successful with his *Hamlet* and *Julius Caesar* (1918), and, in the Soviet Union, I. *Goldberg produced nine workmanlike translations (1933–38). Ber *Lapin's translation of the Sonnets (1953) also merits mention. It is in the theatrical rather than the literary realm that Shakespeare in Yiddish has enjoyed a full and varied life. Joel Berkwowitz has shown that “[t]he ways in which Yiddish playwrights and actors in the United States re-imagined Shakespeare's plays had far-reaching implications for the American Yiddish theater.” And that theater was important to immigrant American Jews.

**SHAKI, ISAAC** (1852–1940), Turkish rabbi. Born in a village near *Istanbul, he was a student of R. Solomon Kimhi. Shaki first became a merchant, and it was not until middle age that he devoted himself to Torah study and research. He was av bet din and a member of the bet din ha-gadol in Istanbul, writing several books in Ladino in order to provide the masses of the people with religious literature in a language with which they were familiar.

His main work was *Historia Universal Judía* (1898–1927), a 16-volume survey of Jewish history. Other works by Shaki were *Millei de Avot* (*Words of the Fathers,* in Ladino *Tesor del Judaismo*) 3 pts. (1907–08), an extensive commentary on *Avot, and Binah le-Ittim* (1897), dealing with the Jewish calendar. Some of his works are extant in manuscript. **BIBLIOGRAPHY:** A. Galante, *Histoire des Juifs d’Istanbul*, 1 (1941), 148.

(Leonard Prager)

**SHALEM, SAMUEL**

(Heb. שלם)

(1) A place whose king *Melchizedek was visited by Abraham (Gen. 14:18). It is generally agreed that the name refers to Jerusalem, especially in view of Psalms 76:3, in which Shalem is equated with Zion; this is also the view of Josephus (Ant., 1:180).

(2) A town in the Jordan Valley close to Aenon (Gk. for “many waters”) where *John was reported to have been baptizing (John 3:23). Later Christian writers, such as Eusebius (Onom. 40:1) and Jerome in his Latin edition of the *Onomasticon* (*Libri de Situ et Nominibus* 266c; though he later changed his mind), identified it with a locality in the Jordan Valley 8 mi. (c. 13 km.) south of Scythopolis (Beth-Shean). Christian pilgrims, such as Egeria (c. 384 C.E.), visited the site, then called Sedima (Solyma?), near which was a spring or pool. The area is indicated by a row of greenish mosaics on the *Madaba Map* (mid-6th century). It may be identical with the Salem mentioned in the Book of Judith (4:4), in which the villages were alerted at the approach of Holofernes, i.e. on the outskirts of the mountains of Samaria. A possible identification is with Tell al-Radgah (present-day Tell Shalem), c. 8 mi. (12 km.) south of Beth-Shean (Scythopolis). This location has numerous springs: 13 in an area of 4 x 4 kilometers; Ambrose in his writings (11, 1432) claimed there were 12 springs at “Ennon.”

On the north side is Tell Shalem. Since Egeria was told that Aenon was situated 200 yards (= 183 m) away, Aenon might very well be situated to the northwest of the ancient mound at ’Ain Ibrahim which has a sheikh's tomb.

(3) The Shalem Rabta (“Great Shalem”) of Samaritan sources, called Sanim by Eusebius (Onom. 160:13), which is identified with the village of Sālim, approximately 4 mi. (6 km.) east of Nablus. According to Samaritan tradition, a synagogue was built there in the fourth century by their hero Bavah Rabbah.

(Michael Avi-Yonah / Shimon Gibson (2nd ed.))

**SHALEM, SAMUEL** (d. 1760), scholar and emissary. Born in *Salonika, Shalem was a pupil of R. Abraham Gategno. In 1745 he went to Constantinople, emigrating from there to *Tiberias. During his time in Salonika he spoke with Ereẓ Israel emissaries, and in his writings he quoted several Torah novellae that he heard from Hebron and Safed emissaries. From 1755 he traveled for about five years as an emissary from Tiberias to *Turkey, *Italy, *France, and *Germany. The letter concerning his mission – written by the hahamim of Tiberias and describing the troubles of Tiberias in the wake of the wars between the sons of the sheikh Dahir el-Omar, ruler of Tiberias – is extant. The collection of his responsa includes many

(Shimon Gibson [2nd ed.])
of his halakhic replies to problems raised in the communities of *Izmir, Turin, Avignon, Ferrara, Verona, Leghorn, Trier, Metz, Hamburg, etc. He died in Izmir on his return journey. His responsa and halakhic novellae were collected and published as Melekh Shalem (Salonika, 1769).

---

**SHALEV, AVNER** (1939– ), chairman of Israel’s *Yad Vashem* directorate. Born in Jerusalem, Shalev served in the Israel Defense Forces between 1956 and 1980, reaching the rank of brigadier general. Shalev was wounded in action on the Egyptian front during the Six-Day War. Between 1972 and 1974 he served as bureau chief for chief of staff David *Elazar*. Other army positions included head of the Information and Instruction Division of the General Staff; education officer at the IDF Officers School; chief education officer and head of the Education Corps, where he was editor-in-chief of the IDF Radio Station and the IDF weekly magazine; and senior lecturer at the IDF National Security College.

After retiring from military service, Shalev served as director general of the Culture Authority in the Ministry of Education and Culture and chairman of the National Culture and Art Council. He was also a member of the directorate for various national museums and cultural institutions in Israel. In these positions he was responsible for devising and directing national culture policy and encouraging, supporting, and overseeing the funding of all types of cultural and artistic activity in Israel. Shalev also introduced policies to raise the standards of Israel’s leading cultural institutions and advanced and promoted new cultural programs, such as art and culture festivals throughout the country, in order to increase cultural awareness and involvement. Another achievement in this period was to transform the Antiquities Division of the Ministry of Education into a national authority. Shalev was also instrumental in enhancing educational opportunities in regional areas by promoting the accreditation of educational institutions there and enabling their students to obtain recognized degrees.

From 1993 Shalev served as chairman of the directorate of Yad Vashem, the Holocaust Martyrs’ and Heroes’ Remembrance Authority in Jerusalem, where he initiated a multi-year development plan aimed at equipping Yad Vashem with the necessary tools to address the challenges of Holocaust remembrance in the 21st century. As part of this plan Shalev placed education as a high priority at Yad Vashem and spearheaded the establishment of the International School for Holocaust Studies as well as a new Museum Complex, and served as the chief curator of the new Yad Vashem Holocaust History Museum, which opened in March 2005. During his tenure he also brought about the uploading of Yad Vashem’s Database of Holocaust Victims’ Names onto the Internet, harnessing modern technology in the service of Holocaust remembrance and education.

Shalev studied modern history of the Middle East and geography and graduated from the IDF Command and Staff College and National Security College. Among his publications are To Bear Witness – Holocaust Remembrance at Yad Vashem (2005).

**SHALEV, MEIR** (1948– ), Hebrew writer. Shalev, son of poet Yitzhak *Shalev*, was born in *Nahalal*. He grew up in that much acclaimed agricultural cooperative and later in Jerusalem, and studied psychology at the Hebrew University. For many years he produced and hosted radio and television programs and is also known for his journalistic contribution to various newspapers. His first publications were books for children and the volume Tanakh Akhshav ("Bible Now," 1985), a personal, modern look at diverse biblical episodes. His first novel for adult readers Roman Rusti (1988; The Blue Mountain, 1991; 2001) was an outstanding success among Israeli readers and turned Shalev overnight into one of the most popular contemporary Hebrew prose-writers. The novel recounts the chronicle of pioneering settlers in the Jezreel valley. The narrative point of view is that of a grandson who is brought up on myths and legendary stories of days gone by. Esay (1991; Esau 1993) unfolds the story of a baker’s family against the backdrop of Jerusalem and the Galilee from the beginning of the 20th century up to the 1970s, highlighting the complex relations between fathers and sons and the pivotal role played by women and mothers. Be-Veito ba-Midbar (1998; "His House in the Desert," German, 2000) is the story of 52-year-old Rafael Meyer, whose development was shaped by four men and six women, including his grandmother, his aunts, and his ex-wife. Indeed, the power of women to mold and dictate the lives of men is a recurrent theme in Shalev’s writing. Shalev interweaves in his rich and multi-layered narrative biblical associations with mythic materials and archetypal patterns, underscoring memory and sensual experience. Fantasy and humor are essential elements in his fiction. Other books include the novels Ke-Yamim Aḥadin (1994; As a Few Days, 1999) and Fontanella ("Fontanelle," 2002). Among Shalev’s books for children are Ha-Yeled Hayyim ve-ha-Mifletz (1982; Hayyim and the Monster of Jerusalem, 1990), Gumot ha-Hen shel Zohar (Zohar’s Dimples, 1987; German: 1995), Aba Ose Bushot (1988; My Father Always Embarrasses Me, 1990) and Ha-Traktor be-Argaz ha-Hol ("The Tractor in the Sandbox," German, 1999). His books have been translated into many languages, and information is available at the 101H website at www.101h.org.il.

SHALEV, YITZHAK (1919–1992), Hebrew poet and novelist. Born in Tiberias, he became a teacher in Jerusalem. His first poems were published in "Moznayim" and "Davar," and subsequently appeared in a large number of newspapers and literary journals.

Among his volumes of poetry are "Ohezet Anaf ha-Shaked" (1951), "Kolot Enosh Hammim" (1954), and "Elohei ha-Noshek Lohanim." He also wrote a novel about the Jewish defense activities during the riots in Palestine in 1936, "Parashat Gavriel Tiros." In 1969 he wrote the novel "Dam va-Ru’ah." He is the father of writer Meir "Shalev."

[Getzel Kressel]

SHALEV, ZERUYA (1959– ), Hebrew writer. Shalev, born on Kibbutz Kinneret, studied Biblical Studies at the Hebrew University, and published a collection of poems in 1989. Six years later her first novel, "Rakadeti, Amadeti," was published, which made the author famous worldwide. The novel, an outstanding bestseller in Israel, describes the stormy relationship between Yaa’arah, a married woman who is trying to complete her dissertation on legends describing the destruction of the Temple, and the much older Aryeh, a married man, who, as it turns out, was once her mother’s lover. The relationship between the two is characterized by obsessive intensity, sadomasochistic sexuality, infatuation, yearning, and revulsion. Shalev, one of the most successful contemporary Hebrew writers, was awarded the Book Publishers’ Associations’ Golden and Platinum Book Prizes for this novel as well as for her third novel, "Ba’al ve-Ishah" (2000; "Husband and Wife"). The latter focuses on the crisis in the marriage of Nā’amah and Udi, after the husband has undergone a Kafkaesque metamorphosis and is unable to live a normal life. In 2005 Shalev published the third novel in her family-trilogy: "Tera" ("Late Family") is the story of 36-year-old archeologist Ella Miller, who sets out to explore the freedom and joys of a new love relationship, leaving behind her family. Shalev’s language is rich and captivating, her descriptions bold and vivid. Love, sexuality and betrayal, motherhood, family life and commitment are the major themes in her prose. Shalev also wrote a book for children “Mama’s Best Boy” (2000).

Shalev won the German Corine Book Award (2001) and the French Amphi Award.

For translations of her prose, see the ITHL website at www.ithl.org.il.

[Anat Feinberg (2nd ed.])

SHALISH (Heb. שַׁלֶּשׁ), one with whom an article or money is deposited and who has authority to dispose of it according to law or in accordance with stipulated conditions.

Types of Deposit
The deposit can be effected by a single person who deposits something with the shalish to give to another person or to buy some article, or by two people who have greater trust in a third party than in one another, as, for instance, where there is a difference of opinion between them and they deposit an object with the shalish until it is established who is entitled to it, or where a debtor has paid his creditor only part of the debt and they deposit the bill of debt with a shalish until the balance is paid (Ket. 5:8; BB 10:5; Tosef., BM 1:10; cf. Rema, ḤM 56:2).

The conditions to which the shalish is subject may at times be affected by the defect of *asmakhta, as in the following example: If a debtor repays part of his debt and gives his bond to a shalish saying: “If I do not give you [the balance] by such date, give the creditor his bond, so that he can again claim that part of the debt is already paid” (BB 10:5); the tanna’im disagree on whether the shalish must act in accordance with this condition, and the Talmud explains that the dispute stems from the argument that the condition is defective because *asmakhta (BB 166a). The halakha established that the condition is void and the shalish need not return the bond to the creditor, unless the appropriate procedure has been followed, such as an act of “acquisition in the presence of an important (hashuv) bet din in order to rectify the defect of asmakhta (Sh. Ar., ḤM 55:1).

The status of shalish can arise without any specific act. For example, if a wife has been administering her husband’s property, or an administrator has been appointed over a person’s property in circumstances where the owner has given the administrator absolute authority over all his possessions and trusted him completely, and the owner then dies, the administrator has the credibility of a shalish (Sh. Ar., ḤM 56:7, and Siftei Kohan thereto, n. 34).

The Credibility of the Shalish
A *shalish is, in general, accorded greater credibility than a single witness. “The admission of a litigant is as good as a hundred witnesses, but the shalish is believed more than both. If

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 18 373
one [litigant] says one thing, the other [litigant] another, and the shalish something else, the shalish is believed" (Tosef., BM 1:10). The reason for this special credibility of the shalish is that the depositor has reposed confidence in him (Git. 64a; and see in detail PDR 1:294–5). For this reason it has been concluded that even a shalish who is a relative also merits credibility, despite the fact that a relative is disqualified from giving evidence (Sh. Ar., HM 56:1). The shalish, is believed in preference to the debtor or creditor. If two witnesses contradict him, however, he is not believed (Sh. Ar., HM 56:2; Sma and Siftei Kohen thereto).

If someone has in his possession another's property and claims that its owner handed it to him as a shalish and the owner denies this, one opinion is that the one possessing the property is believed (Sh. Ar., HM 56:1): "Even if the owner claims: You robbed me of it, and the other retorts: It is not so, but you appointed me a shalish between you and so and so, the other is believed" (Sma, HM 56:1 n. 7). On the other hand, some posekim argue that if this were so, anyone could seize his fellow's property and enter into a collusive agreement with another and say, I am a shalish. Accordingly, they hold that the shalish is not believed unless the depositor admits that the property was deposited with him as a shalish (Siftei Kohen, HM 56:1 n. 5).

The shalish is believed without an oath, since he is not a litigant and is backed by the presumption: "A man does not sin when he personally gains nothing by it" (Hai Gaon, in Ozar ha-Géonim, ed. by B.M. Lewin, 10 (1941), 143, no. 352; Sh. Ar., HM 56:1). If the date fixed for the return of the deposit passes and the shalish has not returned it, he is still a shalish and is still believed (Sh. Ar. ibid.). The unique credibility of the shalish continues only as long as the deposit is still in his possession (Tosef., BM 1:10; Sh. Ar., HM 56:1; Divrei Géonim, 107:7). It is thus considered a sensible precaution to return the deposit in the presence of the bet din and clarify the facts in its presence, lest a dispute should arise between the parties, and, if the shalish has already parted with the deposit, he would not be believed (Sh. Ar., HM 56:3). One opinion is that it is possible to restore the deposit to the shalish so that he would again have credibility (Siftei Kohen, HM 56, no. 20; Divrei Géonim, 107, no. 6).

Liability of a Shalish
A shalish who acts contrary to the conditions made with him may become liable to compensate for any loss caused by his action. If he returns to the creditor a bond deposited with him, contrary to what was stipulated, he is subjected to a ban until he undertakes to compensate the debtor for any loss sustained as a result of the return of the bond. If the shalish does not undertake to compensate, and the creditor obtains payment unjustly by means of the bond returned to him, the shalish does not have to compensate the debtor, since this is only a case of damage caused indirectly by "gerama and the rule is that there is no liability for damages caused by gerama (Rema HM 55:1; Divrei Géonim, 107, no. 10). If, on the other hand, contrary to the stipulation, the shalish returns the bond to the debtor, the shalish must compensate the creditor, for this is a case of garmi (as opposed to gerama), when the tort-feaser is liable to pay (Siftei Kohen, HM 56, no. 4; Divrei Géonim 107, nos. 11 and 12).

The shalish is at liberty to retract and restore the deposit to the parties. If the parties do not want to take it back, he can hand it over to the bet din. A shalish who is paid for his services, however, cannot retract (Arukh ha-Shalihan, HM 56:17).

"The claimant pays the expenses of the shalish (Rema, HM 56:1), for it is always the one for whose benefit and advantage something is effected who has to pay the cost" (Sma, HM 56 n. 13; Arukh ha-Shalihan, HM 56:23). It is customary to write a deed when something is deposited with a shalish (for the wording of such a deed, see Sefer ha-Shetarot no. 65, and see "Shomerim").

[Nahum Rakover]

SHALKOVICH, ABRAHAM LEIB (pen name Ben-Avigdor; 1867–1921), Russian Hebrew author and pioneer of modern Hebrew publishing. Born in Zheludok province of Grodno, Shalkovich settled in Warsaw in 1891. In 1889 he wrote a sharp criticism of the "halukkah system in Ha-Melitz (nos. 82–83), and his first story, “Elyakim ha-Meshugga” (“Eliakim the Insane”). In 1891 he began publishing the “Sifri Agorah” series, offering Hebrew literature in an attractive and reasonably priced booklet form. The series served as the medium of the “new wave” which sought to revitalize Hebrew literature and to introduce the realism then current in Europe. The success of the “Agorah” books prompted Shalkovich to set up the Ahí’assaf publishing house in Warsaw (1893), and he edited the first three volumes of the Luáh Ahí’assaf annual (1894–96). He also contributed to Ha-Pardees, and to Ha-Zeman, published by Ezra *Goldin. In 1896 he left Ahí’assaf and set up Tushiyah, a new company which published translations from foreign languages. In 1901 Shalkovich founded a children’s weekly called Olam Katan, and in 1904 renewed the publication of the daily Ha-Zeman.

His work as a publisher demanded his entire energy and curtailed his own writing. In 1913 he founded the Ahissefer publishing house, which also issued the miscellany Netivot (1913) in the editing of which he had a share. In Netivot he published a long article, “Ahad Ha-Am u-Venei Moshe” (pp. 238–90), on Ahad Ha-Am whom he had previously supported and admired. Shalkovich died suddenly in Carlsbad, while attending the Twelfth Zionist Congress.

Shalkovich was among the first of the modern Hebrew writers to stress the problems of the individual Jew rather than those of the Jewish people. In his story “Menahém ha-Sofet” (1893) he called for a true portrayal of the Jewish scene in a simple realistic vein. But Shalkovich did not always remain
loyal to his own views. The novel *Lifsnei Arba Me’ot Shanah* (1892) was written in a florid and sentimental style. While Shalkovich’s stories have little literary merit, he deserves respect as an innovator in Hebrew literature and a pioneer in modern Hebrew publishing.

[GEDALYAH ELKOShI]

**SHALLON, DAVID** (1950–2000), Israeli conductor. Born in Tel Aviv, Shallon studied violin, viola, and French horn at the Tel Aviv Academy of Music. In 1974, after service in the Israel Army Band, he studied in Vienna and completed the conducting class with Hans Swarowsky. From 1974 to 1979 he was assistant to Leonard *Bernstein for Europe. From 1980, he conducted leading orchestras as the Berlin PO, the London SO, the Israel PO, and the San Francisco SO; he also appeared at many of the major European festivals and conducted at leading opera houses, including Vienna, Frankfurt, Duesseldorf, and the New Israeli Opera. He was musical director of the Dusseldorf SO (1987–93), the Jerusalem SO from 1992 to 2000, and the Luxembourg PO in 1997. Several Israeli composers, among them Noam *Sheriff*, dedicated works to him. Among his recordings are viola concertos by Bartók, Hindemith, Schnittke, and Mark *Kopytman.

**BIBLIOGRAPHY:** Grove online, s.v.

[ISRAELA STEIN (2ND ED.)]

**SHALLUM** (Heb. שלום, *šelah*, **שלאם** – “Yahweh has preserved or required”), son of Jabesh, one of the last kings of Israel. Shallum came to the throne in the 39th year of the reign of *Uzziyah in Judah, after killing *Zechariah son of Jeroboam II and thus putting an end to the dynasty of Jeroboam (11 Kings 15:10). Shallum ruled Israel from Samaria for one month (15:13), apparently between Elul and Tishri, 747 B.C.E. The throne was taken from him by *Menahem son of Gadi, who formed a conspiracy against him and killed him (15:14).* Some scholars interpret the designation “son of Jabesh” as a reference to the city of *Jabesh (-Gilead) and take it as indicating that Shallum was from this city.

[Josef Segal]

"SHALMANESER III (Shulmánu-asharid) ("Shulmanu is leader") 111), ruler of Assyria 859–824 B.C.E. Shalmaneser inherited from his father, the cruel Ashurnasirpal II (883–859 B.C.E.), a well-equipped army and the desire to extend his rule over Syria and Phoenicia. Over a period of some 20 years (858–838 B.C.E.), he succeeded in subduing most of the small kingdoms from the Euphrates in the north to the Jordan in the south. He was the first Assyrian king to come into direct contact with an Israelite monarch and probably the first to traverse Israelite territory.

The main sources for the history of Shalmaneser’s reign are the royal annals, which were “edited” some five times during his lifetime. The texts have been compiled and translated by E. Michel in *Die Welt des Oriënts* 1 (1947) and following volumes. In addition to these and other inscriptions, there are also many reliefs from the reigns of Ashurnasirpal and Shalmaneser which clearly indicate their military innovations as well as their contacts with foreign countries. Of particular interest is the Black Obelisk, one of whose registers depicts an Israelite delegation from King *Jehu presenting gifts to Shalmaneser* (c. 841 B.C.E.).

Shalmaneser’s western campaigns began in his first regnal year when he defeated the league of north Syrian states, including *Beth-Eden, Carchemish, Kummukh* (i.e., *Commagene, Samal, Hattina, and Gilicia.* A direct result of this was the formation of an even stronger south-Syrian league which succeeded in holding off the Assyrian advance for over a decade.

In 853 B.C.E., Shalmaneser crossed the Euphrates for the second time and proceeded to the city of Pethor (see Numbers 22:5), where he received tribute from the north-Syrian kingdoms. He continued on to Halab, the center of the cult of *Hadad*, where he met the combined forces of 12 states in one of the great battles of antiquity. Opposing the Assyrians was the triumvirate of Hadadezer ("Ben-Hadad I) of Damascus, Iru-leni of Hamath, and Ahab the Israelite: they were accompanied by smaller contingents from the Phoenician coast-Byblos (!), Arqanta, Arvd, Sianu (see Genesis 10:17–18), and Usanta in addition to troops from Egypt, the south Syrian Amanah (or perhaps the Ammorites), and an Arabian tribe. According to the Syrian text, this army totaled 3,940 chariots, 1,900 cavalry, over 62,000 infantry, and 1,000 camel riders. Judging from the fact that Shalmaneser did not press on beyond Karkar nor resume his successive campaigns against the league for another four years in 849, and then again in 848 and 845 B.C.E., it seems that at best the battle ended in a military deadlock, if not in an Assyrian defeat. Of note is the large force under Ahab’s command, which may indicate, as Malamat suggests, a minor league including Ahab’s vassals, Moab, and possibly Ammon, in addition to Jehoshaphat king of Judah with his vassals Edom and possibly Philistia (see 1 Kings 22:4; 11 Kings 3:4ff.). Certainly, this text sheds much light on Ahab’s stature in the international theater, a fact only hinted at in the Bible (1 Kings 18:10, see also Meg. Ilb).

It was only in Shalmaneser’s 18th year (841 B.C.E.) that he succeeded in breaking through the south-Syrian front. To a great extent this was made possible by internal changes among the allies. *Hazaël had usurped the throne after killing Ben Hadad II, probably to be identified with Hadadezer mentioned in the annals.* While he continued the anti-Assyrian policy of his predecessors, Hazaël renewed the border wars against
Israel with greater vigor (11 Kings 8:12). This new source of tension was one of the factors that precipitated the overthrow of the dynasty of Omri by the military officer Jehu Ben Nimshi (11 Kings 9:1ff.). The latter may have made overtures to Shalmaneser, thereby disengaging the Israelite army from the south-Syrian camp, which ultimately led to its dissolution.

Shalmaneser first met Hazael's troops in the mountain passes of the anti-Lebanon (Sirion). Hazael retreated to his capital *Damascus, where he withstood the siege. Shalmaneser, after burning the outskirts of Damascus, continued into the Hauran, "the bread basket" of Syria and Israel, probably destroying many settlements in his wake. Some scholars would see a later historic reference to this march in Hosea's mention of the spoiling of Beth Arbel in Transjordan by a certain Shalman (10:14). From there Shalmaneser crossed Israel to the mountains of Ba’li-raši, which is on the Mediterranean coast. There he received tribute from Jehu "the son of Omri" and from Baalimzeri the king of Tyre. Quite plausibly, this mountain should be identified with Mount Carmel, which traditionally served as the boundary between Israel and Phoenicia.

Shalmaneser returned only once more, in 838 B.C.E., in a punitive expedition against Hazael, who subsequently became the dominant power in the area. During his later years, Shalmaneser was occupied with campaigns in northern Syria and with rebellion in Assyria proper against his heir Shamshi-Adad V.

[Aaron Demsky]

"SHALMANESER V (727–722 B.C.E.), son of *Tiglath-Pileser III. He reigned in Babylonia under the name of Ubulai. None of his royal inscriptions, if indeed he composed any, have survived, with the result that knowledge of the period is indirect. From the 7th century B.C.E. Aramean ostraca found at *Assur, it seems that he took captives from Beth-Eden. Josephus quoting Menander of Tyre (Antiquities 9:284) notes that Σέλωμας had for several years unsuccessfully besieged Ussu, the older, mainland district of Tyre. This last campaign was related to a wide range of insurrections in the area. At this time, "Hoshea ben Elah conspired with the Egyptian king of Sais (!) in the delta. Shalmaneser took Hoshea captive and laid siege to *Samaria (11 Kings 17:3ff.). The Babylonian Chronicle ascribes the destruction of Shamraim, i.e., Samaria (cf. the Aramaic pronunciation in Ezra 4:10) to Shalmaneser, though the final capture of the city was probably carried out by his famous successor *Sargon II in 722/21 B.C.E.

[Aaron Demsky]

SHALOM, ABRAHAM BEN ISAAC BEN JUDAH BEN SAMUEL (d. 1492), Catalanian (Spain) philosopher and translator of philosophical writings. Shalom is known to have translated two works from Latin into Hebrew: a compendium of the physical sciences by Albertus *Magnus, Philosophia Pau- perum, under the title Ha-Pilosofyah ha-Tivit ("Natural Philosophy"), extant in manuscript form (Hamburg Ms. 266); and a discussion of certain problems in Aristotle's Organon by Mar-silius of Inghen, under the title She'elot u-Teshuvot ("Questions and Answers," see S. Pinsker, Likkutei Kadmoniyot (1860), 152, second page). Shalom's preface to the latter, in which he polemicizes against the opponents of secular-scientific studies, together with the index of the questions, was published by A. Jellinek under the title Marsilius ab Inghen (1859). Shalom's major work, Neveh Shalom (Constantinople, 1539; Venice, 1574), gives evidence of the author's thorough command of the fields of knowledge of his time, and is rich in quotations from Greek and Arabic philosophical literature. In its external form, Neveh Shalom is a series of homilies on various aggadic passages drawn from the talmudic tractate Berakhot. Into this framework Shalom weaves a number of philosophic discussions in which he undertakes to review the philosophic statements of his predecessors, to consider just those views which are in harmony with Scripture, to decide which among them is correct, and, especially, to prove that "Moses *Maimonides is true and his teaching is true" (see Neveh Shalom, author's introduction; see also 1:14, 21a). In other words, he undertakes to defend Maimonides' philosophy with its particular equilibrium between Greek philosophy and scriptural teachings. Shalom's defense is directed both against the more radical position of *Levi b. Gershom, who felt that Maimonides had compromised philosophy, and also against the more conservative position of Hasdai *Crescas, who felt that Maimonides had compromised scriptural religion. His assumption that Maimonides' authority is supreme in all questions sometimes led Shalom into difficulty in his attempts at harmonization of different authorities. There were, in fact, cases where he felt that religious considerations demanded a different position from that which Maimonides had apparently held. His solution to the dilemma consisted in showing that Maimonides'
Shalom's discussions reveal a careful study of Maimonides, Levi b. Gershom and Crescas, as well as other Jewish writers and non-Jewish philosophers, especially Averroes. His own method does not display any great originality. He sometimes expounds, in different passages, inconsistent positions on the same question. This imprecision is due to the fact that Shalom did not attach importance to all the topics which he discussed. There are just a few subjects which were fundamentally significant for him because of their religious implications, and, when dealing with those he was careful to state a definitive and consistent position. However, the various technical philosophic problems upon which he touched concerned him less, and he did not always exercise the same care with them. In general, the philosophical sections of Neveh Shalom have a strong apologetic motif. They are designed less to discover new truths than to defend, first the doctrines of the Jewish religion, as Shalom understood them, and then, the philosophical positions of Maimonides. His methods of argumentation in these sections are appropriate to that end.

[Herbert Davidson]

**SHALOM, ISAAC I.** (1886–1968), U.S. businessman and philanthropist. Born in *Aleppo, Syria, Shalom immigrated in 1910 to the United States, where he settled in New York City. There he started a small textile business, and in 1921 he established the handkerchief firm of I. Shalom & Co., which developed into one of the leading manufacturers in its field in the U.S. A lifelong supporter of Orthodox Jewish educational institutions, Shalom was instrumental in 1945 in founding *Ozar Hatorah*, an organization that provided Hebrew education for tens of thousands of Jewish children in the Arab countries of North Africa and the Middle East. Shalom was also an active Zionist who established many enterprises in Israel and was one of the leaders of the Sephardi and Syrian communities in New York City.

[Hillel Halkin]

**SHALOM, SHIN** (pseudonym of Shalom Joseph Shapiro; 1904–1990), Hebrew poet and author. Born in Parczew, Poland, Shalom was a descendant of distinguished hasidic rabbis. He received a religious and secular education at his grandfather’s “court,” which moved to Vienna in the wake of World War 1. Here he began to write poetry, at first in German and later solely in Hebrew. His grandfather, R. Hayyim Meir Jehiel Shapiro, spent many years preparing the family for immigration to Palestine; in 1922 some 30 members of the family immigrated to Jerusalem, where Shalom attended a teachers’ seminary. In 1926 he joined those rabbis in his family who founded Kefar Hasidim in the Valley of Jezreel, and taught Hebrew in this settlement. In 1928 he moved to Rosh Pinnah in the Galilee. Shalom described this period in his book *Yoman ba-Galil*. From 1930 to 1931 Shalom studied philosophy at the University of Erlangen (Germany). He returned in 1932 to teach in Jerusalem; later he moved to Rehovot and finally settled in Haifa (1954). In 1968 Shalom was elected chairman of the Hebrew Writers’ Association of Israel. His works won varied literary awards and his collected works were published in eight volumes (1966–68). The lyrical and dramatic tension in Shalom’s poetry is created between the “I” of the universe (whom he sometimes calls “Him”) and the personal “I.” He envisages the life of man and of the world as a constant ascent, accompanied by falls, a Jacob’s ladder touching the ground with its top rung in the sky; an ascent from the personal “I” to the infinite “I,” from the life of the moment to eternal life. This journey from “I” to “I” finds its strongest expression in Shalom’s two main books of poetry, *Panim el Panim* ("Face to Face," 1941) and *Sefer Ha’ar"o'i* (1963). In the former it is a magical journey within the inner soul; in the latter the journey is made real through living characters and plastic portrayal of sights and situations. Shalom’s two novels – *Yoman be-Galil* ("Galilee Diary," 1932) and *Ha-Ner Lo Kavah* ("The Candle Was Not Extinguished," 1942) – are useful for deciphering his poetry. The former is a first-person narrative concerning the love of a Jewish teacher for an Arab girl. *Ha-Ner Lo Kavah* focuses upon the life of a poet whose private struggle to ensure that “the candle does not go out” corresponds with the nation’s struggle for independence and strength. Shalom’s verse dramas also depict the struggle and confrontation between the two “I”s, between time and eternity. The drama, *Shabbat ha-Olam* ("The World’s Sabbath," 1945) is based on the tragic antinomy between the tanna, Elisha b. Avuyah, who abandoned religious practice and his disciple, R. Meir, who remained steadfast in his belief. Elisha’s desecration of the Sabbath constitutes, in a way, a revolutionary call for the casting off of the yoke of the law and, on the other hand, the observance of the Sabbath by R. Meir and his wife, Beruryah, is aimed at preserving tradition. Only in the cave of the mystic Simeon b. Yohai is the secret of the affinity between the “Sabbath of the country” and the “Sabbath of the world” revealed. “The Cave of Josephus” was based on the life of Josephus. In connection with his poetical philosophy, Shalom also gave strong expression to the revival of Israel.

The close friendship between Shalom and Max *Brod prompted joint literary efforts, such as the historical play *Sha’ul Melekh Yisrael* ("Saul, King of Israel," 1944); Brod also wrote the libretto for the first Hebrew opera (music by Marc *Lavry) based on Shalom’s play *Dan ha-Shomer* (1945) – a story inspired by the foundation of kibbutz *Hanaitah* – and composed several musical works on Shalom’s poems, of which the most important is *Requiem Ivi* ("Hebrew Requiem") for solo voice and orchestra. Other Israeli composers, including...
Paul Ben-Ḥaim, Zeira, and Nardi have also set poems by Shalom to music. A list of his works translated into English appears in Goell, Bibliography, index, s.v. Shin Shalom.

[Gideon Katznelson]

In 1971 Shin Shalom published the volume of poetry Maḥteret ha-Shir, the ninth volume of his collected works, and in 1972 Kokhav ha-Tekumah, an epic of the rebirth of Israel, in which he gives expression to his faith in the meaning of the world and the mission of a man, an affirmation which stands in opposition to the depiction of violence and the absurd which characterizes much of contemporary poetry.

In 1973 he was awarded the Israel Prize, and simultaneously there appeared a special volume comprising 48 reviews of his poems during his half-century of activity.

**SHALOM, SILVAN** (1958– ), Israeli politician, member of the Knesset since the Thirteenth Knesset. Shalom was born in Gebi, Tunis, and was brought by his parents to Israel the following year. As a student at Ben-Gurion University, he served as chairman of the Students Association there on behalf of the Likud and as deputy chairman of the National Students Association. He graduated from Ben-Gurion University in economics and accounting in 1983, and worked for a period as a journalist. He received an M.A. in Public Administration in 1991 and a law degree in 1996, both from Tel Aviv University.

Shalom served as director general of the ministry of energy and infrastructure in 1989–90, when Moshe “Shaḥal of the Labor Party was minister, and as chairman of the board of directors of the Electricity Corporation in 1990–92.

Shalom was first elected to the Thirteenth Knesset on the Likud list in 1992, serving on numerous Knesset Committees. In the Fourteenth Knesset he served as chairman of the coalition in the Finance Committee, was chairman of the lobby for the advancement of soccer and of the lobby for encouraging industry in Samaria. From July 1997 to July 1998 he served as deputy minister of defense, under Yitzhak Mordechai. In July 1998 he was appointed by Prime Minister Binyamin *Netanyahu as minister of science and technology. In the government formed by Ariel “Sharon in 2001 Shalom was appointed deputy prime minister and minister of finance. When Sharon formed his second government after the elections to the Sixteenth Knesset in 2003, the Ministry of Finance was given to Binyamin Netanyahu and Shalom was appointed deputy prime minister and minister for foreign affairs. Shalom objected to Sharon’s plan for disengagement from the Gaza Strip and Northern Samaria, but accepted the position of the majority, and supported it.

In December 2005 he ran for the chairmanship of the Likud after Sharon left it to form the Kadimah Party, and came in second to Netanyahu.

[Susan Hattis Rolef (2nd ed.)]

**SHALOM ALEICHEM** (Sholem Aleykhem; narrative persona and subsequent pseudonym of Sholem Rabinovitch (Rabinovitz); 1859–1916), Yiddish prose writer and humorist born on February 18, 1859 (old style; March 2, new style), in Pereyaslav (today: Pereyaslav-Khmelnitskyi) on the left bank of the Dnieper (Dnipro), downstream from Kiev, as the third child of Menakhem-Nokhem Rabinovitch, a wealthy timber and grain merchant and Khave-Ester, née Zeldin. Together with Sholem Yankev *Abramovitch (often misidentified as his fictional narrator, Mendele Moykher Sforim) and I.L. *Peretz, Shalom Aleichem is regarded as one of the three major classical writers of Yiddish literature. He rapidly achieved widespread popularity with the reading public, though it took him longer to achieve lasting critical acclaim. By canonizing Abramovitch as the “grandfather” of Yiddish literature and castigating the facile and highly popular pulp-fiction of “Shomer, he brought aesthetic criteria to bear on Yiddish literature and became the first to see himself as occupying a position within a Yiddish literary tradition. In fact, he was barely 24 years younger than Abramovitch, but this difference was crucial, since the political turmoil and the pogroms of the 1880s had discredited the “Hasakahah or Jewish Enlightenment movement, making for an altogether more resigned, milder, and less didactic tone in Shalom Aleichem’s work. He was distrustful of all ideology and could offer only aesthetic solutions to the problems of Jewish existence. It is true that he manifested considerable enthusiasm for the Zionist cause, but he does not seem to have been very sanguine about its chances of success. He promoted his vision of Yiddish writing capable of standing comparison with other literatures in the two volumes of his lavishly produced *Di Yidishe Folksbibliotek (“The Jewish Popular Library,” 1888–89) in which inter alia he published works by Abramovitch, Peretz, and Isaac Joel *Linetsky as well as early versions of his own novels, *Stempenyu* (1889; *Stempenyu*, 1948) and *Yosele Solovey* (1890; “The Nightingale: Or the Saga of Yosele Solovey the Cantor,” 1913). These novels are both restrained, tragic love stories in which self-fulfillment is sacrificed to traditional concepts of modesty; the author was not entirely successful in reconciling form and content. The *Folksbibliotek*-project was abandoned in 1890 when Shalom Aleichem lost his fortune on the stock exchange. However, his reputation owes less to his novels than to his epistolary sat-
ire, Menakhem-Mendl (begun in 1892; “Menakhem Mendel and Sheyne Sheyndl,” 1948) and his loosely structured series of monologues, Tevye der Milkhiker (begun in 1895; Tevye the Dairyman, 1987). It was in these series that Shalom Aleichem found the style most suited to his genius, and he continued working on them almost up to the time of his death, creating personae whose voices enabled him to express his ironic view of a traditional society in crisis.

Most of his fiction, which also included the stories he wrote for Jewish holidays and his many children's stories, appeared in the first instance as feuilletons in various newspapers, being collected in book-form usually at a much later date. The ability that Shalom Aleichem had shown in these tales to capture scenes from a child’s perspective found its most virtuoso expression in Motl Peyse dem Khazns (serialized between 1907 and 1916; The Adventures of Mottel, the Cantor’s Son, 1953). In this cycle of stories he created a brilliantly ironic account of the misfortunes of a widow and her children and their later peregrinations from the Ukrainian market town to New York, as seen through the eyes of the youngest carefree son, Motl. Shalom Aleichem also wrote critical reviews and poems and tried writing for the stage, but without great success. In the theatre, it was dramatizations of his stories by other hands that achieved lasting fame, most notably the Tevye stories which eventually became the well-known musical drama, Fiddler on the Roof (1964). Shalom Aleichem was still at work on his lightly fictionalized autobiography, Funem Yarid (1916–17; From the Fair: The Autobiography of Sholom Aleichem, 1985) and the continuation of Motl Peyse at the time of his death. His multifarious oeuvre constitutes a Jewish comédie humaine, portraying the transition from the old order of traditional life to modern times. Through it runs the recurrent theme of unrealizable aspiration, followed by catastrophe and renewed hope, epitomizing courage in adversity and survival against all odds both in the Old World and the New. The tragic is constantly interwoven with the comic, while his characters and perspectives embody powers of regeneration in the face of adversity.

In 1861 his family had moved to Voronkov (Voronka), somewhat closer to Kiev, where he attended heder. Voronkov was later to be satirized in his works as the archetypal shtetl, Kasriveke. However, 10 years later Menakhem-Nokhem Rabinovitsh was defrauded and the family returned to Pereyaslav where the 12-year-old boy helped his father run a modest inn. The following year his mother died of cholera, and his father remarried. The death of his mother had a particularly traumatic effect on the young Rabinovitsh which is indirectly, almost unconsciously, reflected in a number of his works. In 1873–36, he attended the Russian secondary school (gymnasium) in Pereyaslav on a scholarship. It was during these years that he composed his first literary creation in the form of a glossary of his stepmother’s curses (unpublished), thus early revealing his ability to face adversity with humor. He also began writing Hebrew biblical romances in the manner of Abraham *Mapu, his father’s favorite author. After graduating with distinction from the gymnasium Rabinovitsh became a private tutor in Russian, Hebrew, and other subjects in and around Pereyaslav. The following year, as the result of a stroke of good fortune, he was offered the position of private tutor to the daughter of the wealthy merchant, Elimelech Loyev. Rabinovitsh and his teenage pupil, Olga/Hodl read Hebrew and European literature together and fell in love. Some two to three years later, becoming aware of the tender feelings between tutor and pupil, Loyev dismissed Rabinovitsh. It was at about this time that his earliest Hebrew pieces were published in the popular maskilic Warsaw newspaper, Ha-Zefirah.

Rabinovitsh now secured the office of obshchestvenny ravin or government rabbi in Lubny. During the years in Lubny he contributed further pieces in Hebrew not only to Ha-Zefirah but also to Ha-Meliz on social and educational issues. In 1885 Olga came across an article by Rabinovitsh and was able to locate him through the publisher. On May 12 (old style; Lag ba-Omer) of the same year, their marriage took place in Kiev against her father’s wishes. However, Loyev was soon reconciled, insisted that Rabinovitsh give up the post of ravin, and invited him back to the estate at Sofyevka, where he was able to pursue his literary activities free from financial worries.

With the appearance from 1881 onwards of Alexander "Zederbaum’s (Tsederboym) St. Petersburg weekly Dos Yidishke Folksblat, at that time still the only Yiddish periodical, Rabinovitsh felt encouraged to pursue his enthusiasm for Yiddish literature and wrote his first Yiddish story, “Tseyv Shṭeyner” (“Two Stones,” 1883) which was serialized in this periodical. This piece was dedicated to Olga-[E]limelekhovna Loyeva]. The action is a tragic version of the romance between himself and Olga/Hodl in which the heroine commits suicide and the hero becomes deranged (thus anticipating the underlying themes of Yosele Solovey). Rabinovitsh later became dissatisfied with this story, hence its omission from collected volumes throughout his lifetime.

A further story, "Di Vibores” (1883; “The Election,” 1994) was published in Dos Yidishe Folksblat and was signed for the first time “Shalom Aleichem.” Rabinovitsh resorted to a pseudonym since this satire attacks the affluent leaders of a Jewish community, named in the story as Fintsternish (“darkness”), though clearly Lubny was meant. The nom de plume, initially intended as a temporary stratagem, became a narrative persona. Feeling that his talents lay primarily in the realm of Yiddish humor, he adopted the name permanently, and, indeed, it was eventually destined to become the appellation by which he was universally known. In Funem Yarid he also explains that the pseudonym was in part adopted for the sake of his family who shared the prejudices against Yiddish at that time prevalent in intellectual circles. Like “Tseyv Shṭeyner,” this story was never reprinted in Shalom Aleichem’s lifetime.

In November 1883 the young couple moved to Belaya Tserkov (Bila Tserkva), south of Kiev, where Shalom Aleichem at first worked as inspector of sugar estates for the Kiev Jewish millionaire, Israel *Brodsky, whose name together with that
of *Rothschild was to become emblematic of fabulous wealth in Shalom Aleichem's fiction. After leaving Brodski's employ, Shalom Aleichem and Olga remained in Belaya Tserkov, financially supported by Loyev. In the early 1880s Shalom Aleichem published a number of further slight sketches, epistolary skits, and stories in Dos Yidishe Folksblat. Whereas in these years Shalom Aleichem's aspirations lay in the direction of the novel and he attached little importance to his feuilletonistic work, it was in these short pieces that he developed his abilities as a writer of monologues and epistolary sketches, and it was these skills that were later to avail him in the masterpieces, Menakhem-Mendl, Teveye, and Motl Peyse. As time went by, he further honed the feuilleton style which he learnt inter alia from Gogol and which became his real forte. It was precisely these monologues and sketches that earned him his popularity and in which he was able to give free rein to his ironic fantasies.

During these years in Belaya Tserkov, Shalom Aleichem and Olga began spending the summer months in a dacha in the village of Boyarka not far from Kiev, as they continued to do until he left Russia in 1905. This village later served as the model for the fictional village of Boyerik in the Teveye stories and other works. In 1884 their daughter Ernestine/Khaya-Ester was born, the first of six children (four daughters and two sons). In 1885 Loyev died. Shalom Aleichem inherited a very considerable fortune and ventured into business speculations in Kiev.

In 1886 the first of his stock exchange stories was published in Dos Yidishe Folksblat adumbrating the virtuosity of the Menakhem-Mendl letters. In this same year appeared Di Veltraye ("Journey round the World," 1886), his first independent publication, while over the winter 1886–87 further feuilleton sketches were serialized in Dos Yidishe Folksblat anticipating the Kasrilavek stories.

A major landmark in Shalom Aleichem's literary career was the appearance in 1887 of "Dos Meserl" (1886; "The Pocket-Knife," 1920). This story attracted a particularly favorable review by Simon *Dubnow in the influential St. Petersburg Russian-Jewish journal Voskhod, which represented the beginning of critical acclaim for Shalom Aleichem, but it was not until considerably later that his genius was widely appreciated. The story relates the terror of a young boy unable to resist the temptation to steal a penknife from an amiable maskil or freethinker who lodges with his parents. The story concludes on an edifying note attributable to the waning influence of the Haskalah on Shalom Aleichem's early career. "Dos Meserl" epitomizes the style of Shalom Aleichem's many children's and holiday tales which revolve around minor domestic problems and their resolution seen through the eyes of child protagonists or deal with crises in the preparation for a Jewish festival that have a happy outcome. These stories were some of Shalom Aleichem's most popular works, appearing in the holiday issues of periodicals and widely enjoyed in the family circle, making Shalom Aleichem's name truly a household word. "Dos Meserl" and "Tsvey Shteyner" were translated into Russian and came to the favorable attention of Leo Tolstoy and Maxim Gorki.

That same year Shalom Aleichem wrote "Legboymer" ("Lag ba-Omer," 1887) in memory of that festival in 1885 when it fell on May 12, i.e., his wedding day. The story relates how a group of kheyder lads escape their rebbe's birch for a day and sally forth into the countryside on Lag ba-Omer only to be assailed by a gang of Ukrainian youths and so badly beaten that their leader, Zyame, altogether eludes any further flogging by the rebbe, since after three weeks in bed he dies. This was also the year in which Shalom Aleichem moved with his family to Kiev, the model for his fictional Yehupets, to deal on the stock exchange.

In 1888 Shalom Aleichem began his life-long campaign for higher standards in Yiddish literature with two publications. Shomers Mishpet ("The Trial of Shomer," 1888) constituted a savage attack on pulp-fiction, especially that of Nokhem-Meyer Shaykevitsh, known as Shomer, at the time by far the most popular of Yiddish authors, a prolific writer of sentimental pulp fiction whose plots were usually lifted from the works of Charles Paul de Kock, Alexandre Dumas père, or their like. Shalom Aleichem accuses Shomer of corrupting the Jewish people with escapist and morally dubious fantasies which bear no relation to the realities of Jewish life. In "Der Yidisher Dales in di Beste Verk fun Undzere Folks-Shriftshteler" ("Jewish Poverty in the Best Works of Our National Writers," 1888) he distinguished between such trashy romantic shund and realistic works such as Fishke der Krunner (1886; Fishke the Lame, 1920) by Abramovitch, whom he dubs the zeyde ("grandfather") of Yiddish literature. A number of other writers are similarly singled out for praise on account of the realism of their works including Isaac Meir *Dik, Linetsky, Abraham *Goldfaden, and Mordecai *Spector. It is Shalom Aleichem's view that events portrayed in serious literature must be realistic and plausible within the framework of Jewish society. His novel, published the same year, Sender Blank un Zayn Gezindl ("Sender Blank and His Household," 1887) with its flights into the world of pure fantasy is a parody of the shund-novel, but at the same time it is severely critical of the vulgar insensitivities of the Jewish plutocracy, thus anticipating a theme which was to reappear frequently in his works.

However, by far his most significant achievement at this time was his editing of Di Yidishe Folksbibliotek. The publication of this annual or anthology of the best of earlier and contemporary writing in Yiddish was made possible by the considerable financial resources which Shalom Aleichem had inherited from his father-in-law. Before its collapse, Di Yidishe Folksbibliotek appeared in two volumes published in Kiev in 1888–89. The first volume comprised items by authors such as Linetsky and Abramovitch, as well as pseudonymous pieces by himself, including "Lider funem Kheyder: Vinter" (1888; "Song of the Kheyder," 1994), signed Shlumiel. "Grandfather" Mendele (Abramovitch) was encouraged to return to writing in Yiddish and was represented by the revised and expanded prologue and first part of his "Dos Vintshfingerl" (1888; The
In addition, Shalom Aleichem had persuaded Peretz, who had previously published only in Hebrew and Polish, to contribute his extraordinary narrative poem "Monish" (1888; "Monish," 1939) for which Shalom Aleichem paid him the unprecedented fee of 300 rubles. It is interesting to observe that in the process of editing Peretz's text, Shalom Aleichem found it necessary to remove the author's frequent Polonisms in the interest of a wider readership. Peretz resented Shalom Aleichem's having done so without consultation, and for a number of years relations between the two men were soured. There were also contributions from David Frishman and Simon Samuel Frug, who had hitherto written exclusively in Hebrew and Russian respectively and who had both had their Yiddish literary debuts only a few months earlier in Dos Yidishe Folksblat. The first volume concludes with a short essay, "Etelekhe Verter vegn Zhargon Oysleyg" ("A Few Words concerning Yiddish Spelling," 1888) in which Shalom Aleichem calls for a standard orthography and a grammar of the Yiddish language, while advocating that homophones should be differentiated by their spelling and that the orthography of words from the Germanic component should be approximated to the German spelling. In the baggage ("supplement") appeared Shalom Aleichem's novel Stempenyu. Though in some ways resembling Yiddish Spelling, he writes, "Blumen" ("Flowers," 1903). This pamphlet comprised 18 stories, including "Koysl Marovit" ("The Western Wall"). His father had been a lover of Hebrew literature and had nurtured ambitions for his son in this direction. The death of his father did have the incidental effect of relieving Shalom Aleichem from the pretense of not being a Yiddish writer.

When his father died in that same year, Shalom Aleichem gave literary expression to his mourning in A Bintl Blumen ("A Bouquet of Flowers," 1888), a literary bouquet laid on his father's grave, subsequently shortened and revised as "Blumen" ("Flowers," 1903). This pamphlet comprised 18 stories, including "Koysl Marovit" ("The Western Wall"). His father had been a lover of Hebrew literature and had nurtured ambitions for his son in this direction. The death of his father did have the incidental effect of relieving Shalom Aleichem from the pretense of not being a Yiddish writer.

The second volume of Di Yidishe Folksbibliotek comprised Shalom Aleichem's comedy "Di Asife" ("The Assembly," 1889), signed Shulamis, whose protagonist is a ravin, as until recently he had been himself, and "A Briv tsu a Gutn Fraynd" ("A Letter to a Good Friend," 1889) in which he replies to criticism that had been made of "Stempenyu": "It is necessary to observe," he writes, "that a young Jewish woman is unlike other women in the world." Gentle heroism may well consist in giving free reign to the passions; Jewish heroism consists in controlling one's feelings. Furthermore, fictional characters must be figures with whom the common people can identify. Formerly authors had protagonists who were either angels or demons, but modern readers demand characters whom are closer to psychological reality. This volume contains the second part of Abramovitsh's "Dos Vintshtsfingerl," further items by Peretz and Linetsky as well as contributions by Frug, Abraham Ber Gottlober, Goldfaden, "Ben-Ami and Mikhl Gordon.

In a supplement to the second volume of Di Yidishe Folksbibliotek, the novel Yosele Solyov appeared. As in the case of Stempenyu, this is a restrained, unconsummated Jewish love story in which self-fulfillment is sacrificed to customary concepts of modesty, and the traditional Jewish woman pines for her outsider hero, in this case a highly talented itinerant cantor. It ends with the death of the heroine and the madness of the hero. There are some thematic similarities with his "Tsvey Shteyner." At the same time a host of caricatured figures provide comic relief. The judicious fusion of comedy and pathos is in some ways reminiscent of Dickens. It is instructive to compare Shalom Aleichem's delicacy and apprehensions concerning the credibility of a Jewish love story with the uninhibited sexuality of the play Yankl der Shmid ("Yankl the Blacksmith," performed 1906) written less than 20 years later by David Pinski.

The consistently high quality of the Folksbibliotek aroused considerable interest, and it was recognized by many as representing a turning point in the development of Yiddish literature. But the reactions were far from universally favorable. In 1889 Judah Leib Gordon wrote in Russian to Shalom Aleichem, sharply censoring his intention to raise the status of zhargon-literature. At most, Gordon claimed, Yiddish might be tolerated as means of enlightening the ignorant masses, but otherwise he regarded it as the curse of the Diaspora.

In October of 1890 Shalom Aleichem was preparing to edit a third volume of Di Yidishe Folksbibliotek when the stock market crashed and he lost his entire fortune. He moved his family to Odessa and traveled to Czernowitz, Vienna, and Paris to escape his creditors, while his mother-in-law attempted to pay off his debts. In 1891 he returned to Russia and, with help from his mother-in-law, once again began trading on the stock exchange. The collapse of the Folksbibliotek in the same year as that in which Dos Yidishe Folksblat ceased publication deprived Shalom Aleichem of publishing outlets for Yiddish works, and in consequence he wrote nothing in Yiddish throughout 1891 and returned for a while to writing in Russian. It was during this period, inspired very largely by Nikolai Gogol's oral-style or skaz-monologues (as they are called by Bakhtin and the Russian Formalists), that Shalom Aleichem found the style most suited to his genius.

In 1892 Shalom Aleichem made further preparations for a third volume of the Folksbibliotek but lacked the financial means to bring this project to fruition. Instead he contented himself by putting everything he published in Yiddish that year into his Kol Mevaser tsu der Yidisher Folksbibliotek ("Advertiser for the Jewish Popular Library"), this time without contributions by others, though in a number of cases he again signed his own pieces with pseudonyms (such as Shulamis and Dr. Solomonis Rabinus). Here he published London, an earlier version of London (1909), the first series of his Menakhem-Mendel letters, concerning the comic vicissitudes of an archetypal lutfmentsch and unsuccessful speculator. Shalom Aleichem continued to extend his epistolary Menakhem-Mendel series until 1913. Kol Mevaser... also in-
cluded the "folksong" "Shlof, Mayn Kind" ("Sleep My Child"), which soon became so popular that when in 1901 the major Yiddish song collection by Saul *Ginzburg and Pesach [Piotr] "Marek appeared in St. Petersburg, "Shlof, Mayn Kind" was listed as being anonymous.

The mid 1890s were a period of comparative literary inactivity. In May 1893 Shalom Aleichem and his family moved to Kiev, where he continued to speculate on the stock exchange and attempted to act as a commodity broker. Meanwhile he and his family continued to spend their summers in the dacha at Boyarka, and in the summer of 1894 a chance encounter with a vivacious dairymaid delivering butter and cheese to families vacationing in the vicinity became a formative experience, since this figure would serve as the model for the series of Teyye stories which he soon began to write and on which he continued working sporadically for most of the rest of his life. Later that year he wrote *Yakheho* "z, oder dor Groyse Benzhpil ("Hocus-Pocus: Or the Great Stock-Exchange Gamble"). This was his first complete play, a satire in the style of Pushkin on the life of the speculators and nouveaux riches of Kiev in which he had been so deeply involved.

In August 1897 Shalom Aleichem attended the First Zionist Congress in Basel recording his impressions in *Der Yidisher Kongres in Basel* (1897; "The Jewish Congress in Basel," 1984). In fact, Shalom Aleichem's interest in the Zionist cause had already begun in 1888 when he had joined the Hovevei Zion movement and the following year he had invited one of their most prominent leaders, Abraham Menahem Mendel "Ussishkin, to report on the welfare of the colonists in Palestine in the second volume of the *Folksbibliotek*. He turned these interests to literary account in "Oyf Yishev Ertz-Yisroel: Zelik Mekhanik" (1890; "Selig Mechanic," 1984), a story with a propagandistic Zionist message. Immediately after attending the Basel conference, he wrote the essay "Oyf Vos Badarf'n Yidn a Land" (1898; "Why Do the Jews Need a Land of Their Own?" 1984). It is a popular but cogently argued statement of the Zionist cause: antisemitism will only be overcome when Jews have a state in Palestine. The same year, while living in Berdichev, he incorporated some of these ideas into *Meshiekh Tsyaytn: A Tsienistisher Roman* ("Messianic Times: A Zionist Novel," 1890).

In 1900 Shalom Aleichem wrote "Der Zeyger" (1900; "The Clock That Struck Thirteen," 1900), one of his "stories for Jewish children," a slight monologue told by an anonymous narrator and inhabitant of Kasrilevke about his grandfather's pendulum clock that had been in the family for generations and was his pride and joy. It served the whole town as its time-piece, despite the maskil's hair-splitting attempts to prove it a minute or two fast, until, that is, the day it struck thirteen. More and more hopeless attempts are made to repair the clock, but finally, just in the middle of an exciting story, it collapses under the weight of the heavy objects that have been attached to the pendulum to try and keep it going. Everybody was understandably distressed, and the narrator, still a child, had nightmares about the clock. The prevailing atmosphere is one of melancholy recognition of the obsolescence of tradition. It has even been asserted that the story embodies a subliminal reference to the death of his mother when the young Rabinovitch was still only 13.

That same year Shalom Aleichem wrote his famous satire *Der Farkishefter Shnayder* (1900; "The Haunted Tailor," 1979). This, the most Gogolian of Shalom Aleichem's stories is typical of his genre of fantastic tales. The narration is in the macaronic style of an old pinkes or chronicler and tells the story of a henpecked yet opinionated and self-important tailor, Shimen-Elye Shma Koleynu, who is persuaded by his wife to go to the neighboring shetel to buy a goat so that his numerous hungry children may have an ample supply of milk. Halfway between the two villages he stops at an inn belonging to his cousin Doni to whose lack of learning he tactlessly alludes. Returning with the goat he has purchased he spends the night at the inn. When he arrives home the next day, the goat is unmilkable. Yet, when he attempts to return the goat, the melamed's wife, from whom he bought it, milks it in front of the rabbi's court. Back at home the story repeats itself and the tailor is taken ill, accepting the innkeeper's story that the goat is bewitched. It is left to the reader to draw the conclusion that the innkeeper took his revenge by switching the female goat with a male goat (and vice versa) each time the tailor passed through. The characterization is largely achieved through the formulaic words of the characters. In addition to the humor that arises from Shimen-Elye's solecisms and his confabulations of Aramaic and Ukrainian, an element of irony is introduced in that the theme of duplicitous substitution is suggested to the mind of the reader by the references to Rachel and Laban.

In the early years of the new century Shalom Aleichem was already supporting himself and his large family almost entirely by writing, especially for the St. Petersburg and Warsaw daily papers. By 1903, in fact, he felt able to abandon business activities altogether. It was during this period that he wrote many of the stories in his Kasrilevke series, including among others "Kasrilkev Tramvay," "Kasrilkev Hoteln," "Kasrilkev Restoranen," "Kasrilkev Vayn un Kasrilkev Shikirim," "Kasrilkev Teater," "Kasrilkev Sreyfes," and "Kasrilkev Banditn" (1901; "Transportation," "Hotels," "Restaurants," " Liquor," "Theater," "Fires," "Bandits," collected in English as A Guide to Kasrilevke, 1973). Most of the Kasrilevke stories satirize shetel life in Voronkov and Berdichev. Over the years, while revising his works, Shalom Aleichem gradually brought more stories into this cycle by inserting the name Kasrilevke where previously he had written Berditshev, Mazepevke, or some other toponym. The ethos of these stories may be exemplified by "Dreyfus in Kasrilevke" (1902; "Dreyfus in Kasrilevke," 1979). Zeydl is the only person in Kasrilevke who subscribes to a newspaper, and it is through him that the inhabitants of Kasrilevke anxiously follow the second Dreyfus trial, which took place in 1899. When once more a guilty verdict is pronounced, they simply cannot believe it. "Se kon nit zaytn!" ("It is impossible") shout the outraged inhabitants of Kasrilevke, and it is not the judges or false witnesses in Paris whom they
blame but Zeydl. "Idiots," replies Zeydl and thrusts the newspaper into their faces, but they just refuse to understand. "Who was right?" asks the narrator in conclusion. The well-known story "Ven Ikh Bin Roytshild" (1902; "If I Were Rothschild," 1979) was also written in 1902 and also belongs to the same cycle. This is the monologue of a Kasrilevke melamed whose wife is pestering him for money for the coming Sabbath. If he were rich, he muses, not only would he make sure that his wife had enough so that he could pursue his teaching in peace, he would not only provide for the sick and the poor in Kasrilevke, but he would endow yeshivot and ensure that even the Gentiles had no need to go to war. In fact, he might even abolish money altogether which is surely the root of every evil inclination, but then how would he provide for the Sabbath right now? The story combines realistic observation of the crushing poverty of the shetel with a touching portrayal of the unknowingly aspirations of many of its inhabitants. A further Kasrilevke story written at this time was "Oygetreyselt" (1902; "A Yom Kippur Scandal," 1979) which was subsequently included in the "Kleyne Mentshelekh mit Kleyne Hasoges" series. This famous tale takes the form of an anonymous narration of the scandal that was reported to have arisen when a Litvak visitor was apparently robbed of 1,800 rubles in the Kasrilevke synagogue during the Yom Kippur service. The rabbi immediately ordered the doors to be locked and for everyone's pockets to be turned out. All comply with the exception of Leyer-Yosl, the much-lauded son-in-law of the local magnate, who makes all manner of excuses to avoid being searched. When finally his pockets are examined, gnawed chicken bones are found, to his own shame and to the mortification of the rabbi, but to the huge amusement of the townsfolk. "Well, we all asked with one voice, 'and what about the money?' – 'What money?' asked the man innocently, watching the smoke he had exhaled. – 'What do you mean – what money? The 1,800 rubles!' – 'Oh,' he drewled. 'The 1,800. They were gone.' – 'Gone? – 'Gone for ever.'" There is masterly irony in the laconic pacing of this dénouement.

At this time Shalom Aleichem also revised four volumes of his works which the Folksbildung publishing house in Warsaw issued as Ale Verk fun Shalom Aleichem ("The Complete Works of Shalom Aleichem," 1903). This was the first of several collected works published during his lifetime and subsequently, and was an important milestone in his literary career. This title was, however, a misnomer. Neither this collected works edition nor any of its successors was ever even remotely comprehensive. Then in August 1904, Shalom Aleichem edited Hilf: a Zaml-Bukh fir Literatur un Kunst ("Help: An Anthology for Literature and Art") and himself translated three stories submitted by Tolstoy as well as contributions by other prominent Russian writers in aid of the victims of the Kishinev pogrom.

In 1904 Shalom Aleichem was still living with his family in Kiev in a degree of comfort and tranquility that he had seldom experienced before and was at work on feuilletons, monologues, Kasrilevke and Tevye stories for Der Freynd (St. Petersburg), Der Veg (Warsaw) and other papers, but this comparative calm was soon to be shattered by political events. An adumbration of the turmoil to come is to be found in Shalom Aleichem's story "Yoysef" (1905; "Joseph," 2004) which appeared in Der Veg. This is the monologue of a conceited but not altogether despicable young fop who confesses "in confidence" to the writer how he is besotted by a girl who waits at table in her mother's restaurant. She, however, adores Yoysef, a Bundist conspirator, so the narrator ingratiates himself with the Bundists, talks about Karl Marx and August Bebel and attends a clandestine meeting in the forest at which Yoysef speaks. He observes that the earnest young men at the meeting are dressed in Gorki-style black blouses (a style that Shalom Aleichem himself affected from time to time). When the dzhentlmen, as the conspirators call him, finally asks Yoysef for his advice, he simply recommends speaking to the girl directly, since he has no time for such trifles. The conspiracy is discovered and Yoysef is arrested. Returning from a business trip the dzhentlmen finds that the restaurant has disappeared.

Literary reflections of political ferment were soon followed by all too real historical events. In October Shalom Aleichem and his family lived through the three days of the Kiev pogrom associated with the failed 1905 revolution. As angry mobs surged through the streets, the family sought refuge in the Hotel Imperial. After these experiences Shalom Aleichem resolved to leave and moved via Radzilow and Brody to Lemberg (today: Lvov) in Austrian Galicia. Whereas others had lost faith in Russian liberalism two years earlier in the aftermath of the Kishinev pogrom, for Shalom Aleichem 1905 was the turning point. A further motive for leaving Russia may have been his apprehension that his political satires could have unpleasant consequences. What little financial security there had been in the Kiev years disappeared and, although he was by now the most famous of Yiddish writers, whose works were enjoyed by a vast readership, he was now cut off from his publishers. He began a reading tour that took him to many points in Galicia and Romania. Leaving his family in Geneva, where Abramovitsh was at the time, he continued his reading tour to Paris and London. From this time on Shalom Aleichem became increasingly dependent financially on enervating but hugely successful lecture tours, and it was only on such tours that he ever again returned to Russia.

In 1906 Shalom Aleichem made his first visit to the United States, arriving on October 20 in New York, where he was given an exhilarating welcome in both the Yiddish and English-language press. Two plays were commissioned from him, and the Hearst Press offered him a lucrative contract. Shalom Aleichem remained in the Bronx for some months and on February 8, 1907, a dramatization of Stempenyu, produced by Boris Tomashevski, was staged at the People's Theater, while on the same night "Der Oysvorf oder Shmuel Pasternak" ("The Outcast: Or Shmuel Pasternak"), a version of Yakshevoz which Shalom Aleichem had specially adapted for Jacob Adler, was performed at the Grand Theater. Both plays were excessively sentimentalized for the New York theater audience, and both
were box-office disasters. Meanwhile Hearst's Jewish American collapsed and Shalom Aleichem was unable to interest the Yiddish press in his Motl. In the early summer he returned to Geneva via The Hague, a disappointed man.

In August Shalom Aleichem attended the 8th Zionist Congress in The Hague as the delegate of New York Federation of American Zionists. It was here that he met Hayyim-Nahman *Bialik for the first time and formed a close friendship with him. His impressions of this event are recorded in "Ayndrukn fun Tsiisonistishn Kongres" (1907; "Impressions from a Zionist Congress," 1984). In the early autumn he went on holiday in the Alps near Geneva and invited Bialik to visit him there. They were joined by Abramovitch and Ben-Ami as well. It was at this time that the four of them posed in a photographer's studio for the famous comic portrait showing them in a boat with Shalom Aleichem standing behind holding an up-right oar. He describes this meeting in "Fir Zenen Mir Gezesn" (1908; "Once There Were Four," 1979). It was at this time that Shalom Aleichem was diagnosed with tuberculosis.

Shalom Aleichem's continued preoccupation with the Kiev pogroms of 1905 and their aftermath were reflected in his novel Der Mabl ("The Flood") which was serialized 1907–8 in Vorhayt. In 1918 the novel appeared in book-form under the title In Shturem (In the Storm, 1984). This novel reflects the reactions of progressive Jewish youth to the pogroms to which Shalom Aleichem and his family had come all too close. Embodied in the lives of the protagonists, we see the tensions that existed between universal and national solutions to Jewish social problems. The original title implied that a "flood" would sweep away cruelty and violence. The change in title indicates a subsequently less sanguine view of social progress.

In 1908 Shalom Aleichem was once again compelled by financial constraints to undertake a reading tour in Russia. He had by now become famous for his recitations, and the tour went well until in early August in Baranovichi, some distance north of Pinsk, he suffered a severe recurrence of tuberculosis and was diagnosed as having open pulmonary tuberculosis. After two months of rest in Baranovichi itself, he moved to the resort of Nervi on the Ligurian coast for further recuperation. This setback was to some extent offset by the celebration of his 50th birthday and 25 years of literary creativity in 1909. A committee of authors secured the rights to his works and returned them to him, thus ensuring him a permanent income. During this period some of Shalom Aleichem's works began to appear in Russian translation and met with much critical acclaim.

In Nervi, perhaps realizing that his health prognosis was not very favorable, Shalom Aleichem made a first start on his autobiography Funem Yarid. However, he soon set it aside in order to work on other projects including his Ayzvn-Geshikhtn (Railroad Stories, Engl. 1987), which were written and published over a period stretching from 1902 to 1911, although of the 20 stories that eventually constituted this series, as many as nine were written in various sanatoria during this period of convalescence in 1909. In these stories Shalom Aleichem skillfully exploits a situational framework of fleeting encounters, such as he must often have experienced when traveling between venues on his frequent and grueling reading tours and paints a picaresque composite picture of the precarious economic circumstances of Jews living in those western parts of the Russian Empire in which they were permitted to reside. Dan Miron shrewdly observes that it is a token of the increasing modernity of Shalom Aleichem's work that his narrators become progressively less severe in their critique of social reality. The traveling salesman is a "caricature of the maskilic 'watchman' or the Mendelean sarcastic commentator" [Image, p. 334].

Two of these Railroad Stories, both written in 1909, may serve to characterize this important cycle in Shalom Aleichem's oeuvre. "Stantsye Baranovitsh" (1909; "Station Baranovitch," 1979) is named after the very station at which Shalom Aleichem himself had almost died the year before. The narrator heard the story from his father who had it from his own father. It happened in the days of Nikolai I. Kive, a Jew who had permitted himself a number of injudicious remarks, was condemned to run the gauntlet. Reb Nisl, the narrator's grandfather arranges a simulated funeral and then slips Kive over the border into Austrian Galicia. From then on Kive sends begging letters, threatening to return and confess. Finally he threatens to send Reb Nisl's letters to the police. At that point the train arrives in Baranovichi. The narrator hurriedly alights and the story is never finished. "May Station Baranovitch burn to the ground!" This is almost a shaggy-dog story in which much of the ironic humor lies in the ploys with which the narrator plays his audience much as Shalom Aleichem does his. What, after all, would the devoted readers of Shalom Aleichem's Ayzbn-Geshikhtn have done had Shalom Aleichem really died? "A Khasene on Klezmer" (1909; "The Wedding That Came without Its Band," 1979) is a story told to the narrator one hot afternoon in a railway compartment by a merchant with a penchant for euphemistic irony who relates the humorous side of the 1905 pogroms. On this occasion the arrival of the drunken pogromists was delayed just long enough by the blessed inefficiency of the railway for the Cossacks summoned by the police superintendent to arrive and establish order. That salvation should take the form of a regiment of mounted Cossacks is in itself highly ironic.

Shalom Aleichem's unhappy experiences with the New York Yiddish theater found expression in the serialization between 1909 and 1911 of Blondzhende Shtern (Wandering Star (sic), 1952). The themes bear comparison with those of Stem-penyu and Yosele Solovey, and the novel takes the form of a complex and picaresque story in which two Jewish artists make their way from the shtetl to Second Avenue. The hero is a brilliant star on the Yiddish stage who degenerates both as artist and human being in the New World, unlike the heroine, a singer, who ventures outside the narrowly Jewish world and preserves her integrity. The affinity with Charles Dickens, who was much admired by Shalom Aleichem, is particularly clear in the Whitechapel scenes.
Between 1909 and 1913 Shalom Aleichem and his family moved between health resorts in Nervi and the French Riviera, in the winter, and Switzerland and St. Blasien in the Black Forest, in the summer. Despite ill health and feverish literary activity, this was once more a relatively tranquil and secure interlude in Shalom Aleichem’s life. This was also the period in which the “Jubilee” edition of his works in 16 volumes Ale Verk: Yubileum Oysgabe (“Complete Works, Jubilee Edition,” 1909–15) was prepared for publication. This edition, which was interrupted owing to difficulties during World War I, did much to establish Shalom Aleichem’s literary reputation which had earlier been belittled in some quarters.

The fourth volume of the Yubileum Oysgabe (1910) comprises Menakhem-Mendl (1910; The Letters of Menakhem-Mendl and Sheyne-Sheyndl, 2002). This is the so-called “canonized version” of the Menakhem-Mendl letters that were further, but somewhat unsatisfactorily, expanded as Menakhem-Mendl: Nyu-York-Varshe-Vin-Yehupets (1913; The Further Adventures of Menachem-Mendl: New York – Warsaw – Vienna – Yehupets, 2001). Taken together these series of letters somewhat loosely constitute an epistolary novel, in part inspired by Abramovitsh’s Kitser Masoes Binymoin Hashlishi (1878; The Travels and Adventures of Benjamin the Third, 1949). The textual history is somewhat complex, but the 1910 version is the most artistically cohesive. To some extent a self-portrait, though Shalom Aleichem sought to minimize this perception in his introduction to this second edition, Menakhem-Mendl travels from place to place naively confident in the imminence of prosperity, meanwhile corresponding with his down-to-earth and skeptical wife, Sheyne-Sheyndl. She urges him to forget his harebrained schemes and hurry home. Her attitude, which is initially somewhat credulous, becomes increasingly skeptical and eventually downright contemptuous, though in the revised versions her tone becomes less abrasive and her common sense is more sympathetically portrayed. Menakhem-Mendl is the quintessence of the lafmensths trying his hand at all manner of activities, including the stock exchange and the commodity market. He acts as insurance agent, marriage broker, and journalist and eventually goes to New York, though this last episode was dropped in the final version. In the interaction between husband and wife, as Ruth Wisse has shrewdly observed, we see transferred into two characters Tevye’s ironic alternation between optimism and tragic resignation. Miron refers to Menakhem-Mendl and Sheyne-Sheyndl as Don Quixote and Sancho Panza-like archetypes. Marxist critics such as Max Erik have sought to stress Shalom Aleichem’s presentation of the hopelessness of Menakhem-Mendl’s schemes as an implied critique of capitalism. It would be more accurate to say that Menakhem-Mendl’s misfortunes are symptomatic of the arbitrary restrictions placed by the czarist regime on Jewish enterprise, but this is too narrow a perspective. Menakhem-Mendl’s willingness to believe that at any moment he will make his fortune and finally free himself and his family from material worries is an ironic reflection of the theme of utopian and eschatological hope that runs through much of Jewish literature.

The fifth volume of the Yubileum Oysgabe comprises Motl Peyse dem Khazns (1911; The Adventures of Mottel, the Cantor’s Son, 1953). Shalom Aleichem was at work on Motl Peyse from 1907 right up to a few days before his death. It is a fragmentary novel whose first-person narrator is initially almost nine years-old and may be about 11 by the end of the second part, though his putative age has been the subject of some controversy. After the death of his father and the forced sale of the family’s household goods, Motl immigrates with his mother to the U.S. in what Seth Wolitz perceptively describes as a carnivalesque Exodus or secular burlesque of the Haggadah, with the flight from the slavery under the czar across the European wilderness and the Atlantic to the promised city. The critical irony results from the discrepancy between Motl’s carefree perception of what are for him wonderful adventures and the perils endured by his mother and indeed the whole community of Russian Jews constantly threatened by pogroms. Meanwhile Motl, rather like Huckleberry Finn, is preoccupied with his blithe pranks or with helping his elder brother in comically vain efforts to make money by selling ink or kvas. The omission of chapters 5 and 16 from volume 5 was occasioned by the publisher’s wish to promote the volume as being suitable for children. For the complete text see either vols. 18 & 19 of the Folksfond edition of Ale Verk fun Shalom Aleichem (“Complete Works of Shalom Aleichem,” 1920) or Khone Shmeruk’s exemplary edition which follows the 1913 Progres text.

The seventh volume of the Yubileum Oysgabe (1911) comprises the Tevye der Milkhiker cycle which by this point was almost complete. The full cycle consists of the following episodes: 1. “Kotoynti” (1903; “I Am Not Worthy,” 1994), which had been included in 1895, is omitted from the Yubileum Oysgabe and was advisedly not reprinted until after the author’s death. In this prefatory letter, the reader is introduced to the eponymous hero for the first time. Tevye is overawed by Shalom Aleichem’s condescending to put him “in a book” and is ashamed of his supposed lack of learning. However, “Kotoynti” and “Vakhalaakkakoyys” (1918; “Tevye Reads the Psalms,” 1969), far from adding anything, detract somewhat from the poignantness of the stories concerning Tevye’s daughters; 2. “Das Groyse Gevins” (1903; the revised version of the story originally entitled “Tevye der Milkhiker,” 1895; “Tevye Strikes It Rich,” 1979) and relates how Tevye, a country Jew, who struggles to improve his knowledge of scripture, became a dairyman as a result of the generosity of two Yehupets ladies to whom he had given a lift after they had lost their way in the forest; 3. The sequel is “A Boydern” (1899; “The Bubble Bursts,” 1949) which relates how Tevye entrusts his savings to his distant relative, Menakhem-Mendl, who loses everything on the Yehupets stock-exchange; 4. In “Hayntike Kinder” (1899; “Modern Children,” 1949) it is related how Tevye’s eldest daughter, Tseytl, chooses to marry the sickly young tailor, Motl Kamzoyl, rather than the rich elderly butcher, Leyzer-Volf; 5. “Hodl” (1904; “Hodel,” 1946) was written just one year
before the outbreak of the 1905 revolution. Tevye is offered a financially attractive match for Hodl, his second daughter, but it transpires that she is secretly betrothed to Pertshik, a revolutionary whom Tevye had invited to tutor his daughters, an ironic allusion perhaps to Shalom Aleichem's own romance with Olga/Hodl some quarter of a century earlier. After a hasty wedding, Pertshik departs on a secret mission, is arrested and exiled. As Hodl leaves to join her husband in Siberia, Tevye, who prides himself on his manly stoicism, weeps bitter tears; 6. “Khavé” (1906: “Chaveh,” 1948) is the story of Tevye's third daughter who elopes with an autodidact Ukrainian clerk whom she regards as a “second Gorki.” Tevye attempts to intervene with the village priest but is rebuffed. In accordance with halakhic requirement and despite the promptings of his heart, Tevye performs ritual mourning for his daughter as though she were dead and rejects her when she accosts him in the forest. There is considerable irony in the fact that the threat of assimilation is associated with the name of Gorki, a writer much admired by Shalom Aleichem; 7. “Shprintze” (1907; “Shprintצ,” 1995) relates how, after the political upheavals of 1905, many wealthy Jews fled from the cities to the countryside, and Tevye had good business delivering diary products to their dachas. The feckless son of a rich widow woos Shprintze, Tevye's fourth daughter. At first Tevye is apprehensive but gradually warms to the idea, beginning once again to dream of the acts of charity he would be able to perform as the father of a millionaire. Suddenly, however, Tevye is summoned by the widow's brother who treats Tevye as a wily schemer and offers him money as compensation for breach of promise. Tevye is so shocked that he simply turns on his heels. Shprintze drowns herself; 8. In “Tevye Fort keyn Erets-Yisroel” (1909; “Tevye Goes to Palestine,” 1995), Shalom Aleichem meets a well-dressed Tevye traveling on a train. In the meantime his wife, Golde, has died and his youngest daughter, Berylke, in order to ease her father's misfortunes, has married the proverbially rich Pedahtsur, a parvenu who had made a fortune during the Russo-Japanese war. By now Tevye realizes that even Hodl had done better with her exiled revolutionary idealist. In Pedahtsur's ostentatious mansion, Tevye is a silent witness to his daughter's misery. Embarrassed by Tevye's humble profession, Pedahtsur is ready to pay for him to go to Palestine. Tevye, who has always dreamed of visiting Rachel's tomb and the Western Wall, accepts the offer, expecting never to see his children again. In 1911 Shalom Aleichem saw Tevye's departure for Palestine as the culmination of the cycle. However, three years later, he added one more story together with an epilogue; 9. In “Lekh-Lekho” (1914; “Get Thee Out,” 1949) after an interval of many years Shalom Aleichem encounters Tevye once more. The planned journey to the Holy Land had been abandoned when Pedahtsur had gone bankrupt and Motl Kamzoy had died leaving Tevye responsible for his daughter, Tseytul, and her children. In 1905 pogroms had begun in the large towns and became widespread. The peasants, with whom Tevye had lived in the village in peace for decades, come to his house explaining that, though they have nothing against him personally, they have no choice but at the very least to break a window or two. But this is nothing compared to what happens at the time of the trial of Menahem Nendel “Beilis, when he is driven out of his village. At the moment of departure, Khave returns to share her family's misfortunes. Tevye asks Shalom Aleichem whether he was right to be forgiving, but Tevye, whose grandchildren are waiting, has to leave before Shalom Aleichem has time to answer.

“Vakhalaklakoykôs” is the sequel to “Lekh-Lekho.” It was first published posthumously at the time of the editing of the Folksfond edition. Shalom Aleichem once again meets Tevye on a train and Tevye takes the opportunity to elaborate further on how it was back in 1905, when the hromada or rural assembly had decreed that the Jews be made to feel the wrath of the general community. Tevye had quick-wittedly devised a test to determine whether God truly wanted him to suffer or not, in which the peasants had to attempt to repeat tongue-twisters such as “vakhalaklakoykôs” and “memaymakim.” The choice of these words is, of course, not determined solely by their refractory phonetic qualities, but represents yet another level of Tevye's (and the author's) irony: “Let them be confounded and put to shame that seek after my soul: let them be turned back and brought to confusion that devise my hurt... Let their way be dark and slippery: and let the angel of the Lord persecute them” (Ps. 35:4–6); “Out of the depths have I cried unto thee, O Lord. Lord hear my voice: let thine ears be attentive to the voice of my supplications” (Ps. 130:1–2). It is sometimes held that Tevye has a shrewd grasp of scripture and that his supposedly clumsy misquotations are an element in Shalom Aleichem's humor. Roback for example speaks of “malapropisms” and much the same view is taken by Butwin. More accurate assessments are offered by Michael Stern, Hillel Halkin, and Joseph Sherman: the truth is that Tevye is always in control of his quotations, and whether he cites literally, in modified form or, as he occasionally does when addressing a Pedahshtur or a Leyzer-Volf, in deliberate doggerel, it is always to appropriate ironic effect. When considering Tevye and his quotations – which serve also to anchor the narrative within the context on Jewish literary tradition – it is well to bear in mind that they represent a kind of mythopoeia, a use of language to transcend an unsatisfactory environment, and as such Tevye is a correlative of Shalom Aleichem, and of the artist in general.

The peasants meanwhile not surprisingly fail Tevye's test and in recognition of the fact that Tevye has lived peaceably among them for so many decades and that he is "a Jew, certainly, but not a bad man," they allow him to break a couple of his own windows pro forma. Tevye concludes by bemoaning the insecurity of the Diaspora, but emphasizes by contrast the naturally superior intelligence of Jews which imposes upon them higher moral obligations. Tevye's final word is that should the Messiah not come in the meantime, then perhaps he and Shalom Aleichem may meet again in Yehupets, Odessa, Warsaw, or even America, but in the meantime Shalom Aleichem should give his greetings to the Jews he meets,
tell them not to worry and say that “our ancient God lives.” Although supposedly related, Menakhem-Mendl and Tevye are very different characters, but they have in common that each episode takes them to a new crisis or catastrophe from which they “bounce back,” as Miron puts it, by the power of their fortitude.

The figure of Tevye was based in part on the real-life model encountered in Boyarka but was at the same time inspired by Abramovitch’s itinerant hero, Mendele, a fact to which Shalom Aleichem makes a veiled allusion, as Ken Frieden has noted, in “Hayntike Kinder.” Tevye sees himself as a modern Job and alternates between restrained alterations with the inscrutable deity and total resignation. Though he loses his home, his wife, and his daughters, his outlook remains one of self-ironizing good humor. In the revised versions, the narration is entirely in Tevye’s voice, enlivened by polyphonic embedding of the disparate voices that Tevye constantly cites. Indeed, it may be said that one of Shalom Aleichem’s most characteristic strengths is his ear for distinctive, idiosyncratic discourse, as is also seen clearly in the monologues and the railroad stories.

Though Shalom Aleichem gently mocks would-be social reformers, social tensions nevertheless form an important part of the thematic structure of his Tevye-cycle and of his works in general. An important theme is the contrast between grinding rural penury and the affluence of Jewish urban bourgeoisie of Yehupets (i.e., Kiev). Inequalities of wealth, generational conflict and the contrast between the genders are seen as a microcosm of the strains in Jewish social life in late 19th-century Russia. The political disillusionment that sets in after the collapse of the 1905 revolution is echoed in the contrast between Hodd’s idealism and Beylke’s resigned pragmatism. Also much in evidence is the dichotomy between Tevye’s frequently asserted faith that God will provide and the acerbic skepticism that he applies to the dilemmas of daily life.

The celebration of the beauty of nature in the Ukrainian landscape re-echoes similar passages in Abramovitch, while the topic of animal welfare is reflected in the story “Tsar-Balekhayim” (“Pity for Living Creatures,” 1968) and elsewhere.

In 1914 Shalom Aleichem wrote four film screenplays in Russian that were never produced or published, but which included an adaptation of Tevye which was utilized in part by Charles Davenport in 1919 when he directed his silent film Khave. In 1915 Shalom Aleichem also wrote a dramatized version of the Tevye stories “Khove” and “Lekh-lekho,” entitled “Tevye der Milkhiker: A Familien-Bild in Fir Akt’n” (“Tevye the Dairyman: A Family Portrait in Four Acts,” 1923), which was the famous actor and director Maurice “Shwartz staged in Vienna in 1924. In 1939 Shwartz filmed Tevye der Milkhiker which became one of the most successful of all Yiddish movies. In 1925 Menakhem-Mendl was adapted for the cinema under the direction of Alexander *Granovsky as Yidish Glikn (“Jewish Luck”) with inter-titles by Isaak *Babel and with Solomon “Mikhoels in the role of Menakhem-Mendl. The most celebrated transformation of Shalom Aleichem’s Tevye stories was the musical, Fiddler on the Roof (1964), with a score by Sheldon Harnick and Jerry Bock.

The 12th volume of the Yubileum-Oysgabe (1912) comprises “Marienbad” (1911; Marienbad, 1982), an epistolary novel. Shalom Aleichem returns here to social milieux comparable to those depicted in Yakneho”z, creating a comedy of manners in which the vain pretensions of the superficial nouveau-riche Jewish bourgeoisie of Warsaw is exposed to biting satire, tempered by Shalom Aleichem’s compassionate understanding of the all-too-human folly which drives their actions. The work consists of a polyphony of epistolary voices exemplifying a wide range of Yiddish registers from the Galitsyaner to the Lithvak, from the Russified speech of Odessa to the semi-illiterate writing of the lottery winner, or to the pretentious Hebrew of pompous fools. Equally interesting from the socio-linguistic point of view is the high status accorded to German, which various characters attempt to employ with varying degrees of accuracy. The complex plot of Marienbad involves numerous wealthy Jews and their wives mainly from Nalewki Street in Warsaw, but also from Kishinev, Bialystok, Odessa, etc., whose spouses are in Marienbad nominally in order to take the waters, but who are in reality more concerned with flirting, playing cards, or securing matches for their daughters. “The world has changed,” as the main female protagonist, Beltshi Kurlender, writes to her husband in Warsaw, and these characters, whose ancestors had for centuries lived the traditional life of the shtetl, have seen their world transformed by wealth and are themselves often amazed at the changes their lives have undergone. Not so far, perhaps as to permit anything particularly reprehensible to occur, but through misunderstandings, gossip, and the malevolence born of blind jealousy, severe matrimonial strife and at least one divorce result. Bourgeois Jewish Warsaw and Tevye are, of course, worlds apart, but the Y amaytshikhe and Tevye have in common the problem of finding matches for numerous daughters. The action is datable to the summer of 1911 on account of the mention of the visit of the shadkhin, Svirski, to the 10th Zionist Conference, which Shalom Aleichem himself attended in Basel in August. Note also the irony with which Khayim Soroker, for example, laments his failings as a writer, while his wife, Ester, compares his letters to a feuilleton.

In 1911 Shalom Aleichem’s works began to appear in the Hebrew translation of his son-in-law, the Yiddish and Hebrew writer Y.D. Berkovitz, Kitvei Shalom-Alekhem (“Works of Shalom-Alekhem,” 3 vols., Warsaw, 1911–13). In fact, Shalom Aleichem had been participating in the preparation of this edition from 1905 onwards. The relationship of Shalom Aleichem’s Russian and Hebrew works to his Yiddish oeuvre has still to be adequately investigated, but it may be said that, in a manner which is similar to the gestation of many of Mendele’s works and anticipates the relationship between the Yiddish and English versions of the works of Isaac *Bashevis Singer, Shalom Aleichem worked together with Berkovitz and made changes to the text, especially the endings, during
the process of translation, and these emendations were in turn adopted in subsequent Yiddish editions.

The 16th volume of the *Yubileum-Oysgabe* (1915) comprises an incomplete version of the novel *Blatiker Shpas* (the complete text is only to be found in the 1923 two-volume edition; *The Bloody Hoax*, 1991). This novel was later dramatized and popularized as *Shver tsu Zayn a Yid* (“It’s Hard to Be a Jew,” 1948). It explores the complexities of Jewish-gentile relations and narrates the romantic complications arising in the household of David Shapiro as the result of the exchange of identities between the talented Jewish student, Hershel Shneyerson, who lacks a *pravozhītel’stvo* or residency permit and is unable to secure a university place, and his friend, Ivan Ivanov, the privileged son of a Russian general.

In 1913 Shalom Aleichem commenced work on a truly comprehensive edition of his works that was planned to comprise 40 volumes. In fact, only 28 volumes appeared posthumously (1917–23).

In the spring of 1914 he set out on a reading tour of Russia which was to take him to 20 cities including Warsaw, where he visited Peretz (see: “A Vokh mit Y.L. Perets” (“A Week with I.L. Peretz,” 1915). At the beginning of World War I, Shalom Aleichem was taking a holiday on the Baltic coast of Germany following the conclusion of his Russian tour. As an “enemy alien” he was obliged to leave Germany and managed to reach Copenhagen, where he remained for several months in ill health and without financial support until he was able to embark for the U.S., where he arrived with his family (except for his eldest son, Misha) in December. In New York he was once again given an enthusiastic welcome and a reception was organized for him in Carnegie Hall, but serious support was not forthcoming. Cut off from his income in Europe, he was obliged to undertake further reading tours and wrote for the New Yiddish press. He was diagnosed as having incipient diabetes, but was not in a financial position to spend the winter in the south as his doctors advised.

In 1915 Shalom Aleichem’s autobiography, *Funem Yarid*, was serialized in *Der Tog*. In the past he had made several attempts to begin this work, but it was not until 1913, while living in Switzerland, that he began writing *Funem Yarid* in earnest. He lived to write two and a half of the projected 10 parts. In its incomplete form, the story covers the author’s childhood and his romance with Olga Loyeva up to the moment at which they are about to be parted. It is noticeable that the cyclical structure of this work is comparable to that of Teyye, *Menakhem-Mendl* and other works with their ever recurring peripetēa of the stroke of luck followed by catastrophe.

On September 19, 1915, while living in Lenox Avenue in Harlem, Shalom Aleichem was deeply shocked to hear of the death of Misha, from tuberculosis in a sanatorium in Copenhagen. On receiving this shattering news, Shalom Aleichem decided to rewrite his “Tsvae” (1923; “The Last Will and Testament of Shalom Aleichem,” 1994).

Despite failing health, financial difficulties compelled him to undertake yet another reading tour in 1916. One of his last stories, “A Mayse mit a Grinhorn” (1916; “Business with a Greenhorn,” 2004), was published in *Di Vorhayt* in January. This monologue is told directly to the reader, without the need for Shalom Aleichem to act as addressee, in the voice of Mr. Baraban, a Jewish-American businessman, full of complacent contempt for the “greenhorn,” potentiated by ugly sexual jealousy. This is a portrait of sheer meanness in the ruthless commercial atmosphere of New York City and is further evidence of Shalom Aleichem’s growing disillusionment with the purported advantages of the New World. The story is so interlarded with Anglicisms that Berkovitz found it necessary to append a glossary, and it is evidence of Shalom Aleichem’s uncannily accurate ear for language that after a comparatively brief acquaintance with the U.S. he was able to make virtuoso, satirical use of this register. In this context it is interesting to note that in a high proportion of the surviving portraits of Shalom Aleichem, he is depicted with his pocket notebook in his hand and it was undoubtedly to his habit of constantly noting down the turns of phrase that he heard around him that much of the accuracy of his narrative voices may be attributed.

On May 13, 1916, shortly after moving to Kelly Street in the Bronx and while still at work on the last unfinished chapter of *Moll Peyse dem Khazns*, Shalom Aleichem died of tuberculosis. Vast crowds attended his funeral, and he was mourned throughout the Jewish world. He was buried in the “Honor Row” of the Arbeter Ring section of the Mount Carmel Cemetery in Queens, New York.

After his death his popularity continued to increase not only with the Yiddish readership, but also in translation, especially in Russian, English, and Hebrew. In the 1920s and 1930s Shalom Aleichem’s reputation grew steadily as the result of positive evaluation by such critics as *Baal-Makhshoves*, M. *Wiener*, Maks *Erik*, Elye Spivak and I.J. *Trunk*.

**Works and Correspondence**

The most complete edition of Shalom Aleichem’s works to date is the *Folksfond* edition in 28 vols., 1917–25, reprinted several times. Valuable for its critical introductions is the 16–vol. edition of the *Oysgeveyts Verk* (“Selected Works,” Moscow, 1935–41). In 1948 a critical edition of Shalom Aleichem’s collected works was initiated in Moscow by N. Oyslender and A. Frumkin. Only the first three volumes (of a projected 20) appeared. These include the complete Yiddish belletristic writings of the years 1883–90, most of which are unavailable elsewhere. The editorial work of Oyslender and Frumkin together with Kh. Shmeruk’s editing of *Dos Meserl* (1983) and *Moll Peyse* (1997) serve as models for a complete critical edition of Shalom Aleichem’s works, which remains an as yet unrealized desideratum.

Selective List of Works in English Translation

**Biography**

No critical biography of Shalom Aleichem has yet been written, but there is a rich memoir literature: Y.D. Berkovitch, *Ha-Rishonim ki-Vnee Adam: Sippurei Zikhronot al Sholom-Aleikhem uVnei-Doro* (1938–43, 1959, 1976) (my master in the sin-

[Hugh Denman (2nd ed.)]

**SHALOM ALEIKHEM** (Heb. שלום עליכם; “peace be upon you”).

1. A form of greeting common among Jews. The reply to the greeting is *aleikhem shalom* (Heb. שלוםlekhem; lit. “upon you be peace”). The greeting is mentioned, in the singular form in the Talmud: "A teacher should be greeted with ‘Peace to thee, my master,’ and should be answered (if he makes the first greeting) with, ‘Peace be with thee, my master and teacher’ " (Ber. 27b, and Rashi ad loc.; see also Sh. Ar., YD 242: 16). In modern Hebrew, the greeting is often shortened to *shalom* (see Form of *Greetings*).

2. Opening words of hymn welcoming Sabbath angels to the home. It is recited by the head of the family upon re-
turning from the synagogue on the Sabbath eve. The hymn, which is of late composition, is known only in the Ashkenazi rite. It is based on the talmudic statement (Shab. 119b) that on the Sabbath eve two ministering angels accompany every Jew from the synagogue to his home.

**Bibliography:** Davidson, Œzar, 3 (1930), 465 no. 1268.

**Shalom Ben Yizhak of Neustadt** (c. 1350–c. 1413), talmudist, teacher of Jacob *Moellin, in whose works there is much information on him. Shalom apparently lived for a time in Vienna and is therefore sometimes referred to as “Maharash of Vienna,” but moved to Neustadt. His teachers were his father, whose interpretations of halakhah, kabbalah, and the Torah he quotes, Israel of Krems, and other Austrian rabbis. He established a yeshivah at Neustadt, later known as the yeshivah of Israel Isserlin, which was one of the most important in Austria.

His two sons – Yonah and Yudel – served as rabbis in Vienna and in Neustadt, respectively, and are mentioned several times in his book of sermons. Yonah died a martyr’s death, following the edict of 1420 in Austria.

The responsa of Shalom are scattered throughout the rabbinical works of his contemporaries and of his disciples, and constitute reliable source material for the history of the Austrian Jews. S.Y. Spitzer has published Hilkhut u-Minhatgei R. Shalom (Derashot Maharash) (1977), containing 546 items dealing with various laws of the Shulhan Arukh, which is also valuable source material for the customs of Ashkenazic Jews of his time, the organizational and economic conditions of the Jewish communities, and the relations between Jews and non-Jews. His works reflect the harsh conditions under which the Jews of Central Europe lived at the end of the 14th century.

[Shlomo Eidelberg]

**Shalom (Friedland), Rahel** (1904–1988), Israeli engineer. Born in Poland, Rahel Shalon went to Palestine in 1925. She served in the *Haganah (1925–48), and was a major in the Israel Defense Forces. She became professor of civil engineering at the Haifa Technion in 1952; dean of the School of Graduate Studies, 1958–62; and senior vice president in charge of research in 1963. She wrote “Cement and Concrete” (1939) and “Cementitious Materials” (1964), and edited the monthly In the Field of Building from 1952. Shalon was chairwoman of international research committees on building in hot climates.

**Shaltiel, David** (1903–1969), Israeli soldier and diplomat. Born in Hamburg of a Sephardi family, Shaltiel went to Palestine in 1923 and served in the French Foreign Legion from 1926 to 1931. In 1932 he returned to Palestine and joined the *Haganah, for which he became an arms purchasing agent in Europe. Arrested by the Nazis in 1936, he was freed through Haganah efforts in 1939. In 1940 he established Haganah counterintelligence and was chief of Haganah intelligence (1941–42, 1946–48). He was the commander of Jerusalem during the *War of Independence, and received the rank of alfuf. In 1950 Shaltiel was appointed Israel military attaché in France, Benelux, and Italy. He was minister to Brazil and Venezuela (1952–56), minister (then ambassador) to Mexico and the Caribbean Islands (1956–59), and from 1963 to 1966 ambassador to Holland.

**Shamgar** (Heb. שמח), son of Anath, deliverer of Israel who flourished in the period of the Judges. According to Judges 3:31, he saved Israel by slaying 600 Philistines with an oxgoad. The Song of Deborah describes the times in which Shamgar lived as so dangerous that the highways were unused, travelers preferring to walk through the safer byways (Judg. 5:6). The reports about Shamgar are unusual in that no information of a personal or family nature is given about his tribal af-

390

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 18
filiation, the exact time at which he lived, or the duration of his influence. It is not said that he judged Israel, nor are his death or burial recorded. It is only known that he lived after "Ehud and before "Deborah. The name Shamgar appears to be of Hurrian origin and may well be šîmîg-ăr(i), "[the god] Shimike gave." "Anath" was the name of a Canaanite goddess. It may have a mythological association or it may refer to the birthplace of the hero, a Canaanite town in Galilee. There is no certainty, therefore, that Shamgar was an Israelite. The connection between his exploits against the Philistines and the report of Judges 5:6 is also unclear. It is not likely that he attempted to clear the roads of marauding Philistine bands, since at the time of Deborah (c. 1125 B.C.E.) the Philistines did not yet constitute a threat to Israel. Some scholars believe that Shamgar was a foreign oppressor who, like Sisera later on, may have brought northern Palestine under his control and oppressed the Israelites. The author of the late reference in Judges 3:31 would thus have derived Shamgar, the Israelite judge, from the older Song of Deborah (5:6), a misappropriation which transformed a foreign oppressor into an Israelite judge. This view is also highly unlikely since the Song of Deborah parallels Shamgar with Jael, who is clearly pro-Israelite. It has been observed that Shamgar's adventure bears striking resemblance to those of "Samson, who also used the jawbone of an ass to slay the Philistines (Judg. 15:15–16). In fact, he may have belonged to the time of Samson.

[ Nahum M. Sarna]

SHAMGAR, MEIR (1925– ). Israel jurist. Born in Danzig, Shamgar arrived in Palestine in 1939. Arrested for underground activities in the Irgun Zevi Le'ummi, he was held under administrative detention by the Mandatory authorities from 1944 until 1948. Later, as a colonel of the Israel Defense Forces, he was Military Advocate-General from 1961 until 1968. Appointed Israel's attorney-general in 1968, he appeared for the government in the dramatic Shalit "Who is a Jew?" case and in the Sussman Inquiry Commission into the El Aksa fire. In 1971 he led an investigation into crime and from 1972 devoted most of his time to various economic offenses and gained a reputation for hard but fair investigating and prosecuting. As a member of Prime Minister Rabin's "think tank," he took an active part in the drafting of the legal formulation of the Israel-Egypt disengagement agreement after the Yom Kippur War. He was appointed to the Supreme Court in 1975 and in 1983 he became president of the Supreme Court, a position he held until 1995, when he retired. As a justice Shamgar was a staunch defender of freedom of expression, ruling in favor of the media when their democratic rights were challenged. As president of the Supreme Court, he worked to improve the administrative systems of the courts, introducing methods of supervision, reporting, and control. He also oversaw the move to the new Supreme Court building. In 1996 he headed the commission investigating Yitzhak Rabin's assassination. In 2005 he received the Democracy Award for his contribution to Israeli democracy.

[ Alexander Zvielli / Shaked Gilboa (2nd ed.)]

SHAMI, YITZHAK (1888–1949), Hebrew writer. Born in Hebron, he taught in Ekron, Damascus, and Philippopolis (Plovdiv), Bulgaria. In 1919, he returned to Hebron where he served as a teacher and was active in the Jewish community. He moved to Tiberias in 1926, and finally settled in Haifa in 1930.

His first short story, "Ha-Akarah," set in the Sephardi community, was published in Ha-omer (1907). Subsequently his stories dealing with the Sephardi and Arabic milieu of Palestine appeared in various literary journals in Palestine and abroad (including Ha-Tekufah, Ha-Shiloah). His collected stories, with an introduction by Asher Barash, were published posthumously (Sippurei Yitzhak Shami, 1951). A new edition of Nikmat ha-Avot with an introduction by G. Shaked appeared in 1975, Hebron Stories, a collection in English translation with an introduction by Arnold J. Band, appeared in 2000. For English translations of his works, see Goell, Bibliography, p. 75.

[ Getzel Kressel]

SHAMIR (Heb. ש"מירה), kibbutz in northern Israel on the Golan slope and the eastern rim of the Huleh Valley, 8 mi. (12 km.) S.E. of Kiryat Shemona, affiliated with Kibbutz Arzi ha-Shomer ha-Za'ir. Shamir was founded in 1944 by a group from Romania who previously maintained a temporary camp near Ramat Yohanan. Until the "Six-Day War (1967) the kibbutz was a border settlement, exposed to Syrian artillery. It struggled to reclaim for agriculture its hilly land, covered with basalt boulders. Shamir's economy improved when it was allocated land in the Huleh Valley, particularly after the completion of the drainage project there. In 1968, Shamir had 430 inhabitants, increasing to 546 in 2002. It raised irrigated field crops (in partnership with Kibbutz *Amir and Kibbutz *Sedeh Nehemya), deciduous fruit orchards, beeives, cattle, and poultry. The kibbutz specialized in honey production and operated optical and nonwoven fabric plants. The name Shamir, meaning “sharp stone” or “corundum,” hints also at the Ha-Shomer ha-Za'ir movement.

[ Efraim Orni / Shaked Gilboa (2nd ed.)]
SHAMIR, MOSHE (1921–2004), Hebrew author. Shamir was born in Safed and raised in Tel Aviv. He was a member of the “Ha-Shomer ha-Za‘ir movement and held a position on its national board. From 1941 to 1947 he was a member of kibbutz Mishmar ha-Emek, and in 1944 joined the Palmah. He founded and edited the literary magazines Yalkut ha-Re‘im, Daf Hadash, and Massa, and edited Ba-Mahaneh, the underground weekly of the Ṣaganah and later the official weekly of the Israel Defense Forces. From 1969 until 1971 he headed the Jewish Agency Aliyah Department in London.

In the initial stage of his career Shamir was interested predominantly in the human aspect of social, class, and national problems. In Yalkut ha-Re‘im he published several stories which were highly critical of kibbutz life and were not included in later collections of his works. This attitude is reflected even in some of his stories for children. In his short stories for adults, the moral is less obvious, although he is still concerned with problems of class and social structure ("Nashim Mehakkot ba-Hu‘az," "Yihye ha-Em Ha-Yihye"), human problems in the kibbutz ("Hut ha-Zemer ha-Nizḥi," "Ad Or ha-Boker"), and problems of immigration and the Holocaust ("Em ha-Hardofim").

Many of Shamir’s articles and stories are devoted to Israel’s struggle before and during the War of Independence, especially in the stories included in Ad Eilat (1950). These works are general emotional apotheoses of the goals and achievements of the yishuv. The native-born Israel hero who is committed to the ideals and goals of his country and whose life and personality are shaped by them attains its romantic crystallization in the novel Ha-Halakh ba-Sadot (1947). The hero, Uri, the young Israeli, grows up amid family entanglements in his kibbutz home and reveals his traits of courage, ruggedness, hidden sensibility, cruelty, and honesty by his dedication to his family, to Mikah (his refugee girlfriend), to his comrades in the Palmah, and in his military activities. Uri became the central figure in Shamir’s works and appears in various guises in two main variations: first, as the born leader capable of stirring groups to action, exemplified by Alik in his stories for youth: “Eḥad Efes le-Tovatenu” (1951) and “Alik ve-ha-Kallaniyyot,” whose early chapters resemble the above stories. Other evolutions of this central character are Ami in the play Kilometer 56 (1949) and the slum children in “Shekediyyot Yafot” and “Aggadot Lod” (1958; in Nashim Mehakkot ba-Hu‘az). A more complex and obscure variant appears as Moshe, first in Tahat ha-Shemesh and in its sequel Ki Eirom Attah (1951).

Shamir’s historical novels show a turning-point in his work. The central character did not change, but the author’s attitude toward him underwent a severe crisis. The earlier unrestrained apotheosis disappeared, and instead the hero’s motives were criticized. By placing him in a different historical context (Alexander Yannai of the Hasmonean era), Shamir reveals how the positive qualities of his hero – leadership and determination – lead in a dialectic manner to negative results. Alexander Yannai, himself a victor over oppression, evolves into a cruel tyrant until his brother Absalom, who had idolized him, revolts against him. Shamir also turns his attention to the psychological make-up of the ruler whose ends justify his means in the historical-biblical novel Ki’vat ha-Rash (1956). Here, and in even a sharper manner in his play Milhemit Be-nei-Or (1955), Shamir reaches an utter negation of hero worship, in the character of King David, who crushes Uriah in order to achieve his egotistical aims. In Ki Eirom Attah, a novel, his theme is the intellectual and erotic revolt of youth against the collectivist values Shamir once lauded. He sets the novel in the 1950s and takes up several problems which concerned Israel’s intellectual world in the 1950s. The hero who rebels against the values of his movement reflects the Shamir of the 1950s, questioning the validity of the sanctu of his youth.

Shamir’s novel Ha-Geval (1966) deals with the condition of Israeli society in the 1960s. One of the heroes of this society, Rafi Orlan, becomes tired of his style of life and finds his way into the no-man’s land between Jewish and Arab Jerusalem. The novel attempts to describe the Israeli “decline” in the 1960s, the feeling of being under siege, the UN soldiers, the nouveau riche. Those who live on the border provide the background of the work.

Positive social themes likewise dominate Shamir’s plays. Despite his questioning of the nationalist-pioneer values of his youth, in the end he reaffirms them (Beit Hillel, 1951; Leil Sufah, Sof ha-Olam, 1954; Gām Zo le-Tovah, 1958; Shetsei Shabbatot, Ad Or ha-Boker). Only in two later plays, Me-Aggadot Lod and Ha-Ramkol, does he deviate from this position, both in his artistic presentation (atmospheric lyricism in lieu of naturalism) and in his ideological point of view. In two plays, Ha-Layla la-Isḥ and Ha-Yoreṣ, Shamir deals with social criticism, as he did in the novel Ha-Geval.

Shamir is a romantic capable of writing on many subjects. His best works are those novels written in the naturalist genre. He depicts his stories against broad and rich backgrounds, has a keen sense of structure, and utilizes complex narrative techniques. Mythological motifs play a role in Ki Eirom Attah, and a vast architectural scope surrounds Meiḥek Basar va-Dam (1951). Likewise he tried his hand at epistolary technique in Ha-Geval, a novel in which he also varies the narrative point of view.

Shamir began to write in a high literary style filled with pathos; his descriptions are elaborate and his dialogues contain a mixture of Arabisms and slang. Sof ha-Olam is also written in the dialect of Israel’s various ethnic communities. In Meiḥek Basar va-Dam, he attempted to imitate the language of the Mishnah, but in Ki’vat ha-Rash he decided against the attempt to imitate the biblical language. His dramatic abilities fall short of his narrative talents. Most of his plays are staged stories (see below) whose dramatic adaptations prevent an adequate characterization. In the two plays Ha-Layla la-Isḥ and Ha-Yoreṣ he tried to introduce modern techniques (flashbacks taken from the style of Arthur Miller and the epic sense of Berthold Brecht) without allowing these techniques to distort the subject of the drama. After the Six-Day War, Shamir turned to political endeavors through his identification with...
the “Greater Israel” movement. He served in the Ninth Knesset (1977–1981) as a representative of the Likud. His works, *Hayyai Im Ishmael* (1968) and *Nes Lo Karah Lanu* (1968), are to be understood against this background. After the Camp David Agreement, Shamir left the Likud and was a founder of the nationalist Tehiyyah party. In 1988 he was awarded the Israel Prize for Hebrew fiction.

**SHAMIR** (Yazernitzki), **YITZHAK** (1915– ), pre-state underground leader and Israeli prime minister, member of the Eighth to Thirteenth Knesset. Born in Ruzinoy, in Eastern Poland, Shamir studied at a Hebrew gymnasium in Bialystok, and was a member of the *Betar youth movement. He studied law in Warsaw, but immigrated to Palestine in 1935 before completing his studies and enrolled at the Hebrew University of Jerusalem. In 1937 he joined the Irgun Zvai Le’ummi (121), but in 1940 was one if the members who broke away from the 121 and joined Lohamei Herut Israel (Lehi), of which he was one of the founders. The following year he was arrested by the British, but managed to escape. Following the murder of the Lehi commander, Yair *Stern in 1942, Shamir became a member of the triumvirate that led the movement, and coordinated its organizational and operational activities. As one of the leaders of Lehi, Shamir was believed to have been connected to the decision by the organization to assassinate the British Colonial Secretary, Lord Moyne, in Cairo in November 1944 – a decision executed by two members of the Lehi. He was arrested by the British a second time in 1946, and was sent to Eritrea, but once again managed to escape, and was granted political asylum in France. He returned to Israel upon the establishment of the State, and until 1955 engaged in trade. In 1955 he was appointed to a senior post in the Mossad, in which he served until 1965, when he returned to engage in business, and played an active role in the struggle for Soviet Jewry. In 1970 Shamir joined the Herut Movement, and was elected to its executive, running the party’s Immigrants Department and later its Organizational Department. In 1975 he was elected chairman of the Herut Executive.

Shamir was elected to the Eighth Knesset in December 1973, and was a member of the Foreign Affairs and Defense Committee and the State Control Committee. After the elections to the Ninth Knesset in May 1977, he was elected speaker of the Knesset – the first speaker from the Likud. After the resignation of Moshe *Dayan from the government in March 1980 Shamir was appointed minister for foreign affairs in his place. He continued to serve as minister for foreign affairs in Menahem *Begin’s second government, in the Tenth Knesset, and following Begin’s resignation at the end of August 1983 he was chosen as the Likud’s candidate to succeed him. Shamir became prime minister in October 1983, and continued to serve simultaneously as foreign minister until September 1984. Shamir led the Likud in the elections to the Eleventh Knesset in 1984, but the election results created a stalemate between the two main parties, and a National Unity Government was established with an agreement regarding a rotation in the premiership. Thus, Labor leader Shimon *Peres served as prime minister for the first two years, with Shamir serving as vice premier and foreign minister, and from 1986 to 1988 the
two switched positions. In March 1987 Shamir was formally elected as leader of the Herut Movement. In May, he initiated the rejection by the government of the London Agreement, concerning the calling of an international conference on peace in the Middle East, signed between Foreign Minister Peres and King Hussein of Jordan.

Shamir led the Likud in the 1988 elections to the Twelfth Knesset, and even though he had the option to establish a narrow right-wing-religious government, preferred to establish another National Unity Government. In May 1989 – a year and a half after the outbreak of the first Intifada, he joined Minister of Defense Yitzhak Rabin in initiating a four-part plan that included a proposal to hold elections in the West Bank and Gaza Strip, for a local Palestinian leadership with which Israel could negotiate a settlement. However, when opposition to the plan within the Likud mounted, his position hardened, and in March 1990 the Labor Party left the government and initiated a vote on a motion of no-confidence in the government that resulted in his government falling. After Peres failed to form an alternative government, Shamir formed a narrow government in June 1990. In October 1991, Shamir participated in the Madrid Conference sponsored by the U.S. and Soviet governments. However, the Conference led to the disintegration of his government, and in the elections to the Thirteenth Knesset held in 1992 the Likud, once again led by Shamir, lost. Shamir did not resign from the Knesset, but in March 1993 Binyamin Netanyahu was elected as chairman of the Likud. Shamir did not run in the elections to the Fourteenth Knesset held in 1992 the Likud once again led by Shamir and became increasingly critical of Netanyahu’s leadership and his having signed the Hebron and Wye River Agreements with the Palestinians.

Susan Hattis Rolef (2nd ed.)

SHAMMAH (Heb. שָׁמַמֵא, alternatively, שָׁמָא, שָׁמֲא), the name of a number of biblical figures.

1) An Edomite chief, the son of Reuel, and the grandson of Esau (Gen. 36:13, 17; 1 Chron. 1:37).

2) The third son of Jesse (1 Sam. 16:9; 17:13). He is referred to as Shimeah in 1 Samuel 13:3, where he is identified as the father of Jonadab, and as Shimei in 1 Samuel 21:21, where he is identified as the father of Jonathan, David’s giant-killing warrior. 1 Chronicles 2:13 and 20:7 refer to him as Shimea. In the latter verse he is identified again as the father of Jonathan.

3) The son of Agee, Hararite, one of the three mighty men of David who single-handedly defeated the Philistines when they attempted to invade a field of lentils (11 Sam. 23:11–12). The parallel passage in 1 Chronicles 11:12–14 has “barley” for “lentils,” and wrongly attributes the feat to Eleazar.

4) A Harodite, one of the mighty men of David known as the “thirty” (11 Sam. 23:25), who is probably identical with the son of Agee, mentioned above.

[Shlomo Balter]

SHAMMAI (Ha-Zaken, i.e., The Elder; c. 50 B.C.E.—c. 30 C.E.), one of the “Zugot, the leaders of the Sanhedrin. Hillel’s first colleague was “Menahem the Essene and Shammai was appointed to succeed him as “av bet din when he retired. Nothing is known of the early life of Shammai except for the statement that he was a builder by occupation (Shab. 31a). Shammai was the founder of the great school which, called after him, was known as Bet Shammai. In general Bet Shammai took up a stringent attitude as compared with the lenient one of its counterpart “Bet Hillel. Shammai himself, however, did not always adopt a stringent line, and of some 20 halakhot transmitted in his name, he adopts a stringent view in about two-thirds of the cases, while in the other third he takes the lenient view.

Other Halakhot

On five topics, most of which deal with levitical cleanness and uncleanness, Shammai, adopting a more stringent approach, disagreed with both Bet Hillel and Bet Shammai (Eduy. 1, 7–8, 10–11), but in one detail of the halakhot of cleanness and uncleanness he took a lenient view contrary to the opinion of Bet Shammai and in accordance with that of Bet Hillel (Or. ii, 12). Against the view of the other sages, Shammai held that he who appoints an agent to kill a person is himself liable (Kid. 43a citing in the name of the prophet Haggai, a tradition based on Nathan holding David responsible for the death of Uriah). Shammai wished to insist on his minor son fasting on the Day of Atonement “but they ordered him to feed him with his own hand” (Tosef. Yoma 4 (5):2). He also acted against the view of the sages when, his daughter-in-law having on Sukkot given birth to a male child, “he broke away the roof plastering and put a sukkah-covering over the bed for the sake of the child” (Suk. 2:8). On the other hand he adopted a lenient view on two cases: in his opinion an offensive war and a siege begun three days before the Sabbath were not to be interrupted on that day, and though one was forbidden to set out on a long voyage in the Mediterranean Sea less than three days before the Sabbath, a short one could be undertaken even on the eve of the Sabbath. Shammai wanted to declare that a field improved during the Sabbatical Year was not to be sown in its eighth year. However, “only a short one could be undertaken even on the eve of the Sabbath” (Avot 1:15). Shammai’s dictum was “Make your study of the Torah a matter of established regularity, say little and do much, and receive all men with a friendly countenance” (Avot, 1, 15).

SHAMMASH (Heb. שַׁמָּש), salaried beadle or sexton in the community, the synagogue, rabbinical court, or a hevrah. A shammash performed a number of functions varying in accordance with the measure of autonomy or the nature of the religious institutions he served: tax collector, bailiff, process server, secretary, messenger, almoner, all-around handyman, grave digger, or notary. He sometimes acted as shulklaper, knocking on window shutters with a mallet to summon Jews to prayer, to announce the arrival of the Sabbath, or to waken people for pre-dawn penitential services. By signing the minutes of the kahal or of an association, he testified to their correctness. In Vilna he had to take an oath that he would strictly observe and enforce the communal statutes. He often acted as a diplomat or was sent as an envoy to another community. The hevra kaddisha of 19th-century Russian communities sometimes employed an oyel shamash to run errands. Along with the rabbi and cantor, the shammash was one of the three employees who received a regular salary and shared in the income from fees and largesses distributed at weddings or other festive occasions. He also supervised the local institutions, whether synagogue, *hekdesh, or association. In larger towns there was a variety of specialized functionaries by that name. In the hevra the term shammash was used to denote the period of apprenticeship served by a new member.

[Isaac Levitats]

SHAMOSH, YIZHAK (1912–1968), Syrian author and translator. He practiced law in *Aleppo and *Damascus, edited Le Commerce du Levant, and contributed to literary periodicals in *Egypt and the Levant. After settling in Palestine in 1937, he taught Arabic at the Hebrew University and held high posts in Israel’s Broadcasting Authority and Ministry of Justice. He was an expert on the modern Arabic short story and the literature of the Arabic diaspora in the U.S.

[Shmuel Moreh]

SHAMRI, ARIE (1907–1978), Yiddish poet. Born into a pious family in Kaluszyn, Poland, Shamri early came under the influence of the Zionist ideology of “Ha-Shomer ha-Za’ir and immigrated to Palestine in 1929, joining kibbutz Ein Shemer, from which he derived his new name. Beginning in 1936 his poetry appeared in the Warsaw weekly Literarishe Bletter and other Yiddish journals. His first book to be translated was the Hebrew translation (by A. Shlonsky) of Lamed-vav Shirim al Lezer Tsipres (“36 Poems about Leyzer Tsipres,” 1939). After the Holocaust Shamri’s poetry, filled with love for nature, displays a renewed identification with the hasidic world of his Polish childhood. Among the collections of his poems are In Toyer fun Teg (“In the Gate of the Days,” 1947), A Shtern in Feld (“A Star in the Field,” 1957), and Gezangen in Shayer (“Songs in the Barn,” 1970). In 1983 his essays were collected in the volume Aynzamlung (“Gathering”). From 1966 he headed the Tel Aviv publishing house Yisroel–Bukh and among others he edited and published there Vortslen (“Roots”), an anthology of prose and verse by Israeli Yiddish writers.

[Sol Liptzin]

SHAMSKY, ARTHUR LOUIS (Art; 1941– ), U.S. baseball player, member of the 1969 champion New York Mets. Born in St. Louis, Shamsky began his professional career in 1960 by hitting a home run in his first at-bat playing for Geneva in the New York Penn League. He made his Major League debut with Cincinnati on April 17, 1965. An outfielder with a sweet left-handed stroke, Shamsky hit 21 home runs in only 96 games the following season while plateauing against right-handed pitchers, with four HRs coming in consecutive at-bats on August 12–14 to tie the record. His bat was sent to Cooperstown. After being traded to the Mets on November 8, 1967, Shamsky became a hero to New York’s Jewish community when he hit .300 with 14 HRs and 47 RBIs as the cleanup-hitting fourth outfielder and left-handed pinch hitter for the 1969 championship team. Like other Jewish players before him, Shamsky refused to play in a Yom Kippur doubleheader that season. His seven hits in 13 at-bats led all batters in the NL Championship Series sweep against Atlanta. The following season, Shamsky hit .293 and registered career-highs in games (122), hits (118), runs (48), and RBIs (49). He remained with the Mets until 1972, when he played in a total of 22 games for the Chicago Cubs and Oakland A’s before back problems forced his retirement. His lifetime numbers were .253 in 665 games, with 68 HRs, 194 runs, and 233 RBIs. After retiring Shamsky worked as a sports broadcaster on radio and television for eight years, and was a radio & television announcer for the New York Mets from 1979 to 1981. He is the author of The Magnificent Seasons (2004).

[Elli Wohlgelehrter (2nd ed.)]

SHANDLING, GARRY (1949– ), U.S. comedian-actor. Shandling was born in Chicago, Ill., and moved with his family to Tucson, Arizona, for the health of his older brother Barry, who later died from cystic fibrosis. Growing up, Shandling was a fan of comedy, often watching The Tonight Show and Woody Allen films. After graduating from Palo Verde High School, Shandling went on to study electrical engineering and then marketing at the University of Arizona. However, he was more interested in writing jokes than taking notes in class. After completing his bachelor’s degree, he remained at his alma mater for postgraduate work in creative writing. After meeting George Carlin following a Tucson performance and getting positive feedback from some material he had written,
Shandling moved to Los Angeles in 1973. He wrote scripts for Sanford and Son (1972–77), Welcome Back, Kotter (1975–79) and Three’s Company (1977–84). In 1977, a freak traffic accident left him with a crushed spleen and other serious injuries. As he recovered, he vowed to become a vegetarian, take up exercise, and try his hand at stand-up comedy. In 1978, he made his first stand-up appearance at a Comedy Store amateur night. He continued to work on his stand-up routine, which featured self-deprecating humor about his appearance and his inadequacies with women. On March 18, 1981, he made his first appearance on Johnny Carson’s Tonight Show, a major break that aided his stand-up career. In 1984, Shandling wrote and starred in Garry Shandling Alone in Vegas for Showtime. Two years later, he had parlayed multiple appearances on The Tonight Show into a permanent guest host spot, but later turned it down to focus on his Showtime sitcom spoof, It’s Garry Shandling’s Show (1986–90), which was later rebroadcast on the FOX network. Like his sitcom lampoon, his next series, HBO’s popular Larry Sanders Show (1992–98), ridiculed television talk shows. In 1993, Shandling turned down a $5 million offer from NBC to take over Late Night from David Letterman, who had moved to CBS. Shandling made his first feature film appearance with a cameo in The Night We Never Met (1993), which he followed with a supporting role in Love Affair (1994) and a dramatic part as a Hollywood producer in Hudy Burlly (1998). He co-wrote and starred in the feature comedy What Planet Are You From? (2000), and in 2004 he hosted the Primetime Emmy Awards. In 2006, he joined an all-star cast to voice the animated film Over the Hedge.

[Adam Wills (2nd ed.)]

SHANGHAI, port in Kiangsu province, E. China. It was opened to foreign trade in 1843. A flourishing foreign community developed there, including Jews of various nationalities. They were mostly Sephardim from Baghdad, Bombay, and Cairo, including such well-known families as Sassoon, Kadoorie, Hardoon, Ezra, Shalom, and Baroukh. There were three synagogues in Shanghai, and between 1904 and 1939, 12 Jewish magazines in English, German, and Russian were founded there. The leading one was Israel’s Messenger, a Zionist monthly established in 1904 by N.E.B. Ezra and published until his death in 1936. Before World War I the Jewish population numbered around 700, with 400 Sephardim of Baghdad origin, 250 Europeans, and 50 Americans. Most of them were engaged in commerce, while a few were in the diplomatic service and in medicine or teaching. Their number was substantially increased to around 25,000, first by Jews from Russia fleeing from the 1917 Revolution, then between 1932 and 1940 by refugees from Nazi Germany and German-occupied countries who found out that they could enter the free port of Shanghai without visas. The Japanese closed Shanghai to further immigration and after the outbreak of the Pacific war in December 1941 they deported to Shanghai most of the Jews living in Japan or in transit to other countries. Substantial aid was given locally, especially by Sir Victor Sassoon, Horace Kadoorie, and Paul Komor. Additional funds came from abroad. With the outbreak of the Pacific war, the position of all Jews became desperate. Most of them were kept in semi-internment under miserable conditions in the Honkew district, subject to the whim of the Japanese occupation forces. They had great difficulty in finding employment, and most of their property was confiscated under one pretext or another. Almost all of them left Shanghai after World War II, largely with American help, for Israel, the United States, or other parts of the world. A few elderly people remained to live out their days under the Chinese Communists.

Hebrew Printing

Apart from J.J. Sulaiman’s Kunteres Seder ha-Dorot (1921), the main period of Hebrew printing in Shanghai was during World War II and immediately after (1940–46), when remnants of Lithuanian yeshivot (Mir, Slobodka), as well as Lubavitch Hasidim, found refuge in Shanghai and printed – mostly photostatically – rabbinic, ethical, and hasidic works in limited editions for their own use. To the above works enumerated by Z. Harkavy (in Ha-Sefer, no. 9, 1961, 52–3; Hashlamot le-Mafteh ha-Maftehot (by S. Shunami, 1966), 3–4) have to be added – at least – the above work by J.J. Sulaiman and S. Elberg’s Akedat Treblinka (Yid., 1946). Hebrew newspapers were printed in Shanghai as early as 1904.

[Rudolf Loewenthal]

SHANKER, ALBERT (1928–1997), U.S. labor leader. Shanker, who was born in New York City, taught in the New York City public school system from 1952 to 1959, when he resigned to become a trade union organizer for the city’s teachers. Elected president of the 55,000-member United Federation of Teachers (UFT) in 1964, Shanker, as the teachers’ legal bargaining agent, led the UFT in winning considerable improvements for teachers and assurances of more effective teaching methods in slum schools.

His most serious problem was the UFT head resulted from the partial implementation of a school decentralization plan, which would have placed teachers under the control of 30 elected local school boards. The attempt by the administrator of one black and Puerto Rican “demonstration district” to remove union teachers – all of whom were Jewish – from his district precipitated three city-wide school strikes which virtually closed New York City public schools in September and October 1968; the large majority of the teachers in the city system were Jewish. Charges and countercharges of racism and antisemitism and violent tactics by black militants in some areas profoundly dis-
turbed New York City Jews and exacerbated race relations (see Black-Jewish Relations in the U.S.). The strike settlement was a clear victory for the union, addressing its main points.

From 1974 until his death Shanker served as president of the American Federation of Teachers, and retained his presidency of the AFT until 1986. He was vice president of the AFL-CIO Central Labor Council of New York City, and the Jewish Labor Committee. From 1970 to 1997 he had a column in the New York Times entitled “Where We Stand,” which dealt with topics relating to education, labor, and current events.

The Albert Shanker Institute in Washington, D.C., established in 1998 in his honor, is a nonprofit organization dedicated to generating ideas and promoting policy proposals relating to children’s education; unions as advocates for quality; and freedom of association in the public life of democracies.

**ADD. BIBLIOGRAPHY:** D. Mungazi, Where He Stands: Albert Shanker of the American Federation of Teachers (1995); AFT’s American Teacher (April 1997).

**SHANKMAN, JACOB K.** (1904–1986), U.S. Reform rabbi. Born in Chelsea, Massachusetts, Shankman, a boy prodigy, entered Harvard University at the age of 14 and graduated by 1923. He received his M.A. in 1925 at the age of 21. He was ordained at Hebrew Union College in 1930. He was then appointed to the Third Street Temple, Troy, New York, and in 1937 to Temple Israel, New Rochelle, where he was awarded life tenure and remained as rabbi until 1974 and then as rabbi emeritus. During 1943–46 he served as a chaplain with the U.S. Navy. Under his leadership the temple flourished and drew many Jews, moved to Westchester County, and became the preeminent Reform Congregation of the county. A new building was erected in the early 1960s. Not content with local leadership alone, Shankman served on the Hebrew Union College board of governors (1952–59) and was president of its alumni association (1958–59). Apart from rabbinic and civic bodies in the New York area, Shankman’s principal public activity was with the World Union for Progressive Judaism. He was its American director from 1957 to 1964; chairman of the World Executive Committee from 1959; and president of the organization in 1964–1970.

[Sefton D. Temkin / Michael Berenbaum (2nd ed.)]

**SHANKS, HERSHEL** (1930– ), U.S. lawyer, author, and editor, particularly of archaeological materials. Shanks was born in Sharon, Pennsylvania, a small town on the Ohio border. He graduated from Haverford College (B.A. in English), Columbia University (M.A. in sociology), and Harvard Law School (L.L.B.). He then joined the U.S. Justice Department, where he handled cases in the United States Courts of Appeal and the Supreme Court. Thereafter he practiced law privately in Washington for more than 25 years, often establishing important precedents in the law. He wrote widely in legal journals and published a book on a great American jurist, entitled The Art and Craft of Judging: The Opinions of Judge Learned Hand. Although he had never formally studied the Bible or archaeology, he published his first book related to these subjects, The City of David – A Guide to Biblical Jerusalem, during a sojourn in Jerusalem in 1972–73. On his return to the United States, while continuing to practice law, Shanks founded Biblical Archaeology Review (BAR), which began as a 16-page pamphlet written entirely by himself; in the early 2000s the magazine had over a quarter of a million readers. Almost all major scholars in Bible and archaeology have published articles in BAR, in which they often explore fresh perspectives for a non-scholarly audience. BAR is known especially for exploring controversies in the world of biblical archaeology, with the editor often taking his own strong stand. Shanks founded two other magazines, Bible Review in 1985 and Archaeology Odyssey in 2000. For over 15 years, beginning in 1987, he also served as editor of Moment, a Jewish magazine founded by Elie Wiesel and Leonard Fein, and edited by Fein for 12 years before Shanks became editor.

[Shimon Gibson (2nd ed.)]

**SHAPERO, HAROLD** (Samuel; 1920– ), U.S. composer and pianist. Born in Lynn, Massachusetts, Shapero studied the piano with Eleanor Kerr and composition with Sergey Slonimsky (1936–37), Ernst Krenek (1937), Walter Piston (1938–41), Paul Hindemith (1940–41), and Nadia Boulanger (1942–3). During the 1940s Shapero had associations with Arthur *Berger, Irving Fine, and Leonard *Bernstein, who conducted the première of his symphony in 1948 and recorded it in 1954. Together with them, he formed Brandeis University’s first music department, where Shapero taught for over 30 years, eventually appointed professor of music in 1952 and founding and directing its electronic music studio. Among his students were Joel Spiegelman, Richard *Wernick, David Epstein, and Sheila Silver. Shapero wrote orchestral works, piano, and chamber music, in which traditional forms are combined with dodecaphonic techniques. His works earned a series of awards, including the Prix de Rome (1941) and a Naumburg Fellowship (1942). His compositions include Symphony for Classical Orchestra (1948); Credo for orchestra (1955); a Hebrew cantata Until Day and Night Shall Cease (1954), commissioned by the American Jewish Tercentenary Committee;
and *Three Hebrew Songs* for tenor, piano and string orchestra (1988); *They Who Sow at Night* (S. Shalom), *Eagle! Eagle Over Your Mountains* (S. Tchernikowsky), *Will There Yet Come Days of Forgiveness* (L. Goldberg). As a pianist, he gave the premières of his keyboard and chamber works, also recording a number of them.

**BIBLIOGRAPHY:** Grove Music Online.

[Israel Stein (2nd ed.)]

**SHAPERO, NATE S.** (1892–1990), U.S. business executive. Shapero’s business career in his native Detroit made him one of the leading men in the pharmaceutical industry and a director of the National Bank of Detroit. Shapero served in the U.S. Navy during World War I and as a dollar-a-year-man in the U.S. Treasury Department during World War II. Actively participating in many civic and charitable undertakings in his hometown, he was also intensely interested in Jewish institutions, including Israel’s Weizmann Institute, Brandeis University, Sinai Hospital, and Temple Beth El of Detroit. He was president and honorary chairman of the board of Cunningham Drug Stores; chairman of the board of Marshall Drug Company and Broward Drug Company; president of the Michigan Association of Chain Drug Stores and of the Michigan Welfare Commission. He and his wife, Ruth, donated funds to endow the museum at Temple Beth El and the nursing school of Sinai Hospital, which later became a part of Wayne State University.

**SHAPHAN** (Heb. שפוח, “rock badger, hyrax, coney”), son of Azaliah, Josiah’s scribe and the head of one of the most influential and pro-Babylonian families in the last days of Judah (11 Kings 22:3). Shaphan was one of the messengers sent by the king to the prophetess Huldah concerning the finding of the new book in the Temple (11 Kings 22:14; see *Deuteronomy*). Later, his sons were supporters of the prophet Jeremiah. One of them, Ahikam, used his influence to save *Jeremiah from death when the latter prophesied the destruction of Jerusalem* (Jer. 26:24). A second son, Elasah, one of the men sent to Babylon by Zedekiah, took Jeremiah’s letter to the elders in exile (Jer. 29:3). Mention is made of two or more sons of Shaphan, *Jaazaniah and Gemariah*. Jaazaniah is only mentioned among the elders in Jerusalem seen by Ezekiel in a vision in Ezekiel 8:11. The information about Gemariah is more definite. It was in his chamber at the Temple gate that the scribe Baruch read Jeremiah’s scroll “to the people” in the reign of Jehoiakim (Jer. 36:10ff.). Shaphan’s son Micaiah was present, but he himself was sitting with other officials in conference. Apprised by Micaiah, they warned Baruch to go into hiding with Jeremiah, and they later pleaded with the king not to burn the scroll. The family’s sympathy with the prophet was further evidenced by the fact that Jeremiah was put under the guardianship of Shaphan’s grandson, Ahikam’s son *Gedaliah*, who was appointed governor of Judah by the Neo-Babylonian captors of Jerusalem (Jer. 39:14; 40:5).

[Yuval Kamrat]

**SHAPIRA (Spira),** hasidic family known as the Munkacs dynasty; named after the town of Munkacs (Mukachevo), the seat of the dynasty. Its founder, **SOLOMON SHAPIRA** (1832–1893), was born in Ribnic near Peremyshlany, Galicia, the son of Eliezer Shapira of Lancut and grandson of Zevi Elim-elekh *Dynow*. A disciple of Hayyim *Halberstam of Zanz*, he also visited the hasidic rabbis of Ropczyce (Ropshits), Rymowan, Ruzhyn, and Belz. He held rabbinical posts at Sasov, Stryzow, Lancut, and Tarnogrod, and in 1881 was appointed rabbi of Munkacs. He was succeeded by his son Zevi Hirsch (1850–1913), who was born at Stryzow and with his father settled in Munkacs. He was a disciple of Hayyim Halberstam of Zanz and of Ezekiel of Sieniawa. Until 1893 he headed the bet din in Munkacs; from that year, when his father died, he became rabbi of the town. Like his predecessors, he was also a hasidic *zaddik*. Under him Munkacs became an important center of Hasidism. He was an active member of the committee of Orthodox rabbis of Hungary. Toward the end of his life, he opposed the efforts of the German Orthodox sector to associate the Hungarian Orthodox in founding *Agudat Israel*, through whose influence the leaders of German Orthodoxy sought to strengthen the religious elements in Germany. Zevi Shapira, however, feared that a close collaboration would result in a weakening of Orthodoxy in Hungary. Although he appreciated the efforts of the German Orthodox to strengthen their ranks, he did not wish to see what he regarded as their liberal way of life penetrate to Hungary. He was active in strengthening traditional education and objected to the compulsory attendance by Jewish children in the general schools. He also opposed the special schools which had been established in several communities so that Jewish youth should not have to attend school on Sabbath, and called upon his Hasidim not to send their children to them. Zevi Hirsch was an authority in both the halakhah and mystic spheres.

His most important works are *Darkhei Teshuvah* on the Shulhan Arukh, *Yoreh De’ah* (1893), Zevi Tiferet (1912), responsa, and *Be’er Lahai Roi* (1903–21), on the *Tikkunei Zohar*, one of the most noteworthy commentaries on this difficult work. The author attempts to present “the simple meaning of the secrets.” Zevi Hirsch regarded it as his most notable work, even though his *Darkhei Teshuvah* was acclaimed by the leading rabbinical authorities.

Zevi Hirsch was succeeded by his son *Hayyim Eleazar Shapira* (1872–1937), rabbi of Munkacs from 1913 and hasidic *zaddik*. He succeeded in combining talmudic dialectics with the ability to reach halakhic decisions and a wide knowledge of Kabbalah and hasidic learning. He had many admirers and many opponents, and exercised great influence over the rabbis of Hungary even after Munkacs (Mukachevo) had passed to Czechoslovakia. Of lively temperament, he intervened in communal affairs beyond his community, and was even more adamant than his ancestors in opposing all innovation. An extremist opponent of Zionism, *Mizrachi*, and *Agudat Israel*, he regarded every organization engaged in the colonization of
Erez Israel to be inspired by heresy and atheism. Redemption was to be a miraculous phenomenon, and any natural activity – political or colonizing – was liable to lead to a holocaust. He opposed the *Balfour Declaration. On the other hand, he supported the “old *yishuv” and was the president of the Kolel Munkacs in Jerusalem. In 1930 he visited Palestine, where he met and encouraged the anti-Zionist elements. His Hasidim viewed this journey as an apocalyptic act.

After the example of his father, he called for the maintenance of traditional education and for its financial support. He opposed the Hebrew schools which were established in eastern Czechoslovakia between the two world wars, and condemned the Hebrew secondary school of his town. His struggles were not only ideological, and he occasionally became involved in local disputes with rival *zaddikim, waging a campaign of many years with the *zaddik of *Belz, Issachar Dov Roke’aḥ, who lived in Mukachevo from 1918 to 1921. His works include Minhat Elazar, responsa (1–4, 1902–30); Divrei Kodesh, sermons (1933); Hamishah Ma’amarot (1922); and Sefer Mashnim Hayyim (1919, 1956). Ḥayyim Eleazar’s son-in-law Joshua Jerahmeel Rabinowicz (1913– ), son of Rabbi Nathan David of Parczew, became rabbi of Holon in Israel.

**SHAPIRA, ABRAHAM** (1870–1965), one of the first Jewish *Shomerim (“Watchmen”) in Erez Israel. Born in Novaya Mikhailovka, southern Russia, Shapira was taken to Erez Israel at the age of ten; his family lived first in Jerusalem and later in *Petaḥ Tikvah. From his youth he displayed outstanding courage and was held in awe by the local Arabs. In 1890 he was appointed head of the *Shomerim in Petaḥ Tikvah and enlisted the aid of the local Bedouin and the young Jewish settlers. As part of the general arrests made after the Turkish discovery of *Nili during World War I, Shapira was deported to Damascus to stand military trial, but he was acquitted and drafted into the Turkish army in Istanbul. Afterward, he took part in the defense of Petaḥ Tikvah against Arab attack in May 1921 and was among the initiators of the peace ceremony between the settlement and its Arab neighbors. Shapira often served in the role of negotiator in the quarrels between Jews and their *Shomerim and served as honorary president of the Association of Jewish *Shomerim. Shapira, a colorful, romantic figure, was beloved by all who knew him. Chaim Weizmann wrote about him in *Trial and Error:*

He was a primitive person, spoke better Arabic than Hebrew, and seemed so much a part of the rocks and stony hillsides of the country that it was difficult to believe that he had been born in Russia. Here was a man who in his own lifetime had bridged a gap of thousands of years; who, once in Palestine, had shed his Galut environment like an old coat…. [David Derovan (2nd ed.)]

**SHAPIRA, AVRAHAM ELKANA KAHAANA** (1917– ), Israeli religious leader and former chief rabbi. Shapira was born in Jerusalem, where he studied at Yeshivat Eẓ Ḥayyim and then at Hevron Yeshivah under Rabbi Moses Mordechai Epstein and Rabbi Ezekiel Sarna. After his marriage, Shapira was invited to teach at the Merkaz ha-Rav Yeshivah, where he remained for over 50 years. In his youth, he was friendly with Avraham Yeshayahu Karelitz (the Ḥazon Ish), Zevi Pesah Frank, Isaac Zev Soloveitchik, and Isser Zalman Meltzer. In 1956, he was appointed to the Rabbinic *Bet Din* in Jerusalem. In 1974, he joined the High Rabbinic Court, joining the Rabbinic Council of the Chief Rabbinate in 1980. Three years later he was elected Ashkenazi chief rabbi, serving until the end of his term in 1993.

In 1982, after the death of Rabbi Zevi Judah Kook, son of the founder of Merkaz ha-Rav, the venerated Rabbi Abraham Isaac ha-Kohen Kook, a power struggle ensued over the post of rosh yeshivah. In the end, Shapira was named the rosh yeshivah at Merkaz ha-Rav, as opposed to Rav Zevi Tau. The tension between them continued with the appointment of Shapira’s son as the executive director of the yeshivah and was further exacerbated by Shapira’s emphasis on teaching more Talmud and less Bible and Jewish thought at the yeshivah. The bubble finally burst in 1997, when Shapira decided to allow Merkaz ha-Rav students to attend courses at the yeshivah leading to a teaching certificate. Tau, along with a number of other teachers and a good number of students, broke away from Merkaz ha-Rav and formed his own yeshivah, Har ha-Mor.

During his term as chief rabbi and afterwards as well, Shapira, together with his colleague, Chief Rabbi Mordechai *Eliyahu, became the spiritual leader of the religious Zionist camp in Israel. Thus, for over 20 years, he spoke out on political and social issues of concern to religious Zionism. During the events leading up to the Israeli government’s disengagement from Gaza in 2005, Shapira was a vocal opponent of the removal of the Jews from their homes and the uprooting of Jewish communities in Gaza. Shapira even issued a halakhic decision forbidding IDE soldiers from obeying commands to participate in the actual disengagement. Of the hundreds of religious soldiers that participated in the removal of the Jews, fewer than 40 refused to obey their officers’ commands.

Shapira’s first published work was *Zekher Yehudah,* an edition of the responsa of Isaac Jacob Rabinowitz of Ponevezh (1948). In 1989, his collected lectures on the Talmud, Shit‘urei Maran ha-Gaon Rav Avraham Shapira, appeared in six volumes. From 1990 to 2003, three volumes of Shapira’s essays were published, titled *Minhat Avraham. Morashah,* a further collection of essays, appeared in 2005.

**BIBLIOGRAPHY:** http://he.wikipedia.org/wiki. [Yehuda Slutsky]
SHAPIRA, ELIJAH BEN BENJAMIN WOLF (1660–1712), rabbi, preacher, and halakhist. Elijah studied under his grandfather, Aaron Simeon Shapira, and Abraham Abele *Gombiner. He was the brother-in-law of Jacob *Reischler and of David *Oppenheim. He served as rabbi in Kolin, Bohemia, and from 1702 in Tiktin, resigning this post when he was appointed head of the yeshivah and preacher in his native Prague (though according to some he continued to act as rabbi of Tiktin while in Prague).

Elijah gained renown through his works: Eliyahu Zuta, a short commentary on the Levush of Mordecai b. Abraham *Jaffe, published with the text (Prague, 1689); Eliyahu Rabbah, a more extensive and profound commentary to the same work, published with the Shulhan Arukh, Orath Ha'iyim (Sulzbach, 1757), to which it served as a kind of supplement; Shishah Shirah me-Hiddushei Eliyahu Rabbah on the tractates Ketubbot, Kiddushin, Gittin, Bava Kamma, Bava Batra, and Hullin, published in Zurich in 1768. Many of his other works—sermons, novellae, and responsa which had remained in manuscript—were destroyed in the great fire of Prague in 1754.

Shapira died in Prague; his sons were Aryeh Leib, rabbi of Leiben, and Samuel, head of the Prague bet din.

[Itzhak Alfassi]

SHAPIRA, HAYYIM MOSHE (1902–1970), Israeli politician; leader of the National Religious Party. Born in Grodno, Belorussia, Shapira from his youth was imbued with a religious Zionist spirit. He was active in organizing the Ze’irei ha-Mizrachi movement and did much for the aliyah of religious halutzim to Ereẓ Israel. After moving to Warsaw he became one of the leaders of the organization. Afterward he went to Berlin and studied at the Hildesheimer Rabbinical Seminary. In Berlin Shapira also became the leader of Ze’irei ha-Mizrachi and was sent as a delegate to the 14th *Zionist Congress (1925). From that time on he attended all Zionist Congresses and was also elected to the Zionist General Council as a representative of Ha-Poel ha-Mizrachi. Shapira settled in Palestine in 1925 and became a central figure in his movement and in Mizrahi. In 1935 he was elected as an alternate member and then a full member of the Zionist Executive and served on it until the establishment of the State of Israel as head of the Immigration (aliyah) Department.

Shapira made several visits to Jewish centers around the world and in 1938, after the Anschluss of Austria, he went to Vienna on a mission to organize the rescue of Jews and facilitate their migration to Ereẓ Israel. In the 1940s, during the struggle against British policy in Palestine, Shapira played an important role in preventing fratricidal conflicts between the *Haganah and *Irgun Zevai Le’umi. In 1948, he was appointed a member of the People’s Council (Mo’ezet ha-Am) and of the Provisional Government of the State of Israel as minister of immigration and of health, in which capacity he organized the mass immigration that began during the *War of Independence. On the eve of the elections to the first *Knesset (1949), Shapira was among the initiators of the “United Religious Front” and was elected on its behalf as a member of the first cabinet. In 1957, when a grenade was thrown in the Knesset, Shapira was seriously wounded. His life was in danger, and he was then given the additional name of Hayyim (in accordance with traditional Jewish custom). He served in almost all governments—as minister of immigration, health (1948–49 and 1961–65), the interior (1949–52 and 1959–70), and religious affairs and social welfare (1952–58). On the eve of the “Six-Day War (1967), he played an important role in establishing the government of national unity. At the 21st world conference of the Mizrahi and Ha-Poel ha-Mizrachi in 1968, Shapira was elected president of its world center.

[Itzhak Goldshlag]

SHAPIRA, HAYYIM NACHMAN (1895–1943), critic of Hebrew literature. Born in Minsk, Russia, he was a lecturer in Semitic languages at the University of Kovno from 1925 to 1940 and was also an active Zionist. During the Nazi occupation, he furthered cultural activity in the Kovno ghetto, and was killed along with his wife, his mother, and his only child. A student of the German school of aesthetics of the 1920s, he sought to introduce this discipline into the analytical study of Hebrew literature. Shapira published stories and articles, especially in Gilyonot, Haolam, and Moxnayim. During the last years of his life, he worked on his magnum opus, Toledot ha-Sifrut ha-evtit ha-Hadasah (“A History of Modern Hebrew Literature”), which was to consist of 12 volumes. Only one volume was published dealing with the Haskalah in central Germany (1784–1829). In it, he stresses the ideological direction of the beginnings of modern Hebrew literature, viewing it as a product of the secular “this-worldly” attitude of the enlightened. At the same time, he places Hebrew literature within the context of the aesthetic theory of the Enlightenment, offering some fine insights into its artistic aspects. A reprint of this volume appeared in 1967, with the addition of a biographical essay by Benzion Benshalom. The manuscript of the second volume, which dealt with Hebrew literature in Galicia and Lithuania, was destroyed in the ghetto.

[Getzel Kressel]

SHAPIRA, JOSHUA ISAAC BEN JEHEIL (d. 1873), rabbi and talmudist. Known as Eizel Ḥarif (“sharp”) because he was one of the keenest intellects and most outstanding pipilists of his day, he was av bet din successively at Kalvariya, Kutno, Tiktin, and, finally, Slonim.

Shapira was the author of (1) Emek Yehoshua (1942), in two parts: part 1—24 responsa on the Shulhan Arukh; part 2—16 occasional homilies; (2) Nahalat Yehoshua (1851), in two parts: part 1—responsa on several halakhot and various sub-
subjects in the Babylonian and Jerusalem Talmuds; part 2 – Sabbath and festival homilies, and, at the end, a eulogy on his father; (3) No'am Yerushalmi, commentary and glosses on the Jerusalem Talmud – on Zera'im (1865), Moed (1866), Nashim (1868), Nezikin (1869); (4) Ibbei ha-Nahal (1857), homilies; (5) Sefat ha-Nahal (1859), homilies and comments on aggadot in the Babylonian and Jerusalem Talmuds; (6) Azat Yeḥosiyya (1868), commentary on the questions asked by the "sages of Athens" (Bek. 8b); (7) Marbeh Eẓah (1870), commentary on the aggadic statements of Rabbah bar Ḥana; (8) Marbeh Te-"vunah (1872), on the basic principles of the Babylonian and Jerusalem Talmuds. Shapira was one of the few scholars in his generation who attached as much value to the Jerusalem Talmud as to the Babylonian, a fact amply reflected in his commentaries.

SAMUEL ABBA HORODEZKY

SHAPIRA, KALONYMOUS KALMAN (1889–1943), hasidic rebbe of the Warsaw Ghetto. Born in Grodzisk, Shapira was a descendant of the seer of Lublin ("Jacob Isaac ha-Hozeh mi-Lublin) and the maggid of Koziencie (Israel ben Shabbetai Hapstein "Kozience). After his father died when he was three, a family member took charge of his education. Married at 15, at the age of 20 he became a rebbe and then the rabbi in Piaseczno, near Warsaw. In 1923 he founded a yeshivah, Daas Moshe, which became an important hasidic institute in pre-war Poland. His educational goals were ambitious. He wanted nothing less than to create, in the words of his biographer, Nehemia Polen, a "core group" of students of "sublime stature" to revitalize the hasidic movement. The goal of education as he envisioned it was that a child must experience the inner life of Torah. He outlined his goals in his first book, Hovat ha-Talmidim ("The Student’s Responsibility") published in 1932, the only work to be published while he was alive. He emphasized joy and renewed vitality for the yeshivah world.

Polen describes him as physically imposing, "handsome and well groomed, distinguished and elegant." An account of his early war experience was published in the Forward on March 30, 1940. Refusing to abandon his flock in Warsaw, he saw his son, daughter-in-law, and sister-in-law killed in the first days of the German bombings, and a few weeks later his mother died.

Shapira tended to the religious needs of the community, including its mikvah, and worked with relief kitchens that served 1,500 people a day assisted by the "American Jewish Joint Distribution Committee. He also continued to teach Talmud week in and week out, composing impassioned derashot on the weekly portion that related not only to the words of the Torah but to the conditions of ghetto life. They were preserved and published under the name Esh Kodesh ("The Holy Fire," 1960).

His one remaining daughter was deported during the great Aktion of the summer of 1942. She was murdered in Treblinka. The rebbe remained in the ghetto and lived through the Ghetto Uprising, where he was captured and incarcerated. He died in Trawniki. Of Esh Kodesh, Polen concludes: "It is testimony to faith in learning, teaching, human communication, language, and – most of all the redemptive power of compassion."

[Michael Berenbaum (2nd ed.)]

SHAPIRA, MEIR (1887–1934), Polish rabbi, rosh yeshivah, educationalist, and communal leader. Shapira received ordination when he was only 15 years old from Isaac "Shmelkes, Meir Arikh, and his teacher, his maternal grandfather, Samuel Isaac Schor. Shapira manifested his future interest in Jewish education as early as 1910, when in his first position as communal rabbi of Gliniyan, he founded his first yeshivah in his own home, later transferring it to his next post in Sanok. He rapidly gained a reputation among Polish Jewry, and was elected to the chair of the education committee of Polish "Agu- dat Israel in 1919 and to the leadership of the whole organization in 1922. Shapira also became a Jewish spokesman in Polish government circles in 1923. He was elected to the Polish Sejm, where he was noted for his forceful speeches and outspoken criticism of antisemitism. Within two years, however, Shapira decided to devote the whole of his life and energy to Jewish education. He thereupon resigned from the Sejm in 1924, accepted the post of rabbi in Piotrkow, and worked for the development of the two enterprises which remain his greatest contribution to Jewish education.

The first enterprise was a program of studies (still in existence) which has passed into Jewish nomenclature as the daf yomi ("daily page"). At the 1923 congress of Agudat Israel, Shapira proposed that every Jew undertake to study each day one identical page of the Talmud. The plan envisaged a communal completion of the study of the Talmud every seven years. Shapira himself participated in the completion of the first cycle in 1931. Shapira's second achievement was the establishment of Yeshivat Hakhami Lublin. He first conceived of the idea of this yeshivah in 1922, and two years later, after a highly strenuous fund-raising tour of Europe and North America, laid the foundation stone in the presence of leading Jewish rabbis and dignitaries. This institution was unique in conception, character, and even architecture. Shapira was vigorously opposed to the poor amenities, unattractive surroundings, and penurious atmosphere characteristic of the traditional yeshivot. He set a precedent, now universally followed, by equipping his establishment at Lublin with an excellent library (much of it his own), with spacious living and dining quarters, and with appropriate lecture halls. The academic standards themselves were maintained by a rigorous selection of applicants, including a growing number of hasidic youth. Shapira frequently
lectured to the students and participated in their daily studies, activities, and even meals.

In 1933 Shapira accepted an invitation to become rabbi of Lodz, on condition that the community honor the yeshivah’s debts. The condition was accepted, but Shapira died before assuming the post. Shapira was an enigmatic and colorful personality, in whom a deep understanding of rabbinic lore was combined with a nimble wit and love of life. The former is indicated in his responsa Or ha-Me’ir (1926), and in various collections of essays published by his pupils. The latter was revealed in the songs and melodies he composed while dancing with his students. Many of his witty aphorisms are still quoted. The manner of his death was characteristic of his life. Realizing that his end was near, he requested his students to dance in song around his bed; while they were so engaged, he breathed his last breath.

**SHAPIRA, YESHAYAHU** (1891–1945), ḥasidic Ereẓ Israel pioneer and leader of religious labor Zionism. Shapira was born in Grodzisk, Poland, the youngest son of the ḥasidic rabbi Elimelech of Grodzisk, and was educated by his maternal grandfather in a deeply ḥasidic spirit. His education was also permeated with an ardent love of Ereẓ Israel, so much so that as a youngster Shapira took an extraordinary decision for his environment and joined the Zionist movement. In 1914 he even went to Ereẓ Israel, but hastened back to his family because of the outbreak of World War I. In Poland he participated in the foundation of *Mizrachi* (1917), and in his Hebrew address at the founding conference he called on all Orthodox Jews to liquidate their businesses in the Diaspora and settle in Ereẓ Israel. Shapira settled in Palestine in 1920 and became the head of the Immigration and Labor Department of the Mizrachi center in Jerusalem. He organized a group of 120 religious workers to build the Rosh-Pinnah–Tabgha road and another of 50 workers, including himself, to clean Solomon’s Pool near Jerusalem. He was one of the founders and leaders of Ha-Po‘el ha-Mizrachi, the first group of which was formed in his home in Jerusalem. In 1924 he went to Poland as an emissary and influenced young ḥasidic rabbis, such as Yechezkel Taub and Israel Eliezer Hofstein, to settle together with their disciples on the land in Palestine. These groups founded the settlements of Nahlat Ya‘akov and Avodat Yisrael, which later merged into *Kefar Hasidim*, and some of them founded Kefar Ata.

In 1933 Shapira became the manager of the central cooperative bank Zerubavel in Tel Aviv, but ten years later he decided to return to farming by settling in *Kefar Pines*, and his house there became a spiritual center for members of Ha-Po‘el ha-Mizrachi. He wrote many essays and articles, particularly on economic problems of settlement and cooperation, and was beloved for his devotion and modesty. He died in Jerusalem.

**BIBLIOGRAPHY:** Tidhar, 3 (1958), 1328–30.

**SHAPIRA FRAGMENTS**, portions of a manuscript of Deuteronomy, claimed to be of exceptionally early date, which were offered for sale in Berlin and London by Moses William Shapira (c. 1830–84), a Jewish-born Christian antiquarian from Jerusalem. The fragments consisted of 15 leather strips, brought to Europe in July, 1883. Shapira’s story was that they had been found by Arabs some years previously in the Wadi Mujib in Transjordan, and that he had bought them from one of the finders. In 1878 he sent copies to Konstantin Schloßmann of Halle, who pronounced them fabrications. Shapira then placed them in a bank in Jerusalem, but on receiving new encouragement he took them to Leipzig in July, 1883, and submitted them to Hermann Guthe. Guthe in his turn concluded that they were forgeries, and in September of that year published a detailed study of them, entitled *Fragmente einer Lederhandschrift, enthaltend Moses letzte Rede an die Kinder Israel*., in which the complete text of the fragments was compared with the Masoretic Text. From Leipzig Shapira went to Berlin (July 10) and offered the fragments to the Royal Library. An expert committee was convened to examine them, consisting of A. Dillmann, E. Sachau, A. Ermann, and M. Steinschneider, who unanimously (apparently without knowing of Guthe’s investigation) concluded that they were forgeries.

From Berlin Shapira went to London (arriving there on July 26) and offered his fragments to the British Museum for £1,000,000. The script on the fragments was closely similar to that on the Moabite Stone (c. 850 B.C.E.), and Shapira and many members of the British public, who were greatly excited by the fragments, were willing to ascribe a Mosaic date to them. Such a date would inflict a mortal blow, they thought, to critical theories of the composition of the Pentateuch; and insofar as these theories were founded on the distribution of divine names in the Pentateuch, it was noteworthy that the fragments, by exhibiting the reading *Elohim* where the Masoretic Text had *YHWH*, showed the precarious nature of this foundation. The British Museum appointed C.D. Ginsburg to report on the fragments. He too found them to be forgeries. His conclusions were that they were strips cut from the margins of old scrolls, treated with oil to give the impression of antiquity, and inscribed with letters imitating those on the Moabite Stone by a northern European Jew in whose pronunciation of Hebrew there was no distinction between *hêt* and undagesh *kaf*, or between *têt* and *tâf*. (Oral tradition in the British Museum adds that the writing had been done with a steel pen.)

This adverse finding was the more bitter for Shapira because it was confirmed by C.S. Clermont-Ganneau, who saw some of the fragments in the museum; it was he in particular who first affirmed that they had been cut from old synagogue scrolls. Clermont-Ganneau, eleven years before, had exposed...
as fakes pieces of “Moabite” pottery which Shapira had sold to Germany. Suspicions of prejudice on his part can, however, be set aside in view of the unanimity with which other scholars decided against the authenticity of the fragments. Humiliated and discredited, Shapiro committed suicide in a Rotterdam hotel on March 9, 1884.

More recently the question of the character of his fragments has been reopened in the light of the Qumran discoveries, particularly by M. Mansoor (see bibliography). It has been suggested that they might be comparable to biblical fragments in the Paleo-Hebrew script found in the caves, and that the textual deviations could be evidence of a paraphrase (such as the “Sayings of Moses” from Qumran Cave 1) rather than a transcript of the biblical text. The detailed internal evidence marshaled by Ginsburg seems conclusive enough, but doubts will probably not be silenced until it is possible to secure and examine the Shapira fragments themselves, most of which appear to have been bought in 1885 by the bookseller Bernard Quaritch but have not since been located.

[Frederick Fyvie Bruce]

SHAPIRO, ABBA CONSTANTIN (1839–1900), Hebrew poet. Born in Grodno, Shapiro studied photography, then lived in Vienna and St. Peters burg, where he married a Christian woman and was baptized. His apostasy haunted him throughout his life and is a hidden undercurrent in much of his poetry. He gained fame and fortune in St. Petersburg as an art photographer: he was the personal photographer of prominent Russian officials and of L.N. Tolstoy. From 1877 his poems appeared in most of the Russian and Hebrew literary periodicals. Shapiro’s poetry, replete with Jewish and occasionally Zionist themes, was collected by J. *Fichmann in one volume, Shirim Nivharim (1911). Shapiro also published Sedom (1900), a poem on Dreyfus, cast in a biblical setting, and a critical essay on Turgenev’s story “The Jew,” “Turgenev ve-Sippuro ‘Ha-Yehudi,'” in Ha-Meliz, 19 (1883).

[Getzel Kressel]

SHAPIRO, ALEXANDER M. (1929–1992), U.S. Conservative rabbi. Shapiro was born in Brooklyn, N.Y., and received a B.A. from Brooklyn College as well as a B.H.L. from the *Jewish Theological Seminary, in 1950. He was ordained at JTS in 1955 and earned a Ph.D. from Dropsie University in 1970. From 1955 to 1957, he served as a chaplain in the United States Army. He was director of United Synagogue Youth activities in Philadelphia (1957–59) before becoming rabbi of Temple Beth Tikvah in the Philadelphia suburb of Erdenheim (1957–68). Under his leadership, the congregation won two Solomon Schechter Awards, for its school and library. In the summers, he served as director of *Camp Ramah in the Poconos and then director of Leaders’ Training Fellowship at the Ramah camps in Wisconsin, California, and Canada.

Shapiro is credited with organizing and leading – over the objections of the United Synagogue – the first protest by a Jewish group in front of the Soviet embassy in Washington, D.C., on October 6, 1964. His activism ushered in a new era of Jewish picketing and vigils on behalf of Soviet Jewry.

In 1968, Shapiro turned to academia, joining the faculty of Temple University, where he taught in the Department of Religion (1969–70) – although he also served as co-rabbi of Philadelphia’s Germantown Jewish Center (1968–69). In 1970, Shapiro moved to Israel, where he lectured at Beersheba’s Ben-Gurion University and the David Yellin Teachers’ Seminary in Jerusalem as well as for the Overseas Student Programs at Hebrew University. He returned to the United States in 1972 to assume the pulpit of Congregation Oheb Shalom in South Orange, N.J., a synagogue that had been headed previously by two leaders of Conservative Judaism and former presidents of the *Rabbinical Assembly, Charles *Hoffman and Louis *Levitzky. He served on the boards of the Jewish Federation of Metropolitan New Jersey (1972–76), the Solomon Schechter School (1973–81), and Jewish Family Services (1973–76), and was elected president of the New Jersey Region of the Rabbinical Assembly, where he initiated a study of the effects of congregational demands on rabbis and their families.

Shapiro emerged as a national leader of the Rabbinical Assembly when he was elected treasurer of the organization (1980–82), then vice president (1982–84) and ultimately president (1984–86). During his tenure in office, and following years of his lobbying for equal rights for women in the pulpit, the RA voted to amend its constitution and admitted its first women members, JTS graduate Amy *Eilberg, and Beverly Magidson and Jan Kaufman, who had been ordained elsewhere. This step reopened concerns of the more traditional members of the Conservative movement, prompting Shapiro to join with JTS chancellor Gerson *Cohen in establishing a committee to articulate Conservative ideology. As president, Shapiro also participated in a delegation of Jews and Catholics who met in the Vatican to discuss the implementation of Nostra aetate with Pope John Paul II.

Shapiro also sought to engage in interdenominational dialogue, becoming the first Conservative rabbi to address the annual convention of the Orthodox *Rabbinical Council of America and taking that opportunity to revive the proposal that a national *bet din be established to deal with matters of personal status, such as marriage, divorce and conversion. His RCA counterpart, Rabbi Louis *Bernstein, returned the visit and appeared before the RA that year – the first and last time such an exchange took place. While president, he also had the distinction of being arrested during a 1985 demonstration in front of the Soviet consulate in New York City – an act of civil disobedience and courage reminiscent of his participation in a civil rights march in Birmingham, Alabama, with Martin
Luther King, Jr., in 1963: the presence of Shapiro and 18 rabbinical colleagues in kippot electrified and inspired a large assembly of southern African-Americans; the hotel in which he stayed was bombed shortly after his departure.

A scholar in the area of medieval responsa, Shapiro contributed articles and essays to numerous academic journals and reference books. He was also the co-editor (with Burton Cohen) of Studies in Jewish Education and Judaica in Honor of Louis Newman (1984).

**SHAPIRO, ARYEH LEIB BEN ISAAC** (1701–1761), scholar and grammarian. Raised in Vilna, Shapiro married a daughter of Mordcaib b. Azriel, one of the city’s most respected residents. As a young man, he maintained a correspondence with the Karaite scholar Solomon of Troki, the author of Appiryon. Shapiro ranged beyond the boundaries of traditional learning, for in addition to his vast knowledge of the Talmud he studied logic and mathematics, and wrote a work on Hebrew grammar, Kevuzat Kesef (Zolkiew, 1741). His other works include a two-part commentary on Masekheta Soferim entitled Nahalat Ariel and Me'on Arayot, which were published together with the tractate at Dyhernfurth in 1732. Also extant is a responsa dated 1754, which appears in Teshuvat Shemuel (Vilna, 1859) by R. Samuel of Indura. Shapiro, in his later years, served as a dayyan and scribe of the Vilna community.

**BIBLIOGRAPHY:** S.J. Fuenn, Kiryah Ne’emanah (1860), 111f.; Fuerst, Bibliotheca, 3 (1860), 371; Benjacob, Ozar, 516.

**SHAPIRO, ASCHER HERMAN** (1916–2004), U.S. mechanical engineer. Born in Brooklyn, Shapiro taught at the Massachusetts Institute of Technology, where he became professor of engineering (1962), head of the department of mechanical engineering (1965), and an Institute Professor (1975). He was associated with the National Advisory Committee on Aeronautics and the U.S. Atomic Energy Commission. He did research on the aerodynamics of high-speed flight and turbomachinery, on propulsion systems, and on biofluid dynamics of the cardiovascular, pulmonary, and urinary systems. He took out patents on fluid-metering apparatuses, combustion chambers, propulsion systems, turbomolecular vacuum pumps, and industrial centrifuges. Shapiro wrote *Dynamics and Thermodynamics of Compressible Fluid Flow* (2 vols., 1953–54) and *Shape and Flow; the Fluid Dynamics of Drag* (1961).

[Samuel Aaron Miller]

**SHAPIRO, BENJAMIN** (1913– ), Israeli biochemist. Shapiro was born in Germany and immigrated to Erez Israel in 1926. He received his doctorate in science from the Hebrew University in 1940 and was appointed associate professor in 1953 and full professor in 1958. He was awarded the Israel Prize for medicine in 1955.

**SHAPIRO, BERNARD** (1935– ), Canadian educator, administrator, public servant. Bernard Shapiro was born in Montreal. In 1954 he graduated from McGill University with a B.A., after which he and his twin brother, Harold, took over for several years the management of the family’s popular restaurant in Montreal, Ruby Foo’s. He and his brother left Montreal to pursue higher degrees. Bernard earned a doctorate in education from Harvard in 1967 and was hired by the University of Boston. He was appointed an associate dean at Boston before returning to Canada as dean of education at the University of Western Ontario and later vice president academic and provost. From 1980 to 1986 he was director of the Ontario Institute for Studies in Education in Toronto. In 1985 he headed a provincial Commission on Private Schools in Ontario which, among its recommendations, called for partial provincial funding of Jewish and other religious schools. This recommendation was never implemented.

In 1986 Shapiro was appointed Ontario’s deputy minister of education and held several other major deputy minister posts before he retired from the Ontario public service in 1992 to become a professor of education and public policy at the University of Toronto. Shapiro returned to Montreal as principal of McGill University in 1994, a position he held until 2002. He also oversaw the American National Jewish Population Survey (njps) review process before its release by the United Jewish Communities. In 2004 Shapiro began a five-year term as ethics commissioner of Canada, responsible for the administration of the code of conduct for members of the House of Commons as well as the prime minister’s ethical guidelines for cabinet ministers and other public office holders.

Active in the Montreal Jewish and non-Jewish communities, in 2004 Shapiro and his wife, Phyllis, a professor of education at McGill University, were Montreal’s Negev Dinner honorees. In 1999 he was appointed an Officer of the Order of Canada.

[Harold Troper (2nd ed.)]

**SHAPIRO, DAVID S.** (1909–1989), U.S. Bible scholar and rabbi. Born in Philadelphia, Shapiro studied at the Hebrew Theological College of Chicago and the Illinois Institute of Technology. He served as the rabbi of Orthodox congregations in Savannah, Georgia (1916–38); Erie, Pennsylvania (1918–41); Indianapolis, Indiana (1941–48); and Milwaukee, Wisconsin (1948–1989). Shapiro also taught at the University of Wisconsin and the Graduate School of the Hebrew Theological College.

In 1936 he published *Yesodei ha-Dat ha-Universalit*, an attempt to establish the theory of a universal religion on the basis of rabbinic sources. Shapiro issued *Midrash David* in 1952, consisting of essays on the festivals and halakhic discourses. In 1961, his *Torat Moshe ve-ha-Nevi’im* appeared. It includes bibilical studies which attempted to prove the dependence of the prophets on the Mosaic law.

**SHAPIRO, ESTHER JUNE** (1934– ), U.S. producer and screenwriter. A Brooklyn native, Shapiro began her enter-
tainment career writing for television. One of her first jobs was writing a 1966 episode of *The Iron Horse*. She also wrote for *Love of Life* (1969–70) and was executive story consultant for *Love Story* in 1973–74. Shapiro married Richard Shapiro, also a producer and screenwriter, in 1960. In 1975, the pair wrote the screenplay for the NBC movie *Sarah T.: Portrait of a Teenage Alcoholic*. Two years later, they produced and wrote the ABC movie *Intimate Strangers* (1977). The same year, they wrote for the CBS television movie *Minstrel Man*. In 1981, the two collaborated as the creators of *Dynasty*, a prime time soap opera, which the couple also wrote for until 1989. In 1983–84, the Shapiros worked as cocreators and executive producers of *Emerald Point*. Shapiro also wrote for the show. In 1985, the pair created *Dynasty II: The Colbys*, a spin-off of the original series, for which Shapiro also wrote. Shapiro was an executive producer for the ABC television movies *The Three Kings* and *Cracked Up* in 1987. The next year, she became executive producer of the television show *HeartBeat* (1988), which she also wrote. The following year, the couple wrote and were executive producers for the NBC television series *When We Were Young*. In 1991 the pair returned as writers for the television movie *Dynasty: The Reunion*. Other television movies the couple worked on are *Blood Ties* (1991), *The Colony* (1996), *Living the Life* (2000), and *The Motel* (2005).

[Susannah Howland (2nd ed.])

**SHAPIRO, EZRA Z.** (1903–1977), Zionist and communal leader. Shapiro, born in Volozhin, Russia, was brought by his family to Cleveland, Ohio, in 1906. Early in his life Shapiro became active in advancing Jewish education and in the Zionist Movement, two causes which he served vigorously on the local, national, and international levels. He became president of the Zionist District of Cleveland in 1924 and ten years later was elected chairman of the national executive committee of the Zionist Organization of America. As president of the Cleveland Hebrew Schools (1939–43) and the Cleveland Bureau of Jewish Education (1953–56), he helped create the system of communal education there. At the 1951 Zionist Congress, Shapiro, as chairman of its committee on fundamental problems, was instrumental in drafting the Jerusalem program redefining Zionist goals for the post-State era. He was a leader of the World Confederation of General Zionists and the American Jewish League for Israel which he helped found in 1957. He was vice president of the American Association for Jewish Education, 1959–66. Other areas of Cleveland public life in which Shapiro was active include his post as city law director (1933–35); member of the Cleveland Community Relations Board from 1963 and vice chairman from 1966; trustee of the Jewish Community Federation from 1934; and president of the Jewish Community Council (1942–45). In 1971 he settled in Jerusalem and became director of the Keren Hayesod-United Israel Appeal.

[Judah Rubinstein]

**SHAPIRO, HAROLD** (1935–), U.S. scholar and administrator. Born in Montreal, Shapiro held dual American and Canadian citizenship. He earned his bachelor’s degree from McGill University in 1956 and his Ph.D. in economics from Princeton in 1964. Shapiro joined the faculty of the University of Ann Arbor in 1964 as an assistant professor, becoming an associate professor in 1967. In 1970 he was named a full professor of economics and became chair of the department of economics in 1977. He served as a research scientist at the Institute of Labor and Industrial Relations and at the Institute of Public Policy Studies. His fields of interest included econometrics, mathematical economics, science policy, the evolution of higher education, and money and banking. Shapiro published numerous articles in academic journals, including the *International Economic Review* and *Journal of Comparative Economics*, and he wrote and edited several books, including *Tradition and Change: Perspectives on Education and Public Policy* (1987).

Shapiro was named vice president for academic affairs of the University of Michigan at Ann Arbor in 1977, and he also served as chairman of the executive board of the University of Michigan hospitals. In 1980 he was elected president of the university and chairman of its board of regents. In 1988 he was named Princeton University’s 18th president, the first Jew to serve in that office and he served in that capacity until his retirement in 2001. He also held a faculty appointment as professor of economics and public affairs; he became professor emeritus.

Shapiro served as a member of the Bretton Woods Committee, the American Philosophical Society, the Institute of Medicine of the National Academy of Sciences, and the Government-University-Industry-Research Roundtable of the National Academy of Sciences. He was a member of the presidential Council of Advisors on Science and Technology from 1990 to 1992, and he chaired the Institute of Medicine’s Committee on Employer-Based Health Benefits. In 1996 he was appointed by President Bill Clinton to chair the National Bioethics Advisory Commission, which issued the report *Cloning Human Beings* in June 1997.

Shapiro served as a trustee of the Alfred P. Sloan Foundation, the Universities Research Association, the Educational Testing Service, and the University of Pennsylvania Medical Center. He also served on the board of directors of the Dow Chemical Company and the American Council on Education. He was a fellow of the American Academy of Arts and Sciences.

[Dorothy Bauhoff (2nd ed.)]

**SHAPIRO, HARRY LIONEL** (1902–1990), U.S. anthropologist. Born in Boston, Massachusetts, Shapiro graduated from Harvard University in 1923. The following year, he travelled to Norfolk Island in New Zealand to study the Pitcairn Islanders, who were the descendants of the mutiny that had taken place in 1789 aboard the British naval vessel *Bounty* in the South Pacific. After receiving his Ph.D. from Harvard in 1926, Shapiro served as assistant curator in physical anthropology at the American Museum of Natural History, and rose to the position of assistant curator in physical anthropology at the American Museum of Natural History.
to become curator and chairman of the department in 1942, in which capacity he remained until he retired in 1970. At the same time, he was also a professor of anthropology at Columbia University (1942–73). An officer of various professional organizations and lecturer at various institutions, he was a founding member of the American Association of Physical Anthropologists (1930) and served as secretary (1935–39) and vice president (1941–42). He served for many years as a member and in 1953–54 as chairman of the division of anthropology and psychiatry of the National Research Council. His expertise was primarily in physical anthropology, human biology, race, and population.

Among his many honors and awards, Shapiro received the Theodore Roosevelt Distinguished Service Medal (1964); a Distinguished Award for Contributions in Science from the New York Academy of Sciences (1977); and the T. Dale Stewart Award for Distinguished Service from the American Academy of Forensic Sciences (1983).

Among his books are The Heritage of the Bounty (1936), Migration and Environment (1939), Race Mixture (1953), Aspects of Culture (1956), The Jewish People: A Biological History (1960), and Peking Man (1974). He also edited Man, Culture, and Society (1956).

[Stewart Kampel (2nd ed.]]

SHAPIRO, IRVING SAUL (1916–2001), U.S. business executive. Born in Minneapolis, the son of immigrants from Lithuania, Shapiro rose to become chairman of the giant DuPont Company and corporate America’s lead liaison with Washington in the 1970s. A lawyer trained in litigation – he graduated from the University of Minnesota with a bachelor of law degree in 1941 – he joined DuPont in 1951 as a specialist in antitrust after working in the Office of Price Administration and the Justice Department in Washington. His rise at DuPont was punctuated by high-profile legal landmarks. He became closely acquainted with the company during a lengthy antitrust case that in 1962 led to DuPont’s relinquishing its 37 percent stake in General Motors. Winning the trust of the DuPont family, he rose steadily at the company until he was named chairman and chief executive in 1974, the first lawyer to hold that title. Although he had little formal education in business or science, Shapiro said he developed a deep-seated understanding of business and a flair for dealing with customers from his father, who ran a dry-cleaning business in Minneapolis.

Shapiro took charge of DuPont in trying times. There was an energy crisis in the United States, and the costs of raw materials and fuel were soaring for the company, a petrochemical maker, as the economy was sliding into recession. Shapiro pulled DuPont out of numerous unprofitable businesses and put money into the others. He set up DuPont’s first energy department, which created conservation programs and partnerships with oil companies and other manufacturers to develop synthetic substitutes for oil and gas. Many of the management and business models he instituted remained in place for decades. At the time, in the 1970s, antibusiness sentiment was running high. Shapiro defended American business, asserting that too much regulation was hampering America’s ability to compete with Europe and Japan. Numerous products, including DuPont’s Freon, were being accused of contributing to the depletion of the earth’s ozone layers, while others were being labeled carcinogens. Many new regulations and restrictions were promulgated, many of which Shapiro believed stemmed from hysteria, not science.

In 1976 Shapiro was elected chairman of the Business Roundtable, an influential group of business executives. He made regulatory reform a cornerstone of his two-year tenure. He also became a personal adviser to President Jimmy Carter, and was intimately involved in drafting the response to the 1977 boycott some Arab countries placed on companies doing business with Israel. Shapiro was active in Jewish community affairs in Wilmington, Del., and at one time headed its Jewish Federation.

[Stewart Kampel (2nd ed.)]

SHAPIRO, KARL JAY (1913–2000), U.S. poet and critic. Born in Baltimore, during World War II Shapiro was a soldier in the Pacific campaign. From 1950 to 1955 he edited the Chicago periodical Poetry, and from 1956 he was professor of English at the State University of Nebraska. He wrote forcefully on many kinds of experience and showed a preoccupation with his own attitude toward Judaism. In such early poems as “The Synagogue” and “The Jew” (both 1943), he affirmed that his religion was flexible and easily diluted, and that he tried to write freely, “one day as a Christian, the next as a Jew.” In his Poems of a Jew (1958), which he called “documents of an obsession,” Shapiro asserted that “man is for the world, not for the afterworld”; yet, while rejecting any special Jewish commitment, he declared that mere abandonment of the Jewish religion did not negate Jewish identity, and he even admitted a measure of pride (in the poem “Israel”) in the Jewish state’s restoration of dignity to the Jewish name. In an interview published in 1981, he said: “In my case, the tradition was the Jew, not Judaism, not the religion, but the existence of the Jew as a person, as a creature, even as a kind of mystical presence.”

He believed that Walt Whitman was America’s greatest poet. He was also appreciative of Dylan Thomas as well as of William Carlos Williams. He said that “it wasn’t until some of the contemporary English poets like Auden and Spender began to publish …[that] I really saw the possibilities of using contemporary English … contemporary twentieth-century English…”

His critical works include an Essay on Rime (1945), a critique of poetry in verse; Beyond Criticism, lectures (1953), reprinted as Primer for Poets (1965); In Defense of Ignorance (1960); and The Bourgeois Poet (1964), on the poet in society. He also wrote the Pulitzer Prize-winning V-Letter and Other Poems (1944); Trial of a Poet … (1947); Poems, 1940–1953 (1953); an anthology Selected Poems (1968); To Abolish Children, and Other Essays (1968); and White-haired Lover (1968),

SHAPIRO, (Levi Joshua) LAMED (1878–1948), Yiddish writer. Born in Rzhishchev (near Kiev), Shapiro, his early writings in hand, went to "conquer Warsaw" in 1896, but returned home two years later and supported himself by tutoring. In 1903, again in Warsaw, he published several short stories in local Yiddish periodicals and then began a period of wandering which continued to the very end of his life: to America in 1905, where he contributed stories to Di Tsukunft and reported briefly for the Forverts; in Warsaw again in 1909, he joined the staff of the daily, Der Fraynt, and translated from European literature. In 1910 he published his first collection, Noveln ("Stories"). In spite of financial and geographic instability, the decade 1908–18 was the most prolific of his career: he published his most notorious pogrom story, "Der Tseylem" ("The Cross"), and a number of other works which were later collected in Di Yidishe Melukhe ("The Jewish State," 1919). He began to drink heavily, however, suffered frequent depressions, and wrote ever more sporadically. Hopes of perfecting an invention of color cinematography took Shapiro to Los Angeles in 1921, but he returned to New York after his beloved wife Freydl's death in 1927. In 1931 he published a new story collection, Nyu-yorkish, focusing on the confusing life of immigrant Jewish men. A series of further literary projects, including the attempt to edit his magazine, Studio (1933), were unsuccessful. After a brief period of working for the Federal Writers Project of the WPA in 1937–38, Shapiro returned for the last time to Los Angeles. In 1945 he published a series of essays on literary themes entitled Der Shrayber Getyt in Kheyder ("The Writer Goes to School"). In 1948 he died from the effects of alcoholism. Shapiro's chaotic, restless life stands in sharpest contrast to his carefully controlled, tightly structured, and polished stories. Although many of his works explore violence and human conflict, particularly the wild frenzy of pogroms, the highly visual form of his narration and compression of detail produce a static or classical effect. Shapiro is often called "the master craftsman of the Yiddish short story."

[Robert Tabak (2nd ed.)]

SHAPIRO, RAMI (1951– ), U.S. rabbi. Shapiro was born in 1951 in Springfield, Mass. He received a bachelor's degree from the University of Massachusetts, a master's degree in religious studies from McMaster University, and rabbinic ordination from Hebrew Union College-Jewish Institute of Religion in 1981. He received a Ph.D. in contemporary Judaism from Union Institute in Cincinnati, and took advanced training in counseling.

Shapiro served as rabbi of Temple Beth Or in Miami from 1981 to 2000, a congregation that affiliated with Reconstructionist Judaism. During this time he led the congregation to explore new and participatory forms of Judaism and spiritual growth, transforming conventional American synagogue patterns. He developed creative interpretations of liturgy, encouraged adult study and daily spiritual practice, and initiated an ethics and spiritual curriculum for teenagers called "What Would a Mensch Do?"

Rabbi Shapiro took an active role in the Reconstructionist Rabbinical Association and Ohalah, the Jewish Renewal rabbinic network, as well as the Reform movement. From 2000 to 2002 he was rabbi of the Metivta Center for Contemplative Judaism in Los Angeles. From 1994 to 2004 he directed an Internet site for Jewish study and spiritual growth, Virtual Yeshiva (later called SimplyJewish.com.). From 2002 he headed the One River Foundation, an interfaith institute sharing the spiritual insights of Judaism, Christianity, Islam, and other religions, and continued to write and to teach widely.

Shapiro developed guides to death and mourning for non-Orthodox Jews. His creative translations of liturgy were used in many congregations. Shapiro developed an extensive approach to Jewish ritual and spiritual life, challenging liberal Jews to do more. His book Minyan (1997) was built around the theme of ten key principles of Jewish life, derived from but not always identical with areas of tradition. He advocated ethical consumption (based on kashrut), balancing work and play (Shabbat), and daily acts of kindness (gemilut hasadim) as well as urging daily spiritual practices such as silence and chanting God's names. Among his writings are creative re-interpretations of a number of classic Jewish texts, including selections from the Bible, Pirkei Avot, and Hasidic tales. He wrote Wisdom of the Jewish Sages: A Modern Reading of Pirkei Avot (1993); Minyan: Ten Principles For Living a Life of Integrity (1997); The Way of Solomon: Finding Joy and Contentment in the Wisdom of Ecclesiastes (2000); Proverbs: The Wisdom of Solomon (2001); Hasidic Tales: Annotated and Explained (2003); The Prophets: Annotated and Explained (2004).

[Robert Tabak (2nd ed.)]
lawyers and a major litigation practice, as well as corporate, transactions and real-estate practice. Throughout the course of his career, Shapiro defended a number of well-known clients. But none of them, who included the pornographic movie star Linda Lovelace, the television personality Johnny Carson, and the son of the actor Marlon Brando, achieved the notoriety of the case involving O.J. Simpson, who stood trial in 1994 for the murder of his wife and her friend. Shapiro, by then a well-known criminal defense attorney, replaced Simpson's original lawyer on the case, but he was forced to play a secondary role behind others on the defense “dream team” group of lawyers, headed by F. Lee Bailey and Johnnie Cochran. Shapiro bristled at his co-counselors and, when Cochran took over, he often criticized them. Simpson was cleared of guilt in a startling verdict. After the trial, Shapiro told reporters that he viewed with disgust some of the tactics employed by the defense team. “Not only did we play the race card,” he said on national television, referring to the defendant, who was black, “we dealt it from the bottom of the deck.” He was the author of The Search for Justice, A Defense Attorney’s Brief on the O.J. Simpson Case (1996).

SHAPIRO, SAMUEL HARVEY (1907–1987), lawyer, legislator, and governor. Shapiro, who was born in Estonia and grew up in Kankakee, Illinois, became city attorney there in 1933. Elected district attorney of Kankakee County in 1936 on the Democratic ticket, he resigned in 1941 to enlist in the U.S. Navy, in which he served for four years. In 1946 Shapiro was elected to the Illinois House of Representatives, and served 14 years. He became known for his sponsorship of mental health legislation and his exposure of corrupt officials in the state hospital system. In 1960 Shapiro was elected lieutenant governor of Illinois, and was reelected in 1964. During 1967–68 he served as acting governor, and when Governor Otto Kerner resigned in May 1968, Shapiro succeeded him. He was defeated for reelection in 1968. Shapiro was a president of Kankakee’s Temple Israel, a founder and president of the Kankakee B’nai B’rith, and a member of the Anti-Defamation League. Shapiro wrote Messages to the General Assembly of Illinois (1968).

[Bernard Postal]

SHAPIRO, YA’AKOV SHIMSON (1902–1993), Israeli lawyer and politician. Shapiro was born in Russia and studied at the Medical School of Kharkov University. He came to Erez Israel in 1924 and was one of the founders of the kibbutz Givat ha-Sheloshah. Later, Shapiro studied at the Jerusalem Law School and practiced as a lawyer. In 1948–49 he was Israel’s first attorney-general. He was a member of the Second Knesset (1951), the Third (1955) and the Seventh (1969). In 1965 he was appointed minister of justice, retaining the office in Golda Meir’s cabinet in 1969. In June 1972, however, following a storm over the acquittal of Mordecai Friedman, manager of the Netivei Neft oil company, on charges of irregularity, Shapiro submitted his resignation and it was cited as a rare example of a minister accepting responsibility for the mistakes of his department. On August 30, however, he rejoined the cabinet. In October 1973 he again submitted his resignation, following a controversy over criticism he made of the conduct of the Yom Kippur War by Moshe Dayan, the minister of defense, and the resignation took effect 48 hours later.

SHAPP, MILTON JERROLD (Shapp: 1912–1994), U.S. industrialist and governor of Pennsylvania. Born in Cleveland, Ohio, Shapp moved to Philadelphia in 1935 and worked in the sale of electronic products. To avoid antisemitic sentiment, he changed his name from Shapiro to Shapp but continued to practice Judaism openly. In 1946 he founded Jerrold Electronics Corporation, which pioneered in the development of cable television access. It became a major force in the television industry, making Shapp a multimillionaire. An equal opportunity employer, Shapp hired African-Americans, Hispanics, and other minority groups; and he was one of the first executives to promote women to top management positions. In 1963 the Pennsylvania AFL-CIO named him Man of the Year, the first time a business executive was selected for that honor. In 1967 he sold his interest in the company to the General Instrument Company so that he could concentrate on politics.

In 1960, at the request of President-elect Kennedy, Shapp served as chairman of the New Growth-New Jobs conference in Philadelphia and submitted a report suggesting programs for improving job opportunities in Philadelphia. During the Kennedy administration, he served as consultant to the Peace Corps and to the U.S. Department of Commerce on Area Development problems, and was vice chairman of the National Public Advisory Committee on Area Development. Shapp first ran for the Pennsylvania governorship in 1966 but was defeated.

In 1968 he served as chairman of the Committee for Pennsylvania State Constitutional Revision. In that year he backed Eugene McCarthy for president, losing the support of some labor leaders who had backed him in 1966. As a lib-

Appendix to Moses Rappoport’s Imrei Moshe on Megillat Esther (1889).

BIBLIOGRAPHY: Yahadut Lita, 3 (1967), 102.

[Anthony Lincoln Lavine]
eral, and an opponent of the Vietnam War, Shapp had the endorsement of Americans for Democratic Action and of the New Democratic Coalition. He supported state legislation attempting to prevent the sending of Pennsylvania citizens into undeclared wars. Shapp also supported abortion reform. He was elected governor of Pennsylvania in 1970 by a wide margin, becoming the first Jew to hold that office. In 1974 he won a second term by a large margin as well, serving until 1979. He was the first Pennsylvania governor to succeed himself in the 20th century. As governor, he established the Pennsylvania State Lottery, administered by the Department of Aging which his administration created. The lottery was just one of Shapp’s successful attempts to restore the state to stable financial footing.

In 1976 he ran for the Democratic nomination for president but did not make it into the primaries.

Shapp served Jewish organizations in many capacities, especially the American Jewish Congress; the Allied Jewish Appeal of Philadelphia; and the Federation of Jewish Agencies of Greater Philadelphia.

He wrote My Impressions … Israel at Age 25 (1973).

SHAPSHAL (Szapszal) SERAYA BEN MORDECHAI (1873–1961), leader of East European Karaites, Russian Turkologist and diplomat. Born in Bakhchesaray (Crimea), he studied in the Karaita school of Simferopol where his teacher was Samuel “Pigt, but he did not graduate. In 1899 he graduated from the Oriental Department of St. Petersburg University and served as translator at the Russian Foreign Office. In 1901 he was appointed as a personal tutor of the Iranian Crown Prince Mohammad Ali Shah and, after the coronation of the latter, Shapshal became his court minister and adviser and ennobled as “khan.” In Iran he acquired the nickname “bloody Shapshal,” because he urged the Shah to crush the Iranian Constitutional Movement. Following the revolution in Iran, he was expelled from the country in 1908 as a Russian spy and returned to the Russian Foreign Office, teaching at the same time Turkish and Azeri in St. Petersburg University. Despite his lack of religious education and traditional way of life, in 1911 Shapshal was elected as hakham of West Russian Karaites, but he declined this office. After the demise of the hakham S. Pampulov, this office was offered to Shapshal, but he encountered strong opposition among Crimean Karaites, who did not accept “bloody Shapshal” as a leader. He again declined this office and was elected only in 1915 as hakham. He began with religious reforms, which were aimed at severing Karaitism from its Hebrew and Jewish roots, and shaping the new Turkic-Khazar identity. One of his innovations was the complete exclusion of Hebrew language and literature from the curriculum of Karaita schools. In this period he established a Karaita library-museum, “Kurai Bitiqligi,” which included the books and archive of the Karaita Spiritual Council from Crimea and Odessa. This library contained tens of thousands of printed editions and manuscripts in the Hebrew, Arabic, and Karaita languages. Shapshal also established a periodical “The News (Izvestiya) of the Karaita Spiritual Council” in Russia under his own editorship and published nine numbers (1917–19).

In 1919, after the Bolshevik occupation of the Crimea, which caused the deaths of masses of local population, Shapshal escaped to Istanbul and worked there at a Georgian bank. Later he was appointed as a librarian to catalogue the manuscripts in Abdul Hamid II library. In 1928 Shapshal was appointed as hakham of the Karaites in Poland and Lithuania and changed the name of this title to “gahan” (khan), to obliterate the Hebrew term and to demonstrate the Turkic background of the Karaites. From this period until the end of his life he resided in Troki. After the partition of Poland and Soviet occupation in 1939, Shapshal lost this office and became a Soviet scholar of Orientalism. After the Nazi invasion of Lithuania in 1941, he occupied the office again. He met with German authorities and convinced them of the non-Jewish racial background of the Karaites. The Nazi officials in Vilna arranged the “scientific debate” between Shapshal and the Jewish historian Zelig Kalmanovich (who was in the Vilna Ghetto and was killed by the Nazis) about the origins of the Karaites.

After World War II, following the return of Soviet occupation, Shapshal again lost his office and enrolled in the Karaita kolkhoz at Troki. Later, until the end of his life, he was a senior researcher in the Institute for History and Law of the Academy of Sciences of Soviet Lithuania.

While a student Shapshal published two booklets in Russian about Crimean Karaites: Karaimy 1 Chufut Qaleh (1896) and Karaimy, zapiski krymskago gornoago kluba (1897). Later he published several books and articles on Turkology.

Shapshal was a spiritual leader of the Karaites, who was not accepted by the majority of the community but whose ideology led to a great extent to the de-Judaization and assimilation of East European Karaites. According to his theories, they originated from Khazars and Polevtsi. Shapshal claimed that Karaism was very close to early Christianity, and that Anan ben David recognized Jesus and Muhammad as prophets, who were sent to the Gentiles but influenced Karaism. As to East European Karaites, he claimed that they had adopted the Moslem religion secretly keeping Turkic pagan cults, beliefs, and customs, which had a central role in the Karaita legacy.

[Golda Akhiezer (2nd ed.)]

“SHAPUR (Shahpuhr), the name of three Persian kings of the Sassanid dynasty. The first reigned from 241 to 272 C.E., the second from 309 to 379, and the third and last from 383/4 to 388/9. In rabbinic literature apparently only the first two are mentioned.
SHAPUR I. Samuel, the head of the academy at Nehardea, discussed with Shapur I, with whom he was on friendly terms, religious topics (Sanh. 98a; Suk. 53a), the tense political relations between Persia and Rome (Ber. 56a), and also other subjects. Although aggadic in their extant form, the conversations, in view of their subject matter and contents, are historical. The Jewish community in Babylonia, a large ethnic-religious group recognized by the authorities, was a political and economic factor of considerable importance, and Jewish representatives met the king or other representatives of local authorities to discuss matters of common concern. In the days of Samuel, as during the third century generally, Persia, which included Babylonia, was the scene of a particularly animated religious ferment. There were the sect of Mani and the fanatical priest Kartir who was actively hostile to all non-Mazdean religious minorities. His boast of his ill-treatment of the followers of various religions, the first to be mentioned being the Jews, was found in an inscription. Under such circumstances the Jews appealed to the authorities for protection, these contacts providing an occasion for discussions on religious topics. In any event, talmudic literature records no complaint against Shapur I (see Samuel’s reaction in MK 26a).

SHAPUR II. Many statements refer to the contacts and ties between Shapur II, and particularly between his mother Ifra Hormizd, and the Babylonian amoraim. While still a baby, Shapur II succeeded to the throne and until his majority the regency consisted of several members of the aristocracy and the queen mother. In his lengthy reign two periods may be distinguished. The first concluded in 363 C.E. with the defeat of the emperor Julian in his campaign against the Persian empire, ushering in the second period during which the political position of the Jews of Persia improved in recognition of their unexpected loyalty to the empire. It had been feared that they would revolt against Shapur II and assist Julian, who had promised the Jews of Erez Israel that he would rebuild the Temple in Jerusalem on his return from the Persian War. While Shapur II, at the instigation of the Mazdean priests, persecuted the Christians in the Persian empire, he did not intentionally harm the Jews, a distinction resulting from Christian hopes of a victory for Christian Byzantium, his mortal enemy, with which they were believed to be in contact. To finance his protracted wars against Rome, Shapur II demanded considerable sums of money from the Jews, of which Rava complained in the ‘30s and ‘40s of the fourth century C.E. (Hag. 3b). Because of these wars, the Jews, like the rest of the population, were compelled to billet soldiers in their homes (Pes. 5b; Hul. 94b), and as a result there were cases of rape (Ket. 3b). Isolated instances of premeditated attacks on the Jews may also have occurred (soz, ed. Neuberger, 72), but the evidence is inconclusive, and may refer to Shapur I. A conversation took place between Shapur I1 and R. Hama on a halakhic subject, that of the burial of the dead (Sanh. 46b), for contrary to the halakhah the Persians interred a corpse only when all its flesh, which they believed defiled the earth, had been consumed by wild beasts or birds of prey. Aggadic in character but indicative of the good relations that existed between Ifra Hormizd, the queen mother, and the Jews are the talmudic statements that she sent money for charitable purposes to R. Joseph (bb 8a) and also to Rava (bb 10b), and a sacrifice to the latter to be offered in honor of Heaven (Zev. 116b); that she protected Rava from the king’s anger (Taan. 24b); and that she submitted to him a halakhic problem (Nid. 20b).

[ Moshe Beer]

SHAR’AB, geographic region between Isb and Ta’izz in southwest Yemen, most of it a plain plateau, and on its east side the main *San’a-Dhamār-Yārim route. There were scores of Jewish communities in the region. Their method of study consisted of the memorization of texts by continued repetition. The main subjects of study were aggadah and Midrash on the one hand, and Kabbalah, particularly the Zohar, on the other. The great Yemenite poets of the Masha’ family, Joseph b. Israel and Shalom *Shabazi, were from Shar’ab, as was R. Shalom *Sharabi, the kabbalist. Shabazi has been the most popular personality of Yemenite Jewry throughout all its long existence. There were many religious and kabbalist scholars among them who tended to deal with miraculous deeds. They preserved the correct emphatic pronunciation of the qof and had two other linguistic peculiarities: (a) the complete identification of seri and holam, as was common to the Jews of Babylon and the Jewish communities in the vicinity, but reflecting the ancient Hebrew pronunciation in the land of biblical Judea; (b) the pronunciation of gimel with a dagesh as g, unlike all other Yemenite Jews who pronounce it j (and in Arabic as well). Most of them were weavers, silversmiths, tailors, and shoemakers, but some were also landowners and coffee planters, whose fields were cultivated by Arabs. Their immigration to the Land of Israel commenced in 1911–12, following Sh. Yavneheli’s mission to Yemen. At first they were settled near the Kinneret, but they later moved to Kefar Marmorek. Many of them became residents of the Ha-Tikvah Quarter in Tel Aviv. In the moshavot they worked in agriculture and in the cities as manual laborers.

[Yosef Tobi (2nd ed.)]

SHARABI, SHALOM (1720–1777), Jerusalem kabbalist. Sharabi was born in *Sana in *Yemen, where the study of Kabbalah and mysticism was widespread. In his youth, he emigrated to Erez Israel via *Damascus. In Damascus he was involved in a controversy with the local rabbis concerning the meaning of the minimum quantity (“the size of an olive”)
prescribed for the eating of matzah on Passover night. When he arrived in *Jerusalem, he prayed and studied at the kabbalistic yeshivah Bet El, which had been founded in 1737 by the kabbalist Gedaliah Hayon. There the prayers were held in accordance with the mystical meditations of Isaac *Luria. Like the Jerusalem kabbalists, he studied only the Lurianic Kabbalah, as transmitted through the works of Hayyim *Vital, Luria's outstanding pupil. Soon he became widely known as a man of outstanding piety and as a kabbalist. Sharabi succeeded Gedaliah Hayon as head of the yeshivah after the latter's death (1751). During his leadership, he did much for the yeshivah, initiated important regulations, and arranged the order of prayer. He became known as one of the greatest rabbis in Jerusalem and his signature appears on several documents preserved from this period. In 1754 and 1758, he and other rabbis of Jerusalem signed the note binding the association of kabbalists, Avhavat Shalom. In 1774 he signed next to the leaders of the community of Jerusalem on a letter for emissaries to Western Europe.

Sharabi's life was embellished by legends even from his youth, and in Erez Israel he was famous as a saint and miracle worker. Popular tradition links his departure from Yemen with a miracle that occurred after a rich Muslim woman tried to seduce him. In Bet El he worked as a servant and hid his learning from others; only miraculously was his deep knowledge of Kabbalah discovered and he became a member of the kabbalistic circle. According to legend, the prophet Elijah appeared to him, and he was an incarnation of Luria. After his death, his name became greatly revered among the Jews of Jerusalem and among the kabbalists of Bet El. His grandson, Solomon Moses Hai Gagin, wrote a poem of praise on his expertise in Ez Hayyim and in Shemonah She'arim of Hayyim Vital. The members of Bet El used to prostrate themselves on his grave on the Mount of Olives on the commemoration of his death. His signature was Shalom Mizrahi di-Yid'a Sharabi and his titles Ha-Reshash or Ha-Shemesh (both are Hebrew acronyms of Shalom Mizrahi Sharabi).

Sharabi's books are on Lurianic Kabbalah. Particularly famous is his prayer book Nehar Shalom (Salonica, 1806), which includes in detail the secrets and mystical meditations on prayers and on mitzvot for the entire year according to Luria's Kabbalah. It became popular in Erez Israel and North Africa after his death. His contemporary, Ḥ, J.D. *Azulai, attested that Sharabi studied the Lurianic teachings in depth and presented the mystical meditations of Luria clearly and correctly. He annotated corruptions in the texts and elucidated lacunae and contradictions. His glosses and explanations of Luria's writings are an important source for their understanding.

The missing part of the work was published later in an edition of Ez Hayyim (1866–67; 1910). It was published in Jerusalem in two editions (1911–12; 1916). Parts of the prayer book were published under different titles and in many editions from 1911. He also wrote Rehovot ha-Nahar, a commentary on Luria's principles (Salonica, 1806); and Emet ve-Shalom, glosses to Hayyim Vital's Ez Hayyim (Salonica, 1806), later published in Ez Hayyim (Salonica, 1842; Jerusalem, 1866–67).

[Yehuda Ratzaby]

SHARANSKY, NATAN (Sharansky; 1948—), Jewish dissident in the Soviet Union and Israeli politician, member of the Fourteenth and Fifteenth Knessets. Born in Donetsk, in Ukraine, Sharansky started studying mathematics and computer sciences in 1966, obtaining his degree from the mathematics and physics institute in Moscow. After the Soviet invasion of Prague in August 1968, he decided to join the struggle for human rights in the Soviet Union. In 1973 he first applied for an exit permit in order to immigrate to Israel, but his request was denied. He proceeded to become an articulate spokesman for Jewish emigration from the Soviet Union to Israel, but refused to cooperate with Israel's efforts vis-à-vis Jews who left the Soviet Union for other destinations. Following the signing of the Helsinki Agreement for Security and Cooperation in Europe in 1975, he joined the Helsinki group in the Soviet Union headed by Andrei Sakharov, and was its contact man with Western journalists reporting on the dissident movement in the Soviet Union. Sharansky convinced Yuri Orlov to lead a small group of Jewish and non-Jewish dissidents to refuse exit visas that the Soviet Union was willing to offer them in order to get rid of them, so that they could continue to monitor the Soviet failure to comply with the Helsinki Accords. Accused in a March 1977 Izvestia article of working for the CIA, Sharansky was arrested shortly thereafter on charges of treason and espionage, and sentenced to 13 years imprisonment. Having gained some fame as a dissident before his imprisonment, there was a good deal of international activity to get him released. His wife Avital, whom he had married in 1974 and who had managed to leave for Israel, stood at the head of the campaign for his release. Sharansky was finally released as part of an exchange of prisoners between the United States and the Soviet Union on February 11, 1986, and received a hero's welcome in Israel. Sharansky continued to be active on behalf of Soviet Jewry, and in 1988 was elected head of the Zionist Forum – an umbrella organization engaged in helping in the absorption of immigrants from the former Soviet Union. Following the Declaration of Principles in 1993, he established an organization called "Mabat Lashalomi" to follow the agreements between Israel and the Palestinians. In 1996, prior to the elections to the Fourteenth Knesset, he formed a new immigrants' party called Yisrael ba-Aliyah. The new party, which was considered moderately right-wing, gained seven seats and joined the government formed by Binyamin *Netanyahu. Sharansky was appointed minister of industry and trade. In the late 1990s he was accused by former prisoner of Zion Yuli Nudelman of having collaborated with the KGB, but the accusations were never substantiated. In the elections
to the Fifteenth Knesset Yisrael ba-Aliyah gained six seats, and joined the government formed by Ehud *Barak. Sharansky was appointed minister of the interior – a ministry that was important for the new immigrants – after the Ministry had been in the hands of *Shas for most of the previous fifteen years. However, Sharansky and his party left the government over Barak's peace policy in July 2000. Sharansky then joined the government established by Ariel *Sharon in 2001, and was appointed deputy prime minister and minister of construction and housing. In the elections to the Sixteenth Knesset Yisrael be-Aliyah gained only two seats, and Sharansky decided to resign his Knesset seat. The two Yisrael be-Aliyah MKs then joined the Likud. In Sharon's new government Sharansky, no longer a member of the Knesset, was appointed minister without portfolio in charge of Jerusalem. In the controversy within the Likud concerning Sharon's disengagement plan Sharansky joined the "rebels," who objected to the plan, and after all the parliamentary efforts to foil the plans failed, resigned from the government in May 2005. His 2004 book, The Case for Democracy: The Power of Freedom to Overcome Tyranny and Terror, was warmly praised by U.S. President Bush. Among his other writings are (Anatoly and Avital Shcharansky) The Journey Home (1986) and Fear No Evil (1988).

[Susan Hattis Rolef (2nd ed.)]

**SHARETT (Shertok), MOSHE** (1894–1965). Zionist leader, and prime minister of Israel 1954–55. Member of the First to Fifth Knessets. Sharrett was born in Kherson in Ukraine. His parents, who were members of the *Bilu movement, settled in Ereq Israel in the early 1880s but returned to Russia. As a child Sharrett went to a modern heder, and attended a Russian gymnasium in Kherson. At the same time grew up in a Zionist atmosphere and studied Hebrew. In 1906 his family resettled in Palestine, first in the Arab village of *Ayn Siniya in Samaria, where Sharrett learned Arabic and gained a close insight into the life and customs of the Arab villagers. This experience accompanied him in later life, making him more sensitive to Arab feelings and sensitivities. In 1908 the family moved to Jaffa and Sharrett's father, Jacob, was one of the founders of the Aḥuzat Bayit quarter, from which Tel Aviv grew. In the years 1908–13 Sharrett attended the Herzliya gymnasium in Tel Aviv. When his father died, he helped support the family by giving private lessons in Hebrew, Turkish, and Arabic. With his classmates Eliyahu *Golomb and Dov *Hos (both of whom married sisters of Sharrett's), David *Hacohen, and others, he established close ties with pioneers of the Second Aliyah. After graduating from high school, he went to Constantinople to study law. Upon the outbreak of World War I he volunteered for the Turkish army, and received the rank of officer. He served in Macedonia and in Aleppo, inter alia as an interpreter of the commander of the German Army operating in Turkey. At the end of the war Shertok returned to Palestine, and in 1919 was among the founders of *Ahдут ha-Avodah, in which he became a close associate of Berl *Katzenelson. In 1920 Sharrett went to England to study at the London School of Economics, where one of his professors was Harold *Laski. In London he became active in the British Po'alei Zion movement. He returned to Palestine in 1925 and was nominated by Katzenelson as deputy editor of the newly founded Histadrut-owned daily Dava. Upon the recommendation of Chaim *Arlosoroff in 1931 he was appointed Secretary of the Jewish Agency's Political Department. Following Arlosoroff's assassination in 1933, Shertok was elected by the Eighteenth Zionist Congress as his successor as head of the Political Department, a post he held until the establishment of the State of Israel in 1948. Sharrett was responsible for day-to-day contacts with the British Mandatory authorities, the preparation of the Jewish case for presentation to the various British commissions of inquiry on the situation in Palestine, and a wide range of activities in the field of information and public relations. In 1937, and again in 1947, Sharrett supported partition, if that would lead to the establishment of a Jewish state. It was on his initiative that the Jewish Supernumerary Police were established in the course of the Arab Revolt of 1936–39. At the outbreak of World War II he was one of the leaders of the recruitment of Jews from Palestine to the British army, playing an important role in the establishment of the *Jewish Brigade. On June 29, 1946 – "Black Saturday" – he was one of the Jewish leaders arrested by the British, and was detained for four months at the Latrun detention camp. In 1947 he played a major role in the diplomatic battle to get the UNSCOP partition plan approved (see *Palestine, Inquiry Commissions, and *Palestine, Partition) by the UN General Assembly. Upon the establishment of the State of Israel he was appointed as its first foreign minister, which is when he officially changed his name from Shertok to Sharrett. Sharrett was responsible for establishing Israel's highly professional foreign service and opening diplomatic delegations in dozens of countries around the world, paying special attention to Latin America. He was among those who supported contacts with West Germany, and signed the Luxembourg Agreement with Konrad *Adenauer over the issue of *restitution payments to Israel in 1952. Though in later years he was to be criticized for allegedly opting for a totally Western orientation and accused of neglecting Asia, he had in fact made efforts to establish contacts within the framework of the Asian socialist movement, but enjoyed only limited success. While he favored nonalignment, within the objective constraints, including the major role played by Egypt and other Muslim states within the nonaligned bloc, such an option did not exist for Israel. When David *Ben-Gurion temporarily retired to Sedeh Boker in January 1954, Sharrett succeeded him as prime minister, retaining the Foreign Affairs portfolio and handing the Defense portfolio to Pinhas *Lavon. It was in the course of his premiership that the "esek bish" (later named the "Lavon Affair") took place, though he himself was not implicated. When Ben-Gurion resumed the
post of prime minister in November 1955, Sharett continued to serve as foreign minister, but due to growing differences of opinion between the two men over Ben-Gurion’s activism, he resigned in June 1956. He was critical of the “Sinai Campaign, which took place four months after his resignation, viewing it as rash. In 1960 he was elected chairman of the Zionist Organization and Jewish Agency Executive. He continued to support strong links between the State of Israel and the Zionist Organization, and devoted his last years to Zionist endeavors among the Jewish communities abroad. He also continued to be active within Mapai. In the Lavon Affair controversy that continued to bedevil Mapai, Sharett was one of Ben-Gurion’s principal opponents. The Affair finally led to the breakup of Mapai in 1965 – the year of his death. In these years Sharett, who was a master of the Hebrew language and engaged in the translation of poetry in foreign languages into Hebrew, also served as chairman of the Am Oved publishing house. He passed away in Jerusalem and was buried in the Old Cemetery in Tel Aviv.

Throughout his political career Sharett was well served by his capacity for clear and systematic thinking, his analytical power, his thoroughness and diligence, and his unusual linguistic talents (he was proficient in eight languages). He never relied on intuition, but examined every question in detail, took pains to acquire a thorough knowledge of the material, and studied the arguments of the other side. In speech and in writing he was a perfectionist in regard to both form and content.

Several educational institutions, a fund for the encouragement of young artists, as well as several neighborhoods and numerous streets throughout Israel bear his name.

Among his writings are Texts of Addresses Presenting the Position of the Government of Israel on the Future of Jerusalem, During the Fourth Session of the General Assembly of the United Nations, 1949 (1950); The Challenge of the Land (1960); and a “political diary,” Yoman Medini (1968–76).

[Susan Hattis Rolef (2nd ed.)]

SHARETT (Shertok), YEHUDAH (1901–1979), Israeli composer; brother of Moshe *Sharett. Born in Kherson, Yehudah Sharett was brought to Ereẓ Israel at the age of five and shared in the family’s adventurous settlement in the Arab village of ‘Ayn Siniya. After their move to Jaffa he studied violin and music at the institution directed by Shulamith Ruppin (later the “Shulamit Conservatory”). In 1922 he joined kibbutz “En-Harod; there he founded the “Emek Quartet” whose members gave many concerts in agricultural settlements and at the same time continued to fulfill their daily stint of manual labor. In 1926 he joined kibbutz “Yagur. In 1929 he went to Germany to study with the noted music educator Fritz Jo-ede. Upon his return he began to compose intensively for the needs of his kibbutz, from simple children’s songs to his crowning achievement – the Yagur Passover Seder Service. Between 1937 and 1939 Sharett published eight song collections called Anot which principally contained his own songs and compositions. They were the first music publications of the workers’ movement and the first of their kind in the country.

No. 2, for *Omer and Passover, already contained the nucleus of the seder; no. 4, “for the days of siege and bloodshed” served for ceremonies during the Arab riots; no. 8 included choral works by 16th- and 17th-century European composers, with words adapted by Sharett. Of Sharett’s songs and choral pieces, the following became especially popular: Kamu Tōei Midbar (words by Bialik; choral setting, edited by Josef Tal); Ha-Bonim ba-Ḥomah; a group of songs by the poet Rahel, including Ve-Ulai, Hen Damah be-Dami Zorem; Lo Sharti Lākh Arzi (early 1930s); El Al be-Eyal (D. Shimoni); and Ha-Geshem Ḥalaf Halakh Lo (Song of Songs). The Passover seder service (Seder Pesah Nusah Yagur, 1951) evolved with the collaboration of the members of Yagur. Its basic text is the “Spring” and “Exodus” passages from the Song of Songs and the Book of Exodus, together with a considerable part of the traditional Ḥaggadah. Participation is distributed between the celebrants, an adult’s choir, a children’s choir (with a small percussion ensemble), adult and child soloists, adult and child speakers, and an “ad hoc” ensemble of available instruments. Almost all nonreligious kibbutzim in Israel adapted Sharett’s seder, or many parts of it. A few of the melodies (such as Sh. *Postolsky’s Ha Lahma Anya) were taken from other composers, but the seder, as a whole, is Sharett’s creation.

In 1953 Sharett left Yagur and settled in *Neveh Yam. From that time he also worked on the creation of “kibbutz liturgies” for the High Holidays.

[Bathja Bayer]

SHAREZER (Heb. שארזר), an abbreviated Babylonian name meaning “... [name of deity] protect the king” (cf. Nergal-Sharezer; Jer. 39:3, 13).

1. According to 11 Kings 19:37 (= Isa. 37:38; cf. 11. Chron. 32:21), Sharezer and *Adrammelech murdered their father, King Sennacherib, in the Temple of Nisroch and fled to Ararat.

2. The name in Zechariah 7:2, sometimes read Sharezer, should most likely be combined with the preceding word and read Bethel-Sharezer (see “Regem-Melech”).
SHARFMAN, ISAIAH LEO  (1886–1969), U.S. cantor. Born in Brooklyn, he attended the Yeshiva of Harlem and then a yeshivah in the Bronx before attending the Talmudical Academy of Yeshiva University and the Bet Midrash le-Morim at Yeshiva. His parents moved to Jerusalem, Palestine in 1935, where he studied at the Jerusalem Conservatory of Music and the Bet Midrash le-Morim run by Mizrachi. His return with his parents to New York in 1939 and attended high school at night and then Manhattan School of Music, receiving both his B.A. and M.A. in 1949. His studies were interrupted by war service and he was in the U.S. army between 1942 and 1945. Thus, he was both a learned Jew and a classically trained musician, at home in the synagogue and at home in all facets of music, classic and contemporary.

In 1949 Sharlin entered the School of Sacred Music at HUC-JIR and then entered its cantorial program while pursuing graduate work at the Cincinnati Conservatory of Music.

He moved to Los Angeles in 1954, combining a part-time position at the newly formed Leo Baeck Temple and teaching at the Hebrew Union College's Los Angeles Campus. He remained at Leo Baeck until his retirement in 1988, introducing many of his compositions in different services and for special education. He had a firm grasp of the seriousness of liturgical movement and was a cantor at a time when many Reform congregations had soloists and choirs. He brought to the synagogue, in the words of its Rabbi Leonard Beerman, a sense of musical vitality and the musically possible. Although a formally trained musician, he was one of the first to introduce the guitar to synagogue service, bringing the liveliness and informality of the camp experience back into the synagogue.

At Hebrew Union College, he was chairman of the Department of Sacred Music. Among the programs he established was a program for cantorial certification and one for synagogue organists. He also continued a long tradition of Jews – mainly from Bukovina, but also from Bessarabia – to the 1,800 Jews of the town and its environs. The crowding in the ghetto caused epidemics, and by June 1942 some 1,449 had died of typhus. The Judenrat fought the epidemics by opening a hospital, a pharmacy, and a sanitation station. With the help of the Aid Committee from Bucharest it organized shops where food, medicine, clothes, and other essentials were produced. An orphanage and school for 186 children was opened. About 1,000 Jews were dispersed on June 30 into 10 nearby villages, and in May 1943 some 175 were sent to a labor camp in Trikhyat (near Nikolayev), where they perished. In September 1943 there were still 2,731 Jews from Bukovina and 240 from Bessarabia in the Shargorod ghetto. In 1979, 800 Jews (23% of the total population) lived there, but there was no synagogue. Most of the Jews left in the 1990s.

[Shimshon Leib Kirshenboim / Shmuel Spector (2nd ed.)]
working with individuals and training them in a mentoring program as cantors. He continued that well into the age of retirement. He was a composer and arranger as well as a cantor. Among his more important works was the service that he composed for the inauguration of Alfred Gottschalk, his former colleague in Los Angeles, as president of Hebrew Union College-Jewish Institute of Religion in 1971. His collected works have been published.

[Michael Berenbaum (2nd ed.)]

SHARM EL-SHEIKH, TIRÂN ISLAND, AND TIRÂN STRAITS. Sharm el-Sheikh and Sharm al-Ma‘ (Sharm el-Moye) are two small bays on the southeastern coast of the Sinai Peninsula, opening out to the Red Sea. They are situated 10 mi. (16 km.) north of Ra‘s Muhammad, the southern tip of Sinai, and 15 mi. (24 km.) southwest of the Tirân Straits and the southern end of the Eilat Gulf. The two bays are separated from each other by a narrow headland. The Arabic name of the first is related to the tomb of a Bedouin sheikh on its shore; in 1956, it was given the Hebrew name Mifraz Shelomo ("Solomon’s Bay"). Sharm al-Ma‘ means "Water Bay." The local climate is arid-tropical, with summer temperatures in the 95–104°F (35–40°C) range, and precipitation remaining well below the 1 in. (25 mm.) annual average. The shore beyond the bays is hemmed in by coral reefs and mangrove thickets.

Tirân Island, at the southern issue of the Eilat Gulf, is composed of a northern and southern part, with a bay thrusting deeply into its eastern coast. Measuring 23 sq. mi. (59 sq. km.), it is over 7 mi. (12 km.) long and 6.5 mi. (11 km.) wide. Although mostly flat, a mountain 500 meters high rises at its southern end. The island is today uninhabited and has no fresh water supply. East of it lies the smaller Sinâr (Senappir) island (surface 9 sq. mi., 24 sq. km.), which belongs to Saudi Arabia. Between Tiran and the Ra‘s Nuṣrânî Cape on the Sinai Coast, a 4 mi. (7 km.) wide strait connects the Eilat Gulf with the Red Sea; coral reef isles, however, reduce its width to 2.5 mi. (4 km.), and the width where the water depth permits a secure passage to ocean-going vessels does not exceed 200–300 meters.

In the late Roman and early Byzantine periods, when Jewish centers of Arabia and Ethiopia developed trade with the Red Sea, a community of Jewish merchants was founded on Tiran in the fifth century, which named itself “Yotvat.” It was destroyed by Emperor Justinian in 535 C.E. On the Sharm el-Sheikh shore, Bedouin occasionally camped. Paul Friedmann, who planned to found a Jewish state in Midian to absorb Jewish refugees from czarist Russia, set up a temporary camp in Sharm al-Ma‘. The Turks sent a unit of soldiers to Midian to prevent the group’s landing there. The episode contributed to exacerbate the Turko-British quarrel over Sinai, and a decade later proved to have a negative influence on Theodor Herzl’s el-Arish project.

After Israel’s War of Independence (1948), the Egyptians built camps and fortifications at Sharm el-Sheikh and Ra‘s Nuṣrânî, with the intention of blocking the Tirân Straits to Israel shipping. To give them a foothold for the purpose, Saudi Arabia ceded Tirân Island to Egypt in 1949. Egypt thus repudiated the international law requiring that such waterways remain open to the shipping of all nations, even when both their sides are under the same political authority. The blockade was broken in the “Sinai Campaign, when Israel forces reached the Sharm el-Sheikh and Tirân area overland on Nov. 3, 1956, blowing up the huge guns at Ra‘s Nuṣrânî which had dominated the straits. On the basis of the maritime powers’ undertaking in the United Nations that free shipping through the Tirân Straits would be guaranteed, Israel evacuated all of Sinai. A UN force was stationed at Sharm el-Sheikh and Ra‘s Nuṣrânî, guarding the straits and thereby permitting the development of Eilat as Israel’s Red Sea port. In May 1967, Egypt demanded the withdrawal of the UN troops from the Sharm el-Sheikh area, a request immediately complied with. Nasser declared the Tirân Straits closed to Israel shipping. This became a principal factor in triggering the “Six-Day War, in which the Sharm el-Sheikh area once again came under Israel’s control on June 7, 1967. Subsequently, it was Israel’s declared policy that in any peace agreement Sharm el-Sheikh and the Tirân Straits had to remain under Israeli control, together with a strip of land to connect it with Eilat. In 1968 the first bathing facilities were installed at Sharm el-Sheikh, and in 1971 a project was announced to build a town there. Early in 1971, the 150 mi. (250 km.) long highway between Sharm el-Sheikh and Eilat was completed. Following the peace treaty between Israel and Egypt, Sharm el-Sheikh was returned to Egypt, but many Israelis (and others) continued to take their vacations there.

[Shlomo Hasson / Efraim Orni]

SHARON, ARIEL

SHARON (Scheinerman), ARIEL (Arik; 1928– ), Israeli soldier and politician, member of the Knesset from the Eighth Knesset. Sharon was born in Kefar Malal and went to high-school in Tel Aviv. He joined the Haganah in 1945, and in 1947 served in the supernumerary police of the Jewish settlements. In the War of Independence he served as a platoon commander in the Alexandroni brigade and was severely wounded in the battle for Latrun. At the beginning of 1949 he was appointed company commander, and in 1951 an intelligence officer in the Central Command. In 1952–53 he studied history and Eastern studies at the Hebrew University of Jerusalem, and was then appointed commander of the 101 commando unit, established to carry out reprisal operations against Arab marauder attacks. In 1954 the unit was merged with a paratroop regiment, headed by Sharon, and continued its unconventional activities behind enemy lines. The unit’s level of performance was considered high, but it was occasionally criticized for its lack of restraint, such as during the
operation in Qibyah, in which women and children were also killed. In the Sinai Campaign of 1956 Sharon fought as commander of a paratroop brigade. However, as a result of the large number of casualties in a battle that took place in the Mitleh Pass, which many viewed as being superfluous, he fell out with Chief of Staff Moshe *Dayan. In 1957 he was sent to the Camberley Staff College in Great Britain, and after his return his advancement in the IDF was frozen by Chiefs of Staff Hayyim *Laskov and Zevi Zur. In 1958–62 he commanded an infantry brigade and the Infantry School, simultaneously attending the Law School at Tel Aviv University.

It was only after the appointment of Yitzhak *Rabin as chief of staff in 1964 that Sharon's military career once again started to advance. Rabin appointed Sharon head of the Northern Command Staff, and in 1966, after he received the rank of major general, as head of the IDF Training Division. In the *Six-Day War he led an armored brigade which broke through Egyptian fortified positions in Um-Kattaf and Abu 'Ageila. After the War he returned to his previous position as head of the Training Division, in which capacity he moved several training bases to the West Bank. In 1969 he was appointed commander of the Southern Command, in which capacity he fortified the Bar-Lev Line and played an active role in the War of Attrition. In this period he was highly critical of Chief of Staff Haim *Bar-Lev. In 1971 he concentrated most of his efforts into fighting against terrorist cells in Gaza and removing the Bedouins from Northern Sinai. The latter activity was criticized by the chief of staff. In this period, though he was still in uniform, Sharon made some proposals of a political nature. In September 1970, in the course of “Black September” in Jordan, he argued (in closed military circles) that Israel should not have helped save King Hussein’s skin in his battle against the PLO, but rather aligned itself with the PLO against the king. The background to this idea was Sharon’s objection to any Israeli withdrawal from Jueda and Samaria, and his belief that an alternative staff would have to be offered the Palestinians. Regarding the Sinai, he proposed that Egypt be allowed to maintain a civil administration there, while the IDF would continue to hold it for a period of 15 years. In the meantime trust would be established between the two sides, to be followed by negotiations toward a settlement. However, his ideas were not taken seriously by the government of Golda *Meir.

In June 1973, after Sharon reached the conclusion that he was unlikely to be appointed chief of staff, he resigned from the IDF and entered the political arena, joining the *Israel Liberal Party. He immediately launched a campaign for the expansion of Gahal through the inclusion of additional parties and groups and played a leading role in the establishment of the Likud. Upon the outbreak of the *Yom Kippur War, however, he returned to active service as commander of an armored division and led his men across the Suez Canal into Egypt proper. Despite the brilliant success of this operation, he was once again severely criticized for disobeying orders and showing disrespect for his superiors.

After demobilization, Sharon ran in the elections to the Eighth Knesset on the Likud list and was elected to the Knesset.

However, feeling ineffective as an ordinary Member of the Knesset in opposition, he resigned from the Knesset in December 1974 and accepted an emergency appointment in the IDF. Half a year later he was appointed by Prime Minister Rabin as his special advisor. A year later he resigned as advisor and formed a new political party, Shlomzion, which gained two seats in the elections to the Ninth Knesset in 1977. After the victory of the Likud in the elections, Shlomzion merged with it, and Sharon was appointed by Menahem *Begin as minister of agriculture in his government, and chairman of the Ministerial Committee on Settlement, in which capacities he encouraged the establishment of new settlements in the territories occupied during the Six-Day War. In this period he was considered the patron of *Gush Emunim. After the resignation of Ezer *Weizman from the post of minister of defense in May 1980, Begin refused to appoint Sharon to the post. However, after the elections to the Tenth Knesset in 1981, Begin finally gave way, and Sharon was appointed minister of defense. Not long after his appointment, Sharon started planning a major operation in Lebanon to stop the launching of Katyushas on Northern Israel and to oust the PLO from Beirut and southern Lebanon. He also sought to remove the Syrians from Beirut and install a government in Lebanon that would be willing to sign a peace treaty with Israel. After an attempted assassination of the Israeli ambassador to London, Shlomo Argov, Sharon decided, in June 1982, to embark on Operation Peace for Galilee. However, two months before this, he implemented the very sensitive operation of withdrawal from the Rafa Salient and the removal of the settlers from Yamit and other Jewish settlements in the area.

Regarding Lebanon, the government approved a limited operation, at a depth of 40 kilometers from the border with Israel. Yet Sharon continued the operation into Beirut, while, according to Menahem Begin’s son Zeev Binyamin *Begin, keeping vital information from the prime minister and misleading him. Sharon personally approved the entry of the Christian Phalange troops into the refugee camps of Sabra and Shatilla the day after Lebanon’s president-elect, Bashir Jemayel, was assassinated. Following the massacre that occurred in the camps, Sharon was found by the Kahane Committee of Inquiry set up by the Israeli government – after massive popular pressure to investigate the event – to be responsible for not preventing the massacre, and he was forced to resign from the Ministry of Defense, remaining in the government as minister without portfolio. Despite opposition in the *Israel Labor Party, Sharon was appointed minister of industry and trade in the National Unity Government formed in 1984. Soon after entering his new position Sharon traveled to the U.S. to appear in a libel suit that he had brought against Time magazine, which had published an article stating that the Kahane Committee Report included a secret appendix, according to which Sharon had encouraged the Jemayel family to take re-
venge against the Palestinians for Bashir’s assassination. Sharon won the suit on the facts but failed to prove malice. Sharon remained in the Ministry of Industry and Trade until February 1990 and continued to support Jewish settlement in the territories, proposing that the Palestinians be given 11 autonomous areas.

Following the government’s decision on May 15, 1989, to hold elections in the territories, Sharon headed a group in the Likud, that also included David *Levy and Yitzhak *Modai, which tried to undermine the plan, and went so far as to leave the government in February 1990, after a stormy meeting of the Likud Central Committee. However, after the Labor Party brought the National Unity Government down in March, he rejoined the narrow government formed by Yitzhak *Shamir as minister of construction and housing. In this position Sharon assisted private associations that were engaged in purchasing property in the Old City of Jerusalem and in East Jerusalem for Jewish settlement, and was involved in purchasing tens of thousands of caravans to house the wave of new immigrants from the former Soviet Union that started pouring into Israel after 1989. Sharon opposed Israel’s participation in the Madrid Conference in October 1991. In February 1992 he contended for the Likud leadership, but came in third after Shamir and Levy. He did not contend for the Likud leadership in 1993 opposite Binyamin*Netanyahu, after the Likud’s electoral defeat in the elections to the Thirteenth Knesset in 1992.

In the government formed by Netanyahu after the elections to the Fourteenth Knesset in 1996, a new Ministry of National Infrastructures was tailor-made for Sharon. Following Netanyahu’s defeat in the direct election for prime minister held in 1999, and Netanyahu’s decision to leave politics temporarily, Sharon finally assumed the leadership of the Likud. It was Sharon’s decision at the end of September 2000 to pay a well-publicized visit the Temple Mount that triggered the outbreak of the second Intifada and led to the final breakdown of Barak’s efforts to work out a permanent settlement with the Palestinians.

In the elections for prime minister held in February 2001 Sharon defeated Ehud *Barak. Following the elections, he set up a national unity government. Soon after his victory he cancelled the system of direct election of the prime minister. With the full cooperation of Minister of Defense Binyamin *Ben-Eliyzer, who briefly served as chairman of the Labor Party, Sharon used massive force to try to crush the increasingly violent Intifada and, in the end of March 2002, launched Operation Defensive Shield, involving wide-scale incursions into the Palestinian towns in the West Bank, and preventing Yasser *Arafat from leaving his residence in the Mukaṭa’ā compound in Ramallah. In November 2002, the Labor Party decided to leave the government, and new elections were held two months later.

In the elections to the Sixteenth Knesset the Likud, under Sharon’s leadership, won an impressive victory. Sharon sought to establish another national unity government, but Labor refused, and he established a coalition with Shinui, the NRP, and the National Union. After the elections, Sharon approved the construction of a defensive fence to separate Israel from the West Bank and make it difficult for terrorists to enter Israel, arguing that the location of the fence did not imply the delineation of Israel’s future borders. At the beginning of 2004 he introduced a unilateral disengagement plan, involving the dismantlement of all the Jewish settlements in the Gaza Strip, and several in Northern Samaria, as well as full Israeli withdrawal from these areas. This move led to a serious rift within the Likud and the breakup of his coalition. The disengagement took place in August 2005 (see *Gush Katif). In January 2005 he established an alternative coalition with the Labor Party and the Ashkenazi *haredi parties, and with the help of several opposition parties managed to get the Knesset to approve the implementation of the disengagement plan and the 2005 budget on March 30, 2005. At this point Sharon never specified what his plans were following the disengagement. Despite the very difficult political, military, and economic situation, and serious allegations of financial irregularities raised against him and his two sons, Omri and Gilad, Sharon’s popularity soared.

In November 2005, with the Likud Central Committee threatening to depose him as party chairman over his political policies and Likud MKs and cabinet ministers also opposing him, Sharon left the Likud and founded the Kadimah Party, taking with him leading Likud figures, such as Ehud *Olmert, Tzipi *Livni, and Meir *Sheitrit, and joined by disaffected Labor Party leaders such as Shimon *Peres. On January 4, 2006, Sharon suffered a massive stroke which left him incapacitated. Ehud Olmert of Kadimah became acting prime minister and led the party to an election victory in March 2006.

Sharon’s eldest son, Omri, was elected to the Sixteenth Knesset on the Likud list.

[Susan Hattis Rofel (2nd ed.)]

SHARON, ARYEH (1900–1984), Israeli architect, among the most influential architects in Israel specializing in public buildings. Born in Poland, he went to Palestine in 1920 and joined kibbutz Gan Shmuel, working as a mason. Between 1926 and 1930, he studied architecture at the Bauhaus in Dessau, Germany, and then worked for two years in Berlin. He returned to Ereẓ Israel in 1932 and planned and built many...
cooperative housing projects in Tel Aviv. He grasped the connection between the social and political views of the Bauhaus to the Zionist ideology of the Yishuv. He also planned the new Beilinson Hospital, the old and new Agricultural Center, the Bet Brenner building in Tel Aviv, the Ichilov Hospital, Tel Aviv, various buildings of the Weizmann Institute in Rehovot, and of The Hebrew University, Jerusalem. His architecture was known for the relationship between his buildings and their natural surroundings and corresponded to the development of modern architecture over the years. It can be characterized as international and pragmatic. From 1948 to 1953 Sharon was head of the Israel Government Planning Department and as such was responsible for the design of many of the new settlements.

---

**SHARON, NATHAN** (1925– ), Israeli biochemist. Sharon was born in Brisk, Poland, and immigrated to Palestine in 1934. He was educated at Tel Aviv High School and earned his M.Sc. (1950) and Ph.D. (1953) in biochemistry from the Hebrew University of Jerusalem. He was a research assistant at the Agricultural Research Station, Rehovot (1949–53), before joining the staff of the department of biophysics at the Weizmann Institute (1954), where he was appointed professor (1968) and head of department (1973–83 and 1987–90). He was dean of the faculty of biophysics and bioengineering for three periods between 1976 and 1986. He was professor emeritus after 1995. He also carried out postdoctoral research at Harvard Medical School and Massachusetts General Hospital, Boston, and at Brookhaven National Laboratory, Upton, New York (1956–58). Sharon’s research initially concerned lectins, the proteins found in plants, microbes, and mammalian cells that combine with carbohydrate-containing proteins, and later extended to the broader field of sugar-containing proteins called glycoproteins and the associated field of glycobiology. These proteins have important roles in the growth and differentiation of normal cells and the changed behavior of cancer cells. Sharon has a particular interest in cell surface molecules in the family called adhesins and their role in permitting invading microbes to attach to and infect cells. He has used his discoveries to suggest simple forms of treatment, such as cranberry juice to prevent urinary tract infections, and to develop longer-term strategies for blocking microbial adherence to host cells. Sharon’s achievements have been internationally recognized by many distinguished honors and awards. These include election to the Israel Academy of Sciences and Humanities (1992), the Israel Prize in biochemistry and medicine (1994), and foreign membership in the Academia Europaea (1999), the Polish Academy of Sciences (2000), and the American Society for Microbiology (2001). He served as a visiting professor at many leading universities in North America and Europe. Even after attaining emeritus status he continued to contribute original and frequently cited scientific papers and to write authoritative reviews. His books on lectins and complex carbohydrates are highly regarded. His interest in scientific education includes three books of popular science and chairmanship of influential Israeli committees concerned with the advancement of science.

[Michael Denman (2nd ed.)]

**SHARONAH** (Heb. שָׁרוֹנָה), moshav in northern Israel, in Lower Galilee, 3 mi. (5 km.) W. of Yavne‘el, affiliated with Tenu‘at ha-Moshavim. The village’s land was acquired in 1913 by American Jews and a year later, in World War 1, the ground was abandoned. After the land passed over to the Jewish National Fund, moshav Sharonah was founded (1938) by a Gor- donia pioneer group from Eastern Europe, as part of an endeavor to reinforce the “settlement bridge” between the Jezreel and Kinnarot valleys. In 1970 Sharonah had 178 inhabitants, increasing to 441 in 2002. Its farming was based on field crops, fruit orchards, and cattle. The name is mentioned by Eusebius (Onom. 162:4, 5).

[Efraim Orni]

---

**SHARP, ISADORE NATANIEL** (Issy; 1931– ), Canadian hotel executive and philanthropist. Founder, chairman, and chief executive officer of Four Seasons Hotel Inc., Sharp was born in Toronto, Ontario. He graduated as an architect from Toronto’s Ryerson Institute in 1952 and began in the construction business with his father, Max Sharp. On his first trip to Europe in the late 1950s, Sharp became interested in building luxury hotels and in 1961 opened the Four Seasons Motor Hotel in Toronto. From that first hotel he created a worldwide chain that has set the industry standard for fine travel accommodation. In 2005, Four Seasons Hotels and Resorts had 66 hotels in 29 countries and more than 20 properties under development. In addition to numerous corporate directorships, Issy Sharp also applied his leadership skills to charitable and community causes. He initiated the corporate sponsorship program supporting the Terry Fox Marathon of Hope and is the founder of the annual Terry Fox Run Program, the largest single-day fundraising event for cancer research worldwide. In 1983, in recognition of his work on behalf of the Canadian Cancer Society, Sharp was the first recipient of the Ruth Hartman Frankel Humanitarian Award. He continued to serve as a director of the National Terry Fox Run and the Terry Fox Humanitarian Award Program, as well as a governor of the Canadian Council of Christians and Jews. In 1985 he served as co-chairman of the United Jewish Appeal and in 1989 was named the Negev Dinner honouree by the Jewish National Fund of Canada. Among numerous other business and community honors and awards, Sharp was appointed an Officer of the Order of Canada in 1993.

[Andrea Knight (2nd ed.)]

---

**SHARUHEN** (Heb. שָׁרוֹן), city in the territory of the tribe of Simeon (Josh. 19:6); in the Septuagint, the name is translated as “their fields” (sedoteihem). The parallel passage in Joshua...
15:32 has Shilhim, and that in I Chronicles 4:31 has Shaaraim. Opinions are divided between these being variations of the same name or different places. In Egyptian sources, Sharuhen appears as a Hyksos stronghold besieged for three years by the army of Ahmose I after the expulsion of the Hyksos from Egypt. It remained an Egyptian fortress under Thutmose III. It was evidently the starting point of Shishak’s Negev campaign (no. 125 in his list of Canaanite cities). These data have led Al-bright to identify Sharuhen with Tell al-Fari'a (present-day Tel Sharuhen), an ancient mound on the Besor River, about 18½ mi. (30 km.) west of Beer-Sheba. Between 1927–1929 it was excavated by *Petrie, who identified it with Beth-Pelet. Remains include a Hyksos fortification; strata of the Philistine, Israelite, and Persian periods; Hyksos and Philistine tombs; Jewish coins; and a Roman fort.

**SHAS (Heb. שע״א),** an abbreviation consisting of the initials of *Shishah Sedarim* (Heb. שישהל סדרים), or *Shia Sidra* (Aram. שׁיא סִידְרֵי, the “six orders” into which the Mishnah is divided. The full Aramaic term is found in *Ba‘a Mezia* 85b, the full Hebrew in *Esther Rabba* 1:12. The abbreviation does not appear in the manuscripts of the early editions of the Talmud and was first used in the Basle edition (1578–81) because of the objection of the censor to the term Talmud. It appears in *Haggah* 10a and *Shabbat* 63a. In both of these passages the Munich manuscript reads שׁישהלמה (talmuda). Tosafot to *Sanhedrin* 249a quotes *Avodah Zarah* 19b שׁישהלמה (shelish ba-Shas), “A third of one’s time should be devoted to Shas)” where the printed editions read שׁישהלמה (ba-Talmud).

**Bibliography:** R.N.N. Rabinovitch, *Maimon al Hadpasat ha-Talmud*, ed. by A.M. Habermann (1952), 76ff. esp. n. 7. [Harry Freedman]

**SHAS (Sephardi Torah Guardians),** Israeli political party. Shas was established in 1984 before the elections to the Eleventh Knesset, in protest over the small representation of Sephardim in the *haredi* ‘Agudat Rabbi Ovadia ‘Yosef, who established a seven-member Council of Torah Sages. At first the party’s political leader was Rabbi Yitzhak Haiyim Peretz. True to its slogan of “restoring the pristine splendor” (Hahzarat Atarah le-Toshnah) Shas established an independent education system called El ha-Ma‘ayan, and started to actively engage in bringing members of the Sephardi community back to religion. In the elections to the Eleventh Knesset Shas won four seats, compared to Agudat Israel’s two, receiving not only the support of haredi voters, but also of many traditional voters. While Shas followed an extreme policy on issues of religion and state, at first it followed a moderate policy on the peace issue, after ‘Yosef had declared that lives were more important than territories.

Shas joined the National Unity Government formed in 1984, and Peretz was appointed minister of the interior. He resigned in January 1987 over the Shoshana (Susan) Miller affair, after the High Court of Justice ruled that Ms. Miller be registered in her id card as Jewish, even though she has been converted to Judaism by a Reform rabbi. The Ministry of the Interior was now run by the director general of the ministry, Aryeh *Deri. Peretz later returned to the government as minister without portfolio.

In the elections to the Twelfth Knesset in 1988, Shas won six seats, and once again joined the National Unity Government, in which Deri, now officially recognized as the political leader of Shas, was appointed minister of the interior. It was Deri, in collusion with Haim *Ramon* of the *Israel Labor Party, who helped Shimon *Peres bring down the government in March 1990, when five of Shas’ MKs were absent during a vote on a motion of no-confidence in the government. But after Peres failed to establish a new government, Shas joined the new right-wing-religious government established by Yitzhak *Shamir.

In the elections to the Thirteenth Knesset in 1992 Shas retained its six seats, and despite allegations of mismanagement of funds by the party’s educational institutions and charges of corruption against several of its Knesset members, Prime Minister Yitzhak *Rabin included Shas as the only religious party in his government, offering Shas many of the power positions previously held by the *National Religious Party. After a prolonged struggle, Shas managed to bring about the removal of Shulamit *Aloni from the Ministry of Education and Culture. However, external pressures and criminal charges brought against Deri that resulted in demands by the attorney general that he resign, led to its resignation from the government in August 1993, one month before the signing of the Declaration of Principles with the *PLO in Washington. Efforts to bring Shas back into the government failed. Nevertheless, it joined Ramon’s new list in the *Histadrut elections in May 1994, and was thus a partner to the revolutionary changes in the Histadrut that followed.

In the elections to the Fourteenth Knesset in 1996, Shas, still under Deri’s political leadership, but now less dovish than before, garnered 10 Knesset seats and joined the government formed by Binyamin *Netanyahu, even though Deri himself was not given a ministerial post. Deri was, nevertheless, allegedly involved in the attempts to get Ronnie Bar-On appointed attorney general. In the elections to the Fifteenth Knesset in 1999, Shas, now under the political leadership of Rabbi Elihu (Eli) Yishai, received a record 17 seats. Shas joined the government formed by Ehud *Barak, but left over Barak’s willingness to make far-reaching concessions to the Palestinian Authority. It then joined the government formed by Ariel *Sharon after he won in the elections for prime minister held in 2001. In the elections to the Sixteenth Knesset held in 2003, Shas lost six of its seats to the Likud. This was due to the departure of Deri from the political scene, divisions in the Sephardi haredi camp, a deterioration in Shas’ financial situa-
tion, and some embarrassing statements by Rabbi Yosef in the course of his weekly lessons. Shas remained outside the new government formed by Sharon, and despite talks held with the Likud at the end of 2004 and the beginning of 2005 about a possible entry of Shas into the government after the departure of the National Union, the NRP, and Shinui, Shas, believing that early elections lay ahead, chose to remain outside. In the course of the Sixteenth Knesset Shas opposed the government both over Netanyahu’s economic policy that greatly reduced social transfer payments, and especially child support benefits, and over Sharon’s disengagement policy. In the March 2006 elections to the Seventeenth Knesset, Shas received 12 seats and rejoined the government with four cabinet posts, including Yishat as minister of industry, trade and labor.

**SHASHU, SALIM** (1926– ), Iraqi poet and journalist. A Baghdadi lawyer and teacher, Shashu immigrated to Israel in 1951 and edited the Arabic weekly *al-Manār*, also working for the Arabic section of the Israel Broadcasting Authority. He hailed Israel’s military achievements in his nationalistic poems. His verse collection *Fi ‘Alam al-Nūr* (“In the World of Light,” 1959) was dedicated to President Ben-Zvi. 

[Shmuel Moreh]

**SHATNER, WILLIAM** (1931– ), Canadian actor-writer. Shatner was born in Montreal. His paternal grandfather, Wolf Shattner, had changed the family name after emigrating from the Ukraine. Even before his teen years, Shatner was working professionally for the Canadian Broadcasting Company. He studied business at McGill University and in 1951 acted in the Canadian feature *The Butler’s Night Off*. He had planned to go into the clothing business with his father after graduating with a bachelor’s degree in 1952, but instead joined the Canadian Repertory Theatre (1952–54) in Ottawa and then the Stratford Shakespeare Festival (1954–56) in Stratford, Ontario. He played Ranger Bob on the children’s television series *Howdy Doody* in 1954 and starred in a live adaptation of Herman Melville’s *Billy Budd* (1955). In 1956 Shatner made his Broadway debut with *Tamburlaine the Great*. In 1958, he made his U.S. feature film debut in *The Brothers Karamazov* and starred in the Broadway production of *The World of Suzie Wong*, which took the 1959 Theatre World Award. Shatner appeared in the feature *Judgment at Nuremberg* (1961) while working in television programs like *Playhouse 90* and *Studio One*, and then in the Broadway production of *A Shot in the Dark*. In 1962, he starred in the acclaimed film *The Intruder*, which he followed with appearances on *The Twilight Zone* and *77 Sunset Strip*, and a starring role in the short-lived television series *For the People* (1965). In 1966, Shatner was cast as Captain Kirk in *Star Trek*, a part he played until NBC canceled the series on Sept. 2, 1969. After a divorce wiped out his finances he continued to act on television, including an adaptation of the book *Go Ask Alice* (1973), but the role of Kirk had typecast Shatner and he found himself mostly relegated to bit parts in action films. Shatner rejoined the *Star Trek* cast and provided the voice for Kirk in an animated series (1973–75). This was followed by a failed attempt to relaunch a syndicated live *Star Trek* series, which evolved to become a series of films that featured Shatner’s Kirk from 1979 to 1994. Shatner found himself back on television as a cop in the series *T.J. Hooker* (1982–86) and then as host of the reality television series *Rescue 911* (1989–95). In 1989, Shatner began publishing his long-running *Tek War* series of science-fiction novels and helped adapt them to television. After serving as a spokesperson for Priceline.com from 1998, he returned to acting in 2003 with guest appearances as Denny Crane on David E. Kelley’s *The Practice*, which earned him an Emmy for best guest actor. In 2004, he joined the spin-off series, *Boston Legal*, reprising his role as Crane and earning a Golden Globe and another Emmy. Shatner was a longtime breeder of American quarter horses, and raised money for various charities, including Ahead With Horses and Children’s Museum of Los Angeles.

[Adam Wills (2nd ed.)]

**SHATZKES, MOSES** (1881–1958), rosh yeshivah. Born in Vilna, Shatzkes was raised by his stepfather, Isaac *Blaser*, a foremost exponent of the *Musar* movement. Shatzkes studied at the *Telz* yeshivah where he became a leading disciple of its *rosh yeshivah*, Eliezer Gordon. In 1909 Shatzkes was appointed rabbi of Lipnishki, and in 1915 of Ivo, both in the province of Vilna. After World War I, he was active in guiding Vilna’s Jewish relief organization and the Va’ad ha-Yeshivah. In 1930 he was elected to the important position of the rabbi of Lomza, and in this capacity served as one of the leaders of Polish-Lithuanian Jewry until the war forced him to flee to Vilna in 1939. There he was appointed the head of the Grodno yeshivah after the death of its *rosh yeshivah*, Rabbi Simeon *Shkop*. He immigrated to the United States in 1941, and became a senior member of the faculty of the Rabbi Isaac Elhanan Theological Seminary of the Yeshiva University. Shatzkes’ annotations to Blaser’s works were published under the title *Anaf Peri* as an appendix to the second volume of the latter’s *Peri Yiẓḥak* (Jerusalem, 1913).

[Aaron Rothkoff]
...and joined the "Haskalah movement. He gained a literary reputation through his book Ha-Mafte'ah ("The Key," 1869). The book analyzes talmudic legends, starting from the premise that they are merely ethical allegories, not to be taken literally. This theory, acceptable to the moderates of the Haskalah movement, was anathema to Orthodox Jews, who tried to prevent publication of the book, and in some towns even burned copies. Shatzkes wrote articles in the same vein (Ha-Asif, 2 (1885), 241–61; Ha-Sifrut, 3 (1889–90), 103–18; and others). In Yiddish he published anonymously Der Yudisher for Pesakh ("Preparations for Passover," 1881) in which he attacked superstitions associated with the Passover festival. Toward the end of his life, he moved to Kiev, where he became a leading figure in the Haskalah circle, noted for his pungently witty conversation.

**BIBLIOGRAPHY:** Rejzen, Leksikon, 4 (1929), 494–500; Kessel, Leksikon, 2 (1962), 975–6. [Yehuda Slutsky]

**SHATZKY, JACOB** (1893–1956), historian. Born in Warsaw, Shatzky received his doctorate in 1922 for a dissertation on 19th-century Polish-Jewish history. During World War I he served as an officer in the Polish Legion. From 1913 on he wrote Polish articles and reviews on Jewish literary and historical subjects. He came to write mainly in Yiddish after 1922, the year he settled in the U.S., where he was one of the founders of the U.S. section of *YIVO. From 1929 until his death he was librarian of the New York State Psychiatric Institute.

Shatzky’s range was extraordinarily wide: Spinoza, psychiatry, theater, music, folklore, literature, language, and other areas. His principal field, however, was Eastern European Jewish history, and his major work was his history of Warsaw Jewry. He was an indefatigable and often querulous reviewer of scholarly works. The quality and accuracy of his own historical scholarship has often been questioned.

**SHULA (Shaoool), ANWAR** (1904–1984), Iraqi poet and journalist. Born in *Baghdad, Shaul was editor (1924–25) of the Arabic-language Iraqi Zionist journal, al-Miṣḥāb. At that time he also wrote poems expressing his Jewish national convictions. He was secretary of the Baghdad Jewish community for three years, but then became estranged from the Jewish community. In 1937 he went so far as to sign an anti-Zionist declaration.

Shaul was the first Iraqi to deal with the life of the masses and to demand the abolition of the veil and an improvement in the status of women. His first stories were published in the anthology al-Hiṣād al-Awwal ("The First Crop," 1930). He compiled an anthology of translated short stories titled Qisas min al-Gharb ("Stories from the West," 1937). His other books are Fi Zihām al-Madīna ("In the Tumult of the City," 1955) and a volume of poems, Hamsāt al-Zamān ("Whispers of Time," 1956). Like his colleague Meir Bašri (1912– ), he considered himself an Iraqi Jew, a member of the Arab Iraqi nation; he did not immigrate to Israel with the great majority of Iraqi Jews in 1951. However he left Iraq in 1971. He was a prolific writer and published in literary periodicals in the Arab world.

**SHAVEI ZION** (Heb. שַׁבֵּי צִיוֹן, “Those who Return to Zion”), moshav shittufi in northern Israel, in the Acre Plain, 2 mi. (3 km.) S. of Nahariyyah, affiliated with Ha-ILINE, ha-Hakla’i. Shavei Zion was founded in 1938 by a group of German-Jewish immigrants who were descended from generations of farmers and cattle merchants in the village of Rexingen, Wuerttemberg. Shavei Zion was one of the first villages to adopt the moshav shittufi form of settlement. Although not strictly Orthodox, the settlers preserve traditional Judaism as part of their social organization. In 1970 the village had 312 inhabitants, rising to 619 in 2002. The moshav economy was based on industry, farming, and tourism, including a plastics factory and a resort and beach.

**SHAVELSON, CLARA LEMLICH** (1886–1982), U.S. labor organizer, suffragist, communist, and consumer activist. Born to religiously observant parents in Gorodok, Ukraine, Lemlich was already a committed revolutionary when her family came to the United States in 1903. At 17, she supported her family by working in a Lower East Side shirtwaist (blouse) manufacturing shop.

In 1905, Lemlich began organizing waistmakers into the nascent "International Ladies Garment Workers Union and was a co-founder of ILGWU Local 25. At a time when most of the union consisted of skilled male workers, Lemlich’s recruits were largely young immigrant women. She emerged as a leader of a strike at the Leiserson shop in the fall of 1909. Company guards and policemen singled Lemlich out on the picket line, breaking six of her ribs and arresting her 17 times. In November, 1909, Lemlich interrupted a mass meeting called by the ILGWU.Wresting the podium from a roster of speakers that did not include any working women, she called for a general strike. Her oration in Yiddish ignited what became known as the "Uprising of the Twenty Thousand." In subsequent weeks, 30 to 40 thousand garment workers, mostly young Jewish women, walked out of their workplaces.

Following the strike settlement, garment shops in New York would not hire Lemlich. After working part time as a union organizer, she accepted a full time job as a suffrage advocate. Her relationship with the middle-class women who hired her quickly soured, and she was fired within the year. Soon after, Lemlich married Joe Shavelson and moved to Brooklyn. Now a housewife with children, she began mobi-
Shavuot

Working Women’s Movement

The Working Women group changed its name to the Progressive Women’s Council around 1920 and in 1926 to the United Council of Women’s Organizations (UCWO). It joined with the United Labor Committee and the American Federation of Labor to form the American Labor Party in 1934. TheUCWO successfully fought to raise wages and improve working conditions. In 1935, under the rubric of the Communist Party, the UCWO organized the successful meat boycott of 1935 which spread from New York to major urban areas across the nation and reduced the price of meat in hundreds of American cities.

Shavelson remained politically active until the end of her life. Through the 1950s, despite FBI monitoring, she protested the nuclear arms race and the Rosenberg executions. She continued her political work through the 1960s and 1970s, where, at the Jewish Home for the Aged in Los Angeles, she helped the orderlies organize a union.

Bibliography:

Shavuot

(Heb. שַׁבוּעֹת; “weeks,” Pentecost, “the 50th day”), the festival celebrated on the sixth of Sivan (and also on the seventh outside Israel). The biblical names for the festival are: “Hag Shavuot” (“Feast of Weeks,” Ex. 34:22; Deut. 16:10); “Yom ha-Bikkurim” (“The Day of the First-fruits,” Num. 28:26), and “Hag ha-Kazir” (“The Harvest Feast,” Ex. 23:16). The rabbinic name is “Azeret” (RH 1, 2; Hag. 2, 4). This word, of uncertain meaning but generally translated as “solemn assembly,” occurs also in connection with the day following the Festival of Sukkot (Lev. 23:36; Num. 29:35). This would seem to suggest that, for the rabbis, Shavuot is an additional one day feast to Passover just as there is an additional one day feast to Tabernacles (see Targ. Onk. to Num. 28:26 and BDB 192a–93a).

History

This feast, one of the three *pilgrim festivals (Deut. 16:16), marked the end of the barley and the beginning of the wheat harvest. According to the critical view, it was probably a midsummer festival in origin and taken over from the Canaanites. It is stated in Leviticus: “From the day after the Sabbath, the day that you bring the sheaf of wave-offering you shall count (until) seven full weeks have elapsed: you shall count fifty days, until the day after the seventh week; then you shall bring an offering of new grain to the Lord” (Lev. 23:15–16 and to 21). Leviticus 23:11 states that the sheaf was waved on the day after the Sabbath on the festival of Passover. Thus Shavuot falls 50 days after this day. The *Sadducees (and later the *Karaite) understood the term “Sabbath” in these verses literally; hence, for them Shavuot always falls on a Sunday. The *Pharisees, however, interpreted “Sabbath” as the first day of Passover (which was a Sabbath, “day of rest”) so that for them Shavuot always falls on the 51st day from the first day of Passover (Sifra Emor Perek 12; Men. 65a–66a). The *Beta Israel (Falashas) interpreted “the day after Sabbath” as meaning the day after Passover so that for them Shavuot falls on the 12th of Sivan. The community of *Qumran apparently interpreted “Sabbath” as the Sabbath after the end of the Passover festival, and as they had a fixed solar calendar, this “Sabbath” always fell on the 26th of Nisan so that Shavuot always came out on Sunday the 15th of Sivan.

On this festival in Temple times two loaves (shetei ha-ḳeṭer) understood the term “Sabbath” as the Sabbath after the end of the Passover festival, and as they had a fixed solar calendar, this “Sabbath” always fell on the 26th of Nisan so that Shavuot always came out on Sunday the 15th of Sivan.

For the rabbis the festival became the anniversary of the giving of the Torah at Sinai. The description of the feast in the liturgy is “zeman mattan tov (Lev. 19:1): The festival became the anniversary of the giving of the Torah at Sinai. The description of the feast in the liturgy is “zeman mattan tov (Lev. 19:1): The festival became the anniversary of the giving of the Torah at Sinai. The description of the feast in the liturgy is “zeman mattan tov (Lev. 19:1): The festival became the anniversary of the giving of the Torah at Sinai. The description of the feast in the liturgy is “zeman mattan tov (Lev. 19:1): The festival became the anniversary of the giving of the Torah at Sinai.

Shavuot (Falashas) interpreted “the day after Sabbath” as meaning the day after Passover so that for them Shavuot falls on the 12th of Sivan. The community of *Qumran apparently interpreted “Sabbath” as the Sabbath after the end of the Passover festival, and as they had a fixed solar calendar, this “Sabbath” always fell on the 26th of Nisan so that Shavuot always came out on Sunday the 15th of Sivan.

On this festival in Temple times two loaves (shetei ha-ḳeṭer) were “waved before the Lord” (Lev. 23:15–16). These had to be offered only from the finest wheat, from produce grown that year in Ereẓ Israel (Men. 8:1). Shavuot was associated with the bringing of the “bikkurim, “the first ripe fruits,” to the Sanctuary (Ex. 23:19; Deut. 26:1–11). The Mishnah (Bik. 1, 6) states that the period for bringing them was any time from Shavuot to Sukkot. The villagers would first assemble in the large town of the district and would go up together with their first ripe fruits to the Temple, where they would be welcomed with song by the levites (Bik. 3:2–4). In rabbinic times a remarkable transformation of the festival took place. Based on the verse: “In the third month after the children of Israel were gone forth out of the land of Egypt, the same day came they into the wilderness of Sinai” (Ex. 19:1), the festival became the anniversary of the giving of the Torah at Sinai. The description of the feast in the liturgy is “zeman mattan tov (Lev. 19:1): The festival became the anniversary of the giving of the Torah at Sinai. The description of the feast in the liturgy is “zeman mattan tov (Lev. 19:1): The festival became the anniversary of the giving of the Torah at Sinai. The description of the feast in the liturgy is “zeman mattan tov (Lev. 19:1): The festival became the anniversary of the giving of the Torah at Sinai.

It is possible that the Pharisees insisted that Shavuot be observed on a fixed day because they wished to affirm that the festival commemorated the Sinaitic theophany which occurred on the 50th day after the Exodus (following the general Pharisaic belief in an oral Torah reaching back to Moses which the Sadducees denied), and because a purely agricultural festival had little meaning for the town dwellers who made up the Pharisaic party (L. Finkelstein, Pharisees (1962), 115–18, 641–54). If this is correct, the transformation into a historical fest took place before the present era. However, neither Josephus nor Philo refers to Shavuot as “the time of the giving of our Torah,” and none of the references in the rabbincic literature to the Torah being given on this day (e.g., Shab. 86b) is earlier than the second century. c.e., though there may well have been a tradition far earlier than this. The earliest clear references to Shavuot as the anniversary of the giving of the Torah are from the third century, e.g., the saying of R. Eleazar that all authorities agree that it is necessary to rejoice with good food and wine on Azeret because it is the day on which the Torah was given (Pes. 68b).
In some medieval communities it was customary to introduce children to the Hebrew school on Shavuot, the season of the giving of the Torah. At this initiation ceremony the child, at the age of five or thereabouts, was placed on the reading desk in the synagogue and from there was taken to the school where he began to make his first attempts at reading the Hebrew alphabet. He was then given cakes, honey, and sweets “that the Torah might be sweet on his lips.” In many modern synagogues, particularly Reform, the confirmation of older children takes place on Shavuot (see *Bar Mitzvah).

The Laws and Customs of Shavuot
Unlike Passover and Sukkot, Shavuot has few special rituals, and those it does have are late. This is entirely explicable in view of the development of the festival mentioned above. The harvest associations no longer had much meaning once the Temple was destroyed, and there are no biblical ceremonies connected with the giving of the Torah since this motif is post-biblical. In modern Israel attempts have been made to revive some of the harvest ceremonies (see *Kibbutz Festivals). In the synagogue it is customary to read the Book of Ruth on Shavuot. Among the reasons given are that the events recorded in Ruth took place at harvest time (Ruth 2:23); that Ruth was the ancestor of David (Ruth 4:17) who, traditionally, died on Shavuot; that Ruth’s “conversion” to Judaism is appropriate reading for the festival which commemorates the giving of the Torah; and that Ruth’s loyalty is symbolic of Israel’s loyalty to the Torah. The portion of the Torah read in the synagogue on the first day is the account of the theophany at Sinai (Ex. 19:1–20:26). In the Ashkenazi rite it is prefaced by chanting the Aramaic *Akdamut hymn composed by Meir b. Isaac Nehrui of Orleans (11th century) in praise of Israel’s faithfulness to the Torah. The haftarah for the first day is the vision of Ezekiel (Ezek. 1–2) because of its parallel to the vision of the whole people at Sinai. The haftarah for the second day is Habakkuk’s prayer (Hab. 3) because it similarly describes a theophany. This, too, is prefaced by an Aramaic hymn in praise of the Torah, “*Yeziv Pitgani,” composed by Jacob b. Meir of Troyes (1100–1171). Under the influence of the Kabbalah it became customary to spend the whole of the first night as a vigil in which selected passages from all the Jewish religious classics are read (tikkun leil Shavuot). A less observed custom is to recite the whole of the Book of Psalms on the second night because of the association of the festival with David.

The Torah reading for the first day (Ex. 19–20) includes the *Ten Commandments. Although the Mishnah (Tam. 5:1) states that the Ten Commandments were recited each day in the Temple, the rabbis discouraged their recitation outside the Temple to refute the claims of the “sectarians” that only these, and not the whole Torah, were given to Moses at Sinai (Ber. 12a). During the Middle Ages there were some protests against the practice of standing while the Ten Commandments were read on Shavuot. However the custom for the whole congregation to stand is still followed on the grounds that the talmudic objection to any special significance being attached to the Decalogue cannot apply to congregational reading from the Scroll, since the whole of the Torah is written in the Scroll. The account of the revelation on Mount Sinai is usually sung to a specially solemn tune.

It is customary to adorn the synagogue with plants and flowers on Shavuot because, tradition has it, Sinai was a green mountain; and with trees, because Shavuot is judgment day for the fruit of the tree (RH 1:2). Some authorities disapproved of the custom because of its similarity to certain church rites (see *Hukkat ha-Goi). It is a home custom to eat dairy products on Shavuot because the Torah is compared to milk (Song 4:11) and because the law of the first fruits is placed in juxtaposition to a law concerning milk (Ex. 23:19). In some communities it is customary to eat triangular pancakes stuffed with meat or cheese because the Torah is of three parts (Pentateuch, Prophets, and Hagiographa) and was given to a people of three parts (priests, levites, and Israelites) on the third month through Moses who was the third child of his parents.

[Louis Jacobs]
Angelo, and Stephen Burrows. In addition, he introduced at least two Paris designers to the U.S. and helped make Gloria Vanderbilt an iconic jeans label. Shaw backed his designers with his production expertise, his network of retail contacts, and his money.

Born in Kiev as Benjamin Schwartz, he was brought to New York City at the age of three. As a child, he got his first taste of the garment business when he was sent to find buttons and zippers for his mother, Rose, a dressmaker on the Lower East Side. His formal education ended early and he went to work as a messenger. After learning the rudiments of sales and production and changing his name to Shaw because “there were too many Schwartzes in the Manhattan telephone directory,” he became a partner in Wieman, Wilkes & Shaw in 1925. Four years later, the stock market collapsed and so did his company. In 1935, Shaw launched a dress house called Elfreda and ran it until 1954, when he retired. Six months later, he was back in business, first importing the apparel collections of French designers Nina Ricci and Pierre Balmain for an American customer. In 1956 he bought into the Jane Derby dress firm, where Oscar de la Renta subsequently became the designer. In 1969, a few years after Derby’s death, the company – then named for de la Renta – was sold to publicly owned Richton International. Shaw, his son Gerald, and de la Renta bought it back in 1974. In the interim, Shaw invested in Halston, one of the most popular U.S. designers of the 1970s and early 1980s. When the Halston business was sold in 1973, Shaw said, “I made millions.” Other associations with designers followed. Gerald Shaw, who became president of Oscar de la Renta Ltd., said of his father, “He couldn’t make a pattern, but he could tell whether a dress worked. He had a talent for spotting talent.”

[Joseph Mersand]

SHAW, IRWIN (1913–1984), U.S. novelist, playwright, and scriptwriter. Born in Brooklyn, Shaw gained overnight fame with his one-act antiwar drama Burry the Dead (1936), dealing with a group of dead soldiers who refuse to be buried. The Gentle People (1939), about a group of Brooklyn folk who turn upon a gangster, demonstrated Shaw’s gift for seeing a fable in everyday life and was regarded as an anti-Fascist parable. His World War II experiences in the U.S. army inspired a book of short stories, Act of Faith (1946), and his first novel, The Young Lions (1948). One of the outstanding novels of the war, The Young Lions dealt with the problem of antisemitism in the army and dramatically portrayed the careers of one German and two American soldiers and their fateful encounter toward the end of World War II. Shaw’s other novels include The Troubled Air (1951), about the treatment of actors suspected of being Communists; Lucy Crown (1956); In the Company of Dolphins (1964); and Voices of a Summer Day (1965). As a writer, Shaw was noted for his liberal outlook and masterly technique, evident in short-story collections such as Sailor off the Bremen (1939), Welcome to the City (1942), Mixed Company (1950), and Tip on a Dead Jockey (1957, 1959). His plays include Sons and Soldiers (1944), Assassin (1946), and the comedy Children from Their Games (a play in two acts, 1963), but in this genre Shaw was generally less successful, although he was prominent as a writer of screen and radio plays. Shaw wrote the text for Report on Israel (1950), an album of photographs by Robert *Capa. He also provided the text for Paris/Magnum Photographs, 1935–1981 (1981). Among his later works are Rich Man, Poor Man (1970); Evening in Byzantium (1973), and Paris! Paris! (illustrated by Ronald Searle, 1977). His Short Stories, Five Decades appeared in 1978.

[Joseph Mersand]

SHAWN, DICK (1923–1987), U.S. actor. Originally from Buffalo, NY, Shawn (né Richard Schulefand) began his comedy career during World War II while serving with the Army. He moved to New York City after winning a University of Miami talent show and appearing on the television show Arthur Godfrey Talent Scouts. By 1955 Shawn was performing at New York’s Palace Theater, had made guest appearances on The Ed Sullivan Show, and was performing at Las Vegas nightclubs. He made his film debut in the 1956 movie The Opposite Sex. In 1960, he signed on with 20th Century Fox and starred in their film The Wizard of Baghdad. In this satire on the Arabian Nights, Shawn played a laidback genie. The same year, he acted with fellow comedian Ernie Kovacs in Wake Me When It’s Over. Three years later, he had a role in the all-star comedy It’s a Mad, Mad, Mad, Mad World (1963). Shawn’s most famous role was that of a hippie actor named Lorenzo St. DuBois (L.S.D.) who is cast as a singing Adolf Hitler in Mel Brooks’ 1968 comedy The Producers. In one scene, Shawn is credited for inventing the “high five” when, instead of putting out his hand for fellow actor David Patch to “give him five,” he held it up and Patch slapped it. Other Shawn movies include Way … Way Out (1966), Penelope (1966), Looking Up (1977), Beer (1985), and Maid to Order (1987). Shawn was also highly regarded for his one-man stage show The Second Greatest Entertainer in the Whole Wide World, during which he lay motionless on stage during the entire intermission (1985). Shawn’s final movie, Rented Lips (1988), came out after his death.

[Joseph Mersand]

SHAYEVITSH, SIMKHA-BUNIM (1907–1944), Yiddish poet and novelist. Born in 1907 in Lodz, Poland, and interned from 1940 in the Lodz ghetto, Shayevitsh responded to the mass deportations in late 1941 with “Lehik-Lekho” (“Go”), a long poem evoking the traditional Jewish past in contrast with the tragic historical present. A second poem on expulsion followed in “Friling 1942” (“Spring 1942”), contrasting the promise of spring’s arrival with the horrors of ghetto life. In the ghetto he met Chava Rosenfarb, became her mentor, and read more of his poetry to her, all of which has been lost. On August 28, 1944, Shayevitsh was deported to Auschwitz, where he was among the last sent to the gas chamber. The two poems
(found in the ghetto's ruins) and two letters were published by the Jewish Historical Commission (1946). His subsequent influence on Yiddish writers was considerable, despite the meagerness of his surviving output.

SHAZAR (Rubashov), SHNEUR ZALMAN (1889–1974), third president of the State of Israel, scholar and writer, member of the First to Third Knessets. Shazar (acronym for Shneur Zalman Rubashov) was born in the Belorussian town of Mir in the province of Minsk. In 1892, after a disastrous fire in Mir, the family moved to the nearby townlet of Stoltbtsy, where Shazar received a heder education under the influence of *Chabad, in addition to being influenced by his parents' Zionism. The influence of his Hebrew teacher and the writings of Ber *Borochov brought him to the *Po'alei Zion Movement, and during the 1905 revolution he was active in propagating the movement's ideas and organizing Jewish *self-defense units in Belorussia and the Ukraine. Attending the clandestine Po'alei Zion conference in Minsk in July 1906, he became acquainted with Izhak Ben-Zvi and started to participate in the editorial and publishing activities of the movement. In 1907 he moved to Vilna, where he first met and worked with Borochov, Jacob *Zerubavel, and Rahel Yanait (see Rahel *Ben-Zvi), and translated Russian articles written by Borochov and Ben-Zvi into Yiddish for the movement's journal, Der Poletarisher Gedank. Arrested along with the other leading members of the movement in the summer of 1907, he was jailed for two months. After his release, he enrolled as a student at the "Academy of Jewish Studies," then newly established in St. Petersburg by Baron David *Guenzburg. The historian Simon *Dubnow and the Hebrew writer and scholar J.L. *Katzenelson ("Buki ben Yogli") were two distinguished faculty members, who particularly influenced the young Shazar.

To support himself he edited Der Yidisher Emigrant, organ of the *Jewish Colonization Association (ICA), and also wrote for Yiddish papers Der Fray in Russia, and Dos Naye Lehn in the United States.

In 1911 Shazar spent the summer in Erez Israel working in the kevuza in Merhavyah, and met Berl *Katzenelson and the poetess *Rahel. He left Russia the following year and attended the universities of Freiburg-im-Breisgau and Strasbourg. While confined to Berlin as an enemy alien during World War 1, he continued his studies at the University of Berlin, attending courses with historian Friedrich Meinecke. Shazar's fields of specialization were East European Jewish history, the Shabbatean movement, and biblical criticism. Shazar was also involved in Zionist activity, contributing regularly to the Juedische Rundschau. In 1916 he was one of the founders of the Labor Zionist movement, and in 1917 of the *He-Halutz Movement in Germany. At the Po'alei Zion conference held in Stockholm in 1919, he was appointed, along with Nachman *Syrkin, Nahum *Nir, and Hayyim *Fineman, to survey conditions in Palestine and work out a program for cooperative economic development. He helped edit the report prepared in Yiddish by the mission in 1920, and wrote the chapters on Jewish labor and on the kevuza. In 1920 he married Rachel *Katzenelson, whom he had first met in St. Petersburg, in Jerusalem. Shazar participated in the Po'alei Zion Conference in Vienna in 1920, where the movement split on the issue of how to relate to Communism. Shazar emerged as one of the spokesmen of the group that objected to Communism. He opened the founding assembly of the World He-Halutz Organization in 1921, and from 1922 to 1924 lectured on history at the Jewish Pedagogic Institute in Vienna.

Settling in Palestine in 1924, Shazar became a member of the Secretariat of the *Histadrut and joined the editorial staff of its daily Davar, becoming the paper's editor-in-chief and head of the Histadrut publishing house, Am Oved, in 1944. He served in these capacities until 1949. All along he carried out numerous missions abroad on behalf of the Histadrut, the World Po'alei Zion, *Mapai, and the Zionist movement. Shazar was a member of the Jewish Agency delegation to the United Nations General Assembly in November 1947, and at that time established contact with the Lubavitcher rebbe Me Nachem Mendel *Schneersohn, convincing him to establish Kefar Habad in Israel. Ever since his boyhood Shazar had been emotionally and intellectually involved with the Chabad Movement. In later years he regularly visited Kefar Habad. During his two visits to the United States as president, in 1966 and 1971, he called on Schneersohn in Brooklyn.

Shazar was elected to the First Knesset on the Mapai list and served as minister of education and culture from 1949 to 1951, and in this capacity was responsible for passing the Compulsory Education Law of 1949. He served as a member of the Knesset until October 1956, when he resigned. Following the Soviet government's refusal to accept him as Israeli ambassador to Moscow, he became a member of the Jewish Agency Executive in 1952, and headed the Department of Information. In 1954 he was appointed head of the Department of Education and Culture in the Diaspora. From 1956 to 1960 he was acting chairman of the Agency's Jerusalem Executive.

On May 21, 1963, the Knesset elected Shazar as the third president of the State of Israel, and on March 26, 1968, he was reelected for a second five-year term. During his presidency he represented Israel in numerous state visits abroad. During the 1964 visit of Pope *Paul VI, the pope was received on his arrival at Megiddo by President Shazar, who also took leave of him in Jerusalem.

Like his predecessor, Izhak Ben-Zvi, Shazar made his residence a center for Israeli and Jewish scholars, writers, and artists. The Bible Study Group, first established by David *Ben-Gurion, met there regularly, as did the circle for Study of Diaspora Jewry conducted in cooperation with the Hebrew University's Institute of Contemporary Jewry. A year after completing his two terms as president, Shazar passed away.
Shazar’s writings span 70 years. His literary work took many forms, from poetry and autobiographical fiction, to scholarly treatises and journalistic articles. He wrote freely in both Yiddish and Hebrew, and was noted for his unique style, that applied both lyricism and biblical influences to contemporary issues. He first produced a “magazine” at the age of ten, and a piece he wrote appeared in Ha-Meliz of March 17, 1903. His first Yiddish article, a plea for the unification of the Socialist Zionist parties, appeared in America in 1910, and his first Hebrew article – an impression of his visit to the Western Wall – in Jerusalem in 1911. His career as Labor Zionist editor began after World War I in the German Po’alei Zion’s Ofy der Shvel (1918) and the Viennese Das Arbeittende Eretz Yisrael (1921–23). After the Po’alei Zion split of 1920, Shazar sharply attacked the left’s decision not to participate in the Zionist Congress. Writing for Ahdut ha-Avodah’s weekly, Kunteres, during his participation in the Labor Zionist research mission, he gave notable expression to the reaction evoked by the Arab attacks in Jerusalem in 1920: “Is Jerusalem to be another Kishinev?” From the first issue of Davar until the 1970s, he contributed not only hundreds of unsigned editorials, but, under his own name and pseudonyms, essays on numerous topics. From 1930 to 1932, he edited the monthly Ahdut ha-Avodah with Chaim Arlosoroff, and from 1953 the yearbooks of Davar.

As early as his student days, Shazar had been drawn to the study of the Shabbatean movement and to biblical criticism. In the former he was attracted by the passion for national redemption which he sensed as central within the mystic yearning of European Jewry in the dark days of the 17th century. He wrote his first article on the subject in Ha-Shiloah in 1913. His work on the subject of Jewish mysticism was published in the Russian Jewish Encyclopedia and numerous studies. His contribution to the field was acclaimed by Gershom Scholem.

Shazar played a pioneering role in introducing modern Bible criticism in the Hebrew language. He had himself studied under Professor Novak at Strasbourg, and in 1914 he translated from Russian into Hebrew essays on the subject by Max Soloveichik (“Solili”). Shazaar’s contribution to Yiddish philology grew out of his study under Dubnow of responsa literature as a source for East European Jewish history of the 15th to the 17th centuries. Coming upon numerous Yiddish phrases in the testimony of witnesses, he collected and analyzed the linguistic material. In his preface to an edition of Eduard Gans’s speeches of 1821–23, Shazar cast light on the inner world of early 19th-century German-Jewish assimilationists, and founders of Jewish scholarship. His essays on Marx and Lassalle expressed his interest in the Jewish role in socialism, while his essays on Borochov, Ben-Zvi, Syrkin, and Berl Katzenelson illuminate the beginnings of the Socialist Jewish Labor movement. The wide scope of Shazar’s cultural knowledge and interests added depth to the many contacts and meetings involved in his activity as president of the state.

His autobiographical sketches, collected in Kokhevi Boker (1950; Morning Stars, 1967) and reprinted many times, appeared in English, French, Yiddish, and Spanish translations. His biographical evaluations of leaders in Zionism and Jewish culture were assembled in Or Ishim (1963). A biography of the writings of Shazar from 1903 to 1973, a new edition of Or Ishim in three volumes, and an album on Shazar were all published in 1973. Shazar’s verse, including much translation, appeared in many journals; his Yiddish translation of a selection of Rahel’s lyrics appeared in 1932. Correspondence between Rahel and Shazar was published in Ha-Hofim Ha-Shanim: Mikhtavim 1909–1963, Rahel ve-Zalman Shazar (1999).

[Susan Hattis Rollf (2nd ed.)]

SHCHEDRIN, town in Polesie district, Belarus. In 1841 Hayyim Golodetz, a timber dealer, established a Jewish colony on the estate of Shchedrin. By the end of the 19th century some of the settlers engaged in general agriculture and some in the timber business of the Golodetz family. In 1897 there were 4,022 Jews in Shchedrin (95% of the total population of the town), about 40% of them engaging in agriculture. A decline in the timber trade in the area and the subsequent departure of the Golodetz family resulted in a general emigration from the town. In 1926 there were 1,759 Jews (91 percent of the population) in Shchedrin. The Soviet government attempted to develop agriculture and in 1930 over half of the 380 remaining Jewish families were engaged in that occupation, about half of them living on the kolkhoz Sotsialistishe Veg. About 30 percent were engaged in crafts. A local Jewish council operated until the 1930s, as did two Yiddish schools, one for the kolkhoz children. The Germans arrived in July 1941, and in March 1942 they murdered the 1,500 Jews living there.

[S. Slutsky / Shmuel Spector (2nd ed.)]

SHEALTIEL (Heb. שלטיאל) (Haggai 1:1); abridged biblical name meaning “I asked of God,” referring either to the request for a son (cf. 1 Sam. 1:17, 20, 27) or some other personal benefit (cf. Ps. 27:4 – request to reside permanently in the Temple). The name is unique and its bearer was either the first or the second son of King Jehoiachin (1 Chron. 3:17), who was exiled from Judah at the age of 18 in 597 B.C.E. (11 Kings 24:8). A Babylonian ration tablet of 592 B.C.E. lists Jehoiachin and five sons, so that Shealtiel may have been born prior to his father’s exile. His son (nephew according to 1 Chron. 3:17ff.), given the Babylonian

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 18
name *Zerubbabel, served as governor of Judah under Darius (Haggai 1:1; cf. Ezra 3:2; Neh. 12:1).

[Bezalel Porten]

SHEAN, AL (Schonberg: 1868–1949), vaudeville actor. Born in Dornum, Germany, and brought up in New York, Shean became well known with the Comedy Four, which he led for 15 years. He then teamed with Ed Gallagher for a time, but subsequently appeared in plays, taking roles like Stonewall Moskowitz in Betsy (1926), Father Malachy in Father Malachy’s Miracle (1937), Von Barwig in The Music Master (1941), and Manny Siegelman in Meet a Body (1944). His sister was the mother of the *Marx Brothers.

SHEAR, MURRAY JACOB (1899–1983), U.S. biochemist. Shear was born in New York. After doing research in several hospitals, he worked at the National Cancer Institute, Maryland, becoming chief of Chemical Pharmacology Laboratory from 1947. His research focused on the mechanism of deposition of bone salts, the genesis of tumors by chemical agents, and the chemotherapy and immunology of cancer. He served as chairman on several cancer research societies and was active in Jewish communal affairs.

SHEARER, NORMA (1902–1983), U.S. actress. Born Edith Mary Fisher, Shearer was schooled in the family’s middle-class home until 1912, when she enrolled in the Montreal High School for Girls. In 1914, she transferred to Westmount High School. She had been a child model, and at 14 won a beauty contest. A fan of silent film actress Pearl White, Shearer dreamed of becoming an actress herself. When the family business began to decline and her parents were forced to sell their home in 1919, Shearer quit school and went to work plugging sheet music. Her mother left her father in 1919, Shearer quit school and went to work. She later worked as an art model to help bring in money. After securing Edward Small as an agent, Shearer got roles in the films The Leather Pushers (1920), and The Stealers (1920), but three weeks after the film’s Aug. 20 New York premier, Shearer returned to film a yearlong absence with Romeo and Juliet (1936), but three weeks after the film’s Aug. 20 New York premier, Thalberg died from a congenital heart defect. After the devastating loss of her husband and fighting off a severe case of pneumonia, Shearer intended to retire but ended up signing a final six-picture contract with MGM, which included Marie Antoinette (1938) and The Women (1939). She finally retired in 1942. Shearer remained active in Hollywood, presenting the first Irving G. Thalberg Memorial Award in 1945 and helping to establish the careers of Janet Leigh and Robert Evans in the 1950s, but she mostly focused on her family. Her health began failing in the 1970s, and by the 1980s she was moved to the Motion Picture and Television Fund’s hospital in Woodland Hills, California, where she died. She is buried next to Thalberg at Forest Lawn in Glendale, California.

[Adam Wills (2nd ed.)]

SHEAR YASHUV (Heb. שֵׁרֶץ יָשָׁבָע), moshav in the Huleh Valley, affiliated with Ha-Oved ha-Ziyoni. She’ar Yashuv was founded in 1940 by pioneers from Eastern Europe, as the third of the “Ussishkin Fortresses” near the country’s northeastern corner. It made little headway and was uninhabited after the War of Independence. In 1949, the village was settled anew by immigrants from Hungary and had 133 inhabitants by 1968, growing to 245 in the mid-1990s and 327 in 2002. Only a small group was still engaged in farming at the turn of the century. In 1997 the moshav was the site of a collision between two IDF helicopters, taking the lives of 73 soldiers. A monument in memory of the dead is located in there. The name, “A Remnant Shall Return,” is taken from Isaiah 10:20–22.

[Efram Orni / Shaked Gilboa (2nd ed.)]

SHEBA (Schieber or Schiber), CHAIM (1908–1971), Israeli physician and medical educator. Born into a hasidic family in a small village in Bukovina, Sheba went to Palestine in 1933. He worked as a sick fund physician until 1936, and then joined the staff of the Beilinson Hospital in Petah Tikvah. After service with the Royal Army Medical Corps in World War II, he became chief medical officer of the *Haganah in 1947, and on the establishment of the state was appointed chief medical officer of the Israel Defense Forces. In 1951 Sheba became director-general of the Ministry of Health, but resigned two years later to take over the direction of Tel Ha-Shomer Hos-
SHEBA BEN BICHRI, a member of the tribe of Benjamin. Sheba ben Bichri belonged to the clan of Becher, whose eponymous ancestor was the second son of Benjamin (Gen. 46:21; 1 Chron. 7:6).

Playing on the jealousy which was aroused among the tribes of Israel by David’s apparent favoritism in arranging to have Judah welcome him back first at the Jordan after the crushing of the revolt of Absalom in Transjordan, Sheba blew a horn with the cry, “We have no share in David, neither have we any portion in the son of Jesse; every man to his tents, O Israel” (11 Sam. 19:41–44; 20:1); and instead of escorting David to Jerusalem, the men of Israel marched ahead after Sheba to their homeland. Had David not taken successful steps to assert his authority over Israel, Sheba would presumably have tried to induce Israel to make him king. But David did assert his authority. David, who in order to woo Judah had sent, while still in Transjordan, a promise to *Amasa to make him army commander in place of *Joab (11 Sam. 19:14), assigned to Amasa and the men of Judah the task of pursuing and liquidating Sheba. He gave Amasa three days in which to raise the levies of Judah, but because Amasa was delayed, the king sent out *Abishai with his men and Joab with the rest of the professional fighting units. When Amasa arrived tardily at the rallying point, Joab treacherously, but understandably, murdered his rival. Then he and Abishai marched through Israel all the way to Abel of Beth-Maacah in the north. Though the last five words of 11 Samuel 20:14 are unclear, it seems that the population of the districts through which Joab’s men marched actually joined them. Evidently, whatever knowledge they may have had of the incident at the Jordan did not make them sufficiently anxious to secede from David and to make them want to risk clashing with the troops that had so decisively crushed the rebellion of Absalom. When Joab attacked Abel of Beth-Maacah, “a wise woman” of the town (probably with the approval of the townspeople) stepped onto the wall and asked for a parley with him; on receiving his assurance that he would not hurt the town or any of its inhabitants provided they surrendered Sheba, she went and got the people of the town to toss Sheba’s head over the wall to the besiegers.

On the consequences of the rebellion for David’s kingdom, army, and chief officers, see *David; *Amasai; *Joab.
[Shabbetai Ginton]

SHEBNAH (Heb. שֶׁבְנָא, שֶׁבְנָה).

(1) The scribe of King Hezekiah, mentioned in connection with the episode which took place during the siege of Jerusalem by Sennacherib king of Assyria (701 B.C.E.; 11 Kings 18:17–19:37, and in the parallel passage in Isa. 36–37). He was one of the delegation of Hezekiah’s three senior officials dispatched to negotiate with the Assyrians. However, their mission having proved of no avail in the face of the Assyrians’ demand for complete surrender, they were sent to the prophet Isaiah to seek the advice of God (11 Kings 19:1ff. and the parallel passage in Isa. 37).

(2) Shebnah, who bore the titles “steward” and “who is over the household,” was the object of Isaiah’s rebuke (Isa. 22:15–25). In this passage, which has the character of a personal admonition, Isaiah prophesies that Shebnah will be removed from his position, exiled to “a large country,” and replaced by Eliakim (ibid. 22:19–23).

The identification of this Shebnah with the one mentioned in 11 Kings 18–19 is not definite. The main difficulties are:

(a) the difference in the titles; and

(b) in Isaiah’s rebuke reference is made to Shebnah’s downfall and exile and not to his being reduced to a lower position, and hence his status in 11 Kings as second in rank to Eliakim, who is there described as “over the household,” cannot be interpreted as the fulfillment of Isaiah’s prophecy. Those who assume that the reference is to the same person explain these difficulties, as well as the reason for the prophet’s sharp rebuke of Shebnah, against the background of Isaiah’s advocacy of a policy of nonintervention, and of Shebnah apparently being the leader of the opposing, pro-Egyptian group which called for an uprising against Assyria. According to this view, the rebuke in Isaiah 22 refers to an earlier period than that reflected in 11 Kings 18–19: in the former, Shebnah still occupied the eminent position of being “over the household,” while in the latter, which describes events during Sennacherib’s siege, the prophecy had already been fulfilled, Shebnah having been degraded from his exalted station and appointed to the less important position of “scribe.” Some ascribe these administrative changes not to politics arising from Judah’s policy

BIBLIOGRAPHY: H.P. Smith, Book of Samuel (1CC, 1912), 366–71; M.Z. Segal, Sefer Shemuel (1956), 356–72; Bright, Hist, 188.

In the Agгадah:
The immediate cause of Sheba’s rebellion against David was the fact that he saw portents that the kingdom should be divided. His error was that he falsely and vaingloriously interpreted these signs to refer to his own elevation and to the throne (Sanh. 101b). He is also condemned as an idolator (Tanh. B. Va-Yera, 12).

By 1966 he was appointed a vice president of Tel Aviv University, which under his guidance developed into one of the country’s leading medical institutions. In addition to being head of this hospital’s department of internal medicine he became, in 1965, an associate clinical professor at the Hebrew University-Hadassah Medical School in Jerusalem. As a member of the tribe of Benjamin, he went and degraded from his exalted station and appointed to the less eminent position of being “over the household” (Sanh. 101b). He is also condemned as an idolator (Tanh. B. Va-Yera, 12).

In addition, Sheba did fieldwork in parasitology with Saul Adler in the country’s leading medical institutions. He went and got the people of the town to toss Sheba’s head over the wall and asked for a parley with him; on receiving his assurance that he would not hurt the town or any of its inhabitants provided they surrendered Sheba, she went and got the people of the town to toss Sheba’s head over the wall to the besiegers.
but to the deplorable personality of Shebnah, who exploited his position to advance his personal interests, as is evident from the literal meaning of the passage in Isaiah: "What have you to do here and whom have you here... you who hew a tomb on the height and carve a habitation for yourself in the rock? [22:16]. . . . and there shall be your splendid chariots" (verse 18b). It is conjectured, on the basis of the first part of verse 16, that the reference here is to a foreigner. On the basis of this verse, as also on paleographical, archaeological, and chronological grounds, it is contended that the sepulcher discovered by Ch. Clermont-Ganneau in the village of Siloam belonged to Shebnah.

[Nili Schupak]

SHECHEM (Heb. שכם), ancient Canaanite and Israelite city situated between Mt. Ebal and Mt. Gerizim in a fertile and well-watered valley in the heart of the central hill country of Erez Israel. Shechem has been identified with the ancient mound known as Tell al-Balātā, 1 mi. (2 km.) east of modern ‘Nablus, also called Shechem in modern Hebrew parlance. The site has been excavated by an Austrian expedition (1913–14), German expeditions (1926–32), and an American expedition from 1957 onward. In the Bible, Shechem is first mentioned in connection with Abraham's arrival in Canaan; he sanctified the place and built an altar there at "Elon [the terebinth] of Moreh" (Gen. 12:6). After leaving Succoth Jacob returned to Shechem, where he bought land and his sons Simeon and Levi destroyed the city following the rape of their sister Dinah (ibid., 33:18ff.). Joseph was later buried in the plot of land purchased by Jacob (Josh. 24:32). Excavations at Shechem have revealed that the town already existed in the Middle Bronze Age 11 (Patriarchal period). Remains uncovered from this period include a defensive wall, a large beaten-earth platform, and a cylinder seal impression from the time of the Egyptian 12th Dynasty. The first mention of the town in Egyptian documents (in the tomb inscription of Khu-Sebek from the time of Sesostris III, 1878–1843 B.C.E., and in the later Exorcism Texts) belongs to the same period. The town flourished in the Hyksos period (c. 1750–1650 B.C.E.), when it was strongly fortified by a double defensive wall; another wall enclosed the acropolis and a large building, 66 × 98 ft. (20 × 30 m.), probably a temple, was also built. In the late Hyksos period (1650–1550 B.C.E.) a great temple was erected, 108 × 92 ft. (33 × 28 m.), with massive walls 18 ft. (5½ m.) thick. It contained a beaten-earth altar and an entrance flanked by a pair of masse’vot ("pillars"). The city gates were of the triple type, made of pairs of parallel limestone blocks. After the Egyptian conquest of Canaan (18th Dynasty), Shechem suffered a decline; the temple was reconstructed on a lesser scale with much weaker walls; a huge masse’vah stood in front of its entrance. Shechem at this time, however, was still politically important; it was ruled by Labayu, known from the Tell el-Amarna letters as an ally of the Habiru and a rebel against Pharaoh. Shechem is not mentioned among the cities conquered by the Israelites under Joshua but it was the scene of the great covenant for which Joshua assembled the tribes (Josh. 24), and it has thus been suggested that Shechem was
peacefully absorbed by the invading tribes. The archaeological evidence furnishes no proof of a violent destruction of the city as noted at other Canaanite sites, and its transition from the Late Bronze to the Early Iron period was apparently peaceful. In the period of the Judges, Shechem was the center of the kingdom of Abimelech son of Gideon (Jerubbaal) who was "made king by the terebinth of the pillar that was in Shechem," after being supplied with money from the "house of Baal-Berith" ("Lord of the Covenant," Judg. 9). Later, however, the people of Shechem rebelled against Abimelech, who conquered the city and razed its walls. The various localities in the city mentioned in this narrative have been tentatively identified by the excavators: the "Beth-Millo" ("house of Millo") with the above-mentioned Hyksos temple built on a platform (Judg. 9:20); the "terebinth of the pillar" is taken to refer to a sacred tree near the massevah of the Late Bronze Age temple (ibid., 9:6); the city gate with the East Gate, the only one in use from the Late Bronze Age onward (ibid., 9:35, 40, 44). The filling of pits beneath the temple with charcoal and early 12th century B.C.E. pottery may represent evidence of Abimelech’s destruction of Shechem. After Solomon’s death, his son Rehoboam was repudiated as king by the ten tribes at Shechem (1 Kings 12). Jeroboam, crowned king in his place, established his first capital at Shechem (ibid., 12:25). Some archaeological evidence was found for his rebuilding of the East Gate (c. 922 B.C.E.). In the period of the Divided Monarchy, Shechem comprised some well-built quarters, with two-storied houses, and poor sections; its other buildings include large granaries, which re-call the role of Shechem reflected in the Samaritan ostraca as a center for the collection of taxes in kind. In about 724 B.C.E. the richer quarters of the city were apparently destroyed by the Assyrians. These houses were rebuilt and the new stratum contains a quantity of Assyrian pottery. Further destructions of the city seem to have been connected with Assyrian punitive expeditions in 673 and about 640 B.C.E. Shechem was resettled as a poor town, and this settlement disappeared in the fifth century B.C.E. In the Hellenistic period the town re-vived as an extensive and powerful city. Its resettlement has been connected with the expulsion of the *Samaritans from Samaria itself after their revolt against Alexander the Great; they established their settlement near Mt. Gerizim, on which their sanctuary stood. The Hellenistic city was destroyed in 129 B.C.E. by John Hyrcanus; great amounts of earth were spread over the remains and the mound was leveled off. The site later contained an insignificant village. Eusebius (Onom. 1501ff.) and the author of the *Madaba Map still distinguish between the site of Shechem and the city of Nablus (Neapolis) established in 72 B.C.E., but most later writers erroneously equate the two.

Michael Avi-Yonah

SHECHTMAN, DAN (1941– ). Israeli materials scientist and crystallographer. He was born in Tel Aviv and graduated from the Technion, Haifa, where he received his B.Sc. in mechanical engineering (1966), M.Sc. (1968), and Ph.D. in materials engineering (1972). After obtaining his Ph.D. he was an NRC fellow at the Aerospace Research Laboratories, Ohio, where he studied the microstructure and physical metallurgy of titanium aluminides. In 1975 he joined the Department of Material Engineering at the Technion, where he became a distinguished professor. In the years 1981–83, he spent a sabbatical at the Johns Hopkins University and NASA where, while studying rapidly solidified aluminum transition metal alloys, he made the discovery of the Icosahedral Phase, which had a profound influence on the course of materials and crystallography research and opened the new field of quasiperiodic crystals. The unexpected paradigm-breaking discovery which initially startled the scientific community has become an established one and is known as the science of quasi-crystals. Following the discovery, the International Union of Crystallography adopted a new definition of a crystal. Shechtman’s discovery of the quasi-periodic crystals has revolutionized several sciences and brought the quasiperiodic atomic order to the forefront of physics, chemistry, crystallography, and material sciences, and opened new avenues for novel practical use. Shechtman was elected to the Israel Academy of Sciences and Humanities in 1996, to the American National Academy of Engineering in 2000, and to the European Academy of Sciences in 2004. He is a recipient of many prizes and awards, including the Israel Prize in physics (1998), Wolf Prize in physics (1999), the Gregori Aminoff Prize of the Royal Swedish Academy of Sciences (2000), and the EMET Prize in chemistry (2002).

Shechtman was very actively involved in science education in the school system in Israel.

[Bracha Rager (2nd ed.)]

SHEDLOVSKY, THEODORE (1898–1976). U.S. physical chemist. Born in St. Petersburg, Russia, Shedlovsky went to the U.S. in 1908. From 1927 he worked at the Rockefeller Institute for Medical Research (now the Rockefeller University), and became professor there in 1957. He wrote mainly on the electrochemistry of solutions and of biological fluids and was the author of Electrochemistry in Biology and Medicine (1955). He became a member of the U.S. National Academy of Sciences.
SHEEP. In the Bible the term ẓon indicates both sheep and goats (Lev. 11:10; 3:6; et al.); only once does it refer to sheep alone, as distinct from izzim ("goats"; 1 Sam. 25:2). In the Mishnah both are referred to as behemah dakhkah ("small cattle"). The most common strain of sheep in Israel is the broad-tailed sheep Ovis vignei platyura, derived from the desert sheep Ovis vignei (orientalis), domesticated during the Middle Stone Age. The bodily construction and way of life of this strain is adapted to the conditions of existence in dry regions such as Ereẓ Israel and its vicinity. The wool, particularly of the lambs, is usually white (Ps. 147:16; Isa. 1:18). The body of most of the sheep native to Ereẓ Israel is white; only the head and feet are brown. Some of the sheep, however, also have brown spots on other parts of the body. These can be born also to parents with white fleeces, and Jacob, when tending Laban's sheep, asked to receive as wages "all the dark ones among the sheep" born from white parents; a modest-seeming request to which Laban agreed (Gen. 30:32–37; see *Biology). In the local breed some are raised for meat and others for wool (cf. 11 Kings 3:4). The ewe has no horns, while the ram has curved ones (cf. Gen. 22:13). This shape of horn also appears on ancient drawings. From it was fashioned the *shofar of "rounded ram's horns" (RH 3:4). As stated above, the Israel sheep is distinguished by its broad and heavy tail (in the male it can reach a weight of 20 pounds, and is mentioned several times in the Bible (Ex. 29:22; Lev. 3:9; et al.)). The tail fat serves as stock when there is a shortage of pasture, particularly in summer.

The sheep was a main source of meat, hence the expression "sheep for slaughter" often found in the Bible (Isa. 53:7; et al.). Its milk was also of importance (Deut. 12:14), while the wool was a basic necessity of life (Hos. 2:7). Its skin was valuable, being used for shoes, clothing, and hangings (Ex. 25:5). The fertility of the sheep is mentioned as a blessing (Ps. 144:13). The ewes normally gave birth to one lamb, but under favorable conditions they had twins – the "paired" of Song of Songs 6:6. The season of conception depends upon the state of the pasture. With the early ones, the primiparous, it begins in Adar; others conceive later. The early ones are the mukash-aret ("stronger") of Scripture and the later ones the atufim ("feebler," cf. Gen. 30:41–42). The period of gestation of five months is mentioned in the Talmud (RH 8a). The weak and innocent sheep, the potential victims of beasts of prey, symbolic in prophetic parable and allegory the Israelite nation and its fate (Jer. 23:2–3; Ezek. 3:4:6–22; et al.).

Many terms for sheep occur in the Bible. A male in its first year is called keves (Lev. 12:6), the female, kavah (Lev. 14:10), kvissah (11 Sam. 123), or kishab (Lev. 5:6). The adult male is ayil, in Aramaic dekhar ("male"; Ezra 6:9). Ayil meshullash is one three years old (Gen. 15:9). The mature female is ruhel (Isa. 53:7; et al.). Taleh is used for the young of both sheep and goats (Isa. 40:11); the fully grown sheep is the seh (Gen. 30:32; Ex. 12:5). A prime species of sheep for meat was called karim. These came chiefly from the unpopulated border regions: Bashan (Deut. 32:14), Kedar (Ezek. 27:21), Moab (11 Kings 3:4), Edom (Isa. 34:6), and Amalek (1 Sam. 15:9). With the growth of the Jewish population of Israel from the beginning of the period of the kings, the pasture areas gradually diminished, being crowded out by agriculture. During the time of the Mishnah, when agriculture in Israel reached its peak of development, a regulation was enacted that small cattle were not to be reared in the populated part of the country, but only in desert areas and in Syria (BK 7:7), as well as in its forests (BK 81a). During that era the shepherd who was suspected of penetrating into agricultural areas to pasture his flock was treated with contempt (Sanh. 26b). At the close of the talmudic period, after the destruction of Israel’s agriculture, the land was once more converted into extensive grazing areas.

Jehuda Feliks

SHE’ERIT HA-HAZZAN (12th century), poet in Egypt. There are several *piyyutim* in manuscript signed “She’erit,” which does not necessarily mean that all belong to the same author. A *piyyut* named She’erit ha-Levi is known, and another named She’erit ha-Hazzan the Blind, the son of Japhet. The *piyyut* in question here is probably “She’erit ha-Hazzan,” the Splendor of Hazzanim, b. Shemariah, the Glory of Hazzanim, who, in 1160, lived near Fostat. This can be deduced from a *Genizah piyyut*, published by *Schirmann* (see bibl.). From the style of the *piyyutim*, it appears that he was considerably influenced by the Spanish school. In addition to the *piyyut* “Shilḥah ve-Have Zori le-Zārīr” (“Send and bring balm to my lungs”), Schirmann also attributes to him the *seḥel* “Shivtei Yeshurun Lekha be-Shir Nōʿāmnī” (“The tribes of Yeshurun address themselves to Thee in song”), which is signed only “She’erit.”

SHEETRIT, MEIR (1948– ), Israeli politician, member of the Tenth and Eleventh Knesset, and then again from the Thirteenth Knesset. Sheetrit was born in Ksar a-Suk, Morocco, to a family of rabbis. He immigrated to Israel with his family in 1957. At first the family settled in the development town of Netivot, but later moved to Yahveh. He studied at the Givat Washington High School and in Kefar Batyah. He enlisted in the army in 1968, and was discharged from the medical corps with the rank of captain in 1973. Sheetrit had started studying microbiology and biochemistry at Bar-Ilan University in 1964, before his military service. He received his master’s degree in public administration from the same university. He joined the Likud and ran on its ticket in the elections for mayor of Yahveh in 1974, after being rejected by the Labor Party. At the age of 25 he was elected as mayor of Yahveh, serving in this position until 1987. In 1986 he received the prestigious Local Government Prize, the Education Prize, and the Quality of...
Life Prize from the president of the State. He was first elected to the Tenth Knesset on the Likud list in 1981, serving in a variety of Knesset committees, including the Finance Committee. He was elected treasurer of the Jewish Agency and Zionist Organization, in which capacity he served in 1988–92. In the course of his service as treasurer he was accused of fraud and breach of trust and put on trial, but was completely exonerated. Sheftrit did not serve in the Twelfth Knesset but ran once again in the elections to the Thirteenth Knesset, and after the Likud's bitter defeat in these elections, considered contesting the Likud leadership. However, due to the fatal illness of his daughter he decided to withdraw from the contest. In the Thirteenth Knesset, in addition to chairing the sub-committee for Higher Education in the Education and Culture Committee, he served as chairman of the Knesset computerization committee. In the Fourteenth Knesset he served as chairman of the Likud parliamentary group and chairman of the coalition, and as deputy speaker, until being appointed minister of finance in February 1999, after the resignation of Ya‘akov Néeman from the post, and three months before the elections to the Fifteenth Knesset. In the Fifteenth Knesset, he was appointed minister of justice in the government formed by Ariel *Sharon in March 2001, even though he had hoped to receive the Education and Culture portfolio. In the government formed by Sharon after the elections to the Sixteenth Knesset he served as minister in the Ministry of Finance, under Binyamin *Netanyahu, and after the resignation of Avigdor Lieberman of the National Union in July 2004, started serving as minister of transportation. In September he was appointed as the liaison minister between the government and the Knesset. He was one of the proponents within the Likud for bringing the *Israel Labor Party into the government, and was a supporter of the disengagement plan. In late 2005 he followed Sharon out of the Likud to form the new Kadimah Party.

He was a member of the board of trustees of the University of Ben–Gurion in Beersheba, and of the Open University, and a member of the Executive of Bar–Ilan University.

**SHEFARAM** (Heb. שֵׁפָארָם; Ar. شفتا أمير), town in western Galilee. The earliest mention of Shefaram occurs in talmudic sources (31a–b; Sanh. 13b, 14a; Av. Zar. 8b), which describe it after Usha as a seat of the newly reconstituted Sanhedrin, following the War of Bar–Kokhba and the persecutions of Hadrian. From Shefaram the Jewish authorities moved to Bet She‘arim. In the crusader period it was known as Le Safar, a possession of the Templars; churches of St. James and St. John were located there. It was the headquarters of Saladin in 1191, when it was renowned for the woods and vines growing in the vicinity. In 1761 Zahir al-Amir, the Bedouin ruler of Galilee, established his capital there, building a fortified castle and naming the place in Arabic after himself, Shefāʾ Amr. An attempt to settle Jews there in the 16th century had failed, but at the invitation of Zahir al-Amir the Jews successfully renewed their efforts to settle in Shefaram. In 1813, Jews from Safed, fleeing an epidemic, settled in Shefaram. Later, in 1850, Jewish families from North Africa settled there. The community, most of whose members were farmers, maintained itself through the 19th century, although in dwindling numbers: 60 persons in 1856; 13 families in 1895; four families in 1900. The last Jew left the place in 1920, leaving behind a synagogue and a large cemetery. Shefaram’s total population in 1881 was 2,500 according to Palestine Exploration Fund data; in the 1922 census it was 2,288; and in 1931 it was 2,824.

When the town was occupied by the Israeli army in June 1948, a number of Muslim inhabitants fled, while other villagers from the vicinity moved in. The population grew from 3,412 in 1948 to 7,225 in 1961 and to 10,000 inhabitants (Christians, Druze and Muslims) in 1968. In 1987 Shefaram received municipal status. The city’s area is 8.5 sq. mi. (22 sq. km.). By 2002 the population of Shefaram had increased to 30,300 inhabitants. Among them, 57% are Muslims, 27.5% Christians, and 14.5% Druze. Until modern times the town’s built-up area remained within its narrow, ancient nucleus, but when expansion began, the inner quarter remained inhabited by Christians, while Druze inhabited a northwestern quarter and Muslims a northeastern part. After the founding of the state, new suburbs with a mixed population were built, including a housing area for Israeli war veterans from minority groups. Shefaram’s position, midway between Haifa and the Christian center of Nazareth, attracted Galilean villagers, as well as non-Jews from other towns of the region, who were seeking relatively cheap housing. Bedouin who have given up nomadic life have also settled at Shefaram. The town supplied administrative and commercial services to non-Jewish villages in the region, among them Sakhnin, Tbillin, and Tamra, and holds a weekly market. Health, welfare, and employment services are also extended to the Bedouin tribes in the vicinity. Approximately 12% of the people work in agriculture, 44% in local commerce and services, and the rest commute to work in Haifa and its industrial zones.

[Miichael Avi-Yonah / Shlomo Hasson]

**SHEFAYIM** (Heb. שֶׁפַּיִים), kibbutz in central Israel, 2½ mi. (4 km.) N. of Herzliyyah, affiliated with Ha-Kibbutz ha-Me’uḥad. Shefayim was founded in 1931 by pioneers from Poland. Initially the kibbutz members earned a livelihood mostly as hired laborers. In the late 1930s and in the 1940s, Shefayim served as a clandestine landing for “illegal” immigrants. In 1945 it was subjected to severe searches by British forces. In 1970 the kibbutz numbered 550 inhabitants, increasing to 780 in the mid-1990s and 883 in 2002. Farming is highly intensive and fully irrigated. The kibbutz also ran a 168-room hotel and water park. Another mainstay of its economy was a big shopping center kept open on the Sabbath and holidays and attracting people from all over the center of the country. The name is taken from Isaiah 41:18.

**SHEFFER, HENRY M.** (1883–1964), U.S. logician. Born in the Ukraine, Sheffer was taken to the U.S. at the age of 10. After
teaching in various institutions, he was appointed to Harvard in 1916 and became a professor there in 1938.

Though Sheffer wrote little, he had many seminal ideas which exerted their influence on the development of symbolic logic through the outstanding logicians whom he trained, including William Van Orman Quine and Susanne K. Langer. His method of working was through a critical exposure of fallacies and then a demonstration of how they could have been avoided. He also stressed the importance of the way the basic postulates of a system are set out, an idea which proved fruitful as much in general philosophy as in logic itself.

In 1913, Sheffer published a paper showing that all Boolean functions could be expressed in one primitive term, the Shefferstroke function. (C.S. Pierce had discovered this but never published it.) Though most of his ideas were only suggested, Bertrand Russell and Alfred North Whitehead were impressed by Sheffer’s originality, and in 1925 said his work “would demand a complete rewriting of their Principia Mathematica.” A volume of essays, Structure, Method, and Meaning (New York, 1951) was published in his honor.

[Richard H. Popkin]

**SHEFFIELD,** steel manufacturing city in N.E. England. Some Jews may have settled in Sheffield in the 18th century, but the first family of note was the Bright family, many of whose descendants, however, later married non-Jews. There was an incipient community in 1827 centered around the Jacobs family, who maintained a synagogue in their own home and employed a *shohet.* A permanent congregation was organized in 1838 and in 1851 was able to buy the premises used as a synagogue and advertise for a minister. During the mass immigration of 1881 to 1914, a number of Russo-Polish refugees settled in Sheffield; by the beginning of the 20th century the Jewish population was 800. However, it was more difficult for Jews to enter steel industries than clothing industries and consequently Sheffield attracted proportionately fewer Jews than many other manufacturing cities in northern England. In 1953 the two synagogues were amalgamated; there were a number of communal and Zionist organizations in the city, as well as a University Jewish Society and Hillel House. In 1969 Sheffield had a Jewish population of 1,600 (out of a total of 490,000). In the mid-1990s the Jewish population dropped to approximately 800. In 2001, the British census found 763 declared Jews in Sheffield. The city has an Orthodox and a Reform synagogue. Armin Krausz’s Sheffield Jewry (1980) is a sociological study of the community.

[Vivian David Lipman]

**SHEFTALL,** U.S. family among the original (1733) Jewish settlers of *Savannah, Georgia. BENJAMIN SHEFTALL* (1692–1765), who was born in Prussia, was active in the establishment in 1735 of Congregation Mikveh Israel, which he seems to have served as *shammash* and *shohet.* He had two sons, Mordecai (by his first wife Perla) and Levi (by his second wife Hannah Solomons). Benjamin kept the congregation’s vital records, which were continued by his son Levi. Benjamin served as interpreter and supplier to a Georgia community of Lutherans from Salzburg. In 1748 he sent to England for *tefillin* and prayer books for Mordecai’s bar mitzvah, the first recorded observance of this rite in America. Two years later, Benjamin was naturalized at Charleston, South Carolina. That same year, he joined a group of Christians in creating Georgia’s first philanthropic organization, the St. George (later Union) Society, to assist widows and orphans. Benjamin was a modest landowner and small-time merchant when he died.

**MORDECAI SHEFTALL** (1735–1797) enlarged his father’s mercantile enterprises and land holdings. He aided in the reorganization of Mikveh Israel in 1774 and functioned as a *mohel.* Supporting the American revolutionary cause, he became chairman of his parish committee, which seized British imports and records. He and his son Sheftall were captured, paroled, recaptured, shipped to Antigua, and paroled again, whereupon they made their way to Philadelphia. Mordecai took an active role in the building of that city’s synagogue in 1782. He tried privateering, purchasing a ship with the small amounts Congress paid on its indebtedness to him. The end of the war brought him to Savannah, where he remained. One of his sons, SHEFTALL (1762–1847), became an attorney in Savannah, while another, MOSES (1769–1835), was a Savannah physician trained by Benjamin Rush.

**LEVI SHEFTALL** (1739–1809), second son of Benjamin, became a butcher. He joined his brother Mordecai in the revolutionary cause but was accused of Tory sympathies for carrying on trade in British-occupied Savannah. After living for several years in Charleston, he returned to Savannah and helped reestablish Mikveh Israel. He was its president by 1789, when he wrote a congratulatory letter to George *Washington.* He served as U.S. agent, and agent for fortifications, at Savannah until his death.

[Malcolm H. Stern]

**SHEFTEL, MIKHAIL** (1858–1922), jurist and communal leader in Russia. Born in Zhitomir, Sheftel became one of the most noted lawyers in Russia. After the pogroms in *Kishinev,* he took part in the judicial inquiries aimed at clarifying the circumstances surrounding the pogroms and exposing their political nature to the Russian public. He was a member of the central committee of the League for the Attainment of Equal Rights for the Jewish People in Russia. In 1906 he was elected to the Russian parliament (*Duma*) as
SHEHITAH

deputy from Yekaterinoslav (Dnepropetrovsk) and joined the Kadet (Liberal) faction. When the Duma was dissolved, Sheftel was among the signatories to the "Vyborg Manifesto" and in consequence was sentenced to three months' imprisonment. He was active in Jewish communal and scientific associations in Russia and contributed to the Yevreyskaya Entsiklopediya and to the Russian-Jewish press. He also took part in the activities of the Jewish Society for War Victims (*YEKOPO), which gave assistance between 1915 and 1919 to Jewish refugees and expellees from areas near the front in Western Russia.

[Yehuda Slutsky]

SHEHITAH (Heb. שְׁחִיתָה), the Jewish method of slaughtering permitted animals or birds for food. The underlying principle of the procedure is to kill the animal in the swiftest and most painless way possible by cutting horizontally across the throat, severing the trachea (windpipe), the esophagus, the jugular veins, and the carotid arteries. The knife (see below) is drawn across the throat of the animal in one or more swift, uninterrupted movements. In the case of animals most of the trachea and esophagus must be severed, while with birds it is sufficient to sever the largest part of either one. In the first instance, however, both are severed even in birds. "Then thou shalt kill of thy herd and of thy flock which the Lord hath given thee, as I have commanded thee" (Deut. 12:21) is the Pentateuchal basis of shehitzah. Maimonides lists shehitzah among the 613 commandments (Sefer ha-Mitzvot, 146) and rabbinic authorities state (Hul. 28a): "Moses was instructed concerning the rules of shehitzah."

The Shohet

In early times there were no "professional" shohetim (sing. "shohet"). Any adult versed in the halakhah was allowed to perform the act of shehitzah. In medieval times it was resolved that would-be shohetim in order to obtain a license (kabbalah) had to pass an examination (conducted by a rabbi) on the theory and practice of shehitzah. A synod convened in Germany around 1220 resolved that no man could act as a shohet without such a license.

A kabbalah certificate is nowadays issued to an applicant who has successfully passed an oral examination on the laws of shehitzah and terefa (see *Dietary Laws) and has correctly performed ritual slaughter, at least three times, in the presence of experts. Only meat of animals slaughtered by a shohet who possesses a kabbalah certificate is fit for consumption according to religious law (i.e., kasher, cf. Sh. Ar., YD 1). Kabbalah certificates are not issued to minors, women, or to mentally or physically handicapped persons (e.g., a deaf-mute or an idiot), although, if they perform the shehitzah properly, their slaughter is ritually valid (ibid., 1:2, and Hul. 1:1). In Yemen there were women ritual slaughterers and it is even recorded that on Jan. 13, 1556, R. Isaac Immanuel de Lattes of Mantua gave a kabbalah to a woman.

A rabbi should not issue a kabbalah certificate to a person who is his close relative, or irresponsible, or to someone who is lax in the fulfillment of religious duties. Excluded also are persons inclined to drunkenness or whose "hands are unsteady." In order to retain his status, the shohet is obliged to rehearse the rules of ritual slaughter every day during the first 30 days of receiving the kabbalah certificate, then once a month during the first year, and after that at least once in three months. He is also obliged to inspect, from time to time, the sharpness of his knife (or knives) or to have them inspected, upon request, by rabbinic authorities.

The Knife

In the shehitzah procedure, the knife (known as halaf) has to be spotlessly clean and smooth, without a single notch or dent, and it has to be examined before and after shehitzah. The examination is performed by passing the edge of the knife gently back and forth against the tip of the finger and the fingernail; any imperfection in the blade can thus be discovered. The knife must be at least twice as long as the width of the animal's throat and must not be pointed. Usually very high grade steel is used in order to avoid notches. One of the important stages in the training of a shohet is to learn how to set the knife to exquisite sharpness.

The Act

The act of shehitzah is preceded by a benediction. One authority has ruled that the absence of the benediction renders the meat non-kosher, but the general opinion is that although a benediction should be recited, its omission, post facto, does not affect the validity of the act. Shehitzah may not be performed on the Sabbath but, post facto, it is valid if so performed. Any one of the following five movements can disqualify the shehitzah: shehituyah – if the slightest pause or interruption occurs during the shehitzah act; derashah – if the knife is pressed into the neck instead of moving firmly back and forth; halalah – if the knife gets stuck behind the food pipe; hagramah – if the cut is not made in the prescribed section; ikkur – if the tissues are torn out rather than cut.

For birds and undomesticated animals (hayyot) the blood must be covered after the shehitzah. This is done by placing sand or soil underneath, slaughtering, and then spreading more soil over the split blood, at which time a special benediction is pronounced. One of the reasons given for this procedure is that these animals owe nothing to man (as opposed to domesticated animals) and thus their slaughter is more shameful.

Reasons Given for Shehitzah

Underlying these minute regulations is the concept of za'ar ba’alei hayyim, the deep concern not to inflict pain on any living creature. The shehitzah procedure was thus devised to make animal slaughter instantaneous and painless (see *Animals, Cruelty to). Maimonides writes in a similar vein: “The commandment concerning the killing of animals is necessary because the natural food of man consists of vegetables and
the meat of animals; the best meat is that of animals permitted to be used as food. No doctor has any doubts about this. Since, therefore, the desire to procure good food necessitates the slaying of animals, the law enjoins that the death of the animal should be as easy and painless as possible” (Guide of the Perplexed, pt. 3, 48).

**Anti-Shehitah Movements**

Though the concept of shehitah is rooted in humane aspects and the laws are directed to perform the act as swiftly as possible and render the animal insensible to pain almost instantly, from time to time there have been attempts in the non-Jewish world to ban shehitah. While some of these were motivated by humanitarian concern, in many cases the agitation was a manifestation of antisemitism.

An anti-shehitah movement was started in Germany in the middle of the 19th century. The first country to ban shehitah was “Switzerland, which outlawed it by plebiscite (178,844 votes to 115,931) on Aug. 20, 1893. Later shehitah was forbidden in Norway (Jan. 1, 1930), Bavaria (May 17, 1930), Nazi Germany (April 21, 1933), Sweden (1937), Fascist Italy (1938). Severe restrictions were imposed on the Jews of Poland in 1936. During World War II shehitah was banned in the countries under Nazi hegemony.

In the United States, shehitah is protected in a number of states (in 1915 a law was passed in New York according to which it is an offence to sell as kosher an article that is prohibited for Jewish consumption). Similarly, the Act of Parliament of August 13, 1928, which provides for the humane slaughter of animals in Scotland, makes a special provision for shehitah (Article 8). Subsequently, an act passed on July 28, 1933, which provides for the humane and scientific slaughter of animals, and the Slaughter of Animals (Consolidation) Act (1958) further safeguarded shehitah in Britain. They require that in abattoirs cattle and sheep be instantaneously slaughtered or be rendered insensible by stunning until death supervenes, but food intended for Jews and Muslims is exempt from the foregoing provision (a private member’s bill to forbid shehitah, introduced in the British Parliament, was defeated in 1968).

There are similar legal safeguards in Finland, the Republic of South Africa, and Ireland. Many slaughterhouses have special large padded casting pens and other similar devices to get the animal into the required position swiftly and painlessly.

In recent years, the anti-shehitah movement has been revived in a number of countries. Medical and veterinary authorities such as Lister, Virchow, and Vogt and more than 450 of the most eminent physiologists, pathologists, and heads of veterinary colleges in Great Britain have become convinced that the Jewish method is absolutely humane. The British physician Lord Horder stated in 1940: “Careful and critical scrutinising of this method of slaughtering leaves me in no doubt whatever that it is fraught with less risk of pain to the animal than any other method at present practised.” Similar sentiments were expressed by Sir William Bayliss, professor of general physiology at the University College of London: “The Jewish use of the knife is a humane method of slaughter which compares favourably with any other process. The result of the cut made by the Jewish expert is to produce immediate insensibility, from which the animal does not recover. The pain, if any, is momentary, and at the worst is but slight.”

**Stunning**

Many of the opponents of shehitah have advocated electrical stunning before the act which would render the animal unconscious and thus insensitive to pain. The halakah strongly opposes such stunning prior to shehitah. Stunning often causes a strong jerk of the muscles, which could impair the act of shehitah. It may also injure the brain and lungs, rendering the animal forbidden. The stunning furthermore causes extravasation of blood so that small blood clots form in the meat, hemorrhages, and severe congestion of muscles.

The laws of shehitah are codified in Sh. Ar. YD, ch. 1–28.

[Harry Rabinowicz]

**Communal Aspects**

In many regions and during many periods shehitah provided a major source of income for the communal leadership. The first signs of organized communal control over shehitah appeared at the end of the tenth century in Ramleh, Ereẓ Israel, and in Egypt. The old profession of tabbah, combining slaugter and meat seller, was divided into two, when the kazzav, the butcher, ceased to act as slaughterer, a function which was acquired by the specialist shoḥet. This became the rule, albeit with some exceptions, in the kingdoms of Christian Spain and in the Sephardi Diaspora after 1492. The shoḥet was also expected to act as bodek, to examine the animal lungs for kashrut. Usually the shoḥet was granted ḥazakah or perpetual tenure; he did not have to stand for reelection and could be dismissed only for transgression. This right was often transmitted to his heirs and sometimes remained in the same family for many generations. In Venice he was called the sagatino. In order to pay the shoḥet’s salary, the community arranged to collect fees for his services. Periodically the shoḥet’s work in the abattoir was inspected by the local rabbi or dayyanim; many communities hired two shoḥatim. In smaller settlements the shoḥet often combined his work with the office of cantor, teacher, or other paid communal functions. As the shoḥet was responsible for many minutiae in the proper exercise of his function, his character and piety were as important to the community as his technical expertise. Some kabbalists, chief among them the anonymous 14th-century Spanish author of Sefer ha-Kaneh and Sefer ha Peliʿah, attacked the whole conception of meat-eating and cattle-slaughtering as a part of the general life-style. On the other hand, the development of the concept of metempsychosis made shehitah and the shoḥet participants in the right way of liberating the soul from its material environment if both the action and the man were pious and proper (see also *Sacrifices in Kabbalah*).

The method of shehitah and attitude to it of Ashkenazi Jewry developed largely on the same lines. In Ḥasidism the
mystical appreciation of sheḥitah became an ideological and social mark of the movement. Tales told about *Israel b. Eliezer Ba'al Shem Tov express a deep concern with the personality of the shohet; miraculously the Ba'al Shem Tov was able to know and disclose the sins of the shohet in various places. Hasidism introduced a different technique for the fine sharpening of the shohet's knife. As the circle around *Elijah b. Solomon Zalman, the Gaon of Vilna, objected to the introduction of highly polished knives, contending that such instruments were prone to denting, the hasidic sheḥitah became both a divisive factor in the community and a unifying element among the Hasidim. In 1772 a herem was proclaimed against the hasidic sheḥitah, its knives, and its shohatim, which "are of a certainty blenched with the taint of heresy. Meat [or cattle] slaughtered by these burnished knives is not kasher." As Hasidism spread, the close tie between the rabbi and the shohet made the introduction of hasidic sheḥitah a tangible sign that the Hasidim had taken over the community and the rabbinate.

The kahal acquired monopolistic control over all sheḥitah and sale of kasher meat. Soon the income from sheḥitah was employed not merely to defray expenses but also to underwrite educational, charitable, and other communal endeavors. As early as the 12th century in Castile there are references to such a meat tax. Throughout the Sephardi world it was known as gabela and in Morocco in modern times it was called hakdis. In Poland from the 17th century and in Russia it was called ko-robla. In Berlin the sheḥitah tax is first documented in 1723, but it probably existed long before that. Often these taxes became the mainstay of communal income. In modern times various states – often on the initiative of the maskilim – used the meat tax as a method of financing their own enterprises, educational and otherwise, among the Jews. As East European Jewry migrated to Western Europe and the New World they instituted the sheḥitah tax there too. In New York the shohet was at first a functionary of the synagogue rather than of the community as a whole. In the 20th century, with the development of canned meat and canning factories and the concentration of great numbers of Jews in a few communities, sheḥitah underwent many changes. The kasher butchers were supervised by a mashgichah (“supervisor”) or as he was called in London a shomer (“watchman”). Each properly slaughtered animal or fowl was identified by a plumbe, a lead disc stamped kasher and showing the date of slaughtering. Every can of meat had to be similarly marked. Attempts were made to ensure central supervision over kashrut in order to check the many abuses that had appeared. In Palestine the Mandatory government adopted regulations which provided that in each city sheḥitah must be under the control of a single board representing the various groupings in the community. In Israel sheḥitah has remained under the general supervision of the Mo'azot Datiyot (“religious councils”) and the rabbinate.

[Isaac Levitats]

Women and Sheḥitah

Women are tacitly included when the Mishnah states that everybody slaughters, that their slaughtering is acceptable, and that they are not included among those whose slaughtering is unacceptable (Hul. 1:1). According to Zevahim 3:1, slaughtering, even of the most holy things (kosher kadashim), by women, slaves, and the impure, is acceptable. On the one hand, this statement seems to put women in the category of those who do not usually slaughter while, on the other, it affirms that women could slaughter sacrifices. The only condition is that those who are impure should not come into contact with the meat. According to Zevahim 3:1b, “everybody slaughters” means that women have the authority to do so in the first instance (based on Lev. 1:5, where the commandment to slaughter was not limited to priests); that their slaughtering is acceptable means after the fact (Hul. 2b). The Jewish traveler *Eldad (ben Mahli) ha-Dani (c. 880) left behind a small code of law, Hikhot Erez Yisrael (“Laws of the Land of Israel”). Beginning with the Tosafists, medieval rabbis rebut arguments purportedly found in Hikhot Erez Yisrael against women's slaughtering; these include claims that women are fable-minded, physically weak, and prone to fainting. Instead, they affirm that women may slaughter on their own (e.g. Tos. Hul. 2a, d.h. hakol; Zev. 31b, kol; Kid. 36a, d.h. Hakabalot; 76b, d.h. ein bodekin; Er. 59b, d.h. ve-tehumin; MT Sheḥitah 4:4; Commentary on the Mishnah Ḥullin 1:1; Commentary on the Mishnah Zevahim 3:1; Meir of Rothenberg, Shut Maharam 4 (Prague), no. 193; Jacob ben Asher, Tur YD 1). Orhot Hayyim and Kolbo of the 13th–14th centuries deem it acceptable for women to slaughter for themselves, le-atzman, but not for others, lo le-aterim (OH Hil. Sheḥitah, no. 3; Kolbo, no. 107). Jacob ben Judah *Landau, 15th century author of Sefer ha-Agr, represents a major turning point in the development of rabbinc discourse on the subject. He states that while it is obvious that a woman may slaughter, “It is a custom in all the Jewish diaspora that they do not slaughter and I have never seen the practice of doing so. Therefore, there is no reason to allow them to slaughter because custom cancels, and the custom of our fathers is Torah” (Sefer ha-Agr, Hil. Sheḥitah, no. 1062). Joseph *Caro contests Jacob ben Judah Landau’s view that the custom is that women do not slaughter; he also asserts that women's slaughtering for themselves means slaughtering by themselves, that is alone (levadan) without anybody supervising them (BY YD 1; Kesef Mishnah, Hil. Sheḥitah 4:4). Limitations on women's slaughtering were accepted by Moses *Isserles of Cracow and by Solomon ben Jehiel *Luria of Poznan (Rama, SA YD 1; Yam shel Shelomo, Hul. 1:1). Luria raised the possibility that fear of their husbands will lead women to hide mistakes; he ruled that because of the many stringencies recently added to the process of slaughtering and of the greater concern that they will faint, women are not allowed to slaughter for others or at all (Yam shel Shelomo, Hul. 1:2). One relatively late attempt to limit women's slaughtering in Italy reveals what may have been a new or a previously understated argument. In 1728, in an exchange with Abraham Yahyah of Modena, Shabbetai Elhanan ben Elisha *del Vecchio accepted all the traditional arguments for women's slaughtering, even for sacrifices, but
expressed concern that a women in a state of impurity might touch the animal.

In contrast with efforts by rabbis elsewhere in Christian Europe to limit women’s rights to slaughter, licenses appear in early modern Italy for specific women not only to slaughter but also to porgé (nikkar or treibern) animals. Poring, removal of fat, veins, nerves, and sinews after the animal has been ritually slaughtered, is a complex process. The involvement of women in kosher slaughtering and porging has been construed by some as proof of an improvement in the condition of women among Italian Jews. Others have argued that the reason women were allowed to slaughter was not emancipation but so that they could provide food for their families in isolated locations, such as summer houses in the mountains, or in distressed circumstances. Italian Jewish women who demonstrated under supervision that they had sufficient knowledge and expertise to slaughter, to examine, and to porgé received permission to slaughter both fowl and cattle unsupervised (beinah levein atzmah) for all Jews (lekhol yisrael).

[Howard Tzi Adelman (2nd ed.)]

SHEIKH, ABRAHAM BEN SHALOM HA-LEVI AL- (c. 1749–1829), community leader, liturgical innovator. Al-Sheikh was born and lived in *San’a. He was the grandson of the *nagid R. Tihye ha-Levi, who headed the Jewish community of San’a after the return from the Exile of Mawzâ, when he founded the Al-Sheikh synagogue, the first to be built in the new Jewish walled-off neighborhood (qâ’il al-yahud). After the fall of the Iraqi family, he was appointed by the imam as supervisor of his mint and as president of the Jews of Yemen. As a wealthy man, he donated much money to the poor and helped orphans marry, built mikvaot and a boys’ school for the community from his own funds, and improved his family synagogue, already known for its beautiful traditions and valuable collection of books. He instituted a mixed rite of customs and prayers in the synagogues by introducing several changes and reforms based on Sephardi prayer books and the opinion of R. Joseph Caro (*shami). This provoked the criticism of conservative (*baladi) scholars. Al-Sheikh wrote a work on the *masorah and the musical notes of the Scriptures, Hekat Mehokek (in manuscript).

[Yehuda Ratzaby / Yosef Tobi (2nd ed.)]

SHEINDLIN, JUDITH (1942– ), U.S. judge. Judith Blum Sheindlin was born in Brooklyn, N.Y., and educated at American University in Washington, D.C., and New York Law School. Beginning in 1972, Sheindlin prosecuted juvenile delinquency cases for ten years, until she was appointed a judge of Family Court in Manhattan. She retired from the bench in 1996 and began a television career as Judge Judy, an impressively outspoken judge constantly admonishing plaintiffs and defendants. For more than ten years, Sheindlin rendered opinions sharply and quickly in a widely syndicated and extremely popular half-hour series. Her husband, Gerald, who graduated from Long Island University and Brooklyn Law School, became a judge in the Bronx and then an acting justice of the State Supreme Court. He retired at 65 to begin a television career as Judge Jerry of The People’s Court. He had presided over 86 murder trials and published 65 opinions, but his show, frequently aired back to back with his wife’s, was not as successful as hers. Nevertheless, the couple’s television earnings far eclipsed their salaries on the bench. Judge Judy was the author of several books, including Don’t Pee on My Leg and Tell Me It’s Raining and Beauty Fades, Dumb Is Forever: The Making of a Happy Woman (1999).

[Stewart Kampel (2nd ed.)]

SHEINKIN, MENAHEM (1871–1924), Zionist leader in Russia and Ereẓ Israel. Born in Ulla (near Vitebsk), the son of an hasidic rabbinical family, Sheinkin studied to become a rabbi. He became attracted to the *Haskalah movement, however, and enrolled at Odessa University. An early Zionist, he was a delegate to the Second Zionist Congress in 1898. In 1900 he visited Ereẓ Israel for the first time and from there went to London as a delegate to the Fourth Zionist Congress. A year later he became the *kazyonim ravvin in Balta, Podolia. He was a member of the *Democratic Fraction of the Zionist Movement; took part in the activities of the Ziyyonei Zion, who opposed the *Uganda scheme at the Seventh Congress (1905); and was then elected a member of the Zionist General Council. He was forced to resign from his post as an officially appointed rabbi when he refused to give up his Zionist activities. In 1906 he went to Ereẓ Israel, where he directed Hovevei Zion’s information and immigration office in Jaffa and was one of the founders of Tel Aviv (1909). When World War I broke out, he was exiled by the Turks from Ereẓ Israel and went to the United States, where he was among the founders of the Zion Commonwealth Company and organized groups for settlement in Palestine. He returned to Palestine in 1919 and became director of the Zionist Commission’s immigra-
tion office. In 1924 he went to the United States on behalf of the Zion Commonwealth Company and was killed in a road accident in Chicago. A central street in Tel Aviv and one of the city’s suburbs are named after him. His writings were published posthumously as Ketavim (1935).

SHEINKMAN, JACOB (1926–2004), labor leader and Jewish communal leader. Sheinkman was born in New York City. After serving in the Navy in World War II, he attended Cornell University and was one of the first graduates of the School of Labor and Industrial Relations. He then became an organizer for the International Pulp, Sulphite and Paper Mill Workers. He joined the Amalgamated Clothing Workers of America as a lawyer in 1953. In 1958 he became general counsel of the Amalgamated Clothing Workers of America, AFL-CIO; in 1968 he became a vice president, and in 1973 secretary-treasurer. In 1974 he was elected president of the Jewish Labor Committee, where he served three terms and lobbied for strong U.S.-Israeli ties. He also served as vice president of the AFL-CIO Industrial Union Department, as a member of the executive committee of the American ORT, and as a member of the board of trustees of Cornell University. During the 1980s, as a strong opponent of U.S. policy in Central America, he founded and co-chaired a national committee on labor rights in Central America, which served as an organizing base for union activists opposing U.S. military intervention in El Salvador and Nicaragua. From 1987 to 1995 Sheinkman was president of the Amalgamated Clothing and Textile Workers Union. After negotiating the union’s merger with the International Ladies’ Garment Workers’ Union, he retired to form the Union of Needletrades, Industrial and Textile Employees (UNITE).

[Silton Rivdas Konvitz / Ruth Beloff (2nd ed.)]

SHEKALIM (Heb. שקלין), fourth tractate in the order of *Moed, which deals, in eight chapters, with the annual half-shekel tax collected for the maintenance of the Temple and its services and with allied subjects. There is no Gemara in the Babylonian Talmud but there is in the Jerusalem Talmud, and this Gemara is usually included in the printed editions of the Babylonian Talmud. There is Tosefta, divided into three chapters. The reason for placing this tractate in the order of Moed, dealing with festivals, is somewhat problematic. Since Shekalim deals principally with matters connected with the Temple, its expected place might have been in the order Kodashim ("Holy Things") together with the tractates Middot and Tamid. It is probable, however, that its inclusion in Moed is connected with the opening paragraph of Shekalim, which says: “on the first of Adar, announcement is made concerning shekalim… on the 15th, the Megillah is read in the walled cities…” This formulation associates shekalim with the idea of an “appointed time,” which is the basic meaning of moed. Moreover, the first paragraph of chapter 3 significantly links the periodical allocations from the shekel funds with the festivals of Passover, Shavuot, and Sukkot.

It is also remarkable that the various printed editions and manuscripts of the Mishnah, Tosefta, and the Babylonian and Jerusalem Talmuds differ widely as to the place of Shekalim in the sequence of tractates within the order Moed. There are a few instances of its being placed ninth, 11th, or 12th, but it is most frequently found as either fourth or fifth. Following the rule that tractates with a higher number of chapters take precedence, Shabbat (24), Pesahim (10), and Eruv (10) took the first three places, while Shekalim and Yoma, each with eight chapters, vied for the fourth place. But there is evidence, coming from geonic times, that Shekalim used to be studied before Yoma, and eventually the placing of Shekalim as the fourth tractate of Moed prevailed.

As to biblical provisions concerning the half-shekel tax, Exodus 30:11–16 sees it as a onetime measure for the purpose of a popular census. But in II Kings 12:5–17; 22:3–7, II Chronicles 24:5–14; 34:8–14, and in Nehemiah 10:33–34 it appears as a permanent institution. It is remarkable that the last mentioned source speaks of a “third part of a shekel,” having in mind Persian currency.

The contents of the eight chapters of this tractate are as follows: chapters 1–2 deal with the time and manner of levying this tax. Chapters 3–4 deal with the allocations of the shekel fund, when they were made, and how they were to be used. Chapter 5 lists the various chief officers of the Temple and speaks, in particular, about the administration of the funds. Chapter 6 says first that there were in the Temple 13 “chests” for money donated, two of which were marked for shekel contributions. It then goes on to list other things of which there were 13 in the Temple. Chapter 7 first discusses the use to which lost money found on the Temple premises should be put, and goes on to consider similar questions, e.g., that of meat or cattle picked up in the sanctuary or elsewhere in Jerusalem or in the provinces. Various other questions are also touched upon, e.g., a burnt-offering sent by a heathen from abroad. Chapter 8 discusses a variety of questions which have nothing to do with the subject matter of this tractate, except for the incidental statement that the law of shekalim became obsolete with the destruction of the Temple. The following aggadic passages from the Jerusalem Talmud to the tractate are well known: “No monuments need to be put up for the righteous, their deeds are their memorial” (2:7, 47a), and "Whoever settles in Israel, speaks Hebrew, eats his fruit in ritual purity, and reads the Shema morning and evening is assured of the world to come” (3:4. 47c).

The tractate Shekalim for the most part consists of early material, and there are sections and chapters which have come down in their original form. All the officials mentioned in chapter 5 lived between the time of *Agrippa I and the destruction of the Temple (41–70 C.E.), and some of them are mentioned by name in Josephus, while three others are mentioned also in the Mishnah of *Middot and *Tamid, which were
SHEKEL, coin minted in Ereẓ Israel.

Shekel

Originally the shekel was a unit of weight for means of payment in gold and silver. In the third millennium B.C.E. one already finds this unit of weight in Babylonia, weighing there 8.4 grams; it was divided into 24 giru (Heb. gerah). 60 Babylonian shekels were a mina (Heb. maneh) and 60 mina a biltu (Heb. kikkar). This system was introduced in Canaan with some alteration, as the maneh generally consisted of 50 shekels only. As the kikkar was equivalent to 60 maneh, it amounted to 3,000 shekels in Canaan, instead of 1,600 in the Babylonian system. The shekel as a unit of weight for gold is mentioned in Genesis 24:22 and Joshua 7:21 (for the shekel as a unit of weight for silver, see Gen. 23:16; II Sam. 14:26; II Kings 15:20; Zech. 11:12–13).

There were two standards of shekel weights, namely the Babylonian and the Phoenician. Both standards had a heavy and light system: Babylonian – heavy, 22.0–23.0 grs.; light, 11.0–11.5 grs; Phoenician – heavy, 14.5–15.3 grs.; light, 7.3–7.7 grs.

The shekel weight during the First Temple period relates to the light Babylonian system. In the fourth century B.C.E. Phoenician silver coins, such as the Sidonian double shekel and Tyrian stater, circulated in Ereẓ Israel. The former, whose average weight was 26.43 grs., relates to the Phoenician heavy weight, though being somewhat lighter. It may be compared with the Tyrian staters of that period, which are of an average weight of 12.9 grs, two of which would approximate the Sidonian double shekel.

Ptolemy II (285–246 B.C.E.) reformed this coinage by reducing the weight of the tetradrachm from the Attic standard (17.46 g.) to the Phoenician standard (14.30 g.). Thus, the tradition of the Phoenician shekel was kept alive and adopted later by the city of Tyre, which issued shekels from 126 B.C.E. until about 56 B.C.E. These had an average weight of 14.2 grs. and were of good silver. They were therefore recommended by the sages for payment of the Temple tax (Shek. 1:7). During the Jewish War (66–70 C.E.), due partly to a shortage of Tyrian shekels, which had not been issued by then for about ten years, the Jewish authorities issued silver shekels of their own, with the legends Shekel Yisrael, Haẓi ha-Shekel (“half-shekel”) and Reva ha-Shekel (“quarter shekel”).

Perutah

The only Jewish coin denomination mentioned in the Mishnah, Talmud, and Midrash besides the shekel is the perutah. Numismatists identify this denomination with the Hasmonean and early Herodian coinage, that of the Roman procurators, and the smaller coins of the Jewish War. The Hasmoneans undoubtedly adjusted their coinage to the Seleucid standard. Their perutah had an average weight of 2 grs. and an average size of about 15 mm.; it may be compared to the Seleucid dilepton. The Hasmoneans also had a lepton, or half-perutah, and a trilepton, or 1½ perutah. The perutah of that weight and size was retained until about 30 C.E. From the time of Agrippa I (42 C.E.) onward, the perutah increased in weight and size to an average of 2.55 grs. and 17 mm.; this brought it close to the weight and size of the Roman quadrans, which under Nero weighed 3.21 grs and was 17–18 mm. The rela-
tion of the perutah to the silver coinage is mentioned in the Talmud (Kid. 2a, 12a) in two variations:

(a) 192 perutah in a dinar, which corresponds to the Seleucid system and therefore refers to the Hasmonean period, and

(b) 144 perutah in a dinar, which reflects the situation after 30 C.E. when the weight and size of the perutah were increased and Erez Israel was under Roman control.

**Hezi and Revi’a**

The only bronze Jewish coins that bear an indication of their denomination are those of the fourth year of the Jewish War (70 C.E.). Hezi (“half”) appeared on the large bronzes and revi’a (“quarter”) on the smaller sized coins, but it is not known of what denomination these coins were halves and quarter. All suggestions to solve this problem remain hypothetical.

**Other Denominations**

The Herodian tetrarchs Antipas and Philip II, as well as the kings Agrippa I and II, adjusted their coin denominations to the city coin system prevailing in Erez Israel and therefore have no Jewish character. The same also applies to the coinage of the Bar Kokhba War (132–35 C.E.), which is overstruck on the money then in circulation, i.e., the Roman silver coinage, both imperial and provincial, and the Erez Israel city coins. The silver tetradrachm, however, was called *sela* by the Jews and the silver denarius *zuz*. The various denominations mentioned in the Mishnah, Talmud, and Midrash refer mainly to Roman coinage (see *Coins, In Talmudic Literature*).

**In the Zionist Movement**

The biblical name shekel was given by the First Zionist Congress (1897) to the fee and card of Zionist membership. Its price was fixed at 1 franc, 1 mark, 1 Austrian crown, 2 shillings, half a dollar, 40 kopeks, etc. The shekel also served as a voting certificate for elections to the Zionist Congress, and until the 25th Congress (1960) the number of delegates allocated to a certain election area (country) was calculated on the basis of the total of shekels sold there. Erez Israel had the privilege of the “double shekel,” being entitled to twice the number of delegates that any other country received for the same number of shekels. The reverse side of the shekel bore the text of the Zionist program and for 25 years, after the 18th Congress (1933), also the “discipline clause,” meaning that the discipline of the World Zionist body takes precedence over that of any other Zionist body.

The growth of the World Zionist Organization is reflected in the number of shekel holders: 164,333 in 1907; 584,765 in 1923; 1,042,054 in 1939; 2,159,840 in 1946; and 2,148,029 in 1960. The new constitution of the World Zionist Organization (1960) retained the shekel as a token of Zionist allegiance and voting card, fixing its cost at between 15 and 50 cents or their equivalent, but making the size of congress representation independent of the shekel sales. The 25th Congress (1968), by resolving that each country may itself determine the system of congress elections to be held there, abolished the shekel as an obligatory institution and left it to the countries to decide whether to retain the shekel as a certificate of membership and voting card for the members of the local Zionist Organization concerned.

In 1970 a decision was taken by the Israel Knesset to call the unit of Israel currency “shel,” renamed “new shekel” in 1985 and equal to 1,000 old shekels in the face of runaway inflation.

[Aharon Zwergbaum]

**SHEKHINAH** (Heb. שיחינה, lit. “dwelling,” “resting”), or Divine Presence, refers most often in rabbinic literature to the numinous immanence of God in the world. The *Shekhinah* is God viewed in spatio-temporal terms as a presence, particularly in a this-worldly context: when He sanctifies a place, an object, an individual, or a whole people – a revelation of the holy in the midst of the profane. Sometimes, however, it is used simply as an alternative way of referring to God himself, such as “The Holy One Blessed be He,” or “The Merciful One.” For example, on the verse, “After the Lord your God shall ye walk…” (Deut. 13:5), the Talmud comments: “And is it possible for a man to walk after the *Shekhinah*?… Rather this means that one should follow [emulate] the virtues of the Holy One, Blessed be He” (Sot. 14a). The term, though seemingly hypostatized in certain passages, must be viewed purely figuratively and not as representing a separable aspect of God or as being in any sense a part of the Godhead. The latter notion is totally alien to the strict monotheism of rabbinic Judaism for which the unity of the divine Essence is a basic premise. The references to *Shekhinah* which are open to misinterpretation, e.g., those which talk of God placing His *Shekhinah* in the midst of Israel (cf. Sif. Num. 94), or where the *Shekhinah* is pictured as talking to God (Mid. Prov. to 22:28), are the product of homiletic license. The rabbis themselves were not unaware of the dangers of misinterpretation, and occasionally preface their remarks with *kivyaqhol*, “as if it were possible” (Mekh. Pisḥa 12; see also S. Schechter, *Some Aspects of Rabbinic Theology* (1909), 40, n. 1; E.E. Urbach, *Hazal* (1969), 33, n. 15; 50).

One of the more prominent images associated with the *Shekhinah* is that of light. Thus, on the verse, “… the earth did shine with His glory” (Ezek. 43:2), the rabbis remark, “This is the face of the *Shekhinah*” (ARN 2, 13a; see also Hul. 59b–60a). Both the angels in heaven and the righteous in *olam ha-ba* (“the world to come”) are sustained by the radiance of the *Shekhinah* (Ex. R. 32:4; Ber. 17a; cf. Ex. 34:29–35). This association with light has led to the view that the *Shekhinah* is some kind of luminous material, a being of light created by God. This view is found among certain medieval Jewish phi-
losophers, and was even propounded by a rabbinic scholar in comparatively recent times (J. Abelson, The Immanence of God in Rabbincal Literature (1912). For criticism of his views see Urbach, ibid., 32, 35). Nevertheless, the imagery of light, shining glory, radiance, etc., is commonly associated with the numinous in religio-mystical language in general, and does not necessarily have the literalistic connotations of a separate luminous entity. In the case of the Shekhinah this is further borne out by a consideration of the ways in which the term is used in the literature.

In the Targums
The term Shekhinah, in its Aramaic forms, is frequently found in the Targums, particularly in Targum Onkelos. It is employed together with other “intermediary” terms such as menra yakara (“noble word”), to paraphrase certain references to God, thus avoiding the overtly anthropomorphic implications of various biblical expressions. For instance, the verse “the Lord is not in your midst” (Num. 14:42), Onkelos translates “the Shekhinah of God is not in your midst” (see also Targum on Num. 14:14, and note the double paraphrase). The verse “you cannot see My face, for man shall not see Me and live” (Ex. 33:20) is rendered, “You cannot see the face of My Shekhinah” (see also Ex. 33:14–15). And “to put His name there” (Deut. 12:5) becomes “to rest His Shekhinah there” (see also 12:11).

In Talmud and Midrash
The talmudic and midrashic usage of Shekhinah does not have quite the same apologetic overtones which are apparent in the Targums; on the whole it is wider in extension and in texts of different dates it varies considerably in nuance. In origin Shekhinah was used to refer to a divine manifestation, particularly to indicate God’s presence at a given place. This did not imply a limitation of God’s omnipresence, however, since it is said that the Shekhinah is in all places (BB 25a), and that just as the sun radiates throughout the world so does the Shekhinah (Sanh. 39a). Even those special places and objects which God imbues with an extra holiness by His presence – such as the thorn bush in which He revealed Himself to Moses, or Mount Sinai, or the Tabernacle in the wilderness – in connection with which the term Shekhinah is most often used, teach us that no place is devoid of His presence: neither the lowestest of trees, nor the barest of mountains, nor a wooden sanctuary (Shab. 67a; Sot. 5a; Ex. R. 34:1); Though the presence of God is everywhere, the Shekhinah rests preeminently on Israel rather than on the gentiles (Ber. 7a; Shab. 22b; Num. R. 7:8), for Israel is a people chosen and sanctified by God to be carriers of His will to the world. Israel’s sins led to the destruction of the Temple, where the Shekhinah was always present (this is true at least of the First Temple; The Second was thought to have been devoid of the Divine Presence; cf. Yoma 4b). According to one view, the destruction of the Temple caused the departure of the Shekhinah to heaven (Shab. 33a; Ex. R. 2:2). In opposition to this, however, we find it said that even while Israel are unclean the Shekhinah is with them (Yoma 56b); when they are exiled it goes into exile with them, and when they come to be redeemed the Shekhinah will be redeemed too (Meg. 29a).

The Shekhinah does not only rest on the people of Israel as a whole, but a wide variety of subgroups are said to influence the Shekhinah for good or for ill. On the one hand where ten are gathered for prayer, or even one sits and learns Torah, there the Shekhinah is (Ber. 6a). It watches over the sick (Shab. 12b); rests between man and wife if they are worthy (Sot. 17a); he who gives charity is fit to receive it (BB 10a); as is he who is particular in fulfilling the mitzvah of zizit (Men. 43b). On the other hand, he who walks with an upright posture (i.e., is proud), as it were, pushes against the feet of the Shekhinah (Ber. 43b); so does he who sins in secret (Hag. 16a); it does not rest on those who are sad, lazy, playful, light-headed, or engage in idle conversation, but only on those who perform a mitzvah in joy (Shab. 30b); scoffers, flatterers, liars, and slanderers will never be recipients of the Shekhinah (Sot. 42a). A righteous judge causes the Shekhinah to rest on Israel, but an unrighteous one drives it away (Sanh. 7a). The term also figures in such expressions as “under the wings [i.e., patronage] of the Shekhinah.” Proselytes are said to be taken in “under the wings of the Shekhinah” (Shab. 31a; see also Tosef., Hor. 27), though Zuckermandel has “under the wings of heaven.” Moses was taken to his burial place wrapped in the “wings of the Shekhinah” (Sot. 13b).

The Shekhinah is commonly associated with the charismatic personality and is thought to rest on specific outstanding individuals. “The Shekhinah only rests on a wise, rich, and valiant man who is tall of stature” (Shab. 92a; cf. Ned. 38a). Several of the talmudic rabbis were considered to deserve that the Divine Presence rest on them, except that their generation was unworthy (Sot. 48b; Suk. 28a; see also MK 25a). This charismatic association seems to be connected with the idea that certain individuals possess Ruah ha-Kodesh, the Holy Spirit (for a discussion of the interrelationship of Shekhinah and the Holy Spirit, see Ruah ha-Kodesh). The use of the term Shekhinah would thus seem to range from the numinous revelation of God, as in the theophany at Sinai or the awe-inspiring presence speaking to Moses from the Tabernacle, to the more mundane idea that a religious act, or mitzvah, draws man nearer to God. Sometimes the term is simply an alternative for “God,” while at others it has overtones of something separate from the Godhead; it may be used in a personalized or depersonalized way. From the point of view of Jewish theology it would be a mistake to overemphasize any given use to the exclusion of the others, and it is important to view it in the perspective of the Jewish monotheistic background as a whole. It is also possible to take a somewhat demythologized view of the rabbinic conception of the Shekhinah, for such a view is even expressed in the talmudic literature itself, albeit as the opinion of a single individual: “R: Yose said, ‘The Shekhinah never came down to the world below, nor did Moses… ascend on high’” (Suk. 5a).

[Alan Unterman]
In Jewish Philosophy

Unlike the rabbinic sages, who generally identified Shekhinah with the Presence of God, or even with God Himself, the medieval Jewish philosophers were concerned with avoiding any possible anthropomorphic interpretations of this concept, and therefore went to great lengths to point out that Shekhinah refers not to God Himself, nor to any part of His Essence, but rather to an independent entity, created by God. According to Saadiah Gaon, the Shekhinah is identical with kevod ha-Shem ("the glory of God"), which served as an intermediary between God and man during the prophetic experience. He suggests that the "glory of God" is the biblical term, and Shekhinah the talmudic term for the created splendor of light which acts as an intermediary between God and man, and which sometimes takes on human form. Thus, when Moses asked to see the glory of God, he was shown the Shekhinah, and when the prophets in their visions saw God in human likeness, what they actually saw was not God Himself but the Shekhinah (see Saadiah's interpretation of Ezek. 1:26, 1 Kings 22:19, and Dan. 7:9, in Book of Beliefs and Opinions, 2:20). By emphasizing that the Shekhinah is a created being which is separate from God, Saadiah avoids any possible compromising of the divine unity and any hint of anthropomorphism.

Judah Halevi follows Saadiah in interpreting the Shekhinah as an intermediary between God and man, maintaining that it is the Shekhinah, and not God Himself, which appears to prophets in their visions. Unlike Saadiah, however, Judah Halevi does not speak of the Shekhinah as being a created light. It seems that he identifies the Shekhinah with the Divine Influence (ha-Inyan ha-Elohi), about whose meaning there is much disagreement among scholars. According to Judah Halevi, the Shekhinah dwelt first in the Tabernacle, then in the Temple. With the destruction of the Temple and the cessation of prophecy, the Shekhinah ceased to appear, but will return with the coming of the Messiah (Kuzari, 2:20, 23:323). Judah Halevi distinguishes between the visible Shekhinah which dwelt in the Temple and was seen by the prophets in their visions and which disappeared with the destruction of the Temple, and the invisible spiritual Shekhinah which has not disappeared but is "with every born Israelite of virtuous life, pure heart, and upright mind" (ibid., 5:23).

Maimonides accepts Saadiah's view that the Shekhinah is a created light, identified with glory. He too associates the Shekhinah with prophecy, explaining that it is the Shekhinah which appears to the prophet in his vision (Guide of the Perplexed, 1:21). Explaining prophecy as an overflow from God through the intermediation of the active intellect (ibid., 2:36), Maimonides writes that man apprehends God by means of that light which He causes to overflow toward him, as it is written, "in Thy light do we see light." Some interpreters of Maimonides believe that the Shekhinah corresponds to the active intellect itself, which is the lowest of the ten intellects (see Intellect), and which communes with the prophets (Yad, Yesodei ha-Torah, 7:1). However, there are also passages in which Maimonides identifies the Shekhinah with God Himself rather than with some other being. For example, in his exegesis of Exodus 24:10 (Guide, 1:28), Maimonides interprets the "feet" of God as the throne of God on which sat the Shekhinah (i.e., God). In the 19th century Nachman Krochmal interpreted Shekhinah as pure spiritual power. Krochmal's philosophy of history, which is based on Hegel, asserts that every nation has a spiritual power, and that the Jewish people has the spiritual power in its purest form, which is directly rooted in the Absolute Spirit. This spiritual power of the Jews is called Shekhinah (Moreh Nevukhei ha-Zeman, ch. 7), and this notion explains the rabbinic sayings that wherever the Jews wandered the Shekhinah wandered. In the 20th century Hermann Cohen, following Maimonides in holding that Shekhinah must be understood metaphorically, defines it as "absolute rest which is the eternal ground for motion" (Religion der Vernunft (1929), 53).

The concept of Shekhinah played a very important role in kabbalistic and hasidic literature, while its role in Jewish philosophy is relatively minor. However, two modern philosophers, Martin Buber and Franz Rosenzweig, who were influenced to some extent by the kabbalistic tenor, make use of this concept and do not oppose anthropomorphism as did the earlier Jewish philosophers. Buber speaks of God as both immanent and transcendent, employing the kabbalistic terminology of "shells" and "sparks" of God (On Judaism (1967), 6, 27). Shekhinah is a theophany of the Exile that symbolizes the fact that the Jewish people was never abandoned despite the shame and degradation it suffered. Rosenzweig is much more explicit. He believes that the Shekhinah is the bridge between the "God of our fathers" and the "remnant of Israel" (Der Stern der Erlösung (1954), 192–4). The descent of the Shekhinah upon man and its dwelling among man is conceived by Rosenzweig as a separation which occurs in God Himself. God descends and suffers with His people, wandering with them in exile. At the end, it is God who suffers the most, and the remnant of Israel who bears His sorrow. Most important is Rosenzweig's notion that the purpose of the mitzvot is to unify God and His Shekhinah.

In Kabbalah

The basic elements of the kabbalistic concept of the Shekhinah are found in the earliest kabbalistic work, Sefer ha-Bahir, where the Shekhinah, or Malkhut, is described as the daughter, the princess, the feminine principle in the world of the divine Sefirot. These motifs were developed in kabbalistic circles in the late 12th and 13th centuries and were mingled with philosophical ideas in the works of the Gerona circle and in the writings of Abraham Abulafia; many nuances were added in the works of Isaac the Blind, the Iyyun circle (see Kabbalah), and in the writings of Jacob and Isaac, the sons of Jacob ha-Kohen. Most of these motifs were drawn together by the author of the Zohar and his circle, especially Joseph Gikatilla. From this period, the end of the 13th century, the basic concept of the Shekhinah remained constant up to the time of Isaac Luria and his disciples in Safed and persisted into Hasidism.
although certain modifications can be found in the works of every single kabbalist. This article deals with the basic elements of the concept common to all.

The Shekhinah, or Malkhut, is the tenth and last in the hierarchy of the Sefirot. In the divine world it represents the feminine principle, while Tiferet (the sixth Sefirot) and Yesod (the ninth) represent the masculine principle. All the elements and characteristics of the other Sefirot are represented within the Shekhinah. Like the moon, she has no light of her own, but receives the divine light from the other Sefirot. The main goal of the realm of the Sefirot (and of religious life as a whole) is to restore the true unity of God, the union of the masculine principle (mainly Tiferet) and the Shekhinah, which was originally constant and undisturbed but was broken by the sins of Israel, by the machinations of the evil power (the sitra avara), and by the exile. The restoration of the original harmony can be effected by the religious acts of the people of Israel through adhering to the Torah, keeping the commandments, and prayer.

The symbolism describing the Shekhinah is the most developed in kabbalistic literature. Most of the many and varied symbols refer to aspects of the Shekhinah's relationship with the other Sefirot above her – such as her acceptance of the divine light from them, her relationship to them as a lower aspect of themselves which is nearer to the created world, and her coming close to the masculine element or moving further away from it. In another group of symbols the Shekhinah is the battleground between the divine powers of good and evil; because of her femininity and closeness to the created world she is the first and the main target of the satanic power. If the evil powers could fill the Shekhinah with their own evil essence, unity of the divine powers would be broken, constituting an enormous victory for the powers of evil. It is therefore the duty of man and the Sefirot to protect the Shekhinah from the designs of the sitra avara.

The Shekhinah is the divine power closest to the created world, of which it is the source and the sustaining power; the divine light which maintains the created world passes through the Shekhinah. The angels and the world of the Merkabah are all her servants. In kabbalistic theology the Shekhinah is the divine principle of the people of Israel. Everything that happens to Israel in the earthly world is therefore reflected upon the Shekhinah who waxes and wanes with every good deed and every sin of each individual Jew and the people as a whole; on the other hand, everything that happens to the Shekhinah, her relationship with Tiferet and other Sefirot and her battle against the evil powers, is reflected in the status of Israel in the earthly world. Study of the Torah and prayer bring a Jew near the Shekhinah, for she is symbolized as the Oral Law. The Shekhinah is the divine power usually revealed to the prophets, though sometimes higher divine powers may take part in such a revelation. She is also the first goal of the mystic who tries to achieve devekut, communion with the divine powers; though a mystic may reach higher divine powers through devekut, the Shekhinah is the first and the closest for mystical contact. The idea of the exile of the Shekhinah, resulting from the initial cosmic disaster and from Adam's fall, became of great importance in Lurianic Kabbalah. To fulfill every commandment for the purpose of delivering the Shekhinah from her lowly state and reuniting her with the Holy One, blessed be He, became the supreme goal. The notion of redeeming the Shekhinah from exile acquired new eschatological content.

[Joseph Dan]

Shekhinah as Female Symbol

The myth of the feminine Shekhinah evolved out of biblical wisdom literature, rabbinic texts, and early mystical ideas. Proverbs 8 portrays wisdom as God's daughter who serves Him as “a confidante and source of delight in every way” (8:30). Building on the second century B.C.E. Wisdom of *Ben Sira, the rabbis replaced the female hypostatic personified wisdom of Proverbs with the Torah, making the Pentateuch God's firstborn and the archetype for creation (Gen. R. 1:1). This is not to say that feminine imagery is absent in rabbinic literature. Drawing from biblical motifs, the rabbis metaphorically represent Zion, the community of Israel (Keneset Yisra'el), Torah, and the Sabbath in female terms as God's spouse, daughter, sister, or mother. The Shekhinah, however, although grammatically feminine, remains male or at the very least androgynous in early rabbinic literature.

There are allusions to sexual activity in the divine realm in early Jewish mystical ideas recorded in Heikhalot writings (Synopse 183ff). This literature was mainly preserved by the German Pietists of the 12th and 13th centuries, whose theology was strongly influenced by it. The sexual imagery nascent in Heikhalot literature was given further expression in a work entitled “Secret of the Nut,” in which a student of *Eleazar of Worms describes a bi-sexual Godhead.

The mythic possibilities implicit in the female imagery of the rabbis and the sexual allusions of early Jewish mystics are actualized in the kabbalistic myth of the Shekhinah, the female aspect of the male God. The Shekhinah is the final Sefirot, mediating between heaven and earth and serving as the passive eye or door through which a mystic can achieve divine vision. The popularity of the Shekhinah in Kabbalah corresponds to and may have been influenced by the popularity of the cult of the Virgin Mary among contemporaneous Christians. The need for nurturing female images may be a response to similar theological needs and cultural stimuli.

Medieval kabbalists constructed the Shekhinah with female physiology and gender specific roles to express both divine processes and human mystical experiences. As mother, the Shekhinah may become pregnant and lactate, showering the earth with divine light. As menstruant, she comes under the sway of excessive judgment or the demonic powers (sitra avara) and metes out judgment to transgressors. As bride and wife, she engages in sexual relations with the male Sefirot, Tiferet and Yesod, and fosters unity in the cosmos. Because medieval kabbalists believed all liturgical and ritual acts affect both the terrestrial and heavenly realms, halakhically sanctioned
physical intercourse between a male mystic and his wife on earth could foster both divine and mystical union, for the act enables both Tiferet and the male mystic to unite with the Shekhinah. Wives thus became a conduit through which their husbands could attain divine union. Drawing from talmudic tradition, medieval kabbalists deemed Friday night to be the most auspicious time to engage in sexual intercourse.

Sixteenth-century kabbalists in Safed made this myth the foundation of the newly instituted Kabbalat Shabbat ceremony and Solomon *Alkabez’s Lekha Dodi, remains the liturgical manifestation of this kabbalistic ritual. Isaac *Luria further enlarged upon the importance of sexual union with the Shekhinah (also known in Lurianic Kabbalah as the nukba de-zeit), making the act not only a means to attain devekut (divine union), or a way to effect unity in the heaven, but also defining it as a way to repair the world (tikkun olam). Moreover, Lurianic kabbalists, who believed that intention was as important as the physical performance of the commandments, mediated upon uniting Tiferet with his Shekhinah before and during the performance of commandments in their kavanot (lit. intentions).

The symbol of the Shekhinah has long been seen as one of the few examples of gender equality in Judaism. However, the inferior position of women in medieval society informed many kabbalistic conceptions of the Shekhinah. The Zohar describes the Shekhinah as a passive vessel lacking any distinct personality (see, inter alia, Zohar 1:181a). Consequently, the Shekhinah is like a revolving sword with the potential for both good and evil (Zohar 153b, 221b, 242a; 2:27b; 3:19b). When she is described in positive terms, she is often gendered male, as Malkhut or David; when she is under the sway of excessive judgment or the demonic “other side” she remains female.

Recently, some Jewish feminists have reclaimed the symbol of the Shekhinah as a means of supplementing what they perceive to be the patriarchal bias of Jewish theology. Judith Plaskow urges that the “long suppressed femaleness of God, acknowledged in the mystical tradition, but even here shaped and articulated by men, must be re-explored and reintegrated into Israel.” Toward that goal, some feminist liturgists have re-interpreted mystical themes and emphasized the symbol of the feminine Shekhinah in innovative prayer rituals (Gottlieb).

SHEKHTMAN, ELYE (Eli Shechtmann; 1908–1996), Yiddish writer. Born in Vaskovichi (Polonia), he had a traditional education, including a year in the Zhitomir yeshivah (1921), studied literature at the Jewish Pedagogical Institute in Odessa (1929–33), and then lived in Kharkov (1933–36) and Kiev (1936–41) until his service as an officer in the Red Army in World War II, during which he was wounded in combat. He was subsequently arrested, imprisoned, and released after Stalin’s death. Thereafter he lived in Kiev until his immigration to Israel in 1972. His first stories appeared in 1928. His major work was his epic novel depicting Jewish life in Russia from the early 20th century into the 1970s, Erev (“On the Eve”), published first in a censored version (Moscow, 1965), then later in a complete version (Tel Aviv, vols. 1–4, 1974; vols. 5–6, 1979; vol. 7, 1983). Among his other books are Oyfn Sheydv (At the Crossroads, 1930; stories about post-revolutionary life), Farb-kerte Mezhes (Plowed-under Borderlands, 1932–36; novel), Polyseyer Velder (“Polonese Forests,” 1940; stories), Bayym Shkisse-Aker (“At the Sunset-Field,” 1974); Ringen ofn der Neshome (“Links on the Soul,” 4 vols. 1981–88), and Tristia (“Sadness,” 1996). He was the recipient of the Itsik Manger Prize, the Chaim Zhitkowsky Prize, the Fernando Jeno Award (Mexico), and the Congress for Jewish Culture Award. His works have been translated into French, English, and Hebrew.

SHELA (first half of the third century c.e.), Babylonian amorah and resh siidra (“head of the academy”) in Nehardea (Iggeret R. Sherira Gaon, ed. by B.M. Lewin (1921), 78). For a while Shela was the most celebrated religious authority in Babylon, but gradually his importance was overshadowed by *Samuel and later by *Rav, when the latter returned to Baby- lon. This transition is indicated in the sources. Thus it is related that Rav once came to Shela’s academy incognito and was appointed the *amora (the expounder to the students) of Shela. While Shela was expounding, Rav commented that in the presence of R. *Hiyya he had explained a certain detail differently. Shela immediately realized that his amorah was the distinguished Rav and refused to continue to employ him in a subservient capacity (Yoma 20b; TJ, Shek. 5:2, 48d). Rav’s
position became of such authority that after listening to Shela with which he disagreed, he waited until Shela left and then appointed an amorah to explain the topic as he understood it. In another case Shela permitted a woman to remarry under questionable circumstances, with the result that Rav considered excommunicating him. Samuel, however, persuaded Rav to consult first with Shela, who later admitted his mistake (Yev. 121a). Shela and Rav disagreed on other occasions (Sanh. 44a).

This change in Shela’s status is also illustrated by the following episode. Shela and his disciples were always the first to pay honor to the exilarch, but Shela later granted this privilege to Samuel. When Rav arrived in Babylon, Samuel transferred this honor to him. When Shela’s disciples objected to their master thus being the third to be received, Samuel changed places with Shela (TJ, Taan. 42, 68a). R. Hisda referred to Shela as a great authority (Ket. 75a). Shela’s learning was studied by the rabbis of Caesarea (TJ, Mak. 27, 31d). It seems that the school of Shela continued after his death, since his school and that of Rav are mentioned as disagreeing on a number of halakhic issues (Git. 52b; Kid. 43a; Sot. 42b; RH 23a).

SHELAH, SAHARON (1945– ), Israeli mathematician. Born in Jerusalem, Shelah received his Ph.D. in mathematics from the Hebrew University of Jerusalem (1969). He was simultaneously professor of mathematics at the Hebrew University and Rutgers University, New Jersey. Shelah’s main research interests are in the sphere of mathematical logic, and especially model theory and set theory. His classification theory and the idea of proper forcing have applications of fundamental importance to cardinal arithmetic. He also solved many famous and previously intractable problems in algebra and topology. He was a prolific writer of original papers and influential books. His 1994 book, Cardinal Numbers, won the Bolyai Prize for the year 2000 of the Hungarian Academy of Sciences for the best mathematical monograph on original research, nominally awarded every five years but the first in modern times. His honors include the Wolf Prize (2001) for his work on mathematical logic and set theory.

SHELEM, MATTITYAHU (1904–1975), Israeli composer. Born in Zamoscz, Poland, Shelem went to Palestine in 1922, worked in agriculture and road building and in 1927 joined kibbutz Bet Alfa. For a time he was a shepherd, and the shepherds’ and shearing festival songs which he composed at that time were his first popular works. In 1940 Shelem joined kibbutz *Ramat Yohanan. From 1944 onward Shelem was chiefly active as a teacher and *Youth Aliyah instructor in his kibbutz. In 1958 he founded an archive there (Makhon le-Havai u-le-Mo’ed) to collect the documentation on the development of the forms of festival and holiday celebration in the kibbutzim (see *Kibbutz Festivals). Shelem’s songs, to which he always wrote the words, were created for the immediate needs of kibbutz life – from kindergarten to communal celebrations. The following list contains Shelem’s best-known songs in approximate chronological order.

Shelem’s songs, to which he always wrote the words, were created for the immediate needs of kibbutz life – from kindergarten to communal celebrations. The following list contains Shelem’s best-known songs in approximate chronological order.

SHELED, SIDNEY (1917– ), U.S. author. Born in Chicago, Sheldon went to Hollywood at 17 to be a screenwriter. He got a job as a script reader for Universal Studios at $17 a week. In his spare time, Sheldon and a collaborator worked on their own scripts, eventually writing a number of “B” pictures for Republic Studios. He joined the Air Force during World War II and earned pilot’s wings. Upon his discharge, he began to write for Broadway. At age 25 he had three musical hits simultaneously on Broadway: *Merry Widow, Jackpot, and *Dream With Music. Next came *Alice in Arms, starring Kirk Douglas in his first Broadway appearance, and, later, *Redhead with Gwen Verdon, for which Sheldon won a Tony Award. Returning to Hollywood, Sheldon won an Academy Award for *The Bachelor and the *Bobby Soxer, starring Cary Grant, and wrote a number of memorable and commercially successful films, including *Easter Parade with Judy Garland and Fred Astaire, *Annie Get Your Gun, *Jumbo, and *Anything Goes, with Bing Crosby. After leaving Hollywood as a writer/director/producer, he became involved in television when ABC asked him to create a show for a young actress named Patty Duke. Over two years, Sheldon wrote 78 scripts for *The Patty Duke Show. He then created, wrote, and produced the hit series *I Dream of Joannie, which brought Sheldon an Emmy nomination. The show ran for five years. He also created the popular detective series *Hart to Hart. He wrote his first novel, *The Naked Face (1970), and it earned the Edgar Allan Poe Award from the Mystery Writers of America for best first novel. Three years later, he produced *The Other Side of Midnight, which firmly established him as a bestselling author. Each of his successive novels, *A Stranger in the Mirror (1976), *Bloodline (1977), and *Rage of Angels (1980) through *The Sky Is Falling (2001) and *Are You Afraid of the Dark? (2004) dominated the bestseller lists. All told, Sheldon wrote over 200 television scripts, 25 major motion pictures, six Broadway plays, 18 novels, which sold more than 500 million copies, and a memoir, *The Other Side of Me.

[Stewart Kampel (2nd ed.)]
Shelem's *Omer, celebrated in Ramat Yohanan from 1945 onward and adopted in many other kibbutzim, is one of the two central "new ceremonies" developed by the secular kibbutz movement (the other being Yehudah "Sharet's seder"). It is a reconstruction of the ancient ceremony, based mainly on the Mishnah, and is made up of recitations, solo and small choir songs, songs for the participating public, dances (created by Lea Bergstein), and the symbolic actions of harvesting and presentation of the first sheaves. Many of the songs have entered the Israel folk repertoire, such as "Bi-Yhudah u-va-Galil," "Shibbolet ba-Sadeh," and "Panah ha-Geshem."

[Batcha Bayer]

**SHELI‘AH ZIBBUR** (Heb. שליח זבبرج; "envoy or messenger of the community"), designation of a person who in public synagogue worship officiates as reader and cantor (see also *Haazzan*). The main function of the sheliah zibbur is to lead the congregants in communal worship by repeating aloud the benedictions of certain parts of the prayers or the introductions to them, certain doxologies (e.g., *Barekhnu*), and the *Amidah;* by reciting the intermediary *Kaddish* prayers; and by leading the congregants in the recital of responsive readings and hymns. The Shulhan Arukh (oh 534–9) lists the qualifications required of a sheliah zibbur: (1) humility, (2) acceptability to the congregation, (3) knowledge of the rules of prayer and the proper pronunciation of the Hebrew text, (4) an agreeable voice, (5) proper dress, (6) a beard. The requirement of a beard is, however, waived except for the High Holy Days (Magen Avraham to Sh. Ar., oh 536). Except for the recital of hymns and psalms (e.g., *Pesukei de-Zimra*) only a male after *bar mitzvah age may officiate.

**BIBLIOGRAPHY:** Elbogen, Gottesdienst, 488–502.

**SHELOMI** (Heb. של bölümü), town in northern Israel. Shelomi is located on the slopes of Western Galilee, 8 mi. (12 km.) east of Nahariyyah. The town’s area is 2.3 sq. mi. (6 sq. km.). It received municipal council status in 1960. In 2002 the population numbered 4,930, among them 22% new immigrants. The town’s industry was based on metal and medical equipment plants. The name derives from the biblical figure Achihud ben Shelomi, who lived in the land of Asher.

[Shaked Gilboa (2nd ed.)]

**SHELOSHET YEMEI HAGBALAH** (Heb. שלושת ימי המבלחר, "the three days of limitation"), the name given to the three days immediately preceding the festival of Shavuot. The scriptural sources for distinguishing these days are found in Exodus 19:12, where God commands Moses, "And thou shalt set bounds unto the people," and Exodus 19:15, where Moses orders the children of Israel, "Be ready against the third day." (See also the discussion in Shabbat 87a as to how many days of “limitation” were ordered by God and how many by Moses.) The original limitations were against touching Mount Sinai (Ex. 19:12) and against having sexual intercourse (ibid. 19:15). The people were also commanded to sanctify themselves during these days (ibid. 19:10 and 14). According to the halakhah, marriage celebrations and haircuts, otherwise prohibited during most of the period between Passover and Shavuot, are permitted during these three days (Sh. Ar., oh 493; 3 and Mishnah Berurah, ad loc.).

**SHELOSHIM** (Heb. שלושים; "thirty"), designation of 30 days of mourning after the death of close relatives (parents, child, brother, sister, husband, wife) counted from the time of the burial. According to halakhah, the bereaved has to observe the following “mourning rites during this period: (1) not to wear new clothes (or even festive clothes on Sabbaths and festivals); (2) not to shave or have a haircut; (3) not to participate in festivities, including weddings, circumcision, and pidyon ha-ben (see Redemption of *Firstborn*) meals except if it is the birth of his own child; (4) not to marry; (5) to abstain from going to entertainments. It is also customary to change one’s permanent seat in the synagogue during the sheloshim period. If the 30th day falls on a Sabbath, the mourning period terminates before the entrance of the Sabbath; shaving and haircutting, however, may not be performed until Sunday.

The three *pilgrim festivals and Rosh Ha-Shanah cause the sheloshim period to be shortened in the following way: If the mourner observes the mourning rites of *shivah for at least one hour prior to the commencement of Passover or Shavuot, the shivah is waived and the observance of sheloshim is reduced to 15 days after the festival. In the case of *Sukkot*, the mourner has to observe the sheloshim for only eight days after the festival. If the mourner observes at least one hour of shivah before the commencement of Rosh Ha-Shanah, the shivah is waived and the Day of Atonement annuls the sheloshim; if he observes one hour’s mourning before the Day of Atonement, shivah is waived and the subsequent Sukkot festival annuls the sheloshim. The minor festivals of Hanukkah and Purim do not shorten the sheloshim. Should a person learn of the passing of one of his close relatives within 30 days of his death (*shemuaḥ kerovah*), he has to observe the complete mourning rites of shivah and sheloshim. If, however, the news reaches him more than 30 days after the death (*shemuaḥ rehokah*), the mourning rites of shivah and sheloshim are observed for only one hour.

**SHELUHEI EREZ ISRAEL** (Heb. "emissaries of Erez Israel"), the name for messengers from Erez Israel sent abroad as emissaries to raise funds. During the patriarchate after the destruction of the Second Temple, emissaries were sent in groups (ת),
Hor. 37, Pes. 4:8); sometimes a father and a son were sent together. The senders of these emissaries were usually the heads of the Ereẓ Israel religious administration, or its communities. During Roman rule the sender was the patriarch. With the cessation of the patriarchate in 429 C.E. the sending of emissaries ceased, but was renewed after the Arab conquest of Ereẓ Israel in the 630s, when the emissaries were sent by the geonim and the heads of the academies. In general, emissaries did not act on behalf of two towns at the same time, an exception being Shabbetai Baer, who was sent (1674) from *Jerusalem, *Hebron, and *Safed. Usually a single emissary was dispatched on a mission, but at times two were sent, as in the case of Joseph b. Moses of Trani and Abraham Shalom 111 who went to Istanbul in 1599, while occasionally two emissaries, an Ashkenazi and a Sephardi, were sent. The *Azulai, *Israel, Navon, and Meyuhas families perennially provided emissaries.

There were several kinds of deeds and letters that the emissary needed on his journey:

1. Iggeret kelali ("general letter"), the most important of the emissary’s letters, was a lengthy and detailed document written on parchment, mainly in ornate style. It contained a request for financial support with a detailed description of the town’s troubles as well as its virtues. The letter was signed by the rabbi, the dayyanim, and the other important members of the community. The letter was always written in Hebrew, but from the 18th century some emissaries translated it, or its most important points, into the language of the locality to which they were sent, sometimes even printing it.

2. Iggeret li-nedivim ("letter to philanthropists"), directed to individual philanthropists, being merely an abridgment of the general letter.

3. Shetar ko'ah harsha’ah mishpati ("power of attorney"), a widespread custom was that the emissary received power of attorney from his senders, giving legal force to his demands as an accredited agent to collect the contributions.

4. Shetar tenai eri ha-shehlihot ("deed of terms of the mission"), deed to confirm the conditions stipulated between the emissary and his principals concerning the former’s salary and expenses to be deducted from the funds raised. On his return the emissary was required to present an account of the income and expenditures of his mission. From the 17th century it was customary to give the emissary one-third of his income, and in exceptional cases only one-quarter.

5. Shetar pitturin ("bill of nonliability"), deed freeing the emissary from every liability imposed upon him by his senders, with the aim of giving confidence to future emissaries.

6. Pinkas ha-shehlihot ("account book of the mission"), account book of the mission which every emissary took with him. The heads of the donor communities, as well as individuals, noted in the pinkas the amounts they gave. On the one hand the account book served as the emissary’s evidence of the contributions he collected in each place, and on the other as propaganda in the places to which he was going. In most cases the communities’ leaders briefly repeated the contents of the emissary’s letter of appointment in their notes, sometimes stressing that the amount given was the result of a special effort because of their love for Ereẓ Israel. The emissary entered his expenses in the pinkas, and on returning home he delivered it to the community which sent him, doing this to attest the veracity of his accounts. The pinkas also served as a guide for future emissaries, to help them in arranging matters at the time of their mission. Ereẓ Israel emissaries frequently reached remote communities, despite the numerous dangers surrounding them. Many of the emissaries left written impressions of their missions, only some of which are extant. The pinkasim and descriptions of the missions, providing information on the number, occupation, habits, etc. of the members of the communities, are of considerable historical importance, particularly in the case of remote communities where no other records are extant. The most important of such works include H.J.D. *Azulai’s Ma’gal Tov ha-Shalem (1934), the diary of his travels during two missions (1753 and 1773) for Hebron, and Jacob *Saphir’s Even Sappir (1866), on his mission from Jerusalem to Egypt, Yemen, and the Far East in the late 1850s.

From the *Mamluk period until the Turkish conquest in 1517, a few emissaries were sent on behalf of the yeshivot of Ereẓ Israel. From the second half of the 16th century missions were executed in the name of the town or the community, and by the first half of the 17th century a gradual consolidation of a permanent system of missions from the three holy cities, Jerusalem, Hebron, and Safed (referred to as YaHaZ), began to take place. Each of the three cities regularly sent its own emissary once every few years to each of the mission regions. The emissary was called shelihā kolel, or shelihā kolelot, the latter designation serving as an indication that he was sent on behalf of the entire population of the town. From 1740 to 1777, authority was given to one Jerusalem institution, the kabbalist yeshivat Bet El, also called the yeshivah or community of the Hasidim (the pious), to send emissaries regularly. At times, temporary permission was granted an institution or yeshivah whose economic plight was serious to send its own special emissary. One Jerusalem rabbi, Yom Tov *Algazi, authorized Jerusalem emissaries to collect special contributions in the course of their mission for a personal need, namely, to redeem a child from captivity.

Missions of a temporary nature were also common in localities other than the four towns. From the beginning of the 19th century the communities began to act separately, each sending its own emissary to maintain its institutions. This phenomenon eventually brought an end to the missions (see below).
The Karaite community of Jerusalem also sent emissaries to the members of its community in the Diaspora. The first such emissary (from the middle of the 17th century) known by name was David b. Joshua ha-Hazzan.

From time to time private emissaries, due to personal poverty and severe economic plight, left Ereẓ Israel to collect contributions. They were provided with letters of recommendation signed by the heads of the yishuv, being similar in form, and at times also in content, to those borne by the emissaries, but in them the emissary’s troubles were stressed. From the 18th century such individuals who obtained these letters were called shelihim le-azman ("emissaries on their own behalf"). At first the emissary was sent to a particular country or a group of adjacent countries, but the region of the mission was not restricted; sometimes the emissary was permitted during the course of his journey to determine the extent of the region of his mission, being guided by his desire and the prevailing conditions.

Gradually more precise regions of activity were determined. In the 17th century there were already four mission regions: Turkey, including Syria, the Balkans, and the Mediterranean islands; Frankia, including Italy, France, Germany, and later also Poland and Lithuania; Maghreb, North Africa; and Arbiztan, including Persia, Iraq, Kurdistan, Afghanistan, and Bukhara. Emissaries were also sent to Egypt, the Yemen, and India. The duration of the emissary’s stay in the locality of his mission was not fixed. In general he used his own discretion, and its length depended upon the needs, possibilities, and prospects of collecting the maximum amount of money. Sometimes its duration was determined by his health, or whether or not he was able to adapt himself to harsh and unpleasant conditions in the country of his mission. In general the mission did not last longer than three or four years, but there were occasional emissaries who stayed ten years and more. Sometimes an emissary was sent two or three times to the same country. During their travels emissaries were exposed to all kinds of hardships that at times endangered their lives. Some died during their mission or in consequence of it. Some were robbed by highwaymen, taken captive, or imprisoned on the charge that they were spies. Of the 850 known emissaries, 85 died during their journey or in the locality of their mission. The ability and greatness of the emissary did not necessarily stem from his own personality but chiefly from his principals, i.e., as a consequence of the authority in Ereẓ Israel in whose name he spoke. The heads of a number of communities were accustomed to receive the emissary with royal splendor, song, and praise. In Oriental countries he stayed in most cases at the home of one of the wealthy members of the community, while in European lands the community hired accommodation for him. Sometimes the heads of the community compiled poems in his honor, as Moses Zacuto was accustomed to do.

Emissaries who died during their mission received the honor that was their due; they were eulogized fittingly by the rabbis of the communities and kinot were recited for them. In Oriental countries it was customary to exaggerate in praise of the emissaries and ascribe miraculous deeds to them. There were messengers who pretended to be emissaries of Ereẓ Israel, particularly in Ashkenazi countries where they did not know the customs of Ereẓ Israel and did not recognize the florid signatures of its scholars. When such deceit was revealed, it gave rise to doubt regarding the motives of many emissaries. An additional occurrence that caused a decline in the honor accorded the emissaries, though indeed unusual, was the rivalry between the emissaries of different towns when they met in one place. At times there were serious frictions between them. Some emissaries, who were not treated with honor because of this, demanded that they be treated properly not for their own sake but for the honor of Ereẓ Israel. As a result there were instances of emissaries who scolded communities where they were not treated in a dignified manner. If they found no other way to gain their ends, they made use of the power of herem, which was proclaimed in Jerusalem in front of the Western Wall. Megillat Ahimaaz (ed. by B. Klar (1944), 18–19) mentions a story from the tenth century about a Jerusalem emissary in Venosa, in southern Italy, where one of the worthies of the community, the well-known paytan Silano, scoffed at the emissary. The latter related the incident to his principals in Jerusalem and they exchanged Silano.

Historical Survey

After the destruction of the Second Temple Vespasian substituted a fiscal tax for the half-shekel paid by the Jews for Temple sacrifices, which was called juscus Judaicus. In the anarchy of the third century this tax ceased to be collected and world Jewry was prepared to give toward the maintenance of the courts of the patriarch (naṣi) in Ereẓ Israel. The patriarchs also used these funds to maintain the academies and needy students. Like the half-shekels in former times, these contributions, later called aurum coronarium, were collected annually. To collect them the patriarchs on occasion dispatched distinguished emissaries. Equipped with a letter of authorization (igra di-ykār; Aramaic, “letter of honor”) from the patriarch Judah (c. 230–286), Hiyya b. Abba (late third century) visited the communities in Syria and Rome. He was the first recorded professional Jewish fund raiser; his letter read: “We are sending you our emissary, a great man who is to be treated as ourselves” (11, Hag. 1:8, 76d, Ned. 10:10, 42b). In describing the emissary Joseph of Tiberias, who converted to Christianity, a detailed description of the rank of the emissary and his functions is transmitted by Epiphanius (one of the Church Fathers in the fourth century): “This Joseph is regarded by them as one of the notables, for those who are called emissaries take their places after the patriarch. They sit together with the patriarch and can frequently discuss matters with him both by day and night in order to inquire and obtain counsel from him, and they put before him halakhic words from the Torah … [The patriarch] sent him with letters to Cilicia, and when he arrived there he collected from every town in Cilicia
all the tithes and contributions of the Jews of the province … Since he was an emissary, for this office is so called by them, he was very severe … he expelled and removed from their offices many of the members of the synagogue: laymen, priests, elders and readers…” In talmudic sources the collection of money by emissaries is called migbat hakhamim (“collection of scholars”; Tj, Hor. 3:7). From the second half of the fourth century the Roman emperors became envious of the money of the emissaries, which at times reached enormous sums, and when the office of patriarch was abolished in 429, the sending of emissaries was explicitly prohibited by the emperors Theodosius II and Valentinian. The sending of emissaries was later renewed, and in the eighth century two emissaries of Ereẓ Israel are known to have been active in Venosa in the south of Italy; it is not certain whether they were sent from Jerusalem or Tiberias. The tombstone on a Roman grave found in this city states that the dead maiden was the only child of a distinguished family and that she was eulogized by two emissaries and two rabbis. In the second half of the ninth century an emissary is known to have come to this city from Jerusalem and preached there every Sabbath (Megillat Ahimaaz, ed. by B. Klar (1944), 18–19).

In the second half of the tenth century a Jerusalem emissary named R. Jonah ha-Zaken b. R. Judah ha-Sefaradi is mentioned as having been sent to distant lands. He is the first emissary referred to by name after the close of the Talmud. His letter as emissary for 977 or 987 is also extant, and it contains all the components of the letters of the 16th-century emissaries and their successors. In the first half of the 11th century the two sons of the Gaon *Solomon b. Judah traveled as emissaries of the Ereẓ Israel yeshivah. During this period emissaries went with two aims: to maintain the central Torah foundation, i.e., the yeshivah and its scholars, and to ease the heavy burden of taxation imposed upon the Jewish community in the country. These funds were not however intended to maintain the poor, who were supported by the local charity of Ereẓ Israel. On the other hand, the emissaries of Tiberias were sent out to raise funds to maintain the poor flowing into the town, who called themselves meyasserim (“sufferers”), since a not inconsiderable number of the poor were among the sick who came to bathe in its healing waters.

The first known emissary from the Mamluk period was Jacob, who was sent by the yeshivah in Acre of *Jehiel b. Joseph of Paris in the second half of the 13th century. He took a list of the graves of the zaddikim (righteous men) in Ereẓ Israel with him as propaganda. There are no other emissaries from the 13th and 14th centuries who are known by name. *Isaac b. Sheshet Perfet (the Ribash) alludes to a Jerusalem emissary to Spain in about 1390 (Responsa, no. 508). In the 15th century the Jewish population in Jerusalem grew through immigration from Italy, Franco-Germany, and Oriental countries, many of whom were poor, and there was need to collect donations on their behalf outside Ereẓ Israel.

From the beginning of the Ottoman period (1517), the sending of emissaries continued to increase and take on a permanent character (more or less along the lines mentioned above). Among the Ereẓ Israel emissaries of this period were those who are generally considered its most distinguished scholars: Bezalel *Ashkenazi, Moses *Alshekh, Joseph of *Trani, Yom Tov *Zahalon, Nathan *Spira, *Hezekiah da Silva, and Hayyim Joseph David Azulai. At times immigrant scholars, whose influence on the communities of their native countries was great, were sent. A number of scholars are also known to have feared to immigrate to Ereẓ Israel lest they be required to return to their country of origin as emissaries, e.g., *Benjamin ha-Kohen of Reggio. Suitable persons from among the scholars could not always be found to carry out missions, and then men of inferior standard were used. Sometimes this resulted in the choice of unworthy persons who embezzled the funds collected. In 1629 opposition to the emissaries was heard for the first time from the heads of the Italian community of the island of Corfu. In their letter to the heads of the Jerusalem community they informed them that they no longer wanted emissaries to visit as the great expense involved in this swallowed up most of the money; they assured the leaders that they themselves would take care to transmit the contributions to their agent in Venice.

The leaders of the Jews of Amsterdam succeeded in 1824 in abolishing the sending of emissaries not only to their own town but also to all the communities of Western Europe. They further resolved that there should be a permanent center in Amsterdam for the Ereẓ Israel contributions from all the communities in the West. The institution that centralized the contributions was called Hefrat Terumat Kodesh (“Society for Holy Contributions”); however, this name was quickly forgotten and it became known as Pekidei u-Mashgihei Amarkelei Ereẓ Israel (“Officers, Overseers, and Treasurers of Ereẓ Israel”). Ṭevi Hirsch Lehren was the head of the central fund for many years. Following its establishment, a similar one was founded in New York in 1832, Hefrat Terumat ha-Kodesh. The leaders of the Ereẓ Israel yishiv accepted this arrangement with pleasure, even though their spiritual independence was restricted as many matters were dictated to them by the Amsterdam center. From time to time an emissary was sent in spite of their express commitment to refrain from doing so. Lehren firmly prevented these emissaries from operating in Western Europe. The Venetian community also followed the lead of Amsterdam, but its center did not succeed in collecting a reasonable sum of money, and in 1863 a pamphlet was printed in Trieste containing letters from the heads of the four holy towns with a request that the new regulation be reexamined and rescinded. The scholars gave assurances that the sending of emissaries would be conducted in an orderly and honorable manner. Thus, the organization of emissaries retained its special character only in Amsterdam.

Activities in the Diaspora

The function of the emissary in the later centuries may be defined as (1) activities for Ereẓ Israel, and (2) for the communities of the Diaspora.
ACTIVITIES FOR EREẒ ISRAEL. The Collection of the Contributions. The emissary strove to obtain the maximum contribution from the communal fund. He then turned to the philanthropic members of the community, although not every community permitted him to turn to its members. In some communities, however, the rabbis encouraged individuals to make a separate contribution as distinct from the other contributions of the community. In some communities in Italy and in Amsterdam the rabbis placed at the disposal of the emissary one or two patrons who guided and counseled him, and taught him how to carry out the collection, as well as to whom to turn with requests for separate contributions.

In many communities it was customary to collect donations on certain days of the year or on special celebrations. Sometimes this took place during the calling up to the reading of the *Torah. The funds were centralized in the hands of a treasurer called the gabbai Ereẓ Yisrael (“Ereẓ Israel collector”), or pekid Ereẓ Yisrael (“Ereẓ Israel officer”), from whom the emissary received the money. Every important community had some religious trust (hekdes) on behalf of Ereẓ Israel. In some communities it was customary to impose fines on transgressors for the benefit of Ereẓ Israel. In the important communities there were special funds called Kuppot (“Funds”) or Ma’ot (“Monies”) Ereẓ Yisrael.

Over the years special funds were added for each of the four holy towns, and even for their different institutions. The Karaites also had funds in their communities, which were called Im Eshkahék (“Lest I Forget Thee”) or Zikkaron Im Eshkahék (“A Reminder Lest I Forget Thee”). The division of the contributions in Ereẓ Israel was made in accordance with a definite system fixed by mutual agreement, as each of the four towns sent emissaries abroad. At the end of the 16th and the beginning of the 17th centuries they divided the funds into 24 parts: Jerusalem took seven, Safed ten, Hebron three, with the other four going to others. At that time Tiberias was in ruins. With the growth of the populations of Jerusalem and Hebron and the decline of Safed’s, the share of the former in the division was larger. Thus, in 1670 Jerusalem took 12 parts, Safed eight, and Hebron four. This division lasted until 1740, when Tiberias was resettled and its part in the division was fixed once more. At the beginning of the 19th century the funds were divided into 28 parts: Jerusalem took 11 parts, Safed seven, Hebron six, and Tiberias four. At times, when the situation in Ereẓ Israel was bad and they could not manage with the contributions, the heads of the Diaspora communities put a special tax on their members for the benefit of Ereẓ Israel – in Venice in 1601, in Istanbul in 1727. Similarly, indirect taxes were placed on certain goods in Istanbul in 1763. The half-shekels donated on Purim were also devoted to Ereẓ Israel. In 1740 when Tiberias was resettled and its part in the division was larger, the rabbis encouraged individuals to make a separate contribution as distinct from the other contributions of the community and in practice his work commenced with this. Sometimes he brought with him some soil from the holy land for the communal worthies, drawings of the holy places and the graves of the zadikim (pious men), or scrolls of Esther and amulets from Ereẓ Israel. An important medium utilized for publicity was the printing of various books about Ereẓ Israel, whether compiled by themselves or others, in order to awaken the readers’ love for Ereẓ Israel and interest in its affairs. The books included descriptions and illustrations of holy places and the graves of zadikim in Ereẓ Israel, descriptions of travels to Ereẓ Israel, geographical descriptions of the country, maps, etc. Sometimes the emissaries printed books describing the immediate events which had given rise to their mission, among them Horvat Yerushalayim (Venice, 1636), by anonymous authors, describing the difficult conditions of *Jerusalem in 1625; Zimrat ha-Årez (Mantua, 1745) by Jacob *Berab (111), describing the resettlement of Jews in Tiberias in 1740; and Korot ha-Åttim (Vilna, 1840), a detailed description of the riots against the Jews of Safed during the revolt of the fellahin against Ibrahim Pasha in 1834, and of the Safed earthquake in 1837. Similarly, many propaganda books were published describing the virtues and the praise of Ereẓ Israel. Additional propaganda media were poems and *piyyutim in praise of Ereẓ Israel.

Propaganda Methods. The emissaries used the general letter (see above) to help raise donations. There were also special letters to philanthropists and homilies in praise of Ereẓ Israel generally, as well as of the town assigned the emissary. The emissary was accustomed to preach on the first Sabbath of his arrival in the community and in practice his work commenced with this. Sometimes he brought with him some soil from the holy land for the communal worthies, drawings of the holy places and the graves of the zadikim (pious men), or scrolls of Esther and amulets from Ereẓ Israel. An important medium utilized for publicity was the printing of various books about Ereẓ Israel, whether compiled by themselves or others, in order to awaken the readers’ love for Ereẓ Israel and interest in its affairs. The books included descriptions and illustrations of holy places and the graves of zadikim in Ereẓ Israel, descriptions of travels to Ereẓ Israel, geographical descriptions of the country, maps, etc. Sometimes the emissaries printed books describing the immediate events which had given rise to their mission, among them Horvat Yerushalayim (Venice, 1636), by anonymous authors, describing the difficult conditions of *Jerusalem in 1625; Zimrat ha-Årez (Mantua, 1745) by Jacob *Berab (111), describing the resettlement of Jews in Tiberias in 1740; and Korot ha-Åttim (Vilna, 1840), a detailed description of the riots against the Jews of Safed during the revolt of the fellahin against Ibrahim Pasha in 1834, and of the Safed earthquake in 1837. Similarly, many propaganda books were published describing the virtues and the praise of Ereẓ Israel. Additional propaganda media were poems and *piyyutim in praise of Ereẓ Israel.
ACTIVITIES FOR THE COMMUNITIES OF THE DIASPORA.
The emissary’s mission to the Diaspora had another side. It also aimed at bringing the Jews of the Diaspora nearer to the affairs of Ereẓ Israel. This found expression in the spiritual influence of the emissaries, who regarded themselves as bound to teach and guide the exiles in spiritual matters. Sometimes the emissaries were asked by the exiles to make decisions in matters of minhagim and halakhah that they could not decide themselves. The emissaries had already begun to make improvements in the communities and to give halakhic decisions during the era of the patriarchate, when the messengers of the patriarch were accustomed to appoint the heads of communities and the supervisors of communal arrangements. This trend in affairs continued in effect until the missions came to an end. The emissary drew this power not simply from his personality but by virtue of the authority of Ereẓ Israel and of the great Torah scholars who were the signatories of his letter of appointment. For this reason, care was taken in general to dispatch men of stature. As a result the exiles looked upon rabbinical ordination by the Ereẓ Israel rabbis as something grand and superior. Thus, many rabbis of communities were accustomed to request confirmation of ordination for their pupils. Similarly, authors among the exiles who wanted to raise the public stature of their works attempted to win commendations for them from the emissaries. The Torah novellae (hiddushei Torah) and sermons of the emissaries found attentive listeners, and works by Diaspora scholars include novellae and homilies heard from the emissaries.

Ereẓ Israel Emissaries and Spiritual Movements
From the 15th century Ereẓ Israel emissaries played an important role in Jewish spiritual movements. Their influence in the outbreak of the spiritual storms flowed from their very personalities but their main influence stemmed from their authority as Ereẓ Israel emissaries. The Kabbalah, which developed and was consolidated in Safed in the 16th century, was spread throughout the Diaspora by kabbalist emissaries who circulated and published during their missions their own works and those of others. Thus, for example, Gedaliah *Cordovero, son of the well-known kabbalist Moses *Cordovero, organized the distribution of his father's writings, whose two works were published during Gedaliah's mission to Italy in 1582. Similarly, Abraham *Almosnino, the Jerusalem emissary to Frankfurt on the Main, brought tikkanim and sodot there in 1592 which he had copied from the manuscript of one of the pupils of R. Isaac *Luria. To a large degree it was the Ereẓ Israel emissaries who circulated reports of the existence of the ten tribes and thereby aroused waves of redemption yearnings and the will to immigrate to Ereẓ Israel. In 1527, the well-known Jerusalem kabbalist Abraham b. Eleazar ha-Levi transmitted information about the ten tribes and about indications of redemption and return in the wars of the *Beta Israel (Falashas) in Ethiopia. Similarly, the 17th-century letter of Baruch Gad concerning the Benei Moshe (sons of Moses) is remarkably like the story of *Eldad ha-Dani (and hence may be regarded as a forgery). The Benei Moshe complain about their bad conditions and desire with all their might to immigrate to Ereẓ Israel. The letter made a great impression on the Jerusalem inhabitants, who wished to restore the city to its former glory, as well as upon the Jews of Eastern Europe, who were severely agitated after the massacres of 1648–49 and were in need of consolation, hope, and salvation. Gad's letter was distributed by Ereẓ Israel emissaries throughout the Diaspora for a period of 250 years and was republished 15 times. A number of the emissaries attempted during their travels to discover traces of the ten tribes, some acting on behalf of their principals and others on their own behalf, e.g., *David D'Beth Hillel, one of the pupils of Elijah Gaon of Vilna.

The Shabbatean movement, which agitated most communities of Europe from the beginning of the second half of the 17th century, was also bound up with the emissaries, who played a decisive role in it. The pseudo-messiah *Shabbetai Zevi was sent as an emissary from Jerusalem to Egypt in 1664. *Nathan of Gaza was the son of the emissary Elisha Hayyim b. Jacob Ashkenazi. There is no doubt that the latter in the course of his work as an emissary – after Shabbetai Zevi had revealed himself – helped to spread the teaching of his son. Moreover, the scribe of Shabbetai Zevi, Samuel of Primo, went abroad in 1662 as a Jerusalem emissary. Later, he undoubtedly made use of his contacts with the communities of Turkey in order to spread his belief in Shabbetai Zevi. There were also emissaries who opposed Shabbateanism. When Hyyia b. Joseph Dayyan was in Italy in 1673 as an emissary, he censured Shabbateanism. Shabbetai Baer acted in a similar manner when he was on a mission in 1674.

The Ereẓ Israel emissaries also took an active part in the Nehemiah Hyyia Ḥayon polemic at the beginning of the 18th century. Solomon *Ayllon, rabbi of Amsterdam who was a Safed emissary, was among his chief supporters, while Moses Hagiz, when an emissary of Jerusalem in Europe, was one of his most vigorous opponents. The Ereẓ Israel emissaries also played an important role in the polemic which was stirred up in 1729 around the personality and writings of Moses Ḥayyim *Luzzatto and continued for a number of years, giving rise to a controversy in the Jewish world. The Ereẓ Israel emissaries intervened in the dispute which centered around Jacob *Emden and Jonathan *Eybeschuetz. Abraham Israel, Jerusalem emissary in 1752, defended Eybeschuetz, and the document which he received in the letter of a man who had carried great weight and strengthened his stand. Emden was enraged by the Ereẓ Israel emissaries in particular and by its inhabitants in general, accusing them of Shabbatean tendencies.

The emissaries also played an important part in the Reform polemic which commenced in 1796. It started when in the same year a false report was published in one of the French newspapers that the Jews of Italy were preparing to introduce religious reforms. This grew from a rumor that a large convention of Italian rabbis in Florence had resolved to abrogate various prohibitions. Several Italian communities were stirred that same year to deny this report, and they published a spe-
cial pamphlet. The moving spirit in all these activities was provided by several Erez Israel emissaries who were then in Italy; among the signatories were Hayyim Baruch Saporta, the Safed emissary, and the Hebron emissaries Ephraim "Navon, Judah Leon, and Hayyim J.D. Azulai, and others. This pamphlet was also published the same year in Hamburg in German translation. In the Reform controversy only two emissaries, Hayyim Judah Ayash and Judah Aaron Takli, sided with the reformers when an organ was introduced into a Hamburg synagogue in 1817. Abraham b. Eleazar ha-Levi, the Jerusalem emissary in 1819, Nathan *Amram in 1842, and Israel Moses *Haazzan in 1845 came out against the religious reforms.

The emissaries helped in no small degree in the spread and revival of the Hebrew language, preaching mainly in Hebrew during their missions. In many of the communities the leaders thought of appointing the emissaries as rabbis or dayyanim, and many agreed to the proposals, accepting the appointment on completion of their mission. In times of need they used their influence to assist the communities in material matters, generally in isolated communities in the East. In 1750 in Nikopol, Bulgaria, the Safed emissary Ezra Malki helped mobilize financial support from Polish Jews to rebuild the synagogue named after Joseph Caro, which was in ruins. Cruel treatment of the Jews of Irbil, Kurdistan, in 1867 moved the emissaries to approach the Alliance Israélite Universelle to intervene on the community’s behalf. In 1871, after the riots of their rebellious Kurdish neighbors, the Jerusalem emissary in Kurdistan, Rahaim de la Rosa, and the heads of the community signed the emissary’s letter requesting financial help. Erez Israel emissaries also helped greatly in freeing the “black” Jews in Cochin, India, who were regarded by their white brethren as slaves.

**Emissaries’ Activities on Their Own Behalf**

As there was no printing press in Erez Israel from the end of the 16th to the 19th centuries, the emissaries utilized their missions to the Diaspora as Erez Israel emissaries to publish their own works. During their missions they succeeded in distributing their works, thus bringing greater honor upon themselves. In practice, most of the works of Erez Israel scholars were published by their authors during their missions, or during the mission of another emissary. A number of the emissaries compiled their works during their travels, e.g., H.J.D. Azulai compiled his Shem ha-Gedolim. Usually the emissary referred to his adventures in the introduction. The distribution of the emissary’s works at the time of his mission undoubtedly brought him financial profit, and there were even cases in which the emissary on his return was requested to divide his profits with his principals, as the publication of his works and their distribution was made possible primarily as a result of the mission. While on their missions, some emissaries made frequent visits to libraries to examine expensive and rare books and manuscripts. Some Erez Israel emissaries regarded their missions simply as a means of livelihood and were sent numerous times to various countries.

**Historical Importance of the Emissaries**

The sending of emissaries played an exceptionally important part in Jewish history in general, and in the history of Jewish settlement in Erez Israel, in particular. It constituted one of the most important chapters in the history of Erez Israel between the destruction of the Second Temple and the birth of Zionism, and in the history of the relations between the inhabitants of Erez Israel and the Jews of the Diaspora. The letters of the emissaries and documents about them are important sources for understanding the events that occurred in their times and the causes that gave rise to their missions. Their importance is also considerable for the histories of the communal institutions in Erez Israel. On the other hand, the account books of the emissaries constitute an important source of the history of the communities in which they worked and of the relations between the communities and Erez Israel. The modern scholar Abraham *Yaari compiled with great diligence and extraordinary erudition everything known (and not known until his research) on this subject in his monumental work Sheliḥot Erez Israel (1951).

[Abraham David]
Independence (May 10, 1948) by immigrants from Germany and Hungary. In 1970 Sheluhot had 340 inhabitants; in 2002, 414. Its farming was based on irrigated field and fodder crops, palm orchards, dairy cattle, poultry, turkeys, and carp ponds. It operated electrical and metal factories and guest rooms.

**SHEM** (Heb. שֵׁם), eldest son of Noah, father of the “Semitic” peoples, including the Hebrew people. The meaning of the name is uncertain. It is possibly to be explained as Hebrew, meaning “fame,” “name,” “appellation.” The Akkadian *simmu*, which is the same word, means not only name but also “son.” As the eldest son, Shem always appears first in the list of Noah’s three sons (Gen. 5:32; 9:18; 10:10; et al.). Together with his brothers and their wives, Shem and his wife accompanied Noah into the ark at the time of the Flood (7:7), and was also present with them during the covenant made with God afterward (9:8). As an individual personality, he appears only in Genesis 9:20–27 in the episode of Noah’s drunkenness when the sensitive and modest behavior of Shem and his brother Japheth contrasts sharply with that of Ham. For this deed Noah blessed Shem and Japheth, “Blessed be the Lord, the God of Shem; let ‘Canaan be a slave to them’ (verses 26–27). This passage clearly foreshadows the subject of the Canaanites and implicitly identifies Shem with the future people of Israel. It is of interest that יהוה is here called the “God of Shem” and is not cited in connection with the other two brothers. In the list of nations in Genesis 10, Shem is the father of five sons who had 21 descendants, making a total of 26 people derived from him. Few of these had any known connection with Israelite history and the principle of their grouping cannot be determined with any degree of certainty (10:21–31). The genealogy of Shem appears last in the table of nations because of its great importance, the order being climactic. It serves to connect the list with the birth of Abraham by drawing attention to the fact that Shem was the “ancestor of all the descendants of Eber” (verse 21). The detailed genealogy of Shem through the line of Eber is resumed in chapter 11 (verses 10–26) where it concludes with the birth of Abraham, the father of the Hebrew nation. Shem is not again referred to in the Bible other than in the Chronicler’s repetition of the Genesis genealogies (1 Chron. 1:4, 17, 24).

[Nahum M. Sarna]

**In the Aggadah**

Shem’s importance in the aggadah is due entirely to his being Israel’s ancestor. Noah’s blessing of Shem (Gen. 9:26ff.) is accordingly interpreted as a blessing of Israel. Noah’s excommunication of Canaan condemning him to be a slave to his brothers (ibid.) was used to justify Israel’s conquest of the land of Canaan, for “whatever a slave possesses belongs to his master” (Sanh. 91a). Ever since the time of Hyncaus I’s victorious campaigns in Samaria and Idumea (Jos., Ant. 13:254ff.; Wars, 1:262ff.) the apologetic tendency to defend such conquests against the charges that they were aggressive acts made its appearance; and it was for the same reason that Noah was said to have distributed the world between his three sons in such a manner that Shem received the middle of the earth, including in particular the Land of Israel (Sanh. *ibid.*; Gen. R. 12; *Pāre* 24; Mid. Ḥag. to Gen. 9:27; cf. Jubilees 8:10ff.). Although he is listed as the oldest of the three sons of Noah (Gen. 5:32; 6:10; 10:21), Shem is considered by the rabbis to have been the youngest, but yet the wisest, most important, and most righteous (Sanh. 69b; Gen. R. 26:3; 37:7 et al.). Since the primacy of younger brothers is an established motif in biblical historiography, Shem, too, had to be younger in years, but superior in every other respect. Thus, he was born circumcised (ARNO, 2, p. 12; Gen. R. 26:3) – a distinction shared with some of the greatest biblical personalities (ibid., Tanh. B., Gen. 32; Mid. Ps. 9, 7, ed. Buber, pp. 84f.); and it was he who took the initiative to cover his father’s nakedness (cf. Gen. 9:23), for which he was blessed that his (Israelite) descendants should cover themselves with the fringed tallit and that the Divine Presence should rest only in Jerusalem (Yoma 10a; Gen. R. 26:3; 36:6, 8; Tanh. B., Gen. 49).

Shem was also privileged to have God’s name associated with his (Gen. R. 26:3; cf. Gen. 9:26). He was, moreover, endowed with the gift of prophecy, and for 400 years he prophesied to the nations of the world, but to no avail (Ser., 141f.). Finally, he was identified with Melchizedek, king of Salem, who served there as high priest in Abraham’s time (cf. Gen. 14:18ff.) but was deprived of this privilege in favor of Abraham because he had blessed Abraham before God (Gen. 14:19ff.; Ned. 32b; Gen. R. 26:3; 41:6; Lev. R. 25:6; Num. R. 4:8; ARN op. cit.). The real reason, however, was the role played by Melchizedek in Christian literature, where he became a prototype of Jesus (cf. Heb. 5:6f.; 7:15–17; cf. also Ginzberg, Legends, vol. 5, 225ff., n. 102). In line with the rabbinic concept of the pre-existence of the Torah and its institutions prior to the revelation at Sinai, Shem’s “tents” (Gen. 9:27) were accordingly identified as a bet midrash – an academy with which Eber, Shem’s great-grandson, subsequently became associated, and which also served as a bet din (Mak. 23b; Gen. R. 36:8; 85:12; Targ. Ps.-Jon. to Gen. 9:27 and 25:22). It is said that Israel’s Patriarchs studied at the academy of Shem and Eber (Targ. Ps. Jon, to Gen. 24:62 and 25:27; Gen. R. 63:10), and that students of the Law will be privileged to study in the world to come at the heavenly academy of Shem, Eber and other heroes of Israel (Song R. 6:2 no. 6; Eccles. R. 5:11 no. 5).

[Moses Aberbach]

**SHEMA, READING OF**, the twice daily recitation of the declaration of God’s unity, called the Shema (“Hear”) after the first word in Deuteronomy 6:4; also called Keriat Shema (“the reading of the Shema”). As it had developed by at least
as early as the second century c.e., the Shema consisted of three portions of the Pentateuch – Deuteronomy 6:4–9; Deuteronomy 11:13–21; and Numbers 15:37–41, in this order – together with the benedictions of the Shema, two to be recited before the Shema and one after in the morning, and two before and two after in the evening (Ber. 1:1–5, 2:2). The morning benedictions before the Shema are: “Whoforemost light and greatest darkness....” (Yoger Or; Hertz, Prayer, 108–14) and “With abounding love...” (“Ahavah Rabbah, ibid., 114–6), and “True and firm...” (Emet Ve-Yaziv, ibid., 126–8), after it (see *Shabirat). The evening benedictions before the Shema are “Who at Thy word bringest on the evening twilight...” (Maariv Aravim, ibid., 304), and “With everlasting love...” (“Ahavat Olam, ibid., 306), and “True and trustworthy...” (Emet ve-Emunah, ibid., 310–2), and “Cause us to lie down in peace...” (“Hashkivenu, ibid., 312), after the Shema (see *Arvit).

Development of the Practice
It is difficult to determine the stages through which this development took place. At a very early period the Deuteronomic injunction “And these words which I command thee this day... and thou shalt talk of them” (6:6–7 and 11:19) were understood as a commandment to read the Shema, perhaps in response to the challenge of Zoroastrian dualism, though as late as the third century c.e. some held the view that the duty of reciting the Shema is rabbinic and the verses refer not specifically to the Shema but to the “words of Torah” in general (Ber. 21a). The *Nash papyrus, dating from the Hasmonean period, contains the Ten Commandments and the first portion of the Shema. The Mishnah (Tam. 5:1) records that in the Temple all three portions of the Shema were recited together with the Ten Commandments, and explicit reference is made here to the benediction after the Shema, Emet ve-Yaziv, and to another benediction before the Shema, which is identified at a later period (Ber. 11b) with Ahavah Rabbah. At a later period, too, there are indications that special significance was attached to the first verse of the Shema (Ber. 13b; Suk. 42a). It is not implausible, therefore, to see the successive stages as (1) the reading of the first verse; (2) the reading of the first portion; (3) the reading of all three portions, together with Emet ve-Yaziv and Ahavah Rabbah; (4) the addition of the other benedictions.

In any event, it was a long established practice at the beginning of the present era to read the Shema in the evening and morning as can be seen from the fact that the schools of Hillel and Shammai (see *Bet Hillel and Bet Shammai) debated as to how it should be read. The school of Shammai took the words “when you lie down and when you get up” literally, and ruled that the evening Shema should be recited while reclining and the morning Shema while standing upright. The school of Hillel ruled that “when you lie down...” refers to the times of reading, i.e., in the evening and in the morning, but that no special posture is required. The ruling followed is that of the school of Hillel (Ber. 1:3).

There was much debate in the tannaitic period as to the times of reciting the Shema. The eventual ruling is that the evening Shema can be recited from nightfall until dawn, though ideally it should be recited before midnight; the morning Shema can be recited from the first traces of the dawn until a quarter of the day (Ber. 1:1–2; Ber. 2a–3a, 9b).

Inclusion of the Barukh Shem. After the first verse of the Shema it has been customary from rabbinic times to recite under the breath the doxology, uttered as a response in the Temple, “Blessed be the name of His glorious Kingdom for ever and ever” (Barukh Shem). The midrashic explanation is that this was recited by the patriarch Jacob on his deathbed when his sons declared their loyalty by reciting the Shema. Since Jacob said it, we too repeat it, but since Moses did not say it, we recite it sotto voce (Pes. 56a). Another midrashic explanation is that when Moses went up on high, he heard the ministering angels saying Barukh Shem, and he brought it down for Israel to use. Since it was stolen from the angels, Israel recites it silently, but on the “Day of Atonement, when Israel is pure as the angels, it is recited in a loud voice (Deut. R. 2:36).

Various suggestions have been made to account historically for the insertion of Barukh Shem. Thus it may have been introduced by the Pharisic opponents of Herod and the Sadducean priesthood in order to emphasize the belief in the sole sovereignty of God as against the aristocratic tendency to admit the sovereignty of the caesars (see Abrahams, Companion, iii); or as a response at a time when the Shema was read verse by verse led by the reader (Elbogen, Gottesdienst, 26); or as a substitute for the Temple response after the destruction of the Temple (H. Albeck (ed.), Shishah Sidrei Mishnah, Zera'im (1958), 328), which might explain why the later custom is to recite Barukh Shem in a loud voice on the Day of Atonement, since this was the day on which it was especially recited in Temple times (Yoma 3:8, 41, 6:2).

Recitation of Shema before retiring. In addition to the twice daily reading of the Shema as part of the morning and evening prayers the practice was introduced in the amoraic period of reciting the first section before retiring (Kerit Shema al ha-Mittah). The source in the Talmud (Ber. 4b) is the saying of R. Joshua b. Levi: “Though a man has recited the Shema in the synagogue, it is meritorious to recite it again on his bed.” The proof text was given as: “Tremble and sin not; commune with your own heart upon your bed and be still. Selah” (Ps. 4:5). Later on in the same passage (Ber. 5a) the practice is connected with the fear of demons, whom it is said to drive away, but it is uncertain whether this was the true origin of the custom. Maimonides (Yad, Tefillah, 7:2), as usual in such circumstances, makes no mention of the demon motif but simply records the duty of reciting the first paragraph of the Shema, and he takes “on the bed” literally.

Other Ritual Uses of the Shema. The first verse of the Shema is also recited in the early morning (Hertz, Prayer, 30); when the Torah scroll is taken from the ark on Sabbaths and
festivals (ibid., 480); during the Kedushah in the Musaf on Sab-
baths and festivals (ibid., 530, 816, etc.); and on the deathbed
(ibid., 1064). The first verse of the Shema is recited once, and
Barukh Shem, three times, at the conclusion of the services
on the Day of Atonement. The portions of the Shema from
Deuteronomy 6:4–9; 11:13–21 are included in the parchments
enclosed in the "mezuzah and "tefillin. The remains of tefillin
for the head found in Qumran (XQ Phyl. 1–4) were acquired
by Y. Yadin in 1969 and proved to contain, among additional
biblical texts, Deuteronomy 6:4–9. It is presumed that the
original fourth scroll from these remains, which is now lost,
contained Deuteronomy 11:13–21.

The Laws of the Shema
The Shema should be recited with full concentration on the
meaning of the words; if, however, it was recited without con-
tentration, it is unnecessary to repeat it, provided the first
verse was recited with concentration. If the Shema is recited
while walking, it is necessary to stand still for the recitation of
the first verse. It is customary to place the right hand over the
eyes while reciting the first verse as an aid to concentration,
and, for the same reason, the first verse should be recited in
a loud voice. One should not wink or gesticulate while read-
ing the Shema but should recite it in fear and trembling. The
Shema should be recited sufficiently loudly for it to be heard
by the ear, since it is said: "Hear, O Israel." Care must be taken
to enunciate the words clearly, and this applies especially to
two consecutive words, the first of which ends and the sec-
ond of which begins with the same letter. The Shema can be
recited in any language, but with the same clarity of enuncia-
tion one is expected to use for the Hebrew. If one is in doubt
as to whether he has recited the Shema, it is necessary to recite
it in order to make sure. It is forbidden to interrupt the recita-
tion of the Shema. It is forbidden to recite the Shema in a place
that is not scrupulously clean, or in front of the naked body.
Women (who are exempt from carrying out precepts depend-
ent on a given time) and little children have no obligation to
recite the Shema but may do so if they wish. It is customary
for women, nonetheless, to recite the Shema.

The total of the words of the Shema together with Barukh
Shem is 245. It is customary for the reader to repeat the last
two words of the Shema and the first word of the following
benediction, thus bringing the total up to 248, corresponding
to the limbs of the body and the number of positive precepts.
When the Shema is recited in private, the total is made up by
reciting before the Shema the three words el melekh nieman
("God, faithful King!"). The usual translation of the first verse
of the Shema is "Hear, O Israel: The Lord our God, the Lord
is one." Other translations are "The Lord our God is one Lord"
(AV); "The Eternal, the Eternal alone, is our God" (Moffatt);
"The Lord is our God, the Lord alone" (new Jewish transla-
tion, JPSA 1993); following Ibn Ezra).

The Shema in Jewish Thought
The Shema is in Jewish thought the supreme affirmation of
the unity of God and is frequently called "the acceptance of
the yoke of the Kingdom of Heaven." The original meaning
of the first verse may have been that, unlike the pagan gods
who have different guises and localities, God is one. At first the
main emphasis in the Shema was seen to be in opposition to
polytheism; there is only one God, not many gods. R. *Akiva
is reported to have recited the Shema just before his execu-
tion by the Romans (Ber. 61b), and generally Jewish martyrs
recited it as they went to their deaths. Perhaps from earliest
times (see S.R. Driver, Deuteronomy, ICC (1902), 89–91), but
certainly from later, the word etad ("one") was understood
also to mean "unique." God is not only one and not many, but
He is totally other than what paganism means by gods. Seen
in this light, the Shema is not only an affirmation that there are
no other gods, but that God is the Supreme Being. God is dif-
ferent from anything in the universe He has created. This was
the general view of the medieval Jewish philosophers and kabb-
listals (see, e.g., Bahya Ibn Paquda, Hovot ha-Levavot, 1:9–10).
In hasidic thought, the further idea is read into the Shema that
there is only God, the whole universe existing in Him, as it
were, and only enjoying an independent existence from the
human standpoint (panentheism; see Menahem Mendel of
Lubavitch, Derekh Mitzvotekha (1953) 118–24). This doctrine
was treated as heresy by opponents of Hasidism.

Various Interpretations of the First Verse.
Christian exegesis in the Middle Ages interpreted the three divine
names in the first verse of the Shema as referring to the Trinity
(see 11.12 (1905), 261 and J. Katz, Exclusiveness and Tole-
tance (1961), 19). Jewish commentators were naturally at pains to
contradict this, and a current interpretation was that, in fact,
the Shema asserts the opposite, that there is only one God and
no three persons in the Godhead (see, e.g., Daat Zekeinim and
Baba Ibn Asher to Deut. 6:4 and Leon de Modena, Magen va-
Horev (ed. S. Simonsohn 1960), 31–32). Very curious are the
references in the Zohar to the three divine names in the first
verse of the Shema. These represent the unity of three pow-
ers in the Godhead, which are the Sefirot of Lovingkindness,
Judgment, and Beauty (Hesed, Gevurah, Tiferet), symbolized
by the colors white, red, and green, or the Sefirot of Wisdom,
Understanding, and Beauty (Hokhmah, Binah, Tiferet; Zohar
1:18b; 3:26a). The Zohar is strongly anti-Christian in intent
and repeatedly stresses that all the Ten Sefirot are a unity with
Ein Sof, so that it is absurd to read the Christian doctrine into
it, as some of the Christian kabbalists have done. The possi-
bility, however, that the formal zoharic interpretation was influ-
enced by Christian exegesis of this verse cannot be ruled out

The word "Israel" (in "Hear, O Israel") is understood by
the Midrash as referring to the patriarch Jacob (Deut. R.
2:35). The devout Jew addresses himself to his ancestor to de-
clare that he has kept the faith. Abudraham understands it to
mean that each Jew addresses his fellow. In hasidic thought
(Dov Baer of Lubavitch, Kunteres ha-Hitpaldut, in Likkutei
Be'urim (1868), 54a), the idea is put forward that each Jew ad-
dresses the ”Israel” part of his soul, speaking to the highest within him. Abudraham also remarks that the letter ayin of the word Shema and the letter dalet of the ehud are traditionally written larger than the other letters in the Torah scroll so as to form the word ed (”witness”): the Jew testifies to God’s unity when he recites the Shema.

Jewish devotional manuals sometimes advise the worshiper to have in mind while reciting the Shema that if he is called upon to suffer martyrdom for the sanctification of God’s name, he will do so willingly and with joy (see, e.g., Alexander Suskind of Grodno, Yesod ve-Shoresh ha-Avodah (1663), 97–99). This author also advises the worshiper after he has recited the first verse of the Shema to have in mind the following:

I believe with perfect faith, pure and true, that Thou art one and unique and that Thou has created all worlds, upper and lower, without end, and that Thou art in past, present and future. I make Thee King over each of my limbs that it might keep and perform the precepts of Thy holy Torah and I make Thee King over my children and children’s children to the end of time. I will, therefore, command my children and grandchildren to accept the yoke of Thy Kingdom, Divinity, and Lordship upon themselves, and I will command them to command their children, in turn, up to the last generation to accept all of them, the yoke of Thy Kingdom, Divinity, and Lordship.

[Louis Jacobs]

**SHEMAIAH** (Heb. שֵׁמֶהְיָא, Shemehia), a prophet in the days of Solomon’s son, Rehoboam king of Judah (1 Kings 12:22–24 and the parallel passage in 11 Chron. 11:2–4; 12:5–8, 15). Shemaiah is associated with two events, one at the beginning of, the other during Rehoboam’s reign. In 1 Kings and in the parallel account in 11 Chronicles it is related that Shemaiah cautioned Rehoboam not to embark on a war against the tribes of Israel that had rebelled against his authority, and warned him that “this thing is from Me [i.e., God]” (1 Kings 12:24; 11 Chron. 11:4). According to 11 Chronicles 12:5–8, Shemaiah rebuked Rehoboam and his princes, and blamed them for the invasion of Judah by “Shishak king of Egypt. After Rehoboam and his princes had humbled themselves before the Lord “the word of the Lord came to Shemaiah: “They have humbled themselves; I will not destroy them, but I will grant them some deliverance, and My wrath shall not be poured out upon Jerusalem by the hand of Shishak” ” (11 Chron. 12:7). The Chronicler attributes to Shemaiah “the Chronicles of Shemaiah the Prophet and of Iddo the Seer” (ibid., verse 15), which probably means simply the part of the Book of Kings referring to Shemaiah’s generation.

[Nili Schupak]

**SHEMAIAH** (late first century B.C.E.), the colleague of Avtalyon (see Zugot). In talmudic sources they are usually mentioned together. They are described as having taught in the same bet midrash (Yoma 35b), cooperating in an exemplary fashion. Like Avtalyon, Shemaiah was said to have been a convert to Judaism, descended from Sennacherib (Git. 57b; cf. Tj, Mak. 3:1, 81d). Those who identify Avtalyon with Pollio mentioned by Josephus, identify Shemaiah with Samaia, as one of the Pharisee leaders in the time of Herod. Shemaiah’s dictum (Avot 1:10), ”Love work, hate lordship, and seek no intimacy with the ruling power,” probably reflects his attitude to the government of his time, and accords with Josephus’ statement about Pollio (see Avtalyon). Shemaiah and Avtalyon administered the sofah rite, presumably within the framework of the Temple ritual (Edyot 5:6). In an early discussion of faith and belief in rabbinic literature, Avtalyon expresses the view “that the faith in God of the children of Israel in Egypt sufficed for the Red Sea to be divided for them,” while Shemaiah holds that this merit stemmed from Abraham’s faith in God (Mek. 2, 3). The late report that Shemaiah and Avtalyon were darshanim gedolim (masters of homiletical exposition) would seem to be anachronistic (Friedman, Netiot le-David, 234).

[Bialik Myron Lerner / Stephen G. Wald (2nd ed.)]

**SHEMAIAH OF TROYES** (11th century), French scholar. Shemaiah was one of “Rashi’s closest pupils and appears to have been the father-in-law of Rashi’s grandson, *Samuel b. Meir*. Shemaiah helped Rashi edit his responsa and afterward collected and assembled them from the notes of his master. He also wrote up for him some of his halakhic decisions and with Rashi’s approval and signature. Very often the additions have been merged with the text and are identifiable as additions only by comparison with manuscripts. Shemaiah himself, under the direction of Rashi, wrote commentaries to a number of tractates, but only those to Middot and Tamid have been preserved in two versions, one of which appears in all large editions of the Talmud since the Venice edition of 1522, and another in a work published by A. Berliner from a manuscript (in Sefer Rashi, see bibl.). Numerous rishonim, however, quote from his commentaries to many other tractates, and there are rulings of his which are known to have been handed to Rashi for his approval and signature. Shemaiah’s Seder Leil Pesah was published at the end of the Dikdukei Soferim to Pesahim (874), and there remain in manuscript remnants of his commentaries on piyyutim. It is possible that this Shemaiah is identical.
with Shemaiah ha-Shoshanni, author of the Midrash to the weekly portion Terumah, who is known to have written commentaries to the mizhbar. Shemaiah served as the main source for knowledge of Rashi’s teaching, and his collections were the basis of most of the extant anonymous books of the “school of Rashi,” among them Sefer ha-Pardees, Mahzor Vitry, Siddur Rashi, and others. The son of Shemaiah, Moses, was the editor of the halakhic work Ḥa-Orah, which contained much valuable material after the tradition of Rashi, and which was apparently the basis of the extant Sefer ha-Orah (1905).

[Israel Moses Ta-Shma]

SHEMARIAH BEN ELHANAN (d. 1011), scholar in *Egypt. According to the legend of Abraham ibn Daud (G.D. Cohen (ed.), The Book of Tradition (1967), 64), Shemariah was one of *Four Captives who were taken prisoner in c. 970 while on a journey to collect contributions for the Babylonian academies, each of whom later established a school in a different country. Documents found in the Cairo *Genizah, apparently originating from Babylon, state that he studied during the gaonate of *Shirer, with whom and whose son and successor, *Hai Gaon, he corresponded, after he himself had become the head of the yeshivah at El Fostat. He was head of the local bet din and was famous as a preacher. He is referred to as “the av bet din of all Israel,” possibly the title accorded the highest religious authority in the country. Shemariah wrote a commentary on the Song of Songs, which he dedicated to Judah b. Joseph Alluf of *Kairouan. He was in contact with the prominent rabbis of his day, such as Hushiel of Kairouan and *Dunash ibn Labrat, in *Spain, who composed a laudatory poem in his honor. His son-in-law was *Sahlan b. Abraham, head of the Babylonian community at the beginning of the 11th century.

[Eliyahu Ashtor]

SHEMARIAH BEN ELIYAHU BEN JACOB (Ikriti; 1275–1355), philosopher and biblical commentator. Though probably born in Rome, he is known as Ikriti (“the Cretan”) because, when he was still a child, his family moved to Crete, where his father had been called a rabbi; he is also known as ha-Yevani (“the Greek”). Shemariah knew Greek, Italian, and Latin, and is noted for being the first medieval Jew to translate Greek literature directly from the original and not from Arabic or Hebrew translations, as had been done previously. Until the age of 30, the only Hebrew literature he knew was the Bible; only later did he study Talmud and philosophy. Invited to the court of Robert, king of Naples, he engaged in biblical studies and wrote philosophical commentaries (until 1328). His manner of interpretation satisfied even the Karaites, and, in the hope of reconciling them with the Rabbanites, he went to Spain in 1352. There, however, certain accusations were leveled against him, including the charge that he regarded himself as a messiah. He died in prison.

In Ha-Mora (1346), Shemariah attacked the opinions on creation of the philosophers; in his book Amaziyahu he also attacked philosophy. Other works include Elef ha-Magen (a commentary on the tales and legends contained in the tractate Megillah, S.M. Schiller-Szenesey, Catalogue Cambridge Ms. 33/2), books on logic and grammar, biblical commentaries, and liturgical and secular poems, some of which were written in honor of David b. Joshua, a descendant of Maimonides.

[Zvi Avneri]

SHEMER, NAOMI (Saphir; 1930–2004), composer, song writer, and performer. Born at kvevuza Kinneret, she studied at the Tel Aviv and Jerusalem Academies of Music. Among her teachers were Frank *Peleg, Iona Vinze-Kraus, Joseph *Tal, and Abel *Ehrlich. She returned to kvevuza Kinneret as a music teacher and there she composed her first songs especially for children. In 1956 she moved to Tel Aviv. Her songs, to most of which she composed both lyrics and music, became very popular and are considered as part of the Israeli song canon. In 1967, after being commissioned by the Israel Broadcasting Authority to write a song for the annual song festival, she wrote Yerushalayim shel Zahav, which immediately became popular. It became the theme song of the Six-Day War and achieved international fame. In many Reform movement services and among both Ashkenazi and Sephardi congregations in Israel and the Diaspora, the song was introduced into the liturgy for special occasions, such as Friday evening, the last hakka- fah on Simhat *Torah, and the synagogue service on Israeli Independence Day. Considered to perfectly express the love of the nation for Jerusalem, the song was proposed in the Knesset as a new Israeli national anthem. By the mid-1980s there was not an Israeli singer or ensemble that had not performed one of Shemer’s songs. Nicknamed the “national songwriter,” she demonstrated a unique ability to express the national mood. Although her first works were published in the 1950s, her first book of songs, Kol ha-Shirim (“Complete Songs”), did not appear until 1967. Later publications included four additional song books (1975, 1982, 1995, 2003), as well as various collections for children. As a singer, she recorded a selection of her own songs. Her honors included the Israel Prize for Israeli song (1982), Jerusalem Prize (1983), and honor-
ary doctorates from the universities of Jerusalem (1994) and Beersheba (1999).

**SHEMI (Schmidt), MENAHEM** (1897–1951), Israeli painter. Shemi was born in Russia and immigrated to Palestine in 1913. In World War II, he served in the British army in Egypt, North Africa, and Italy. Shemi was one of the founders of the artists’ colony in Safed (1949). Shemi was principally a landscapeist. His palette, originally somber, became bright in his considered years; his mystic, dreamlike canvases of Safed are considered his best works.

**BIBLIOGRAPHY:** M. Bassock (ed.), Menahem Shemi (Heb., 1958).

[Yona Fischer]

**SHEMI, YEHIEL** (1922–2003), Israeli sculptor. Shemi was born to Esther and Moshe Stizberg, who immigrated to Erez Israel in 1923 and settled in Haifa. Until the age of 13 Shemi was educated in a religious manner at home, as well as at the Nezah Israel school. After he was no longer observant, Shemi studied at the Reali High School and joined the Ma’anot ha-Olim youth organization. Shemi was an autodidact. All his artistic education was limited to a few painting classes under the instruction of Prof. Paul Konrad Hoenich of the Technion.

From 1939 on Shemi lived and worked in kibbutz Kabri. Through the art seminars that he organized in the kibbutz during the 1950s, he came in contact with many Israeli artists. He was one of the members of the New Horizons group, and his first steel sculptures were exhibited there. For a short while Shemi went abroad for a stay in the United States and in Paris. His meetings with world-famous sculptors influenced his own evolution. In 1986 Shemi was awarded the Israel Prize for art. Shemi’s artistic style changed over time from figurative to abstract. The sculptures he created in the 1940s were carved in stone; some of them were lost when kibbutz Beit ha-Arava was abandoned in May 1948. The works usually described human figures, usually monumentally and with rough texture (for example, *Father and Son*, 1954, kibbutz Hukuk).

In the 1950s Shemi turned to working with iron. This transformation was not simply technical but also an open expression of a change in his point of view. The significance deriving from the change was Shemi’s entrance into the modern world of sculpture. The impulse to work with additional techniques can be attributed to the modernist spirit in art that expressed swiftness, spontaneity, and an untraditional attitude. Soon afterward his technique changed and Shemi turned to the abstract, which is another modernist characteristic. His first large public assignment was created in this style, namely, the sculpture he erected for the Tenth Anniversary Exhibition in Jerusalem (1958, still standing in front of Binyanei ha-Ummah, Jerusalem). Later Shemi received many invitations from all over the country to create public sculptures, some of them as monuments.

Shemi worked with other types of materials, such as wood, torn iron, and concrete. One of his unique creations integrating art with architecture was his work at the Jerusalem Theater (1971). The geometric forms of the sculpture, as well as the bare concrete, were part of Shemi’s art language. The huge size of this project and the fact that it was displayed as sculpture and not as a monument was significant for the artist.

[Ronit Steinberg (2nd ed.)]

**SHEMONEH ESREH** (Heb. שְׁמוֹנֶה עֵשְׁרֵה, lit. “eighteen”), popular name for the Amidah prayer. The name stems from the fact that the weekday Amidah originally contained 18 benedictions (although today none of the various Amidot recited on different occasions consists of exactly 18 benedictions).

**SHEM-TOV, VICTOR** (1915– ), Israeli politician, member of the Fifth, Sixth, Tenth, and Eleventh Knessets. Shem-Tov was born in the town of Samokov, Bulgaria. As a youth he was a member of the Maccabi ha-Za’ir youth movement. He attended high school in Sofia, and in 1939, before immigrating to Palestine, joined the Socialist League. In 1946 he was elected, on behalf of Ha-Shomer ha-Za’ir, to the Jerusalem Workers Council. In 1948–49 he was in charge of *Histadrut* absorption programs during the years of mass immigration. In 1949–50 he served as chairman of the Bulgarian Immigrants’ Association in Jerusalem, and as a member of *Mapam’s Central Committee. He was elected to the Fifth Knesset in 1961, and represented Mapam in the Knesset Finance Committee. In 1961 he also became a member of the Histadrut Executive. In 1969, even though he was not elected to the Seventh Knesset, Shem-Tov became the first Mapam minister that was not a kibbutz member, being appointed as minister without portfolio in the government formed by Golda *Meir after the elections. In July 1970, after the *Likud* left the coalition, he was appointed minister of health, in which position he introduced a National Health Insurance Bill that failed to pass. He continued to serve as minister of health in the Eighth Knesset, even though once again he was not an MK. In 1974, together with Minister of Transportation Aharon Yariv, Shem-Tov presented to Golda Meir’s government a document containing what came to be known as the Yariv–Shem-Tov formula, that defined the Arab negotiating partners with whom Israel would be willing to negotiate a peace agreement. The document was published by Shem-Tov during a visit to Washington. It stated that the State of Israel would conduct peace negotiations with Jordan and with any Palestinian body that would recognize Israel’s right to exist, would be willing to live in peace with it, and would refrain from committing acts of terror. The formula was once again presented in the government of Yitzhak *Rabin but was not brought to the vote, because it was supported by only five ministers. However, the formula was not rejected. In 1979–85 he served as secretary general of Mapam.
Shem-Tov was elected to the Tenth Knesset in 1981 and the Eleventh in 1984, and supported Mapam's decision to leave the Alignment with the *Israel Labor Party after Labor decided to enter a National Unity Government with the Likud.

[Susan Hattis Rolef (2nd ed.())]

**SHENHAR (Shenberg), YITZHAH** (1902–1957), Hebrew author. He was born in Volshisk, a small town on the border of Galicia and the Ukraine. During World War I his family moved to Proskurov. An active member of the He-Halutz movement, he started agricultural training before completing his studies. On his arrival in EreZ Israel in 1921 he joined the pioneers of the Third *Aliyah and worked as a building laborer, wagoner, railman, and farmer. From his youth he had written Hebrew poetry, and his literary activity, mainly in verse and drama, gained impetus on his arrival in EreZ Israel, where he published his first poem in 1924. Shenhar studied European literatures and languages for many years becoming well versed in some of them. From 1931 he devoted himself exclusively to literary activities, becoming a professional writer, a literary adviser to publishing firms, an editor, and a translator. As personal secretary to Salman *Schocken during the 1930s, he accompanied him on his travels in Europe and established connections with the Schocken Publishing House, which from the beginning of the mid-1940s published most of his books and translations. Shenhar worked for the United Jewish Appeal in South America in the early 1950s.

While Shenhar's creativity embraced a wide variety of works including fiction, poetry, plays, travel notes, and children's literature, his position in Hebrew literature and Israel cultural life was established mainly through his fiction and translations. Most of Shenhar's fictional writing comprises short stories and novelettes. It was only toward the end of his life that he ventured on a novel, which he did not complete. He was a master of the lyrical short story characterized by atmosphere and psychological nuances rather than by dramatic tension and plot development. Shenhar's works are within well-defined literary traditions, especially the late 19th-century tradition of the Russian psychological school, as exemplified by the short stories of Chekhov, and the Hebrew psychological novelette of the early 20th century. His style aspired toward an artistic balance and harmony, carefully striving for an equipoise between descriptions of social situations and landscape on the one hand and individual psychological portrayals on the other. He sought to give his subtle descriptions of atmosphere the firm base of a classic Hebrew style, drawing liberally on the ancient sources, especially the Mishnah and Midrash. Shenhar thus evolved a synthesis of style which is in the spirit of the Hebrew literature written by the followers of S.Y. Abramovitch (Mendele Mokher Seforim). He may be described as a writer who tried to combine the descriptive “plastic” style of Mendele with the lyrical-psychological novella tradition of M.J. *Berdyczewski and U.N. *Gnessin.

Shenhar's stories may be classified according to their socio-historical background: stories about the Ukrainian small town and village against the backdrop of revolution and civil war (mainly in his first collection of stories, *Basar va-Dam*, 1941) to which also belongs the uncompleted novel published posthumously; stories about the tribulations of halutzim and the trials of their acclimatization (mainly in *Me-Erez el EreZ* 1943); stories on village and city life under the British mandate (in *Yamim Yedabberu*, 1945) and after Israel's independence. In the latter, Shenhar does not confine himself only to the mentality and problems of Russian Jewry and especially of the Russian-born halutzim (as he did in his earlier collections). His canvas extends from the German immigrant to the Oriental Jew, and to different parts of the country, in an attempt to give a panoramic view of the multi-faceted new Jewish society. After the establishment of the State of Israel, Shenhar was among the first to turn to the new immigrants from Arab countries as a literary subject. He also wrote several biblical stories (*Me-Az u-mi-Kedem, 1947*) and symbolic-surrealistic stories which have no socio-historical setting but are suspended in time and place.

Despite the variegated social background of Shenhar's stories he created one world, whose unifying element is a basic paradox: a world of frenzied and at times volatile activity and movement, revolutions, destruction, pioneering efforts and the struggle for national revival which is viewed through the eyes of the outsider who is alienated, passive, and static. The most typical characters of Shenhar's panorama are the pioneers whose fervor has cooled and who now live on the periphery of society. His anti-heroes, out of touch with their milieu, are in the literary trend of the “detached” or alienated heroes of M.J. Berdyczewski, H. I. *Brenner, U.N. Gnessin, G. *Schofman, and Y.D. *Berkowitz. Central to this trend is the theme of the young intellectual at odds with the traditional Jewish society of Eastern Europe which some of these writers (mainly Brenner) transposed to the halutzic background of EreZ Israel. Shenhar's vivid, poignant and penetrating portrayal of the schism between the sensitive individual and the pioneering society makes him one of the main exponents of this trend. Nevertheless he departed from the traditional patterns: (1) his characters' alienation is not rooted in an exaggerated intellectualism (on the contrary, they are mostly non-intellectuals, some of whom are unable to express themselves articulately); (2) his stories are not mainly psychological portrayals of the heroes but fuse the psychological with broad social landscapes; (3) the rootlessness of most of his heroes is not as extreme as that of Gnessin's heroes. Though Shenhar's protagonists are incapable of identifying with the rhythm and intensity of the reality that surrounds them, their relation to it is not negative, even when they openly reject its coarseness and cruelty, or are skeptical about its blatant self-assurance. The hope for compromise or fusion is never absent from his stories. Thus Shenhar's works form one of the main links between the great fiction writers of the beginning of the century, such as Brenner and Gnessin, and some younger Israel-born writers, like S. Yizhar, who also describe the alienated, sensi-
Shenkar was the foremost Hebrew translator of belles-lettres in his generation. He also translated poetry – Rilke, François Villon, and Chinese verse – but was most successful in his translations of great Russian literary works of the 19th century (Tolstoy's Anna Karenina; Dead Souls and other works by Gogol; works by N. Leskov and A. Chekhov, etc.). His translations were in the classic Hebrew style of his original writings which he used with skill, especially in those tasks that required linguistic virtuosity and an adherence to stylized archaisms. Shenkar was among those who set the principal norms for the translation of belles-lettres prose (he translated over 30 books). Be-Shivah Derakhim (1944) is a compilation of his travel notes; his collected stories were published posthumously (3 vols., 1960). His sister, Rivka Rochel-Shenkar, recorded her memories in Beit Yiḥzak Shenkar (1986).

[David Maisel]
four other communities are said to have been exempted from the edict. Of Shephatiah's many poems, only the piyyut Yisrael Noshah is known today. It is included in the Ne’ilah service on the Day of Atonement in the Ashkenazi liturgy.

**BIBLIOGRAPHY:** Roth, Dark Ages, index; Schirmann, in: YMHS, 1 (1933), 97–147. [Yonah David]

**SHEPHELAH** (Heb. שפלות), biblical geographical term derived from *shfl* ("low"). The Shephelah is one of the component parts of the Promised Land, together with the mountain, the valley (Arabah), and the Negev (Deut. 1:7; Josh. 9:1; 12:8; and is so referred to in Jer. 17:26; 32:4; 33; Zech. 7:7). It refers to an area of hills and valleys, which separates the highlands from the coastal plain. In this sense, the Shephelah can only be regarded as a "lowland" from the point of view of those holding the higher parts of the country, i.e., the Israelites, as against the Canaanites of the plain or the Philistines. In particular, the term refers to the western fringe of the Judean mountains. In this region Joshua smote the Canaanite kings after the battle of Aijalon, defeating them from Jarmuth to Eglon (Josh. 10:40). Later, the tribe of Judah fought against the Canaanites in the Shephelah (Judg. 1:39). A still more precise definition is given in 11 Chronicles 28:18, which enumerates the cities of the Shephelah occupied by the Philistines in the time of Ahaz: they include Beth-Shemesh, Aijalon, Gederoth, Socoh, Timnah, and Gimzo. The struggle between the inhabitants of the Shephelah and the Philistines on the coast for possession of the region is reflected in Obadiah v. 19. The detailed description of the region in Joshua 15:33ff reflects the division of Judah in the time of the divided monarchy, under Jehoshaphat or later, when the districts of Socoh, Lachish, and Mareshah (the second to the fourth districts) comprised the area of the Judean Shephelah.

The sycamore tree was characteristic of the region. Solomon made cedars as abundant in Jerusalem as sycamores were in the Shephelah (1 Kings 10:27; 1 Chron. 11:5; 27). A special officer of the king was appointed to guard these trees (1 Chron. 27:28).

The term is sometimes extended to other similar regions in the country. The Shephelah of Israel (Josh. 11:16) possibly refers to the hills and valleys bordering the mountains of Ephraim on the west. This definition, however, is somewhat artificial, for the western border of the mountains of Ephraim presents no such network of valleys and hills as is found in western Judah. The term appears as well in connection with the battle against Jabin, king of Hazor (Josh. 11:2); the location of this area between Kinneret and Dor suggests that here the term refers to the hilly region in southern Naphtali.

In the Hellenistic period, the area covered by the term Shephelah was extended westward, reaching from Bet Guvrin to Jaffa (1 Macc. 12:38; Eusebius, Onom. 162:8). Talmudic sources (in particular Shev. 9:2; Tosef., Shev. 7:10; Tj, Shev. 9:2, 3; Sif. Deut. 6) generalize the term and apply it to each of the three main districts of the country. In Galilee it refers to the area of Lower Galilee, below Kefar Hananya, where sycamores grow; in Judea the Shephelah of Lydda is included in that of the south; in Transjordan it includes Heshbon, Dibon, Bamaoth-Baal, and Beth-Maon. The area of the Judean Shephelah was resettled by Jews from 1882 onward and contains many agricultural settlements.

**SHER, SIR ANTHONY** (1949– ), actor, writer, and artist. Born in Cape Town, South Africa, Sher was educated at the Webber-Douglas Academy of Dramatic Art, London. He established his reputation on the London stage during the 1980s with a number of virtuoso performances. Unheroic in stature but with an intense, vivid personality, he brought enormous dynamism and panache to every part he rehearsed. His extensive repertoire ranged from appearances in Molière's Tartuffe and the most discussed Richard III since Laurence Olivier's, to The Merchant of Venice and Singer for the Royal Shakespeare Company. His roles for the National Theater have included Arturo Ui and Mark Gertler, while his playing of Arnold in Torch Song Trilogy was outstanding. He received the Olivier and Evening Standard Awards for best actor in 1985.

Apart from a consuming acting career, Sher was an accomplished artist who exhibited both at London's Barbican and the National Theater and a highly successful author whose novels Middlepost and The Indoor Boy both received highly enthusiastic reviews. One of the best-known contemporary British actors, Sher received many awards and three honorary degrees. He was knighted in 2000. [Sally Whyte]

**SHER, NEAL** (1947– ), U.S. lobbyist and government official. Sher joined the U.S. Department of Justice's Office of Special Investigations (OSI) in 1979, becoming its director from 1983 to 1994. Established in 1979, OSI investigates, denaturalizes, and deports persons who took part in Nazi-sponsored acts of persecution, and excludes from entry into the United States any person listed on its "watch list" of suspected Nazi and Axis persecutors. Under Sher's directorship, 98 individuals who entered the United States under false pretenses by hiding their Nazi past were denaturalized, and many were deported.

Sher spearheaded several high-profile cases, including placing former Austrian president and United Nations Secretary General Kurt Waldheim on the "watch list," based on Waldheim's service in the Wehrmacht while in the Balkans and Greece as Jews were being deported and murdered there. Sher successfully prosecuted Arthur Rudolph, the former project director of NASA's Saturn V moon rocket program, who voluntarily left the country in 1984 when OSI proved he served from 1943 to 1945 as director of the Mittelwerk slave labor V-2 rocket factory. Sher also led the case against Karl Linnas,

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 18
stripped of his citizenship in 1981 when OSI shed light on his past as commander of the Tartu concentration camp and his personal involvement in the killing of thousands of Jews.

One case under Sher's directorship was particularly controversial, that of John Demjanuk, a retired Cleveland, Ohio, auto worker. In news attracting international attention, OSI accused Demjanuk of being "Ivan the Terrible," a notorious Ukrainian guard at Treblinka. In 1982, Demjanuk was stripped of American citizenship and deported to Israel and convicted of murder, though his conviction was overturned by the Israeli Supreme Court in 1993 for lack of evidence. A U.S. appeals court subsequently ruled that OSI had "acted with a reckless disregard for the truth." Demjanuk was eventually stripped of his citizenship for his activities in several concentration camps.

From 1994 to 1996, Sher was executive director of the "American Israel Public Affairs Committee (AIPAC), the pro-Israel lobby based in Washington, d.c. He lobbied Congress to increase foreign aid to Israel, to pass anti-terrorism legislation, and to urge the move of the American embassy from Tel Aviv to Jerusalem. Following AIPAC, Sher consulted with the World Jewish Congress and joined a Washington, d.c.-based law firm.

In 1998, Sher became chief of staff of the International Commission on Holocaust Era Insurance Claims (ICHEIC), established to evaluate claims against several European insurance companies and to distribute proceeds from those claims to Holocaust survivors and victims' heirs. Sher's career at ICHEIC was cut short in 2002 when he admitted to improper use of agency funds and improbabilities with respect to travel. Sher fully reimbursed ICHEIC but was subsequently disbarred from the d.c. bar. Ambassador Stuart Eizenstat, the senior government official who led efforts on Holocaust-era asset restitution in the Clinton administration, stated "I can only say it's a real tragedy ... and an exception to the decades of [Sher's] service to the country and to the Jewish community."

[Ralph Grunewald (2nd ed.)]

In 1957, on the occasion of the inauguration of the Mann Auditorium in Tel Aviv, his work Festival Preludes (Akdamot le-Moced), which won the Sol Hurok prize, was performed by the Israel Philharmonic Orchestra conducted by Leonard *Bernstein.

Over the years Sheriff wrote many works which refer to specific national subjects and events. His music often displays linkage to various Jewish cultural sources and musical traditions. By fusing Eastern and Western, new and old (sometimes, ancient) musical elements in contexts rooted in the Jewish cul-
tural heritage and openly based upon fundamental compositional models of Western music, Sheriff created a special musical idiom characterized by multiple historical sentimentality.

Sheriff’s list of works includes *Israel Suite* for orchestra (1967); *Song of Songs* for flute and orchestra (1981); *Nocturnes, Six Songs* for voice and piano (1982); *Prayers* for string orchestra (1983); *La Folia Variations* for orchestra (1984); *Decalogue* (Trei Assar) for twelve cells (1984); *Metem* for tenor, baritone, boys’ choir, men’s choir and orchestra (1985); *A Vision of David* for orchestra (1986); *Violin Concerto* (Dibrot) (1986); *Cello Concerto* (1987/96); *A Sephardic Passion* for alto, tenor, mixed choir and orchestra (1992); *Scarlattiana*, Concerto for piano and orchestra (1994); *Psalms of Jerusalem* for tenor, bass, four mixed choirs and orchestra (1995); *String Quartet No.2* ("Rosendorf") (1996); *Akedah* (The Sacrifice of Isaac) for orchestra (1997); and *Bereshit* (*Genesis*) for soloists, children’s choir and orchestra (1998).

Sheriff’s awards include the first prize of the Israel Philharmonic Orchestra Conducting Competition (1959); the *ACUM* Prize for his life’s work (1995); and the *EMET* Prize, sponsored by the AMN Foundation for the Advancement of Science, Art and Culture in Israel, under the auspices of the prime minister of Israel (2003).

* [Yuval Shaked (2nd ed.):]

**SHERIRA BEN HANINA GAON** (c. 906–1006), gaon of Pumbedita from 968–1006. Sherira belonged to the family of the exilarchs, who claimed descent from David. His teachers were his father R. Hanina and his grandfather R. Judah, both of whom he mentions frequently in his responsa and who preceded him as *geonim* in Pumbedita. On the death of Nehemiah Gaon, who had been his opponent, Sherira was appointed to succeed him. This was a critical period for the two academies of Sura and Pumbedita. Financial contributions and the addressing of queries to the academies had practically ceased and the number of students was small. Sherira renewed the academy’s ties with the communities, whose leadership he strongly rebuked for their indifference. Sherira’s personality and fame as a scholar turned the tide for a while. Despite the great expansion of rabbinic learning in Kairouan in North Africa, in Spain, and in Franco-Germany, students came to Sherira from near and far. Although Sura declined, the leadership of Pumbedita not only regained its former prestige, but claimed supreme authority; and Sherira played a key role in making the Babylonian Talmud the supreme source of authority in the Jewish world.

Sherira was among the most prolific writers of responsa. One inquiry addressed to him by *Jacob b. Nissim b. Shahin in the name of the community of Kairouan led to the writing in 987 of his famous epistle, *Iggeret Rav Sherira Gaon*, a classic of Jewish historiography. Jacob sought information as to when and how the Mishnah, the Tosefta, the *beraitot*, and the Talmud had been compiled. He inquired “whether the men of the Great Synagogue had really begun the writing of the Mishnah, and the Sages of each generation had written [more] parts of it until Rabbi [Judah] ha-Nasi came and compiled it.” Sherira deals with the question in a scholarly manner, revealing himself a practical and accurate historian (with the possible reservation that his opinions on the exilarchs, descended from *Bustanai, from whom he claimed descent, may be colored). He discusses the activity of the *savoraim* in revising and compiling the Talmud, and continues the sequence of tradition to the geonic authorities. Under Sherira and his son *Hai, the volume of geonic correspondence swelled to unprecedented proportions. Nearly half of the geonic responsa are attributed to them. Through their writings (in large part composed jointly), they greatly influenced the exegetical and judicial work of later ages. They frequently formulate rules which are of the highest importance for the interpretation of the Talmud. The majority of the responsa deal with questions of religious practice but some contain expositions and comments on passages of the Talmud and the Mishnah. Passages from a Bible commentary by Sherira are quoted by Jonah *Ibn Janah and David *Kimhi. It is unknown whether these encompassed all the books of the Bible. In addition to a glossary on the first and last orders of the Mishnah, Sherira wrote a commentary on several talmudic tractates, including *Berakhot, Shabbat, and Bava Batra*. Only a fragment of the last, apparently written in 972, has come to light (in: *Ginzei Kedem, 5* (1934), 17–23). Sherira was less interested than his son Hai in Arabic literature, though he wrote in Arabic to communities in Muslim countries. Generally, he preferred to use Hebrew or Aramaic. In his decisions Sherira endeavored to decide in strict conformity with the law.

Sherira, who was interested in Kabbalah, believed that the mystical works *Shi’ur Komah and Heikhalot* contained ancient traditions, and that the anthropomorphic elements of the former work were to be interpreted symbolically as representations of profound mysteries. He seems to have explained the *aggadah*, however, in a non-mystical manner. Sherira wrote a work, *Megillat Setarim*, which apparently discusses the importance of the *aggadah*, but that part of the work is not extant. Two years before his death, Sherira appointed his son Hai as Gaon. He died at the age of 100 (*Sefer ha-Kabbalah* by Abra- ham Ibn Daud), and on the Sabbath following his death, a special scriptural passage, “Let the Lord, the God of the spirits of all flesh, appoint a man over the congregation” (*Num.* 27:16) was read, and in the prophetic reading (*1 Kings* 2:1–12) the last verse was changed to: “and Hai sat on the seat of Sherira, his father, and his kingdom was established greatly.”

**SHERMAN, ALEXANDER** ("Allie"; 1923– ), U.S. football player and coach, twice named NFL Coach of the Year. Sherman began his career at his hometown school of Brooklyn

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 18
College playing quarterback, where he was named team captain in 1941. After graduating in 1943, Sherman was drafted by the Philadelphia Eagles, though in his first season they were the “Steagles” (Steelers + Eagles). Sherman retired from the NFL in 1947, having appeared in 51 games as a reserve quarterback. In 1949, he was named fieldback coach for the Giants and was on their staff throughout the 1950s except for 1953–56, when he served as head coach in the Canadian Football League. Sherman was named head coach of the Giants in 1961 and responded by leading the 1961 Giants, who were bolstered by the addition of future Hall of Fame quarterback Y.A. Tittle, to a 10–3–1 record and a first place finish in the Eastern League. In recognition of the turn-around, Sherman was voted NFL Coach of the Year. For the 1962 season, Sherman was given an added gun with the return of receiver Frank Gifford to the lineup. Sherman, now working with three future Hall of Famers – Tittle, Gifford, and veteran linebacker Sam Huff – guided the Giants to a 12–2 record and another first place finish in the Eastern League. Again, Sherman was named NFL Coach of the Year, the first time a coach had won in two consecutive years. The Giants had another banner season in 1963, finishing atop the Eastern League for a third straight time with an 11–3 record. After his management rewarded Sherman with a 10-year contract. However, trades, retirements, and injuries took their toll, as the Giants would go 24–43–3 over the next five seasons, and Sherman was released. He would make one more appearance as a head coach, leading the North to a 27–16 victory over the South in the 1969 collegiate Senior Bowl. In later years, Sherman worked as an executive for Time-Warner, and, by appointment of Mayor Rudolph Giuliani, served for two years as the president of the New York City OTB Corporation.

[Robert B. Klein (2nd ed.)]

SHERMAN, ALLAN (1924–1973), U.S. singer, television producer, and writer. Born Allan Copelon in Chicago, Illinois, his parents were divorced when he was six. He never saw his father again, and in time took his mother’s maiden name. His grandfather took him to see Yiddish plays, which inspired his love for theater. After he graduated high school, Sherman enrolled in the University of Illinois, where he wrote “The Campus Scout,” a humor and gossip column for the school’s daily newspaper. He enlisted in the army in December 1942 but was discharged five months later due to asthma. Sherman moved to New York and secured a job in May 1945 writing gags for radio comedian Lew Parker. He wrote jokes for Cavalcade of Stars and The 54th Street Revue, but his big break came with his co-creation of the game show I’ve Got a Secret (1952–67). The executive producers fired Sherman in 1958, saying that his focus was on too many outside projects. He continued to produce other programs until 1960, when he developed the game show Your Surprise Package for CBS and moved to Hollywood. While the program was canceled in 1962, Sherman’s parodies had caught the attention of Hollywood’s comedy luminaries. Using his connections, Sherman put out his first album on Warner Bros. Records, My Son, The Folk Singer (1962), which was followed by My Son, the Celebrity (1962), both of which were eventually certified gold. Even President Kennedy could be heard singing Sherman’s songs. In 1963, Sherman released My Son, the Nut, which included the hit single Hello Muddah, Hello Faddah, a summer camp parody sung to Ponchielli’s Dance of the Hours. Two weeks after the single’s release, he served as guest host of The Tonight Show for one week, introducing Bill Cosby in his first television appearance. In 1965, he released his autobiography A Gift of Laughter, but a failed television special and disappointing sales from five subsequent albums led Warner Bros. to drop Sherman in 1966. Sherman continued working on projects, including providing the voice of Dr. Seuss’ Cat in the Hat in The Cat in the Hat (1971) and Dr. Seuss on the Loose (1973), before his death from emphysema.

[Sherman, Archie (1911– ), British property developer and philanthropist. Sherman was born and educated in Cardiff, S. Wales. In 1939 he moved to London, where he earned a reputation as an expert on shop properties and, after a successful career in real-estate, was invited to join the City Centre Public Property Company as a co-director with Charles Clore and Jack Cotton.

His overriding interest, however, was in supporting worthy causes, and though his Charity Foundation promoted the advancement of medical science at four of Britain’s leading teaching hospitals (Guy’s, St. Mary’s, Barths, and Stoke Manderville) as well as a number of Jewish and general domestic charities.

He took up residence in Tel Aviv and eventually became a citizen of Israel. Over the years, he sponsored some 40 major projects across the expanse of Israel, from hospitals and homes for immigrants, sports centers and schools, university faculties and centers of Torah learning to day centers and kindergartens, several synagogues and mikvot.

He is only philanthropist to be accorded the distinction of a “double-first”, as the First Worthy (Neeman) of Jerusalem and the First Neeman of Tel Aviv-Jaffa for his contributions to the upbuilding of Israel.

[Adam Wills (2nd ed.)]

SHERMAN, ARCHIE (1911– ), British property developer and philanthropist. Sherman was born and educated in Cardiff, S. Wales. In 1939 he moved to London, where he earned a reputation as an expert on shop properties and, after a successful career in real-estate, was invited to join the City Centre Public Property Company as a co-director with Charles Clore and Jack Cotton.

(1997), a docudrama adaptation of the socio/political text of the same name written by professors Irving Abella and Harold Troper. This text explores the racist Canadian immigration policies set for Jewish refugees before, during, and after World War II. Sherman's latest play *Remnants (A Fable)* (2003) once again takes up this shameful history, but this time he frames it within the biblical story of Joseph, son of Jacob.

Sherman also turned his critical attention to Zionism and its place in Jewish Canadian identities. In *League of Nations* (1992), a trio of childhood friends endures a contentious reunion. Nathan Abramowitz, the play's protagonist, is confused about his Jewish Canadian heritage while Nathan Glass sees it as his duty to settle in Israel and make the land able to sustain a Jewish presence. In *Reading Hebron* (1996), the same Nathan Abramowitz questions his role in the oppression of Palestinians.

Sherman worked with professional companies across Canada and his plays have been produced at the Vancouver Playhouse, Toronto's Tarragon Theatre, and the National Arts Centre in Ottawa. He is an accomplished journalist with articles and essays appearing in *The Globe and Mail, Canadian Theatre Review* and *What,* a literary magazine he co-founded and edited between 1985 and 1990.

Sherman received the Governor General's Award in 1995 for *Three in the Back, Two in the Head,* was nominated for two others, and received the Chalmers Canadian Play Award for *League of Nations* in 1993. Sherman's fluid dramaturgical structure, his high theatricality, and his ability to handle serious material with humor make him a driving force in Canadian theatre.

[Amanda Lockitch (2nd ed.)]

**SHERRY, LAWRENCE** (Larry; 1935– ) and NORMAN BURT (Norm; 1931– ) U.S. baseball-playing brothers. A native of Los Angeles, Larry Sherry was born with club feet and underwent operations at the age of six months to correct the deformity, having to wear braces to walk properly until the age of 12. At Fairfax High School, he was converted from an infielder to a pitcher because of his lack of speed. A right-handed pitcher, Larry Sherry made his Major League debut on April 12, 1959, and played for the Los Angeles Dodgers (1959–62) and the New York Mets (1963). In 194 games, he batted .215 with 45 runs and 69 RBIs. Sherry managed the California Angels from July 23, 1976, to July 11, 1977. He is credited with helping Koufax's struggling career by advising him during spring training in 1961 to "just try to throw easier, throw more changeups, just get the ball over." On May 7, 1960, August 30, 1961, and June 28, 1962, Larry and Norm were battery mates, the 13th and last brother battery in M.L.B. history, and the only Jewish brother battery in history. Norm's homer in the 11th inning won the 1960 game for Larry.

[Elli Wohlgerlnter (2nd ed.)]

**SHESHBAZZAR** (Heb. שֵׁשֶׁבָּזָרָא שֵׁשדנָצָר, the prince (nasi) of Judah at the beginning of the return to Zion of the Babylonian Exile (538 B.C.E.). According to the Book of Ezra (1:8–11), King Cyrus of Persia delivered the Temple vessels, taken by Nebuchadnezzar from Jerusalem, to Sheshbazzar, the prince of the Jews, who brought them to Jerusalem during the return from Babylon. This is also mentioned in Ezra 5:14, where Sheshbazzar is called governor. Opinions differ on the origin, rank, and role of Sheshbazzar during the return to Zion. Some assumed him to have been a gentle, Persian or Babylonian, governor in the service of the king of Persia; others thought that he was a Jewish officer, not from the House of David, who was appointed over Judah for a short while at the beginning of the return to Zion; and some even held that his role in connection with the return to Zion was to restore the Temple vessels to Jerusalem. However, the title "prince" by which the prophet Ezekiel designates the Davidic ruler (Ezek. 37:25), supports the supposition that Sheshbazzar was the leader of the people of Davidic origin, and was appointed ruler of Judah by the king of Persia. There were also those who attempted to identify Sheshbazzar with "Zerubbabel on the assumption that this was Zerubbabel's Babylonian name. This hypothesis is, however, unlikely if only because both Sheshbazzar and Zerubbabel are Babylonian names. Many scholars have accepted the more probable view, which identifies Sheshbazzar with Shenazzar, son of Jehoiachin, the uncle of Zerubbabel, who is mentioned in 1 Chronicles 3:18. An examination of the Septuagint transliterations of these two names supports the view of W.F. Albright that both revert to a basic form, Sin-abùsur, a name common in the cuneiform documents of this era and found in an Aramaic document in the form of Shenabazar. If Sheshbazzar is Shenazzar, the uncle of Zerubbabel,
then he quite naturally stood at the head of the returnees, and since he was born close to the time of the exile of Jehoiachin (c. 595 B.C.E.; see *Jehoiachin), he would have been about 60 years old at the time of the return to Zion, and apparently did not live long. Because he apparently stood at the head of the returnees for only a short time, the image of Zerubbabel overshadowed him in the narratives of subsequent generations, and thus Sheshbazzar is mentioned in the Book of Ezra only in connection with the return of the Temple vessels.

**SHESHET** (late third century and the first half of the fourth century C.E.), Babylonia amora. Sheshet's main teacher is not definitely known. He attended *Huna's lectures* (Yev. 64b; Ket. 69a) and quotes statements in the name of *Jeremiah b. Abba* (Eruv. 12a) and *Rav* (Yev. 24b). He taught in Nehardea (Meg. 29a) and Maoza ( Ned. 78a), and later founded an academy at Shilhe on the Tigris (Letter of Sherira Gaon, ed. by B.M. Lewin (1921), 82). His most constant colleagues were *Nahman b. Jacob* and *Hisa*. Sheshet suffered from both physical frailty (Pes. 108a) and blindness (Ber. 58a). However, although requiring the aid of a reader (Sanh. 86a), he overcame these difficulties by his great determination (Men. 95b) and an extremely retentive memory (Shev. 41b). It is recorded that Hisa's lips trembled in admiration when he saw the ease with which Sheshet quoted *beraitot* (Eruv. 67a).

The distinctive feature of his teaching was his insistence on the authority of precedent. He usually justified a decision by saying, "We have learnt it in the Mishnah or in a *bara'aita" (BM 90a; Yoma 48b; Yev. 11b). His favorite question to his pupils was, "What is my source for this?" and his answer would be "For we have learnt it in a *bara'aita" (Kid. 68a). Compared Yev. 35a, 48a; Shab. 123b). He was a keen scholar (Ber. 8a) and used to recapitulate his studies every 30 days (Pes. 68b). It was once said of him, "It is good when one possesses a keen understanding in addition to the inheritance of tradition" (Bek. 52b and Rashi ad loc., see Eccles. 7:11). He was, however, averse to the casuistry of Pumbedita. He once answered one of Amram's quibbling objections with the remark, "Are you not from Pumbedita, where they draw an elephant through the eye of a needle?" (BM 38b). *Nahman testified that Sheshet taught halakhot, *Sifra, *Sifrei, "Tosefta, and all of the Talmud (Shevu. 41b). Sheshet himself admitted, however, that in matters of *aggadah, "I cannot dispute with Huna" (Suk. 52b and Rashi ad loc.). He explained Proverbs 3:16, "Length of days is in her right hand, and in her left hand riches and honor," to mean that whoever studies the Torah with due respect receives as his reward length of days as well as riches and honor. He who does not do so, receives riches and honor, but is denied length of days (Shab. 63a). He was also the author of the maxim, "A borrower is the slave of the lender" (Git. 14a).

The Talmud illustrates his piety by recording that he never took more than four paces without wearing his *tefillin* (Shab. 118b and Rashi ad loc.). It is also related that a sectarian once taunted Sheshet that because of his blindness, he would not be able to know when the king, whom a large crowd was waiting to see, would pass by. Despite the efforts of the sectarian to mislead him, Sheshet nevertheless managed to identify the exact moment of the king's passage. In reply to the enquiry as to how he knew, he replied, "The earthly kingdom is like unto the heavenly, and (in 1 Kings 19:12–13) God's appearance is announced by a deep silence" (Ber. 58a).

**SHESTAPOL, WOLF** ("Veleve Khersoner"; c. 1832–1872), hazzan. Shestapol was born in Odessa and as a youth sang with his father Samuel and with Bezalel *Shulsinger* (Odesser). After his appointment as hazzan in Kherson he studied for some time with Solomon *Sulzer* in Vienna. Shestapol derived his inspiration from those aspects of European art music which had become accessible to him in Odessa and Vienna. In his case, the dependence on Italian and French opera was extremely pronounced. His compositions, of a soft and lyrical character, became very popular and some of them were taken over into the Yiddish theater by *Goldfaden and others. They include *Ommam Ken, Misaf-Kaddish* for the Penitential holidays, *Ve-al ha-Medinot*, and *Adonai Zekharanu*.

[Bathja Bayer]

**SHESTOV, LEV** (pseud. of *Lev Issakovich Schwarzmann*; 1866–1938), religious philosopher and man of letters, born in Kiev. His father was a wealthy textile manufacturer, and Shestov absorbed an interest in Yiddish and Hebrew literature. Much of his later work is at least congruent with his hasidic roots. He is known for his elegant and witty, aphoristic style, the range of his erudition and interests, and the trenchancy of his critique of rational speculation and systematic philosophy as modes of truth. His most outstanding gift as a writer was his ability to characterize thought and style by conveying a sense of the human experience that produced it, and he called his essays "pilgrimages through souls." Although he left no direct disciples, Albert Camus, Nicholas Berdyaev, and D.H. Lawrence, among others, testified to his impact. He was close to, and appreciative of, even the philosophers whose efforts at system he set himself most strongly to oppose – Edmund Husserl and Karl Jaspers. His essays on Chekhov, Ibsen, Dostoevsky, and Tolstoy are famous. Like the Hasidim, Shestov cultivated a respect for mystery and paradox that survived the most intensive rationalist training. He cared too much for inwardness, for inner expe-
rience as an access to salvation, to rest within what was orthodoxy in Judaism. At the same time he was too dismayed with the Logos of the Fourth Gospel, too smitten with love for the Old Testament God, with all his arbitrary caprice, to have other than short shrift for conventional or churchly Christianity. Yet Shestov was both a Jew and a Christian; and for him the fundamental antinomies were not between the Old and New Testament, or even between religion and atheism, but rather, as the titles of his last two books clearly state, between, Speculation and Revelation, and Athens and Jerusalem (1938). Well trained in logic and philosophy, Shestov was against rational speculation only insofar as he felt it attempted to limit human possibilities. He was against what he felt was Husserl's project of turning philosophy into a science, and believed that philosophy should concern itself primarily with questions that could not be answered by reason, but only by the "cries of Job" – i.e., by direct human experience. He believed that rational speculation ("Athens") had infected religion as well as philosophy. Against Philo and St. Thomas, Shestov cited Tertullian, who believed it was absurd; Luther, who grasped that the essence of action and therefore of "good works" was limitation, hence mediocrity, and that salvation could come by faith alone; and those biblical heroes of faith, Abraham and Job.

Trained as a lawyer at Kiev University, Shestov never practiced. Although early committed to radical politics, he never entertained illusions about the Bolshevik Revolution, and emigrated shortly after it occurred. In 1922 he became professor of Russian philosophy at the University of Paris.

[Sidney Monas]

SHETAR (Heb. שטר), formal legal document, or deed, derived from the Akkadian satāru, meaning writing.

Early Examples

The term shetar is not found in the Bible, where the term sefer is used to denote a legal document, such as sefer keritut in Deuteronomy 24:1 for bill of divorce, or sefer ha-niknah in Jeremiah 32:11 for bill of sale. In tannaitic literature the terms iggeret, get, and shetar are commonly used to designate various types of legal documents. Subsequently, the word get acquired a more limited meaning, restricted to a document expressing legal separation such as divorce or manumission of a slave. In geonic times, the term ketav was frequently used to designate a legal document. The only legal document whose execution is elaborately described in the Bible is the one referred to in Jeremiah, which seems to have been written in duplicate, and was subscribed to by witnesses. One copy was sealed; a second copy was left unsealed for ready access. The sealed document is the antecedent of the "tied deed" known as a Doppelurkunde. Such documents were in wide use in the Near East during the period of the First and Second Temples.

The earliest known and extant collection of legal documents of Jewish origin is one from the Jewish garrison in Yeb of the fifth century B.C.E., written in Aramaic, known as the Elephantine Papyri. It is a collection of 33 complete legal documents of various kinds, including a ketubbah. They resemble the basic forms of Jewish documents as used in talmudic and post-talmudic times. In the Book of Tobit (probably composed in the second century B.C.E.) 5:3 there is a reference to a deed of deposit as well as to a marriage document. There is sufficient evidence to conclude that forms of legal documents were already standardized during the last two centuries of the Second Temple. Recently there have been discovered, among the "Dead Sea Scrolls, legal documents dating from the first century C.E., which conform to the standards referred to in tannaitic literature. It is noteworthy that despite the large number of references to legal documents in tannaitic and amoraic literature, no complete form of legal contract or bill of indebtedness is recorded in the Talmud. There are, however, references to individual clauses and expressions, and their legal effects. It is evident that formalities were strictly adhered to, and that formularies, i.e., prototype standard forms, were available to the scribes, who would either copy the forms or merely fill in the particular information (Git. 3:2). These formularies related to every area of human relationship. Professional scribes were generally employed, and during the period of the Second Temple bonds of indebtedness were deposited in special archives for safekeeping (Jos., Wars, 2:427).

From the geonic period there is preserved a collection of 28 formularies attributed to Hai Gaon, who died in 1038 C.E. (see bibl.). Many later collections are extant containing different types of forms, some including additional provisions to meet the demands of new exigencies. Asher Gulak edited a thesaurus of such formularies (Ozar ha-Shetarot, 1926), containing 403 different forms, each representing a particular type of deed. Among these forms are private documents, such as family and commercial agreements, as well as judicial and communal Shetarot.

One of the earliest forms of documents was the "tied deed," get mekushar, which is described in the Mishnah (BB 10:2) and Tosefta (BB 11:1). It was a formal legal document wherein the agreement was written on one side and the document was then folded. The parchment was cut at the top in strips which were tied together, and three witnesses then signed between the knots on the reverse side. Such documents have been found among the Dead Sea Scrolls. The Talmud relates that this type of document was instituted by the rabbis to make it more time-consuming and more difficult for priests, who might on impulse divorce their wives and are prohibited from remarrying even their former spouses (Yad Ramah to BB 160b; see *Divorce; *Marriage, Prohibited). In contradistinction to the get mekushar is the get pashut, ("plain deed"), which is not folded and tied and requires only two witnesses. This is the form in use today.
**Format of the Shetar**

Every shetar, as a formal document, requires the signatures of witnesses. It does not require the signature of the obligor. Credence is given, however, to documents either signed or written by the obligor, but unwitnessed, and which otherwise do not comply with the formalities of a shetar. Such a document is called ketav yad ("his own handwriting"; equivalent to a memorandum), and has the status of an oral understanding with all its legal consequences and without creating a lien on reality (Tur, 69; see *Lien; *Obligations, Law of). The shetar is somewhat different from modern western forms of contract which recite the facts of an agreement. The shetar records the testimony of the witnesses who state that on a given day the named obligors appeared before them and said such and such. For many centuries documents written in Israel and the countries of the Middle East and Africa would usually refer to the date according to the Seleucid calendar ("Era of the Documents"). Documents written in Europe usually referred to the year since creation ("Era of the Creation").

For the purpose of analysis, a shetar may be divided into two parts. The first part is the tofes (typos, "frame"), which is the general section of the instrument. A stereotyped copy may be used, not prepared specifically for the contract being undertaken. It contains the standard words of the preamble and the close of the document, as well as the words of obligation and additional clauses which protect the obligee in every conceivable way permitted. The toref contains the names of the parties, the date, the nature and amount of the obligation. During the centuries in which Jewish civil law governed the internal economic relations between Jews, there developed additional clauses and provisions, which were inserted into shetarot mainly for the protection of the obligee. These clauses include the following:

1. A credence clause (neemanut) in which the obligor under the agreement asserts that he relieves the claimant of any oath which may be necessary, and that he considers the claimant's testimony that he has not been repaid sufficient to preclude the obligor from raising such a defense. The basis for this clause is to be found in Shevu'ot 42a. There are, of course, variants in the wording of such clauses which may strengthen the position of the claimant (Tur, H M 61).

2. The right to collect from the best of the obligor's property (shefer erg ekhasin). Though according to the Talmud a creditor can recover first from the average quality real estate of the debtor, and a woman for her ketubbah first from the least desirable land of her husband (see *Execution), this clause, which is found in the usual ketubbah and bill of indebtedness, improved the claimant's position, so as to recover from best quality realty.

3. A clause allowing the claimant to recover costs of litigation (see *Execution).

4. The obligor must sell his property to pay his obligation, rather than await a court sale (see *Execution).

5. In some isolated cases there were even incorporated undertakings by the obligor of personal servitude or imprisonment in case of his default (see *Execution; *Imprisonment for Debt).

6. A common clause allowing the claimant to render the document effective through the use of a non-Jewish court, and in some cases by personal force (see *Mishpat Ivri). The end of the shetar usually included the statement that it was not a mere form but an actual document, and concluded with the words, sharir ve-kayyam ("firm and established"). Any provisions added after this phrase (other than corrections) are of no effect.

A legal instrument may not be written on a material which is susceptible to forgery. In the event of a correction, a mark must be made next to the corrected word or clause, and a reference to it must be added at the foot of the document, which must be witnessed (Tur, H M 42; see *Forgery).

To enforce a claim based on a shetar, the claimant must submit the document to a court of at least three persons to establish the authenticity of the witnesses' signatures. This may be accomplished either by the witnesses themselves identifying their own signatures, or by others testifying that they are familiar with the signatures of the witnesses, or by a handwriting analysis. Once the signatures are authenticated, the court appends a validation certificate, henpek (or hanpek) or asharta, which precludes any future challenge to the validity of the document. This proceeding before the court may take place without the obligor being present and even over his objection. Such certification is referred to in the Talmud (BM 7b) and appears among the Elephantine documents of the fifth century B.C.E.

The language of a document does not affect its validity. Indeed, in addition to Aramaic or Hebrew, legal instruments were written in Persian, Arabic, Latin, Greek, English, Spanish, and all other languages used by Jews. Bills of divorce, however, were subject to special rules.

**Shetarot Written before Gentile Courts**

The general rule, as stated in the Mishnah, is that all legal instruments written by non-Jewish courts and witnessed by non-Jews are valid, except for bills of divorce and manumissions of slaves (Git. 1:5). Although there existed differences of interpretation and application between various rabbinic authorities on this point, it was generally agreed that, where there was a basis for holding that the non-Jewish court was not totally corrupt, credence would be given to legal instruments such as contracts, deeds, and bills of indebtedness. A distinction is made between documents which evidence a business transaction, or at least state consideration, and which under the rule of "dina de-malkhuta dina" ("the law of the land is the law") required recognition, and deeds of gift which take on different legal incidents (Maim. Yad, Malveh ve-Loveh, 27:1). The medieval rabbis distinguished between deeds written in gentile courts and those written before notaries outside the court. Maimonides ruled the latter invalid, while Nahmanides upheld their validity.
Types of Document
A review of the various types of documents assembled in Gulak’s Oẓar ha-Setarot is sufficient to indicate the wide scope of relationships covered by such documents. These may be divided into the following five categories:

(1) Family Documents: These include *betrothal agreements, *marriage contracts (see *ketubbah), antenuptial agreements, releases between *husband and wife, *divorce documents, halizah and yibbum, (see *Levirate Marriage), wills, deeds of trust (see *Shalish; *Consecration and Endowment) and guardianship (see *Apotropos), and support contracts. It is evident that these documents cover the entire range of family relationships and evidence a sophisticated legal development. One of the more interesting documents is the shetar shiddukhin (see *Betrothal), a contract between two sets of parents in which both parties undertake to betroth their children to each other, and promise to contribute whatever dowry is involved. The difference between this and a shetar erusin ("contract of betrothal") is that the latter document deals with promises made to and by the prospective couple, while the shetar shiddukhin involves promises exchanged by their parents or guardians. The get ("divorce") contains specific formulæ which are dealt with elsewhere (see *Divorce).

(2) Business Documents: These documents relate to economic relations between Jews and include bills of sale, gifts, leases, partnerships, Iska (see *Partnership), mortgages (see *Lien), bonds, receipts, *assignments, letters of *attorney, employment contracts (see *Labor Law), and escrow agreements. Each of these deeds had its own historical development. Thus, there exist many copies of partnership agreements in the Cairo Genizah which represent the frequent use of partnership, even on an international scale, during the period between the middle of the tenth to the middle of the 13th century.

(a) Shetar Hov, bond, bill of indebtedness. This is probably the most frequently used private legal document besides the ketubbah. In fact, when the term shetar is used without modification it refers to a shetar hov. It should be noted that a shetar hov may result from any type of credit or obligation transaction and need not be the result of a loan of money (see *Loans; *Obligations, Law of). A unique and important feature of the shetar hov (as well as of the ketubbah) is the fact that the shetar hov itself creates a lien on the debtor’s real property, aharayut nekhasim or shi’bud nekhasim, which is an effective claim against that property even when it is sold to a third party. In other words, the shetar hov creates a mortgage on all the real property owned by the debtor on the date of the execution of the document. This provision was inserted into the ketubbah by Simeon b. Shetah (Tosef., Ket. 12:1) in the first quarter of the second century B.C.E. The Talmud records a difference of opinion as to whether we do or do not imply the existence of such a lien when the phrase stating it is omitted. The final decision is that we attribute its omission to a scribal error, and assume the intention to create the lien. As a result of the creation of this lien, predated bonds are invalid because they prejudice the rights of other creditors, while postdated bonds are valid. During the geonic period the lien was extended by appropriate clauses in the document to movable property, and even to property to be acquired later than the time of the contract. The rabbinic courts, however, would not enforce the claim of a creditor against the movables sold by a defaulting debtor.

The Torah prohibits the taking of interest for a loan (Ex. 22:24; Lev. 25:36–38; Deut. 23:20–21), and indeed a document which states that interest is to be paid is invalid (see *Usury). The Elephantine documents do, however, contain penalty clauses which become operative if the debt is not repaid when due. Such a clause is prohibited by the majority of rabbinic opinion, but was widely used with approval in medieval England (during the 12th and 13th centuries), when a certain formal clause was included which stated that, on default of repayment, the loan was reloaned to the debtor via a gentle intermediary. This legal fiction permitted the acceptance of the interest. A shetar hov which does not state when the debt is due is repayable not earlier than 30 days from the date of the loan.

During the Second Temple period assignment of debts by the obligee was permitted. In fact the innovation of *probul was predicated on this assumption. In amoraic times, restrictions were placed on this right of assignment by permitting the assigner to forgive the debt after assignment (Kid. 48a). The Talmud also refers to bonds made out to the order of the holder. This type of document would be considered by modern standards as a bearer paper. The question as to whether or not an assignee could claim under such a document is left unresolved in the Talmud. In post-talmudic times, however, it was the custom to insert a phrase in the bond allowing the named creditor or his agent to claim on the bond. Subsequently, there developed a document which named no creditor, but merely evidenced indebtedness to holder muqaz (משי; mozi ketav zeh). In order to assign a debt from a named creditor to another, it was necessary to write a deed of transfer which, together with the original bond, had to be physically conveyed to the assignee. This procedure is called ketivah u-mesirah (see *Acquisition, Modes of). There is some question as to whether this would be effective as against the debtor. Another method employed was to write a letter of attorney, harsha’ah, which provided for the transfer of four ells of land together with the indebtedness. From the tenth century on these four ells were the ones theoretically owned by every Jew in Israel (see *Agency, Law of).

(b) Shetar Iska, a type of limited partnership agreement wherein the active partner borrows from a passive partner. Half the money is considered loan and half is investment in the business. This enables the active partner to pay a return to the passive partner, usually one third, without its being considered as usury. This type of agreement, which is referred to in the Talmud (B.M. 104b), was also called shetar kis and became very popular in the Middle Ages, when the Jews were very active in the moneymooning business and would borrow additional loan capital from fellow Jews. Originally, the pas-
sive partner bore part of the risk of loss. Later amendments to the standard text of such a document included undertakings by the active partner which amounted to a guarantee to the passive partner against any loss (see Gulak, Ozar, nos. 234 and 235). The shetar iska resembles the medieval Latin document known as commenda (see *Partnership; *Usury).

(c) Sufajia or Diokne, bills of exchange. This type of document was in use during the geonic period in the countries involved in the Mediterranean trade centering on Egypt. As a rule these documents were drawn on well-known banks in another city or country, which charged a fee for their issue. In this way they facilitated international trade and functioned very much like the modern bill of exchange or check. These documents did not conform to Jewish law, but were, nevertheless, enforceable in rabbinic courts, where the law merchant was applied to protect the businessmen who relied on these documents (A. Harkavy (ed.), Zikhron Kamnaha Geonom (1887), no. 232; see *Minhag).

(d) Minram, also mimram, a note of indebtedness which was widely used among Jews in eastern Europe between the 16th and 18th centuries. The form of the document consisted of the signature of the debtor on one side of the note, and on the reverse side, exactly opposite the signature, a statement as to the amount owed, the terms of payment (date due), and sometimes the place of payment (Sifrei Kohanim, HM 48). The origin of the term is not clear. It is probably derived from the Latin, membrana ("parchment"). Some suggest that it is a derivative from the document of remembrance referred to in the responsa of *Asher b. Jehiel (Rosh, resp. no. 68:3) and corresponds to the Latin, in memoriam. The significant innovation of this document is the omission of the name of the creditor, which results in its being completely negotiable without any further requirements. The Jewish community councils of Poland passed special regulations protecting the holder of such notes, and implying, as a matter of law, waiver of defenses which the defendant may interpose. In fact, the shetar mimram does not conform to halakhic principle; nevertheless, it was granted rabbinic sanction as a result of its wide use (Bah Yeshanot, resp. no. 351). During the trade fairs in Poland there also developed the practice of having these notes signed in blank. Afterward the sum and terms of payment would be completed. This obviously involved the element of trust on the part of the purchaser (debtor) and a close relationship between the merchants. The use of mimramot was so widespread in 17th- and 18th-century Poland that a very substantial trade existed in the discounting and sale of such documents.

(3) Court Documents. Each stage of the rabbinic judicial process was recorded, and appropriate legal documents were issued by the court. These included summons (hazmanah le-din), decision (pesak din), appraisal of the debtor’s property (shuma), writ of execution against the property (shetar adrakhta), and writ of execution against transferred realty (shetar tirfa).

(4) Communal Documents. From the time of the destruction of the Second Temple to modern times the Jewish community was self-governed as to its internal affairs. Thus it had its own system of taxation and means of enforcing compliance in accordance with the decisions of the rabbinic court and community councils. The decree of *herem ("excommunication") was its most powerful weapon. Other examples of community documents are ordination (*semikhah), letters of appointment of rabbis, community loan bonds, right of settlement, and hazakah.

(5) Miscellaneous Documents. There are many other documents which cannot be classified under any of the above categories. Some of these are of historical interest. Among them are deeds of manumission of *slaves and bills of sale for slaves. One interesting document recorded by Gulak (Ozar no. 399) is an order for anyone who had a claim against the overlord of Vienna in 1387 to come forward with his claim within 30 days or be forever barred.

[Abraham M. Fuss]

Contemporary Research into Legal Documents 1975–2005

The period 1975–2005 witnessed increased interest in the study of legal documents, and more in-depth study of those documents previously noted.

Y. Muffs, Studies in Aramaic Legal Papyri from Elephantine, was reissued with a long Prolegomenon by Baruch Levine (Leiden 2003). The work of Bezalel Porton and Ada Yardeni, Textbook of Aramaic Documents from Ancient Egypt (1989), newly copied and translated have expanded the scope of the studies.

Legal documents from the Dead Sea—Qumran discoveries have been published and are the subject of a number of studies which provide insights into the business activities and social lives of people living in the first centuries of the common era. In this category are Hannah M. Coton and Ada Yardeni, Aramaic, Hebrew, and Greek Documentary Texts from Nahal Hever and Other Sites (1997; Discoveries in the Judean desert, vol. 27), and Klaus Beyer, Die aramaischen Texte vom Toten Meer (Gutenberg 1984), which has a section dealing with private documents, including both formal and informal legal documents from the Dead Sea area, see pages 304–27.

Gulak’s Das Urkundenwesen im Talmud, published in 1935, has been translated into Hebrew with supplemental notes by Ronan Katzoff, Legal Documents in the Talmud, In Light of Greek Papyri and Greek and Roman Law (Jerusalem 1994).

The first collection of rabbinic formularies is that of *Saddiah Gaon (b. 882). M. Ben Sasson published substantial fragments from Saddiah’s Sefer ha-Edut ve ha-Shetarot in Shenaton ha-Mishpat ha-Avri, vols. 11–12 (1984–85), pp. 135–278. This is also the best scholarly edition of the early formularies.

The study of the Cairo Genizah documents was greatly stimulated by the work of S.D. Goitein and his classic A Mediterranean Society. Volume 1, published in 1967, dealt with economic matters. The fifth volume, the last, was published in 1988 shortly after his death. Goitein describes legal instruments, such as partnership contracts and other documents used in business and court proceedings, which have not been
published as of 2005. For the legal historian it is necessary to have access to the texts of the documents to determine the nuances in the wording of documents which allow us to learn what problems those nuances are intended to solve. An example of such study is J. Rivlin’s Bills & Contracts From Lucena, (1020–1025) (Heb., Bar-Ilan University Press, 1994), which consists of 45 original documents emanating from the Cairo Genizah which come from southern Spain and were written in Hebrew; the work provides commentary and reference to specific emendations. See also Rivlin’s Inheritance and Wills in Jewish Law (Heb.; Bar-Ilan University Press, 1999), pp. 307–411, on which appear the texts of wills and gifts in contemplation of death from the Cairo Genizah, and his article in HUCA (Hebrew Section), vol. 73, p. 79ff.

There are stills thousands of documents unpublished from the Genizah. The Cambridge Taylor-Schechter collection, which is the largest depository of Genizah documents, has commenced a program of digitizing documents and putting them on the Internet. Hopefully it will be possible to study the legal documents directly within a few years.

Various collections of medieval shetarot which were required to be registered in government archives are still extant. Some of these are now being published. Thus, Elka Klein, Hebrew Deeds of Catalan Jews – 1171–1316 (Barcelona–Girona 2004), is a welcome addition. The Hebrew documents are also translated into Spanish. Another work of this kind is Ignacio Ferrando, 23 Contratos Comerciales Escritos por Los Judíos de Toledo en Los Siglos XIII Y XIV: Edicion Completa y Estudio Linguistico de los Datos Judeo-arabes y Andalusies (University of Zaragoza 1994). The previously published collections of shetarot are listed in M. Elon, Jewish Law: History, Sources, Principles, vol. 3, pp. 1529–40; in N. Rakover, Ozer ha-Mishpat (Tel Aviv 1990) and in The Multi-Language Bibliography of Jewish Law (Jerusalem 1990), p. 701.

Examples of studies which deal with particular historical aspects of shetarot are Edward Fran, Ideals Face Reality, Jewish Law & Life in Poland 1550–1655 (Cincinnati 1997); A Fuss, Mishpat Avraham, (Heb., Jerusalem 2004).

[Abraham M. Fuss (2nd ed.)]

SHETZER, SIMON (1900–1947), U.S. attorney, merchant, and Zionist leader. Shetzer was born in Detroit, Michigan, and after some years practicing law, he joined his family’s wholesale dry goods distribution firm. In the 1930s Shetzer was a leader in Detroit Jewish life, organizing the Detroit Jewish Community Council and serving as its president (1937–41), among other activities. Long active in Zionist affairs, he served the Zionist Organization of America as president of the Michigan and then of the Midwest region. In 1941 he became national executive director of the ZOA, serving until 1943.

SHEVAT (Heb. שבט), the post-Exilic name of the 11th month of the Jewish year. Occurring in Assyrian and other early Semitic inscriptions, in biblical and apocryphal records (Zech. 1:7; 1 Macc. 16:14), and frequent in rabbinic literature (e.g., Megillat Taanit), the name is held to be etymologically connected with the root sbt from which terms are derived for instruments used in “beating” and “striking” in Semitic and in some Indo-European languages. The zodiacal sign of Shevat is Aquarius. In the present fixed Jewish calendar it invariably consists of 30 days, the 1st of Shevat never falling on Sunday or Friday (see “Calendar”). In the 20th century, Shevat in its earliest occurrence extended from January 1st to 30th and in its latest from January 31st to March 1st. Historic days in Shevat are feasts; (1) Second of Shevat, the anniversary of the death of *Alexander Yannai (Meg. Ta’an. 11); (2) 15th of Shevat, the New Year for trees (see “TuBi-Shevat; RH 1:13); (3) 22nd of Shevat, the anniversary of the assassination of the emperor *Caligula and the abolition of his blasphemous decree to erect his statue in the Temple in Jerusalem (Meg. Ta’an. 11; January 24th, 41 C.E.); (4) 28th of Shevat, the anniversary of the death of *Antiochus IV Epiphanes (Meg. Ta’an., ibid.); fasts: 5th (or 8th) and 23rd of Shevat, once observed in memory of the death of righteous men in the generation of Joshua the son of Nun (ibid., 13; Jud. 2:10), and of Israel’s battle against Benjamin and the idol of Michah (ibid., 17–21).

[ Ephraim Jehudah Wiesenbarg]

SHEVELOVE, BURT (1915–1982), U.S. theater writer. Born in Newark, N.J., Shevelove graduated from Brown University and earned a master’s degree in theater from Yale. After serving as a volunteer ambulance driver in World War II, he started his theatrical career in 1948 when he co-produced, directed, and wrote material for the revue Small Digest. He
directed a revival of Kiss Me Kate in 1956, then Bil and Cora Baird’s Marionette Theater, and later Hallelujah, Baby!, which won a Tony Award as best musical in 1967. But as co-author with Larry Gellbart of A Funny Thing Happened on the Way to the Forum, Shevelove scored his biggest triumph. The zany musical, with Zero Mostel in the starring role, won six Tony awards, including best musical and best book. Based on the works of Plautus, Funny Thing had its origins in Shevelove’s research on the plots of Plautus when he was a graduate student. In 1971, Shevelove directed a revival of No, No, Nanette, which brought Ruby Keeler, the film and stage star, out of retirement to win new fame. Shevelove, who worked with Stephen Sondheim on Funny Thing, collaborated with him again in 1974 on an adaptation of Aristophanes’ The Frogs, which he directed at Yale. The memorably unconventional production was performed in and around the Yale pool. In theater circles, Shevelove was well known as a play doctor, helping musicals that were in difficulty to reach Broadway. He also produced, directed, and wrote many television shows, for which he won Emmy and Peabody Awards.

[Stewart Kampel (2nd ed.)]

**SHEVI’IT** (Heb. שביית; “Seventh Year”), fifth tractate in the Mishnah order *Zera’im*, dealing with the problems of the sabbatical or *shemittah* year. There is Gemara in the Jerusalem Talmud but not in the Babylonian.

The contents of the ten chapters of the mishnaic tractate are briefly as follows: Chapters 1–2 deal with the problems of *tosefet shevi’it*, certain agricultural works which had to be stopped, by rabbinical command, already in the sixth year, on the “eve of the seventh.” Chapters 3–4 speak of works allowed during the sabbatical year. Chapter 5 deals with the special regulations concerning specific products and discusses the attitude toward people suspected of not observing the *shemittah*. Chapter 6 speaks of the differences between the various areas of the Holy Land as to *shemittah* observance. Chapters 7–9 define the plants and products subject to the *shemittah* year. There is *tosefet shevi’it* included under the *shemittah*. Chapter 10 speaks of the release of debts and discusses the institution of *prosbul*.

The closing sentence of the tractate affords a good example of equity in Jewish law. Having mentioned that the sages are pleased with him who repays a debt despite the sabbatical year, it concludes that equally praiseworthy is he who keeps the *prosbul*; he who repays a debt despite the sabbatical year, it concludes that equally praiseworthy is he who keeps

once threatened to kill if he did not eat the forbidden food he offered him; when the rabbi remained steadfast, the gentle declared that, in fact, he had wanted only to test his loyalty to Judaism, and, on the contrary, he would have killed him had he eaten it (T1, 422, 35a–b).

The Tosefta to this tractate is divided into eight chapters. Interesting is the account of how the produce of the *shemittah* year used to be stored in communal granaries, and allocations made to the members of the community, each according to his needs, every Friday (8:1). The Mishnah was translated into English by H. Danby (1933).

For bibliography see the main articles on *Mishnah*, “Tal- mud, and “Tosefta.”

**SHEVU’OT** (Heb. שבעות; “Oaths”), sixth tractate of the order *Nezikin* in the Mishnah, Tosefta, and the Babylonian and Jerusalem Talmuds. It deals with oaths of various kinds but also with some aspects of ritual impurity. A link between these apparently diverse subjects is indicated in Leviticus 5:1–13. The fact that Shevu'ot, with eight chapters, follows Makkot, with three, seems to contradict the rule that the sequence of tractates within a given order is in the descending order of the number of chapters. However, it is clear from the Talmud (see Shevu. 2b, bottom; also Rashi in loc.) that Makkot was once joined to Sanhedrin, giving it a total of 14 chapters (see H.L. Strack, Introduction to the Talmud (1931), pp. 27, 51; H. Albeck, Mishnah, Seder Nezikin (1952–9), p. 3).

The contents of the Mishnah in brief are as follows: chapter 1 opens with the terse statement: “Oaths are two, which are four,” i.e., to the two kinds of oaths referred to in Leviticus 5:3, called shevu'ot bittui (“oaths of utterance”), the Oral Law added two similar ones. Examples of these oaths are given at the beginning of chapter 3, and with them the discussion on oaths actually begins: “(I swear that) I will eat”; “(I will not eat); “I have eaten”; and “I have not eaten.” This differentiation helps to establish whether, and what, sacrifices are due in case of their violations. The phrase, “two, which are four,” characteristic of the oldest stratum of the Mishnah, is used also with regard to ritual uncleanness and introduces chapter 2. In fact, most of the rest of the first chapter deals with this subject, which is continued in chapter 3. Chapter 3 distinguishes between shevu'at bittui and shevu'at shav (“vain” or “false oath”). The latter applies when one asserts by oath something contrary to accepted knowledge, or impossible, e.g., swearing that a man is a woman or that one saw a flying camel. Swearing that one will violate a religious precept also belongs to this category. The following four chapters deal with judicial oaths. In fact it is because of the legal significance of the oath that Shevu'ot was placed in the order Nezikin, which deals predominantly with matters of law and judicial procedure. Chapter 4 deals with shevu'at edut (“oath of evidence”); chapter 5 with the shevu'at ha-pikkadon (“oath relating to baliments”), in accordance with Leviticus 5:21 ff.; chapter 6 with the shevu'at ha-dyyanim, i.e., oaths imposed under certain circumstances by the court on
the defendant; and chapter 7, having noted that according to
Torah law the plaintiff has the privilege of being allowed to
take an oath and consequently of receiving judgment in his
favor, goes on to discuss instances when by rabbinical enact-
ment the defendant also has the right to take an oath. Chap-
ter 8 deals with the oaths of the four bailees (*shomerim*) in
accordance with Exodus 22:6–16.

The Tosefta to this tractate is divided into six chapters.
Chapter 1:5–7 and chapter 3 are of a halakhic Midrash (a
Mekhilta) to Leviticus, which does not fit in with the work
and has been inserted in the Tosefta. The terminology and
the names of the tannaim mentioned in it make it clear that
this fragment comes from the school of Ishmael. Tosefta
3:6 sees all crime as a rebellion against God, e.g., if one
bears false witness, one commits an injustice not only against
one’s neighbor, but one also “denies Him who commanded:
‘Thou shalt not bear false witness.’” Tosefta 3:7 gives expres-
sions found in magical texts which served as incantations
and, having found their way into Israelite folklore, were
employed as oath formulas (Lieberman, Greek Helle-
nism, p. 91).

The Gemara of the Babylonian Talmud on this tractate
includes a good deal of aggadic material. One discussion lists
mitzvot which, if fulfilled as a reward, cause one to have male
offspring (18b). Another cites a series of courtroom laws which
assure fair trial (30b–31a). Thus, if a rabbinical scholar and an
uneducated person (*am ha-arez*) come to be sentenced, both
of them have the privilege of being seated. There is an inter-
esting discussion of the names of God in 3a and b. The Babylo-
nian Talmud (26a, cf. Tosef. 1:7) also gives the statement that
Ishmael, a disciple of Nebunya b. ha-Kanah who interpreted
the whole Torah according to the hermeneutical rule of *kelal*
and *perat*, followed the same principle, while Akiva, a dis-
ciple of Nahum of Gimzu who interpreted in accordance with
*ribbu* and *mitut* (“extension and limitation”), construed the
Torah like his master (see *Hermeneutics*). The Jerusalem Tal-
mud contains very little aggadic material. The major aggadic
section discusses various types of atonements (1:9–33b–c). It
also quotes the first verse of the prayer for rain in Greek (3:10–
34d), as it was obviously recited by the common people on
occasions of drought (Liebermann, *ibid.*, 8–20). *Shevuot* was
translated into English in the Soncino edition by A.E. Silver-
stone (1935). For bibliography see the main articles on *Tal-
mud,* “Mishnah,” “Tosefta.

[Arnost Zvi Ehrman]

**SHEWBREAD or SHOWBREAD** (Heb. לֶחֶם נַחַשׁ/הָנִים; Ibr., “bread of display”), the bread laid out in the Temple
on the golden table (Ex. 25:30; 1 Sam. 21:7; 1 Kings 7:48; 11 Chron.
4:19) which is called “the table of Shewbread” in Numbers 4:7.
The shewbread is also referred to as לֶחֶם חֲסֵדָי ("the regular
bread"). On the other hand the Hagiographa use the terms
לֶחֶם נַחַשׁ/הָנִים (Neh. 10:34; 1 Chron. 9:32; 23:29), מְעֻרֵת לֶחֶם נַחַשׁ/הָנִים (11 Chron. 13:11), מְעֻרֵת נַחַשׁ/הָנִים (11 Chron. 23:23), or simply מְעֻרֵת חַד (1 Chron. 28:16; 11 Chron. 29:18, on the basis of Lev. 24:6–7).

It is also called שֶׁרֶך לֶחֶם ("a row of bread": Ex. 40:23; cf. verse 4).

The manner in which the shewbread was prepared is de-
scribed in Leviticus 24:5–9. Like most meal-offerings, it also
was made of semolina. Consisting of 12 loaves, apparently cor-
responding in number to the tribes of Israel, the shewbread
was arranged on the table in two rows of six loaves. Each loaf
was made of two-tenths of an ephah, twice the quantity of
the usual meal-offering (Num. 15:4, et al.), resembling in this
respect only the two waveloaves of the Feast of Weeks (Lev.
23:17). Frankincense was placed on the shewbread (Lev. 24:7),
but unlike the prescriptions for other meal-offerings it is here
explicitly stated that the frankincense had to be pure, and fur-
thermore that the token (portion גְּדֹלָה) contained only the
frankincense (in contrast to the token portion of a usual meal-
offering, which contained some oil and fine flour in addition to
the frankincense; Lev. 2:2). Thus no part of this bread was put
on the altar, since only the token portion was burned. The tal-
mudic halakhah prescribes that these loaves were to be of un-
leavened bread (Men. 5a; cf. Jos., Ant., 3:255), although this is
not explicitly mentioned in the text, which likewise makes no
reference to their being seasoned with salt, as was done with
other meal-offerings (Lev. 21:3). However, the Septuagint (Lev.
24:7) adds Καὶ ἀλας (“and salt”), and according to the hala-
khah the frankincense was to be salted before being burned on
the altar (Men. 20a). The loaves were changed every Sabbath.
On the basis of the relevant passages it may be presumed that
the priest did not have to go into the Holy of Holies especially
for this purpose, but would change the loaves when he came
there on the Sabbath at the appointed times, that is, either in
the morning or at dusk, to attend to the lamps or the incense
altar. As in the case of most meal-offerings, the shewbread was
eaten by males among the priests in a sacred place.

The evidence concerning the shewbread in the Sanctu-
ary of Nob (1 Sam. 21:1–7) does not substantially contradict
the instructions contained in Leviticus; there is only a differ-
ence in presentation, like that between Priestly Code of laws
and historical writings. Here, too, it can be seen that the shew-
bread consisted not of one but of several loaves (as shown by
the plural המְעֻרֵת in verse 7); their number is not given, this
detail being unnecessary for the narrative. The shewbread is
here called שֶׁרֶך לֶחֶם (“holy bread,” verse 5). That given by
the priest Ahimelech to David was presumably from the old loaves
previously “removed from before the Lord” (verse 7) and as yet
unseen; it was not removed on that day by Ahimelech from
the table especially for David and his men. The only point
that conflicts with what is stated in Leviticus is the view ex-
pressed here that the old loaves could be eaten by non-priests
in a state of purity, not specifically by priests in a holy place.
This is, however, a general feature of the non-Priestly sources
of the Bible, that sometimes permit to non-priests “sanctified”
by purity what the Priestly sources (i.e., *P* and Ezek. 40–48)
permit only to males among the priests.

The custom of placing loaves of bread on a table in a
sanctuary before the god, coupled with other ritual acts, was
prevalent in various places and times. Clear parallels of this custom existed in Babylonia, although not a few differences distinguish these from the specific crystallization in the Israelite style. Some have sought to find in Akkadian sources the special term *akhir panu, which corresponds to the biblical shewbread, but the reading has been found to be erroneous.

[Menahem Haran]

**SHIBAM**

situated at the foot of the mountain below the stronghold of Kawkabán, 30 km northwest of *San‘a*, Yemen; once the capital of a small independent highland state. Ancient Himyari inscriptions can be found on the stones of the city gate and in other old buildings of the town. It is located on the main route of commerce. It is called Shibam al-Kawkabán (or Shibam al-Ghirās) to distinguish it from the other, more famous Shibam in Hadramawt. The Jews lived in the neighboring village of Dhafarān; in about 1930 there were approximately 1,000 Jews. Jacob *Saphir stayed there in 1858 and left a vivid description of the Jewish community. Qā‘al-Yahūd (the Jewish quarter), in which about 60 families lived, was part of the town, but was surrounded by a wall which severely crowded the inhabitants. There was almost no room for courtyards, since the houses and the streets were very narrow. The gates of the town were closed from evening until morning. The community of Shibam, with its three synagogues, was the religious center of the neighboring villages and also catered to their religious needs. The Jews were businessmen, silversmiths, iron-smiths, and tanners.

[Yo’sef Tobi (2nd ed.)]

**SHI‘BUDA DE-RABBI NATHAN** (Aram. “Rabbi Nathan’s Lien”), a rule of law attributed to R. Nathan, a *tanna of the second century, and cited in the Babylonian Talmud as follows: “Whence is the rule derived that if one man [A] claims a *maneh [100 zuz] from his neighbor [B], and his neighbor [B] [claims a like sum] from another neighbor [C], that we collect from the one [C] and give it to the other [A]? From the verse, ‘… and he shall give it unto him to whom he is indebted’” (Num. 5:7 – Pes. 31a). The Bible does not state, “unto him who lent him the money” [B], but rather “unto him to whom he is indebted,” i.e., to whom the principal rightfully belongs now [A] (Rashi, ad loc.).

**The Substantive Law**

In the Shulhan Arukh the rule reads as follows: Reuben claims 100 from Simeon, and Simeon from Levi; we collect from Levi and give it to Reuben. No distinction is made as to whether Levi was already obligated to Simeon when the latter borrowed from Reuben or whether Levi had become obligated thereafter. Nor is any distinction made between a loan (see *Loans*) having documentary attestation and one having only oral attestation (about these definitions see *Obligation, Law of*). As long as both debtors acknowledge indebtedness, each to his respective creditor, we collect from Levi and give it to Reuben. This holds true for every type of obligation which Levi incurs toward Simeon, whether it be through loan, *sale,* lease, or hiring (see *Lease and Hire; *HM 86:1). Indeed, the liabilities may have arisen from *torts, *damages, bailments (see *Shomerim,* and larceny (see *Theft and Robbery*) as well. Nor need the two debts, i.e., of Simeon and Levi, have been of the same kind. For example, Simeon’s indebtedness to Reuben may have arisen as the result of a loan, whereas Levi’s indebtedness to Simeon may have been incurred through purchase. Similarly, Simeon’s liability may be according to biblical law and Levi’s according to rabbinic law (Siftei Kohen, *HM 86:1*). Reuben’s ability to collect from Levi is limited to the circumstances that Simeon is insolvent (Sh. *Ar., HM 86:2,* although a dissenting opinion, which considers Levi virtually a debtor of Reuben, would extend the said liability even to those cases where Simeon was solvent (Siftei Kohen, *HM 86:2,*

According to most commentators, *Shi‘buda de-Rabbi Nathan* differs from an ordinary *lien in being essentially a procedural device for the collection of debts rather than a substantive incumbrance on the property of the debtor. Thus, an ordinary lien attaches only to those properties of the debtor which were in his possession at the time he incurred the debt. Moreover, the indebtedness created through an ordinary lien may be discharged by the payment of money even in the case where the indebtedness arose through the delivery of a deposit or a pledge. R. Nathan’s Lien, however, attaches to those properties the debtor acquired subsequent to his loan sold his property, Rabbi Nathan’s Lien is ineffectual, for inasmuch as the debtor himself has no claim against the purchaser, his creditor also may have no claim against the purchaser. Under such circumstances, however, an ordinary lien is effective, and in the case of nonpayment the creditor may seize the property from the purchaser for the satisfaction of his (earlier) claim (Kezot ha-Hoshen, *HM 86,*).

**Legal Analysis**

Privity of contract is expressed in talmudic literature in the form of the refusal of a debtor to enter into litigation with his opponent on the ground that *lavin ba‘al devarim didi at (“You have no claim against me,” or “You are not my plaintiff”). Shi‘buda de-Rabbi Nathan* is a method of *assignment which Jewish law makes available in order to overcome, when necessary, the limitations created by the principle of privity. Rabbi Nathan’s Lien differs from the other methods of assigning rights, such as *mamad sheloshftan (see *Assignment; *Obli-
ATION, LAW OF), WHICH IS A KIND OF ASSIGNMENT BY SUBSTITUTION AND requires the physical presence of the debtor, the assignor, and the assignee; MESIRAT SHETAROT (SEE “ACQUISITION”), WHICH EFFECTUATES ASSIGNMENT THROUGH THE DELIVERY OF THE BONDS OR NOTES OF INDEBTEDNESS TO THE ASSIGNEE ACCOMPANIED BY A DEED OF ASSIGNMENT; AND HARSHA’AH (SEE “AGENCY, LAW OF”), WHICH CREATES A POWER OF ATTORNEY UNDER THE FORM OF ASSIGNMENT. THESE THREE METHODS OF ASSIGNMENT DEPEND UPON THE INITIATIVE AND CONSENT OF THE ASSIGNOR, WHEREAS SHI’BUDA DE-RABBI NATHAN CREATES WHAT IS ESSENTIALLY AN AUTOMATICALLY TRANSFERRED OBLIGATION. IN CONTRAST WITH THE OTHER METHODS, HOWEVER, SHI’BUDA DE-RABBI NATHAN IS LIMITED TO CIRCUMSTANCES IN WHICH THE ASSIGNEE IS A CREDITOR OF OR CLAIMANT AGAINST THE ASSIGNOR. SHI’BUDA DE-RABBI NATHAN FINDS ITS CLOSEST PARALLEL IN THE STATUTORY PROCEEDING OF GARNISHMENT IN AMERICAN LAW (SEE HERZOG, INSTIT, 2 (1939), 214, N. 2).

HISTORICAL DEVELOPMENT
Asher Gulak (Ha-Hyyuv ve-Shi’budav, bibl.) maintains that SHI’BUDA DE-RABBI NATHAN UNDERWENT A SERIES OF DEVELOPMENTS IN TALMUDIC TIMES WHEREBY IT RECEIVED A PROGRESSIVELY WIDER APPLICATION. THE ORIGINAL STATEMENT OF R. NATHAN IS TO BE FOUND IN SIFREI NUMBERS 3, AND MERELY PROVIDES FOR THE RIGHT OF A CREDITOR TO COLLECT HIS DEBT FROM MONIES WHICH HAVE BEEN AWARDED TO THE DEBTOR IN COURT BUT WHICH THE LATTER HAS AS YET NOT COLLECTED. THE TEXT OF R. NATHAN’S STATEMENT AS IT APPEARS IN THE BABYLONIAN TALMUD (E.G., PES. 31A) REPRESENTS, ACCORDING TO GULAK, A FURTHER DEVELOPMENT WHEREBY DEBTS OWED TO THE DEBTOR ARE CONSTRUED AS PROPERTY OF THE LATTER AND SUBJECT TO COLLECTION ON BEHALF OF THE CREDITOR BEFORE THEY HAVE BEEN AWARDED TO THE DEBTOR IN COURT. IN THIS POINT THE STATEMENT OF RIGHTS HAS BEEN CREATED WITHOUT ANY REFERENCE, HOWEVER, TO LIEN. THE FINAL DEVELOPMENT OF R. NATHAN’S STATEMENT IS TO BE SEEN IN THE CONSTRUCTION PLACED UPON IT BY THE BABYLONIAN TALMUD, NAMELY, THAT THERE IS A LIEN THAT THE CREDITOR HAS ON ALL THE PROPERTIES OF HIS DEBTOR’S DEBTORS. THIS CONSTRUCTION IS PART OF THE GENERAL TENDENCY WHICH GULAK DISCERNS IN THE BABYLONIAN TALMUD, I.E., TO INCORPORATE LIEN INTO THE VERY CONCEPT OF OBLIGATION.

[Aaron Kirschbaum]

SHIFRAH OF BRODY (fl. 1770s), author of a Yiddish *tkhine (supplicatory prayer) for women. According to the opening page of Tkhine Imrei Shifre (Tkhine of the Words of Shifrah), she was the daughter of the learned Rabbi Joseph and wife of Rabbi Ephraim Segal, a dayyan in *Brody. Quite exceptionally for a Yiddish work by a female author, her work contains something close to a rabbinic approbation (haskamah); an unsigned paragraph in Hebrew labeled “haqdamah” (“INTRODUCTION”) describes Shifrah as a “prominent, learned, and wealthy woman” who is planning to travel to the Holy Land with her husband. This introduction asserts that “several rabbis and sages agree [maskimim] that she should publish this tkhine.” Residents of Brody were well represented among the approximately 300 Jews who accompanied several Hasidic leaders to settle in Safed in 1777. Further, Brody, the home of the famed kloyz or study-house of mystical pietists, was rich in religious ferment and conflict, some of which is reflected in Shifrah’s text.

Like most Eastern European tkhines published before 1835, Tkhine Imrei Shifre makes no reference to place or date of publication; internal evidence, however, places the text some time after 1770. In the first section Shifrah described the difficult contemporary conditions in the region of Brody. In the other parts of the book, she utilized kaballistic, pietistic, and possibly Shabbatean/Frankist material to emphasize the significance of women’s religious acts. The title of the tkhine alludes to the common book title Imrei Shefer (from Gen. 49:21, where it probably means “lovely fawn”), usually taken to mean “words of Torah.” The four sections of the tkhine include a long tkhine on exile, repentance, and redemption; a daily tkhine, asking for assistance against distractions in prayer, help with livelihood, and protection for women in pregnancy and childbirth; a Sabbath tkhine which includes a kaballistic interpretation of the women’s mitzvah of candle-lighting; and a “Moral Reproof for the Sabbath,” consisting almost entirely of material originating in the Zohar, which addresses proper Sabbath observance. The text is exceptional for its use of kaballistic concepts, such as the divine shefu’ (supernal abundance), its reference to the problem of devoted prayer, and its mention of the *Shekhinah as an object of women’s devotion.

[Chava Weissler (2nd ed.])

SHIFTAN, ZE’EV (Ludwig: 1920–1990), prominent Israeli geologist-hydrologist. Born in Görlitz, Germany, he grew up in Erfurt where his father Max (Moshe) was rabbi of that city’s community. Having received a thorough general and Jewish schooling, Shiftan began studies in 1938 at the Breslau Rabbinical Seminary. Following *Kristallnacht he was taken on Nov. 10, 1938, to Buchenwald concentration camp. Freed when a Palestine immigration certificate was obtained for him, he emigrated to Palestine in Feb. 1939 and soon joined the Haganah. Leaning to the natural sciences, he found his way to geology, becoming a student, then assistant, of Professor Leo Picard. He lectured at the Hebrew University and the Haifa Technion. Concentrating on groundwater exploration and exploitation, he worked in the field and wrote papers and books. In 1966 he joined Tahal as consultant to its Hydrological Department and was for a time its head, working in Israel and other countries. The United Nations asked for his service and appointed
him consultant in South America and elsewhere. Besides his scientific work he was active in social and cultural matters; he represented Israel in the B’nai B’rith world council and in January 1990 was elected president of its David Yellin Lodge of Jerusalem. On Feb. 4, 1990, he was among the nine killed in the terrorist attack on Israeli tourists in Egypt in which his wife, Yehudit, was also wounded.

[Michael Avi-Yonah]

SHIHIN (Heb. שִּׁחִינָה) or ASOCHIS, Galilean city. The first mention of it is made by Josephus (Ant. 13:337; Wars 1:86), who describes its capture by Ptolemy Lathyrus on a Sabbath in approximately 103 B.C.E. It was obviously a large Jewish city at that time, for 10,000 inhabitants were taken captive. Josephus locates the city in a plain of the same name (plain of Asochis; Life, 207, 233, 384). Situated in the center of Galilee, it served as his headquarters for some time. The city survived the First Jewish War. It is referred to as Shihin or Kefar Shihin several times in talmudic literature. There it is described as a place where mustard was grown and as the site of a pottery industry, which used the black soil of the area. A fire in one of the kilns drew help from Castra at Sepphoris and with the Nahal Kishon River north of the Carmel and with the Naḥal Nahr al-Zarqā or Mīyāh al-Ash, the latter volume of his book סְתָּמָה בְּחַפָּרָה (1928–).

The identification of Shihin with Tell el-Badawiyya (see *Hannaton) is confirmed by the Roman pottery and ruins found on the site.

[Michael Avi-Yonah]

SHIHOR, SHIHOR-LIBNATH (Heb. שִׁחוֹר, שִׁחוֹרַלִּבְנָת).

(1) Geographical term used in the Bible and derived from the Egyptian si-hor (“lake of Horus”) which originally referred to the lake in the eastern Delta near the Pelusiac branch of the Nile. It has been identified with the Egyptian Pa-she-Hor, “the Waters of Horus,” which are mentioned in a 19th-Dynasty Egyptian text, Papyrus Anastasi 1, 2:11–12 (Pritchard, Texts, 471). It marked the westernmost limit of Palestine in the south, extending to the Egyptian border (Josh. 13:3; 1 Chron. 13:5). The prophets occasionally identify it with the waters of Egypt (Isa. 23:3; Jer. 3:18).

(2) Shihor, with the addition of Libnath (“of the white willows”) is used in Joshua 19:26 to indicate the southern boundary of Asher; it is mentioned with Mt. Carmel. Scholars are divided between its identification with the outlet of the Kishon River north of the Carmel and with the Nahal Tanninim south of the Carmel (Ar. Nahar al-Zarqa or Miyaḥ al-Tamāsīḥ, “the waters of the crocodiles”), which may explain the associations of the name Shihor with Egypt; cf. the Crocodilopolis of Strabo.

[Michael Avi-Yonah]

SHILA OF KEFAR TAMARTA (c. second and third centuries C.E.), Palestinian amorah. The name of his Judean home is always added to his personal name to distinguish him from an older Babylonian amorah of the same name, and from Shila of Navēh, a contemporary. He was a student of R. Johanan, whose teachings he transmits (Tj, RH 2:9, 58b; Tj, Hag. 3:8, 79d). Although he seems to have engaged in halakhah (Nid. 26a), Shila is known mainly as an aggadist, and only aggadic statements of his are quoted. That he delivered his aggadic discourses publicly is evidenced by the introductory formula “R. Shila expounded” (darash; cf. Meg. 16a–b).

**BIBLIOGRAPHY:** Hyman, Toledot, s.v.

SHILL, LOUIS (1930– ), South African businessman and politician. Born in Witbank, South Africa, he qualified as a chartered accountant through Witwatersrand and Stamford universities. One of the founders of Liberty Life in the late 1950s, he was founder and chief executive of Sage Fund in 1965, which introduced the concept of unit trusts in South Africa. He established Sage Group Limited in 1969. On 1 June 1993, he was appointed minister for national housing and public works, a post he held until May 1994.

[David Saks (2nd ed.)]

SHILOAH, AMNON (1928– ), Israeli musicologist of the history and theory of Arabic music. Born in Argentina to Syrian parents, Shiloah settled in Palestine in 1941. He studied Arabic language and literature at the Hebrew University and musicology at the Sorbonne, where he obtained his doctorate in 1963. Shiloah was appointed senior lecturer at the Hebrew University musicology department in 1969 and was its chairman in the years 1971–74. He became full professor in 1978. He served as a board member of the International Musicological Society (1977–81), and won the Jerusalem Prize for research achievements in the study of Oriental Jewish music (1986). Shiloah was provost of the Rothenberg School for overseas students (1992–95), and an honorary member for life at the European Seminar in Ethnomusicology (1995). He won the Grand prix de l’Académie Charles Cros: Litterature musicale for the French translation of his book Music in the World of Islam. Shiloah is one of the most prolific scholars of both Jewish and Arab traditional music.

Shiloah began his career as a musicologist of Israeli art music in the early 1950s, when he published interviews with 13 founding Israeli composers about national identity in their music (published in Massa, 1953). His Massa interviews have often been cited as a pioneer work, and his contribution to *Israel Music Institute News* (1990) was an influential contribution to the study of Orientalism in Israeli art music. Shiloah’s magnum opus, *The Theory of Music in Arabic Writings* (c. 900–1900) (Répertoire international des sources musicales, Henle Verlag, Munich, series B/X, 1979 – a catalogue of manuscripts in libraries of Europe and the U.S.), was the culmination of years of work in European archives. The latter vol-
ume of this seminal text (RISM, series B/xa, 2003), describing manuscripts in Israel, Egypt, Morocco, Tunisia, Russia, and Uzbekistan) was similarly a result of another decade of research. His work was published in Encyclopedia Britannica (1974), Die Musik in Geschichte und Gegenwart (1976, 1994), the Journal of the American Musicological Society (1981), and The New Oxford History of Music (2001) – to cite a few among many publications (e.g., in Cahiers de civilisation medievale, Ethnomusicology, Ariel, Acta Musicologica, Pē'amim, and Yuval). His scholarship on Jewish music was summarized in his Jewish Musical Traditions (1992). Shiloah's work on Arabic music culminated also in his Music in the World of Islam: A Socio-Cultural Study (1995; the book also appeared in French, Hebrew, and Arabic).

In the field of ethnomusicology, he established himself as both a pioneer scholar and a leading authority of Arab music and of Jewish traditional music. Shiloah's comprehensive list of publications encompasses over 240 items in four languages (English, French, Hebrew, and Arabic), including 15 books, edited works, records, and articles – a result of 50 years of work in the field of Arabic music, its ethnomusicalogy, the history of its theory, and its social-cultural history. Shiloah also advanced the fields of Jewish ethnomusicology, especially the study of Jewish-Arab and Sephardi traditions in their countries of origin from Morocco to Iraq, and in Israel. Finally, he has contributed significant writings to the study of Israeli art music.

[Ronit Seter (2nd ed.)]

SHILOAH (Zaslan), REUBEN (1909–1959), Zionist political officer and Israel diplomat. Born in Jerusalem, Shiloah possessed expertise on Arab affairs, combined with political imagination and a talent for analysis of international affairs. He was one of the yishuv's first emissaries to the Jews in Middle East countries (1931), and upon his return from Baghdad and Kurdistan he was at first active in the political field for the Histadrut, later transferring to the Jewish Agency's Political Department (1936). During World War II, he coordinated the yishuv's war effort with that of the Allies; he organized the parachuting of members of the Haganah into enemy territory, initiated intelligence operations against the Axis powers, and was active in rescue missions to save the remnants of European Jewry.

Upon the establishment of the State of Israel (1948), Shiloah formed its political intelligence service and coordinated it with military and security intelligence. In his role as advisor on special affairs to the foreign minister, he established secret contacts with Arab statesmen in an effort to achieve mutual understanding and peace. Shiloah led the Israel delegation that held negotiations over the cease-fire with Transjordan (1949).

After a term of service as minister at the Israel embassy in Washington (1953–57), Shiloah was appointed political advisor to the minister of foreign affairs with ambassadorial rank. His later years were spent in quiet diplomacy for achieving closer ties between Israel and the non-Arab countries of the Middle East and Africa.

SHILOAH, SILOAM (Heb. משולח, מחלח), name applied to the waters of the Gihon spring in Isaiah 8:6; it is probably derived from the root משלחו (shaliḥo; “to send forth”), which occurs in Psalms 104:10 in connection with springs. The “pool of Shelah” mentioned in Nehemiah 3:15 as “lying by the king's garden” refers to the pool formed by the overflow of water in Hezekiah's tunnel, which led from the Gihon spring into the city. Archaeological researches have shown that this pool actually antedated Hezekiah's tunnel. An old open channel, constructed during the Middle Bronze Age, carried water from the Gihon along the eastern slope of the city of David in order to irrigate the “king's garden” in the “king's valleys,” i.e., the Kidron. The overflow was led into the “pool of Shiloah.” In later times the name Gihon was forgotten and the name Shiloah included the orifice of the spring itself. As such, it serves as a landmark in Josephus' descriptions of Jerusalem during the siege of Titus, and marked the boundary between the sections defended by John of Gischala and Simeon Bar-Giora (Wars, 5:140, 252).

According to Josephus, the “Old” or “First” Wall, which surrounded the Upper and Lower Cities, passed near the spring and the pool (erroneously called the “pool of Solomon,” which in Greek is similar to “pool of Siloam”; Wars 5:145). This pool is already mentioned as a pool adjacent to the city fortifications in Nehemiah 3:35), but the Gospel of John (9:7, 11) clearly indicates its function as a place for ritual immersion in the story of the miracle of the blind man regaining his sight: “…And [Jesus] said unto him [the blind man], Go wash in the Pool of Siloam. He went his way therefore, and washed, and came seeing.” In response to the questioning of his querulous neighbors, the blind man repeats his story: “A man that is called Jesus made clay and anointed my eyes, and said unto me, Go to the Pool of Siloam, and wash: and I went and washed, and received sight.” In addition, the Mishnah tells us of the practice of filling stone cups (clearly the so-called “measuring cups”) with water let down into the Siloam Pool (Par. 3:2). One should also mention an interesting text from Oxyrhynchus in Egypt – a fragment of an uncanonical gospel – which refers to a mikveh-like pool close to the Temple area with separate stairs for going in and out. The text refers to Jesus being challenged by a priest about the state of his purity: “He [Jesus] said unto him, I am clean; for I washed in the Pool of David [probably the Pool of Siloam, i.e., as a reference to the “City of David”], and having descended down one staircase I ascended by another, and I put on white and clean garments, and then I came and looked upon these holy vessels [of the Temple].” Elsewhere, it is said that the Pool of David had “running waters,” a reference to the flowing “living” waters that entered the Siloam Pool from the spring of Si-
loam. The concern for purity in Jerusalem and the use of these two pools is further clarified in the Mishnah in relation to the subject of the zavim, men with bodily emissions (semen). The rabbis advocated that following an emission of semen the man “conveys uncleanness to what he lies upon or sits upon, and [therefore] he must bathe in running water” (Zav. 1:13; cf. Mik. 1:8). Later we hear that a man is a zav if he has had three emissions during the time it takes to go the distance from “Gad-Yavan [which is perhaps an alternative name for the Bethesda Pool] to [the pool of] Siloam (which is time enough for two immersions and two dryings) …” (Zav. 1:5).

Excavations in 2004 at the junction of the Tyropoeon and Kidron Valleys by Reich and Shukrun brought to light the Siloam Pool of Second Temple times; it was apparently trapezoidal in shape (estimated to be 40–60 × 70 meters) with built steps and landings along at least three of its sides; the fourth (west) side is unexcavated. Their findings indicate that the pool was most likely built in its present form during the Second Temple period, with two stages of construction of which the earliest of these is dated to the late first century B.C.E or first century C.E. based on the plaster type and other features. The pool was fed with water which was channeled directly from the Siloam spring without any holding basin needed, but the excavators have suggested the pool might also have been fed with runoff rainwater from other directions.

The spring failed in 70 C.E. during the siege and the water was sold by the amphora (5:410). The name “ravine of Siloam” was applied to the Kidron; it was overhung by the rock of the Dovecotes (5:305). After the siege the ravine served as a refuge for the rebels (6:401). Talmudic sources refer several times to the Shiloah, particularly to the narrowness of its issue, which was not larger than an Italian issar (Tosef. Ar. 2:6). From the Middle Ages onward, the name Shiloah referred to the village on the eastern slope of the Kidron Valley (Ar. Silwân). The village was a suburb of Jerusalem, and the inhabitants worked the fields on the hill of Ophel. In 1884 Jews from Yemen established themselves in part of the village; in 1936 they were forced to abandon their houses. In 1967, after the Six-Day War, it was incorporated into the Jerusalem municipal area.

[Michael Avi-Yonah/ Shimon Gibson (2nd ed.)]

SHILOH (Heb. שִׁלֹּה, שִׁלֹּּו), the amphictyonic capital of Israel in the time of the Judges, situated north of Beth-El, east of the Beth-El-Shechem highway and south of Lebanon (Judg. 21:19), in the mountains of the territory of Ephraim. Under Joshua, the tabernacle was erected at Shiloh (Josh. 18:1). Here lots were cast for the various tribal areas (Josh. 18) and for the levitical cities (Josh. 21:2) and here Israel assembled to settle its dispute with the tribes beyond the Jordan (Josh. 22:9, 12). Shiloh was the center of Israelite worship. During one religious celebration, the daughters of the city danced in the vineyards, on an occasion used by the Benjamites, who could not get wives in any way except by abducting them (Judg. 21). Elkanah and his wife Hannah came there to worship and Hannah vowed her child Samuel to the Lord, whom he served as a servant of the sanctuary at Shiloh (1 Sam. 1–2). In this sanctuary, the sons of Eli the priest sinned and the Lord revealed Himself to Samuel (1 Sam. 3). When the Ark was taken from the city on its fateful journey to Eben-Ezer, never to return to Shiloh, a Benjamite brought news of the disaster to Eli, causing his death there (1 Sam. 4). The destruction of Shiloh is alluded to in Jeremiah (7:12, 14; 26:6, 9; cf. Ps. 78:60). However, its priestly family retained its importance for some time after moving to Nob (1 Sam. 21:1–9). Ahijah the son of Ahitub, a priest from Shiloh, appeared with the ephod in the camp of Saul before the battle of Michmas (1 Sam. 14:3). The priestly family of the city was finally deposed by Solomon (1 Kings 2:27). Ahijah the Shilonite prophesied the future kingship of Jeroboam the son of Nebat (1 Kings 11:29–31; 12:15; 15:29; 11 Chron. 9:29). It was apparently in Shiloh that Jeroboam’s wife consulted the prophet and heard the doom of the dynasty (1 Kings 14:2–16). Jeremiah refers several times to the destruction of the city as a warning (7:12, 14; Ps. 78:60); his comparison of the fate of Shiloh with that foreseen for the Temple led to his being accused of blasphemy (Jer. 26:6–9). After the destruction of the Temple, the people of Shiloh were among those Ephraimites who came to sacrifice at Jerusalem (Jer. 41:5).

Shiloh is identified with Tell Seilun, 30 mi. (48 km.) north of Jerusalem, south of the ascent of Lebanon. The identification of biblical Shiloh with Saylûn was established by E. *Robinson and is generally accepted; the topographical position, the remains on the mound, and the name all support this identification. However, the position of the sanctuary within the ancient site is still a subject of dispute. Conder and Kitchener in the Survey of Western Palestine (1881–83) suggested the terrace north of the mound, a position unsupported by other evidence. The area south of the mound, with its ancient road leading to Turmus Aiya, the sanctuaries of Wali Yetim and Wali Sittin, was seen by some scholars to be a much more likely spot for an open-air sanctuary around a tabernacle; a pre-Christian sanctuary can be assumed to have been located in a valley in which there are now a number of Muslim holy places and which, in Byzantine times, contained several churches. Nonetheless, it is quite possible that the sanctuary stood inside the city proper (see below). Archaeological excavations there were undertaken by a Danish expedition directed by H. Kjaer (1926, 1929), A. Schmidt (1932), and S. Holm-Neilson and B. Otzen (1963). New excavations were conducted at the site by I. Finkelstein between 1981 and 1984. These excavations exposed eight strata, ranging from MB II–Middle Ages. The MB II city was heavily fortified (the MB II village was unwalled), with a massive wall (3–5.5 m. wide), with re-
mains standing to a height of up to 8 m. Supporting this wall on the precipitous eastern slope was an extensive glacis (25 m. wide), which incorporated a supporting wall (3.2 m. tall) in its structure. Among the remains of the city from this period were storage rooms and cultic vessels, indicating the presence of a shrine. This level was destroyed. The LB 1 remains consisted primarily of vessels with remains of animals, cast over the wall of the city and then buried. These remains are likely the remnant of cultic offerings. Given that there were no architectural remains discovered at this level, the site may have existed solely as a shrine. Given that the top of the tell has exposed bedrock, the presence of shrines here is based almost entirely on circumstantial evidence.

Iron 1 remains were attested throughout the site. More than 20 silos were discovered (including one that had carbonized wheat). Pillared public buildings were unearthed in one section of the tell, adjacent to the MB wall. These buildings had two levels, divided by a terrace wall. One building had a paved courtyard. More than 20 collared rim jars were discovered in a number of buildings. It is likely that these buildings were part of the shrine complex. The Iron 1 structures were destroyed in a conflagration, possibly the work of the Philistines. A village reappears in Iron 11. More extensive villages are attested in Roman and Byzantine times (see below).

The evidence for sacred continuity at the site from MB III–Iron 1 is instructive for the history of Israel. Surveys done by Finkelstein in the region of the central hills established that Shiloh was indeed in the heart of a settlement landscape that had greatly expanded in Iron 1. The area surrounding Shiloh was perhaps three times as densely populated as any other region in the hills. Given that the top of the tell was long ago exposed, the nature of the shrine constructed by the Israelites is not ascertainable, whether it was a permanent building (cf. 1 Sam. 3:15) or a portable shrine (cf. 11 Sam. 7:6f).

A Roman villa with a bath and a city wall were uncovered in the earlier excavations at the site. In the fifth century (the Byzantine period), a mosaic-paved basilica, measuring 25 × 12 m., was erected south of the tell; further north was a smaller chapel. Shiloh is also known from later sources. Eusebius places it in the toparchy of Acraba, which in his time belonged to Neapolis (Onom. 156:28ff.). Jerome found an altar there (Epistula 108; PG, vol. 25, p. 1953). On the Madaba Map, it appears west of Gilgal, following the tradition recorded by Josephus (Ant., 5:68), with the addition of a historical note: “there once the Ark.” The site of Shiloh was well known to talmudic sages; R. Yose b. Karha recorded the saying of an elder who visited the place and still inhaled the odor of incense between its walls (Sanh. 103b). Jews continued to visit Shiloh to pray at the Masjad al-Sukayma, the Mâ‘ida (“Stone of the Table”) and the tomb of Eli until the 14th century, as is recorded by Eshtori ha-Parḥi. At the wali (“Marabout”) known as al-Sittin or al-Arab’in, a lintel, perhaps of a synagogue, is still extant and shows an amphora between two rosettes flanked by two jars. In the last century an ancient sarcophagus, supposedly that of Eli the priest, was being shown there.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

SHILOH, YIGAL (1937–1987), Israeli archaeologist, expert on Iron Age town-planning and architecture in the Land of Israel. Born in Haifa, he was educated at the Hebrew University of Jerusalem, eventually joining the faculty in 1974. Shiloh received his Ph.D. in 1977, and a revised version of his dissertation was published in 1979 as The Proto-Aeolic Capital and Israelite Ashlar Masonry. From 1983 to 1986 Shiloh headed the Institute of Archaeology at the Hebrew University and was a visiting professor abroad.

As a student Shiloh participated in numerous excavations in Israel, notably in the Survey of the Judean Desert Caves, Masada, Tell Nagila, Ramat Rahel, Arad, Megiddo, and Hazor. In addition to these digs, he also participated in an expedition working on a prehistoric site in northern Italy. From 1978 to 1987 Shiloh undertook major archaeological excavations in the area of the “City of David” in Jerusalem. He was the author of numerous articles and research papers. He was also the recipient of the prestigious Jerusalem Prize only one week before he succumbed to cancer at the young age of 50.

[Shimon Gibson (2nd ed.)]

SHILS, EDWARD ALBERT (1910–1995), U.S. sociologist. Shils was born in Springfield, Massachusetts, to Russian Jewish immigrant parents. His father was a cigar maker in Springfield and then in Philadelphia, Pennsylvania. Shils attended Simon Gratz High School. At 17, he began studying the work of German sociologist Max Weber. Shils went on to study foreign languages at the University of Pennsylvania, graduating with a bachelor’s degree in 1931. In the midst of the Great Depression, Shils was a supporter of the New Deal and went to work as a social worker. Fascinated with the makeup of societies, Shils’ passion led him to take a position as a research assistant in sociology with the University of Chicago in 1934 and then a teaching position in 1938. Shils’ early exposure to and translation of the works of European sociologists, such as Karl Mannheim and Weber, enabled him to serve as a bridge between American and European sociological research. During World War II, Shils served with the Office of Strategic Services, a progenitor to the CIA, interviewing captured German soldiers for the British government. In 1945, he collaborated with scientists from the University of Chicago who worked...
on the Manhattan Project to found the publication *The Bulletin of the Atomic Scientists*, to alert governments to the dangers posed by nuclear weapons and other weapons of mass destruction. From 1946 to 1950, Shils taught sociology at the London School of Economics; he was named an honorary fellow of the college in 1972. He returned to the University of Chicago, where he became an associate professor in 1947 and then a full professor in the Committee on Social Thought in 1950. In 1949, Harvard sociologist Talcott Parsons invited Shils to co-author a paper, titled *Toward a General Theory of Action* (1951), which sought to understand the interconnectedness of groups and individuals within society in a universal context.

In 1952, Shils served as a lecturer at the University of Manchester. He returned to Chicago in 1953 as a professor both on the Committee on Social Thought and the school's sociology department. Shils spent time traveling through India from 1955 to 1956, and each year through to 1967, studying the country's intelligentsia. The growing conservatism of 1950s America and its attack on intellectuals inspired Shils' public challenge to McCarthyism with the publication of his book *Torment of Secrecy* (1956). In 1961, he received his master's degree from Cambridge University and published *The Intellectual Between Tradition and Modernity: The Indian Situation*. In 1962, he founded the quarterly journal *Minerva: A Review of Science, Learning and Policy*, which explores the link between scientific work at universities and public policy. In addition to his work with the University of Chicago, Shils served as a fellow of King's College, Cambridge from 1961 to 1970; a fellow of Peterhouse, Cambridge, from 1970 to 1978; an honorary professor from 1971 to 1977 at the University of London; and a professor at the University of Leiden from 1976 to 1977. Shils delivered the Jefferson Lectures in 1979 and was awarded the Balzan prize in 1983. He taught his last class in Chicago at the age of 84. He died of cancer in Chicago.

[Adam Wills (2nd ed.)]

**SHIMEI** (Heb. שִׁמְיֵי), son of Gera, a Benjamite and a relative of Saul, who insulted David as the latter fled during the rebellion of Absalom. The road from Jerusalem to the Jordan Valley led past Bahurim, in Benjamin, where Shimei resided. As David and his party marched by, Shimei came toward them, threw stones and earth at them, and called to David, “Filth! Filth! Murderer! Blackguard!” He gloated over David’s predicament, saying that it was divine retribution for the blood of the house of Saul that David had shed. “Abishai wanted to kill Shimei on the spot but David restrained him, enduring this humiliation as a form of self-mortification whereby men seek to appease God in times of affliction (11 Sam. 16:5–13).

When David returned in triumph after Absalom’s defeat, Shimei and a thousand Benjamites whom he had persuaded to join him arrived at the Jordan – before any other group of the House of David – and together with the Judahites welcomed him back and begged for clemency (11 Sam. 19:37f.). Clemency was granted, either because David considered Shimei’s change of heart a sign of renewed divine favor (Rashi, 11 Sam. 19:23) or because he believed that a vindictive policy against those who had rebelled would prevent firm reestablishment of his reign (*Mezudat David*, 11 Sam. 19:23). Any oath made by David was not binding on his son Solomon. Before his death David instructed Solomon to watch for an opportunity to do away with Shimei (1 Kings 2:8–9). Solomon placed Shimei under close observation, and made him promise under pain of death to restrict his movements to within Jerusalem. When Shimei broke his vow in order to recover two runaway slaves, Solomon had him put to death (1 Kings 2:36–46).

**In the Aggadah**

Shimei, although a Benjamite (11 Sam. 19:17), is called “the first of the house of Joseph” (*ibid.*, 19:21), in order to elaborate his plea for forgiveness from the king. It suggested that David should emulate the example of Joseph, who forgave his brothers (Mid. Ps. 3:3). Another opinion, however, is that “Joseph” is a euphemism for “the house of Israel” (cf. Amos 5:15). It thus paraphrases his plea: “All Israel has dealt ill with thee however morose anyone else. Now all Israel sits waiting for whatever mercy you may show me. If you accept my apology, then all Israel will come forward and make peace with you” (Mid. Ps., *ibid.*). He failed, however, to persuade David to forgive him. The word *nimrozet* is used by David to describe Shimei’s curse (1 Kings 2:8). It is said to be a mnemonic to illustrate that Shimei was an adulterer (*nôʧ*); a Moabite (*mōvîv*); a murderer (*rôzʧâh*); and an abomination (* tôvērah*; Shab. 105a). Shimei is deprived of any of the credit for having been an ancestor of Mordecai (cf. Esth. 2:5; Meg. 13a). The credit belongs to his wife, who save two righteous men (Jonathan and Ahimaaz) from Absalom (Mid. Sam. 32:4). Shimei’s one recorded virtue is that, as long as he lived, Solomon did not marry the daughter of Pharaoh, but took Jewish wives (Ber. 8a). His eventual death was commensurate with his crime. Because he had sinned by word of mouth, Solomon slew him by pronouncing the name of God on him (Zohar, Exodus, 108a).

**SHIM’ON, JOSEPH BEN JUDAH IBN** (12th–13th centuries), physician, poet, and philosopher, contemporary of Maimonides. Born in Morocco, he was taught by Muslim teachers, and also received a traditional Jewish education, despite the fact that at that time the Jews of Morocco had to live as *anusim* (“forced converts”). He states in his *Ma‘amar...
bi-Mehuyav Mezi‘ut (see below) that he studied philosophy with a Muslim teacher. As a young man, he already achieved fame both as a Hebrew poet and as an expert in mathematics and medicine.

He escaped from Morocco to *Egypt, where he could profess his Judaism openly. He lived first in *Alexandria, from where he sent letters and maqamat to Maimonides, and later in Fostat, where he studied astronomy and philosophy with Maimonides (see his letter in Iggeret ha-Rambam, ed. by D.Z. Baneth, (1946), 7 ff.). Around 1185 he went to *Syria and settled in *Aleppo, where he engaged in commerce (ibid., 68) and became wealthy through commercial travels which took him as far as Babylon and India. Afterward, he became the court physician of the son of Saladin, Az-Zahir-Ghāżī, king of Aleppo. He maintained a constant correspondence with Maimonides, and it was the latter’s desire to complete the education of his “beloved disciple” that led him to write his Guide and to dedicate it to Ibn Shim’on. When he was in *Baghdad, he attempted to mediate between Maimonides and his opponent. *Samuel b. Ali, head of the Baghdad Academy (ibid., 31 ff.), and when the Babylonian scholar, *Daniel b. Saadiah, began to attack the doctrines of Maimonides, Ibn Shim’on demanded his excommunication. He wrote a theological-philosophical treatise on the creation of the world (Heb. trans. by M. Loewy, Ma’amor bi-Mehuyav ha-Mezi‘ut in D. Rabinowitch, ed., Ha-Me’o, 1879; A Treatise as to Necessary Existence, ed. and trans. by J.L. Magnes, 1904). Steinschneider mentions one medical work, presumably written by Ibn Shim’on (see bibliography). Medieval historians of science regard Ibn Shim’on as an eminent physician of his time. The identification of Ibn Shim’on with Joseph b. Judah ibn Aknin has been proven to be incorrect.

**Eliyahu Ashtor**

**SHIMONI, DAVID**

Hebrew poet. He was born in Bobruisk, district of Minsk, Russia, the son of a learned maskil. Shimoni studied with private tutors and read avidly, especially in the impressive library belonging to the father of his childhood friend, Berl *Katzenelson. He soon began to write, publishing his first poem, a free translation from the Russian of Simon *Frug*, in *Gan Sha’ashu‘im*. His first original poem, *Siḥat Reisim* (1902), appeared in the children’s paper *Olam Katan*, but his career is considered to have begun with the poem “Bein ha-Shemashot” (1902), published with *Bialik’s encouragement in Luah Aḥiṣaaf* (no. 12, 1904). His early lyric poems appeared in the best Hebrew journals such as *Ha-Zeman, Ha-Zefirah, Ha-Shiloah*, and *Ha-Me’orer*. For a short period he was employed in drawing revolutionary posters in Russian (1906), and from that year he also published poems in Yiddish. Because of government restrictions placed on the admission of Jews, he was not admitted to the university, so in 1909 he emigrated to Erez Israel, where he stayed about a year. He worked in orange groves and as a watchman in Rehovot and Petaḥ Tikvah, becoming particularly friendly with A.D. *Gordon and J.H. *Brenner. He also spent two months touring the country, and for the rest of his life drew on his impressions of that trip. He first wrote of these travels in *Ha-Zeman*, and later in his poetry. From 1911 to 1914 he studied Oriental philology and philosophy at various German universities. In 1913 his first collection of poems, *Yeshimon*, followed in 1912 by his second, *Sútar u-Demamah*, were published in Warsaw. He then began publishing his first idylls (“Yardenit” in *Ha-Shiloah, “Ba-Ya‘ar be-Ḥaderaḥ* in *Ha-Po‘el ha-Za‘ir*, “Millhemet Yehudah ve-ha-Gālil” in *Moledot*) and initiated in *Ha-Po‘el ha-Za‘ir* the series “Ba-Ḥashavî,” which combined poetry, prose, and reflections. On the outbreak of World War I he returned to Russia, and spent the war in his native town and in St. Petersburg. At the beginning of the Revolution he moved to Moscow, where he became secretary to the editorial board of the newspaper *Ha-Am*. He also had original works and translations published by the *Stybel press. Cycles of his poems and his translations of Tolstoy, Lermontov, Pushkin, and Heine appeared in the first volumes of *Ha-Tekufah*.

After numerous attempts he left Russia and returned to Erez Israel in 1921, where he produced *Mi-Midbar le-Midbar*, echoes of his wanderings at the end of the war and during the revolution, the idylls *Yovel ha-Eglonim, Ba-Derekh, Leket, Ha-Yoreh, Me-Aggadot Zefat*, and the poems *Eshet Iyyov* and *Be-‘Eitt ha-Nehashim*. In 1925 he settled in Tel Aviv and taught Bible and Hebrew literature at the Herzliyyah secondary school until the end of his life. He continued to write idylls (*Ma‘azevah, Sínonah*), dramatic poems, lyrics, chapters of *Ba-Ḥashavî*, and introduced a type of satire and fable which mainly served as vehicles for his reaction to the events of the day. In addition to his literary work he plunged into public activity, becoming a member and eventually chairman of the *Academy of the Hebrew Language; the Writers’ Association, Genazim, and the Israel Chapter of Friends of the Hebrew University.*

Shimoni’s poetry expresses Second Aliyah ideals and describes pioneer life in Erez Israel. He belonged to the circle of leading Hebrew poets who were under the influence of Bialik and were the chief spokesmen of Hebrew literature for more than a generation. These poets shared the heritage of life in the Jewish towns of Europe, which had been shattered by history, and the attempts at rebuilding a new national life in Erez Israel. Shimoni is known primarily through his idylls, which were avidly read by two generations of pioneers and are still an integral part of the Israel school curriculum. The pioneers, who sought in literature a confirmation and reaffirmation of their life, found in Shimoni’s heroes an expression of the finest achievements of the *ḥalutzim*. For this reason the idylls overshadowed Shimoni’s other work. The latter is character-
ized by two features: lyricism, poetry of the ego, of trouble and sadness; and didacticism, poetry which propagates ideas and educates through reproof and satire. Shimoni's early poetry was lyric – sad, gloomy, and severe. In later poems, although strong lyrical and elegiac elements are retained, the poet concerns himself more with public issues, contemporary problems, and the needs of the people.

Shimoni's lyricism revealed from his early youth a complex personality – serious, skeptical, and reflective – always wandering and seeking and meditating on the fundamental questions of existence and the tragic history of his people. The older he grew the more severe and uncompromising became his attitude toward life. As his sense of duty increased, it pushed the demands of his ego aside, and, together with his honesty and moral strictness, impelled him to abandon individualism for the nationalist idea. Shimoni expressed a feeling of alienation, a division between the real world – strange and hostile – and the imaginary region he craved for – between the "northern land" and the "eastern land." His youthful wanderings and the horrors of World War I explain something of Shimoni's tendency to see the dark side of life, but this tendency was reinforced by trends in Russian literature, especially the Byronism in Lermontov's and Pushkin's works, which he translated into Hebrew. Shimoni's writings also bear the influence of the fin-de-siècle.

In his first creative period, Shimoni sees life as a false vision, with sorrow and death as reality. His poems are full of shadows, twilight glimmerings, the sadness of falling leaves, the howling of winds, and lowering storms. They frequently contain expressions of ruined hopes, loss of youth, the palesness of shrouds, the death throes of eras, as if to say that while the whole world is feasting and bathed in light, the poet stands like a stranger at the roadside. They also communicate the sentiments of a young Jew longing to get into the great world which has never accepted him. Shimoni's poetry has nothing of the jubilation of youth, and even love is not able to disperse the clouds of his grief. He wrote a few love poems in his first creative period which occasionally reflect a moment of forgetfulness or a longing for oblivion and repose, but rarely the intoxication and exultation of happiness. Generally it is the girl who looks for love, while the grave youth sings to his beloved the song of "twilight."

**Shimoni and Nature**
Shimoni's strong affection for nature is revealed in his memoirs, where he stresses that from his youth he had a tendency to seclude himself in nature and attempt to penetrate the secrets of existence. When he was unable to wander and enjoy "the wide open spaces" he would soar in his imagination to lands where he could find solace from the real world. In fact, he makes use of nature mainly for giving utterance to his innermost thoughts; yet he wrote only a few epic nature poems. Almost everywhere his lively sense of scenery and his clear vision are engulfed in lyrical sentimentality. Shimoni turns mostly to nature's dark, sad side, recognizing that everything is ephemeral.

It was only some years after Shimoni's first visit to Erez Israel that his impressions of the country began to dominate his spirit and his poetry. When he went back to Europe he wrote yearning poems about the landscape of Erez Israel. When he returned to Erez Israel, he experienced the difficulty of liberating himself from the landscape of his childhood and acquiring an intimate knowledge of a new one. In a poem written in 1924 he expresses his weariness of the overabundant and brilliant light in the country, and his longing for Russia's foggy days.

**The Romantic Character of His Poetry**
In his first creative period, the poet is remote from contemporary social and national problems and for the most part renounces the outer world. Only occasionally does he mention the wretched and dismal existence of the Jews, the horror of World War I, or react indirectly to various events of his time and place. He aspires to what is not of this world, and there, in the imaginary distances of time and place, he hopes to find his lost destiny. A long series of similes and images also gives expression to his yearning for that "somewhere" (including Zion) and his strong attraction to the unknown region of his heart's desire. Now and then one hears in Shimoni's poems the voice of revolt, which is hardly related to a real and clear-cut struggle, but is romantically vague.

**From Regret to the Reality of Life**
Although Shimoni's lyric poetry is melancholy, it should not be regarded as poetry of destruction and despair. In his somber meditation there are occasional flashes of humor, the play of opposites, in which some inner vitality courses.

In this very period of Weltschmerz and depression one can discern in his work the seeds from which his idylls grew. Among his numerous poems of sorrow there are some which look on the bright side of life and discover the source of joy. Slowly the poet achieves the will to live and contentment with that which exists. Shimoni, like many of his generation, was captivated by the romanticism of "Hibbat Zion" and Zionism. Doubtless there was also a romantic influence, but immigration to Erez Israel was much more than a matter of romanticism. When Shimoni settled permanently in the country, he abandoned most of the motifs of his lyrics. Influenced by Brenner, Shimoni, in the middle of his writing career, turned increasingly to topical poetry. Written in a militant and aggressive spirit, this poetry deliberately encouraged national service. Shimoni, ruled by a sense of national and public duty, was to write more and more poems in response to the events of the times, warning against weaknesses and dangers with the lashing tongue of the preacher, the bitterness of the satirist, beginning with Al Sefod (1921), continuing with Erez Yisrael (1929), Lo! Et Damenu Lo Nafkir (1936), Hithakhi Ahvat Yisrael... (1939), and ending with a great number of poems of protest from the days of war, destruction, and ghettos.

Displaying neither surprising values nor new forms, Shimoni's poems did not receive great attention when they
appeared. His style was generally that of the "classical" Hebrew poetry of his time, but he was one of the last to adopt it, when the style had already begun to decline and was exhibiting signs of weakness. Other young poets had embraced new methods. Although aware of these techniques, Shimoni kept to regular rhymes, a definite meter, and a symmetrical construction. Even when the poem is full of grief and stormy protest, the lines and rhymes are clear, considered, and subdued. The seriousness and severity of the poems is somewhat softened by a simple lucid style, whose elements and phrases are casual and ordinary. Shimoni was known as "an abstainer from form" because of his lack of original patterns, embellishments or surprising phrases. The numerous repetitions of the same motifs, the occasionally excessive length, the many allegorical features and general feeling of weariness sometimes lend the poems a gray, monotonous character. As against this, the reader is taken by the purity and veracity of the descriptions, the sincerity of feeling and the warm spirituality. It was to this that Bialik referred when he said of Shimoni: "His clothes are simple but he himself is festive."

Like other Hebrew poets, Shimoni changed from the Ashkenazi to the Sephardi accentuation at a fairly late stage. From 1932 onward his poems rhyme and scan according to the Sephardi accentuation, whereas all his earlier poems (i.e., the majority of his lyrics) must be read with the Ashkenazi penultimate meter stress and tonal emphasis if they are to be fully enjoyed. Shimoni's work is collected in (1) Ketavim, 4 vols. (1925–32); Mivhar Ketavim, 2 vols. (1960), published in 1965 by Dvir Publishing House (not completed). For translations of Shimoni's works into English see Goell, bibliography, index.

SHIMONI, YOUVAL (1955— ), Hebrew novelist. Shimoni was born in Jerusalem. He studied cinema at Tel Aviv Uni- 

versity and published two novels which were hailed as major literary events by Israeli critics. Me’of ha-Yonah ("The Flight of the Dove"); German, 1994; French, 2001) is a postmodern prose narrative made up of two parallel stories, printed on the opposite pages of the book. The second novel, Heder ("A Room"); French, 2004), is yet again a highly sophisticated prose work composed of three independent parts that weld into a single entity, oscillating between an army base and Paris, fusing cinematic techniques and reflecting on the substance of life and art. "This book reaches heights of heart-felt longing and grace," wrote Amos Oz.

[Anat Feinberg (2nd ed.]

SHIMRON (Heb. שִׁמְרוֹן), Canaanite city, first mentioned in the Egyptian Execution Texts (19th–18th centuries B.C.E.; §5), where it appears as Šmwnw; it appears as Šm in the list of conquered cities of Thutmosis III (15th century B.C.E.; No. 35). In the el-Amarna letters, Šamu-Adda, king of Šamhuana, is mentioned as an ally of the king of Acre (Letters 8:13; 224; 225a). All these texts indicate a name like Šim'on for the city; in the Bible, however, it occurs as Shimron, with the Septuagint variant Συμω. A king of Shimron took part in the coalition led by Jabin of Hazor and is listed among the kings defeated by Joshua (Josh. 11:12; 12:20; the name Shimron-Meron is explained in several manuscripts of the Septuagint as referring to two kings, one of Shimron and one of Meron). In Joshua 19:15, Shimron is listed among the cities of Zebulun, together with Nahalal and Beth-Lehem of Galilee. It appears in later periods as Simonias, a village on the frontier of Galilee, 60 stades (c. 7 ½ mi., 12 km.) from Gaba (Jos., Life, 115). It is mentioned as Sim'oniya in talmudic sources (Tosef. Shev. 7:13; Tj, Meg. 11, 70a). However, various scholars doubt the identification of biblical Shimron with Shim'on-Simmonias. Shimron is identified with the present-day Khirbat Simniyia, a prominent tell with springs in the vicinity; pottery on the surface includes types of the Early to Middle Bronze Ages, and remains of a synagogue have been identified there.

SHIN (Heb. שִׁנִּ; ש), the twenty-first letter of the Hebrew alphabet; its numerical value is 300. In the early Proto-Canaanite script the shin was drawn as a pictograph of a composite bow €. Then in the Phoenician, Aramaic, and Hebrew scripts
it was written ֲ. While the Hebrew script preserved this form (cf. the Samaritan ֲ), the Phoenician shin developed into ֲ→ ֲ→ ֲ, and the Aramaic shin into ֲ→ ֲ→ ֲ which is the basic form of the Jewish shin ֲ. From the Nabataean ֲ→ ֲ, the Arabic evolved, which was used both for the sin (ג) and shin (ד). Presumably, the later Proto-Canaanite or the early Phoenician shin was the model from which the Greek sigma Σ, the ancestor of the Latin “S” – developed. See ‘Alphabet, Hebrew.

SHINAH, SELMAN (1898–?), Iraqi lawyer, politician, and Hebrew writer. An officer in the Turkish army in World War 1, Shinah was captured and exiled to *India until 1919. He was elected the Jewish representative in the Iraqi parliament in 1947 and 1949. He founded the Hebrew Writers’ Union in 1920 and published a Zionist weekly in Arabic, Al-Miṣḥāb (“The Menorah”), which lasted until 1929. He settled in Israel in 1951. His autobiography, Mi-Bavel le-Ziyyun (“From Babylon to Zion”), appeared in 1955.

SHINUI, Israeli center-liberal party that underwent several transformations after it was founded in July 1974, following the Yom Kippur War, by Amnon *Rubinstein, Mordechai Wrshubski, and others. The new party was the outgrowth of several protest movements that had emerged against the background of the meḥdal (“failure”) which had led to the 1973 War. The founders of the party believed that deep political, economic, and social defects in Israeli society threatened the state's security, moral steadfastness, and ability to function properly, and that these could not be repaired by means of public protest alone, or by means of activity within the existing parties.

The ideological platform of Shinui was drafted in the form of eight principles, which included willingness to negotiate with Israel’s neighbors on the basis of territorial compromise; amendment of the electoral system to ensure the responsibility of the representatives to their voters as well as the democratization of the parties and legally sanctioned state supervision of their proper operation; securing basic civil rights, guaranteed in a written constitution; avoidance of government intervention in the economy to advance sectorial interests, and intervention only for national requirements, and for the existence of the welfare state; basing the state public administration on the principle of personal responsibility, and the appointment and promotion of employees only on the basis of merit; organization of the education system with the goal of equal opportunities for everyone and ensuring a proper education for everyone, suitable for a democratic society with developed technological and scientific standards; closing the social gaps through an appropriate improvement of the taxation system, the salary policy, demographic planning and the organization of state welfare services; a fundamental change in the standards of public life and the services granted the citizens, by means of education, the upholding of the law, and suitable legislation.

In 1975, Shinui considered uniting with the Civil Rights Movement (CRM-Ratz), but the following year joined – on an individual basis – the new *Democratic Movement for Change (Dash), that received an impressive 15 seats in the elections to the Ninth Knesset in 1977. The DMC joined the government formed by Menahēm *Begin despite Shinui’s objection. Two days before the signing of the Camp David Accords in September 1978, the DMC disintegrated, and seven of its members established a parliamentary group by the name of Ha-Tenu’ah hazzan of the Great Synagogue in Baghdad. He was a practicing kabbalist, and became the subject of legends.

His published works include Imrei Sason (Baghdad, 1891); Devar Beito (2 parts, Leghorn, 1862, 1864); Mizmor le-Asaf (Leghorn, 1864); Kol Sason (Leghorn, 1859); Sadeh Lavan (Jerusalem, 1904); and Tehillah le-David (Baghdad, 1892). He also wrote many works which are extant in manuscript.

[Abraham Ben-Yaacob]
le-Shinui ve-Yozmah (the Movement for Change and Initiative). By July 1980 five members were left in the group, which changed its name to Shinui – The Center Party. In the elections to the Tenth Knesset in 1981 Shinui gained two seats, and in the elections to the Eleventh Knesset in 1984 – three seats. Shinui joined the National Unity Government formed in 1984, and Rubinstein was appointed minister of communications. In the course of the Eleventh Knesset Wirshubski left Shinui and joined the CRM, while Rubinstein resigned from the government in May 1987, because he felt that the government was not doing enough to advance peace, and because of the return of a member of Shas to the government. Shinui was then involved in an attempt at the establishment of a new Center movement with the Independent Liberal Party and the Liberal Center, but this attempt failed. Shinui received two seats in the Twelfth Knesset, and remained in opposition. Prior to the elections to the Thirteenth Knesset in 1992 it created a single parliamentary group and election list with the CRM and *Mapam, called *Meretz. Meretz won 12 seats in the elections, of which Shinui received two. Meretz joined the government formed by Yitzhak *Rabin, and Rubinstein was at first appointed minister of energy and infrastructures, and then, in June 1993, minister of education, culture and sports in place of Shulamit *Aloni. In the elections to the Fourteenth Knesset, Shinui once again received two seats of the 10 won by Meretz. After Meretz registered as a party, one of the two members of Shinui – Avraham Poraz – chose to remain outside the new party, and in March 1999 formed an independent parliamentary group together with Eliezer Sandberg, who had broken off from *Tzomet, which assumed the name of Shinui. In 1999, before the elections to the Fifteenth Knesset, Prof. Shalom Reichman, a staunch advocate of a constitution for Israel and founder and president of the Interdisciplinary Center in Herzliyyah, who was head of the Shinui presidium but was not interested in running for the Knesset, managed to convince journalist Yosef (Tomi) *Lapid to assume the political leadership of the party. Shinui, in its new incarnation, was now identified with efforts to reduce the flow of public funds to the religious parties and to enlist religious youths for military service. Shinui gained 6 seats in the Fifteenth Knesset, and chose to remain in opposition. In the elections to the Sixteenth Knesset, it won an impressive 15 seats. Most of its 15 members were new faces in the Knesset, who came from the professions and academia. Its declared goal after the elections was to convince the *Likud, under the leadership of Ariel *Sharon, to form a secular government with Shinui and the *Israel Labor Party. But when Labor leader Amram Mitzna resisted entering such a government, Shinui entered the new government in a coalition that also included the *National Religious Party and the National Union, with Lapid serving as minister of justice, Poraz as minister of the interior, Joseph Paritzky as minister of national infrastructures, and Yehudit Naôt as minister of the environment. However, in December 2004, not long after Paritzky was replaced after being involved in a political scandal and Naôt resigned after becoming fatally ill, Shinui left the coalition. The reason for its decision to leave the government was its objection to the decision to add more funding to the religious parties in the 2005 budget. Paritzky finally received the status of a parliamentary group in May 2005, and Shinui remained in opposition with 14 seats.

Intraparty strife in January 2006 following the party primary in which Lapid, though winning, faced a challenge to his leadership and Avraham Poraz was ousted from the number two position, led to Lapid and Poraz leaving the party. The ensuing split created two factions and Shinui’s status was seriously undermined. The party won no seats in the Knesset election of March 2006.

SHINWELL, EMANUEL, BARON (1884–1986), British Labour politician. Born in London, the son of a small clothing manufacturer, Shinwell was brought up in South Shields and in Glasgow, where he lived for many years. He joined the British Labour Party at the age of 19 and was active in trade union work, often as a militant, becoming a member of the Glasgow Trades Council in 1906. During World War I he worked as an official of the Seamen’s Union. He denied that he was a conscientious objector, claiming that his job was a reserved occupation. Nevertheless he supported J. Ramsay MacDonald’s campaign in 1917 for a negotiated peace. In the immediate post-1918 period Shinwell was seen as an extreme leftist, one of the so-called “Red Clydesiders.” This impression proved inaccurate: he was a consistent Labour moderate who became even less extreme over most issues as the years passed.

Shinwell entered Parliament in 1922 and was minister for mines in the short-lived Labour government of 1924. He lost his seat at the general election of that year, but returned to Parliament in 1928, and was a junior member of the Labour government of 1929 to 1931. Shinwell refused to follow Ramsay MacDonald into the 1931 national coalition and defeated MacDonald in his constituency of Seaham Harbour in 1935. Following the Labour election victory of 1945, Shinwell became minister of fuel and power with a seat in the cabinet. He was widely criticized for his apparent complacency during the severe winter of 1947–48 and was demoted to a post outside the cabinet in 1948, as minister for war. In 1950–51 he reentered the cabinet as minister for defense. From 1964 to 1967 he was chairman of the Parliamentary Labour Party. “Manny” Shinwell was for several years a veteran member of the House of Commons where he was a popular figure. In 1970, on his retirement, he was created a life peer. In his later years Shinwell vehemently opposed British entry into the European Economic Community. His writings include The Britain I Want (1943), When the Men Come Home (1944), Conflict Without Malice (1955), and The Labour Story (1961).

Though never officially associated with Jewish or Zionist organizations, Shinwell always prided himself on his Jewish origin. In 1938 he was involved in an incident in the House of Commons when a member uttered an antisemitic threat. He crossed the floor and delivered a resounding smack to
the member in front of the whole House. In 1948, when Brit-
ain surrendered the mandate for Palestine and withdrew her
forces, Shinwell, as minister for war, took measures so that
Jews would not be discriminated against in the disposal of
surplus military supplies. In later years he enthusiastically
supported Israel’s cause and took pride in her ability to de-
fend herself. He wrote two volumes of autobiography, I’ve
Lived Through It All (1973) and Lead With the Left: My First
Ninety-Six Years (1981). A respected elder statesman, Shinwell
died at the age of 101.

**SHION** (Heb. פיוון פיוון), town belonging to the tribe of Issachar,
together with Hapharaim and Anaharath (Josh. 19:19). Eue-
sebius places a village of this name near Mt. Tabor (Onom.
158:13). The suggested identification with the springs called
‘Uyôn al-Sha‘în near Dabbûriyya is doubtful. Some scholars
have identified this site with the Sigoph of Soen (according to
some Mss.) fortified by Josephus (Wars, 2:573; Life, 188); as,
however, nearby Mt. Tabor was certainly included in this for-
tified line, a fortress at ‘Uyôn al-Sha‘în would have been su-
perfluous and it is preferable to read the names of the fortified
place as Sogane (Jos., Life, 265; see *Sogane-Sikhnin*).

**SHIPHRAH AND PUAH** (Heb. שלפרה ופאת, פאת), two Hebrew
women who served as midwives for the Israelites in Egypt (Ex.
1:15ff.). Ordered by Pharaoh to kill all male children at birth,
Shiphrah and Puah, being God-fearing, disobeyed him, un-
der the pretext that the vigorous Hebrew women were able to
dispense with the services of a midwife. In reward for their
heroic and virtuous behavior, God “established households”
for Shiphrah and Puah (ibid., 5:21), which probably means that
they became the matriarchs of enduring families in Israel.

The name Shiphrah, which also appears in an Egyptian
list of slaves in the form Š-p-ra, probably means “fair one.”
Puah may be related to the Ugaritic p’ét, meaning “girl.”

Shiphrah is identified with Jochebed, the mother of
Moses (Sot. 11b). The name refers to the fact that as a midwife,
she beautified (meshapperet, משלפרת) the children she
delivered; and Israel multiplied exceedingly (she-paru, פאת) as
a result of her actions; and that she performed deeds which
were pleasing (shafru, פאת) to God (Ex. R. 1:13).

**SHIPLACOFF, ABRAHAM ISAAC** (1877–1934), U.S. labor
and Socialist leader. Shiplacoff, who was born in Chernigov,
Russia, immigrated to the United States in 1891. He worked
under sweatshop conditions as a sewing-machine operator
for seven years, and then taught at Brooklyn Public School
84. During this period he founded the William Morris Edu-
cational Club, in Brownsville, Brooklyn, later part of the
Socialist Party. He was a clerk in the customs service for a
time.

An “old Socialist” devoted to the union movement,
Shiplacoff held several union posts and served on the na-
tional executive committee of the Socialist Party, but due
to his lack of skill as a tactician he did not establish himself in
any one labor organization. He served as secretary to United
Hebrew Trades for some years after 1910. As manager of
the New York Joint Board of the Amalgamated Clothing
Workers, he organized the tailors’ general strike in 1920–21.
He was president of the International Leather Goods Work-
ers Union from 1927 to 1930. A magnetic speaker and a po-
itical aspirant who remained close to his community’s feel-
ings and needs, Shiplacoff was the first Socialist elected to the
New York State Assembly. He represented his Brownsville
(Brooklyn) district in Albany for two terms, 1915–18; in his
second term he served as party leader. He was one of the So-
cialist leaders indicted for sedition under the Espionage Act
in 1919, but the indictment against him was dismissed. Shipla-
coff represented the 49th Aldermanic District in Brooklyn on
the New York Board of Aldermen from 1919 to 1921. In 1929
he campaigned unsuccessfully for the post of Brooklyn Bor-
ough president. A park and playground in Brownsville were
named for him in 1938.

**SHIPS AND SAILING.**

**Biblical Period**
The first sailing vessel mentioned in the Bible is Noah’s Ark
(see *Ark of Noah*).

The Phoenicians first developed marine navigation for
purposes of commerce and communication along the shel-
tered part of the east Mediterranean coast, from the Gulf
of Acre to Tyre and Sidon. Since, however, this area is rich in
wood and natural inlets, the development of a fleet of larger
ships, which could be used for commerce and communi-
cation between Asia and Africa via the Mediterranean Sea,
naturally followed. Phoenician ships traveled the Medi-
terranean Sea parallel to the coasts, in a course which permitted
them to stop and get provisions in ports established for this
purpose in the natural inlets along the shore of the Mediter-
anean. The Phoenician fleet was a source of pride and wealth
to the Tyrians and a target for attack by the prophet Ezekiel
(Ezek. 27). In order to provide convenient terminals for ships
sailing along the coasts, ports were established at the mouths
of rivers. At first only anchorages for boats and small ships,
they were gradually developed, by the hewing out of the har-
bor rocks and the building of suitable quays, into ports ca-
ble of affording ships the services required, such as those
found in Dor, south of Haifa, in Caesarea, in Jaffa, in Gaza,
and elsewhere. Along with the establishment of commercial

486

**ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 18**
fleets for interstate trade, there was construction of warships designed to guard the merchant fleet from pirates. These warships were light and strong and constructed in such a way that they could attain great maneuverability and high speed. Both the merchant ships and warships were propelled by sails as well as oars, and were equipped with large crews of oarsmen. The sail was set on the top of a central mast, and the oarsmen were arranged in one, two, or even three rows along the length of the boards of the ship.

Other nations whose history is connected with seagoing transportation are the “Sea Peoples” who penetrated the Near East in the 13th–12th centuries B.C.E. An impressive portrayal of their ships appears on the relief of Medinet Habu, which represents the sea battle between them and Ramses III. The development of seafaring vessels along the length of the unsheltered coast of Palestine was late, taking place only in the days of Solomon. During the period in which his kingdom expanded and extended to the Mediterranean Sea and the Gulf of Ezion-Geber (“Aqaba”), Solomon completed the construction of a large merchant fleet. The fleet was built with the assistance of Tyrian experts sent to him by Hiram, and was based in the port of Ezion-Geber, in order to develop trade with the distant countries of Africa, and so as not to compete with the Phoenician fleet which plied the coasts of the Mediterranean Sea (1 Kings 9:26–28; 10:22; 11 Chron. 8:17–18). King Jehoshaphat’s later attempt to build a merchant fleet similar to that of Solomon failed, the ships being wrecked at Ezion-Geber (1 Kings 22:48; 11 Chron. 20:35ff.). In spite of the fact that the Israelites were not a seafaring nation, the Bible attributes close connections with marine transportation to two tribes of Israel: Zebulun and Dan. Of Zebulun it is written: “Zebulun shall dwell by the seashore; he shall be a haven of ships, and his flank shall rest on Sidon” (Gen. 49:13) and “for they [Zebulun] draw from the riches of the sea and the hidden hoards of the sand” (Deut. 33:18–19); of Dan: “and why did he [Dan] abide with the ships” (Judg. 5:37).

In the Bible there are many terms connected with sea traffic: pilots (havelim, Ezek. 27:27), and mariners (malalhim, Ezek. 27:27, 29; Jonah 1:5); and rowers (Ezek. 27:29; cf. Jonah 1:13). There are references to a number of types of sailing vessels: oni Shayit, a ship with oars (Isa. 33:21); oni tarshish (“ships of Tarshish”), large and heavy merchant ships (1 Kings 10:22); kelei gome, apparently ships made from bundles of papyrus tied together (Isa. 18:2); sefinah, from the Akkadian sapinatu, sailing vessel with a deck (Jonah 1:5), and others. In addition, details of parts of sailing vessels occur in common usage in the language of the Bible, such as luhotayim (“planks”; Ezek. 27:5); toren (“mast”; Isa. 33:23; Ezek. 27:5); meshotim (“oars”; cf. Ezek. 27:6); nes (“sail(s)”; cf. Isa. 33:23, Ezek. 27:7); yarketei ha-sefinah (“the hold of the ship”; Jonah 1:5); rosh hibbel (“the top of a mast”; Prov. 23:34); and keres (“deck”); Ezek. 27:6. There is a vivid description of a storm overtaking a merchant fleet in the Mediterranean and the subsequent calm in Psalms 107:23–32. (See *Commerce, “Trade*

**Post-Biblical Period**

After its capture by Simeon the *Hasmonean, Jaffa became the main port of Judah; Pompey successfully suppressed the Jewish pirates’ base there. *Herod developed the harbor of Caesarea and built many ships. During the Jewish War, Jewish merchant ships engaged in piracy and inflicted losses on the Romans. Resistance to the Romans was particularly bitter on the Sea of Galilee (Jos., Wars 3, 462ff.).

Among the spoils displayed by Vespasian in his triumphant procession in Rome were “many ships” (Tacitus 7, 3–6). Coins commemorating the Roman victory also bore the legend Victoria Navalis. In the second rebellion (115–117), which took place mainly in Egypt, North Africa, and Cyprus, this form of warfare was widespread. Various maritime occupations were fairly common among Jews in mishnaic and talmudic times, upon the rivers of Babylon and on the seas. The Babylonian Talmud contains more than 200 technical-nautical terms as well as regulations for ordering river traffic; sailing was considered an honorable profession. The wealth of talmudic references have been the basis for a major study by D. Sperber. For centuries, well into the Christian era, *Alexandria had its own society of Jewish navicularii (“shipowners”), as well as seamen of all professions. During the anti-Jewish riots of 39 C.E., cargoes of Jewish ships were carried off and burned. Augustine and Jerome both recorded encounters with Jewish mariners; their contemporary, Bishop Synesius, wrote a satirical account of his experiences aboard a ship with a Jewish crew sailing from Alexandria to Corynna: when a storm rose on Friday afternoon the ship was left to dance freely upon the waves by the God-fearing mariners, to the extreme agitation of the passengers.

Ship representations from the Hasmonean and Early Roman periods have been found at Maresha and in the “Tomb of Jason,” Jerusalem. An intact lower hull of a boat dated to the first century C.E. was excavated on the shores of the Sea of Galilee. Drawings of ships – merchantmen and galleys – are known from the Late Roman and Byzantine periods (e.g., at Nessana, Beth Shearim), as well as in mosaic floors (e.g., recently at Lod), X Legion bricks, and coins. A drawing of a merchantman, together with a Latin inscription, “Domine Ivmius,” was uncovered in the Church of the Holy Sepulcher. Some authorities date it to the Byzantine period, while others suggest dating it to the Roman period.

[Henry Wasserman / Shimon Gibson (2nd ed.)]

As long as the Mediterranean remained open to the European West, Jewish traders were prominent in maritime contacts between the Mediterranean coast and the southern shores of the sea up to the ninth century. Gregory of Tours (sixth century) tells of a ship manned by Jews plying the coast of Provence and Liguria. Norman ships sighted in Carolingian times were thought to be either Jewish, African, or British. During the Muslim domination of the Mediterranean there is evidence in contracts, responsa, and descriptions of partnerships of Jews “in ships,” i.e., in cargoes; Jewish ownership of “a
third of a ship” is mentioned. Maimonides distinguishes between various legal forms of this financing of maritime trade. In the main, such Jewish merchants conducted their manifold and widespread trade in ships owned by gentiles. There were, however, notable exceptions: *Benjamin of Tudca observed that the Jews in *Tyre were shipowners. In southern France, particularly in *Marseilles, Jewish shipowners, who were barely differentiated from their Christian competitors, were active from the Byzantine era until well into the Middle Ages. Evidence of some Jewish shipping activities may be found in Aragon, Barcelona, Portugal, and the Balearic Islands in the late Middle Ages. Most Mediterranean ports contained Jewish merchants, brokers, and insurers, engaged in various aspects of shipping.

Jewish scholars may have helped spread the knowledge of early nautical aids like the compass, quadrant (predecessor of the sextant), astrolabe, and astronomical tables, from the Arab East to the Christian West. *Levi b. Gershom (1288–1344) devised an improved quadrant which continued in use for four centuries and was known as “Jacob’s staff”; his invention was itself a refinement of the “Quadrants Judaicus” of Judah b. Machir. The famous “Allonsine Tables” were translated into Spanish and amended by two Jewish physicians at the court of Aragon in the late 13th century. *Majorca was known for its nautical instruments, produced by Jewish craftsmen, and for its Jewish mapmakers, the most renowned of whom were Abraham *Cresques (d. 1387) and his son Judah, who completed his father’s lifework, a map of the world. Apostatizing after the massacres of 1391, Judah Cresques entered the service of Prince Henry the Navigator and became director of his nautical academy at Sagres. Abraham *Zacuto constructed the first metal astrolabe, compiled astronomical tables, and was consulted by *Columbus, Vasco de Gama, and other leading navigators of the Age of Discovery. Some Jews participated in the great European voyages of discovery (see Gaspar da *Gama and Pedro *Teixeira). Jewish merchants on the Barbary Coast and other Muslim Mediterranean coasts sometimes engaged in privateering and piracy (see also *Palache family).

The *Marrano Diaspora in the Mediterranean world, Northern Europe (Amsterdam, Hamburg, London), and the New World was active in international maritime commerce, mainly as entrepreneurs, merchants, brokers, and insurers. In *Altona and later in Copenhagen Portuguese Jews participated in the shipbuilding industry, developed the trade with Greenland, and pioneered in whaling; the authorities of *Glückstadt attracted Portuguese Jews by offering them the right to engage in shipbuilding, from which they were excluded in all Hanseatic cities. In England a Marrano, Simon Fernandez, was chief pilot of Sir Walter Raleigh (see also Antonio Fernandez *Carvajal). In his “Humble Address on behalf of the Jewish Nation,” *Manasseh Ben Israel emphasized the services the Jews could render to English shipping. Members of the *Schomberg family achieved distinction in the royal navy and merchant marines. Joseph d’Aguilar Samuda (1813–1885), a pioneer in the building of iron steamships, helped found the Institute of Naval Architects. Gustav Wilhelm Wolff, joint founder of the Harland and Wolff shipyards of Belfast, one of the world’s largest, joined the Church of England at an advanced age. Sephardi Jews played an important role in colonial trade. The *Furtado and *Gradi families (who pioneered the Canada trade) were prominent among the shipping merchants of *Bordeaux. Marrano shipowners and shipbuilders were active in *Leghorn. In Antwerp the Mendes-Nasi family were prominent shippers in the spice trade and even had their own ships built.

Jews sailed the Indian Ocean, mainly in non-Jewish ships, playing a not inconsiderable role in shipping in the 11th–12th centuries and once more in the 16th–18th centuries. They were also active in shipping in Constantinople and worked as boatmen or porters in the ports of Constantinople (where the Jewish boatmen were known as kaikjes) and Salonioka. In the British and Dutch colonies of North America, Jews were engaged in the oceanic colonial trade as well as in trade between the various colonies and in fishing enterprises (see Aaron *Lopez and *Touro family). Michael and Bernard Gratz, shippers of New York, outfitted privateers in the War of Independence. Captain John Ordronalux (1778–1841) was a highly successful privateer captain in the 1812–14 war between the United States and Great Britain. In South Africa the *De Pass brothers were the largest shippers for many years in the 19th century; they were connected mainly with developing the whaling and fishing industries.

In modern times, Jewish participation in shipbuilding – as in other heavy industries – was not uncommon. However, there were exceptions. When Alexander Moses of Koenigsberg began building a ship in 1781, the German builders protested; Frederick 11 allowed him to finish this one but not to build another. Albert *Ballin raised the standard of the Hamburg-America Line and brought it international repute by introducing modern passenger services and winter pleasure cruises. Jens and Lucie Borchardt (1878–1969) developed tugboat shipping in Hamburg harbor; after the Nazi rise to power they continued their activity in Great Britain. In 1870 W. Kuntsmann (1844–1934) of Stettin founded the largest shipping firm on the eastern coast of Prussia. In Russia, Jews helped develop the internal river traffic: David S. Margolin organized a firm which owned 62 river steamboats on the Dnieper and in the 1880s G. Poljak built a fleet of petroleum tankers that sailed from the Caspian Sea up the Volga. Austrian Lloyd was organized by Italian Jews from *Trieste, as was the Navigazione Generale Italiana. Jacob *Hecht formed the Rhenania Rheinhochseefahrts group in 1908 and the Neptun company in 1920 for river shipping.

For shipping in Israel see *Israel, State of: Economic Affairs; *Zim.

**BIBLIOGRAPHY: BIBLICAL PERIOD: C. Tott, Ancient Ships** (1895); Cowley, Aramaic, 89–90; A. Koester, *Das antike Seewesen* (1923); idem, *Schiffahrt und Handelsverkehr des ostlichen Mittel-

SHIRAZ, capital of the former province of Fars, S. *Iran. The existence of a Jewish community in Shiraz is attested by Persian and Arab geographers from the tenth century. The funeral of a great Sufi leader in Shiraz (981) was attended by Muslims, Christians, and Jews. Muqaddasi (tenth century) states that there was a smaller number of Jews than Christians in the province. Benjamim of Tudela (c. 1162) described Shiraz as a large city, with a Jewish population of about 10,000. With the rise in 1288 of Sa’d al-Dawla, the Jewish physician and vizier of Arghun Khan, the Jews of Shiraz shared in the considerable freedom enjoyed by all the communities in *Persia, and likewise were affected by the persecution which swept over Mesopotamian and Persian Jewry after the death of Arghun Khan. The persecutions of the Jews in Shiraz under the Safavids are detailed in the Judeo-Persian chronicles of *Babai ibn Lutf and Babai ibn Farhad. Coja Jacob Aaron, a Jewish banker and broker of the English East India Company of Basra, went to Shiraz during the Persian occupancy of *Basra in 1777. According to David d’ *Beth Hillel, there lived in Shiraz 700 Jewish families (about 3,500 people) in 1827. And according to the account of Benjamin 11, 2,500 out of 3,000 Jews in Shiraz were forced to embrace Islam in the middle of the 19th century. Later, most of the Jews returned to Judaism. In 1892, 1897, and 1910 there were severe pogroms in the Jewish quarter; many were killed and injured. During the 19th century, Christian missionary activities and the Bahai movement made inroads into the Jewish community which were countered by the establishment of an *Alliance Israélite Universelle school in 1909 (which closed in the 1960s). Toward the end of the 19th century, many Jews from Shiraz emigrated to Erez Israel, including the families of Rahamim Reuven *Melamed and Raphael *Hayyim *Ha-cohen.

Approximately 12,000–15,000 Jews lived in Shiraz in 1948. According to the 1956 Iranian census, 8,304 Jews remained in Shiraz, which was then the second largest Jewish community in Iran. Approximately 2,000 Jews left for Israel between 1956 and 1968. Most were artisans and peddlers, but there were also merchants and moneylenders. About half the Jews received financial assistance until they left the city. Those who remained belonged to the middle classes, but in the 1960s Jews began to leave their ghettos. A yeshivah with 18 pupils, a teacher’s seminary with 20 pupils, and schools were run by Ozar ha-Torah and by ORT. The former had 1,100 pupils in 1949 and 2,020 in 1961. In 1960 about 1,000 Jewish children attended government schools. The town had a branch of the Iranian Jewish Women’s Association and the Young Peoples’ Association, Kanun Javanan. In 1967 the community numbered 7,000 Jews. In the year 2000, 13 Jews were arrested and brought to the revolutionary court in Shiraz on false charges of spying for Israel. They were sentenced to from one to 12 years in prison. Eventually all of them were released at the beginning of 2003. There remained in Shiraz about 3,000 Jews in 2005.

See *Iran.

[Herbert Joseph Fischel and Hayyim J. Cohen / Amnon Netzer (2nd ed.1)]

SHIR HA-MA’ALOT (Heb. שיר המואלים, “Song of Ascent”), superscription of Psalms 120–134 (see *Psalms). (The superscription of Psalm 121, however, is Shir ha-Ma’alot.) These psalms are now generally understood to have been sung by the pilgrims as they went up to Jerusalem to celebrate the three Pilgrim Festivals. Those carrying the firstfruits chanted Psalm 122 as they approached Jerusalem (TJ Bik 122). In the Ashkenazi rite, these psalms are recited together with Psalm 104 on Sabbath afternoons during the winter season and also on *Tu bi-Shevat. Psalm 126 is sung in the home before *Grace after Meals on Sabbaths and festivals.
SHIR HA-YIHUD (Heb. דִּחוּהַי ִׁיר ש, "Hymn of Unity"), a lengthy medieval liturgical poem divided into seven parts, one for each day of the week, praising God, extolling His uniqueness, and emphasizing the smallness of His creatures. Poetic beauty and sublimity of religious thought have placed the poem among the foremost liturgical compositions. Each line is divided into rhymed couplets, with four beats in each couplet. From the fourth line on, each verse throughout the remainder of the poem contains 16 syllables. The first three lines serve as an introduction, a free translation of which reads:

I will sing to my God as long as I live,
The God who has sustained me all through my life,
To this day Thou hast taken me by the hand,
Life and loving kindness hast Thou given me.
Blessed be the Lord, blessed be His glorious name,
For His wondrous kindness shown to His servant.

The identity of the author is uncertain and no trace of his name is to be found in any acrostical combination in the poem. *Heidenheim (Ha-Piyutim ve-ha-Paytanim, s.v. Judah b. Samuel b. R. Kalonymus, in: Introd. to his Shemini Aszeret Mahzor) ascribes its authorship to *Samuel b. Kalonymus he-Hasid, the father of *Judah he-Hasid of Regensburg. A. Epstein (in Ha-Goren, 4 (1903), 96–98) has sought to identify Samuel b. Kalonymus Hazzan as the author.

Originally, the appropriate portion of the Shir ha-Yihud was recited in many congregations after the conclusion of the daily service. Some congregations only recited it on the Sabbath. The most prevalent contemporary custom is to recite the entire poem at the conclusion of the service on the eve of the "Day of Atonement, and to chant the appropriate daily section at the start of the morning service on *Rosh Ha-Shanah and the Day of Atonement. Its elimination from the daily and Sabbath services was probably due to the desire not to lengthen the service unduly, though some authorities also quoted the talmudic dictum that no mortal is capable of properly praising the Almighty (A. Lewisohn, Mekorei Minhatgim (1846), no. 32). "It is as if an earthly king had a million denarii of gold, and someone praised him as possessing silver ones. Would it not be an insult to him?" (Ber. 33b).

[Aaron Rothkoff]

SHISHAK (Heb. שִׁשָּׁק, biblical name for Sheshonq (935–914 B.C.E.), founder of the 22nd (Bubastite) Dynasty of Egypt, and one of the last kings in Egyptian history to invade Palestine. His Tanite predecessors had markedly restrained themselves in this direction; Siamun captured Gezer in approximately 960 B.C.E., but immediately allied himself to *Solomon through a diplomatic marriage (1 Kings 3:1; 9:16) and tried to restrain his Edomite protégé Hadad from revenge on Solo-

mon (1 Kings 11:14–22, 25). Shishak's campaign took place in the fifth year of *Rehoboam's reign (918/7 B.C.E.) and is recorded in 1 Kings 14:25–28, 11 Chronicles 12:2–12, and in a relief at Karnak listing the 165 conquered cities. The motive for the campaign may have been ingratitude on the part of *Jeroboam, who earlier had found protection at Shishak's court (1 Kings 11:40). Rehoboam was distracted by a task force dispatched to the Negev that penetrated as far as Edom, and he was made to pay a ransom from the Temple treasury; Jerusalem and Judah remained untouched. His southern fortifications (11 Chron. 11:5–12) may have been erected on this occasion. Shishak's main energies were directed against the north. He made a circuit of the area, bringing destruction on Gezer, Gibeon, cities in the Jordan valley, Shechem, Megiddo (where part of a stele bearing his name was found), and cities in the region of the Yarkon. Due to the destruction of Shechem, Jeroboam's residence was temporarily removed to Penuel (1 Kings 12:25), which then also fell at the hands of Shishak's troops (it is not mentioned again in biblical sources).

[Irene Grumach]

In the Aggadah
Shishak's real name was Zevuv ("fly"), but he was so called because he longed (from the root Ha-SHA-K; "to desire") for the death of Solomon, whom he feared to attack (SOR 20). The treasures which he plundered from Jerusalem (cf. 1 Kings 14:25ff.) were those which the children of Israel had taken from Egypt at the time of the Exodus (Ex. 12:36; Pcs. 119a).

SHITRIT, BEHOR SHALOM (1895–1967), Israeli Sephardi leader. In his youth he came in contact with Second Aliyah pioneers near Tiberias. After the British occupation of Palestine he was one of the organizers of the police force in his native Tiberias and was appointed commander of the police in Lower Galilee. After training in the Police Officers' School, he worked in the department of criminal investigation in several towns. In 1933 he investigated the case of Chaim *Arlosoroff's murder. From 1935 until 1948 he served as magistrate in several towns. With the establishment of the State of Israel (1948), Shitrit became a member of the government, first as representative of the Sephardi and Oriental communities, holding the post of minister of police and minorities. Later he became a member of the Knesset for *Mapai and served as minister of police almost until his death. In organizing and developing the Israeli police, he benefited from his broad experience in the police force and in court, as well as from his thorough knowledge of all the ethnic groups in Israel, their languages, and their customs.

[Yehuda Slutsky]
SHI’UR KOMAH (lit. “the measure of the body,” namely the body of God), Hebrew term for an esoteric doctrine concerning the appearance of God in a quasi-bodily form. This doctrine developed in the tannaitic period as the most secret part of *Merkabah mysticism. When the mystic attained the vision of the supernal world and found himself standing before the throne, he was vouchsafed a vision of the Shi’ur Komah as the “figure in the form of man” which Ezekiel had seen on the throne in his first vision of the Merkabah (Ezek. 1:26). Not only was this doctrine consistent with the obviously anthropomorphic descriptions of God in many biblical passages, it was also reinforced by the interpretation of the Song of Songs as relating to God and Israel. The figure of the believed as described there (Songs 5:11–16) served to legitimize the Shi’ur Komah doctrine, which was furtherembellished by the details given about the halak, the robe of glory with which this mystical body of God is clothed. Fragments of this doctrine have been preserved in several texts bearing the title Shi’ur Komah and in many allusions to it in midrashic literature. The fragments consist of a detailed description of the limbs of God in the figure of a man and this apparently deliberate and excessive indulgence in anthropomorphism proved shocking to later and more rationalistic Jewish thought. On the other hand, the kabbalists hailed it as a profound "Epistle on Shi’ur Komah" to its philosophical interpretation on the lines of "Averroes’ notion of "one single order and act in which all beings participate in common." Interpretations of Shi’ur Komah according to the traditions of the *Hasidei Ashkenaz in the 13th century are to be found in the Sefer ha-Navon published by Joseph Dan. The Spanish kabbalists did not try to comment on its details, but the author of the *Zohar imitated its general tenor in his descriptions of the divine configurations (parzufim) in the *Idra Rabba and *Idra Zuta, which he evidently considered as the summit of his kabbalistical revelations, ascribed to R. *Simeon bar Yohai. Many kabbalists (*Jacob b. Jacob ha-Kohen, *Isaac b. Samuel of Acre, Judah *Hayyat) saw it as a description of *Metatron, or of the priemal Adam (*Adam Kadmon).

[Gershom Scholem]

SHIVTAH (Hebr. שבטה) or SOBATA, former town in the Negev, 35 mi. (56 km.) southwest of Beersheba, near the Nezana highway. It was founded in the first century B.C.E. by the *Nabateans (only pottery and an inscription mentioning Dushara are known), but it expanded considerably under Christian rule during the course of the Byzantine period (4th to 7th centuries) and thrived until the Abbasid period (c. 800 C.E.), at which point it was finally abandoned. The original Nabatean name for the site may have been Shubitu. The town is mentioned in the later story of St. Nilus and in the Nezana papyri. The settlement (covering an area of about 22 acres) is unwallled.
and comprises many sumptuous residences, stables, various public buildings, three churches, public squares, and winding streets. Three types of stones of varying quality were used for building houses: a very hard limestone for the foundations and the walls of the lower stories; a yellowish-medium-hard stone for the middle parts of the walls and the voussoirs of the arches; and a soft chalk for the upper stories and the coverstones of the roofs. Wood was hardly used in private houses, except for shelves in built-in cupboards. The roofing of the private houses was based on a system of arches and cover-stones, and only in the churches were large quantities of wood used. The southern and older part of Shivtah is centered on two large pools. The nearby southern church was built after the other buildings. The northern part, covering 40 dunums (10 acres) with 340 rooms, contained a tower, perhaps a public building, at its southern end and a large church dedicated to St. George at its northern extremity. This church consists of an open court, a narthex, a mosaic-paved side chapel, and a baptistry; the main church (66 x 37 ft.) has a nave and two aisles separated by six columns. It has three apses and its walls were once covered with white marble. Near the church was a large square surrounded by 36 shops and workshops (for potters, dyers, etc.).

The Byzantine-period inhabitants of Shivtah cultivated an extensive area in the Lavan Valley, amounting to 4,945 dunums (1,270 acres); rainwater from a drainage area of 77 sq. mi. (197 sq. km.) was carried by means of a series of complicated channels into their fields. An excavation of farm buildings and a columbarium was made by C. Baly at the time of the Colt expedition, but remains unpublished. All the valleys, large and small, were traversed by dams, and an elaborate system of channels collected the rainwater from afar, in a ratio of 1:20 or 1:30 of catchment area per unit of arable field. Experiments in ancient methods of farming and water use are being carried out by M. Evenari of the Hebrew University on a reconstructed farm at Sobata. The presence of a number of wine-presses (described as excavators as baths of a very economical type) indicates that grapes were probably one of the main crops. In the city itself, water was based on rainwater collected in cisterns and the cleaning of the reservoirs was a duty to be performed by every inhabitant; each house was also provided with one or two cisterns. In the 8th–9th centuries C.E. a small Muslim community lived at Sobata and built a small mosque near the South Church.

The first European scholar to visit Sobata was E.H. Palmer (1869), who suggested identifying it with Zepath, which Simeon conquered, changing its name to Hormah (Judg. 1:17). This identification has not been accepted. The site was later visited by A. Musil (1902); A. Jaussen, R. Savi gnac and H. Vincent (1905), who found the first Nabatean and Greek-Byzantine inscriptions; C.L. Woolley and T.E. Lawrence (1914); and T. Wiegand, who visited Sobata at the head of the Committee for the Preservation of Ancient Monuments attached to the Turco-German Headquarters (1916) and thus had the opportunity to correct some of the mistakes made by earlier scholars. In the years 1934–38 an expedition of New York University and the British School of Archaeology in Jerusalem, under the direction of H.D. Colt, made large-scale excavations at Sobata, the results of which have not been published. In the years 1958–59 the Israel National Parks Authority, under the guidance of M. Avi-Yonah, carried out some clearance and restoration of the ancient buildings. The North Church was studied by R. Rosenthal in the 1970s and later excavations were conducted by S. Margalit. An architectural appreciation of the site was also made by A. Segal. In 1981 A. Negev fully published the 30 or more inscriptions found at Shivtah (see L. Di Segni 1997). In 2000, Y. Hirschfeld prepared a new map of the site and made a detailed study of the architecture of the settlement. T. Tsuk also made a study of its water systems.

[Michael Avi-Yonah /Shimon Gibson (2nd ed.)]

**SHIVVITI** (Heb. שְׁיוֹבִיתִי), the opening word, in Hebrew, of the verse: “I have set the Lord always before me” (Ps. 16:8). As a part of the daily prayer, the word became a cliche for Jewish devotion and common language. During the 18th and 19th centuries, and up to the present a votive tablet called “Shivviti,” principally containing the above verse, was put up in front of those praying in the synagogue. These synagogue plaques contain other verses, concerning the Law and the Torah. Most of them were profusely decorated in shapes and colors. The most common motifs of decoration were the seven-branched menorah of the Temple, and symbolic buildings representing different “Holy Places” in Erez Israel, such as Jerusalem or the tombs of sages and righteous men. Some are decorated with animals or mythical beasts and persons. Others serve as amulets, containing magical symbols, such as the Magen David, and magical verses. Most of the Shivviti plaques derive from Eastern Europe in the 19th century. There are, however, some plaques which come from North Africa, mainly from Morocco.

[Bezalel Narkiss]

**SHKLOV** (Pol. Szklów), city in Mogilev district, Belarus; within Poland until 1772. Jews apparently first settled in Shklov during the 16th century. By the end of the 17th century the trav-
elaer Korb wrote (Regesty i nadpisi, 2) that the Jews formed the “wealthiest and most influential class of the town,” which was then a commercial center at the junction of trade routes between Russia and Western Europe. In 1746 the Shklov community broke away from the council of the “province of Reissen” (or “Russia,” one of the provinces within the framework of the Councils of the Lands) and became independent. There were 1,367 Jews in Shklov and its surroundings who paid the poll tax in 1766. When Shklov passed to Russia in the first partition of Poland in 1772, it was handed over to General Zorich. The Jews complained to the central government, which then restricted the authority of the master of the city. During the first 50 years of Russian rule Shklov became a commercial center of prime importance. Two large fairs were held there annually and the merchants attending it traveled from Central Asia and Moscow to the commercial towns of Central Europe. Shklov was also a center of Jewish culture. The disciples of Eliezer b. Solomon, the Gaon of Vilna, were influential there. Between 1783 and 1835 several printing presses operated in Shklov, and about 200 books were published. It was in Shklov that Hasidalah first actively emerged in the Pale of Settlement. Baruch Schick, Nathan (Note) Notkin, and Joshua Zeitlin were active there. The Hebrew version of Koli Shavat Bat Yehudah (1804) by Y.L. Nevakhovich, which called on the Russian government to grant Jews equal rights, was published in Shklov.

After the construction of new roads and railroads bypassing Shklov, the city began to decline. The community numbered 9,677 in 1847, 5,422 (77% of the total population) in 1897, and 3,119 (37.6%) in 1926. P. Smolenskin describes Shklov in its decline in his stories Ha-Toch be-Darkhei Hayyim and Kevarat Hamor. Zalman Shneur, a native of Shklov, immortalized the community life and folklore in Anshei Shklov, and Nohi Pandre. After the Communist Revolution of 1917, communal life was liquidated. In the 1930s, 50 Jewish families earned their livelihood from working in three kolkhozes, one of them was a Jewish one with 30 families. In 1939 the Jewish population declined again to 2,132 (26% of the total population). The Germans arrived there in July 1941. They created two ghettos for the local Jews and from the environs, one in town, housing 3,200, and the second in the neighboring town of Ryzhkovichi with 2,700 Jews. Young Jews were executed from time to time from both ghettos. In early October 1941 both ghettos were liquidated, and the inhabitants were murdered.

**SHKLOVSKII, ISAAC VLADIMIROVICH** (pseud. Dio neo; 1865–1935). Russian writer. Born in Yelizavetgrad (now Kirovograd), he started his literary career at the age of 16, contributing short stories, essays, and reviews for publications in south Russia. He was deported for his political activity to Sredne-Kolymsk, northern Siberia, from 1886 to 1892. There he became intimate with the life of the native population, about which he wrote in his Siberian notes, Na kraynem severo-vostoke Sibiri (1895; In Far North-East Siberia, 1916). In 1896 he moved to London, where he served as correspondent of Russkiye Vedomosti and other Russian journals, thus acquainting the Russian reader with life in England. His articles appeared later as books under such titles as Ocherki sovremennoy Anglii (“Notes on Contemporary England,” 1903); Angliyskiye silueti (“English Silhouettes,” 1905); and Angliya posle voyn (“Post–War England,” 1924).

**BIBLIOGRAPHY:** J. Frumkin et al. (eds.), Russian Jewry 1860–1917 (1967), 271.

**SHKOP, SIMEON JUDAH** (1860–1940), Lithuanian talmudist and rosh yeshivah. At the age of 12, Shkop was accepted as a student at Mir Yeshivah, and later proceeded to Volozhin. He married a niece of Eliezer Gordon and in 1885 was appointed to the Telz Yeshivah, where he remained for 18 years. In 1903, he was appointed rabbi of Maltash, and in 1907 of Bransk. During World War I, the communal leaders urged him to leave before the Germans arrived, but he refused and stayed with his community. In 1920, at the request of Hayyim Ozer Grodzinski, he was appointed head of the Shaarei Torah Yeshivah in Grodno. Shkop developed a system of talmudic study which combined the logical analysis and penetrating insights of Hayyim Soloveichik with the simplicity and clarity of Naphtali Zevi Judah Berlin and which became known as the “Telz way of learning.” Many of his students attained distinction, among them Elhanan Wasserman, M.A. Amiel, and I.J. Unterman. Alive to the problems of the day, Shkop had a winning personality. He was an active member of the Moaetz Gedolei Torah of the Agudat Israel. Of his many works there have been published Shaarei Yosher (2 vols., 1928); Maarekhet ha-Kinyanim (1936); novellae on Bava Kamma, Bava Meziah, and Bava Batra (1947; with a preface by his son), on Nedarim, Gittin, and Kiddushin (1952), and on Yevamot and Ketuvot (1957). His novellae have also appeared in Ha-Posek (1941–2) and Ha-Nemanim (1951). As the Germans were about to enter Grodno during World War II, he ordered his students to flee to Vilna and he himself died two days later.

[Mordechai Haohen]
to join the Crusades. Shlom had the man seized and imprisoned. Incited by the wife of the imprisoned man, the crusaders murdered Shlom and 15 others. Duke Leopold executed two of the murderers.

SHLONSKY, ABRAHAM (1900–1973), Hebrew poet, editor, and translator. Shlonsky holds a central position in the development of modern Hebrew poetry and modern Israel poetry in particular. His work marks the transition from the rhetorical, didactic, naturalist type of poetry of the European period to the modernist, symbolic, and individualistic poetry of the Palestinian and Israeli periods. Modernism entered European and Russian poetry in the late 19th and early 20th centuries, but reached Hebrew literature somewhat later. Although symbolism and expressionism had some influence on Hebrew literature before Shlonsky’s day, the subsequent shift to these types of poetry is primarily due to him. His contribution to the development of modern Hebrew literature goes beyond his achievements in poetry. By his manifold literary activities as editor, translator, polemicist, popular lyricist, editor for the theater, and author of children’s literature, he set the literary tone for an entire generation.

Shlonsky was born in Karyokov, Ukraine. He always stressed the fact that he was born at the beginning of the 20th century, which qualified him as a 20th-century poet. The family were “Habad Hasidim, deeply attached to Judaism and to ‘Ahad Ha-Am’s cultural Zionist ideology. His father was interested in folk music and composed the popular melody to Saul Tchernichowsky’s poem “Sahaki, Sahaki.” In her youth, Shlonsky’s mother was active in the socialist revolutionary movement in Russia. At the age of 13, Shlonsky was sent to Ereẓ Israel to study at the Herzlia High School. He returned to Russia shortly before the outbreak of World War I and continued his studies in the Jewish secular high school in Yekaterinoslav. He began writing poetry in his youth, and his poem “Bi-Demei Ye’ush” appeared in *Ha-Shiloah* in 1919.

In 1921, after wandering through Russia and Poland, Shlonsky returned with a group of halutzim to Ereẓ Israel, where he worked on road building and construction, spending some time in kibbutz En-Harod. Much of the atmosphere of that period is found in Shlonsky’s cycles of poems: Gilboa, Amal, Be-Ikei ha-Ẓon, and Yizre’el. Shlonsky dubbed himself “the road-paving poet of Israel.” He did not confine himself to poetry out of conviction of the need to contribute to other literary fields and is to be counted among the writers of dialogue of the young Hebrew art theater, the lyrics of the Hebrew satiric theater, the famous limericks of the Purim balls of “Little Tel Aviv,” and even the jingles for advertising Israel products. However, his major contribution was in the development of linguistic tools and devices for the writing of modern Hebrew poetry and his poetry itself.

In 1922, Shlonsky’s first Ereẓ Israel poem appeared in the weekly periodical *Ha-Poėl ha-Za‘ir*, and in the same year he moved to Tel Aviv. Asher “Barash and Jacob Rabinowitz, publishers of the literary miscellany *Hedim*, drew him into their circle, considering him an outstanding representative of the younger generation of Ereẓ Israel poets, along with Uri Zevi “Greenberg and Yizḥak “Lamdan. In 1924 Shlonsky went to Paris to study. When the newspaper *Davar* was founded in 1925, its editor-founder, B. “Katzenelson, invited him to become a regular member of its editorial staff. Shlonsky took over the literary section of the newspaper, but this proved to be too narrow a framework for him and he joined the weekly literary magazine *Ketuvim*, which he edited jointly with E. “Steinman. This soon became the organ of authors who opposed the Writers’ Union and the literary establishment. Despite its high caliber, *Ketuvim* was not financially solvent enough to support its editor and writers. In 1928 Shlonsky joined the staff of *Haaretz*, with which he remained until 1943, when he joined the editorial staff of *Mishmar* (founded in 1943). Upon the demise of *Ketuvim*, Shlonsky, who was one of the leading authors of the literary group Yahad, founded the weekly *Turim* (first series 1933; second series 1938). He edited *Dappim le-Sifrut*, a literary supplement of the *Ha-Shomer ha-Za‘ir* weekly, and was the first editor of the literary page of the daily *Al ha-Mishmar*, and the quarterly *Orlogin*, which appeared from 1950 to 1957. Linked to the Mapam party, he was one of Israel’s leading intellectuals participating in the left-wing world peace movement and heading Israel’s delegations to world conferences of the movement. In addition he maintained personal contact with Soviet writers. From the late 1950s he became more outspoken in his criticism of the Soviet attitude to Israel and to Jewish culture in the Soviet Union. He was the initiator of the publication of the Hebrew translation of Boris Gaponov’s Georgian epic *Oteh Or ha-Namer*.

Shlonsky’s Poetry

Shlonsky’s poetry was molded out of the world in which he lived. Scenes of horror of World War I, riots against Ukrainian Jews, the inherent contradictions of the Russian revolution (messianic yearnings on the one hand and chaos accompanied by outbursts of cruelty on the other) are themes in his poetry. He set out to avenge the “Eluf Yogenot” (“Thousand Griefs”) which he witnessed “Be-Misholei Eloha” (“In the Paths of the Almighty”). His poem “Devai” (“Sorrow”) contains the lepers’ song of protest, giving expression to their bitter condemnation of the world order, their rebellion, and their yearning for “spring.” The poems in *Ba-Galgal* (1927) are bitter cries, and in *Be-Elleh ha-Yamim* (1930) Shlonsky reacts to the terror of the riots in Palestine at the end of the 1920s. With *Avnei Boha* (1934), the product of his encounter with the Western European city, his poetry takes on a new meditative, existentialist dimension. The poems evoke the loneliness and anguish of modern man in the industrialized city. Shlonsky feels that it is his task to cry out and awake the world’s sleeping conscience. Revolutions do not come about only by the
sword; poetry also has great value in “preparing the hearts.” He refuses to reconcile himself to the image of a generation full of deceit and illusions that does not revolt against the folly of mankind before its demise. Above all, he is appalled at the apathy of man toward a child’s tears, death, suffering, and the impending catastrophe.

The horrors of the approaching Holocaust are expressed in Shirei ha-Mappolet ve-ha-Piyyus (1938). Another visit to some European capitals reproduced with greater force the feeling of alienation, orphanhood, and fear: “From a village fence, my eyes are pierced by the four fangs of the swastika.” Childhood fears, scenes of horror, and pogroms again float into the poet’s consciousness, “Still today, even today, when they knock upon a door, I fear to open, lest the night will enter.” “The poems of the squared fear” take up the central motif of man’s perverseness and his strange restricted and frightened world. The image “squared fear” developed out of Shlonsky’s urbanistic poetry, whose foundations were laid in previous books, especially in Avnei Bohu. Here the European city, which Shlonsky likens to Sodom, is a frightening vertigo which forebodes evil and is haunted by the mad frenzy of passion and the shadow of the gallows. At the edge of night, however, the poet seeks the light of “bereshit hadashah” (“a new genesis”). He rediscovers the simple, sensual joys of life and the exultation of nature’s wonders, which form the reconciliation motif of the poetry.

Al Millet (1947) is a direct continuation of Shirei ha-Mappolet ve-ha-Piyyus. Shlonsky begins the book with “Bereshit Hadashah,” the same poem which concluded the previous book. The poems which follow sing of reconciliation with the world, the renewal of the love covenant with simple things, and the return to childhood, to the security of nature, and to the goodness of fertility. Shirei ha-Lehem ve-ha-Mayim, which take up similar themes, conclude this phase in Shlonsky’s writing.

The period of the Holocaust which followed is filled with fear and confusion. Shlonsky kept his silence — “It is a silence of a face against a gate covered by night.” The poems in Mi-Mahashakim (“From Darkness”), published a few years after they were written, express his helplessness and bewilderment during those terrible days. After the Holocaust, Shlonsky regained his art (Ki Tashuv). The poet’s skill returned, enabling him to sing of the world’s delights. The poet who believed that he was part of a generation which lived without fairy tales now rediscovered what he was unable to see in the days of darkness, but he did not return to love the world by ignoring or denying what had occurred. He affirms the world in spite of the horror, and consequently his love for it will be firmer and more secure. The poems in Paris ha-Aheret (“The Other Paris”) tell of the new confrontation with the city that had once enchanted the poet.

In Shlonsky’s collected works, a number of poems entitled Mi-Sefer ha-Yoreh are placed after the poems of Al Millet. These poems are related to those of Sefer ha-Anakh but the unanticipated occurred: Sefer ha-Anakh does not continue. Once more the foundations and certainties crumbled and confusion and amazement befell the poet. The familiar symbols are the tortured comparisons of the “capriciousness of the sword,” storm, distractions, the hidden, the cloudy, and mute evil in Shirei ha-Mappolet.

Avnei Gevil (1960) contains Shlonsky’s “mature poetry,” although distinct elements already present in his early poetry survive. He does not return to motifs used in his early poetry, but transforms these motifs in keeping with the climate of a different period. This sense of time gives a contemporary quality to the book in that it breathes the atmosphere of the 1950s and its fear of a cosmic holocaust. The “fear of death” poems are permeated with a chilling silence (“Shirei ha-Meruzah ha-Ra’ah”) and the poet believes that there is wisdom in stating facts without an outcry and receiving judgment without a protest. The resignation to fate is not fatalism but a higher wisdom which recognizes the futility of protest. The prose-like lines in some of the poetry (“Ne’m Peloni al Shekhunato”) are written under the influence of the new literature and are an indirect result of Shlonsky’s perception of the times, which unintentionally brings about such forms of expression. Similarly the break in rhythm and the abandonment of rhyme and melodies spring from the poet’s literary strength — not from his weakness. The revival of the poet’s creative power does not come about only from the changes which take place within the poet, but reflect those which occur in the objective reality. It is not easy for a poet of Shlonsky’s caliber to free himself from the memory of his past experiences, yet he cannot sustain his creative ability without constant contact with the present. Therefore, the blend of various elements, always the mark of great poetry, is found in Avnei Gevil. These elements are the synthesis of old and new, of the poetry of personal experience with that of creative wisdom, of excitement and reckoning, and of emotion and significance.

Mi-Shirei ha-Perozedor ha-Arokh (“From Poems of the Long Corridor,” 1968), a book of meditative and emotional poetry, contains poems of reflections on life and death. “The long corridor” is the symbol of a hidden world, a world of secrecy and surprises, a “Kafkaesque” world. Man passes along a corridor with doors on each side; behind him the doors are open, in front of him they are closed. The poems, raising more questions than they answer, containing more doubts than certainty, are a statement of yearning rather than accomplishment, of protest rather than reconciliation. It seems that Shlonsky wished to contradict his previous works, not to lean on his past great achievement, but to struggle in an indirect way with the “questions of the day.”

Like all innovators in literature, Shlonsky never favored complete disassociation with literary tradition. He advocated the blending of tradition and new values with the cultural heritage of the nation. He refused to cast off all the remnants of the past and begin from the beginning. A true innovator, he drew upon the best existing literature, yet built his original creative world. His innovations stem from his contempt for the worn and worthless clichés which had replaced vivid diction. He re-
jects forms of expression which no longer describe reality because deep changes have occurred in the life of society.

In the 1930s Shlonsky wrote many articles explaining his demand for a poetic renewal. He sarcastically attacked the low standard of literary achievements which pretended to give expression to the Erez Israel way of life. He claimed that in an eventful era, poetry cannot exist only on “still waters,” but that the literature of an uprooted generation should be as stormy and bewildering as the generation itself. It should be as full of contradictions and fears as the period in which it was created. “Man has turned his manner of life on its head… destroying the heritage of his past,” wrote Shlonsky, “no father-mother; no tallit and tefillin; none of the old relationships between male and female; hardly anything of the conceptual system of the past exists, yet he insists on seeking his self-expression in the old workshop.” The poet who rejects the current “poetry of the present experience” strives to create a poetry which is nurtured on the wellsprings of the experience of the generation.

This attitude was already found in Shlonsky’s early poems. “Hitgallut” (“Revelation”), opening his collected poems, is the young poet’s “platform” as he begins his odyssey. He knows that he must fulfill the mission of bringing the message of the “new thing” to the world. The young poet, standing on the threshold of the new world, sees the old world’s slow destruction. He does not rejoice at this calamity. Torn between two worlds, he understands up to what point reality forces the culmination of the old, yet he cannot blind himself to the sorrow of its decline. Shlonsky writes of the new life using new forms. Hebrew poetry was not accustomed to the rhythm, the inner structure of the poem, and the modern tonality, yet his system of imagery is based on traditional concepts. He compares the roads to the straps of the tefillin; the country, “her skin like parchment, a parchment for the Torah,” “is wrapped in light like a tallit,” and houses stand like phylacteries. The poem “Yafrim Leilot Kena’an” (“Canaan Nights are Beautiful”), he says, will be sung like Sabbath hymns. The symbol of the ‘Akedah recurs several times.

Shlonsky found a most fitting new tone in the Sephardi pronunciation, in a rhyme which suits daily speech, and in new phonetics and new accentuation. In this field he was a pioneer.

Shlonsky’s last volume of poems, Sefer ha-Sulamot, was sent for publication on the day of his death in 1973 and appeared posthumously the same year.

In 1977 The Correspondence of Abraham Shlonsky by Aryeh Aharoni was published. It consists of letters in Hebrew which Shlonsky sent during the last decade of his life to Jews in the U.S.S.R. who sought to establish contact with the cultural life in Israel and renew their ties with Hebrew literature. They were brought back to Israel by immigrants from Russia. The letters reveal the great lengths to which Shlonsky went to accede to their requests and deal mainly with Hebrew literature and poetry. In one of them he refers to the miracle of the revival of Hebrew in the U.S.S.R.

Every book of poetry Shlonsky published was a significant literary event. His works are Devai (1924), Ba-Gilgal (1927), Le-Abba-Imma (1927), Be-Elleh ha-Yamim (1930), Avnei Bohu (1934), Shirei ha-Mappato ve-ha-Piyyus (1938), Al Millet (1947), Avnei Gevil (1960), and Mi-Shirei ha-Perozer dor ha-Arokh (1968). All except the last two works were later published in two large volumes. Other works are the collection Shirei ha-Yamim (1946, mostly translated poems, some original), the three children’s books Aliilot Miki Mahu (1947), Ani ve-Tali (1957), Uz Li Gag Li (1966), and many translations from the best in world literature. The latter include translations of Shakespeare’s dramas King Lear (1956) and Hamlet (1946), four of Chekhov’s most important plays, Pushkin’s poems “Eugene Onegin,” and “Boris Godunov” (1956), Gogol’s Revizor (1935) and The Marriage (1945), Charles Da Coster’s “Till Ollenspiegel” (1949), Romain Rolland’s “Colas Breugnon” (1950), Michael Sholokhov’s And Quiet Flows the Don, Isaac Babel’s stories, and many more. He also translated much of world poetry, mainly from modern Russian lyric poetry. The correspondence between Shlonsky and Zila Shamir was published in 1997 as Miktavim le-Meshoreret Ze’erah.

For Shlonsky’s works in English translation, see: Goell, bibliography, index, and the ITHL website at www.ithl.org.il.

[Abraham B. Yoffe]
music. Among her major works are *Images Palestiniènnes* for voice and piano; Symphony no 1; *Cinq Melodies sur le Poème de Guillaume Apollinaire* for voice and piano; Concerto for Piano and Orchestra; String Quartet; *Hodaya* – Thanksgiving Cantata for Choir and Orchestra; Two Sonatas for Violin and Piano; *Silhouettes for Voice and Percussion*, and more. In her essays, published in the Israeli press, she portrayed musical life and the life of musicians in both Israel and Europe, and dealt with the lively ideological struggle between the supporters of avant-garde music and its opponents. These were also the topics of her prolific correspondence with leading musicians worldwide. Verdana, who was also a competent drawer, gave private piano lessons for her rather modest living, and taught during the late 1960s and early 1970s at the Tel Aviv Academy of Music. Her awards include First Prize of the French Government Competition for Women Composers for her *Poème Hebraique* for voice and piano (1931); Bartok Prize for a string quartet (1948); prizes from ACUM for a string quartet (1973), and for life's work in music (1984).

Both professionally and socially, Verdana did not receive the many recognition she deserved. Her archive, including a great many articles, letters, and musical compositions, is located in the Music Department of the National Library, Jerusalem.

[Joel Shmuel-Levin (2nd ed.)]

**SHERERUK, CHONE** (1921–1997), Yiddish scholar. Born in Warsaw, Shmeruk studied history at the university there. During World War II he was in the U.S.S.R., where he met many Soviet Yiddish writers. He returned to Warsaw in 1946 and then immigrated, via Stuttgart, to Israel in 1949. When the Yiddish department was opened at the Hebrew University of Jerusalem in 1950, he was one of Dow *Sadany's first students, also studying history with Israel *Halpern, Ben-Zion *Dinur, and Yitzhak *Baer. He taught Yiddish literature and culture at the Hebrew University from 1957 (professor, 1961, later chair of the Yiddish department). A member of the Israel Academy of Sciences and Humanities (1986), he received the Israel Prize in 1996.

Shmeruk studied many aspects of Ashkenazi cultural history and Yiddish literature, analyzing the relations between history, society, culture, language, and literature, and writing articles and books on a wide range of subjects, showing the role and functions of Yiddish in the Ashkenazi world, defined as a polysystem of languages and cultural trends. Shmeruk did not view Yiddish literature as an autonomous cultural entity, but demonstrated the complex links between Yiddish creativity and traditional sources, modern Hebrew, and the surrounding non-Jewish Polish, Russian, German, Italian, and American cultures. He wrote on all periods of Yiddish literature, from the earliest Yiddish text (1272) to his own contemporaries. Among his major books are *Sifrut Yidish, Perakhin le-Toldoteihah* ("Yiddish Literature: Aspects of its History," 1978, rev. Yiddish trans., 1988); *Mahazot Mikra'im be-Yidish* 1697–1750 ("Yiddish Biblical Plays 1697–1750," 1979); *Sifrut Yidish be-Polin* ("Yiddish Literature in Poland," 1981), and *Ha-Kheriah le-Nevi* ("The Call for a Prophet," 1999). One of his fields of specialization was Jews in Soviet Russia and Poland and their Yiddish literature, on which his publications include Ha-Kibbutz ha-Yehudi ve-ha-Hityashevet be-Belorusyah ha-Sovyetit (1918–23) ("Jewish Settlement and Colonization in Soviet Belorussia (1918–23)," 1961); *Pirsumim Yehudiyim bi-Verit ha-Maazot* 1917–60 ("Jewish Publications in the Soviet Union 1917–60," 1961); a bibliography of Yiddish authors in the U.S.S.R., co-edited with I.J. Cohn, M. Pietzash, et al.; *A Shpigl oyf a Shteyn* ("A Mirror on a Stone"), co-edited with A. Suzkiewer, et al. (1964), an anthology of poetry and prose by 12 Yiddish writers in the U.S.S.R.; *The Esterke Story in Yiddish and Polish Literature* (1985); *Di Yidishe Literatur in Nayntsetn Yorhundert* ("Yiddish Literature in the Nineteenth Century," 1993); and *The Jews in Poland Between Two World Wars* (co-edited 1989). He also published on *shund* ("pulp literature") and children's literature, Jewish folklore, press, theater, education, Haskalah, Hasidism, the history of publishing, and illustrations of Yiddish books. He edited classical works of Jewish writers, such as Joseph *Perl's manuscript Miashtoyt ve-Iggerot mi-Zaddikim Amittiyyim u-me-Anshei Shelomenu* (with Sh. Verses, 1969); *Der Nister* (1963); S.J. *Abramovitsh, *Bialik and *Rawntski's Letters* (1966); *Sholem *Alechem* (1976); I.L. *Peretz, Bay Nakht oyfn Altn Mark* (1971); Itzik *Manger, Midresh Isik* (1969, 1984); Isaac Bashevis *Singer, *Der Shpigl* (1975); Uri Zevi *Greenberg (1979); Israel *Rabon, Di Gas* (1986); the middle Yiddish *Pariz un Viene* (1996); *The Penguin Book of Modern Yiddish Verse* (co-edited, 1987). He compiled with Sh. Verses a bibliography of S.J. Abramovitsh's writings and letters (1965) and was director of the series *Yidishe Literatur* (Hebrew University) and of a massive documentation of early Yiddish texts on microfiche. He served as consulting editor to the first edition of the *Encyclopaedia Judaica*. The encyclopedic range of his research, his international teaching, and decades-long mentoring quite literally (re)constructed the field of Yiddish literary studies after the Holocaust and will continue to influence the course of research for decades to come.

[Jean Baumgarten (2nd ed.)]

**SHMUEL-BUKH** (Sefer Shmuel), 16th-century Yiddish epic. Considered the masterpiece of Old Yiddish midrashic epic, the narrative expertly reworks the biblical book of Samuel by means of an intimate knowledge of both post-biblical Jewish traditions (particularly those concerning the primary heroic characters Samuel, Saul, and David) and the conventions of the medieval German “minstrel epic,” recasting the whole as an heroic epic. The text comprises 1,792 four-line stanzas of two rhyming couplets (aaa b) (plus a colophon), each line divided rhythmically into two half-lines of three primary accents each (derived from the stanza characteristic of the Middle
High German Nibelungenlied). The melody to which the poem was performed became famous and was used for many other Yiddish poems of the period. While the issue of the author's identity has not been definitively resolved, Moses Esrim ve-Arba ("of the twenty-four books," i.e. a biblical scholar) named as author at the end of one early manuscript is now generally identified with an emissary from Jerusalem to Turkey in 1487, which accords with the conventional scholarly dating of the text (based on language use and topical references) to the late 15th century. The text is preserved in a complex tradition of 16th- and 17th-century manuscripts and printed editions (editio princeps, Augsburg, 1544) that precludes the construction of a critical edition.

[Jerold Frakes (2nd ed.)]

**SHMUELI, EPHRAIM** (1908– ), educator, author, and historian. Born in Lodz, Poland, Shmueli immigrated to Erez Israel in 1933. He taught at several Polish institutions of Jewish learning, and in 1969 was professor of philosophy and religion at Cleveland State University.

Most of Shmueli's literary and journalistic efforts – all in Hebrew – were devoted to education, sociology, history, and philosophy. His works include *Demayyot u-Meoraot be-Toledot Ammenu* (1940), an account of important personages and events in Jewish history; *Masoret u-Mahapekham* (1942), monographs on tradition and revolution in Jewish history; *Me-Az ad Atah* (1943), historical miniatures; *Toledot ha-Ziyonut* (2 vols., 1947–50), a history of Zionism; *Beuyot ha-Am ha-Yehudi ba-Zeman ha-Zeh* (1960), on the problems of contemporary Jewry; *Bein Emanuth li-Keferah* (1961), on the problems of faith and heresy in Jewish history; *Don Yizhak Abravanel* (1963); and *Beit Yisrael u-Medinit Yisrael* (1966), on the main currents in U.S. Jewish life. Together with Max Mordechai *Soliel*, he co-authored *Bi-Netiv ha-Dorot* (1944), a study on the destiny of Jewry. Shmueli published two textbooks of Jewish history, *Toledot Ammenu ba-Zeman he-Hadash* (7 vols., 1941–58) and *Korot Ammenu* (1968). In addition, he wrote a number of studies on non-Jewish themes, among them a monograph on Miguel de Cervantes (1952), and a work on Baruch *Spinoza* (1963). His *Sheva Tarbutyot Yisrael* (1980) appeared in English translation as *Seven Jewish Cultures: A Reinterpretation of Jewish History and Thought*, in 1990.

---

**SHMUELI, HERZL** (1920–2001), Israeli musicologist. Shmueli was born in Istanbul to parents of Russian descent. He began studying violin at 7 and piano at 10. In 1933 the family immigrated to Israel, where he studied with P. Ginzburg (until 1934) and later attended the Tel Aviv conservatory (1944–48), where he studied theory and composition with *Boscowitch*. During 1950–53, he studied musicology in Zurich with Cherbuleiz, composition and history with Hindemith at the university, and aesthetics in the Zurich Eidgenessische Technische Hochschule für Musik. Receiving a Ph.D. for his thesis, on Jehudah Arjeh Moscato (1953, published in 1954), he returned to Tel Aviv and began teaching at the Israeli Academy of Music and at the Music Teachers' Seminary, of which he subsequently became director (1955–66). In 1966 Shmueli was one of the founders of the Musicology Department of Tel Aviv University, where he subsequently became the head of the department (1971–74, 1987–89) and professor. Shmueli established the Archive for Israeli Music there and served as dean of the Faculty of Visual and Performing Arts (1983–86) and chairman of the Israeli Musicological Society (1969–71). Shmueli was one of the pioneers in the research of Israeli music. His research centered on the Israeli song and art music, music education, and European music in the 18th–19th centuries. He emphasized the connections between music and other disciplines and established a methodology for analysis of the Israeli song. He directed a series of programs on music for Israeli Instructional TV and was consultant for the music department in the educational television division from 1969 to 1972. He edited several periodicals, among them music periodicals for youth (1957–66). Shmueli published books in Hebrew including *Ommunat ha-Musikah* ("Musical Theory," 1954), *Toledot ha-Makhelah* ("History of the Choir," 1963), and books about the Israeli song (1971), and Alexander Boscowitch, the latter with Jehoash Hirshberg (1995). Among his articles are "Stilelemente in Israeli-Lied 1925–1950," in *Festschrift Hans Conradin zum 70. Geburtstag* (1983), 249–60, and "Adolf Bernhard Marx (1795–1866): Deutscher Musiker, Judaische Herkunft – Eine Dokumentation," in *Essays in Honor of Hanoch Avenary* (1990–91), 216–28. He received the Israel Prize for musical research in 2001.

**SHMUSHEKOVICH, YAACOV** (1902–1941), Soviet air force commander. Born in Rokiškis, Lithuania, Shmushekovich fought in the Red Army during the Russian Civil War of 1918–20. In 1922 he was transferred to the air force, finishing flight school as a pilot in 1931. He rapidly gained promotion and was sent to Spain in 1936 to reorganize the Republican Air Force. In 1937 he commanded Madrid's air defense. On his return to the Soviet Union in the following year he was made a Hero of the Soviet Union. Subsequently Shmushekovich was made commander of the Soviet air force in the Far East, and took part in 1939 in the war with the Japanese in Khalkhin-Khol. From November 1939 he was head of the Red Army Air Force, from May 1940 chief inspector of the Air Force, and from December 1940 aide to the chief of staff in air force matters. For his work in establishing the Soviet air
defence he was made Hero of the Soviet Union for a second
time, one of the few soldiers ever to have been accorded the
honor twice. On June 4, 1940 he received the rank of colo-
nel-general but shortly before the Nazi invasion of the Soviet
Union, he was dismissed from his post. He was arrested in
1941, tried for treason, and executed on October 28, 1941 in
Kuybishiev. At the 20th Communist Party Congress in 1954,
Shmushekevich was one of several executed Soviet figures to
be posthumously rehabilitated. In 1967 the Soviet Army pub-
lished a special work in his memory.

[Mordechai Kaplan]

SHNEOUR (Shneur), ZALMAN (Zalkind; 1887–1959). He-
brew and Yiddish poet and novelist who, together with "Bi-
alik and "Tchernichowsky, is considered to be one of the three
great figures in Hebrew poetry of his generation. Shneour was
born in Shklov, Belorusia; his father, Isaac-Eisik Shneour, was
a descendant of "Shneur Zalman of Lyady. At the age of 13 he
left for "Odessa, which was the great literary and Zionist cen-
ter of the time. Young Shneour was particularly attracted to
Bialik, who usually befriended young writers.

Warsaw and Vilna

As Hebrew projects were expanding in Warsaw, Shneour
moved there in 1902, and on Bialik's recommendation was
employed at Tushiyah, a large publishing house, founded by
the author and publisher Ben-Avigdor (A.L. "Shalkovich). At
the same time he published his first poems in the children's
newspaper Olam Katan. Shneour also published poems and
short articles in the prestigious monthly "Ha-Shilo'ah, and in
the weekly Ha-Dor. His first Yiddish poems appeared in the
weekly Yidishe Folksaytung (Warsaw, 1902–03).

In 1904, Shneour moved to Vilna, where he found work
on the editorial staff of the Hebrew daily Ha-Zeman. The
paper included on its staff several young authors who later
achieved renown in Hebrew literature. Vilna proved impor-
tant to Shneour's Hebrew and Yiddish literary development.
There he published his first collection of poetry, Im Sheki'at
ha-Ḥammah (2 vols., Warsaw, 1906–07), his first novel, Mavet,
and a collection of stories. Shneour's poems achieved great
success and ran through several editions. He published po-
etry and prose in Vilna's Jewish periodicals. Whereas the War-
saw period had been one of the most difficult in his life (both
because of his economic deprivation and feelings of foreign-
ness), Shneour became acclimatized to life in Vilna. Shneour
subsequently expressed his affection and reverence for the city
in his poem Vilnah (first printed in the monthly Miklat, New
York, 1920), and later in a special book with illustrations by
Hermann "Struck (1923). Here he reached the peak of his tal-
ent and achieved facility of expression in Hebrew.

First Poems

Shneour's first book of verse, Im Sheki'at ha-Ḥammah, was
enthusiastically received both by critics and readers. Bialik
warmly praised the author in his essay "Shiratenu ha-Ẓe'rah"
(Ha-Shilo'ah, 1908), calling Shneour "a young Samson whose
seven locks have all grown overnight." Bialik also attributed
to Shneour the qualities of the heroic man who "tears the
young lion which roared against him as one tears a kid" (Judg.
14:5–6). The trenchant comparison with the "young Samson"
was to be repeated by others. Long the idol of the young,
Shneour was the poet of heroism and non-surrender, the sym-
bol of revolt against the conventions and long-established
customs of the ghetto.

When Ha-Zeman ceased publication at the end of 1905,
Shneour left for Switzerland. There, inspired by the country's
natural beauty, he began to write the long lyric poem Be-Harim
("In the Mountains," 1908). The major thrust of the poem is its
contrast of nature – genuine, fresh, and strong – with the arti-
fices and inauthenticities of civilization. Sections of the poem
were eventually translated into some European languages in-
cluding Russian (S. "Marshak in Verveyskaya antologiia, edited
by L. Jaffe and V. Khodasevich, Moscow, 1918).

In 1907 Shneour moved to Paris, where he continued his
literary work while studying literature, philosophy, and
natural sciences at the Sorbonne. From 1908 to 1913 he trav-
elled throughout Europe and also visited North Africa. In this
period he wrote the cycle of poems Im Zešit há-Mandolináh
("To the Strains of the Mandolin," 1912) in which the poet
showers words of affection on a "lovely sunburnt Italian girl,"
whom he asks to play the mandolin. Although completely
captivated by her charms, the poet does not forget that her
ancient forefathers destroyed the Temple and caused the Di-
aspota. His ambivalence toward the girl involves the entire
relationship between Jew and gentile. In one of the poem's
most remarkable sections, "Manginot Yisraél" ("Melodies
of Israel," 1912), Shneour describes the Jews' "revenge on the
gentiles." The revenge, restricted to the realm of the spirit, en-
tailed bequeathing to the gentle conquerors a conception of
God that required them to abandon their beautiful and sen-
suous pagan deities. In 1913, at the time of the "Beilis trial, he
wrote Yemei ha-Beinayim Mitkarevim ("The Middle Ages are
Returning"), a prediction of European civilization's descent
to the maelstrom of war and Jew-hatred. Shneour sensed
the return of medieval antisemitism, which in the 20th cen-
tury would be implemented in the name of patriotism rather
than religion, and liberalism's faint-hearted response to this
threat to civilized life.

At the beginning of World War I Shneour was in Ger-
many, where he was interned along with all Russian subjects
in that country. During the war years he studied medicine at
the University of Berlin and worked in a hospital. In 1919, he
visited the U.S. to contact various Yiddish newspapers with
the object of becoming a regular contributor. However, he re-
turned to Berlin, where, after the war and the Russian Revolu-
tion, authors and publishers fleeing from the Bolsheviks cre-
ated a great literary center.

In Germany, Shneour resumed his literary activity and
founded with Solomon Salzmann the Hasefer publishing
house, whose publications included works by David Frischmann and Shneour (Gesharim, 1922, and Vilna, 1923). Because of his literary and publishing activity, Shneour did not continue his medical studies. In the early 1920s the group of Hebrew literary men in Germany dispersed. Shneour settled in Paris in 1923 and lived there until Hitler’s troops invaded France in 1940, when he succeeded in escaping via Spain to the U.S. He lived in New York from 1941 until his immigration to Israel in 1951.

Yiddish Prose

The political and economic crises which afflicted Europe after World War I caused the market for Hebrew books to shrink to the point where authors were compelled to seek different livelihoods. Those years mark an interval during which Schneour paused in his writing of Hebrew prose, devoting himself rather to writing in Yiddish for the American Yiddish press. In his Yiddish articles and fiction Shneour tapped his childhood memories of “the old home,” sketched Jewish life in Eastern Europe which had been disrupted or destroyed by war and revolution, described his encounters with prominent people, and searched the past for forgotten or obscure episodes in Jewish history. He became one of the most widely read Yiddish authors. His novels, some of which were first published serially in newspapers, have been translated into many languages, and have been widely acclaimed. They were also rendered into Hebrew by Schneour himself.

Sources of Inspiration

Shklov, on the River Dnieper, where Shneour spent his childhood, had been a place of Jewish settlement from the 17th century. In Anshei Shklov (1944), Shneour depicts with great artistry and fresh and lively humor the human types that populated the Jewish community in the city. Shklov, where Jews lived their peculiar inner life, was not exceptional among Jewish towns in the Russian *Pale of Settlement* which were printed in various formats and have been widely acclaimed. They were also rendered into Hebrew by Schneour himself.

Shneour provided a kind of rehabilitation for the *ammei ha-areẓ*. Despite their ignorance of Jewish learning, Shneour observed that these people were endowed with other valuable qualities, the opposite of resignation, passivity, and fatalism. In appearance, too, the *am ha-areẓ* was not afflicted with the pallor and bent back of the scholar.

Later Poetry

In his poem cycle Luhot Genuzim (“Hidden Tablets,” 1948), Shneour imagined that in the archaeological excavations being carried out in Israel there might yet be found works written by the opponents of tradition—works like the Apocrypha, fortuitously preserved in other languages and later translated into Hebrew. According to the sages, such books as the Song of Songs and Ecclesiastes were to be prohibited from publication, but were miraculously saved from suppression and were ultimately included in the Bible.

The publication of Luhot Genuzim aroused much controversy. The poem, written in biblical style, relates Israel’s early history in a way that conflicts with the Bible. Schneour’s critics accused the poet of identifying with the “authors” of the Luhot, who held views offensive to Jewish tradition. Shneour defended himself with the claim that the work was a product of his imagination and that he had no intention of substituting the ideas of the Luhot for those of the scriptural version (his admiration for which he had stressed in many of his poems, such as Manginot Yisrael). He merely presented the suppressed opinions of the “opposition,” who were to be found in every era (Korah and his band, the “false prophets,” the Sadducees, etc.). Literary critics also felt that artistically the work was a failure.

Shneour in Israel

Before formally settling in Israel, in 1951, Shneour had visited the country five times. For many years he had lived the life of the country, past and present, from afar deriving his poetic inspiration from it. He sang of its rebuilding by Jewish pioneers in his Mi-Shirei Erez Israel. In Israel he adapted his story Pandrei ha-Gibbor as a play, which was staged by *Habimah*. He also wrote for several daily papers such as Davar and Ha-Boker, publishing in the latter installments of his great epic, Ba’al ha-Parvah. He also revised his Hebrew poetry and prose, which were printed in various formats.

In the 1950s, as prolific as ever, Shneour engaged in collating his enormous output, and was planning new works, when he died in New York. His remains were transferred to Israel and reinterred in a grave next to those of Bialik and Tchernichowsky.

SHNEUR ZALMAN OF (LIOZNA-) LYADY (1745–1813), founder of Chabad Hasidism. According to family traditions he was born in Liozna, Belorussia, on the 18th of Elul. After his marriage in 1760 he devoted himself to Torah study. Concluding that he knew “a little about learning, but nothing about prayer,” in 1764 he decided to learn about Hasidism from Dov Baer the Maggid of Mezhirech, leader of the hasidic movement. In Mezhirech he became one of the inner circle of the Maggid’s pupils. He also studied as a friend and pupil with Abraham b. Dov Baer. Although Shneur Zalman was one of the youngest pupils, the Maggid had a high opinion of him and in 1770 delegated to him the task of composing a new and up-to-date Shulhan Arukh. Shneur Zalman worked on this book for many years but published only small parts of it. About one-third was printed posthumously (the rest had been destroyed by fire) and is known as the “Shulhan Arukh of the Rav” (1814). Though not a hasidic work, it represents – as the Maggid had intended – a great halakhic achievement. It evidences Shneur Zalman’s superb Hebrew style and his ability to provide lucid explanation and profundity without complexity. It became an authoritative halakhic source among the Hasidim of Lubavitch.

In 1774, during the early period of the opposition to Hasidism by traditional Jewry, Shneur Zalman and Menahem Mendel of Vitebsk went to Vilna in an attempt to meet with Elijah b. Solomon, the Gaon of Vilna, and reach some kind of understanding between the Hasidim and Mitnaggedim, but the Gaon did not agree to meet them. After Menahem Mendel went to Ereẓ Israel with many of his followers, Shneur Zalman was left with two others as a deputy leader in Rydzyna (Reisen, Belorussia and adjoining areas). In 1788 Menahem Mendel formally appointed Shneur Zalman leader of Reisen: this was really only a post facto appointment, as he already had many devoted personal pupils. It had become apparent that Shneur Zalman had created a distinct type of Hasidism, to become known as Chabad (see Chabad system, below). In 1799 he published (anonymously) his Likkutei Amarim ("collected sayings"), which became known as the Tanya. A masterly and systematic exposition of Hasidism, it was accepted as the principal source of Chabad Hasidism, “the written law of Hasid.”

By then the influence of Shneur Zalman was already penetrating the strongholds of the Mitnaggedim, who made a last effort to check the spread of Hasidism by informing its followers to the Russian government. Avigdor b. Joseph Ḥayyim, the rabbi of Pinsk, formally accused Shneur Zalman of personal acts of treason against the state (his sending of money to Ereẓ Israel was interpreted as “helping the Turkish sultan”) and of creating a new religious sect (all sectaries being forbidden in Russia). In 1798 Shneur Zalman was arrested and brought for trial to St. Petersburg. No exact details of this trial are known, though many legends have been related about it. He later received a full acquittal and was released on the 19th of Kislev that year. The day is celebrated among Chabad Hasidim as the “Holiday of Deliverance.” Shneur Zalman was again arrested in 1801 under the same accusations but was released later in the year when Alexander I succeeded to the throne. From St. Petersburg, Shneur Zalman settled in the town of Lyady and became known as the “Rav of Lyady.”

Subsequently there developed a marked difference in his exposition of Hasidism, a deepening of the scholarly element and new ways of expression. This change was among the reasons for a resurgence of inter-ḥasidic rivalry, which also had many personal sources. The opposing faction was headed by Abraham (Katz) of Kalisk (then in Ereẓ Israel) and Baruch of Medzhibozh, the grandson of Israel b. Eliezer Ba’al Shem Tov. The strife caused Shneur Zalman much pain but did not weaken his influence. When the Franco-Russian war began, Shneur Zalman was among those who thought that a victory by the revolutionary French would be injurious to Judaism. He therefore brought all his influence in favor of the Russian side and fled with the defeated Russian armies. He became ill during the flight, died in Piena (Kursk district) and was buried in Hadich (Poltava district).

Shneur Zalman was one of the great Jewish personalities of his age, as great a scholar in talmudic studies as in Kabalah. He had a wide knowledge of science and mathematics, and his powers as a systematizer were enhanced by a fine style. Yet he was also a mystic and deeply emotional; he composed ḥasidic melodies and was a charismatic leader. All these qualities blended in a strangely harmonious way. His work is masterly on every subject, an almost unique combination of mysticism and common sense. His other important works are Likkutei Torah (Zhitomir, 1848), Torah Or (1836), and Maamarei Admor ha-Zaken (1958–60).

Schneersohn Family

Chabad Hasidism continued to be led by the descendants of Shneur Zalman of Lyady: DOV BAER (1773–1827), the eldest son of Shneur Zalman, became after his father’s death in 1813 the leader of the majority of his father’s Hasidim. He settled in the little town of Lubavitch, which became the center of Chabad. Under Dov Baer’s leadership, the Chabad approach was strengthened and deepened. His blend of intellect and mysticism is expressed in his clear and profound commentaries on his father’s works. He was a prolific writer and wrote many works, the majority being explanations of diverse subjects, among them Kunteres ha-Hitpudat (1876; Tractate on Ecology, 1963), according to his systematized Chabad Hasidism. At the same time he supported the idea of productivization in the Jewish economy and encouraged his Hasidim to take up manual occupations. He also persuaded all the Chabad...
Ḥasidim in Ereẓ Israel to settle in Hebron (1820), which became the Chabad center there. Dow Baer was imprisoned for a time because of accusations against him by an informer but was released on the 10th of Kislev, which is celebrated as a minor holiday among Chabad Ḥasidim. He died in *Nez-

MENAHEM MENDEL (1789–1866), grandson of Shneur Zalman (son of his daughter) and son-in-law of Dow Baer, became the leader of Chabad after his father-in-law's death. Orphaned while young, he was educated chiefly by his grand-
father and from a very early age began to write on halakhah and Ḥasidim. He wrote numerous books and sermons, most of which remained in manuscript. He was generally acknowledged as one of the greatest Torah scholars of his day. His re-
sponsa Zemah Zedek (1870–74, in honor of which he is re-
ferred to as the "Zemah Zedek") is a highly esteemed halakhic work. Menahem Mendel greatly assisted the Chabad settlers in Hebron. The Russian government accorded him the hereditary title of an honored citizen, and he was acknowledged as one of the leaders of Russian Jewry. He fought the assimilationist policy of the government and the adherents of "Haskalah who gave it their support. The year before his death, no longer able to fulfill his manifold duties, he assigned them to his sons.

After Menahem Mendel's death the Ḥasidim could not reach an agreement on a leader, and most of his sons became leaders of different branches of Chabad Ḥasidism. As the ba-
sis for the division was mainly personal, they reunited after a time.

JUDAH LEIB founded the Kopys branch of Chabad (see below). Another son of Menahem Mendel, ḤAYYIM SHNEUR ZALMAN (1814–1880), became leader in Lyady, noted for his special way of worship. Collections of his sermons have been made (remaining in manuscript). His successor, ISAAC DOV BAER (1826–1910), published a commentary on the prayer book entitled Siddur Maharad. His many other writings re-
main in manuscript. He was the last leader of this branch, and after his death his followers returned to the main Chabad group.

Another branch of Chabad was headed by ISRAEL NOAH (1816–1883), rabbi and Ḥasidic leader in Nezhen and the most notable scholar among Menahem Mendel's sons. These also included JOSEPH ISAAC, who became (in his father's lifetime) a Ḥasidic leader in Ovruch in the Ukraine, but his circle was not a branch of Chabad Ḥasidism.

SAUL (1834–1882), youngest son of Menahem Mendel, was his successor in Lubavitch. Like his father, he was active on behalf of Jewry. Only a few of his works have been pub-
lished. His son SHALOM DOV BAER (1866–1920) succeeded him in the leadership of Chabad. A dynamic personality, his most important achievement was the founding of the first Ḥasidic yeshivah "Tomkehr " (1897), which led the way to a more organized and effective religious education in the Chabad movement and elsewhere. His literary work is closely connected with his educational work. In 1916 he began to establish a network of Chabad yeshivot in Georgia and was the first Ḥasidic leader to spread Ḥasidism among non-
Ashkenazi Jewry.

His son JOSEPH ISAAC (1880–1950) assumed the leadership of Chabad during the period of the civil war in Russia which followed the 1917 Revolution. An outstanding organizer, he began to reconstruct Jewish life and became the foremost religious leader of Russian Jewry. He fought courageously to resume religious activities under the Communist regime. Un-
der his leadership the Chabad movement became the core of a strong Jewish spiritual revival. Although his activities were at first permitted, he was arrested in 1927, and only after power-
ful pressure within Russia and from abroad was freed on 12th–13th of Tammuz of that year, days commemorated by Chabad Ḥasidim as a holiday of deliverance. He left Russia and went to Riga (Latvia), where he organized new Chabad centers, and founded Chabad organizations throughout the world. In 1934 he settled in Poland and organized a network of Chabad yeshivot. After the outbreak of World War II and the German occupation of Poland, he was rescued and went to the United States. With undaunted energy he stimulated, from his headquarters in Brooklyn, a renaissance of Orthodoxy in the United States. Joseph Isaac founded modern organizations of Chabad, a network of schools and yeshivot, newspapers for adults and children, a flourishing publishing house, and numerous welfare organizations. In 1948 he founded *Kefar Ḥabad in Israel. He wrote a notable history of Chabad, and published many of his sermons and talks.

MENAHEM MENDEL (1902–1994), the son and pupil of Levi Isaac Schneersohn of Yekaterinoslav and son-in-law of Joseph Isaac, also studied mathematics and science at the Sor-
bonne in Paris. After the death of his father-in-law in 1950, he became the seventh successive leader of Lubavitch Ḥasidism. Under his direction, its institutions expanded, new ones were founded, and the number of adherents throughout the world increased to over 25,000. He encouraged hundreds of young men to go out to Jewish communities everywhere to establish contact with the Jewish masses and bring them back to Orthodoxy. The Lubavitch Youth Organization, which he founded in 1955, has continued to play a vital role among Jewish college students. Regional offices were established around the globe, and Kefar Chabad served as the Lubavitch headquarters in Israel. Under Schneersohn's direction the influence of Lubavitch spread far beyond the Ḥasidic community and penetrated the mainstream of Jewish life in many parts of the world. Schneersohn, while not belonging to any formal rab-
bincal or political organization, was frequently consulted on Jewish problems and issues.

KOPYL BRANCH. This Chabad branch was founded by JUDAH LEIB (1881–1866), a son of Menahem Mendel of Lubavitch (see above). After his father's death in 1866, following a quarrel over the leadership, Joseph Leib settled in the town of Kopys where many of the Ḥasidim became his followers. He died, however, in the same year. He was succeeded by his son SO-
LOMON (SHNEUR) ZALMAN (1830–1900), under whose leader-
ship his followers became a most important and active branch of Chabad Ḥasidism. A selection of Solomon's Ḥasidic sermons was published in one of the important Chabad books, Magen Avot (1902); other sermons were published in Derashim Tek- arim (ed. G.A. Yankelzon, 1903). Another son of Judah Leib, Shalom Dov Baer (1840–1908), a pupil of his elder brother, Solomon, was also a rabbi. He later assumed Ḥasidic leadership in Rechitsa (now Belarus), which became a secondary center of Chabad Ḥasidism. After his brother's death, Shalom became the moving force of this branch. A third brother, Shemariah Noah (1845–1926), a rabbi and later a Ḥasidic leader in Bobruisk (central Belarus), was the last leader of this branch. He built one of the first Ḥasidic yeshivot (1901) and wrote a book of sermons, entitled Shemen La-Ma'or (1864). Upon his death his followers joined the Lubavitch branch of the movement.

The Chabad System
After Shneur Zalman became recognized as an independent Ḥasidic leader, the new trend in Ḥasidism became known as Ha-Ba-D, an acrostic of the kabbalistic term Ḥokhmah,滨nah, da’at (“germinal, developmental, and conclusive” knowledge). Shneur Zalman's methodical approach, and the need to formulate Ḥasidism in order to transmit its study, gave rise to methodological changes in the approach to Ḥasidism, which also became to a certain extent changes in essence. Although some Ḥasidic ideas had received definition before the advent of Shneur Zalman, it was based on no system which could be studied by regular methods. The conversion to an organized theory which could be studied (as in the Ḥadarim founded by Shneur Zalman) necessitated an intellectual approach. Although Shneur Zalman did not reject the “intuitive” approach to Ḥasidism in principle, he emphasized that this “all embracing way” in practice held many dangers: it could encourage self-deception and especially could lead to the severance of the vital link between simple faith and emotion, and daily practical life. Shneur Zalman stressed the necessity of regular study and unceasing spiritual exercise as indispensable for achieving lasting results. From this he derived a new ethical concept of the “beinoni” (“the average man”). He defined the zaddik as an exceptional human type, whose characteristics are inborn and who directs all his spiritual life to attaining the transition to the divine. However, this person is extremely rare, and there exists a disconnect between him and the average man which is almost impossible to bridge. The practical Jewish ideal is a different figure, that of the beinoni.

The beinoni that “every man should aspire to become” is the person who does not manage in the unconscious depths of his soul to achieve complete spiritual identity with the Divine, yet in his practical life and in his emotions and intellect, he strives toward perfection. This is given additional importance by Shneur Zalman through emphasizing that the beinoni ranks parallel to the zaddik, but the degree of the latter can only be attained by exceptional individuals who are chosen from birth, whereas that of the beinoni is the ideal which may be achieved in practice and is required of every Jew. The beinoni is not required “to change darkness into light or bitter into sweet,” nor can he induce evil to change to good: this task, which kindles heresies and their consequences, is the sole province of the zaddik. The beinoni is required to resist evil throughout his life, to reject it by virtue of his inner decision and the subject of evil to good (control of the evil impulse). To achieve this aim, man is required to utilize his spiritual powers. Instinctive reverence, like “the hidden love that is in the heart of every Jew from birth,” forms the primary basis from which every beinoni may advance to higher degrees of perfection. The beinoni’s struggle against the evil impulse within him is sustained by knowing that “the brain rules the heart from birth” and by persevering in the use of meditation (hitbonenut). Meditation on the greatness of the Creator and on love and reverence for Him results in the elevation of the primitive feelings in the sacred soul to a higher degree of “love and rational reverence.” This does not necessarily imply an intellectual or rationalist approach to adherence to God but is essentially the propulsion of the hidden emotional life to a degree of full awareness. Similarly, strict attention is required to be paid to the accepted Jewish ethical behavior – such as punctiliousness in the performance of the precepts, additional stress on Torah study, and the worship of God in joyousness while repressing melancholy. In placing additional significance on the role of meditation as a primary means of achieving elevation in the Ḥasidic progression, Shneur Zalman regarded study of Kabbalah not as a theoretical study but essentially as a means of strengthening faith in the Creator and of arousing the heart.

In consequence of its teachings and discourses, Ḥasidism develops into an independent study encompassing a variety of subjects which promote meditation. However, while Shneur Zalman did not diverge from the approach of his Ḥasidic mentors in the abstract spheres of speculation, he systematized their teachings by the use of special methods of exposition. In particular he broadened and developed the exposition of Kabbalah (which had already begun during the lifetime of the Ba’al Shem Tov) by employing parables and examples from spiritual life. The symbols and principles of Kabbalah were understood as operating also in psychological problems. In his work Sha’ar ha-Yihud ve-ha-Emunah, Shneur Zalman summarizes his general theological concept, the basic problem being the reciprocal connection between God and the world. Although he accepts the view that the existence of the world has its origin in the hidden and concealed aspect of the divine nature, this does not lead him to deny the basic reality of the world as an illusion of the senses. He draws considerably upon the deductive methods of *Judah Loew, the Maharal of Prague, explaining that even the concealed and hidden aspects are revelations of other facets of the divine nature.

As a corollary to this explanation there arises the paradox of which Shneur Zalman makes regular use, that the physical world, precisely because it conceals the divine manifestation, is an expression of the highest degree of the divinity (“mate-
rial creation derives from the divine substance”). This explanation also postulates conclusions concerning the conduct of man: fulfillment of the practical precepts just because they are materialistic and study of the Torah just because it is linked with material factors in the world are higher degrees than theoretical spiritual adhesion to God. The link with the apparent concealed divine presence in this world is the ascent which follows the descent of the soul into the body. Observance of the precepts, like Torah study, forms a link of real adhesion to God (and in fact the only link). It follows that love of God and reverence for Him, and even the feeling of adhesion to Him, are only a means of arousing the soul toward the true adhesion — through Torah study and observance of the precepts.

By emphasizing the unbridgeable chasm between the divine essence and any attempt at understanding and identification with it, it follows that the only bridge is through the channel of revelation — the Torah and its precepts — while in the life of the soul the most praiseworthy quality is the negation of selfhood. This negation is not expressed through self-mortification but is basically a “negation of existence,” subjection of the individual wish; and “negation of reality” is the wish of the individual to identify with the divine will. Surrender of the soul, as one of the main forms of such negation, serves simultaneously as the basis for the path to worship of God in both the life of feeling and of action.

This interpretation of Hasidism, predicated on observance of the precepts out of a wish to identify with God, in study and meditation, is clearly an individualist process. Every Hasid is responsible for pursuing, and is obligated to pursue, independent worship activity, while the assistance of the hasidic congregation, and even of the zaddik himself, is not integral to divine worship. Hence Shneur Zalman does not dwell extensively on the status and nature of the zaddik. In his view the admor is a spiritual leader and guide who assists his Hasidim to find their individual way to God, while the hasidic group, or the isolated Hasid, can and are required to pursue their way by virtue of their independent powers and responsibility.

Shneur Zalman did not intend to present a complete theosophical system, like the kabbalists, nor did he engage in theological speculations for their own sake. Rather, he was a guide to the path leading to the true service of God. From his position as zaddik, Shneur Zalman sought to demonstrate that by following his advice the hasid would be realizing the verse, “the thing is very close to you, in your mouth and in your heart to observe it” (Deut. 30:14). He constructed a psychological system based on kabbalistic principles, distinguished by subtle analyses and penetrating to the depths of the human soul. His treatment of theology is arrived at incidentally through psychology, and hence his system may be regarded as Kabbalah in hasidic dress.

In his theology, Shneur Zalman presented a conception of theistic transcendence even of a somewhat pantheist nature. In this respect he is closer to the conception of Moses *Cordovero than to Isaac *Luria. On the one hand there is no limit to the greatness of God, and “the intellect cannot grasp it”; on the other, the term “infinite” (Ein Sof) in its adverbial form is understood as “there is no object to the light emanating from Him,” i.e., in terms manifested outside of Him. Shneur Zalman explains this by the use of the terms “surrounds all the worlds” and “fills all the worlds,” i.e., on His own terms God is infinite (Ein-Sof), surrounding and encompassing everything. His greatness lies in that the only luminance revealed outside Him is infinitesimal, though this luminance supports and establishes all existence in the many worlds. Hence the concept of Shneur Zalman cannot be defined as total acosmism, as held by several scholars.

Shneur Zalman explains the concept of zimzum (“contraction,” see “Kabbalah) as being allegorical only, reflecting some inner compulsion. The abundance of the upper world would flow unimpeded in the act of creation, but zimzum is constituted to conceal this light before the limited creatures.

Shneur Zalman emphasizes the importance of “germinal, elemental, and conclusive knowledge” (hokhmah, binah, da’at), i.e., those powers of the soul which are employed in intellectual activities, whose object is the immensity of Ein-Sof. However not the intellect alone, but attributes such as love and reverence and the like ought to be directed toward the Creator. Evil is not bad on its own terms and is constituted to serve as a challenge to man. Whoever manages to subject it (the beinoni), and even to convert it to good (the zaddik), augments holiness in the world and brings the Divine Presence to a complete harmony and the soul to great joy.

The Tanya

This is the first and primary work of the Chabad system, first published anonymously in 1796. Shneur Zalman himself calls the book Likkutei Amarim (“Collected Sayings”), but on the title page of the second edition it is designated “Tanya,” and it has continued to be widely known by this name ever since. It has been translated into English (including pt. 5; 1964–66). The book consists of five parts:

(1) Sefer shel Beinonim (“The Book of the Average Man”).

(2) Sha’ar ha-Yihud ve-ha-Emunah (“The Gateway of Unity and Belief”), called in the first edition himukh katan (“brief instruction”).

(3) Iggeret Teshuvah (“Letter of Repentance”); this exists in two editions: the first, and briefest, was published in Shklov in 1799, while the second edition, the longer version, was published in Shklov in 1806 and has been the most frequently republished. It is also called “Tanya Katan” (“Brief Tanya”).

(4) Iggeret ha-Kodesh (“Letter of Holiness”), published in Shklov in 1814 soon after the author’s death. Not all the letters have been published in their entirety, and their supplements are scattered in various texts.

(5) Kanteres Aharon (“Last Thesis”; Shklov 1814).

The 1814 Shklov edition of the Tanya includes all five parts, and this form has since been retained. Various abridgments and explanations have been written to the Tanya. The
Chabad Hasidim refer to it as the “written law of Ḥabad” and designate it for daily study.

Apart from the letters included in the “Iggeret ha-Kodesh” and “Kanteres Aharon,” the rest of the parts of the book present a complete and consistent system, which develops out of the determination not to “fail” in precision of terminology and logic. This gives rise to complicated syntax and lengthy sentences, which make the subject difficult to comprehend. However, the Tanya is one of the few works of Hasidism which is not a collection of discourses but a complete systematic exposition and was developed by the originator of the system himself. When the book appeared, it was criticized adversely by both maskilim and Mitnaggedim, and even by the Hasid, Abraham of Kalish. But it eventually was greatly appreciated for the profundity of its thought and organized structure. However, commentators have not always succeeded in penetrating its inner meaning. Contradictions exist between Shneur Zalman’s other books of discourses and the Tanya.

Successors to the Chabad System

Those continuing the system advanced by Shneur Zalman of Lyady merely explain and expand what he laid down. The principal contribution of his own descendants to the Chabad system was their selection of various subjects out of the total of those treated by him. Shneur Zalman’s ramified work was given direction and definition principally by his son and successor Dov Baer. He placed even greater emphasis on the element of meditation and also expanded it. He strengthened the intellectual aspect of Chabad, designating the study of Hasidism not only as a means to an end but also an end in itself. By this he brought an additional distance between the Hasidism practiced by Chabad and the rest of the branches of Hasidism (see Aaron of “Starosielce”).

Menahem Mendel, author of Zemah Zdeek, added halakhic works and also introduced a new category of hasidic writings. In Derekh Mitzvotokha (1911–12), on a part of the Torah precepts, Mendel employed a form which combined halakhah, kabbalah, and Hasidism; and in Sefer ha-Hakirah, he brought together concepts and terms from Jewish philosophical literature and the systems of Kabbalah and Hasidism. However, subsequently Chabad returned to the framework established by Dov Baer – hasidic sayings, mainly arranged according to the portions of the Law, which explain religious and theoretical problems (intellectual) or ethical-practical concerns (worship) according to Shneur Zalman’s system. The works which expand the sphere of ideas (of the Kopys dynasty) or the kabbalistic context (those of Shalom Baer) still do not go beyond this general framework, hence the special status acquired by the admorim of Chabad as the sole authoritative exponents of the system. In contrast, a different, more personal type of literary work developed in the form of talks, in which guidance is the principal motif. They are not constructed in an organized form. In them the Chabad admorim of the last few generations express themselves freely, each in his own manner, through ethical tales or general explanations of contemporary problems.

SHOCHAT, ISRAEL (1886–1961), founder and leader of the *Ha-Shomer organization. Shochat was born in Liskova in the province of Grodno (Belorussia) into a family of Jewish landowners. In his youth he joined the Po‘alei Zion party and in 1904 went to settle in Ereẓ Israel. When he became acquainted with the Jewish settlements whose life was based on Arab labor and protected by Arab, Circassian, North African, and other non-Jewish watchmen, Shochat decided to establish a clandestine order whose objective would be to introduce Jewish workers and watchmen into the villages. In 1907 he attended the Eighth Zionist Congress and played a role in the establishment of the World Union of Po‘alei Zion. In 1907 Shochat gathered about ten of his friends in Jaffa and founded the secret society, Bar-Giora. At the head of a group of friends, Shochat set out for Sejera (now *Ilaniyyah) in Lower Galilee and there convinced the surrounding settlements to entrust Jewish watchmen with guard duties. In 1909, at a meeting of the members of Bar-Giora, it was decided to establish the Ha-Shomer organization. Shochat was elected chairman of the Ha-Shomer committee, and within a few years this organization became an important factor in the life of the new *yishuv. In 1910 Shochat attempted to set up a “labor legion” in order to introduce Jewish labor into the settlements based on communal life and discipline. The “legion” was short-lived because of a lack of members and the opposition of the Jewish labor parties to its methods. At the end of 1912, Shochat left for Constantinople with Izhak *Ben-Zvi and David *Ben-Gurion to study law.

With the outbreak of World War 1, Shochat was among the initiators of a project for the establishment of a Jewish militia that would assist in maintaining order in the country. The Turkish authorities rejected this project, arrested Shochat and his wife, Mania Wilbushevitch *Shochat, and deported them to Brusa, Anatolia. In 1917 Shochat was allowed to attend the Po‘alei Zion Conference in Stockholm, and with the end of World War 1 he returned to Palestine. Together with his comrades of Ha-Shomer, he joined ‘Ahdut ha-Avodah and was among the founders of Haganah, the *Gedud ha-Avodah.
(Labor Legion), and the Histadrut. His controversy with the leaders of Ahдут ha-Avodah regarding the organizational system of the Haganah led to his resignation from the Haganah command. He attempted to pursue his own defense activities within the framework of Gedud ha-Avodah through a closed underground that established an arms depot in Kefar Giladi and sent members to Europe for military training. In 1925 he left for Moscow, where he held secret negotiations with high Soviet officials on the possibility of a collaboration between his group and the Soviet secret service, but these negotiations proved completely fruitless. Shochat and his colleagues were called before an internal body of the Histadrut to answer for their separatist political and defense activities. With the disintegration of Gedud ha-Avodah, Shochat was removed from all central public activities. During the 1930s he was active in the Ha-Po'el sports organization and the establishment of the first flying clubs in the country. As a lawyer he took up the defense of Haganah prisoners, and on the establishment of the State of Israel (1948) he acted as legal adviser to the minister of police. His memoirs were published in Kovez ha-Shomer (1937) and in Sefer ha-Shomer (1957). He was a brother of Eliezer *Shoḥat.

**SHOCHAT, MANIA WILBUSHEWITCH** (1880–1961), one of the leaders of the “Ha-Shomer organization. Born on the estate of Lososna, near Grodno, Belorusia, she left her father’s house in her youth and went to work in her brother’s factory in Minsk in order to become acquainted with the living conditions of the workers and assist them. There she became associated with revolutionary circles (“Gershuni and others) and was arrested during the summer of 1899. In prison she met the chief of the secret police of Moscow, Zubatov, who advanced the idea of establishing a workers’ movement that would be loyal to the czar and supported by him (“police socialism,” or “Zubatovshchina”). Zubatov convinced her that the establishment of a Jewish workers’ party under the aegis of the authorities, concerning itself solely with professional and economic interests and abstaining from political activities against the regime, would be a blessing to the Jewish masses and would lead to an extension of Jewish civic rights. Under his influence she undertook to establish such a movement, and in the summer of 1901 she participated in the establishment of the Jewish Independent Labor Party. The workers organized within this party and the strikes they declared were successful because agents of the secret police supported them. They were stubbornly opposed by the Bund and the other Jewish Socialist groups, however. Mania Wilbushevitz played a central role in the party, and even discussed its affairs with the minister of the interior, *Plehve (May 1902).

With the change of the government’s policy toward Zubatov’s projects and under the impact of the Kishinev pogrom, the party reached an impasse and in the summer of 1903 announced its own dissolution. Mania Wilbushevitz subsequently underwent a period of grave crisis. She unsuccessfully attempted to assume a role in revolutionary activities. At the beginning of 1904, her brother Nahum Wilbushevitz invited her to visit Erez Israel, and for a year she traveled through the country studying the conditions of settlement and came to the conclusion that only through collective agricultural settlement could a wide class of Jewish workers emerge — an essential condition for the development of Erez Israel into a Jewish country. In 1907 she undertook a journey to Europe and the United States in order to study various communist settlements. Upon her return, she sought out a group of men who would cooperate in the realization of her project and thus became associated with the members of the Bar-Giora group led by Israel Shochat. Under her influence its members settled on a farm near Sejera (Ilaniyah) and in 1907–08 undertook to farm it on a collective basis, thus inaugurating the first experiment of collective settlement in Erez Israel.

In 1908 she married Israel Shochat and with him was among the founders of Ha-Shomer (1909). Her became a central figure in Ha-Shomer, where her spiritual influence prevailed. When World War I broke out, the Turkish authorities banished Mania and Israel Shochat to Bursa, Anatolia. It was not until the spring of 1919 (after they had traveled to Stockholm to attend the Po’alei Zion convention) that both returned to Palestine and joined the Ahдут Avodah party. In 1921 Mania was a member of the first Histadrut delegation to visit the United States. Her presence aroused bitter polemics when the Bundists and the Communists recalled her collaboration with Zubatov and accused her of denouncing revolutionaries to the secret police. She then published her memoirs in the newspaper Di Tsayt. During the following years she devoted herself to the activities of *Gedud ha-Avodah, and after its dissolution she was active in Kefar Giladi. In 1930 she was among the founders of the League for Jewish-Arab Friendship. In 1948, she joined the Mapam party and settled in Tel Aviv, where she devoted herself to social work. She published memoirs in Divrei Po’alot (1930), Kovez ha-Shomer (1937), and Sefer ha-Shomer (1957).

[Yehuda Slutsky]

**SHOFAR** (Heb. שֶׁפָּר), an animal’s horn prepared for use as a musical instrument. Together with the reed, it is one of the earliest musical instruments known to man which is still in use. Etymologically the word is connected with sappar, meaning wild sheep (Koehler-Baumgartner, s.v. shofar). It is mentioned 69 times in the Bible and frequently in talmudic and post-talmudic literature.

**History and Description**

The *shofar* is first mentioned in Exodus 19:16 at the theophany on Sinai. It was used to proclaim the Jubilee Year and the proc-
lamination of “freedom throughout the land” (Lev. 25:9–10); this verse is engraved upon the Liberty Bell in Philadelphia, Pennsylvania. It was to be sounded on “Rosh Ha-Shanah, which is designated as "yom teru'ah" ("A day of blowing"; Num. 29:1). It was also used as an accompaniment to other musical instruments (Ps. 98:6), in processions (Josh. 6:4ff.), as a signal (Josh. 6:21ff., 11 Sam. 15:10), as a clarion call to war (Judg. 3:27), and in order to induce fear (Amos 3:6).

When used in the Temple, the shofar was usually sounded in conjunction with the trumpet (hagzarah). The Talmud (81t 27a) states that the trumpet was made of silver, while the processed horn of one of the five species of animal – sheep, goat, mountain goat, antelope, and gazelle – was used to fulfill the ritual commandment of the sounding of the shofar. It further declares (ibid. 26b) that the shofar should preferably be made of a ram’s or wild goat’s horn, because they are curved. Rabbi Judah states: “the shofar of Rosh Ha-Shanah must be of the horn of a ram, to indicate submission.” Traditionally a ram’s horn is sounded on those days because of its connection with the sacrifice of Isaac (the *Akedah), the story of which is the Torah reading for the second day of the festival. Conversely, a cow’s horn may not be used because of the incident of the golden calf (Ex 3:2). The shofar may not be painted, though it can be gilded or carved with artistic designs, so long as the mouthpiece remains natural. A shofar with a hole is deemed halakhically unfit, though it may be used if no other is available (Sh. Ar., OH 586).

**Sounds of the Shofar**

The Bible refers to two kinds of trumpet sounds: tekiah and teru'ah (Num. 10:5–8). The Mishnah (RH 4:9) describes the tekiah as a long blast and the teru'ah as three yevavot, a waiving crying blast. It prescribes three sets of shofar sounds since the word tekiah is mentioned in the Bible three times (Lev. 23:24, 25:9 and Num. 29:1), each set to consist of a tekiah, a teru'ah and tekiah thrice repeated (RH 33b f.).

In the talmudic period, doubt arose as to the exact nature of the teru'ah. Some held that it was a moaning sound (genuhei genah) and others that it was an outcry (yelulei yelaf). According to the first opinion, the sound was shevarim (broken sounds), while in the second view it was teru'ah – a tremolo of nine staccato notes. Rabbi Abbahu reconciled the difference by deciding that the first set of sounds should include both shevarim and teru'ah, i.e., tekiah, shevarim–teru'ah, tekiah, while the other two sets were to be composed as follows: tekiah, shevarim, tekiah; and tekiah, teru'ah, tekiah (ibid.). The tekiah (blowing) is a glissando which begins on a lower note and swells into a higher. The teru'ah (alarm) is a series of staccato blasts upon the lower note. The shevarim (tremolo) is an alternation of higher and lower notes. The concluding note of each of the two series is a tekiah gedolah (great blast); this is a long drawn-out note explained as a sign of the removal of the Divine Presence, hermeneutically deduced from Exodus 19:13: “When the ram’s horn soundeth long, they shall come up to the mount.”

**Use on the Holy Days**

During the month of Elul, the shofar is blown from the second day of the new month to usher in the penitential season (Rema, Sh. Ar., OI 581:1). There is a tradition that Moses ascended Mount Sinai for the second time on Rosh Hodesh Elul and that the shofar was sounded so that the children of Israel might not be misled. Thus, originally it was blown only on the first day of Rosh Hodesh Elul. Today it is sounded daily, except for the last day, throughout the month at morning service until Rosh Ha-Shanah is over, and once more on the Day of Atonement at the conclusion of the final service (Ne’ila). This last, though, is a late custom.

On Rosh Ha-Shanah, Psalm 47 is recited seven times before the sounding of the shofar. This is symbolic of the seven circuits that the Israelites made around Jericho before the wall fell down at the blasts of the shofar, and of the seven heavens through which prayers must penetrate in order to reach the throne of God. There are two series of blasts: for the first, which is sounded before the Musaf, the congregation may sit before they rise to hear it, and hence it is called tekiot melyoshav ("sitting tekiot"); to distinguish it from the second series, which is heard during the Musaf Amidah, for which the congregation has been standing all the time). This first series is preceded by two benedictions: (1) "Blessed be Thou O Lord our God King of the universe, who has sanctified us by Thy commandments and has instructed us to hear the call of the shofar"; (2) "Blessed be Thou … who has kept us in life, has sustained us and privileged us to reach this season of the year.”

The second series, the tekiot me’ummad ("standing tekiot") is heard three times during the reader’s repetition of the Musaf (in the Sephardi rite also in the silent Amidah) at the conclusion of each one of its major sections (Malkhuyot – the kingship of God; Zikronot – the remembrance of the merit of our ancestors; and Shofarot – hope for the coming of the Messianic Era to be ushered in by the sound of the shofar). In some communities it is also customary to sound up to a total of one hundred sounds at the conclusion of the service.

The shofar may be sounded only in the daytime. Women and children are exempt from the commandment to listen to it, but such is its place in the Rosh Ha-Shanah ritual that nearly all do. When Rosh Ha-Shanah occurs on the Sabbath, the shofar is not blown, the traditional reason being “lest he carry it (the shofar) from one domain to another (in violation of the Sabbath)” (RH 29b). When the Temple was in existence, it was sounded there even on the Sabbath, except for the last day.

After the destruction of the Temple, Zakkai permitted its use on the Sabbath in a town where an ordained bet din sat (RH 4:1). This, however, is not the normal practice in our times. The congregant sounding the shofar is called a ba‘al tekiah and anyone capable of doing so is permitted to blow it. The prompter, or caller, is the makri.

**Other Uses**

In about 400 C.E. in Babylonia, the shofar was sounded to announce a death (MK 27b). During the Middle Ages also, it was
also blown on fasts (see Ta'an. 1:6), at excommunications (see Sanh. 76 and MK 16a), and at funerals. On Friday afternoon, six blasts were sounded at various intervals. At the first tekiah, the laborers in the fields ceased their work. At the second, shops were closed and city laborers ceased to work. The third signaled that it was time to kindle the Sabbath lights. And the fourth, fifth, and sixth were a tekiah, teru’ah and tekiah formally ushering in the Sabbath (Shab. 35b). In modern times the shofar is used at the inauguration of a new president of Israel. During the Six-Day War in June 1967, the chief rabbi of the Israeli army blew it at the Western Wall after its liberation by the Israel Defense Forces, using the same shofar which he had sounded on Mt. Sinai in 1956. More and more in modern Israel the shofar has been used to mark various solemn occasions, especially by the Oriental communities.

Reasons for Sounding the Shofar

Anthropologists offer the theory that since many powers are ascribed to a horn, for example, frightening away demons, it was blown to produce magical results. The shofar, thus, is to scare off Satan and evil spirits (cf. RH 16b); and so it is fitting that it be used on Rosh Ha-Shanah to frighten away the “prosecuting attorney.”

Most Jewish philosophers attempted to explain the significance of the shofar. Saadia Gaon offered ten reasons for sounding it: (1) to proclaim the sovereignty of God, since it was the custom to sound the shofar at a coronation; (2) to herald the beginning of the ten days of repentance; (3) as a reminder to be faithful to the teachings of the Torah, since the shofar was heard at the giving of the Torah; (4) as a reminder of the prophets, the teachers of righteousness, who raised their voices like the shofar to touch our consciences; (5) to the sound of trumpets the Temple fell, and to the sound of trumpets it will be restored; (6) as a reminder of the Akedah, since the ram which was substituted for Isaac was caught in the thicket by its horns; (7) to inspire awe (“Shall the shofar be blown in the city and the people not be afraid?”); (8) as a summons to the Heavenly Court on the Day of Judgment to be judged; (9) as a reminder that the shofar will call together Israel’s scattered remnants to return to the Holy Land; and (10) as a reminder of the day of resurrection, the return to life (quoted by Abudarham (Jerusalem, 1959 ed.), 296f.).

Maimonides gives a moving interpretation of the sounding of the shofar: “Awake O sleepers from your sleep, O slumberers arise ye from your slumbers, and examine your deeds, return in repentance and remember your Creator” (Yad, Teshuvah 3:4).

[Albert L. Lewis]

SHOFAROT (Heb. שוחריות; “shofar verses”), last of the three central benedictions of the Musaf Amidah on Rosh Ha-Shanah. The benediction is comprised of ten biblical verses which mention the *shofar and which voice the hope for the messianic redemption of Israel and mankind, to be heralded by the sound of the “great shofar” (Isa. 18:3; Zech. 9:14). Joseph *Albo interpreted the benediction as being a statement of religious dogma (Ikkarim 1:4). In the Ashkenazi ritual, the shofar is sounded at the end of the Shofarot benediction during the repetition of the Musaf Amidah; in the Sephardi and Oriental rites it is also sounded during the silent Musaf Amidah. The recital of the Shofarot verses was ordained in the Talmud (RH 4:6; R.H. 32a–b). In the *Conservative and *Reform liturgies, the recital of the Shofarot verses is preceded by appropriate introductory and/or supplementary explanatory readings in the vernacular.

SHOFMAN (Shoffmann), GERSHON (1880–1972), Hebrew writer, distinguished for his miniature short stories, his meditative and didactic sketches, and his epigrammatic essays on literature and life. Born in Orsha, Belorussia, Shofman received a traditional religious education; but as a result of diligent reading, first of Hebrew and then of Russian literature, he became acquainted with European culture and with the new trends in Hebrew literature developed under the influence of S.Y. Abramovitch (Mendele Mokher Seforim) and his disciples. Shofman’s talent for short-story writing was revealed in his very first collection of stories, published in Warsaw in 1902. In that same year, he enlisted in the Russian army and served for almost three years. In 1904, during the Russo-Japanese War, he fled to Galicia, remaining there until 1913, when he left for Vienna. He then settled in an Austrian village, and lived there until he immigrated to Ereẓ Israel in 1938, where he eventually settled in Haifa.

Shofman published his stories and articles in various periodicals in Russia, Poland, Germany, Austria, England, and Israel. He also edited several literary journals. His collected writings first appeared in four volumes in 1927–35, and subsequently in a revised edition of four volumes (1946–52), to which a fifth was added in 1960. Shofman was awarded the Israel Prize for literature in 1957.

Shofman’s writing is characterized by its conciseness and precision. His sentences are free of all literary embellishment and make no attempt at being dramatic; Jacob *Fichmann commented that “in their utter lucidity and strict precision they resemble scientific definitions.” Even Shofman’s metaphors are generally confined to an adverb or an adjective of not more than one or two words. Consequently, his narrative thrust depends on subtle innuendo and symbolic implications.

Shofman’s stories have no plot in the ordinary sense. There is no real sequence of events; the stories consist rather of a succession of hurried utterances and episodic actions with no apparent close connection between them. Only as the narrative unfolds does it become evident that the actions and ut-
terances related by the author are more than episodic. Events are governed by the iron laws of destiny; they are a necessary outcome of past action, as well as an omen for what may come to pass in the future.

Shofman's own history of wanderings comes out clearly in his stories and articles. But at the same time he writes in a somewhat depersonalized fashion, and consequently his works seem to encompass the many turning points in Jewish life in the 20th century: the collapse of Jewish tradition in Russia during the pre-World War I period, and the conceptual vacuum, rootlessness, and depression which overcame the Jews as a result; the counterwave of faith in the socialist revolution which initially swept away a part of Jewish youth, but which after the 1905 pogroms ended largely in despair; the further moral and spiritual decline which came about in the wake of World War I and increasing antisemitism during the interwar period and World War II; and the Jewish immigration to Erez Israel, the State of Israel, and the life of the Jew as he attempted to free himself of the marks of degeneration and moral collapse.

The sociocultural nature of Shofman's themes constitutes the implicit rather than the explicit element in his writings. As seen from an external viewpoint, Shofman's hero is generally a total individualist ruled by desires on the one hand, and on the other hand by hidden forces which are apparently imperceptible to the human intellect. At times he struggles against these forces and at times he surrenders to them. At times he is passive and at times active. However, his existence, living as he does a gloomy and commonplace life, is almost always a marginal one. Depression, illness, degradation, the fear both of life and of death seem to thrust the hero into the position of being activated rather than acting; and in consequence of his experience he normally thinks of and cares for no one but himself. On the rare occasions when he does act for the benefit of society, even when he dies for it, he is in actual fact impelled by some hidden force, the significance of which he does not understand.

Shofman developed his own particular view of aesthetics in both his narrative and his meditative writings, and he demanded the same standards from others. His articles on literary and literary criticism, some of which were published in the series Sirtutei Peham ("Charcoal Drawings") and Shetayim Shalosh Sharot ("Two or Three Lines"), set out his convictions, often in a strongly polemical tone. On the other hand, when a work under review appeared to conform to his own standards, Shofman was generous with his praise.

For English translations of his works see Goell, Bibliography, 1505, 2465–85.

[Shaked Gilboa (2nd ed.)]

SHOHAM (Heb. שוהם, "Onyx"), town in central Israel. The town is located near Ben-Gurion Airport, halfway between Jerusalem and Tel Aviv. It was founded in 1993 and is under constant expansion, with an area of 5.2 sq. mi (13.5 sq. km.) and a 2002 population of 15,600. Its growth rate is one of the highest in Israel – 7% a year. The development of the town has been characterized by emphasis on environmental issues. It has around 60 acres of parkland utilizing a special water-saving system for watering. Every year Shoham hosts an Arts Festival during Sukkot and an International Mountain Bike Race in memory of Yitzhak *Rabin, late prime minister of Israel.

[Shaked Gilboa (2nd ed.)]

SHOHAM (Polakевич), MATTITYAHU MOSHE (1893–1937), Hebrew poet and playwright. Born in Warsaw, and orphaned at an early age, Shoham was educated by his grandfather and uncle. He studied foreign languages and secular literature largely on his own. In 1930 he went to Palestine, but being unable to earn a livelihood, returned to Poland two years later. He served for three years as chairman of the Hebrew Authors’ Association of Poland, and helped to edit its biweekly publication Ammudim; he also lectured at the Institute of Jewish Studies in Warsaw. Most of Shoham's poems, plays, and essays were published in Ha-Tekufah, Moznayim, Gilyonot, and Ketuwim. Only two of his works appeared in book form during his lifetime – Zor vi-Yrushalayim (1933) and Elohei Barzel Lo Taaseh Lekha (1937). His other works were published in collected form in 1965.

Lyric Poems

Shoham began his literary career by writing lyric and dramatic poems, his main themes being love and the biblical past. His vocabulary and style are archaic, and he frequently employs exotic figures of speech and highly dramatic symbolism. The power of Shoham's poems lies in their densely packed lines and in the depth of their mythic conception. This is apparent even in his early lyric cycles, such as Shalumit (Ha-Tekufah, 4, 1919), "Negoho" (ibid., 7, 1920), "Kazir" (ibid., 9, 1921), and "Peret" (ibid., 19, 1923). The pervasive theme in these poems is sensual, primitive love, which is invariably linked to the recurrent cycle of time. A broad mythical conception of love and human life also dominates the poems 'Ahavah' (Ha-Tekufah, 22, 1924) and 'Gadish' (Moznayim, 3, 1931), and the prose
poems “El ha-Malkah” (Ha-Tekufah, 6, 1920) and “Nedudim” (ibid., 8, 1921).

Most of Shoham’s longer poems are based largely upon a mythical conception of Jewish history. In “Kedem” (Ha-Tekufah, 14–15, 1922) and “Ur Kasdim” (ibid., 26–27, 1930), the dramatic tension springs from the polarity between East and West. Shoham’s view is that the salvation of Western man in general, and of the Jew in particular, depends upon his return to the Orient and the renewal of the supremacy of the Orient. In the war between light and darkness (Ormazd and Ahriman), light will ultimately triumph (“Kedem”) and Nimrod will regain his place in the world (“Ur Kasdim”). In “Erez Yisrael” (Ha-Tekufah, 27, 29, 1935, 1936), the tension arises from the poet’s confrontation with the myth-strven landscape of Palestine. Exceptionally interesting are his poetic essays To Scatter and to Winnow dealing mainly with historiosophic problems of Jewish existence and aspects of poetry.

Dramatic Poems
Shoham is regarded as one of the major dramatists in Hebrew literature. His four verse plays deal with biblical themes against the background of eternal Jewish problems; and they are all characterized by the author’s predilection for making the protagonists embrace opposing views of historical destiny. Shoham’s first play, Yeriho (“Jericho,” Ha-Tekufah, 20, 1924), is a dramatization of the fall of Jericho. The chief characters, Achan, a Hebrew, and Rahab of Jericho, are drawn to one another. Their love, perhaps, is a symbol of the attraction between the decadent culture of Jericho and the vigorous, vital Hebrew culture of the desert. Achan is the hero of the play, while Phinehas the priest, who condemns him to death because of his love for a foreign woman, is its villain. Shoham suggests that the salvation of the young nation depends upon the merging of the two cultures. At the close of the play, El-dad and Medad, the spiritual heirs of Moses, proclaim that the nation’s message is not narrow and chauvinistic, like that of Phinehas, but universal, promising redemption for all.

In Bilaam (“Balaam,” Ha-Tekufah, 23–25, 1928, 1929), Shoham presents in a favorable light the liaison between Zimri the Hebrew and Kozbi the Midianite woman, a relationship forbidden by the priest. Phinehas, who opposes the union, is rebuffed by Moses who approves the love of the young people. Subsequently, however, the couple is murdered by the fanatical priest. But the basic theme of the play is found in its subplot – the conflict between Balaam, the prophet of darkness, and Moses, the prophet of light, and Balaam’s final “regeneration out of sin.” Balaam had grown up together with Moses, and had become estranged from him out of envy; but before Balaam’s death he is redeemed from his darkness and accepts the teachings of his friend. Balaam’s blessing is interpreted as the triumph of the inner light in his heart over the darkness which had engulfed him. The structure of the play, with its two plots, is complex. The action centers on the main plot (Kozbi – Zimri), which is largely a drama of intrigue, while the subplot is unfolded in Balaam’s long discursive soliloquies. These soliloquies tend to weaken the dramatic effect of the play, but they undoubtedly add to its poetry.

Zor vi-Yrushalayim (“Tyre and Jerusalem,” 1933; new edition 1992) was written during the author’s stay in Erez Israel – an experience which appears to have considerably altered his views on the relations between Jews and gentiles. In the earlier plays, these had been presented as relations of attraction, but they are now regarded as relations of dissociation. There can be no bond between Elijah the prophet and Jezebel, for she belongs to a foreign culture; and Elisha, who had initially courted Jezebel, dissociates himself from her when he receives the tidings of redemption. Ahikar, the prophet of Tyre, predicts that the culture of Tyre will not prevail over the culture of Israel until there is a “marriage” between El and Astarte; but the central theme of the play is the uniqueness of the Hebrew nation. No longer is the emphasis upon the tragic attachment which overpowers the heroes despite the taboos of society; it has shifted to the dramatic self-denial of Elisha, who conquers his impulses and rejects the temptations of Jezebel in favor of his spiritual ideal. The play also marks a considerable technical advance: there are fewer discursive elements, the dialogue is much more alive, and there is an increase in the use of dramatic techniques such as mime, crowd scenes, and shifts in the dramatic viewpoint.

Elohei Barzel Lo Ta’aseh Lekha (“Thou shalt not make to thyself molten gods,” 1937) represents a remarkable change in Shoham’s methods and outlook. The allegorical elements hinted at in Bilam now take precedence over the symbolic elements characteristic of the previous plays. Alongside the mythical characters, who represent concepts of nation and race, stand the two protagonists, Abraham and Gog, personifying two historical ideas – Abraham, the prophetic ideal of social salvation, and Gog, the racist concept that all breeds must be subjugated to the northern race. Echoes of the doctrine of Aryanism and Nazism are clearly discernible in the course of their struggle; this topicality leads to the appearance of numerous anachronisms, as for example a cannon. The common man (represented by Lot), who is crushed between the two opposing forces, feels that he must give up all hope of redemption in the distant future, for to struggle for it in this life can be disastrous. Here Shoham shows his preference for the insignificant, unimaginative Western man, rather than for the promulgators of lofty ideas, the implementation of which can lead to catastrophe. Technically, the latter is the most complex of his works, combining a plot of love and intrigue, involving Sarah, Hagar, and Lot’s daughters, played out under the allegorical superstructure of the relentless struggle between Abraham and Gog.

Shoham’s work is a mixture of primitive archaism and ideological expressionism. His archaic language and long reflective passages render his plays totally unsuitable for the stage; but his ideological passion, linked to a profoundly imaginative conception of historical situations, his original style, and his complex outlook have secured him a central place in the history of Hebrew drama and poetry. Although most of
his characters are symbolic, the ideological and emotional tension between them generates a powerful dramatic atmosphere which does not depend on theatrical success alone.

[Shaked Gilboa (2nd ed.)]

**SHOHAM, SHLOMO-GIORA** (1929– ), Israeli criminologist. Shoham was one of first scholars to study criminal youth, the effectiveness of laws against crimes, drug abuse, and the personality traits of traffic offenders. He was born in Lithuania and moved to Israel with his parents in 1935. In 1953 he received an LL.M. and in 1960 an L.L.D. from the Hebrew University of Jerusalem, School of Law, in law and criminology. He studied for a doctorate at Cambridge in 1958–59. In 1961 he began to teach at Bar-Ilan University and in 1965 served as associate professor at both Bar-Ilan and Tel Aviv universities. In 1969 he became head of the Institute of Criminology and Criminal Justice at Tel Aviv University and a year later became full professor. He also taught at Harvard, the Sorbonne, and Oxford universities. In addition to his academic work, Shoham was assistant district attorney in Jerusalem, assistant to the state attorney, and criminological advisor to the Israeli Ministries of Justice and Internal Security. In 1973 he lost his son, Giora, in the Yom Kippur War, and from that time appended his son’s name to his own. Among his many books are Rebellion, Creativity and Revelation (1985); Valhalla, Calvary and Auschwitz, in German (1987); The Bridge to Nothingness: Gnosis, Kabbala and Existentialism (1988); God as the Shadow of Man (2000); and Art, Crime and Madness (2002). Shoham was awarded the Israel Prize in 2003 for criminology.

[Shaked Gilboa (2nd ed.)]

**SHOHAT, AVRAHAM BEIGA** (1936– ), Israeli politician, member of the Knesset since the Eleventh Knesset. Born in Tel Aviv, he served in the IDF as a paratrooper in 1956–57. He was a member of kibbutz Nahal Oz. In 1957–61 he studied construction engineering at the Technion in Haifa, serving as chairman of the Students Council there. In 1961–63 Shohat was a member of a team headed by Arie Lova *Eliav that planned the town of Arad in the Negev. In 1963–67 he was the regional director of Solel-Boneh in Arad and the Dead Sea area, and in 1967–89 he was head of the Arad Local Council. For part of this period he served as deputy chairman of the Local Government Center and as chairman of its Development Town Committee.

**SHOHAT, ELIEZER** (1874–1971), Second Aliyah pioneer, a founder of *Ha-Po‘el ha-Za‘ir. Born in Liskova, Belorussia, Shohat settled in Ereq Israel in 1904. He began work in Petah Tikvah as one of the first laborers of the Second Aliyah and founded Ha-Po‘el ha-Za‘ir along with eight other pioneers (1905). He was one of the first Jewish laborers to enter Galilee (1906), became a founding member (1907) of Ha-Horesh (the first Jewish laborers’ association in Galilee), a worker at Umm Juni (Deganyahu) in 1910, a founder of the Galilee labor federa-
tion (1911), a member of the labor group at Merhavyah in 1911 (which resulted in his imprisonment at Acre), and a founder of the first moshav ovedim, Nahalal (1921). He was a member of the Asefat ha-Nivharim. Shoḥat elaborated the labor movement ideology based on Jewish national and moral values. He compiled and edited labor movement literature, notably Pirkei Ha-Polēl ha-Zaʾir (13 vols., coedited with Ḥayyim Shurer), and edited the writings of labor leaders, including three volumes of the writings of A.D. *Gordon (coedited with S.H. *Bergman). His articles, speeches, and letters were published in Bi-Netivei Avodah (1967). He was a brother of Israel *Shochat.

**BIBLIOGRAPHY:** S. Sheva, Shevet ha-Noʿazim (1969).

*Yosef Shapiro*

**SHOHETMAN, BARUCH** (1890–1956), Hebrew bibliographer. Born in Podolia, Shoḥetman emigrated to Palestine at the end of 1925. From 1927, he worked in the National Library of Jerusalem, especially with the bibliographical quarterly Kirjath Sepher, and published essays and articles on historical, literary, and bibliographical subjects. A great part of his work was devoted to the history of Jewish Jewry over the last generations, a field in which he was one of the leading experts. He published, with explanatory notes, hundreds of letters of various authors (including those of Aḥad Ha-Am, M. Usisskin and S. Dubnow). He also published many bibliographical notes (most of them anonymously) in Kirjath Sepher as well as bibliographies to the works of Herzl, V.A. Tcherikover, B. Dinur, D. Shimoni, H.N. Białik, N.H. Tur-Sinai (Torczyner), Tchernichowsky, and S.H. Bergman. For a detailed listing of his bibliographical work, see Shunami, Bibl. Shoḥetman was killed when Jordanian soldiers opened fire at a group of archaeologists visiting the settlement of Ramat Rahel.

*Getzel Kressel*

**SHOLAL** (Sulal), ISAAC (d. 1524), last Egyptian *nagid*. Although of Spanish ancestry, by the early 15th century and perhaps even earlier Sholal’s direct forebears were residing in Tlemcen, Algeria. During the latter half of the 15th century Sholal himself resided in Egypt, where he actively engaged in the grain trade and other pursuits. In 1502 he inherited the office of *nagid* from his uncle/brother-in-law Jonathan (Nathan) *Sholal, serving in this capacity until the Ottoman conquest in 1517, which saw the termination of the negidate. Various sources indicate that Isaac Sholal was intensely involved in the affairs of the Jerusalem and Safed communities as well as the Syrian communities on several levels. During his tenure as *nagid* he made a significant contribution to intellectual life in Jerusalem in the form of massive material support for two yeshivot. One reopened at his initiative, and he founded the other. Sholal also supported the Sephardi yeshiva in Safed. In addition, by promulgating regulations through the agency of his court, Sholal took steps aimed at legislating social issues in the Jerusalem community. In early 1517 Sholal came to Eretz Israel and settled in Jerusalem, but he was then an impoverished man, no longer able to contribute financially to the upkeep of the yeshivot. Nonetheless, in Jerusalem Sholal continued to exercise spiritual influence. He belonged to a circle of individuals who engaged in pietistic practices aimed at hastening redemption. He himself prescribed vigils “to pray and undergo privation for the sake of all our brethren in the Diaspora.” Ever attuned to the incipient signs of the Messiah’s approach, Sholal evinced particular interest in individuals who claimed descent from the Ten Tribes. Sources from the early 1520s indicate that he hosted individuals claiming such ancestry in Jerusalem and earlier in Egypt as well. Sholal’s scholastic achievements and status among the Jerusalem halakhists are reflected in several of the halakhic decisions extant in Kuntres Ḥiddushei Dinim and in his correspondence with his contemporaries in Egypt and Jerusalem.

*Abraham David (2nd ed.)*

**SHOLAL, NATHAN (Jonathan) HA-KOHEN** (1437–1502), one of the last negidim in Egypt. Sholal was born in Tlemcen (Algeria) to a family of Talmud scholars. He emigrated to Italy and from there to Ereẓ Israel, settling in Jerusalem before 1471 (or slightly earlier). Heavy taxation and the high-handed attitude of its leaders, the elders (zekenim), oppressed the Jewish community in Jerusalem and many left, including Nathan Sholal (not before 1481), and went to Egypt. In about 1484 he was appointed *nagid*, a post he held until his death. He rendered great assistance to Obadiah of Bertinoro when the latter immigrated to Ereẓ Israel in 1488. According to various sources, he was a man well-versed in rabbinic law and with an aristocratic bearing. In his capacity as Egyptian *nagid*, he also had the Jewish communities in Ereẓ Israel (especially in Jerusalem) under his hegemony. He fulfilled the task of judge but owned property which he had acquired through trade. He was succeeded as *nagid* by his nephew and brother-in-law Isaac *Sholal*.

*Eliyahu Ashtor / Abraham David (2nd ed.)*

**SHOLEM ZOKHOR** (Heb. שלום זكثر; shalom zakhar; “peace to the male child”), name of a traditional home ceremony held
on the first Friday evening after the birth of a boy. In some communities it is held on the eve of *circumcision. Besides Sholom Zokhor it is also called Vigil or Vaikhnakhit (Isserles to Sh. Ar., YD 265:32). For the Sholom Zokhor, relatives and friends gather at the home of the child's parents in order to congratulate them. After reciting the *Shema, the blessing from Genesis 48:16 and diverse psalms, as well as appropriate prayers, are said for the welfare of the mother and the newborn boy. The guests are served drinks, cakes, and fruits; in some places also lentils and chick-peas. Lentils, due to their round shape, symbolize the ever-recurring cycle of birth and decay. They are meant to be a consolation. The moments of sadness of the occasion are steeped in folklore which holds that the child has forgotten the holy Torah which he was taught in heaven before his birth. In Oriental communities, this ceremony is also called Shasha or Blada and includes the recital of special prayers and aggadic readings (from such books as Berit Olam (1948) or Berit Yizhak (Amsterdam, 1719) in honor of the prophet *Elijah, the patron of the child at circumcision. The origin of the Sholom Zokhor ceremony, the participation in which is considered a mitzvah, is to be found in the Tal- mud where joy is expressed at the birth of a male child (“if a boy is born, peace comes to the world” (Nid. 31b)). In some communities, this ceremony is also called Yeshuat ha-Ben, or Shevuat ha-Ben, or simply Ben Zokhor (see Sanh. 32b, bK 80a, and *Tos. ibid., s.v. le-vei).

See *Birth.

SHOMER (pseudonym of Nahum Meyer Shaikevich. 1849–1905), Yiddish novelist, dramatist. Born in Nesvizh, Russia, Shomer settled in Pinsk. He began his literary career in the 1870s with Hebrew translations from German in Ha-Melih. Under the influence of Abraham Mapu and Kalman Schuman, he wrote many Hebrew short stories and about 200 Hebrew lyrics, which he later incorporated into his Yiddish tales. When he moved to Vilna, he was advised to write in Yiddish and soon became known for his popular novels, with which he achieved a mass appeal hitherto unprecedented in Yiddish letters. Before his literary career began, however, Shaikevich worked as a military contractor whose work took him to Bucharest, where he met Abraham *Goldfaden. Impressed by Goldfaden’s Yiddish theater, Shaikevich began to write plays and organized his own theatrical troupe. When Yiddish performances were forbidden in Russia, he returned to Vilna and concentrated on fiction, sometimes making use of borrowed plots, in order to meet the demand of his ever-increasing audience. At the request of another theater troupe, Shaikevich moved to New York in 1889, where his plays were well received by both the audience and the Yiddish press. Artistic differences prompted Shaikevich to leave the theater and begin publishing his own literary journals. Meant to serve both as edification and as entertainment for an unsophisticated readership, Shaikevich’s stories are filled with sentimental elements and fantastic themes, but also a sympathetic representation of the Jewish themes and a happy ending. The enormous popularity of Shaikevich’s work spawned numerous imitators, although his style was reviled by his contemporary intellectuals. Led by “Sholom Aleichem (Sholem Rabinovitch), detractors dubbed his potboiler fiction “Shomerism.” Attacks on “Shomerism” culminated famously in Sholem Aleichem’s 1888 pamphlet entitled Shomers Mischpet (“The Shomer Verdict”). Shaikevich answered that devastating critique in the introductions to many of his novels; he was convinced that his books performed the valuable function of bringing ethical education to the Jewish masses whose general education had been neglected. Later, his work was more positively received; Soviet critics emphasized the educational service performed by his narratives in the struggle to improve the lot of Jewish victims of poverty and oppression. He is also credited with creating a new Yiddish readership. According to his supporters, he developed the Yiddish audience later enjoyed by Sholem Aleichem, I.L. *Peretz, and others. Among his works are Di Ungleiklikhe Libe (“Unhappy Love,” 1882); Der Oytser oder der Kalter Gazlen (“The Treasure or the Cold Thief,” 1884); Eyn Ungerikhter Glik (“Unexpected Luck,” 1885); and Der Yid un di Grefin (“The Jew and the Countess,” 1892).

[Sarah B. Felsen and Jordan Finkin (2nd ed.)]

SHOMERIM (Heb. שומרים; “bailees”).

Biblical Classification

The law relating to a bailee (i.e., one who is entrusted with the money or chattels of another) is first given in the Torah (Ex. 22:6–14) in several statements of principle from which have been deduced the three categories of bailee, known as the shomer hinam, the shomer sakhar, and the sho‘el.

THE SHOMER HINAM. The shomer hinam (שמירת ההนาม; lit. “an unpaid bailee”) is based on the first case cited in the Torah of one who is given “money or stuff” to look after (Ex. 22:6–8). Such a bailee is not liable to the owner in the event of the goods being stolen (and the thief not apprehended), provided that he confirms on oath before the court that he had not embezzled or otherwise converted the goods to his own use (la shalal yado, lit. “not put forth his hand”). In fact, his duty of care is minimal and his liability is limited only to cases where loss resulted from his own negligence (cf. BM 3:10; Sh. Ar., ḤM 291:1). Thus, in the absence of proven negligence and subject to his taking the prescribed judicial oath, he would...
also not be liable for loss caused by inevitable accident or unforeseeable damage (i.e., "ones; Yad, Sekhirut, 1:2 and 3:1ff.; Sh. Ar., hM 291:6 and 9). It was such leniency which led to this particular portion of the text being construed as relating to the 

shomer hinnam (Yad. loc. cit. 1:2) compared with the higher duty of care imposed on the shomer sakhar (cf. Laws of Hammurapi, 125, 263–7). On the other hand, any bailee, even a shomer hinnam, who mediates with the deposited article without the owner’s authority is considered guilty of theft (i.e., larceny by conversion; see “Theft and Robbery) and is consequently liable for any subsequent loss. Indeed, according to Bet Shammai, the mere formulation of its intent to “put forth his hand,” without his necessarily committing an actual act of conversion, suffices to render the bailee liable, but Bet Hillel does not extend the principle so far (BM 3:12; Yad, Gezelah, 3:11; Sh. Ar., hM 292).

THE SHOMER SAKHAR. The shomer sakhar (שומר שכר, lit. “a paid bailee”) is derived from the second case in the Torah of one who is entrusted with “an ass, or an ox, or a sheep, or any beast, to keep, and it be hurt, or driven away…” (Ex. 22:9–12). The fact that this case refers only to animals, whereas the previous case mentions “money or stuff,” has been interpreted as drawing a distinction, not between the types of property deposited (cf. Philo, Spec. 4:35; Rashbam, Ex. 22:5), but between the types of bailment, since “the safekeeping of money or vessels is generally undertaken without payment [i.e., shomer hinnam], whereas that of animals is undertaken for reward [i.e., shomer sakhar]” (Nahmanides to Ex. 22:6). In this case the bailee is liable in the event of the goods being stolen or lost (which is further authority for the conclusion that Scripture is here referring to a shomer sakhar), and he cannot be absolved even by taking the judicial oath, except in certain specific instances where accident was a contributory factor. However, liability could be avoided, on his taking the judicial oath, if loss resulted from the animal dying or being driven away (BM 7:8; Yad, Gezelah, 1:2; Sh. Ar., hM 303:1–2). The term “sakhar” has been given a wide interpretation, so as to include the receipt by the bailee of any benefit whatsoever from the article deposited. Accordingly, an artisan who is entrusted with an article on which he is to exercise his craft for remuneration is deemed a shomer sakhar (BM 6:6; cf. BM 43a; Shitah Mekubbezet BM 94a; Sefer ha-Hinnukh no. 59). However, during the talmudic period a rabbinical enactment specifically exempted a carrier from liability arising through his transportation of barrels “even though imposed on him in strict law… lest no person be willing to transport his neighbors’ barrel” (Yad, Sekhirut, 3:2).

THE SHO’EL. The sho’el (הThông, “borrower”) is explicitly mentioned as the third type of bailee (Ex. 22:13–14), and on him is imposed the highest duty of care toward the owner of the article, since the bailee has borrowed it for his own benefit. He is therefore liable to make restitution in all cases of “damage or death,” even though they are caused by inevitable accident or other unforeseeable circumstances, as well as in cases of theft or loss. Exceptionally, however, the sho’el may be able to avoid liability “if the owner of the article was with it at the time” – this being interpreted by the tannaim as referring to the case where the owner is borrowed or hired along with his animal or chattel (BM 8:1). The scope of this halakah was extended to make it applicable in circumstances where the owner was with his property at the time the bailment was accepted, though not necessarily when the loss or damage later occurred, and also in circumstances where the owner was hired by the sho’el for purposes quite unconnected with the hiring of his property. Its application has even been extended to the other types of bailees (BM 93b; Yad, Sekhirut, 1:3 and She’elah, 2; Sh. Ar., hM 291:28). This exemption of the sho’el has been justified on the grounds that, in the circumstances mentioned, the owner would presumably take care to guard his own property (Sefer ha-Hinnukh no. 56; see also supplement to Torah Shelema, 18 (1958), 187f.).

The cited text of the Torah concludes with the following statement: “If it be a hireling, he loseth his hire” (Ex. 22:14). This has been construed as a continuation of the provisions relating to the sho’el. However, the view of some scholars is that this phrase creates another category of bailee, distinguishable from the unpaying borrower, which is called the sokher (“hirer”; Midrash ha-Gadol to Ex. 22:14 and Rashi thereto; see also H. Albeck, in: Sinai, 50 (1961/62), 103f.). However, the laws of the sokher do not appear to be elucidated in Scripture (cf. Laws of Hammurapi, 249) and the tannaim disputed the question whether such a bailee is to be treated as a shomer hinnam or a shomer sakhar (BM 93a). Hence, “their laws [i.e., of bailees]… are three” (BM 93a; Yad, Sekhirut, 1:1). The halakah was decided on the basis that the law of the sokher is that of the shomer sakhar (Yad, Sekhirut, 1:2; Sh. Ar., hM 307:1).

Measure of Damages

Generally, the degree of a bailee’s liability in damages is proportionate to the degree of benefit he received from the bailment. Thus the sho’el, who enjoys full use of the article borrowed, is fully liable; the shomer sakhar (and the sokher), who derives partial or indirect benefit, may take the judicial oath for a part and compensate for a part; and the shomer hinnam, who receives no benefit, may simply take the judicial oath and escape all liability (TJ, Shavu. 8:1; Tos. to Ket. 56a–b).

The Torah lays down that a thief must compensate his victim by repaying either twice or four or five times the value of the stolen article (Ex. 22:3–8 and see “Theft and Robbery). If a bailee chooses to compensate the owner for an article stolen during its bailment, rather than take the judicial oath, the thief, if later apprehended, must pay the stipulated double, four- or five-fold penalty directly to the bailee and not to the owner (BM 3:1; Yad, She’elah, 8:1; Sh. Ar., hM 295:2). This ruling is based variously on scriptural authority (see Mekh. Sb-Y to 22:6; TJ, BM 3:1), on the principle of an assignment of rights by the owner to the bailee, and also on a rabbinical enactment (BM 34a: Sefer Keritut, 53, 165; Ritba, Nov. BM 34a).
The fact that certain types of property are referred to specifically in the text (e.g., money, stuff, animals) led the sages to conclude that the laws of bailment are not intended to apply to slaves, deeds, immovable property, consecrated property (hekdeș), and the property of idolaters (BM 49a; BM 57b, 58a; Yad, Sekhirut, 2:1; Sh. Ar., ḤM 301:13), although the rabbis especially provided for the bailee's judicial oath to be taken in respect of consecrated property, lest such property "be treated lightly" (Yad, Sekhirut, 2:2). Nevertheless, the laws of bailment may be rendered applicable to the above-mentioned classes of property by way of a special undertaking to that effect (BM 58a; Yad, loc. cit.; Sh. Ar., ḤM 301:4).

**Principles of Liability**

The "posekim" are divided on the question of whether a bailee's obligations, and thus his consequent liability to the owner, commence immediately when the agreement between the two parties is concluded, or only after a "meshikah" (legal act of acquisition; see "Acquisition, Modes of") of the bailment (Sh. Ar., ḤM 291:5). A general rule, which is based on logical deduction, is that a bailee is not liable for damage caused to the bailment while it is being used for the purpose for which it was received, e.g., a cow borrowed as a beast of burden that dies of its labors (metah mehah melakah; BM 96b; Yad, She'elah, 1:3; Sh. Ar., ḤM 340:1).

A bailee who is able to safeguard his bailment with the help of others and fails to do so is considered negligent — a distinction being drawn between the respective duties of care owed by a *shomer hinnam* and a *shomer sakhar* (Yad, Sekhirut, 3:6; Sh. Ar., ḤM 303:8). Any necessary expenses involved in safeguarding a bailment are recoverable even by the *shomer hinnam* from the owner, as there is no obligation to incur such expense.

The laws of bailment may be expressly varied or excluded by agreement between the parties (BM 7:10); this view is even held by R. Meir, who considers it inapplicable in other legal contexts (BM 94a). The freedom of the parties to vary or exclude the general principles of the law is recognized even though the result may be to impose more stringent obligations on the bailee (Yad, loc. cit. 2:9; Sh. Ar., ḤM 291:27, 296:6, and 305:4).

**Rights and Duties of a Bailee**

One bailee may not entrust his bailment to another (Tosef. BM 3:1). If he does so and the bailment is lost or damaged, Rav held that the first bailee can only escape liability to the same extent as he would have been able to do had he retained the bailment, but R. Johanan held that he is liable even in the case of force majeure (BM 36a and Rashi thereto). Subsequently, this dispute was interpreted by Abbaye to mean that according to Rav there would be no liability even though a *shomer sakhar* entrusted his bailment to a *shomer hinnam*, whereas according to R. Johanan liability would arise even though a *shomer hinnam* entrusted his bailment to a *shomer sakhar*. Rava ruled finally that the halakha should be in accordance with the opinion of R. Johanan — as explained by Abbaye — on the grounds that, as no privity of contract existed between the owner and the second bailee, the former was not obliged to accept the latter's judicial oath (BM 36a–b). Furthermore, the first bailee can avoid liability only if "inevitable accident" can be proved by independent witnesses (Yad, Sekhirut, 1:4; Sh. Ar., ḤM 291:26).

If a bailment deteriorates while it is in the care of the bailee, he has a duty to inform the owner immediately, if the latter is available (HaGaon, *Sefer ha-Mikvaḥ ve-ha-Minḳar*, ch. 6; Sh. Ar., ḤM 292:15). There is a dispute in the Mishnah over the bailee's obligations when the owner is not available, some *tannaim* taking the view that "fruit, even if wasting, must not be touched," while Simeon b. Gamaliel states that the "fruit" must be sold and its value thus preserved, but only at the direction of the court, i.e., not on the bailee's own initiative (BM 3:6). In talmudic times this dispute was regarded as referring to a case where the rate of deterioration was normal for the type of article involved, but in a case where the rate of deterioration was excessive, all scholars agreed that the bailee had a duty to sell the bailment (BM 38a; Yad, She'elah, 7:1; Sh. Ar., loc. cit.). Any such sale had to be to a third party and not by the bailee to himself, so as to avoid suspicion (Tosef., BM 3:8; Pes. 134; Yad, She'elah, 7:5; Sh. Ar., ḤM 292:19).

A bailee may be relieved of his responsibility if the owner refuses to accept the return of his property. A statement in the Mishnah, that an artisan is a *shomer sakhar* who becomes a *shomer hinnam* upon his offering to return the article against payment, was later interpreted to mean that an artisan who expressly indicates to the owner that he wishes to be relieved of all responsibility for the article is thereafter exempted from any liability, even that imposed on a *shomer hinnam* (Rema, ḤM 306:1 and Sma, *ibid.*, n. 4). In the event of the owner being abroad, the bailee may be relieved of his obligations by depositing the article with the court, who will then appoint a trustee for it until the owner's return (Yad, She'elah, 7:12; Sh. Ar., ḤM 293:3).

A bailee from whom a deposited article is stolen must take three judicial oaths, affirming: that he was not negligent as regards his bailment; that he did not "put forth his hand" upon his offering to return the article against payment, was later interpreted to mean that an artisan who expressly indicates to the owner that he wishes to be relieved of all responsibility for the article is thereafter exempted from any liability, even that imposed on a *shomer hinnam* (Rema, ḤM 306:1 and Sma, *ibid.*, n. 4). In the event of the owner being abroad, the bailee may be relieved of his obligations by depositing the article with the court, who will then appoint a trustee for it until the owner's return (Yad, She'elah, 7:12; Sh. Ar., ḤM 293:3).

A bailee who denies the existence of a bailment and commits perjury concerning it, but later admits to the truth, is obliged to compensate the owner to the extent of the article's capital value plus a fifth, and must also bring a guilt offering (Lev. 5:20–26; Shevu. 5 and 8:3; and see *Oath*).

**Modern Israel Law**

In the State of Israel the law of bailments is governed by the Bailees Law, 5727 – 1967, which closely follows the principles...
of Jewish law as described above (see Divrei ha-Keneset, 49 (1967), 2148f). Thus, the three categories of bailee are similarly defined (sec. 1), each attracting a different (and increasing) degree of liability, determined by the degree of benefit received by the bailee (sec. 2, and see explanatory remarks in: Hazáot Hok, no. 676 (1965/66), p. 54). Also, the bailee is exempted from liability for damage or loss sustained while the article was being ordinarily used in accordance with the terms of the bailment (sec. 4). Yet further, the bailee is held liable if he knowingly fails to inform the owner that his property is likely to suffer damage (sec. 2(d)), and he is impliedly authorized to take such urgent steps as may be reasonably necessary to prevent such damage (sec. 6). The Bailees Law also deals with the question of a bailee who entrusts his bailment to another (sec. 3, 7), and makes detailed provision with regard to one who refuses to accept the return of his property from a bailee (sec. 11). Still following the principles of Jewish law, the freedom to contract out of the act is specifically allowed, namely: “The provisions of the act shall apply...where no different intention appears from the agreement between the parties” (sec. 14).

[Nahum Rakover]

During the Knesset debates on the Bailees Law, both the minister of justice, in his opening statement and especially during his reply, and other Knesset members from the various political parties, stressed that the bill was based on Jewish law, and much of the discussion was devoted to examining the relevant Jewish legal sources (see the remarks of Minister of Justice Joseph, and MKs Raphael, Abramov, and Hausner, 44 DK 215–218 (1966)).

The Bailees Law contains 16 sections, the great majority of which are based on Jewish legal principles. An interesting question with regard to the title of the statute arose at the second and third readings of the bill. The title originally proposed was the “Safekeeping of Property Law” (Hok Shomer Nekhasim), a term unknown to Jewish law, whereas the term “bailee” (shomerim) is well known in Jewish law, which speaks of four types of bailees (arba’ah shomerim). The proposal to call the statute the “Bailees Law” was rejected in the Legislative Committee on the ground, among others, that statutory titles generally state the nature of the activity or transaction rather than that of the persons involved – e.g., the “Sale Law,” rather than the “Sellers Law” (see the remarks of MK Azanyah, 49 DK 2149 (1967), and also those of MK Aloni, quoted infra). However, when the bill was presented for its second and third readings, the title was changed to the Bailees Law, 1967. Some of the reasons for the proposed change merit quotation (Remarks of MK Aloni, 49 DK 2148 (1967)).

When we began to deal in the committee with this law, which in effect transforms or translates the Mejelle and other legal rules into an Israeli code based on Jewish law, I did not understand what was meant by “safekeeping of property” until I saw the text of the various sections. Then I realized that we were concerned with the law of bailees (shomerim), as I had learned at school from the Bible and the Talmud; and, understandably, that was the primary association when I went over the material. In all innocence, I then asked why the statute is not entitled the “Bailees Law” rather than the “Safekeeping of Property Law,” and I was told that this indeed had been the original intention, but that the word shomerim [bailees, which also means “watchmen” or “guards”] evoked in many people an association with the Ha-Shomer (the “watchmen”) in the Galilee, with *Ha-Shomer ha-Za’ir, a political youth movement, and with other such worthy organizations.

It seems to me that...we are dealing with Jewish legislation governing the bailment of property that is entirely structured according to the four types of bailees in Scripture, and yet this statute fails to declare its connection with those [Scriptural] rules concerning bailees. This being the case, serious doubts arise as to whether the Knesset has acted properly up to this point – and we have very many years ahead of us – by cutting out associative words, symbols, concepts, and linkages which could promote attachment to our heritage, our history, and our cultural values, particularly in a field of which we are so proud. For it is our people who laid the foundation for social legislation in western thought.

I was a teacher for a number of years, and I regretted that the Wage Protection Law was not called the “Wage Delay Prohibition Law,” so that when teaching the Scriptural verse “The wages of a laborer shall not remain with you...” a teacher could drive the point home by telling his pupils that this law of the Torah still applies today. That is the significance of continuity. Thus is fashioned the associative link that is educationally so important. This is perhaps the best kind of continuity, because it unites us all without religious or national compulsion, in that this ethical and legal basis serves as a general foundation for modern legal thought, and there is no need to be embarrassed or to hide the fact that its source rests on the foundation laid down by the Jewish people when the Torah came into being. It similarly pained me when we adopted the Severance Pay Law, the source of which is the verse “Do not let him go empty-handed: you shall furnish him ([haineke tainik lo] [out of the flock, threshing floor, and vat],” that the word mainak (“grant”) is not a part of the title. It is a pity that a school teacher cannot point out the association between that law and the Scriptural verse. Not only in grade school, but even in the university, many do not realize the connection between the two. I want my children to know when they study this subject that this is not a legally unenforceable Biblical precept; it is intimately connected with daily life in Israel.

See also ibid., for MK Azanyah’s reply, admitting that the bill included many legal concepts of Jewish law but claiming that the Hebrew term shomer, “bailee,” was not sufficiently indicative of the contents of the law):

This is not the place for a detailed review of the Bailees Law and how its provisions rest on principles of Jewish law. The first two sections of the statute are sufficient to illustrate the point we wish to make here.

After initially defining a “bailment” as “lawful possession not by virtue of ownership,” Section 1 provides:

(b) A bailee of property who derives no benefit for himself from the bailment is an unpaid bailee (shomer hinam).

(c) A bailee of property who receives payment or derives
some other benefit for himself from the bailment, and is not a borrower, is a paid bailee (shomer sakhar).

(d) A bailee of property for the purpose of using or benefiting from it without paying consideration is a borrower (sho‘el).

The names given here in Hebrew to these three types of bailees (the four types of bailees in Jewish law, so far as the applicable legal rules are concerned, are actually three; see Maimonides, Yad, Sekhirut, ch. 1), as well as their definitions, are based on Jewish law; anyone who has ever studied the passages on bailees in the Torah or in the Talmud will immediately note the close connection between these definitions and those sources.

Principles of Jewish law in regard to the categories of bailees and their respective levels of liability and duty of care were relied upon in court decisions particularly in view of the close connection between the Bailees Law, 5727–1967, and halakhic principles. CA 34/80 Ali v. Sasson, PD 36 (3) 281, was an appeal regarding an alleged lottery win where the relevant slip given to the lottery agent was not traced. The appeal was heard by Justice E. Scheinbaum who referred to the explanatory comments of the bill that emphasize the principles of Jewish law underlying the new legislation. The Supreme Court held that the lottery slip was an object that could be a subject of bailment and that the lottery agent did not keep it in a suitable way, and was thus negligent. The Court reviewed the categories of bailees in Jewish law and their respective liability, in particular that of the unpaid bailee, who is only liable for negligence (peshe‘ah; Sh. Ar., h. 291, 13, 14; cf. Maim, Yad, Sekhirut 1:2), defined as “failing to guard [the property] in the manner of bailees...” (Mishnah, BM 3:10). In finding the bailee negligent, the Court held that the lottery agent, as a paid bailee, could be found liable, being exempt from liability only if the loss or damage is caused by ones – i.e., force majeure, his liability being more extensive than that of the unpaid bailee, who is only liable for peshe‘a – negligence. However, as in this case the appellant’s claim was based solely upon his testimony, the alleged damage was not proven and the appeal was dismissed.

In CA 1129/01, Atiah v. Hen Shachar etc., the Beersheba District Court ruled that the paid bailee was not liable for damage caused to an object in his care (a tractor, stipulated by the parties to be transported with its engine running, was damaged by fire as a result), though it was contended that regular use or use according to the conditions of the bailment cannot exempt the bailee from negligence. In finding the bailee not liable, the District Court held, in keeping with Jewish law, that since the parties may stipulate between themselves in regard to liability and the duty of care, and such stipulation need not conform to fixed halakhic principles (Maim., Yad, Sekhirut 2:9), the question was determined by the conditions of the bailment; consequently, in this case, the paid bailee was not liable for the damage caused.

An additional case also adjudicated in the Beersheba District Court, in which the Court ruled in accordance with the Jewish law on bailees, was the Ayalon case (CA 1260/01 Ayalon Insurance Company v. Makhon Lev (unpublished), given 576/03). In that case, a garage owner, who had received a car for repairs, notified its owner that he had completed the work, and that he could come to take his car. The owner requested the garage owner to leave it in the garage overnight, telling him that he would only take delivery of the car the next day. The garage owner agreed, but during the night the garage was burgled and the car stolen.

Under section 6 (b) of the Contract for Services Law (5734–1974), the contractor’s responsibility for property is that of a paid bailee for the purposes of the Bailees Law. Section 6 (a) of the Law stipulates that when the work on the property in the contractor’s possession has been completed, the customer must take delivery of the property at the time agreed upon or, in the absence of agreement, within a reasonable period of time after the contractor notifies him that he has completed the work. The trial court ruled that since the car owner did not come to take the car upon being notified by the garage owner that he could take it, the continued guarding of the car in the garage could be regarded as a favor. As such, the garage owner was an unpaid bailee, and was under no obligation to indemnify the owner for the theft. In the appeal court, the District Court judge J. Elon) interpreted the term “reasonable time” in the law in accordance with the Jewish law on bailees (after substantiating the connection between the Bailees Law and Jewish Law).

The judgment states that, indeed, under Jewish Law, from the moment of informing the customer that he should come and take his property, the artisan’s status changes from that of a paid bailee to that of an unpaid bailee: “All artisans are regarded as paid bailees; but if they declare, ‘take your property and then bring us money,’ they rank as unpaid bailees” (Mishnah, BM 6:6). But in the talmudic passage discussing this provision in the Mishnah, a distinction is made between the artisan’s notification as formulated above, and the case of the artisan who notifies the customer: “Bring money and then take your property” (BM 81b). In the latter case, together with his notification of completion of the work, the artisan makes its return to the customer conditional on the payment of his fee. This is the artisan’s right of lien, by virtue of which he is a paid bailee (Maggid Mishneh, Rabbi Vidal de Tolosa (14th-century Spain); on Yad, Sekhirut 10:3).

The talmudic passage (ibid. 80a) offers two explanations regarding the nature of the “benefit,” which confers him the status of a paid bailee even after having completed his work. The first, “as a result of benefit received due to the fact that the customer ignored all the other artisans and specifically chose him,” means, in other words, that the artisan has an interest in maintaining his reputation, which will attract clients who know that they can rely on his responsibility and his safeguarding of property given to him to repair. The second, “for the benefit occasioned by his ability to withhold the property as against his fee, and that he is not required to make efforts to collect his fee,” means, in other words, that the artisan’s right of lien
per se, which he has on the property given to him, is a "benefit" which converts him into a paid bailee of the property, even after completion of his work.

The Court stated that "in both cases, the Talmud's point of departure was that the actual payment of the artisan's work fee constitutes a 'benefit' that gives him the status of a paid bailee for as long as his work is not completed. However, even after completion of his work and prior to the customer having regained his property, the contractor may still derive various benefits from his possession of the property, and it is by virtue of these benefits that he retains the status of a paid bailee for this additional period."

This was the background for the Court's construction of the term "reasonable time" in section 6 (a) of the Contract for Services Law as including the benefits that the artisan was likely to derive. Consequently, as opposed to, and in overturning the ruling of the trial court, the Appeal Court ruled that the time period of one night, during which the car remained in the garage, fell within the ambit of "reasonable time," that the garage owner was subject to the law governing the paid bailee, and therefore responsible.

SHOMER ISRAEL (Heb. שומר ישראל: "Guardian of Israel"), faction of the assimilationist movement (see *Assimilation) in Galicia during the second half of the 19th century, favoring German cultural orientation. Shomer Israel was organized in 1869 as an expression of the intensified political activity among the Jews following the Austrian constitution of 1867 and the prospects of *emancipation. Its founders included Filip Mansch, Rubin Bierer, and Joseph Kohn. They published a weekly, Der Israelit, aimed to spread education among the Jewish masses and make them aware of their civic and social obligations. It appeared for 35 years, first edited by Mansch. Its political outlook was centralist and pro-Austrian with a tendency toward German liberalism. On the initiative of Der Israelit, a Jewish-Ruthenian bloc was created in 1873 for the elections to parliament in Vienna; the bloc succeeded in obtaining three Jewish seats.

The German cultural and Austrian orientation of Shomer Israel was however unable to withstand the new tendencies which gradually emerged within Jewish intellectual circles sympathetic to Polish culture and loyal to the ideas of Galician autonomy. The Jewish youth who studied in Polish schools became imbued with a patriotic spirit, which was expressed by Bernard *Goldman, who arrived in Lemberg in 1870 and laid the foundations of a rival organization named Doreshei Shalom, and a newspaper *Ugoda, which called for Polish assimilation. A new assimilationist organization *Agudath Ahim was also established and was active during the 1880s, when it challenged the views of Shomer Israel. Another opponent of Shomer Israel was the Orthodox sector led by Simeon *Sofer (Schreiber) who headed the *Mahzikei Hadass society. When Sofer was elected to the Austrian parliament in 1879, he joined the "Polish Club," there; the Orthodox were particularly opposed to the conference of communities convened in Lemberg on the initiative of Shomer Israel in 1878, with the aim of reorganizing the communities. The leaders of Orthodoxy, rabbis Simeon Sofer of Cracow and Joshua Rokeah of *Belz, called for a boycott of the conference because of its objectives to modernize Jewish life and its project to establish a rabbinal seminary.

[Moshe Landau]

SHOMRAT (Heb. שומרת), kibbutz in northern Israel, 2 mi. (3 km.) N.E. of Acre, affiliated with Kibbutz Arzi ha-Shomer ha-Za‘ir. Shomrat was founded as the first new settlement in the State of Israel on May 29, 1948, immediately after the capture of Acre in the *War of Independence. The settlers were pioneers from Hungary, Czechoslovakia, and Romania. In 1970 Shomrat had 324 inhabitants; in 2002, 358. Its farming included irrigated field and fodder crops, avocado plantations, dairy cattle and poultry. For many years the kibbutz had a furniture factory and was a partner in Ha-Shomer ha-Za‘ir industrial enterprises in the Haifa Bay area. It also operated guest rooms. The kibbutz achieved notoriety when a local girl was raped by a gang of kibbutz youngsters in 1988. Their initial acquittal caused a great public outcry and the act itself severely tarnished the kibbutz image. Four of the assailants were later convicted on appeal. The name Shomrat is derived from shomer ("guardian"), and also evokes the Ha-Shomer ha-Za‘ir movement.

[Efiram Orni / Shaked Gilboa (2nd ed.)]

SHOMRON, DAN (1937– ). Israeli soldier, thirteenth chief of staff of the Israel Defense Forces. Shomron was born in...
kibbutz Ashdot Ya'akov in the Jordan Valley. His military career began in 1956 when he was a paratrooper. During the Six-Day War of 1967 he commanded an armored division in Sinai, and later served as commander of the southern front. The “Entebbe raid in 1976, later renamed “Operation Yonatan,” in which hostages from an Air France flight hijacked en route from Tel Aviv to Paris were rescued from Entebbe Airport near Kampala, Uganda, was under the command of Shomron, then a brigadier general, who also planned the operation. After occupying various staff positions, he became deputy chief of staff. In early 1987 he was named chief of staff, taking up the position in April of that year and serving until 1991. During his years as chief of staff he had to deal with the first intifada, which began in late 1987, and with the first Gulf War in 1991. After his retirement he served as chairman of Israel's Military Industries and then went into private business.

SHONFIELD, SIR ANDREW (Schonfeld; 1917–1981), British economist. Born in London, the son of Rabbi Victor Schonfeld, he was educated at St. Paul's and Oxford and served as a writer on the Financial Times (1947–57) and economics editor of the Observer (1958–61). Later he held such positions as chairman of the Social Sciences Research Council (1967–71) and director of the Royal Institute of Economic Affairs (1972–77). Shonfield is best known for his many writings on the mixed economy and modern economic developments, such as British Economic Policy Since the War (1958), The Attack on World Poverty (1960), and Modern Capitalism (1965). He delivered the 1972 Reith Lectures on European integration, and was knighted in 1978.

BIBLIOGRAPHY: ODNB online.

SHORE, DINAH (Francis Rose Shore; 1917–1994), U.S. singer. Born in Winchester, Tennessee, Shore graduated from Vanderbilt University in 1938. She started working on radio in 1938 and in 1940 starred in NBC’s Chamber Music Society of Lower Basin Street. She appeared on Eddie Cantor’s radio show, 1940–43. Her sentimental style suited the wartime and postwar periods, and her record “Yes, My Darling Daughter” sold a million copies. She sang in several films (Up in Arms; Follow the Boys, both 1944). The first female star to have her own prime-time TV variety show, her easy-going manner was successful on television when The Dinah Shore Show ran from 1951 to 1961. Her two subsequent TV variety shows were Dinah's Place (1970–74) and Dinah! (1974–80). Shore won eight Emmy Awards for her television programs and for her vocal performances (Best Female Singer). She was married to actor George Montgomery from 1943 to 1963.

Shore wrote and/or compiled six cookbooks, among them Someone's in the Kitchen with Dinah (1971); Dining in Los Angeles (with L. Grad, 1979); and The Dinah Shore American Kitchen (1990).

SHORESH (Heb. תשרש), moshav shittufi in the Judean Hills, 12 mi. (20 km.) W. of Jerusalem, affiliated with Ha-Oved ha-Ziyoni federation. In the Israel *War of Independence, the occupation of Sâris (April 1948) was a decisive step and Shoresh was among the first villages established to secure the Jerusalem Corridor. It was founded in 1948 by settlers from Romania and Czechoslovakia. The soil underwent heavy reclamation work. Deciduous fruit orchards and vineyards were prominent farm branches; the moshav also grew field crops on the Coastal Plain. Its economy was supplemented by a resort village and public swimming pool. In 1970 the moshav numbered 190 inhabitants, rising to 374 in 2002. It lies in the midst of one of the country's largest afforested areas, notably the Martyrs' Forest. The name, “Root,” was adapted from the Arabic Sâris and is presumably derived from an ancient Hebrew name.

SHORT, RENEE (1916–2003), British politician. The daughter of a Jewish engineer from Eastern Europe, Short was educated at Manchester University and worked as a journalist and stage designer before entering politics. She served as a Labour member of Parliament from 1964 to 1987. In the early part of her political career she was one of the most left-wing of national politicians, a constant critic of the United States and a supporter of the Soviet Union, and chairman of the British-German Democratic Republic parliamentary group. She was also a strong feminist. In the 1970s, she moved to the center-left and was actively opposed by the “hard left” in the Labour Party. By the end of her career she had attracted considerable opprobrium from her former allies for attacking large-scale non-white immigration into Britain. Her left-wing stance meant that she never held a ministerial position, but she served as chairman of the influential House of Commons Select Committee on the Social Services from 1979 to 1987.

SHOSTAK, ELIEZER (1911–2001), Israeli politician. Shostak was born in Poland and immigrated to Ereẓ Israel in 1935. He was one of the founders of the *Herut Party and was appointed secretary-general of the National (Revisionist) Labor Federation. A member of the Knesset representing Herut, he resigned from the party in 1966 to form, together with Samuel Tamir, the Free Center, whose representatives they were in the Seventh Knesset, but he subsequently left it to join Laʿam.

Shostak was a member of every Knesset from the Second to the eleventh and was appointed minister of health in 1977 and again in 1981.

SHOVAL (Heb. שובל), kibbutz in southern Israel, in the northern Negev, 16 mi. (25 km.) N.W. of Beersheba, affiliated with Kibbutz Arzi ha-Shomer ha-Zaʿir. Shoval was founded on Oct. 6, 1946, as one of the 11 outpost settlements established in the same night in the South and Negev. The founders were pioneers from South Africa and Israel-born youth. They were later joined by immigrants from Romania, English-speaking countries, and other countries. In 1970 the kibbutz had...
SHOVAVIM TAT

440 inhabitants. In 2002 the population was 505. Shoval pioneered in contour-plowing methods on its loess soils to prevent sheet erosion. It formed friendly ties with the al-Huzayyi Bedouin tribe camping in the vicinity. Near Shoval one of the first experimental, flash-flood reservoirs in the country was installed. With water for irrigation from the National Water Carrier, Shoval raised grain and field crops. It also maintained a large dairy herd and poultry and had three industries: chip processing, silk printing, and metal. Shoval is supposed to be the name of a biblical place in this area, preserved on the “Madaba Map in the form of Sobila (Σωβιλα) and in Arabic, as Bir Zaballa. The name Shobal (Shoval) appears as a private name in 1 Chronicles 1:38, 40 and is connected with Bir Zaballa preserved by the Arabs.

[Ifram Orni / Shaked Gilboa (2nd ed.)]

SHOVAVIM TAT (Heb. שְׁזוֹפְּיָיוִים, שובאים תָּת), an acrostic composed of the initial letters of the names of the first eight weeks of the sidrot (“Torah portions”) of the Book of Exodus which are read in the winter months between *Hanukkah and *Purim. Since diseases were prevalent, especially among infants, during the long and hard winter season, it was the custom to recite penitential prayers (*selihot) on Thursdays of the weeks in which these portions were read in order to avert disastrous epidemics. These penitential prayers are recited in the morning service in the Ashkenazi ritual, or at the afternoon service only (Italian rite). In many European communities, it was customary to fast on these Thursdays; in others (North Africa) on the Mondays and the Thursdays of the Shovavim Tat period. Penitential prayers and fasting do not take place on Thursdays that coincide with a *Rosh Ḥodesh. Kabbalists (Isaac *Luria, Isaiah ha-Levi “Horowitz”), attributed mystical concepts to the observance of Shovavim Tat.

[Leonard Prager (2nd ed.)]

SHPOLA, townlet in S. Kiev district, Ukraine. *Aryeh Leib (Shpoler Zeyde), a disciple of *Israel b. Eliezer the Baal Shem Tov, lived in Shpola during the late 18th and early 19th centuries. In the late 18th century there were 231 Jews. In 1847 the community numbered 1,516 Jews and in 1863, there were 2,534. The Kiev-Odessa railroad which passed near the town helped it to develop and become a center of the grain and sugar industry. In 1897 there were 5,388 Jews (45.3% of the total population) in Shpola. The Jews lived in the town proper, while the remainder of the inhabitants, mostly peasants, lived in the suburbs. The community suffered during the Civil War, and in 1919 both the soldiers of *Hetman Grigoryev (in May) and the armies of General *Denikin carried out pogroms. Under Soviet rule a Jewish city council existed, 95 families founded a Kolkhoz on the town outskirts, and 134 Jews worked in a furniture factory. Most of the Jewish children studied in a Yiddish school. There were 5,379 Jews (55%) in Shpola in 1926, the number dropping to 2,397 in 1939 (16.2% of the total population). The Germans occupied Shpola on July 30, 1941. On September 9 160 Jewish professionals were executed. In late September a ghetto was established where, owing to the very crowded living conditions, each day some 10 to 12 people died. On April 15, 1942, groups of able-bodied Jews were sent to work camps where they perished. On May 15, 1942, 760 women, children, and elderly were murdered; 225 able-bodied workers were sent to Brodetsk camp, where they were killed in December 1942. Another 105 were murdered in Shostkiv camp, and the last Jews were murdered the beginning of 1943. In 1959 there were about 600 Jews in Shpola again, but most left in the 1990s.

BIBLIOGRAPHY: D. Cohen, Shpola (Heb., 1965).
delegate to the divided conference of Ha-Po‘el ha-Mizrachi in Palestine, the majority of whose delegates decided to join with the *Histadrut. Shragai belonged to the minority and, together with his friends, continued to maintain the independent framework of Ha-Po‘el ha-Mizrachi and was elected to its executive. He was chosen as a delegate to Zionist Congresses and as a member of the Zionist General Council and the world center of Mizrahi. In 1929 he was elected to the Vā‘ad Le‘ummi directorate and was head of its department of press and information. In 1946 Shragai was chosen as a member of the *Jewish Agency Executive in London. With the establishment of the State of Israel, he returned to the country and served as a member of the Jewish Agency Executive without portfolio. In 1950 he was elected mayor of Jerusalem and remained at this post until 1952. Two years later he was again elected to the Jewish Agency Executive as head of the Immigration Department and served in this position until 1968.

He was a contributor to the dailies Ha-Zofeh and Letste Noyes in Israel, as well as Hebrew and Yiddish papers abroad. He published books and pamphlets on religious Zionism and the thought behind the Torah ve-Avodah movement. Among his works are Tehumin (1952), Hazon ve-Hagešamah (1956), Tiḥalikhei ha-Ge‘ullah ve-ha-Temurah (1959), Sha‘ah va-Ne‘zah (1960), Pa‘amei Ge‘ullah (1963), and Zemanim (1969).

**SHREIER, FEIWEL** (1819–1898), rabbi and one of the leaders of the Zionist movement in Galicia. Both in Bohorodczany, Galicia, Schreier studied under leading Galician rabbis and in 1861 became the rabbi of Bohorodczany. He was the oldest Galician rabbi and one of the most renowned for halakhic knowledge, to join the Zionist movement upon the appearance of Theodor *Herzl*. Despite his advanced age, he was ready to travel to any community that requested a speaker on Zionism. He was the honorary president of the Galician Ahavat Zion society for the settlement of Ereẓ Israel, which founded the moshavah Mahanayim. He published a number of books on halakhah, including a book by his teacher, Avraham David of Buczacz (Da‘at Redoshim). At the Third Zionist Congress (1899) he was eulogized by Herzl, to whom he was very close.

**SHRODER, WILLIAM J.** (1876–1952), U.S. lawyer and civic leader. Shroder, who was born in Cincinnati, Ohio, engaged in private law practice in Cincinnati for 20 years, also serving as a special assistant U.S. attorney general in 1907 for drug-trust cases. In 1921 Shroder retired from law practice to devote himself fully to voluntary social and civic affairs.

He was president of Cincinnati’s United Jewish Social Agencies during 1923–26; helped found the National Council of Jewish Federations and Welfare Funds in 1932, serving as its first president; and was vice chairman of the Jewish Distribution Committee from 1931 to 1939. Shroder held various civic offices; he was a member of the Cincinnati Board of Education from 1927 to 1934, serving the last four years as chairman. During his tenure in office he instituted equal pay for all teachers, regardless of sex or grade taught, and raised professional standards. The annual Shroder Award was given by the Council of Jewish Federations and Welfare Funds to a community institution with exceptional innovative programs.

**SHTADLAN**, a representative of the Jewish community with access to high dignitaries and legislative bodies. The name is derived from the Aramaic root שדל which in its reflexive form has the meaning “to make an effort” or “to intercede on behalf of.” The shtadlan had to combine the roles and abilities of diplomat, advocate, and intercessor. The functions of the shtadlanim depended on the situation of the Jews in various countries through the ages. Their role diminished and ceased in Western Europe after the French Revolution but continued to be of great importance in Eastern Europe and especially in Russia until the second half of the 19th century. Most of the leaders of Jewish society in the Diaspora who came into contact with state or Church authorities carried out the functions of the shtadlan. The role and status of such influential Jews, deriving from their connections both with the court and with
other Jewish leaders, is delineated by *Saadiah Gaon, writing from Baghdad to Egyptian Jewry in the tenth century: “Re-
late any wish or problem that you have in relation to the state
[ha-malkhit] to us, for then we will order the honorable com-
unity members [ba’alei batim hashvivim] of Baghdad and
they will bring you the royal resolve, in so far as the Lord our
strength will enable them” (in: Ginzei Kedem, 2 (1923), 35).
“Samuel ha-Nagid saw his mission as the defense of the Jews
in the principality of which he was vizier and commander of
the Muslim state and army. *Eliezer b. Joel ha-Levi of Bonn in
13th-century Germany considered that those who on weekdays
interceded for the Jews with alien rulers should have the honor
of being the prayer leaders of the community on the High
Holidays. The name itself appears first in the 13th–14th centuries
in Spain, where the term mishnadhanim was used at first.

The Jewish policy in shtadlanut is explicitly defined in the
resolutions of the conference of the communities of Cat-
'alonia and Valencia which met in *Barcelona in December
1354. Appealing to the king of Aragon and reminding him of
the tradition of royal protection, they asked him to intercede
for them to prevent mob violence and libels. They asked the
pontiff “to bring to naught the evil designs of the populace
who, should troubled days come… would in their foolish
way torment the unhappy Jews. And let the pope command
them that if, Heaven forbid, God should look forth from His
Heaven and send down an evil judgment, they are not, in de-
fiance of His will, to add another vile deed to their sins,
but to strengthen themselves to walk in His ways, wherein he has
commanded them to cherish us as the apple of their eye, be-
cause upon their faith we rest.” Courageously they asked the
pope to “explain that the Inquisition into heresy shall not
pertain to Jews,” since such is the Jewish religious entity that
“even if a Jew strengthens the hands of a Christian who is a
heretic to his faith, the stain of heresy cannot spread to the
Jew, for it is impossible to ascribe to a Jew under the defini-
tion of heresy something which is right according to his faith”
(Bar, Spain, 2 (1966), 26f.). The appeal is to reason, to toler-
ance, and to keeping faith with those who of necessity trust
the ruling Christian powers.

Their actions and appeals throughout the Middle Ages
prove that shtadlanim adopted an unequivocal stand on the
question of Jewish rights. In a memorandum submitted in 1518
(a year before their expulsion), the Jews of *Regensburg an-
swered the accusations brought against them point by point,
oberving in summing up: “If they want and need to keep Jews
then they have to keep them humanely… and to fulfill
what has been promised to them. That they have to keep Jews
in Regensburg… and treat them humanely… our charters…
show… We declare that we are Jews, and are no better than
Jews” (R. Straus, Urkunden und Aktenstucke zur Geschichte
explicit attitude of the Jews to humiliating legislation is re-
vealed in the answer given by Johanan Luria in Alsace at the
end of the 15th century in relation to the Jewish “badge: “It is
[imposed] by the ruler’s command. And if he should order
me to carry a stone of two pounds’ weight, I would have to
do it. Verily this law is like other laws that you impose on us
without reason” (H.H. Ben-Sasson, in: HTR, 59 (1966), 372ff.).
The great shtadlan of the 16th century, *Joseph b. Gershon
Rosheim, constantly based his arguments on the concept of the
natural equality of men (ibid., p. 387). In his arguments
against Martin *Luther, he appealed to the obligation “to comply
with an undertaking and to preserve the peace of the land,”
verring that the refusal to meet such obligations would lead
“Christian opponents of Luther to… fare even worse than the
Jews” (idem, The Reformation in Contemporary Jewish Eyes
(1970), 290). By the 16th century, many individual commu-
nities and also the *Councils of the Lands employed profes-
sional shtadlanim who had to litigate for individual Jews as well
as for the whole body politic of the Jews. In the
*Landesjudenschaft the “Court Jew or a relative of his was
shtadlan, an office which carried considerable authority. In
the phrasing of most charters for Jews, echoes can be heard
through the Latin of the demands, formulations, and achieve-
ments of the shtadlan. His intervention was most frequently
occasioned by *taxation, the *blood libel, and the “Host des-
ecration accusations.

From the late 19th century the terms shtadlan and shtad-
lanut acquired a pejorative undertone; they were used deri-
vively to decry Jewish representatives who failed to stand up
with pride and courage against persecuting governments and
came to denote those who showed weakness and an eagerness
for compromise.

**SHTAYGER** (Yid. “mode”, “manner”), term designating the
musical modes of a traditional Ashkenazi synagogue song,
characterized by an order of intervals which is unusual in
European music. The shtayger are named after the initial
words of certain prayers sung to them, with some differences
in nomenclature between East and West Ashkenazi com-
nunities. The number of these synagogue modes is difficult to
determine if all their variants and tonal shades are taken into
account. Investigators usually restrict themselves to the more
frequent and important ones and number three (J. *Singer,
1886) or four (I. *Schwarz, 1894) principal shtayger. These
were imagined as the Jewish parallel of the medieval Euro-
pean Church modes and are accordingly described in terms of
oxte scales. Later the increased knowledge of non-European
modal structures, such as the maqāmā or raga, gave the
clue for understanding the true nature of the shtayger. First,
their “scales” need not be an octave repeating itself through
the whole gamut; their tonal range may extend over less or
more than eight notes, and the intervals may be altered in different octave pitches or in ascending and descending order. Another characteristic is given by the specific location of the keynotes, which serve as resting points of the intermediary and final cadences. Furthermore, certain shtayer are characterized by a stock of motives of their own. Thus, singing according to a shtayer comes very close to Oriental concepts of modality.

Two shtayer are by far the most important in both the West and East Ashkenazi traditions: the "Ahavah Rabbah" and the "Adoshem Malakh" shtayer. The "Ahavah Rabbah," featuring an augmented second, is rather frequent in synagogue music as well as in folksong and hasidic melodies; it has also been used for the musical characterization of the Jewish nation by Mussorgsky, Anton "Rubinstein, and other composers. The "Adoshem Malakh" shtayer (named after Ps. 93:1) always appears in connection with its 10 to 12 standard motives, which are combined in various ways and variants. Less frequent are the "Magen Avot," which resembles natural minor, and the "Av ha-Rahamim" shtayer, with its two augmented seconds (sometimes mistaken, by superficial observers, for the so-called Gypsy Scale).

The circle of traditional shtayer is not a closed system but extends to many variant forms, which are only occasionally or even rarely used. The Az be-Kol (Rashish)" shtayer, in former times also called by the hitherto unexplained name "Klepaner," may serve as an example of these secondary modes. In the free compositions of individual cantors, modulation from one shtayer to the other frequently occurs and contributes much to the expressive power of the East Ashkenazi singing style.

The use of shtayer melodies in art music raises some problems, especially when their harmonization is attempted. Some convincing solutions have been found, as when the solo tune is allowed to display itself before a background of sustained chords (e.g., L. *Lewandowski's "Ki ke-Shimkhho" for cantor and choir).

[Hanoch Avenary]

SHTERN, Canadian family consisting of a father and four sons, all of whom have made their mark in Jewish literature. The most important of them, however, Yaakov adopted the name *Zipper. All were born in Tyszkowce, Poland.

Abraham David Shtern (1878–1955) became a dayyan and shohet in his native town. In 1938, he immigrated to Canada and was appointed rabbi of the Zeirei Dat Vadaat Congregation of Montreal. He published three volumes of essays on biblical and hasidic themes, in a mixture of Hebrew and Yiddish: Edut be-Yisrael (1943); Kevuza Kitvei Aggadah (1947); Huttim ha-Meshulashim (1953), which are of considerable value from the point of view of both scholarship and folklore. Sholem Shtern (1907– ), a Yiddish poet and literary writer, immigrated to Canada in 1927. He was associated with the radical movement for many years, contributing to its Yiddish press, mostly on literary subjects. This association ceased, however, when the fate of Jewish writers and intellectuals under Stalin became known. His collections of poetry include Nienteket (Toronto, 1929) and In der Fri (Montreal, 1945). His two-volume novel in Yiddish verse In Canada (Montreal, 1960–63), is an unusual literary record of the Canadian scene. Another book, Das Vayse Hoyz (New York, 1967), was translated into Hebrew by Shimshon *Meltzer, under the title Ha-Bayit ha-Lavan be-Harim (Tel Aviv, 1972). Sholem Shtern's poetry and criticism of Yiddish writing have been widely published in important journals in Poland, the Argentine, Australia, Romania, South Africa, France, and Israel, as well as in Canada and the United States. He is represented in various anthologies and on recordings.

[David Rome]

SHTERN, ISRAEL (1894–1942), Yiddish poet, essayist, and literary critic. Shtern was born in the small Russian-Polish town of Ostrołenka and educated in the musar yeshivot of Lomzhe (Lomza) and Słońskowka. In 1914 he moved to Vienna and spent three years in Austrian internment as an enemy alien. Here he became familiar with the newest currents of literature in the Hapsburg realm. In 1917 he settled in Warsaw. His first poems appeared in 1919 in Vokhm Blat and Dos Folk. Later on he continued to publish poems in the major Yiddish periodicals in Warsaw. His book reviews appeared regularly in the daily Haynt and Moment. His basic theme is that God mirrors Himself in the poor, the suffering, the brokenhearted, the victims of social injustice. Shtern always stood on the periphery of Warsaw's literary circles. He spent most of his days
among the Hasidim or poring over the Talmud. He remained poor and embittered both before World War II and during his years in the Warsaw ghetto. According to one report, he starved to death in the ghetto but, according to another report, he perished in the gas chambers of Treblinka. After his death, when his only published volume appeared, *Lider un Eseyen* (“Poems and Essays,” 1957), edited by H. *Leivick, he became recognized as one of the most important Yiddish poets between the two world wars.

**SHTETL** (pl. shtetlakh; Russ. mestechko; Pol. miasteczko; Heb. מַעְיָר; Yiddish diminutive for *shtot* meaning “town” or “city,” to imply a relatively small community; in Eastern Europe a unique socio-cultural communal pattern. The real criteria for the size of a shtetl were vague and ill-defined, as the actual size could vary from much less than 1,000 inhabitants to 20,000 or more. When the community was very small it would be called a *klaynshetel* or even a *shtetele*; however both terms could also carry the connotation of a parochial lack of sophistication or, at times, a feeling of warmth or nostalgia.

The shtetl pattern first took shape within Poland-Lithuania before the partitions of the kingdom. Jews had been invited to settle in the private towns owned by the Polish nobility that developed from the 16th century, on relatively very favorable conditions. In many of such private towns Jews soon formed the preponderant majority of the population. Their occupation in *arenda* led many Jews to settle in the villages around these towns, while many who settled in them were also engaged in *arenda* as well as having other business in the villages. Hence both the economy as well as the style of living in such towns had close links with the villages, in addition to assuming the all-pervading character of a “Jewish town.” Originally dependent on the highly structured and powerful communities in the larger cities from which the settlers first came, these small communities increasingly acquired importance, since their development was unhampered by the established rights and inimical anti-Jewish traditions of the Christian townspeople, as the communities in the old “royal towns” had been. Thus the movement of Jews to smaller towns where they were needed, and therefore protected, by the greater and lesser Polish nobility, continued. The community of the private town often constituted the town itself for all intents and purposes, and therefore could strengthen and consolidate a homogeneous pattern of values, attitudes, and mores.

With the partitions of Poland-Lithuania the final crystallization of the socio-cultural pattern of the began amid the process of geopolitical differentiation of the communities on the territories divided between Poland’s neighbors. In Russia, the shtetl developed in the Pale of Settlement. In 1815, Congress Poland was incorporated into the Pale, which continued to exist until the October Revolution of 1917. Within Austria-Hungary, the shtetl communities were scattered in Galicia, Bohemia, Sub-Carpathian Ruthenia, Bukovina, and Hungary. In the area under Prussia the shtetl pattern did not develop to the same extent. Despite the basic cultural homogeneity which had consolidated in the past few centuries, the communities in the partitioned regions developed specific social traits in each of the states in which they were situated. This was the result on the one hand of the varying cultures of their host societies and on the other hand of the differing social and economic policies and trends which developed in the host society under the Hapsburg emperors or Russian czars.

During the 19th century, the anti-Jewish persecutions, economic restrictions, and outbreaks of violence pressed increasingly on the socioeconomic foundations of the Jews, in czarist Russia in particular, while political and ideological revolutionary trends and movements began to undermine the strength of the life style of the shtetl, which became more and more unsatisfactory to younger generations. Thus weakened in its foundations, the shtetl entered the last phase of its existence. The liberal revolution of 1917 liquidated the Pale of Settlement, while the Communist revolution that followed liquidated the traditional shtetl life. Between the two world wars, independent Poland became the greatest Jewish center in Eastern Europe.

**Life in the Shtetl**

*Yidishkeyt* (“Jewishness”) and *menshlikhkeyt* (“humanness”) were the two major values of the community around which life centered. Both the sacred and the profane were integrated in this way of life. The traditional ideals of piety, learning and scholarship, communal justice, and charity, were fused in the warm and intimate lifestyle of the shtetl. Thus the *Yidishkeyt* and the *menshlikhkeyt* of the shtetl were expressed in innumerable activities, all of which were geared toward the goal of living the life of a “good Jew” and were manifested in the synagogue and at home, in the holiness of Sabbath and the humdrum existence of the market, in the structure of the community and in the organization of the family.

**The Synagogue**

The life of the Jew oscillated between synagogue, home, and market. In the synagogue he served God, studied His Law and participated in social activities created in response to the needs of the community and its individual members. The synagogue, whether a *shul*, a Ukrainian *kloyz*, or a Polish *shtibl*, was the house of prayer, the house of study, and the house of assembly combined. The seating arrangement in the synagogue reflected the social structure of the community: along the eastern wall, where the Ark was located, were ranged the most honored members of the community, the rabbi and the sheyne Yidn (the dignified Jews), the men of learning, of substance, and of status, i.e., men with *yihus*—symbol of distinction acquired through family position in the community or
individual achievement in learning, business, or community participation. The seats facing the eastern wall were occupied by the balebatim or burghers, and behind them were placed the proste Yidn or common Jews – the humble folk, usually assumed to be ignorant, poor, and uneducated. The value of the seats decreased with their distance from the eastern wall, until at the western wall were found the beggars and needy strangers. These were cared for by various community institutions as well as special associations (see hevrarah).

The Home
The home of the individual was the basic unit in the culture and life style of the shtetl; it was founded on a patriarchal and closely knit structure on traditional lines. His home was the place where the shtetl Jew enjoyed his Yidishkeyt in the serenity and peace of Sabbath, in the rituals of the Passover seder, or in the dignity and holiness of the High Holidays. It was where he derived the nakhes – the proud pleasure – from the achievement of his children, the son, or the son-in-law. There he fed the stranger on Friday, and provided meals to the poor student in the yeshivah. However the home was also part of the community, and hardly any important activity at home was separable from the synagouge or the total community. Birth and death, bar mitzvahs and weddings, illness and recovery, were family events which tied the home to the synagogue, and by extension to the community. No family event was a private event, for life in the shtetl was life with people, and therefore part of the total community life. Family joys, as well as family sorrows, were shared by the community, which had the right and duty to express its approval or disapproval about the conduct and behavior of the family as a whole or of each of its members. Thus community control over the life of its individual members became one of the major regulating forces in the shtetl society, which succeeded in surviving for centuries without a police force to maintain its internal law and order.

The Market
The market and marketplace were the source of livelihood and the meeting place with non-Jewish neighbors. The shtetl Jews served as middlemen between the big city and village economy. They brought urban products to the Polish, Ukrainian, or Romanian peasant who visited the market, or as peddlers bought from him the agricultural produce of the villages which they sold in the city. The financial scale of these transactions was limited. Only a few Jews in the shtetl engaged in enterprises on a larger scale involving substantial capital. The majority of the shtetl population lived in poverty, where the major problem was to earn enough during the week in order to be able to buy a chicken or a fish for Sabbath, or to save up enough money for Passover matzot. To make a living the shtetl Jew tried his hand at anything and often at a number of things. Trades and occupations could vary with the season, as well as with a special opportunity encountered at the marketplace. Men and women, old and young, were daily involved in the difficult task of parnose ("livelihood"). Often women and children remained in charge of the stall or the store, while men traveled in the area looking for bargains or peddling city wares.

The market was the area where the shtetl came in direct contact with the goyim, whose life patterns were alien and often hostile to the shtetl mores. The emphasis was considered by Jews to be on intellect, on a sense of moderation, on cultivation of peace, and on goal-directed activities within the framework of a tightly knit family and community. Among the goyim, the shtetl Jew saw the emphasis on the body, excess, blind instinct, sexual life, and physical force. For the Jewish human power was in the mind and in the word, while for the goyim it appeared expressed in muscles and violence. The underlying feeling of the shtetl Jew in all transactions with the goyim was the conviction that no matter how friendly and neighborly the interaction might be, he was never sure that it would not end in bloodshed and death. The feeling was amply supported by experiences of riots, pogroms, and massacres, which often began at the marketplace and spread to homes and synagogues.

Dissolution of the Shtetl
The social, political, and economic forces in the 19th and 20th centuries eroded the patterns of life which had evolved in the shtetl. Pogroms and persecutions, economic depressions and political revolutions caused mass migrations of Jews to larger cities in Europe and across the ocean to the United States. Eventually Hitler and the “final solution” brought death to millions of Jews in Eastern and Western Europe. The physical existence of the shtetl ended in the gas chambers and concentration camps of the Third Reich. However, despite the violent end of the shtetl community and of its life style, much of its influence has survived in Israel and in the Americas (e.g., U.S., Canada, Mexico, and Argentina). The children of the shtetl parents – immigrants and survivors of ghettos and concentration camps – became carriers of values shaped in the shtetl, to be reflected in behavior patterns and social attitudes as well as in the literature of Israel and of American Jews. The shtetl values are reflected in the novels of American Jewish writers such as Bernard Malamud, as much as in the classic portrayals of shtetl life by Shalom Aleichem or the paintings of Marc Chagall.

[Mark Zborowski]

Lives and Roles of Women
Gender hierarchies in the shtetl ascribed the mundane affairs of the world to women and lofty spiritual and religious pursuits to men. These expectations, perhaps more ideal than real, shaped women’s spirituality, family life, economic activities, education, and political choices.

In response to the exclusion of women from arenas of public worship and study, “female variants” of Judaism emerged. Instead of the obligatory Hebrew prayers in the synagogue, women recited Yiddish prayers (*tkhines) at home, which addressed everyday concerns. They also observed the three women's commandments: namely, *hullah, *niddah, and *candle lighting on the eve of the Sabbath and holidays. At so-
cial gatherings or in private, women read homilies (Tsenerene) or ethical books (Lev Tov, “A Good Heart,” and Brantshipigl, “Burning Mirror”) and pious tales (Mayse Buch). Their models of piety were the biblical matriarchs, whom women invoked to intercede on their behalf. They also resorted to female leaders in the community for guidance and assistance; these might include the *rebbetzin (rabbi's wife), zogerke (reader of prayers in their section of the synagogue), gabete (pious woman who oversaw public charity), and klogerns (women hired to wail at burials). Women's spirituality, though different from men's, remained strictly within male-determined religious norms.

The division of roles also reflected the value of the spiritual over the material. An inverted structure of work developed in the shtetl, which allocated the task of breadwinning to women in order to allow their husbands to study. While most couples shared economic responsibility, the cultural ideal dictated that a greater proportion of the burden fell on women. Wives of rabbinic scholars who studied at a distant yeshivah or hasidic women whose husbands spent their time in a shibli or rebbe's home, often assumed the entire load. The primary site of female economic activity was the marketplace, where women ran small shops, peddled food products and household goods, and engaged in petty trade. In addition, women were active in the tobacco and alcohol trades. With the advent of industrialization in Russia in the late 19th century, women joined the workforce in handicrafts and small manufacturing. Notably, women in the general population were also highly active in the shtetl economy; hence, female work was not a unique feature of Jewish life.

Women's dominant role in the household economy extended to family relations. In many households, a patriarchal structure prevailed. The *Haskalah (Jewish enlightenment) movement in Eastern Europe attacked this gender role reversal (that is, a subservient husband and dominant wife) and blamed the inverse work structure for this phenomenon. Satires like The Brief Travels of Benjamin the Third (1878) by S.Y. *Abramovich (Mendele Mokher Seferim) focused on the degrading feminization of men and moral decline of “masculine women.” In this particular novel, an emasculated husband runs away from his wife, “who wears the pants in the house,” in search of the ten lost tribes. D. Biala suggested that the maskilim’s rebellion against matriarchal power may have stemmed from an animosity toward their mothers-in-law, who dominated their adolescent marriages (Eros and the Jews, 1992).

Jewish women also played a defining role in the socialization of their children, particularly daughters who remained in their care until they married. Given the high birthrate in Eastern Europe, Jewish women were pregnant during most of their childbearing years. Prolonged breastfeeding reduced fertility to some extent but birth control was fairly primitive and inaccessible. Births usually took place at home with the assistance of a midwife. Women hung amulets on the wall and recited prayers to protect newborn infants from evil spirits. Images of strong mothers and grandmothers who supported their families and arranged matches for all the children are common in the memoir literature.

Despite their power in the domestic sphere, women were vulnerable and became increasingly powerless in matters of divorce. This was due in part to Jewish law, which empowered men to dissolve marriages unilaterally. In the Czarist empire, where Jewish divorce rates were extraordinarily high, the childless woman, moredeh (rebellious wife), and other “undesirable” wives were especially prone to divorce against their will. Moreover, a decline in rabbinic authority meant that women who sought to secure a divorce from a recalcitrant husband for wife beating or other reasons were usually unsuccessful. In desperation, some women turned to state courts to enforce a rabbi's verdict or to overturn an unjust ruling.

A gendered system of education was another product of shtetl life. I. Parush argues that because rabbinic authorities devoted all their energies to male religious learning, they neglected the education of women. During the 19th century, this “benefit of marginality” allowed women to acquire secular culture with greater ease. While some women remained illiterate, a large segment of Jewish women learned to read in Yiddish; this group was the first to read popular literature (often simplistic, sentimental chapbooks) at their own leisure. Upper-class daughters of Orthodox families even studied foreign languages and literature with governesses and private tutors. “Reading women,” who experienced greater exposure to modern values, in turn served as agents of acculturation at home. Starting in the 1860s, Jewish girls flocked to the new state and private schools throughout the Russian empire; some even pursued higher education as kuristski (auditors). Similar trends took place in the Austro-Hungarian Empire, where secular education had been introduced even earlier.

“Seductive secularization” gradually led to ruptures within traditional society well into the first three decades of the 20th century. The most extreme form of rejection was conversion to Christianity and marriage with Christian partners; not surprisingly, women constituted a disproportionate number of Jewish converts in the late 19th century. Another venue of rebellion was to join a revolutionary movement. Women participated actively in the Bund, various branches of the Zionist movement, as well as general Russian and Polish socialist groups.

On the eve of World War II, women in the shtetl remained the most traditional constituency of European Jewry, despite the onslaught of modernity and change; this was due in part to the migration of more acculturated families to urban centers or abroad, in part to the resilience of old customs and communal values.

526 ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 18
SHUB, DAVID (1887–1973), journalist and sovietologist. Shub was born in Fastov, in the Kiev oblast, to religious parents who, however, sent him to a Russian school instead of the traditional heder. At the age of 16, he became acquainted with the activities of the Jewish Labor *Bund. In the same year (1903), he moved to the United States, but two years later returned to Russia via Switzerland, where he met Lenin, who invited him to join the Bolshevik fraction. Shub declined, but in Russia was arrested for participating in revolutionary activities and sentenced to forced military service in Siberia. He escaped from Irkutsk in 1907 and made his way to the United States, where he remained for the rest of his life.

Shub devoted himself to journalism, writing mostly in Yiddish, but also in Russian and English, concentrating on Russian politics and literature and scarcely dealing with Jewish subjects, apart from his interest in the Bund. He became a leading sovietologist. He was a member of the staff of the *Jewish Daily Forward from 1924, contributing to it until 1972. He was also a regular contributor to the Yiddish political monthly *Fun Opgrunt.
Der Veker, of which he was editor during the years 1922–27. He joined the Mensheviks in 1903 and remained a right-wing Menshevik all his life, continuing his fight against Bolshevism to the end of his life, in the firm belief that Russia would finally abandon it and emerge as a Social Democratic republic.

Shub wrote one of the first biographies of Lenin (Yiddish, 1928; English, revised and enlarged edition, Lenin, a Biography, 1948). Among his other works are Helden un Martirer ("Heroes and Martyrs," Yiddish, 1939), on Russian martyrs in the struggle against Czarism; Sotsyale Denker un Kenfer ("Social Thinkers and Fighters," Yiddish, 1968); and Politicheskiye Deyateli Rossii, 1850–1928 ("Political Figures: Russia, 1850–1928," Russian, 1969) based on the former work and on the radio scripts which he broadcast for Radio Liberty to the U.S.S.R. Shub's memoirs, Fum di Amolike Yoren ("From Bygone Days"), were published in 1970.

[Elia Schumacher]

SHUBERT, family of U.S. theater proprietors and producers. SAM (1875–1905), LEE (1876–1953), and JACOB J. (1877–1963) became Broadway's most powerful theatrical dynasty. They were born in Syracuse, New York, sons of a peddler. Their rise to theatrical prominence began early in life. They first took over the Grand Opera House in Syracuse, and then acquired touring companies and theaters in upstate New York. In 1900 the Shuberts produced "Quo Vadis?" at the Herald Square Theater, New York, and from then until the 1920s they engaged in fierce competition with Klaw and Erlanger, the major theatrical syndicate prior to the Shuberts' arrival. Sam died in a railroad disaster, but the other brothers continued to build their theatrical empire. By 1956, the family enterprise owned or controlled about half the legitimate theaters in the nation, including 17 on Broadway. Faced with a government anti-trust suit, the brothers agreed to sell twelve theaters, and sever their connection with theatrical booking business. The Shuberts produced more than 500 plays. Jacob was one of the early backers of Florenz Ziegfeld, and among the stars the Shuberts introduced to American audiences were Al Jolson, Eddie Cantor, Marilyn Miller, Fanny Brice, Ray Bolger, and Bert Lahr. They had a reputation as aggressive businessmen, but also displayed a sentimental feeling for the theater. Speaking on the decline of the legitimate stage, Jacob once said late in his career: "When they tear down a theater it's like someone in the family dying."

[Raphael Rothstein]

SHUBOW, JOSEPH SHALOM (1899–1969), U.S. rabbi. A Conservative rabbi who was both a leader of the American Zionist movement and the Boston Jewish community, Shubow tended to the needs of Jewish soldiers and displaced persons in war-torn Europe.

Shubow was born in Olita, Lithuania, and came to the United States with his family. He attended Boston Latin High School before heading to Harvard, where he received an A.B. (1920), A.M. (1921), and Ph.D. (1939). In 1925, while a student there, he and Max Rhoade founded Avukah, the national student Zionist organization.

From 1923 to 1935 Shubow served as the literary editor for the Boston Jewish Advocate and from 1924 to 1931 was a correspondent and features writer for the Jewish Telegraphic Agency. Following in the footsteps of his younger brother, Rabbi Leo Shubow, he entered the Jewish Institute of Religion to study under Rabbi Stephen S. *Wise. Upon his ordination in 1933, he was installed as the first rabbi of Temple B'nia Moshe in Brighton, Massachusetts. Under his spiritual leadership, which lasted until his death (excepting his wartime service), it became one of the most thriving congregations of Greater Boston.

A gifted orator, Shubow was outspoken in his ardor for Zionism and in his concern for world Jewry. In June 1934, at a Harvard alumni reunion, Shubow publicly confronted Ernst Hafstaengel, a German Nazi and close friend of Adolf Hitler's, who had been invited as a guest of honor. Shubow questioned Hafstaengel as to what he had meant by his statement that the Jewish problem would soon be restored to normal, asking, "Did you mean by extermination?" Shubow would again display his boldness when in the 1950s he famously confronted the antisemitic Jesuit priest Father Leonard Feeney on the Boston Common.

In 1943, Shubow, then in his early forties, voluntarily enlisted in the U.S. Army. He served as a chaplain in Europe with the Ninth Army through 1946, and traveled with a portable ark that could be strapped to a jeep. In March 1945, having accompanied the troops who had just crossed the Rhine into Germany, he led a Passover seder in Goebbels's castle – an event that was front-page news around the world. After the war, in both displaced-persons camps and Berlin, he played a major role in reuniting Jewish families as well as in rekindling the spark of life in the liberated prisoners. For his compassionate efforts he was awarded a Bronze Star.

The American Jewish community highly respected Shubow, and he rose to a number of influential positions, including the presidency of the New England Division of the American Jewish Congress (1941–1943), the presidency of the Greater Boston Rabbinical Association (1950–1953), and the vice presidency of the Zionist Organization of America (1961–1969). He also was a delegate to the 1936 World Jewish Congress in Geneva.

In addition to being a pulpit rabbi and an activist, Shubow, who knew at least seven languages, was also a scholar of Judaism who studied with Harry Austryn *Wolfson throughout his life. Though a Conservative rabbi, he was highly esteemed for his personal virtues by the modern Orthodox Rabbi Joseph B. *Soloveitchik and by the hasidic Boster Rebbe Levi Yitzchak *Horowitz. Shubow and Soloveitchik were very good friends, but despite their mutual admiration, in 1954 the Rav refused
to take part in a testimonial dinner in Shubow’s honor since the event would also be celebrating the dedication of a new temple-building that would have mixed seating. Similarly, although Soloveitchik delivered a moving eulogy at Shubow’s funeral, he would not enter the temple building.

[Justin Shubow (2nd ed.)]

**SHUCHAT, WILFRED G.** (1920– ). Canadian rabbi. Shuchat was born in Montreal, Canada, and received his B.A. from McGill University in 1941. In 1945, he was ordained at the *Jewish Theological Seminary*, which awarded him an honorary D.D. in 1971. After serving as rabbi of Congregation Sons of Israel in Albany, New York (1944–45) and Temple Beth El in Buffalo, New York (1945–46), he was appointed assistant rabbi of Congregation Shaar Hashomayim in Montreal, becoming rabbi in 1948. In 1993, he retired and was elevated to emeritus. Under his leadership, the synagogue instituted such pioneering programs as home study groups and the Shaar Israel–Shabbat Yachad Project, which connected congregants to Israel through a series of family weekends featuring religious and educational programming, as well as dialogue with Reform and Orthodox invitees. At Shuchat’s initiative, Shaar Hashomayim also became the founder and co-owner of Camp Ramah in Utterson, Ontario.

In the larger Jewish community, Shuchat co-founded in 1947 the Board of Jewish Ministers of Greatier Montreal (now the Board of Rabbis), comprising the city’s English-speaking rabbis, and was instrumental in creating its chaplaincy committee. He also served as chairman of the Religious Welfare Committee of the Canadian Jewish Congress, where he headed a committee on marriage and family that established the Jewish Introduction Service for singles. In 1960, he set up the *De Sola Club*, a kosher dining club in Montreal. He also taught Judaism at the School of Nursing at the Jewish General Hospital. In 1967, he was the creator and program chairman of the Pavilion of Judaism at Expo 67, which attracted three million visitors – the most popular exhibition of its kind.

In the Conservative movement, Shuchat served on the Committee on Law and Standards of the *Rabbinical Assembly*, but he is better known for being one of the original founders of the Union for Traditional Judaism (UTJ), an organization that promotes traditional Jewish observance within the framework of Conservative Judaism. UTJ sponsors a rabbinical college; a speakers’ bureau; a preparatory program for lay men and women who would like to spend a year in intense Torah study; and a Masters in Public Administration, which offers in-depth training to Jewish leaders of the future. Among the books Shuchat wrote are *The Gate of Heaven: The Story of Congregation Shaar Hashomayim in Montreal* (2000) and *The Creation According to Midrash Rabbah* (2002).

[Bezalel Gordon (2nd ed.)]

**SHULAMMITE, THE** (Heb. סולמית), a feminine name or title occurring only in Song of *Songs* 7:1 [6:13]. The phonetic similarity of Shulammite to Shunammite led to the identification of the dancer of Song of Songs with “Abishag,” “the maiden from Shunem,” who was brought to King David in his old age (1 Kings 1:13–4). The word is most plausibly explained as being indeed equivalent to שונמית, “the Shunammite woman” (1 Kings 1:3; 11 Kings 4:25), used (on account of the aforementioned Abishag) as synonymous with “beautiful woman.”

[Keith N. Schoville]

**SHULHAMARUKH** (Heb. מַפָּאָה, “the prepared table”), name of a code written by Joseph *Caro*, similar in form to the *Arba'ah Turim* of *Jacob b. Asher*, but more concise and without stating any sources. The book is in fact a halakhic synopsis of Caro’s previous commentary on the *Turim*, the *Beit Yosef*. It is divided into the same four major sections as the former: *Orah Hayyim*, concerning the daily commandments, Sabbaths, and the festivals; *Yoreh De’ah*, dealing with various subjects, such as dietary laws, interest, purity, and mourning; *Even ha-Ezer*, on marriage, divorce, and related topics; and *Hoshen Mishpat*, dealing with civil and criminal law. In his decisions Caro relied on Isaac *Alfasi*, *Maimonides*, and *Asher b. Jehiel*, generally following any two in cases of disagreement. The book was first printed in Venice in 1569 and notwithstanding serious objections to the work, ultimately became accepted as the code of Jewish law par excellence after amendments had been added by Moses *Isserles* and other commentators of later halakhic authorities had been written on it.

**Isserles’ Commentary**

The admiration of Isserles for Joseph Caro was unbounded, and he refers to him in the most glowing terms. He found, however, one serious drawback in the Shulham Arukh as an authoritative code. Caro had completely ignored the halakhic decisions and minhagim of Ashkenazi Jewry which had grown up in Germany and Poland since *Asher b. Jehiel*, who was one of Caro’s major authorities. As a note on the aim of the *Darkhei Moshe* (see below) states: “Its purpose is to include the new laws which are found in the *Or Zaru’ah*, the *Aguddah*, the *Sha’arei Dura*, the *Issur ve-Hetter*, the responsa of *Israel Bruna*, of the *Maharal* and R. Meir of Padua, and the regulations for divorce and halizah of *Benjamin Ze’ev*, as well as many other collections whose innovations are innumerable … as well as the decisive law according to the minhag, originally from France, which we follow.”

**ADJUSTMENT OF HALAKHAH FOR ASHKENAZIM**. It was the combination of this profound respect for the author and the realization of this serious defect which dictated the approach of Isserles to the Shulham Arukh of Caro. He does not criticize or attack; he explains and supplements. At first he wrote his *Darkhei Moshe to the Beit Yosef*, for the purpose of adjusting the halakhat there to that prevalent in Ashkenazi Jewry; only then did he add to the “table” (shulhan) his additions to which he gave the apt name Mappah, “the Tablecloth.” Both
these elements are prominent in the remarkably succinct addition to Caro’s work. His clarification of the original work is as important as his amendments and additions, and helped considerably toward its acceptance. Where the halakhah of Caro differs from that accepted by the Ashkenazi Jews, Isserles gives the law or the custom as was prevalent in those communities, adding “our minhag is,” or “thus is the minhag.”

As a result of the Mappah, the Shulhan Arukh, as supplemented by Isserles, reflected the halakhah and norms of religious practice as they had developed in Germany and Poland and was thus acceptable to the Ashkenazim, while the text of Caro was equally acceptable to the Sephardim. Between its acceptability and its complete acceptance, however, there was a long and complicated road.

**Opposition to Acceptance of Shulhan Arukh**

The most strenuous opposition to the acceptance of the Shulhan Arukh as the authoritative code of Jewish law was based on grounds of principle. Its most powerful opponent was Solomon *Luria. In his Yam shel Shelomo he expressed his vigorous opposition to all codes which laid down the law. Every code gives rise to commentaries and supercommentaries which have just the opposite effect intended by the authors of the original code. The only source for the determination of halakhah was the Talmud. A similar attitude was taken by *Hayyim b. Bezalel. The acceptance of the Shulhan Arukh was also threatened by another work, the masterly Levush of Mordecai *Jaffe. Based upon both the Beit Yosef and the Shulhan Arukh, it aimed at combining both of them into one work, giving some of the arguments of the former and bringing into the latter, as had Isserles, the Ashkenazi halakhah and minhag.

**Final Acceptance of Shulhan Arukh**

The final acceptance of the Shulhan Arukh as the authoritative code accepted by world Jewry was due mainly to two 17th-century commentaries which have become standard, the Turei Zahav (“Taz”) of *David b. Samuel ha-Levi on the whole of Shulhan Arukh, and the Siftei Kohen (“Shakh”) of *Shabbetai b. Meir ha-Kohen on Hoshen Mishpat and Yoreh De’ah. David ha-Levi gave his commentary to Orah Hayyim the title Magen David. The place of the Siftei Kohen on Orah Hayyim was taken by the Magen Avraham of Abraham Abele *Gombiner, and the combined name Meginnei Erez was given to both commentaries. Of David ha-Levi’s commentaries, only those to Orah Hayyim, Yoreh De’ah, and Even ha-Ezer, however, had the good fortune to be printed together with the text, the commentary Me’irot Einayim of Joshua *Falk being printed with Hoshen Mishpat.

It was not only the comprehensive nature of these commentaries and the fact that in them they effectively answered all the criticisms which had been leveled against the Shulhan Arukh which finally established Caro’s code as the authoritative code. These commentaries were the first to regard the Shulhan Arukh as a separate halakhic work, independent of the Taur or the Beit Yosef, and as a result of their eminence, the Shulhan Arukh became the final authority to which one turned for the definitive halakhah. It was they who were mainly responsible for the preference given to the Shulhan Arukh over the Levush, and the halakhah was accepted to be “in accordance with the Shulhan Arukh.”

**Shulhan Arukh in the Development of Halakhah**

However, the Shulhan Arukh in this sense can be said almost to bear the same relationship to the text of Caro and Isserles as does the Talmud to the Mishnah. The text marks a stage, albeit a decisive one, in the continuous development of the halakhah. The text of Caro, even with the additions of Isserles, has been subject to a continuous process of commentary and supercommentary which has continually modified its decisions and brought in all new halakhic problems which have subsequently arisen. An important addition to Orah Hayyim was the Sha’arei Teshuvah of Hayyim Mordecai Margolis and his brother Ephraim Zalman, and to the other three sections, the Pithei Teshuvah of Zevi Hirsch Eisenstadt, incorporating the new decisions given in the responsa literature from the time of Caro to that of the authors. The extent of this adjustment can be seen in the Ozar ha-Posekim, still in process of publication. For example the third volume which treats of the first 17 paragraphs of the 17th chapter of Even ha-Ezer has no less than 167 folio pages of commentary which give a digest of all the various commentaries and modifications, mainly from the responsa, to the original text of Caro. H.J. Chajes has estimated that in one way or another, from Isserles to his own time, early in the 20th century, 60 percent of the original text of Caro has been subject to some adjustment.

Only parts of the Shulhan Arukh have been translated into English, e.g., some sections of Hoshen Mishpat and Yoreh De’ah by C.N. Denburg, 2 vols. (1954–55).

**BIBLIOGRAPHY:** Ch. Tchernowitz, Toledo*ed ha-Posekim, 3* (1967); I. Rothchild and I. Ta-Shema (eds.), *Arba Meot Shanan Shulhan Arukh—Catalog* (1965), incl. bibl.; *Maharayyim, 96* (1965), ed. by M. Ha-Kohen, issue devoted to Shulhan Arukh.

[Louis Isaac Rabinowitz]

**SHULIM, JOSEPH ISIDORE** (1912–2005), U.S. historian. Born in New Haven, Connecticut, Shulim graduated from Brooklyn College in 1933 and received his Ph.D. from Columbia University. While doing his graduate work, he began teaching at Brooklyn College, where he remained throughout his career until his retirement in 1973, serving for a time as deputy chairman of the Department of History. He was later named professor emeritus of history. His field was the French Revolution and its impact upon the North Atlantic community. He also was a member of the CUNY Graduate School faculty and a founding member of CUNY’s Retirees Chapter, serving for many years on the executive committee and as vice president. Shulim was also active in collegiate Jewish affairs.

His major publications were *The Old Dominion and Napoleon Bonaparte* (1952), *John Daly Burk: Irish Revolutionist*...

[Ruth Beloff (2nd ed.)]

SHULKLAGGER (Yid. “the knocker who calls to the synagogue”), in Ashkenazi countries one of the sextons of the synagogue. Although the office is found from the High Middle Ages, its development is best known from Eastern Europe, where the sexton awakened the people with hammer knocks for the morning prayers, saying: “Jews, this morning arise for the service of the Creator.” The shulklapper also announced the beginning of the Sabbath and holidays. In the last week before Rosh Ha-Shanah and also during the Ten Days of Penitence between Rosh Ha-Shanah and the Day of Atonement, the shulklapper announced the Selihot service. The number of knocks and their order differed according to the occasion and local custom. Other tasks of the shulklapper were to summon people for communal meetings, banquets, and funerals.

[Natan Efrati]

SHULMAN, CHARLES E. (1901–1968), U.S. Reform rabbi. Shulman, born in Berdichev, Russia, was taken to the United States in 1910. He received rabbinic ordination at Hebrew Union College in 1927. After serving congregations in Wheeling, West Virginia (1927–31), and Glencoe, Illinois (1931–41), Shulman led a Riverdale, New York congregation (1947–68). From 1943 to 1946 he was a chaplain in the U.S. Navy. Shulman was an active Zionist and interested himself in the Urban League and other public causes.

A prolific writer, his books include Problems of the Jews in the Contemporary World (1934), Europe’s Conscience in Decline (1939), and What it Means to be a Jew (1960). All are preoccupied with the regression of morality in the 20th century, as evidenced by Nazism and the spread of antisemitism, and by the emphasis in international relations on political expediency rather than considerations of morality.

[Sefton D. Temkin]

SHULMAN, HARRY (1903–1955), U.S. lawyer and dean of Yale Law School. Shulman was born in Kruglove, Russia, and taken to the U.S. in 1912. From 1929 to 1930 he served as law clerk to Justice *Brandeis. He was special counsel to the U.S. Railroad Retirement Board during 1934–36. Shulman became professor of law at Yale in 1940, and shortly before his death was named dean of the Yale Law School. Along with his academic career, Shulman was reporter for the American Law Institute’s Restatement of the Law of Torts (1937–39), and a member of the U.S. Attorney General’s Committee on Administrative Procedure (1941–42), actively contributing to the modernization and reform of the administrative process in the U.S. Shulman’s most important professional accomplishment was his pioneering work as a labor arbitrator, and particularly his significant years of service (1943–55) as the umpire charged with the final interpretation of the labor contract between the Ford Motor Co. and the United Automobile Workers, C.I.O. In this role he established innovative processes for peaceful and legal solutions to labor-management conflicts and collective bargaining. Shulman believed that the labor arbitrator should not merely take an objective position in the construction of the terms of a labor contract but rather had to become an integral part of the collective bargaining process.

His Holmes Lecture at Harvard Law School (1955), “Reason, Contract and Law in Labor Relations,” was evaluated as a major contribution to the institutional development of collective bargaining. Shulman was a specialist in torts, federal jurisdiction, administrative law, and trade regulations, as well as in labor law. He wrote, with F. Frankfurter, Cases on Federal Jurisdiction and Procedure (1937); with F. James, Jr., Cases on Torts (1942); and with N.W. Chamberlain, Cases on Labor Relations (1949).

[Julius J. Marcke]

SHULMAN, MAX (1919–1988), U.S. author and humorist. Shulman was known for his bright style and witty situations, and for his Dobie Gillis character. He was especially popular among college students in the 1950s and early 1960s. He also wrote for motion pictures. Among his works were Barefoot Boy With Cheek (1943), Sleep Till Noon (1949), and Rally Round the Flag, Boys (1957).

SHULMAN, MILTON (1913–2004), British drama critic. Born in Toronto, Canada, Milton Shulman became a lawyer and served as an officer in World War II. After the war he became drama critic of the London Evening Standard, keeping the position for 38 years (1953–91), longer than virtually anyone else in Fleet Street history, and was one of Britain’s most influential theater critics. He was also the paper’s literary editor. Shulman stated that he had attended 5,000 premieres in the course of his career but had never seen a truly great play, and described John Osborne’s Look Back in Anger as “self-pitying snivel.” He wrote the well-known Defeat in the West: The Story of the German Defeat in World War Two (1947) and an autobiography, Marilyn, Hitler and Me (1999). His daughter ALEXANDRA SHULMAN was editor of London Vogue from 1992.

[William D. Rubinstein (2nd ed.)]

SHULMAN, VICTOR (pseudonym of Israel Hayyim Shadosky; 1876–1951), organizer and journalist of the *Bund. Born near Kovno, Lithuania, Shulman became in his youth a member of a mixed Zionist and Socialist youth circle in Kovno, of which *Weiter (Devenishsky), and Shemuel *Tcher-Nowitz were also members. In 1899 he joined the Bund and became active in Gomel, helping to affiliate the local social-democratic organization with the Bund. In Gomel he published the periodical Kamf, to which J.H. *Brenner was a contributor. Between 1901 and 1905 he was imprisoned and sent to Siberia. He helped organize the escape of exiled revo-
volutionaries, among them *Trotsky and Dzerzhinski. Between 1905 and 1909 he was alternately active in Vilna and Warsaw, attended the seventh convention of the Bund (Lemberg, 1906), wrote for the press, and was once more imprisoned and exiled. At the end of 1909 he escaped to Switzerland, where he participated in Bund activities. From 1914 he lived in Warsaw, headed the trade unions which had begun to function legally, and acted as secretary of the weekly Lebns Fragen. In independent Poland and throughout the early period of the Nazi occupation, he worked on the Bund daily Folksaytung. In 1941 he reached New York via Lithuania with a group of Bund activists. There he engaged in writing and editing, mainly a history of the Jewish press, particularly the Bundist. His works include: Bletlehkh Gesikhkhene fun der Yidisher Arbeiter Bavegung (1929); and, on Jews in Poland during World War I, Yidn in Poyln (1946), 733–890.

[Moshe Mishkinsky]

[ Vivian Felsen (2nd ed.)]

SHULSINGER, BEZALEL (Bezalel Odesser; c. 1779–c. 1873), hazzan. Born in Uman, Russia, Shulsinger received no formal musical education. Nothing is known about him before 1826 when he was already a renowned hazzan and held a post in Odessa. From 1860 he lived in Jerusalem. Shulsinger’s compositions, characterized by their lyrical simplicity and easy-moving grace, were taken down by members of his choir, many of whom later became famous hazzanim. Thus Shulsinger’s influence on synagogue music was far-reaching, and many of his compositions achieved widespread popularity. One of them is “Attah Noten Yad,” which he is supposed to have sung to his pupils upon his departure for the Holy Land.

[David M.L. Olivestone]

SHultz, Samuel (1865–1917), Canadian jurist. Born in Victoria, British Columbia (B.C.), Shultz was the grandson of Judah P. Davies, one of the city’s most important Jewish pioneers. He received a B.A. from the University of Toronto in 1888 and went on to earn a law degree. Returning to British Columbia in 1893, Shultz established a legal practice in Victoria and was for a time the vice president of Temple Emanuel. An avid sportsman, journalist, and musician, he was also a charter member of the Native Sons of B.C. and the Connaught Masonic Order. Shultz relocated to Vancouver in 1902, where he married in 1904, and in 1909–10 served a term as an alderman for North Vancouver and three terms as the president of the North Vancouver Conservative Association. In 1914 he was named to the Vancouver County Court, becoming the first Jewish judge in Canada and earning a high reputation for fairness and knowledge of the law. As an outspoken advocate of Jewish rights and a frequent contributor to discussions of public affairs and religious understanding, Shultz was also the founding president of the Vancouver B’nai Brith lodge and the Vancouver Jewish community’s first delegate to the national Zionist convention in 1917, where he was named to the board. He died suddenly several months later at the age of 52.

[Barbara Schober (2nd ed.)]

Shulyvass, Moses Avigdor (1909–1988), scholar and educator. Born in Plonsk, Poland, Shulyvass studied in Berlin. He lived in Erez Israel from 1938 to 1948 and then immigrated to the United States, where he eventually became professor of Jewish history at Spertus College of Jewish Studies in Chicago.

His publications in many languages include historical studies on Italian Jewry. Of special interest are his books Roma ve-Yerushalayim (“Rome and Jerusalem,” 1945); Hayei ha-Yehudim be-Italyah bi-Tekufat ha-Renaissance (“Jewish Life in Renaissance Italy,” 1955); and his biographical sketch of Samuel David *Luzzatto with documentary supporting material, Pirkei Hayyim (1951). He also published two volumes of essays on various aspects of Jewish history, Bi-Zevat ha-Dorot (“In the Grip of Generations,” 1960) and Between the Rhine and Bosphorus (1964) as well as Die Juden in Wuerzburg wahrend des Mittelalters (1934). He also wrote From East to West (1971), Jewish Culture in Eastern Europe (1975), and The History of the Jewish People (1982).

[ Eising Silberschlag]

Shum, an abbreviation used in Jewish sources for the closely allied Rhine communities of *Speyer, *Worms, and *Mainz, based on the initial letters of the Hebrew names of the cities (שלום ורמש, ושמע). Although there are legendary accounts of Jewish communities in the three cities in Roman times, it is probable that the first organized community of the three was founded in Mainz in the early tenth century. Settled communities followed soon after in Worms and later in Speyer; by
the end of the 11th century each was well established. The municipal authorities were well disposed to the Jews, granting them economic rights and a high degree of autonomy. With the exception of a temporary expulsion from Mainz in 1012 and another disturbance there in 1084, Jews and gentiles lived largely at peace with one another. The Jews fulfilled a valuable role as traders and entrepreneurs, and maintained a high standard of living. Jewish cultural and religious life flowered first in Mainz, which soon became a leading Torah center. The existence of many small principalities combined with the absence of a central authority (unlike Babylonian influence on Spain) stimulated the growth of localism and jealous independence among the Rhine communities. R. Gershom b. Judah Melor ha-Golah actively worked toward standardization and federation; his civil takkanot in particular are considered by L. Finkelstein to be of a constitutional nature. Scholars disagree about the source of some takkanot traditionally ascribed to R. Gershom and raise doubts as to whether he did indeed preside over gatherings of Jewish leaders; nevertheless, he undoubtedly laid the foundation for unified action among the three communities as well as other German communities associated with them.

In the generation that followed, the leadership of the Rhine communities passed to France, most specifically to *Rashi. However, while Rashi’s influence was great in the Rhine cities where he had once studied, there is no evidence to support the view that he was the initiator of synodal legislation. During the course of the First Crusade (1096) there was coordinated action among the communities, in cooperation with their coreligionists in France, that sought in vain to avert the catastrophe. All of the Rhine communities suffered terribly at the hands of the crusaders but Mainz and Worms were particularly hard hit. The rebuilding period that followed re-established both the economic prosperity of the communities and their standing as centers of learning. Effective joint action largely prevented further destruction in Germany during the Second Crusade (1146). In a *synod summoned in *Troyes in 1150 by Jacob b. Meir *Tam in order to consider the effects of the Second Crusade, the Rhine communities were ably represented by *Eliezer b. Nathan of Mainz and *Eliezer b. Samson of Cologne. The large number of participants at the conference attest the degree that the Rhine communities and those of France were prepared to coordinate their efforts, a development hastened, no doubt, by the tragedy and the challenge of the Crusades. Though the one ordinance that has been preserved refers to Jewish appeals to gentle courts and gentle officials (both problems of long standing), it is possible that other ordinances, now lost, were of more far-reaching practical importance. Another synod of a less representative nature was held in Troyes around 1160 without German representation. It is probable that the German communities held similar local conferences although there are few references to them in the sources. However, with the death of Jacob Tam and the deterioration of French Jewry at the end of the 12th and the beginning of the 13th century, leadership increasingly passed to Germany and particularly to Speyer, Worms, and Mainz. As early as 1196, in the wake of the Third Crusade, a synod was convoked at one of the Shum cities under the presidency of David b. Kalonymus. One of the vexing problems that Jewish law had long struggled with was the question of yibbum and halizah (see “Levirate Marriage); the compromise that was reached was known thereafter in Jewish law as “Takkanot Shum in regard to halizah." A new generation of creative scholars had arisen, including *Eleazar b. Judah of Worms (d. c. 1230), author of Sefer Rokeah, Eliezer b. Joel ha-Levi, and *Simhah b. Samuel of Speyer. They were to play a critical role in the three synods that followed at the beginning of the 13th century in which the allied Shum cities established their leadership positions within Ashkenazi Jewry; the decisions that were reached were to have a far-reaching effect on Jewish *autonomy during the centuries that followed.

The first of the synods, held some time before 1220, enacted a series of communal regulations known as Takkanot Shum. Among many other stipulations these provided that: Any Jew unjustly compelled to contribute to the treasury of a king or noble shall be aided by the rest of the community; no one shall divorce his wife without the consent of the three communities; books left in trust may not be seized by the community for taxes; and no Jew may accept religious office from gentle authorities. Because of their scope, the enactments had a major effect on the functioning of the Jewish community. A second synod held in Mainz in 1220 reenacted certain provisions and passed over others. Finally a third synod that took place in Speyer in 1223 synthesized the work of the prior two. Some years later another gathering in Speyer in 1250 provided that neither rabbi nor community could pronounce a *herem without the consent of the other. The pivotal role played by the Shum cities continued into the 14th century, and in fact a synodal conference was held in Mainz in 1306 to mobilize resources for the expelled French Jews, and another headed some time later by Hayyim b. Isaac Or *Zaru’a. However, the deteriorating position of the Jews in the Shum cities, particularly in the wake of the *Black Death persecutions of 1348/49, meant that the three together could no longer undertake the crucial responsibilities for western Jewry they had previously fulfilled. Nevertheless, each of the cities continued to make its unique contribution to Jewish life up to the period of the Holocaust.

[Alexander Shapiro and B. Mordechai Ansbacher]
SHUMIATCHER-HIRSCHBEIN, ESTHER (1899–1985), Yiddish poet. Born in Gomel, Belorussia, and emigrating with her family to Calgary, Canada, in 1911, she married Peretz “Hirschbein. Her poetry and two children’s plays in verse reflect her many travels as well as political, natural, erotic, and (following the birth of her son, Omus, in 1934) maternal themes. After her husband’s death she wrote poems of grief and mourning. Her poetry appeared in major Yiddish periodicals; her books were In Tol (“In the Valley,” 1920); Pasn Likht (“Streaks of Light,” 1925); In Shoen fun Libshaft (“In the Hours of Love,” 1930); Ale Tog (“Every Day,” 1939); Lider (“Poems,” 1956). Although she continued to lecture and write, she published little from 1956 until her death, and was largely dependent on her family for support. Her works of 1934 and later were more highly regarded than her earlier writings.

SHUNEM (Heb. שעמון), city in the Jezreel Valley, at the base of the hill of Moreh. The first mention of it occurs in the list of cities conquered by Thutmose III (no. 38; 15th century B.C.E.). In the Tell el-Amarna period (14th century B.C.E.), the city was destroyed by Labaia, the king of Shechem, and its fields were cultivated by the king of Meggido, using forced labor (el-Amarna Letter 248a, 250). In the Bible, it is described as a city in the territory of Issachar, together with Jezreel and Chesulloth (Josh. 19:18). The Philistines camped there before going to battle against Saul in Gilboa (1 Sam. 28:4). Shunem was the birthplace of Abishag, David’s companion in his old age (1 Kings 1:13, 15; cf. Song 7:1). In 925 B.C.E. Shishak overran the city and it is mentioned in his list of conquered cities between Beth-Shean and Taanach (no. 28).

In the time of Eusebius, who places Shunem 5 mi. (8 km.) S. of Mt. Tabor (Onom. 158:31), the “house of Elisha” was shown to pilgrims there. In Crusader times, it was a benefice of the abbey of Mt. Tabor. The Jerusalem Talmud mentions R. Josta of Shunem, who lived in c. 400 C.E. (Shek. 11, 46b). The biblical site of Shunem is identified with the Muslim Arab village of Sulim at the foot of the hill of Moreh, 3 mi. (5 km.) southeast of Afuleh. Surface pottery on the ancient mound, situated northeast of the village, dates from the Middle Bronze Age to the Arab period. In 1968 the village had 725 inhabitants, increasing to 2,240 in 2002. Field crops and fruit orchards have been the main branches of farming.

[Michael Avi-Yonah]

SHURER, HAIM (1895–1968), Hebrew journalist and editor. Born in Podalia, Shurer immigrated to Palestine in 1913. He worked in Galilee and Judea and was also a member of “Nahalal. From 1922 he was on the editorial board of “Ha-Po’el ha-Za’ir and then became a member of the secretariat of the movement. Joining the editorial board of “Davar” in 1936, Shurer was editor in chief of the newspaper (1953–66), and his articles appeared in the press over several decades.

His books include: Yosef Aharonowitz (1938, 1962); Ha-Hayyal (1946); Im Nesi Yisrael (1951); Ba-Alyakh ha-Sheniyyah (1952); and Kal va-Ḥomer (1952). He edited: Besarayah (1941); Ha-Pogrom be-Kishinev (with D. Vinitzki, 1963); and with E. Shoḥat, Pirkei ha-Po‘el ha-Za‘ir (1935–39). [Getzel Kressel]

SHUSHAN (Heb. שושן or שושנה, Susa; “Palace of Shushan”); Akk. Šu-ša-an, Šu-(ú)-ši; Elamitic, Šu-šu-un; Gr. Σοῦθα), capital of “Elam and one of the capitals of the Persian Empire, present-day Qal’a-e-Shush, Iran, on the Shaur River (Elamitic, Ulai; Gr. Eululaios). The mound of Shushan contains an acropolis (450 × 250 m., 38 m. high), and a “royal city” with a keep (375–500 acres). Excavations on the site were begun by W.K. Loftus and W.F. Williams in 1851–52, continued by M. Dieulafoy (1884–86), and resumed in 1897 by J. de Morgan, followed by R. de Mequenem and R. Ghirshman, on behalf of the French “mission” to Persia. The earliest remains belong to the Neolithic period of the fourth millennium; eight pottery styles were found there, the finest being Susa A., characterized by representations of stylized animals (Susa beaker, Louvre). About 3000 B.C.E., Shushan became the capital of Elam. Situated on the fringe of Mesopotamia, it was conquered by the Akkadians (when Puzur-Šinshuballānu was governor of Elam under Naram-Sin, 2270–2234 B.C.E.) and then by Ur III (2106–2016 B.C.E.). Later the rulers of Elam captured Ur and exiled the last king Ibbi-Sin. In the Old Babylonian period the “grand regents” of Shushan paved the way to Elamite political power; in this period the Old Babylonian dialect of Shushan developed which influenced the Akkadian language. Legal documents of this period from Shushan illustrate the importance of Elamite-Akkadian legal institutions.

From 1350 to 1150 B.C.E. Shushan was the capital of a powerful Elamite kingdom; its kings plundered the cities of Mesopotamia and carried off the monuments of their kings (obelisk and statue of Manishtusu, victory stele of Naram-Sin, dioritic statue of Manishtusu, victory stele of Narām-Sin,Palace of Shushan). The temples of the god Inshushinak and Elamite art flourished during this period under the kings Untash-Gal (1234–1227), Shutruk-nahhunte (1207–1171), and Shalik-Ins-hishinak (1165–1151). The temples of the god Inshushinak and the goddess Ninursag were decorated with reliefs and statues of lions of glazed clay. The bronzes statue of Queen Napi-asu, the wife of Untash-Huban (1234–1227 B.C.E.), is a masterpiece of Elamite art. The Elamites carried off the statue of Marduk from Babylon, a sacrilege avenged by Nebuchadnezzar I (1146–1123), who defeated them. Shushan was destroyed in 645 B.C.E. by the Assyrian king Ashurbanipal; the capture is represented on a relief at Nineveh. The city is shown walled,
standing among palm groves and farms, with a fort on the banks of the adjoining river.

Shushan was captured by Cyrus of Persia, and was selected by Darius I as his winter residence and the starting point of the “royal road” to “Sardis. A building inscription of Darius lists the materials from which his palace in Shushan was built, including cedars from the Lebanon, and of the workmen, who included Ionians and Sardians. Darius’ palace was built on the part of the mound facing the acropolis; it was destroyed by fire under Artaxerxes I (464–425 B.C.E.) and rebuilt by Artaxerxes II Mnemon (404–359 B.C.E.). The ruins of this palace include a dwelling house with three courts and an elaborate gate, as well as a throne hall (apadana) with six rows of columns. From these ruins the excavators removed the double bull capitals and the “Frieze of the Archers” in glazed brick, representing the Persian and Medean bodyguard of Darius. The biblical references (Dan. 8:2; cf. 11:45 where the apadana is mentioned; Neh. 1:1 and above all the Scroll of *Esther) refer to Shushan as the residence of the kings of Persia.

The city was conquered by *Alexander in 330 B.C.E.; in 324 he arranged in Shushan a mass marriage of Macedonians with Asiatic women, to symbolize the concord of the peoples. Under the Seleucids and the Parthians, Shushan was a Greek polis (Seleukeia on the Eululaiois), complete with archon, boule, and demos. Greek inscriptions and poems to Apollo and the goddess Nanaia extend back to the first century C.E. Shapur I (309–379 C.E.), the Sassanian king, destroyed Shushan because of a (Christian?) revolt and rebuilt it as Erānshār-Shāpur. According to an old Pahlavi chronicle, Susa, like “Shushar,” was reestablished by the Jewish wife of the Sassanian ruler Yazdegerd I (399–420).

The city resisted the Arabs in 638 for a long time. It became deserted under Arab rule, although some people continued to live around the Nabi Danyal ("[Tomb of the] Prophet Daniel"), below the mound. This tomb, which was on the left side of the river where the Jewish quarter was situated, had caused so much jealousy among the Muslim inhabitants that in the time of the Seljuk sultan Sanjar (12th century) it was arranged, according to a Muslim source, that the coffin of Daniel be suspended from the bridge.

*Benjamin of Tudela (c. 1167) estimated the Jewish population at about 7,000 and mentioned 14 synagogues in the vicinity of the sepulcher of Daniel. The Jewish traveler *Pethaihiah of Regensburg, however, found there about 10 years later only two Jews, a dyer and a weaver. In the early 19th century several thousand Jews lived in the vicinity. The city of Shushan was depicted on the east gate of the Jerusalem Temple, the so-called “Shushan Gate” (Mid. 1:3). The city is mentioned in Daniel 8:2. According to the Talmud, the eastern gate of the Holy Temple in Jerusalem was called Shusan (Meg. 2; see also Kel. 17:9; Mid. 1:3).

SHUSTER, JOE (1914–1992), U.S. cartoonist. Joseph Shuster was born in Toronto, Ontario, Canada, the son of Jewish immigrants from Rotterdam and Kiev. As a boy, he worked at the Toronto Star but liked to sketch as a hobby. The fantasy world of the newspaper’s color comics had a strong impact on him. The family moved to Cleveland, Ohio, when he was 10, and at 18 he met Jerry *Siegel, with whom he was to create Superman, the most famous and fabulous fictional superhero of the 20th century. When Superman first appeared, in 1938, its hero, mild-mannered Clark Kent, worked for The Daily Star, named by Shuster after his old employer in Toronto. When the comic strip received international distribution, the company permanently changed the newspaper’s name to The Daily Planet. Superman’s popularity helped establish comic books as a format and spawned a genre of costumed superheroes, from Spiderman to Wonder Woman to Captain Marvel. Superman became an industry unto himself. Faster than a speeding bullet, as he was described on the radio, the Man of Steel appeared in newspaper comics, animated cartoons, movie-theater serials, a television series, a Broadway musical, a novel, feature films, and a stream of franchised goods from lunch boxes and toys to bubble gum. In the 1970s alone, Superman sales exceeded $1 billion. Superman was reared as a normal American boy and grew up to become Clark Kent, but when danger loomed, he became the crusader for “Truth, Justice, and the American Way.” He donned his glasses, striped to a blue bodysuit and red cape, and flew off, using X-ray vision and other powers to thwart the latest evil menace or global disaster. But Siegel and Shuster did not share in the money machine, having signed away their rights in 1938 for $130. After a series of bitter legal battles, both creators became destitute and even sold their old comic books as collectors’ items worth thousands of dollars apiece. Shuster, partly blind and unemployed, lived in a very modest apartment in Queens, N.Y. Finally, Siegel and Shuster were granted $35,000 a year from the publisher of Superman, DC Comics, for the rest of their lives and were guaranteed that all comics, TV episodes, films, and other Superman references would state that the character was “created by Jerome Siegel and Joseph Shuster.”

SHUVAL, JUDITH (née Tannenbaum; 1926– ), sociologist. Shuval was born in New York. She graduated from Hunter College, New York, where she was elected to Phi Beta Kappa, and received her doctorate in sociology from Harvard University in 1955. She also received the degree of Bachelor of Hebrew Letters from the Seminary College of Jewish Studies of the Jewish Theological Seminary, New York, in 1947. Emigrating to Israel in 1949, she was appointed project director and senior research associate at the Israel Institute of Applied Social Research, where she directed studies in the fields of housing, immigrant adjustment, medical sociology, ethnic relations, occupational sociology, urban settlement, and sociology of nursing. From 1955 to 1956 she was UNESCO advisor in social research at the Institute, on immigrant adjustment. From 1955 she was a member of the Department of Sociology at the Hebrew University of Jerusalem. In 1972 she was appointed associate professor in sociology at the Hebrew University and in 1979 professor of medical sociology. In 1991 she was appointed the Louis and Pearl Rose Chair in Medical Sociology at the Hebrew University. Subsequently she became the director of the medical sociology program. She was a fellow of the American Sociological Association and treasurer of the Israel Sociological Society, in which she served as a chairwoman. She contributed extensively to scientific journals. Her major fields of interest were health and migration, ethnic relations, and sociology of health.

Among her major works are Immigrants on the Threshold (1963), a sociological study of immigration to Israel during the first years of the state, Social Functions of Medical Practice (with A. Antonovsky and A.M. Davies, 1970), The Dynamics of Transition: Entering Medicine (1980), Newcomers and Employees (1983), Social Dimensions of Health: The Israeli Experience (1992), Immigrant Physicians: Former Soviet Doctors in Israel, Canada and the United States (with J.H. Bernstein, 1997), Immigration to Israel: Sociological Perspectives (edited with E. Leshem, 1998), and Social Structure and Health in Israel (with O. Anson, 2000). She was awarded the Israel Prize for social sciences in 1965. In 1981 she was awarded the Israel Gerontological Society prize for research in social gerontology.

[Shaked Gilboa (2nd ed.)]

SHVADRON, SHALOM MORDECAI BEN MOSES (1835–1911), Galician rabbi. He was born in Zolochev. Assiduous in his studies and possessing a phenomenal memory, he was, at the age of 16, familiar with the whole Talmud. He was ordained by J.S. Nathanson and Moses Kluger, who did not usually ordain rabbis. After his marriage, he engaged in business, mainly in the timber trade, but in 1866 lost his fortune. Although offered important positions, he steadfastly refused to accept them, contenting himself with the rabbinate of small communities. The first was Potok, but finally he became rabbi of Brezen and was henceforth known as the “Rabbi of Brezen” or the “Maharsham” (the initials of Morenu ha-Rav Shalom Mordecai) from the title of his volume of responsa. His fame was much greater than the positions he held. He exercised firm control and the civil authorities used to transfer to him cases in which Jews were involved. He was a modest and friendly man. Consulted by some of the greatest scholars, he always used to answer his questioners without delay. Shvadron is best known for his responsa, four volumes of which appeared during his lifetime and three posthumously. These were accepted as authoritative and as essential for dealing with the practical problems of the time. They are distinguished by the painstaking care and clarity with which he analyzed the problem and quoted all the talmudic sources and commentaries, finally reaching a definite decision, by the simplicity of his style, by his anxiety to adduce every consideration that would enable him to reach a lenient decision while keeping strictly to the
halakhah, and by his readiness to accept responsibility for his decisions.

Among his other works are *Gillui Daat* on the Shulḥan Arukh, *Yoreh Deḥah* (2 vols., 1913–26), and *Orah Hayyim* (1920); *Daat Torah* (1891) on the laws of shehitah; *Darkhei Shalom* (1929), a methodology of the Talmud and posekim; *Hagghahot Maharsham* (1932) on the Talmud; *Mishpat Shalom* (1871) on the Shulḥan Arukh *Hoshen Mishpat*; and *Tekhelet Mordēkhāi* on the Pentateuch (1913).

[Mordechai Hacohen]

**SHWED, GIL** (1968– ), founder, chairman, and CEO of Check Point Software Technologies. Shwed is considered the prodigy of Israeli high-tech. He began his programming career at the age of 12 in a company that dealt with artificial intelligence. Later he took courses at the Hebrew University of Jerusalem while still in high school. In the army he served in an Intelligence unit responsible for electronic data gathering. In 1993, at the age of 25, he developed, together with Check Point’s two co-founders, the firewall, the company’s well-known security software product. In the following years, he led Check Point to global leadership in both the firewall and VPN markets, making Check Point a giant in the Internet security industry. Shwed has received numerous prizes and honors for his individual achievements and industrial contributions, including the Academy of Achievement’s Golden Plate Award for his innovative contribution to business and technology in 2002; the World Economic Forum’s Global Leader of Tomorrow Award for his commitment to public affairs and leadership in areas beyond immediate professional interests in 2003; and an honorary doctor of science from Israel’s Technion in 2004.

[Shaked Gilboa (2nd ed.)]

**SIAULIAI** (Ger. *Schaulen*; Rus. *Shavlī*; Yid. *Shavl*), city in N. Lithuania. The Jewish settlement dates from the 17th century; in 1701 Jews received authorization to erect a synagogue. Trade with Germany and the establishment of a railway line fostered growth and economic prosperity, and by 1847 there were 2,565 Jews in the town. They built large factories, among them the tannery of Ḥayyim Frenkl (1879). In 1902 Jews numbered 9,847 (75% of the population); by 1914 this number had increased to 12,000. In 1915 the majority of Jews were, however, exiled to the interior of Russia. In independent Lithuania, Siauliai was the second largest city, and its Jewish community, numbering 8,000 in 1939, the second largest in the country. The economic and social influence of the Jews was widespread; they formed the majority of manufacturers of leather products – the shoe factory, Batas, was Jewish-owned – and were involved in the iron and chemical industries, as well as forming a large part of the force of clerks, laborers, and craftsmen of the town. The position of vice mayor of the town was held by a Jew. The Jewish community was outstanding for its organizational achievements and for its cultural and social institutions. The community supported a religious secondary school (Yavneh), a Hebrew secondary school, an elementary school, and a kindergarten, as well as several Yiddish schools. There were 15 synagogues, a yeshivah, and two libraries. Prominent scholars officiated there, among them Isaac Eissik Haver (*‘Wildmann*) and Joseph Zechariah Stern. The kabbalist Solomon b. Hayyim *Eliashov* was a resident of Siauliai. Before the arrival of the Germans in World War II, several hundred Jews had fled to Russia. Of those who chose to remain, several thousand were massacred by Lithuanians as well as Germans (mainly in the forests of Kuzhi) during the war. About 5,000 Jews (including 1,500 from surrounding areas) were interned in a ghetto. There were frequent *Aktionen* until July 1944, when the retreating Germans transferred those remaining alive to the concentration camps of Stutthof and Dachau, in Germany. Of the total number of Jews interned only a few hundred managed by various means to escape death. The remaining synagogue was closed by the authorities in 1960; the Jewish cemetery was destroyed and Jews were allowed to remove the bones of the deceased to the Vilna cemetery. In the late 1960s the Jewish population was estimated at about 4,000; in the 1990s Siauliai had a small Jewish community.

[Dov Levin]

**SIBERIA** (Rus. *Sibir*), Asiatic part of the Russian Federation, extending from the Urals in the west to the Pacific in the east. The first Jews went to Siberia from Lithuanian towns captured by the Russians in the Russo-Polish war (1632–34); they were exiled there together with other prisoners. In 1659 a number of Jewish residents in the “German quarter” of Moscow were exiled to Siberia. At the beginning of the 19th century Jews were among the convicts sent to Siberia for settlement or hard labor. The latter founded the first Jewish communities there, e.g., in *Omsk*; *Tomsk*, Tobolsk, Kuibyshev (Kainsk) in western Siberia, and Kansk and Nizhnedinsk in eastern Siberia.

Since Siberia was outside the “Pale of Settlement,” convicts continued to constitute the main Jewish element settling there throughout the 19th century. Due to the scarcity of Jewish women in Siberia at the beginning of the 19th century, Jews were allowed in 1817 to buy Kalmyk women, to make proselytes of them and marry them. In 1826 Jews were forbidden to settle in the border district of Siberia between the area of Russian settlement and that of the natives; in 1827 the husbands of Jewish women exiled to Siberia were forbidden to join them; and in 1836 Jewish women joining their exiled husbands were forbidden to take their male children with them. In 1834 Jews whose sentences had expired, as well as members of their families, were obliged to apply for special permission from the minister of finance to join local merchant guilds, in order to prevent “an undue multiplication of
Jews among the merchant class, and consequent damage to the native population.

In 1836 the Russian government, within the framework of its program to increase the number of Jews engaged in agricultural work, set aside 15,154 desyats (409,138 acres) of land in western Siberia for Jewish agricultural settlement. In January 1837 Nicholas I ordered the curtailment of Jewish settlement in Siberia: by this time, however, several hundred Jews had already arrived to participate in the project. On May 15, 1837, ordinances were issued “to prevent the immigration of Jews to Siberia, and to decrease the number of Jews settled there”; these decrees specified, inter alia, that only Jewish convicts aged 40 and over could be exiled to Siberia, and that even such settlers should be allowed in the outlying districts of the country only (in the Yakutsk district and on the further side of the Baikal). The ordinances further required that the sons of exiles (i.e., those under 18) be handed over as “Cantonists, as well as sons of exiles who had completed their terms of sentence; their descendants were also to be handed over as Cantonists, or to be removed to the Pale of Settlement before reaching the age of 16.

In 1857, under Czar Alexander II, Jews in Siberia were permitted to join merchant guilds on the basis of the existing general instructions regarding this matter, and in 1860 the Siberian Jewish children were permitted to remain with their parents. The same proclamation, however, forbade them to settle within 100 versts of the borders with neighboring countries. When after 1859 certain classes of Russian Jews were permitted to settle outside the Pale of Settlement, some of them found their way to Siberia. During this period the Jewish communities of Siberia consolidated and the characteristics of the typical “Siberian Jew” emerged: similar in dress and language to his Russian neighbor, ignorant in Jewish learning, and negligent of the *mitzvot; he nevertheless possessed warm Jewish sentiments and was attached to the Jewish people and religion. The last quarter of the 19th century saw the emergence of an intelligentsia among Siberian Jews, a few of whose members were political exiles. Some of the latter devoted themselves to investigating the customs and languages of the indigenous peoples, e.g., V.G. *Bogoraz, V. *Jochelson, L. Sternberg, M. Krol, S. Chudnovsky, N. Geker, and I. *Shklovski.

Jews of Siberia played a prominent role in the economic development of the area, especially in the fur trade. Some Jews, like the *Guenzburg family of St. Petersburg, participated in the development of Siberian gold mining. In 1897 there were 34,477 Jews in Siberia (0.6% of the total population): 8,239 in the region of *Irkutsk, 7,696 in the region of Tomsk, 7,550 in the Trans-Baikal region, 5,730 in the Yenisei region, and 2,453 in the region of Tobolsk. Some 2,689 Siberian Jews (8.25%) were then engaged in agriculture, 9,161 (28.10%) in crafts and industry, 12,362 (37.92%) in trade, 1,906 (5.85%) in transport, and 1,051 (3.22%) in private and public clerical work and the liberal professions. In the 1890s the entry of Jews into Siberia and the rights of the Jews living there were further restricted. The revised edition of the passport rules published in 1890 proclaimed a total ban on Jewish immigration to Siberia, save for those who were sentenced to exile or hard labor there. This ban became the fundamental rule regarding Jewish entry into Siberia and served as a basis for further prohibitions. In 1891 it was interpreted as including also those Jews who had the right to settle outside the Pale, and this interpretation was finally authorized in 1899; at the same time, however, it was established that the prohibition did not extend to Jews who were already living in Siberia.

From this time Siberia was closed to all Jews, except those sentenced to hard labor or exile. In 1897 the same ban served as a basis for a new law prohibiting Siberian Jews (except for the descendants of soldiers who had served in the army during the reign of Nicholas I) from residing in any other place but that of their registration as permanent residents. This order spelled deportation for thousands of Jewish families who were not living in the place where they were registered; the practical difficulties involved in the transfer of thousands of families from place to place prevented its being carried out. Thousands of Siberian Jews, however, were then left completely at the mercy of the markedly hostile local administration, with the threat of deportation constantly hanging over their heads.

On the other hand, the attitude of the Christian population in general toward the Jews was sympathetic, as may be gauged, among other things, from the election of the Jewish exile Avigdor (Victor) *Mandelberg to the second *Duma (1907). During World War I thousands of Jewish refugees from the front lines reached Siberia and exercised a considerable influence on Jewish community life there: The number of Jewish educational institutions grew, and political parties (e.g., the *Bund, *Zionist Socialists, *Po’alei Zion) were established. After the 1917 Revolution a congress of Jewish community representatives from all Siberia and the Urals was held in Irkutsk (January 1919) and a national council of Siberian Jews was elected. Representatives of the Zionist movement, which had spread widely in Siberia in the first years of the 20th century and greatly intensified its activities after the revolution, exercised a decisive influence at the congress. Thus, the congress resolved, inter alia, “that the work of building Erez Israel will be included among the activities of the Jewish communities in Siberia and the Urals.” The national council was headed by M. *Novomeyski, then officiating as the chairman of the Zionist Federation.

**Soviet Rule**

With the establishment of Soviet rule in Siberia, however, Jewish communal, cultural, and national institutions were gradually destroyed. Many wealthy and middle-class Jews left, most of them for China and a few for Palestine. The majority of the Jewish refugees living in Siberia returned to their homes in Poland and Lithuania. In 1926 there were only 32,750 Jews: 9,083 in the region of Irkutsk, 5,505 in the region of Tomsk, 4,189 in the region of Omsk, 3,040 in the region of Krasnoyarsk, and 2,301 in the region of Novosibirsk. Some 28,972 Siberian Jews lived in towns and 5,778 in rural districts. In 1939 the number
of Jews rose to 63,844 persons, most of them in Khabarovsk Krai (district) – 22,473, including 13,291 of the Jewish Autonomous region – Biobibdzhän; Novosibirsk district (11,191); and Irkutsk district (8,504). Except in the Jewish Autonomous Region where the Jews constituted 18.57% of the population, the Jews were a small percentage of the total population, only 0.6% and 2%. Most Jews lived in the capitals of the districts. The Soviet rulers exiled thousands of Zionists from European Russia to the most outlying parts of Siberia. Among the exiles was the poet Hayyim *Lenski, who described life in the concentration camps and the scenery of Siberia in his poetry. In 1928 the Soviet government assigned an area in eastern Siberia to Jewish settlement, and in 1934 it was declared an Autonomous Jewish Region (see *Birobidzhan). During World War II large numbers of Jewish refugees from the areas occupied by the Germans reached Siberia, and some of them remained there after the war ended. According to the 1959 census there were 12,429 Jews in the Novosibirsk oblast, 9,458 in the Omsk oblast, 10,313 in the Irkutsk oblast, 2,691 in the Buryat-Mongol republic, 8,494 in the territory of Khabarovsk, and 14,269 in Biobibdzhän. The census, which did not cover the whole of Siberia, registered a total of 57,654 Jews (i.e., those declaring themselves as Jews). Some 52,266 (92.4%) lived in towns; 9,970 (17.3%) declared Yiddish as their mother tongue (excluding Biobibdzhän – only 4,373, or 10%). In Novosibirsk, which became the capital of Siberia, the Jewish population (with a synagogue and an old Jewish cemetery) numbered in the late 1960s about 25,10,000, consisting of a small nucleus of Sibe-

SIBIU (Hung. Nagyszeben; Ger. Hermannstadt), capital of Sibiu province, Transylvania, Romania; until the end of World War I part of Hungary. By the end of the 15th century some Jews had commercial or other connections with Sibiu. Permanent Jewish settlement began there after the restrictions in Hungary on Jewish residence were abolished in 1848; however, there is also information about Jews trying to establish themselves in Sibiu from the middle of the 17th century. There were 478 Jews living in Sibiu (about 3% of the total population) in 1850. A permanent *minyan was organized in 1860, and organization of community institutions began in 1876. In 1868 the community declared itself Orthodox. The first synagogue was built in 1878; a second large, handsome synagogue was opened in 1890. In 1881 there was a case of blood *libel in Sibiu. The Jewish population numbered 1,307 (4% of the total) in 1890, and 1,310 in 1920.

The Orthodox *Armin Horowitz (1869–1934) was the rabbi of the community from 1890. A Sephardi community was organized in 1923. Zionist activity in Sibiu commenced immediately after the first Zionist Congress and grew rapidly in the period between the two world wars. A Jewish school was founded in 1919. The community also supported a Hebrew nursery school. The community numbered 1,361 (1.2%) in 1941, and 2,020 in 1947. The majority of the Sibiu Jews were speakers of German, and only some of them learned Hungarian and Romanian (the latter mostly after World War I). During World War II the community's institutions were liquidated, and under Romanian-Fascist rule the Jews in Sibiu were persecuted and their communal property was confiscated. Early in the war the city served as a district mobilization center for forced labor among Jews and, from August 23, 1944, as a refugee center. There were about 125 Jews living in Sibiu in 1970. Friday night and holiday prayers were still held in the great synagogue.

[Yehouda Marton / Paul Schveiger (2nd ed.)]

**SIBONI (al-Sab'uni),** family of rabbis in Salé, Morocco. The most prominent member, AARON, was rabbi in Salé in the mid-17th century. He edited Moses Albaz's kabbalistic prayer book *Heikhal ha-Kodesh* (Amsterdam, 1653) and, with Jacob *Sasportas, condemned and wrote against the Shabbateans, particularly for not observing fast days. Aaron spent some time in Amsterdam as an international merchant. One of his letters to Sasportas describes the expulsion of Jews from Oran by the Spanish on Passover 1669 and the subsequent transformation of the synagogue into a church. His sons JOSHUA and DAVID were rabbis in Salé in the late 17th century and wrote homilies, most of which are extant in manuscript. *SHA-LOM, rabbi in Salé in about 1683, composed dirges (*kinot*) and prayers, which are also extant in manuscript.

**SIBYL AND SIBYLLINE ORACLES.** The sibyl was a Greek prophetess-figure, apparently of Oriental origin. The sibyl utters her predictions not on being consulted, like established oracles, but spontaneously, in ecstatic exclamations. She is be-

**SIBYL AND SIBYLLINE ORACLES.** The sibyl was a Greek prophetess-figure, apparently of Oriental origin. The sibyl utters her predictions not on being consulted, like established oracles, but spontaneously, in ecstatic exclamations. She is be-
lieved to dwell in grottos, to wander through many countries and to live for 1,000 years. Originally conceived of as a single person, various sibyls are found later in different countries, some bearing individual names. From Alexander Polyhistor (first century B.C.E.) comes the earliest mention of a sibyl named Sambetha or Sibbe, described as Babylonian or Hebrew. Sibylline oracles, in hexametric verses, circulated in Athens in the fifth century B.C.E.; from Alexander the Great’s time, these sided with the oppressed peoples and predicted doom to the wicked rulers. A standard figure in these oracles was the hoped for Mighty King from the East, who would liberate the conquered, punish the oppressors, and inaugurate a period of welfare and peace. A combination of Babylonian astrology and Persian millennial speculations was the basis for a firm belief in a predestined future. In Rome, Sibyline Books, deposited in the temple of Jupiter Capitolinus, were consulted at moments when the senate had to make critical decisions. However, when the Roman Empire came to rule over Asia, Oriental sibylline literature evolved into virulent anti-Roman propaganda. Doubtless the strong note of hope for final redemption induced the Jews to adapt the popular pattern of sibylline poetry to the needs of their national-religious propaganda (see below). Christians regarded the sibyl as a heathen prophetess predicting the coming of Jesus and integrated the Jewish sibylline poetry in a larger corpus of Christian oracles. The pagan sibyls and the prophets of Israel, as two kinds of messengers of Jesus advent, stand side by side in Michelangelo’s paintings on the ceiling of the Sistine Chapel in Rome.

Books of Sibylline Oracles
Christian libraries have preserved two different collections of Sibylline Oracles, counted as books 1–8 and 11–14 respectively. The first of these collections was compiled by Christians about 300 C.E. and contains definitely Christian passages (e.g., 8:217–30), but it was composed much earlier and the oldest stratum is Jewish, with only occasional Christian additions. Scholars differ about the extent of this Jewish stratum, but it certainly includes books 3, 4 and most of 5. There are also considerable Jewish elements in the second, much later and inferior, collection; thus in 13:81 the Emperor Decius, persecutor of the Christians, figures as one of the good emperors – a fact that excludes Christian authorship.

The oldest and most interesting of the Jewish parts is book 3, in which the sibyl is presented as Noah’s daughter-in-law, coming from Babylonia. This agrees with the tradition about the sibyl Sambetha. Indeed, the account of the oldest generations of mankind, though following the biblical narrative, is combined with motifs known from parallel Babylonian myths whose previous polytheistic character is sometimes still discernible. Even a piece of rationalized Greek mythology that, following a prevalent Hellenistic theory, makes Kronos and his brothers into kings of olden times, seems to have come down to the author via Babylonia.

It may seem strange that Church Fathers, in their ample quotations from the book, ascribe it to the oldest Greek sibyl. This may be due to the fact that the author incorporated in the work a rich collection of older Greek oracles, referring to many places throughout the Hellenistic world which were threatened with various natural or political catastrophes. But there is a marked difference between these stereotyped predictions of calamities and the Jewish sibyl’s own oracles of disasters, which were always motivated by moral or religious considerations, in keeping with Israel’s prophetic tradition. This genuine prophetic vein reaches its climax in the passage where the sibyl addresses the Greek nation (3:520ff.). Although the fictitious form of predicting a distant future is maintained here, it is clear that the sibylline poet is referring to the great disaster that befell Hellas in his own time, i.e., the middle of the second century B.C.E., when Greece was ravaged by the Roman legions. Here the poetry, too, reaches its highest standard. The Homeric assonances give the verses an evocative power, and the poet’s sympathetic feeling for humiliated Hellas echoes in the repeated use of the designation “barbarian” for the cruel enemy. The same strong emotion also elicits biblical allusions; the words “one man chases a hundred warriors” evokes Deuteronomy 32:30, and “five a whole company,” Leviticus 26:8. It is thus evident that the calamity has both a Greek and a Jewish significance for the poet. The latter becomes clear where the sibyl reproaches the Greeks for their cardinal sin, apostasy from the true God in favor of meaningless idolatry, introduced by haughty kings in olden times. The poet hopes that in their present agony the Greeks will find the only way of salvation, back to God Whom they once had known, presenting them with an ideal image of Israel, the people of “pious men” sitting around the sanctuary of the One God.

The sibyl’s glorification of Israel is centered around three points: monotheism, sexual purity, and social justice: (1) strict Jewish adherence to the One God implies rejection of magic, astrology, and foretelling the future. In stressing this point, the poet may be opposing a Samaritan tendency, known from a fragment of Pseudo-Eupolemos who depicts Abraham as a wise astrologer; (2) sexual purity of the pious people is sharply contrasted with the vices of the gentile world, the most horrible of which is homosexual prostitution; (3) the stress laid on social justice as a Jewish characteristic is especially interesting. The author represents details of biblical law not as commands but as actual facts; thus he can say that the Jews use just weights and measures, do not remove their neighbor’s landmark, and help the widows and the poor, “for God in heaven has given the earth to all men in common.” The unique political situation of a sovereign Judea under Hasmonean kings confronting an enslaved Hellas lends specific shades to the picture of messianic times. The forthcoming last great onslaught of the heathen armies against God’s sanctuary, repelled by divine miraculous intervention, is depicted on Jewish apocalyptic lines, but tinged by the sibylline tradition of the redeeming “Mighty King” from the East. The final life of bliss contains some individual elements unparalleled in messianic literature: “A great peace will spread all over the world. Kings will be friends with one another till the end of time.
Immortal God will place in the starry sky a law, common to all mankind” (755–9).

Outbursts of hatred against Rome cannot belong to the original text of book 3, which was composed at a time when Judea was on excellent terms with Rome. Indeed, close analysis has shown that they result from a very late recast of the text. A completely different situation, however, prevails in books 4 and 5 which are imbued with an uncompromising hatred for Rome. The reason is obvious: they were written after the destruction of the Temple by Titus. Book 4 regards the eruption of Vesuvius (79 C.E.) as a divine punishment for this crime. It can therefore be assumed with certainty that the book was written fairly soon after this eruption. Book 5 has a surprisingly favorable opinion of the emperor Hadrian, indicating that it was written before the outbreak of the Bar Kokhba War (132 C.E.). In these two books messianic hopes are not directed at an immediate future, but they keep their specific sibyllistic, internationally minded vein. When the author of book 5 dreams of a rebuilt Jerusalem, connected by a long wall with the coastal town of Jaffa, he must have had in mind the image of Athens in her time of glory, when the famous “long walls” connected her with her seaport.

**SICARI, name, of Latin origin, used by *Josephus for Jewish patriots who maintained active resistance against the Roman government of Judea, and Jewish collaborators with it, during the period 6–73 C.E. The name derived from the Latin word *sica, “curved dagger”; in Roman usage, *sicarii, i.e., those armed with such weapons, was a synonym for bandits. According to Josephus, the Jewish Sicarii used short daggers, μικρὰ ξιφίδια (*mikra zhiphidia*), concealed in their clothing, to murder their victims, usually at religious festivals (Wars, 2:254–5, 425; Ant., 20:186–7). The fact that Josephus employs the Latin *sicarii*; transliterated into Greek as σκαραῖοι (*sikarioi*) suggests that he adopted a term used by the Roman occupation forces; his own (Greek) word for “bandit,” which he more generally uses to describe the Jewish resistance fighters, is ἄγραι (lestai). For a full description of their activities, see *Zealots and Sicarii.* [Samuel G.F. Brandon]

**SICHER, GUSTAV (Benjamin Ze’ev; 1880–1960), Czech rabbi. Sicher abandoned his early activities in the medical profession to become a rabbi. His first rabbinical post was in the Jewish community of the Bohemian town of Nachod. After World War I he was appointed rabbi of the largest Jewish congregation in Prague, Praha Vinohrady, and in the early 1930s became chief rabbi of Prague. After the German occupation of Czechoslovakia in 1939, Sicher immigrated to Erez Israel, where he founded in Jerusalem a prayerhouse for Czech Jews and acted as rabbi for the patients of Hadassah Hospital. In 1947 he was recalled to Prague to the chief rabbinate of Bohemia. In this capacity he organized religious life in 51 communities reconstituted after the Holocaust. He also devoted himself to the enlargement of the Jewish Museum in Prague. Sicher’s main literary work was the translation of the Pentateuch into Czech. In 1950, when religious marriages were legally invalidated in Czechoslovakia, Sicher was sworn by the prime minister, A. Zápotocký, to observe this law. In honor of his 75th birthday the Council of Jewish Religious Communities in Prague published a collection of *“Jewish Studies”* containing special essays and an appreciation of Sicher’s literary work.

**SICHERVSKY, HEINRICH VON** (1794–1866), Austrian railroad entrepreneur. While on a world tour, Sichrovsky was greatly impressed with the new railroads being built in England. Upon his return to Austria he made a thorough study of the subject; subsequently, together with Leopold von Wertheimstein, he interested Solomon *Rothschild in helping finance the first Austrian railroad, the Nordbahn, of which Sichrovsky served as general secretary till his death. For his services he was posthumously awarded the title of nobility, but he had no male descendants. His daughter, Elise, married Theodor *Gomperz, and his brother, Joseph, was also prominent in developing railroads. Sichrovsky was also active in Jewish communal affairs, particularly in the hevra kaddisha of Vienna (as of 1819) and as member of the community council (Vorstand; 1844–58). He was a noted member of the pre-1848 Viennese literary society known as the Ludlamshoehe.
History
There were probably Jews living in Sicily in the period of the Second Temple; the great Jewish rhetorician *Caecilius of Calacte moved from Sicily to Rome about 50 C.E., and the epigraphic records start in the third century. Even later than this, records are scarce. In 590 Pope *Gregory the Great ordered the ecclesiastical authorities to reimburse the Jews of *Palermo for the damage suffered by the expropriation of their synagogue. Following the conquest of *Syracuse, the Arabs, in 878, took many Jewish captives to Palermo. In a privilege granted after the Norman conquest by Roger I in 1094, Jews are mentioned as residents of Naso. In subsequent records Jews are mentioned in Syracuse, *Messa, and *Catania. *Benjamin of Tudela (c. 1171) mentions the existence of Jewish communities in Palermo and Messina. *Frederick II protected the Jews from persecution during the Crusades and entrusted them with some state monopolies, such as silk weaving and dyeing; he also freed them from ecclesiastical jurisdiction. An edict of 1310 issued by Frederick II of Aragon (1296–1337) prohibited Jews from practicing as physicians and holding public office; they were also forbidden to have Christian servants. A decree of Frederick II (November 1375) limited the jurisdiction of the *Inquisition over the Jews of Syracuse and stipulated that Jews could not be tried by that tribunal unless a secular judge was present. If a Jew was sentenced, he could not be detained in the prisons of the Inquisition but only in a state prison.

Although King Martin V of Aragon, who ruled Sicily from 1392 to 1410, was well disposed toward the Jews and restrained any outrage against them, he could not prevent the forced conversion of the Jews of Monte San Giuliano in 1392, when some of them were massacred; however, he punished those responsible. Jews in Sicily were frequently blamed for fictitious crimes and had to make amends by paying large sums of money, as happened in Catania in 1406. During the reign of Alfonso V (1416–58) the Sicilian Jews prospered. The restrictive regulations confining Jewish residence to ghettos and forced conversions were repealed by the sovereign, who also allowed Jewish physicians to practice their profession among Christians, confirmed the right of Jews to own real estate, and forbade the preaching of compulsory conversionist sermons to the Jews. In 1474 360 Jews, including men, women, and children, perished in a bloody massacre at Modica. Another massacre took place in Noto, where 500 Jews are said to have lost their lives. Subsequently acts of violence against the Jews alternated with measures to protect the communities.

Juridical Status
Under the Saracens the Jews lived in conditions of semi-liberty and were subject to the payment of special taxes, the kharaj and jizya. Under Norman rule (from the second half of the 11th century) they enjoyed judicial autonomy and could settle their disputes in accordance with Jewish law; they were permitted to own property (with the exception of Christian slaves); at times the sovereign ceded his rights to the bishops.

Although the Jews of Sicily enjoyed civil rights, they were formally considered "servi camerae regis" ("servants of the royal chamber") under Frederick I Hohenstaufen, and they enjoyed royal protection. In 1395, under King Martin, Jewish jurisdiction, with limited competence, was extended to the whole of Sicily by the appointment of a Jewish chief judge ("dienchelele"). The first two chief judges were members of the Syracuse community: Joseph *Abenafia and Rais of Syracuse. Following repeated protests by the Jewish communities on the island, who vigilantly guarded their juridical independence, this office was abolished in 1447, and judicial functions were finally conferred on the heads of the Jewish communities. The Jews of Sicily were obliged to pay taxes as citizens, apart from those which they paid as Jews. The communities were held responsible for the payment of the collective taxes. Limitation of civil rights or the imposition of taxes was varied at times by privileges granted to individuals or to communities.

Community Organization
In general, 12 notables or proti acted as leaders of the community, assisted by councillors who were in charge of administration. The latter could take action against those who were slow in paying taxes and could impound their possessions; they authorized weddings and divorces, ritual slaughterers, and the holding of offices in synagogue. In conjunction with the rabbi and the almoners of the community, the proti supervised all communal religious and administrative services and guarded against transgression of the directives contained in the regulations of the individual communities. Relations between the community and the government were a matter for the civic authorities, the representatives, and the special envoys.

Cultural Life
Occasional references in documents and manuscripts make it certain that Jewish learning flourished in Sicily, particularly in the Middle Ages. The first known European Jewish writer was the Sicilian Caecilius of Calacte (see above) who wrote rhetorical, historical, and critical works in Greek, of which only a few fragments have been preserved. The dayyan Mazli‘ah b. Elijah ibn *Al-Bazak was probably the teacher of the celebrated talmudist *Nathan b. Jehiel of Rome. Learned Sicilian Jews knew Hebrew, Italian, Greek, and Arabic, and some of them also Latin. Hence they could take part in the important task of translating scientific works, particularly from Arabic, into Hebrew or Latin. *Faraj (Ferragut) b. Solomon of Agrigento wrote a commentary to Maimonides’ Guide of the Perplexed and translated for King Charles of Anjou the great

SICK, VISITING THE SICK

The medical treatise of Rhazes, known under the title Liber Continens. Moses of Palermo translated important veterinary works from Arabic. There was a notable circle of poets in Sicily in the 12th century, including Samuel b. Nafusi of Palermo, Samuel of Messina, Moses el-Hazzan, and Aḥitub b. Isaac, who translated Maimonides’ treatises on Logic from Arabic. Another Sicilian scholar who distinguished himself was the dāyyān Anatoli b. Joseph, who submitted a legal problem to Maimonides on behalf of the Jews of Syracuse. In the field of science, Jeremiah Kohen of Palermo wrote a commentary in Hebrew on De sphaera by Menelaus of Alexandria; Isaac b. Solomon “Alladib wrote works on astronomy and Elijah Kohen was author of a treatise giving astronomical tables for the latitude of Syracuse. In the sphere of biblical exegesis, Samuel *Masnaut, who later immigrated to Spain, was a poet and writer of aggadic commentaries on books of the Bible, and Jacob *Sikili wrote a homiletical commentary on the Pentateuch. A representative figure of Jewish intellectual life in Sicily was Aaron *Abulrabī of Catania (c. 1400), who wrote a work (subsequently lost) in defense of Judaism and a super-commentary to Rashi’s commentary on the Pentateuch. At the end of the 13th century the Spanish kabbalist Abraham b. Samuel *Abulafia also lived in Sicily. In 1466 King John II of Aragon authorized the Jews of the realm to open a studium generale, or university, with the right to appoint lecturers, to arrange courses, and award diplomas. The text of Nahmanides’ commentary on the Pentateuch (Naples, 1490) was revised and corrected by scholars of Messina.

The last Jewish scholar to come from Sicily was Joseph Saragossi, kabbalist and talmudist, who founded the neo-mystic school of Safed; he probably was not a native of Saragossa in Spain, but of Syracuse in Sicily. The records of Jewish culture in Sicily—now dispersed in libraries the world over—are contained mainly in manuscripts written in the 14th and 15th centuries in Sciacca, Palermo, Noto, Polizzi Generosa, and Syracuse.

The Expulsion

On May 31, 1492, a decree was issued ordering the expulsion of the Jews from Sicily, similar to that promulgated in Spain shortly before; this decree was given final effect within the month of January 1493. It is estimated that 37,000 Jews had to leave Sicily.

In 1695, again in 1702, and again determinedly in 1740–46, attempts were made by the government of the kingdom to attract Jewish settlement to Sicily again, but without success. In the period between the two world wars a small number of Jews settled in Palermo. There were about 50 Jews living in Sicily in 1965.

SICK, PRAYER FOR. Among the earliest prayers recorded are those for the sick. Moses prayed for his leprous sister, Miriam: “Thou make her all alive” (Num. 12:13). When Hezekiah was gravely ill, he “turned his face to the wall and prayed unto the Lord” (Isa. 38:2). A benediction for the healing of the sick was incorporated as the eighth blessing in the daily Amidaḥ. Those who visit the sick pray for their recovery (Rema to Sh. Ar., YD 335:4). In the Middle Ages the custom arose of invoking a blessing for the sick, known as the Mi she-berakh, during the reading of the Torah. The person requesting the recitation of the prayer for a relative or friend usually pledges charity. On the Sabbath the prayer concludes as follows: “It is the Sabbath, when one must not cry out, and recovery will soon come” (Shab. 12a). The name of a gravely ill person is often changed during this prayer in accordance with the statement of the rabbis that a change of name cancels one’s doom (RH 16b; Sefer Hasidim, ed. by R. Margaliot (1957), 213, nos. 244, 245, ed. by Wistinetzki, par. 365; see *Name, Change of).

Psalms are also read for a gravely ill person in the following order (according to one tradition): 90–108, 20, 38, 41, 86, 118. Those verses in Psalm 119 which begin with the letters of the sick person’s name are then recited. The recitation is concluded with the verses in the same psalm whose initial letters spell שָׂטָן (kera Satan; “Destroy Satan”).

SICK, VISITING THE SICK (Heb. בכיון הלמים bikkur holim). Visiting the sick in order to cheer, aid, and relieve their suffering is one of the many social obligations which Judaism has clothed with religious significance. God Himself is said to have observed this mitzvah when He visited Abraham who was recovering from his circumcision (Gen. 18:1; Sot. 14a). Man is enjoined to follow this divine example; the rabbis classified bikkur holim as one of the precepts for which a man enjoys the fruits of this world while the principal remains for him in the world to come (Shab. 127a). The sick of the non-Jews are also to be visited along with the sick of Israel in the interests of peace (Git. 61a).

The visitor is encouraged to be considerate of the patient’s welfare. He is not to visit too early in the morning or too late at night (Ned. 40a). Eliezer b. Isaac of Worms counseled: “Do not fatigue him by staying too long, for his malady is heavy enough already. Enter cheerfully, for his heart and his eyes are on those who come in” (I. Abrahams (ed.), Hebrew Ethical Wills, 1 (1926), 40). The 12th-century moralist, Judah he-Hasd, declared: “Even the great should visit the humble. If a poor man and a rich man fall ill at the same time, and many go to the rich man to pay him honor, go thou to the poor man, even if the rich man is a scholar” (Sefer Hasidim, ed. by R. Margaliot (1957), 367, no. 361; cf. Ned. 39b). Relatives and close friends were advised to visit the sick person as soon as he became ill. Others visited after the first three days of his illness (TJ, Peah 3:9, 17d). Rava raved that his illness not be
announced on the first day since he might yet quickly recover (Ned. 40a; Rashi ad loc.). Whoever visits the sick “removes one sixtieth of his malady,” while he who does not visit hastens the death of the ailing person (Ned. 39b–40a).

Merely visiting was not necessarily envisaged by the rabbis as the true fulfillment of this mitzvah. The sick person was also to be aided and his material needs satisfied. R. Eliezer advised, “When you visit a sick man who is without means, be quick to offer refreshments to him and he will esteem it as though you did uphold and restore his soul” (Abrahams, op. cit., 44). The visitor was also expected to comfort the patient by giving practical expression to his sympathy. It was important for the sick person to know that he is not left to suffer alone in his hours of pain and weakness (cf. Ber. 5b). The most important aspect of the visit was the prayer which the visitor had to recite for the sick person (see Prayer for “Sick”). In the presence of the sick any language could be employed for this prayer (Shab. 12b; Sh. Ar., YD 335:5).

Bet Shammai did not permit the visiting of the sick on the Sabbath when sadness was to be avoided. The halakhah, however, is in accordance with the viewpoint of Bet Hillel, who did permit such visits (Shab. 12a). During the Middle Ages it was customary for the congregants to visit the sick when they left the synagogue on Sabbath mornings (I. Abrahams, Jewish Life in the Middle Ages (1932), 348 ff.). A sick person should not be given bad news, nor should he be told of the death of a relative lest his own recovery be retarded (MK 26b).

It is meritorious to visit the sick many times as long as the frequent visits are not burdensome for the patient (Ned. 39b; Maim., Avel, 14:4). Those suffering from stomach trouble may not be visited since they will be embarrassed to be seen in such a state. Likewise, those for whom speech is injurious may not be visited (Ned. 41a). In these instances, one should stay in the anteroom and ascertain whether any assistance is necessary (Sh. Ar., YD 335:8). An entire chapter of the Shulhan Arukh, Yoreh De‘ah, is devoted to this precept (335).

[Aaron Rothkoff]

SICK CARE, COMMUNAL. As a religious duty and social service the Jewish community, like the city, took care of its sick. Many communities engaged communal physicians as well as making other necessary arrangements. Many ordinances, prayers, and descriptions of treatment tell the story of the special care organized during times of plague and epidemics. Later, special havarot (“associations”; see “Hevrath”) were organized for sick care but the communal board continued to supervise and control them. There is no record of such associations until 14th-century Spain. In Saragossa a shoemakers’ guild provided for sick care in 1336. There was a specialized bikkur holim (“visiting the sick”) society in Perpignan in 1380. These associations multiplied in the 15th century under such names as contrario visitandi infirmos or bicusolim. No such societies existed in the rest of Europe until the 16th century.

The Spanish exiles introduced them in Italy and from northern Italy they spread to Prague, and then to Central and Eastern Europe. In the 17th century Germany had only a few such associations, but by the 18th century they had become widespread there. Whereas the religious-educational associations and the craft guilds cared primarily for their own members, there were bikkur holim societies specially for the poor. A hevrath of this type paid for a physician, druggists, barber-surgeons, hospital attendants, midwives, and others. Care was provided not merely for the poor; all communal members and well-to-do visiting merchants or scholars could depend on the association for help. Thus Jewish merchants from the Polish cities of Lissa and Krotoszyn who did business for part of the year in Breslau paid an annual fee entitling them to free medical and hospital care. Through the provision of voluntary visitors special care was taken to ensure that no sick person, rich or poor, should be left alone.

The legislation relating to the Jews in Galicia at the end of the 18th century, and in Russia in the first half of the 19th century, provided the organizations with legal status, and their regulations were published. A candidate for the association was usually required to pay an entrance fee, and to attend the association meeting regularly. The association obtained means for its activities from various sources. Apart from membership dues, generally collected on Fridays, which amounted to less only than those paid to the hevrath kaddisha, the bikkur holim association often administered legacies, investing the bequest in real estate, and apportioning the income to other charities and the legatees. The association also received a certain percentage of communal dues (e.g., those levied on meat or new clothing). Sometimes the bikkur holim might levy a special tax of its own. The bikkur holim association sometimes exercised a powerful influence in the community, since it might provide free loans and subsidize various charitable undertakings. It often also undertook provision of tickets for board and lodging to needy transients, the sponsorship, outlay, and celebration of circumcision, medical care in childbirth, and related necessities. It safeguarded the rights of the local physicians, who were exempted from communal taxes in lieu of the services they rendered to the poor. The leadership of the bikkur holim was chosen by the members by the same method as adopted for electing the community leadership. The association aimed to obtain funds for its expenses from the wealthy members, and to free the needy from payments and material worry during illness. The articles of the bikkur holim association defined the financial assistance to be afforded to those in need, stipulated the number of visits to the sick, enjoined members to submit regular reports on the condition of patients in the community, and designated night care in serious cases. Fraternal feasts were generally held during the three festivals of Passover, Shavuot, and Sukkot, for which the permissible outlay was regulated.

Societies of women, usually called nashim zadkaniyyot (“pious women”), were formed in the 18th century to act as nurses, to visit women who were sick or in confinement, to
provide medical attention, offer prayers, sew shrouds, and ritually prepare the female dead. Middle-class sick persons were generally cared for at home, while the poor were placed in the ‘hekdeš. By the end of the 18th century first-rate modern Jewish ‘hospitals were opened in Breslau, Vienna, and Amsterdam. At first only transient merchants, travelers, and local servants used the new institutions, and it was not until well into the 19th century that local residents gained confidence in these modern hospitals.

**SICKNESS.**

**HEALTH STATUS**

**Introduction**

There are several available yardsticks for measuring intergroup differences in health status:

1. Lifetime longevity, i.e., average expectation of life in years (calculated at birth or other selected points in the age cycle);

2. Annual overall mortality rate, i.e., number of deaths during the year per 1,000 population (the obverse can alternatively be stated in positive terms as the group’s annual overall survival rate);

3. Annual mortality rate from a specific disease;

4. Annual morbidity rate from a specific disease, e.g., number of new polio cases during the year per 1,000 population (the obverse can alternatively be stated in positive terms as the group’s annual survival rate);

During the year per 1,000 population, irrespective of their life or death outcomes in that year. Within all the Jewish populations studied, longevity and annual survival rates are consistently higher for females than for males. In New York City (1949–51) the average annual death rate for Jewish males was 22% higher than for Jewish females.

**Lifetime Longevity**

Research according to the yardstick of lifetime longevity in the 1960s showed that Jewish women outlived Jewish men in three countries as follows: Israel (1965) – males, 70.7, females, 73.5; Canada (1961) – males, 68.4, females, 72.2; United States (the three cities Detroit, Milwaukee, and Providence, 1965), males, 67.0, females, 71.9.

This pattern is repeated almost universally in the non-Jewish world, despite enormous international contrasts in economic, political, and cultural levels and styles of life. Differences by sex are also visible across almost the entire age spectrum from the first year of life onward, most sharply of all above the age of 45. Also noteworthy is that among both sexes longevity is highest in Israel and lowest in U.S. Jewry. The longevity of Israeli male Jews is one of the highest among the nations of the world, exceeded in 1968 by the male life expectancies only of Sweden (71.6), the Netherlands (71.1), Norway (71.0), and Iceland (70.8). On almost all other yardsticks of health status, the latter four Western countries also lead the world. Perhaps the most interesting finding of all emerges upon finer examination of age-specific mortality rates. In all available Canadian and U.S. studies, the Jewish age progression of mortality for both sexes deviates significantly from that of their non-Jewish neighbors. The divergence is most clearly evident in the four stages of the age cycle discernible in a Canadian study conducted in 1940–42 (Spiegelman, 1948).

Stage I. The first year of life. Here, among both sexes, the all-Canadian death rate was 2.5 times greater than for Jewish children. Infant mortality rates are, of course, influenced by differentials in SES (socioeconomic status).

Stage II. Ages 1 through 34. Here, compared to all-Canadian peers at every age level, the Jewish death rates for each sex separately are consistently about 50% lower.

Stage III. Ages 35 through 54. The Jewish survival advantage continues in each sex, but by steadily shrinking margins with increasing age.

Stage IV. Age 55 and beyond. At age 55 for the first time Jews appear with higher mortality rates than their Christian fellow countrymen. Thereafter, the unfavorable Jewish margin in mortality rates widens progressively with advancing age.

The higher Jewish survivorship rates of U.S. and Canadian Jews from birth to the middle period of life can be explained by the tradition of being health-minded and health-active people, derived largely from their religious practices. The frequent use of medical resources is clearly an advantage for survival below the age of 45–55. It presumably must also operate beyond that point, with the result that the higher rate of Jewish mortality would have been higher still were it not for their greater use of medical resources. Two further facts should be taken into account:

1. Comparing the U.S. and Canadian studies of the 1960s with those of earlier decades, the Jewish tendency to outclimb non-Jewish mortality rates beyond the middle years was seen to become more pronounced;

2. Mortality rates of Israeli males and females in older age were significantly lower than Jews of the same age and sex in the U.S. and Canada. In fact, Israeli life expectancies at age 65 matched those of Swedish females (15.7 and 15.8 years for Israel and Swedish women, respectively) and exceeded those of Swedish males (14.4 and 13.9 years for Israel and Swedish men, respectively).

In subsequent decades, the life expectancy of Jews in advanced countries has been growing by about one year of life every five calendar years, and around the year 2000 it reached 80 years for women and 75 years for men. Although only little different from that of the general population in the corresponding countries or cities, a tendency for infant mortality to be lower among Jews persisted. On the other hand, crude mortality rates of Jews considerably exceed those of the respective general populations, mainly due to the overaged composition of the respective Jewish groups.

[Leo Srole]
MORBIDITY
Any comparison of morbidity between Jews and gentiles must take into account the wide variability of disease patterns among the Jews themselves. This variability stems from the heterogeneous composition of dispersed Jewish communities and the outside influence due to both marriage and conversion. Due to deficient health registration patterns, very little is known about the health status of Jewish or non-Jewish communities in Middle Eastern and North African countries. The information, therefore, can be based only on studies conducted in Israel and on limited studies in the U.S. and in a few European countries.

GENETIC DISORDERS. There are no genetic disorders with either a higher or a lower incidence in all Jews as a group. However, certain diseases are more prevalent among specific Jewish ethnic subgroups as compared to other subgroups and/or gentiles.

Hundreds of years of isolation of relatively small Jewish communities, both from their neighbors and from other Jewish communities, with consequently relatively frequent consanguineous marriages, have contributed to a higher frequency of several genetic disorders within certain Jewish subgroups. These are briefly summarized below:

**Ashkenazi Jews.** At least six rare metabolic disorders tend to appear more frequently among Jews of eastern European origin than among any other ethnic group in the world. Tay-Sachs disease (infantile amaurotic idiocy), a congenital lethal metabolic disorder with accumulation of lipids in the neurons of both the central and peripheral nervous systems, and manifested by arrest of development, progressive visual loss, and slowly occurring dementia, occurs in 1 in 10,000 Jewish births in the U.S. as compared to 1 in 500,000 among non-Jews; Neiman-Pick's disease, a similar condition, manifested by poor mental and motor development, is also more prevalent among Ashkenazi Jews. Gaucher's disease, a rare disorder of lipid metabolism, characterized by splenomegaly, skin pigmentation, bone lesions, and occasionally by hemorrhage and neurological symptoms, is found in about 1 in 250 Ashkenazi Jews; familial disautonomia (Riley-Day's disease), a rare congenital disorder, manifested by poor motor coordination, emotional instability, indifference to pain, inadequate sense of taste, tearless crying, excessive sweating, skin blotching, and frequent upper respiratory infections, has been described almost exclusively in Ashkenazi Jews, with a frequency of about 1 in 10–20,000. Pentosuria, a harmless, rare anomaly, characterized by an excessive excretion of L-xylulose in the urine, which is usually discovered on routine urinalysis and often mistakenly diagnosed as diabetes, occurs among Ashkenazi Jews in a frequency of 1 in 2,500–5,000 as compared to 1 in 40–50,000 among U.S. gentiles. Also, approximately one half of the observed cases of Bloom's syndrome, a rare childhood condition characterized by a marked sensitivity to sunlight, a small stature, and association with chromosomal abnormalities and leukemia, have been described in Ashkenazi Jews.

The first four of these inborn errors of metabolism have been traced back to a circumscribed area in Poland around the city of Bialystok.

**Non-Ashkenazi Jews.** Several other inborn errors of metabolism are prevalent among non-Ashkenazi Jews. The most prominent of these is a specific variety of hemolytic anemia (increased destruction of red blood cells), particularly upon contact with drugs or ingestion of fava beans. This disorder is based on a deficiency in the enzyme glucose-6-phosphate-dehydrogenase (G6PD), which is required for normal carbohydrate metabolism. The enzyme deficiency reaches a frequency of 58% in Jews coming from Kurdistan, 25% in the rest of Iraqi Jews and slightly lower frequencies in other eastern communities, in contrast with 0.5% in European Jews. Thalassemia, a chronic progressive anemia due to the presence of an abnormal hemoglobin which commences early in life, is also found primarily in Kurdish Jews. The neighboring community of Iranian Jews has one of the highest world frequencies of the rare liver disorder, Dubin-Johnson's disease, which is characterized by a defect in bile excretion and accumulation of dark pigment granules in the liver. This disorder has recently been traced to Isfahan. Phenylketonuria, a congenital defect in the metabolism of phenylalanine, characterized by the excretion of phenyl-pyruvic acid in the urine, and which leads to severe mental retardation unless treated early, occurs primarily in Jews originating from Yemen and is practically nonexistent in Ashkenazi Jews. Familial Mediterranean fever (FMF), a disease manifested by repetitive inflammatory attacks of abdominal, pleural and joint pains, as well as by amyloidosis, is prevalent primarily among North African Jews, notably those coming from Libya.

As mentioned above, the presence of closed Jewish communities with frequent consanguineous marriage has enabled the conservation and perpetuation of the abnormal genes for the above conditions. The increase in frequency of inter-ethnic marriage, coupled with a decrease in consanguineous marriage and disappearance of ethnic barriers in Israel and elsewhere, should lead to a dilution of the gene pools and a decline in the overt frequency of these deleterious conditions.

ACQUIRED DISEASES. (1) Infectious. It is impossible to evaluate innate susceptibility to infectious diseases in any group, since their prevalence is mainly determined by environmental conditions. These include personal habits, public hygienic facilities, and sources of infective agents. In the past, better personal hygiene and adherence to strict rabbinical laws kept trichinosis (a disease transmitted through pork meat), and venereal diseases to an infinitesimal rate in most Jewish communities.

An interesting environmental situation arose in Israel, where each immigrating group brought with it diseases prev-
alent in its area of origin. Of special concern were schistosomiasis (bilharziasis) in Yemenite and Iraqi Jews and filariasis (elephantiasis) in Cochin Jews, because these are debilitating diseases which spread easily under suitable conditions. Trachoma, a severe eye condition, and ringworm infection of the scalp were also of major importance among non-European immigrants. At present Israel resembles western countries with its low profile of infectious disease and with a health pattern similar to the one found in well-developed western countries.

(2) Chronic. Several studies conducted in the U.S. suggested a higher susceptibility of Jewish residents to coronary heart disease. Most probably, this is only partly related to the fact that, in general, Jews in this country belong to a higher socioeconomic stratum. Thus, Epstein et al. observed that the prevalence of the disease among Jewish clothing workers in New York City was twice that among Italians. A more recent study carried out by the Health Insurance Plan in New York City revealed the disease incidence among Jews almost 50% higher than among Catholics and 50% higher than among Protestants. These observations are in contrast with findings among other minority groups in the U.S., such as blacks, who have a relatively lower rate of this disease. It is difficult to assess which of the several known risk factors for coronary heart disease, i.e., diet, lack of physical activity, or stress, is responsible for the increased incidence among Jews. One cannot completely rule out a genetic background as a contributory factor, especially in view of studies indicating a higher susceptibility to the disease among people with certain specific blood groups.

In Israel, coronary heart disease has been constantly on the rise in all population groups. The increase followed the rise in standard of living, continuous stress, and decrease of physical activity. However, the process of assimilation has not yet abolished differences between various ethnic groups within the country. Early studies by Dreyfus, and Toor et al., suggested that Yemenites, and particularly newly arrived Yemenites, have a lower risk of acquiring the disease as compared to European-born Israelis, while veteran Yemenites as well as other non-Ashkenazi Jews in Israel have an intermediate range. These findings are compatible with differences in cholesterol levels between the groups, but again, differences in other life habits such as stress, physical activity, smoking, etc., could contribute to the observed difference in risk.

No definite data with regard to other cardiovascular diseases are available. Buerger’s disease, a peripheral vascular disorder affecting primarily young males and manifested by inflammatory and occlusive changes in both arteries and veins, is apparently more prevalent among Jews of eastern European origin, both in Israel and elsewhere. There are some indications that diabetes may be more common among Jews in the U.S., but the data are inconclusive. Cohen suggested that Yemenite Jews have a lower rate of diabetes than other Jewish subgroups, while others observed a higher risk of diabetes among North African-born Jews. Since this is a disease with a certain genetic background, an interaction between heredity and environment could lead to diverse manifestations. It has also been suggested that hypertension and mortality from cerebro-vascular accidents are slightly higher among the North African-born Israelis. This could be related at least in part to a higher incidence of chronic renal disease in this ethnic group, particularly among the females. Regional enteritis and ulcerative colitis, two inflammatory conditions of the bowel, have also been found to be relatively more common among Jews in the U.S. than among gentiles. Jews have always been noted for a lower frequency of drinking. Consequently, both alcoholism and liver cirrhosis are considerably lower among Jews as a group, both in Israel and abroad.

Cancer. There is ample evidence today that several malignant neoplasms occur more frequently in Jews, while others are relatively rare. Furthermore, there is a marked variability in the risk for certain cancer sites within the main Jewish ethnic subgroups. Major cancer sites with a higher risk among Jews are cancer of the colon, breast, and ovary, which have been strongly correlated with higher socioeconomic status, as well as cancer of the pancreas and of the kidney, brain tumors, lymphoma, leukemia, and, among females, cancer of the lung and of the stomach. The higher rate of brain tumors noted among U.S. Jews is consistent with the finding that the incidence of these tumors is higher in Israel than anywhere else in the world.

In contrast, cancer sites occurring less frequently among Jews are the upper respiratory tract, i.e., pharynx, buccal, and the lung (males only), as well as cancer of the bladder, the esophagus (males only) and, to a certain extent, cancer of the prostate. The reason for the varying pattern between the two sexes in lung cancer is probably due to the fact that the most prevalent histological form in this neoplasm differs between the two sexes (adenocarcinoma in females, versus squamous cell carcinoma in males), so that, actually, the lower incidence of lung cancer among Jews is limited to the latter histological form only. The reason for the varying pattern in esophageal cancer is unclear. The one category that has drawn most attention as being rare in Jews is cancer of the uterine cervix. This apparent rarity had been construed as indicating a protective role of circumcision among Jews. More recently, it has been demonstrated that the rarity is limited to Jews of European origin, while in other Jewish communities, notably those originating in Morocco, the incidence may be even higher than that among gentiles in several European countries. The “protective” role of circumcision has also been challenged on the basis of controlled studies in England and the U.S., and by the fact that the disease is not rare in circumcised non-Jewish populations such as in Iran and Turkey. Thus, the low risk of cervical cancer among Jews in the U.S. and Europe as compared to their gentile neighbors is now considered to be
related to better personal hygiene and differences in factors associated with sexual behavior, such as age at first intercourse and number of sexual partners. The recent hypothesis of a viral role in the etiology of cervical cancer is also consistent with the pattern of a closed community, and a lower rate of extramarital relationships among Jews until the recent time period. The relatively lower cervical cancer rate among European-born residents in Israel, as compared to the African- and Asian-born, is also consistent with these explanations. On the other hand, the long-term observation of the rarity of cancer of the penis among Jews as a group has not yet been refuted, and there is a strong probability that in this case circumcision may actually play a preventive role.

Community-wide studies of cancer incidence in Israel have demonstrated some parallelism with findings in the U.S. Two facts stand out:

1. In general the cancer sites that occur more frequently among Jews in the U.S., as compared to gentiles, are more prevalent among the European-born Israelis, while those that occur more rarely among Jews in the U.S. are relatively more prevalent among non-European-born residents in Israel;

2. The relative incidence of various malignant disorders in European – in contrast to Asian – and African-born groups in Israel shows a striking parallelism to the one of white versus nonwhite groups in the U.S. Since there is no common genetic background for the Israeli and American subgroups, it would seem that the similarities observed may be associated with inter-ethnic differences in socioeconomic status. These findings corroborate previously made observations regarding the role of environmental factors in carcinogenesis. To be more specific, cancer sites occurring more frequently among European-born Israeli residents are colon, breast, ovary, uterine corpus, brain tumors, gallbladder (females only), as well as leukemia and lymphoma in older age. Cancer of the stomach and lung are also higher among the European-born, contrary to the expected pattern of a lower risk of these tumors in higher socioeconomic groups, while cancer of the uterine cervix occurs more frequently among the North African-and to a certain extent, among the Asian-born. Cancer of the esophagus is more prevalent among Jews coming from Iran and Yemen, hepatic cancer among Yemenites, and bladder cancer among North African-born males, while residents coming from the Balkan countries (Bulgaria, Greece, and Turkey) have a considerably higher rate of cancer of the larynx. The two leading sites of cancer in Israel (excluding skin cancer) are lung and stomach in males and breast and stomach in females. This is true for all ethnic categories except for the North African-born females, where cancer of the uterine cervix assumes second place.

The effect of length of residence in Israel, namely the role of change in daily life habits on cancer incidence, has only partly been studied so far, due to lack of sufficient data. However, preliminary observations indicate that in all ethnic groups stomach cancer is lowest among the Israeli-born, intermediate in veteran Israelis, and highest in recent immigrants.

There are also some indications that leukemia, at least among children, shows a similar gradient, with highest rate among immigrants, intermediate in first-generation Israelis, and lowest in second-generation Israelis. This is consistent with well-documented data elsewhere that cancer among migrants tends to assume an intermediate position between the range in the country of origin and their host country.

The Israel Ministry of Health has released the following figures for recent years:

<table>
<thead>
<tr>
<th>Patients</th>
<th>Year</th>
<th>1990</th>
<th>1995</th>
<th>2001</th>
</tr>
</thead>
<tbody>
<tr>

SID (Sidilyo; Sirilyo), SAMUEL IBN (c. 1530), rabbi in Egypt. Samuel studied under Isaac de Leon in his native Toledo where he married the daughter of Isaac Aboab. After the Expulsion from Spain in 1492 Samuel arrived in Egypt, where he was a member of the bet din of Isaac Shulal. Before 1509 he signed, together with the other members of the bet din, a legal decision concerning the exemption of scholars from the payment of taxes (Keter Torah of R. Samuel de Avila, Amsterdam, 1725, p. 1b). He was referred to as Baal Nes ("miracle worker"); according to local tradition, when the Egyptian governor, Ahmed Pasha, rebelled against the Turkish sultan and persecuted the Jews in 1524, Samuel offered up prayers in his synagogue which resulted in the downfall of the governor. In memory of this event it became known after him as the Sidilyo Synagogue.

Samuel became famous for his small and important work Kelalei Shemu’el, which was written in 1522 and published in the book Tuammat Yesharim (Venice, 1622). This was a handbook for the study of the Talmud, wherein the contents of the Talmud are presented in alphabetical order. In this work Samuel also describes the method of study used in Spanish yeshivot. Parts of Samuel’s commentary on Avot were published in the Midrash Shemu’el of Samuel b. Isaac Uceda.

[Abraham David]

**SIDNEY, SYLVIA (Sophia Kosow; 1910–1999), U.S. actress.** Born in New York, Sidney first appeared there in 1927 and became internationally known after her part in the film Street Scene (1931). She played for the Guild Theater in To Quito and Back (1937) and for the Group Theater in The Gentle People, (1939). She acted in summer theaters, played in The Four Poster on Broadway (1951), and toured in Auntie Mame (1958). Later Broadway stints included Enter Laughing (1963), Barefoot in the Park (1963), and Vieux Carré (1977).

She performed in many television shows and TV movies, among them the TV series Ryan’s Hope (1975) and Fantasy Island (1998), and the TV movies Raid on Entebbe (1977), Siege (1978), The Shadow Box (1980), Come Along with Me (1982), Finnegan Begin Again (1985), An Early Frost (Emmy nomination for Best Supporting Actress, 1985), Pals (1987), and Andre’s Mother (1999).

Sidney was married to publisher Bennet Cerf (from 1935 to 1936) and actor/teacher Luther Adler (from 1938 to 1946). She wrote Sylvia Sidney Needlepoint Book (with A. Lewis, 1968) and Question and Answer Book on Needlepoint (1974).

[Jonathan Licht / Ruth Beloff (2nd ed.)]

**SIDON** (also Zidon; Heb. נוֹב, נוֹב), Phoenician port, N. of Tyre in Lebanon. The name (Phoen. נוֹב, Akkad. Siddinnu) comes from the root swd ("to hunt, fish"). Justin says that Sidon means "fish town" ("pisces Phoenices sidon vocant"); 18:13, passim), but W.R. Smith (bibl.) shows that swd was used as part of a divine name (e.g., S-d-Tannith, S-d-Melkarth) and was probably a Baal of Lebanon, a food god. Sidon’s wealth came from the resources of the sea (commerce, fish, purple dye from mollusks, and later, glass from the sand). Already by the 15th/14th century B.C.E. Sidon was famous as a religious site. The Ugaritic myth of Keret, king of Sidonians, mentions his visit to the shrines of b’elt S’dymn ("goddess of Sidon’; Keret, 4:197–202; 6:279). In later times Sidonian gods (especially Ashoreth) were very popular with the Children of Israel (Judg. 9:6; 1 Kings 11:5; 11 Kings 23:13). From early times Sidon, as the rest of Phoenicia, was under Egyptian control, but by the 13th century Sidon began to assert its independence and the Tell el-Amarna Letters testify to the secret intrigues of Zimridda, king of Sidon, with Abdi-Airta and his sons, the kings of the Amorites, although Zimridda ostensibly still professed loyalty to Pharaoh (S.A.B. Mercer, The Tell Amarna Tablets (1939), nos. 144, 145; cf. 83:26, 103:18, etc.).

It was its natural resources that made Sidon the leading port of the Phoenician coast by the 11th century B.C.E. It was mentioned in the Egyptian story, The Journey of Wen Amon to Phoenicia (Pritchard, Texts, 25–29), as having 50 ships in commercial contact with Egypt (11th century B.C.E.). About this time Tiglath-Pileser I (1115–1077 B.C.E.) of Assyria invaded Phoenicia, and received tribute from Sidon. By Homer’s time (tenth/ninth century) Sidon’s craftsmanship in metalwork was well known and highly prized; Menelaus gave Telemaochus a present of a beautiful Sidonian gold cup (Odyssey 4:613–9); Sidon was termed “Sidon abounding in bronze” (Σιδόνος πολυχάλκου) and was said to excel in gold and electrum (ibid. 15:425, 460), as well as dyed clothes (as quoted from Homer in Herodotus, Histories, 12:116). On account of this wealth Sidon was subject to frequent raids from the Greek islands of this period (Odyssey 15:427). Up to this time Sidon held the dominating position in riches, trade, and crafts on the Phoenician littoral, which entitled it to be called “Great Sidon” (Josh. 11:8; 19:28), and “the firstborn of Canaan” (Gen. 10:15), and lent the name Sidonian as a general term for Phoenician (1 Kings 16:31). On the invasion of the Twelve Tribes, the Sidonians were living as far south as the hill country of Erez Israel but they were driven back and Asher inherited their land (Josh. 11:8; 13:6; Judg. 1:31). Later they oppressed Israel together with the Amalekites but were beaten (Judg. 10:12).

In the Bible the Sidonians had great fame as carpenters and lumberers. David, Solomon, and the returning Ex-
les hired Sidonian carpenters to cut wood for the Temple (1 Chron. 22:4; Zech. 9:2; Ezra 3:7). Sidon probably founded her colonies about the ninth century in Cyprus (cf. Cook, bibl. no. 11), Hippo, and Kition; and the eighth-century citizens of Sidon, Tyre, and Aradus (Arvad) founded Tripoli in Lebanon (Strabo, Geography, 15:2:15). From the late tenth century on Tyre gradually overtook Sidon in the hegemony of Phoenicia. Shalmaneser III (858–824) took tribute from Jehu of Israel and Sidon (Pritchard, Texts, 278). Sennacherib (705–681) drove out the rebel Eli-Eli, king of Tyre, who had conquered a large part of Phoenicia, and replaced him with the pro-Assyrian Ethbaal, king of Sidon, who had already submitted to Sennacherib in 701. In 677, Sidon rose against the rule of Sennacherib’s son, Esarhaddon, who subsequently cast down the walls of Sidon and destroyed it, beheading her king, Abd-Melkarth. Esarhaddon then built a fort, “Kar,” close to Sidon to overawe it, and gave its territory to Tyre. Shortly after 605, Jeremiah prophesied against Sidon, warning it to accept the yoke of Nebuchadnezzar (Jer. 25:22; 27:3; cf. Ezek. 28:22; Joel 4:4). The new Sidon remained subjugated to the Assyrians and then to the Babylonians, and when *Hophra of Egypt (588–586) organized the anti-Babylonian league with Judah and Ammon, he attacked Sidon for not joining their conspiracy (Herodotus, Histories, 2:161). Under Persian rule Sidon, together with Aradus, Byblos, and Tyre were granted internal autonomy, and later – in the fourth century – they federated, choosing Tripoli as the federal capital (Strabo, Histories, 16:2:22).

The maritime reputation of the Sidonians was so great that Darius especially sent to Sidon for ships and crews before invading Greece in 490 (Herodotus, Histories, 3:316). Under the rule of Artaxerxes I (359–338), the other cities of the federation (mentioned above) cunningly enticed Sidon into rebelling against Persia, promising support, but in effect not helping her at all. In 351, Artaxerxes set out for Sidon with 300,000 infantry and 30,000 cavalry. Tennes, king of Sidon, immediately fled, but the people of the city courageously refused to surrender and burned their ships in the harbor. When the Persians set the city on fire, the inhabitants locked themselves in their houses; more than 40,000 perished and the survivors were transported to Babylonia (Diodorus Siculus, History, 16:41–45). In this episode, Tyre and the other cities acted with deliberate calculation in order to destroy the commercial rivalry of Sidon forever.

With the conquest of Phoenicia by Alexander the Great in 333, Sidon, which was just beginning to recover, immediately surrendered and assisted him at the siege of her ancient enemy, Tyre. Alexander restored Sidon’s constitution, returned to her the territories given to Tyre, and appointed Abdalonymus as king in place of Straton I (342–333), who had assisted the Persians (Justin, 11:10; Arrian, Anabasis, 2:20:1; Curtius, 4:1:16).

Ashtoreth was the supreme deity of Sidon (cf. “Ashtoreth, the god of Sidon,” 1 Kings 11:33; 11 Kings 23:13) and was goddess of fertility and generation (cf. Herodotus, Histories 1:105). It was the charge of the kings to build “a house for the gods of Sidonians in Sidon, land of the sea, a house to Baal of Sidon [cf. 1 Kings 16:31 “Baal of the Sidonians”] and a house to Ashhtar” (cf. 1 Sam. 3:10; Cook, bibl. no. 4). It seems that at this period the “Lord of Kings” (Ptolemy III) granted Sidon the territories of “the fields of Sharon” (cf. Deut. 39), “Dor and Jaffa” (loc. cit.). Shortly after 350 B.C.E., Sidon became a republic ruled by suffectors (Heb. shofer, annually elected magistrates). Josephus identifies the ruling bodies with the Greek Boule (Heb. בּוּלָה) and the δήμος (Heb. דֶמֶצ; Jos., Ant., 14:190). In 218, Antiochus III seized Tyre and Ptolemais from Ptolemy IV, but Sidon was strong enough to resist him and became a center of Ptolemy’s operations (Polybius, 5:61, 69).

At the beginning of the Maccabean wars, Sidon (with Ptolemais and Tyre) persecuted the Jews of Galilee to whose rescue Simon Maccabee went in 163 (1 Macc. 5:35). In 111, Sidon gained autonomy from the Seleucids, and this year was the beginning of a new era for Sidon. Pompey recognized her independence in 64 B.C.E. and ceded her territory up to Iturea (Mt. Hermon). Bronze copies of the edicts of Julius Caesar addressed to the council and people of Sidon in 47–44 B.C.E. in favor of John Hyrcanus and the Jews (recorded in Josephus) were set up in Sidon (Ant., 14:190–210). This period proved to be one of the richest periods financially in Sidonian history. Glassblowing was discovered at this time (probably in Sidon; cf. Pliny, 5:76, Sidon artifex viti). Strabo describes Sidon’s two harbors and expounds on her reputation for astronomy, mathematics, and navigation. After some major disturbances, Sidon and Tyre were placed under Roman jurisdiction by Augustus in 20 B.C.E. Sidon soon advanced to the foreground among Hellenistic cities and was beautified by Herod (Jos., Wars, 1:422; cf. Acts 12:20).

By this time, a large number of Jews resided in Sidon, as is testified by the pagan-Jewish inscriptions from Sidon; and a Jewish inscription ending with hopes for the resurrection (Frey, 2, nos. 875–7). The Jewish population also seems to have established for itself some notoriety (Matt. 11:22; Luke 10:14) and Jesus especially went to preach in its vicinity (Matt. 15:21; Mark 7:24). By the first century, Jews were so numerous in Sidon that the Sidonians were afraid of attacking them in 66 C.E., when the Jews of Syria were massacred in other Greek towns (Jos., Wars, 2:479). By Byzantine times, Sidon had lost most of its wealth (the cedars had been cut down, the purple dye was no longer a monopoly, and other places had superseded Sidon in glassblowing). Antoninus Placentius (570) wrote that Sidon was partly in ruins.

Sidon was described by numerous scholars and travelers in the 19th century, including E. Robinson, C. Volney, and others. The famous Sarcophagus of Eshmunazar, King of Sidon, was discovered in 1855 to the southeast of the city. The first excavation in the city was made by E. Renan in 1861. In 1912 G. Contenau excavated a graveyard containing sarcophagi,
including one depicting a Roman merchant ship, as well as graves dating back to the 16th century B.C.E. and other finds. Contenau also discovered, next to the Crusader castle of St. Louis, a place where the purple dye was extracted from Murex shells. M. Dunand unearthed a temple dedicated to Mithra in 1924. Elsewhere he excavated the Temple of Eshmun and between 1963 and 1968 expanded the excavations around the sanctuary. Tombs dating from the end of the Middle Bronze Age to the beginning of the Late Bronze Age were unearthed in 1937 by P.E. Guigues. More tombs were cleared by M. Chehab in 1940, dating from the period between the 18th and 14th centuries B.C.E. The harbor installations were investigated by A. Poidebard between 1946 and 1950. From 1966 to 1969 Roger Saidah, of the Lebanese Department of Antiquities, excavated a Late Chalcolithic settlement of oval houses, superimposed by a cemetery with tombs ranging in date from the 14th century through the Early Roman period.

Although it was never large, a Jewish community existed in this ancient Phoenician city throughout the Muslim era. Benjamin of Tudela, the 12th-century traveler, reported that there were “twenty Jews” (families or taxpayers) in Sidon. The *Mamluks destroyed the citadel there after capturing the city from the crusaders; as an open city it began to decline during the latter part of the Middle Ages; its Jewish community did not increase. At the end of the 15th century there was a small community. R. Moshe Basola recounts that during his travels in Syria in the year 1521 there were no more than 20 families of Arabized Jews in Sidon. Under Ottoman rule Sidon grew again, and the Jewish community also increased. Rabbinical writings of the period show that Jews in Sidon were active in commerce and some were tax collectors (Mabit, Resp. vol. 2, pt. 2, no. 62). R. Joseph Sofer of *Safed wrote that in 1762 there had been six minyanim (60 adult male Jews) in Sidon, but that most of them had died during the plague and barely one minyan survived. R. Mordecai, of the same period, mentions the Jews of Sidon (Resp. no. 16) saying that they did not have a rabbi at the time. David d’Beth Hillel recounts that Sidon had approximately 20 Jewish families in 1824, all Arabic-speaking and native-born; they were similar in customs to the Jews of Ereẓ Israel, and most of them were tradesmen. Most of the travelers mention the tomb of Zebulun, the son of Jacob, located south of Sidon, a place the Arabs called Sheikh Sadya, that was venerated by Jews and Muslims alike. The traditional tombs of Oholiab the son of Ahisamakh, Bezalel, R. Eleazar Bartukha, and the prophet Zephaniah also were not far from Sidon.

[Eliyahu Ashor / Shimon Gibson (2nd ed.)]

The Jewish community in Sidon remained traditional and its members observed the religious rituals. During the latter stages of the 1948 War, when the Israeli army occupied parts of South Lebanon, the homes of several members of the small Jewish community in Sidon, numbering 200 persons, were confiscated, and Palestinian refugees were installed in them. But the Lebanese government ordered the police to protect the Jews in the city and enabled them to return to their homes and property. In 1962, the Alliance school in Sidon was closed down, and in 1968 there were about 150–160 Jews in the city. In 1972, the *shohet of the community left.

By 1975, most of the Jews in Sidon had left the city and only one family remained. Its head, Yosel Levy, worked as a tailor and made uniforms for the Lebanese army, and it maintained good relations with its non-Jewish neighbors. On June 5, 1982, when the Israeli army occupied Sidon, the Levys were permitted to stay in their home. When the Israeli army withdrew from the city, the remaining members of the family left with it and settled in Israel.

SIDON, KAROL EFRAIM (1942— ). Czech writer, screenwriter, and playwright. Sidon was born in Prague. His father, a Jew, was executed in Theresienstadt in the Small Fortress after his deportation in 1944. In 1965–67 Sidon studied dramatics and screenwriting at the Film Academy of Music Arts in Prague. He worked as a screenwriter of animated films and as an editor at the journal Literární listy. After the Soviet occupation of Czechoslovakia, he lost his jobs. After signing Charter 77, he left for Germany in 1983, converted to Judaism, and took Judaic studies in Heidelberg and Jerusalem (rabbinical training). In 1990 he returned to the Czech Republic and became its chief rabbi as well as that of Prague.

All of Sidon’s work is connected with Jewishness and is often based on the painful experiences of his childhood and adolescence. His fiction started with Sen o mém otcí (1968, “Dream about My Father”), an emotive portrait of his late father, his mother, and stepfather. The author’s adulthood and marriage are reflected in Sen o mně (1970, “Dream about Myself”). After these works, all others appeared in samizdat between 1970 and 1989: a philosophical-contemplative essay Evangelium podle Josefa Flavia (”The Gospel According to Josephus Flavius,” 1974; 1990); the novel Boží osten (”The Sting of God,” 1976; 1991), containing the short story Polské uši (”Polish Ears”) which appeared together with Brány mrazu (”Gates of Frost,” 1977) in Dvě povídky o utopenicích (”Two Stories about the Drowned People,” 1988, in exile), both of which project the author’s personal experiences, anxieties, and emotions onto his heroes, some of whom are Jewish. In the essay Návrat Abrahamových (“The Return of Abraham,” 1986) Sidon interprets biblical history; in the collection of interviews Když umřít, tak v Jeruzalémě (“If One Must Die, Let It at Least Be in Jerusalem,” 1977) and Sedm slov (”Seven Words,” 2004), the
author discusses philosophical and moral questions concerning Judaism. Of his plays, the best known are *Latrine* ("The Latrines," 1971); *Labyrinth* ("Labyrinths," 1972); and *Shapira* ("Shapira," 1972). Sidon also wrote radio plays and screenplays. He translated many parts of the Old Testament and numerous prayers for Jews in the Czech Republic.

[S. Milos Pojar (2nd ed.)]

**SIDON, SIMEON** (1815–1892), Hungarian rabbi. Sidon, who was born in Nádas, was a pupil of Moses *Sofer. His first rabbinate was in the small town of Cifer. In 1835 he was appointed rabbi of Tyrnau (Trnava). During his rabbinate the schism (1869) in Hungarian Jewry (see *Hungary*) took place, and his community joined neither the Union of Orthodox Jews nor the *Neolog* group but remained a *status quo* community. When the Orthodox rabbis disqualified the halakhic rulings of the rabbis of those communities, about 40 families founded a separate Orthodox community. Sidon vigorously complained about this ruling, asserting that many of the status quo rabbis were outstanding and God-fearing talmudists. They had no power to force their congregants to join the Orthodox group.

"Are they to leave their communities and become recipients of charity?" he protested. He remained with his community until his death. Sidon was himself an outstanding talmudic scholar and a gifted preacher.

He was the author of *Ot Berit* (1850), on the laws of circumcision and the redemption of the firstborn; *Shevet Shim'on* (1884–88), responsa and halakhic novellae on marriage and mourning; homilies on *Avot* (some of which were published in the *Even ha-Me'ir* (appended to Z. Horowitz, *Kitvei ha-Ge'onim* (1957) of Meir Stein); and *Beit Menelah* (1879) on Maimonides' *Mishneh Torah*.

[Samuel Weingarten-Hakohen]

**SIDRAH** (Heb. נַדִּיר; "order, "arrangement"), popular term for the sections of the Pentateuch, read publicly in the synagogue on the Sabbath (see *Torah, Reading of*). The term is found in talmudic literature to mean both "weekly portions" (Shab. 116b; Yoma 87a; *TJ*, Ta'an. 1:6, 64c), and schools in which sections of the Scriptures are read and interpreted (*TJ*, Ber. 3:1, 6b; *TJ*, Beza'h 16, 60c). In its Aramaic form (נַדִּיר, sidra) it can also refer to each of the six sections into which the Mishnah is divided.

**SIEBERT, MURIEL** (1932— ), U.S. stockbroker. Siebert, who was born in Cleveland, Ohio, was the best-known woman on Wall Street in the second half of the 20th century. In 1967, she became the first woman to buy a seat on the New York Stock Exchange, and several years later she became the first woman to own and operate her own brokerage firm. In between she served five years, beginning in 1977, as New York State's first female superintendent of banking. A dropout from Case Western Reserve University, she lied about having a college degree to get her first job, as a $65-a-week researcher at Bache & Company, in 1954. By 1967 she was a partner in a tiny brokerage firm and an authority on aeronautics stocks; she earned $250,000 a year but felt she could do better. Because no major firm would hire her, she said, she bought a seat on the exchange for $445,000, joining 1,365 male members of the exchange. She transformed her firm into a discount brokerage house in 1975, on the first day that firms were permitted to negotiate commissions. She continued running the brokerage well into her 70s. She set up several charitable foundations, beginning in 1990 with the Siebert Entrepreneurial Philanthropic Program, which distributes half of the firm's net commission revenue on new issue corporate underwritings to a charity, usually chosen by the issuer or purchaser. In 1999, while president of the New York Women's Agenda, a coalition of more than 100 women's organizations, she developed a Personal Finance Program to improve the financial skills of young people. The program was initially designed to teach how to manage a checkbook and to understand the use and abuse of credit cards. The program was part of the economics curriculum of New York City high schools and was expanded to include such topics as the basics of money, banking, credit, budgeting, taxes, insurance, and investing. Siebert was also involved with many nonprofit, civic, and women's organizations, including the Economic Club of New York, the Council on Foreign Relations, and the New York Women's Forum, of which she was a founder and former president.

[Stewart Kampel (2nd ed.)]

**SIEDLCE**, city in E. Poland. Jews lived there from the middle of the 16th century, occupied as innkeepers, and later also as craftsmen and merchants. In 1794 a Jewish school and the house of the rabbi were built there; the Jewish cemetery was enlarged in 1798. In the 18th century there was a small Jewish hospital; a larger one was erected in 1890. The most noted rabbis of Siedlce in the middle of the 18th century were R. Meir, author of *Netiv Meir* (1931?); and Israel Meisels (officiated 1858–67) son of Dov Berush *Meisels. In the second part of the 18th century the rabbis of Siedlce visited Warsaw where they carried out religious functions for Jews living there illegally. A group for the study of the Torah and Talmud was founded in Siedlce in 1839, and at the end of the 19th century a Bikkur Holim society was established. During World War I a Jewish high school was opened. Yiddish periodicals published in Siedlce included the *Shedlerer Yokhnblat*, which Abraham Gilbert began to produce in 1911. Jacob Tenenboim, who between the two world wars edited the weekly *Dos Shedletter Lebn* with Joshua Goldberg, also collaborated with Gilbert.
The lawyer Maximilian Appolinary *Hartglas contributed to this weekly.

The "Bund started activities in Siedlce around 1900. At first the Polish Socialist Party also had a great influence among the Jews in Siedlce, but Zionism won the greatest adherence, though all shades of Jewish political parties were active.

In 1906 the czarist Okhrana (secret police) organized a pogrom against the Jews of Siedlce in which 26 Jews were killed and many injured. In 1920 Siedlce was occupied by the Red Army, and after its recapture by the Poles antisemitic excesses occurred. The Jewish population numbered 3,727 (71.5% of the total) in 1839; 4,359 (65%) in 1841; 5,153 (67.5%) in 1858; 8,156 (64%) in 1878; and 14,685 (47.9%) in 1921.

Holocaust Period

Before the outbreak of World War II there were 15,000 Jews living in Siedlce. The German army entered the town on Sept. 11, 1939, and began to take measures against the Jews. In November 1939 the Jewish population was forced to pay a "contribution" (fine) of 100,000 zlotys. On Dec. 24, 1939, the synagogue was burned down. During 1940 about 1,000 Jews from Lodz, Kalisz, and Pabianice (cities incorporated into the Third Reich) were forced to move to Siedlce. In March 1941 German soldiers organized a three-day Aktion in which many Jews were killed. The following August a ghetto was set up; it was closed off on October 1. The plight of the Jews in Siedlce then drastically deteriorated. In January 1942 another fine of 100,000 zlotys was imposed. On Aug. 22, 1942, about 10,000 Jews were deported to *Treblinka death camp where they were murdered. Only 500 Jews were allowed to remain in the diminished ghetto, though a further 1,500 stayed there illegally. On Nov. 25, 1942, the so-called small ghetto was liquidated and its 2,000 Jewish inmates deported to Gesiborki. The Germans concentrated all the survivors from Siedlce province in the town. Hundreds of them were shot on the way there or murdered in Gesiborki. All the others were deported within a few days to Treblinka and murdered. A few hundred remained in a forced labor camp near Siedlce until April 14, 1943, when they were executed.

During the deportations hundreds of Jews succeeded in escaping to the forests. They formed small groups which tried to bring in arms and resist the German units searching the woods. The majority of them were killed during the winter of 1942–43. In January 1943 the Germans reported the capture and execution of 150 Jews in different parts of Siedlce province. Some Jewish groups continued to offer armed resistance until the fall of 1943.

The Jewish community in Siedlce was not reconstituted after the war. Organizations of former Jewish residents of Siedlce were established in Israel, the United States, France, Belgium, and Argentina.

SIEFF, ISRAEL MOSES, BARON (1889–1972), British industrialist and Zionist. He was born in Manchester, where his father, a migrant from Lithuania, founded a prosperous business. He and his brothers-in-law, Simon *Marks and Harry *Sacher, were closely associated in their devotion to Zionism, as well as in their commercial career. Sieff’s wife, Rebecca *Sieff, was among the founders of WIZO and continued her active participation in that organization. It was in 1913 that Sieff, along with Marks, came to know Chaim *Weizmann, who was at that time a lecturer in Manchester University. From then on until Weizmann’s death, the three brothers-in-law were among his closest friends and collaborators, notably in the critical labors which led up to the issue of the "Balfour Declaration. Under their leadership Manchester became arguably the major center of British Zionism. Sieff was one of the founders of and a regular contributor to the fortnightly review Palestine, which played its part in educating public opinion in England in favor of Zionism. In 1918, when the Zionist Commission headed by Weizmann went to Palestine to prepare the ground for the implementation of the Declaration, Sieff acted as its secretary. He joined Marks when the main offices of their firm, Marks and Spencer Limited, were transferred to London, and played a notable part in its development. He was the vice chairman and joint managing director of the company and in 1967 became its president. Not restricting his activities to Zionist matters, Sieff was the founder of Political and Economic Planning (PEP), an organization of internationally recognized authority, and was its chairman (1931–39), vice chairman (1939–64), and president from 1966. He was also a vice chairman of the Royal Anthropological Institute. A noted philanthropist, Sieff, together with other members of the family, founded the Daniel Sieff Research Institute at Rehovot, from which the *Weizmann Institute of Science developed. His Zionist and Jewish activities were marked by his honorary presidency of the Zionist Federation of Great Britain and Ireland and of that body’s Educational Trust, his chairmanship and vice presidency of the Joint Palestine Appeal, and his chairmanship of Carmel College. He was made a life peer in 1966. In 1970 his memoirs were published, The Memoirs of Israel Sieff. His younger son Marcus Joseph *Sieff, Baron Sieff of Brimpton (1913–2001), who was educated at Manchester Grammar School and Cambridge, joined the family firm in 1945, became a director in 1954, and, after 1967, was managing director and chairman. He expanded the range of Marks & Spencer to include the sale of food. Like other members of his family he was a notable contributor to Jewish and Zionist causes. Sieff wrote an autobiography, Don’t Ask the Price (1986). After his retirement the firm experienced increasing difficulties, and ceased to be a family or, indeed, a "Jewish" firm. Sieff was knighted in 1971 and received a life peerage in 1980.

[Harry Sacher / William D. Rubinstein (2nd ed.)]
SIEFF, REBECCA (1890–1966), first president of *WIZO.

The eldest daughter of Michael Marks, founder of Marks and Spencer, she was born in Leeds and educated in Manchester. Her husband, Israel *Sieff, and brother, Simon *Marks, were close friends and associates of Chaim *Weizmann, and she was instinctively drawn into their Zionist activity by her strong sense of tradition and historic continuity. She worked with the British Palestine Committee, which prepared the ground for the *Balfour Declaration, and was a founding member and first president of the Federation of Women Zionists of Great Britain and Ireland in 1918. In 1924 she was elected president of WIZO, which was founded in July 1920, holding this position until her death. She was especially active in the 1940s as a campaigner against British rule in Palestine and on behalf of Holocaust survivors. Rebecca Sieff was an excellent speaker with a brilliant mind and a forceful personality. She traveled extensively, speaking on behalf of WIZO and organizing its branches all over the world. She lived mainly at her home in Tel Mond, Israel, where she is buried.

[Sosa Ginossar]

SIEGEL, BENJAMIN "BUGSY" (1906–1947), U.S. mobster.

Born Benjamin Hymen Siegelbaum in Brooklyn, New York, to Russian-born Jewish immigrant parents, Siegel, one of five children, grew up in Hell's Kitchen, where he joined a street gang on Lafayette Street. He started out as a thief, but soon resorted to extorting “protection” money from street vendors by pouring kerosene on their merchandise and setting it ablaze. Fellow gang members took notice of Siegel’s quick, sociopathic temper, naming him Bugsy after the expression “crazy as a bedbug”; Siegel preferred to be called Ben and would attack anyone that used the nickname in his presence. At 14, Siegel merged his gang with Meyer *Lansky’s. Known as the Bugs-Meyer Mob, the gang was based in Manhattan’s Lower East Side and evolved to include gambling, car theft, bank robbery, and murder for hire. In 1930, the gang joined forces with Charles Luciano and was in an otherwise unheard of union at the time between Jews and Italians. As they began buying protection from police and local politicians, mobster Arnold "Rothstein took notice and turned to Luciano and the Bugs-Meyer Mob for help with bootlegging. Before long the gang was folded into the Syndicate, a collection of mobsters from around the nation, where Siegel would have a hand in creating Murder, Inc. A high-profile gang hit forced Siegel underground. The Syndicate sent Siegel, who was tired of being second to Lansky, to California in 1937 to establish a gambling presence. Siegel moved to Beverly Hills, hired Mickey Cohen as his lieutenant, and looked up an old friend from the neighborhood, actor George Raft. Together with local gang leader Jack Dragna, Siegel established a wire service to aid in bookmaking, illegal gambling operations, drug smuggling, and union racketeering. Siegel threw lavish parties at his mansion, rubbing elbows with some of Hollywood’s biggest names. In Siegel’s absence, Lansky became head of the Syndicate. In 1945, Siegel and Lansky set down plans for a gambling hotel in Las Vegas, The Flamingo. The projected cost of the hotel was $1.2 million, but the construction firms took advantage of Siegel’s poor business acumen, driving costs up to $6 million. Siegel’s girlfriend, Virginia Hill, took multiple trips to Zurich at the time, which led mob investors to suspect that Siegel was funneling money to Swiss bank accounts. Angry mob bosses discussed the possibility of a hit on Siegel during a December 1946 meeting in Havana, Cuba. The unfinished resort enjoyed a gala opening on December 26, 1946, but was closed soon after to finish construction. The Flamingo opened again in March 1947 and by May was finally turning a profit. But it was too late. Mob patience had worn thin, and Siegel was gunned down in the living room of his Beverly Hills mansion one month later.

[Adam Wills (2nd ed.)]

SIEGEL, IDA LEWIS (1895–1982), community worker, feminist, public official. Ida Lewis Siegel was born in Pittsburgh, Pennsylvania, shortly after her parents and two older brothers arrived from Lithuania. In 1893 her family moved again, this time to Toronto. Yiddish-speaking Ida devoted much of her life to bettering the lot of immigrants in Toronto, especially Jewish immigrants targeted by Christian missionaries in Toronto. In order to help immigrants both integrate and retain pride in their cultural and religious heritage, Ida organized, while still a teenager, programs to assist immigrant women learn mothercraft, English, and modern hygiene. It was the beginning of an almost 80-year career of public service.

Ida married Isidore Siegel, a traveling salesman and later shopkeeper, and they had six children. With her husband’s support, and uncharacteristic of her times, Ida juggled home and community as she immersed herself in an array of community-based activities benefiting Jews and non-Jews alike. An ardent Zionist, she founded the Daughters of Zion, the first Zionist women’s group in Canada, and in 1916 was a key organizer of Canadian Hadassah. She was also an early supporter of *Youth Aliyah. A lifelong pacifist, she opposed Canadian participation in World War I and, committed to public education, she helped organize the Home and School Association and was an activist on behalf of children’s playgrounds and child welfare. She helped organize the local YM-YWHA, a Jewish medical dispensary – a preliminary step in the founding of the Mount Sinai Hospital in Toronto – and a Zionist Sunday school. A committed suffragette, she campaigned for the women’s vote and, once achieved, pressed women both to exercise their ballot and run for public office. Living by ex-
ample, in 1930 she was elected to the Toronto Board of Education in a largely Jewish neighborhood. She served until 1936 when she unsuccessfully ran for a seat on Toronto’s city council, defeated, some argue, by voter uneasiness about electing a woman and a lack of support from Jewish political insiders, who felt a seasoned lawyer would more effectively represent Jewish interests. Undaunted, Ida Siegel went on to become the first woman vice president of the Zionist Organization of Canada and a member of the executive of the Canadian Jewish Congress. She was widely honored in both the Jewish and larger community.

[Harold Troper (2nd ed.)]

SIEGEL, JERRY (1914–1996), U.S. cartoonist. Siegel, the co-creator of Superman, the first of the great comic book superheroes and one of the most recognizable fictional characters of the 20th century, was born in Cleveland, Ohio, the son of Jewish immigrants from Lithuania. A fan of movies, comic strips, and science fiction pulp magazines, Siegel corresponded with other science-fiction fans before publishing, in 1929, what may have been the first science fiction fan magazine, Cosmic Stories. In high school, Siegel befriended his later collaborator, Joe ″Shuster. They created Superman (Siegel imagined Superman from his birth on the doomed planet Krypton and his rocket arrival on Earth to his superhuman powers and his mild-mannered alter ego, Clark Kent; Shuster gave Superman his skintight costume and accompanying cape). They were inspired by several fictional characters, including Tarzan and Popeye, and used Superman in short stories and a 1933 comic strip proposal. In 1938, after the idea had languished among other proposals, Superman was chosen as a cover feature for Action Comics #1, published by the future DC Comics. They signed away the rights to Superman for $130.

In 1946, Siegel and Shuster, nearing the end of their 10-year contract to produce Superman stories, sued DC over rights to the characters they created. After a two-year fight, they relinquished their claim in return for about $100,000 and severed their relationship with DC. Siegel’s later work appeared elsewhere but in 1975, nearly destitute, he launched a public-relations campaign to protest DC Comics’ treatment of him and Shuster, who, partly blind and unemployed, lived in a threadbare apartment in Queens, N.Y. In 1978, after the first Superman movie made more than $80 million, DC, which over the years had received more than $250 million of the more than $1 billion that Superman generated from movies, television and a variety of commercial products, bowed to public opinion. Ultimately, Siegel and Shuster were granted $35,000 a year each for the rest of their lives and were guaranteed that all comics, TV episodes, films, and other Superman ephemera would be required to state that the character was “created by Jerome Siegel and Joseph Shuster.”

[Stewart Kampel (2nd ed.)]

SIEGEL, MARK (1946– ), Democratic Party activist and White House official. Born in Brooklyn and a product of its public schools, Siegel is a graduate of Brooklyn College (1967). He holds a master’s degree (1968) and doctorate in political science (1972) from Northwestern University, where he specialized in American political behavior, elections, and the U.S. Congress. His dissertation was on the delegate selection process within the Democratic Party: “Toward a More Responsible Two Party System: The Politics of Reform.” He was on the adjunct political science faculties of American University and George Washington University’s Graduate School of Political Management, where he also directed the University’s Semester in Washington program.

Siegel served as legislative assistant for domestic policy to Senator Hubert H. Humphrey (1971–72). He was executive director of the Democratic National Committee under the chairmanship of Robert S. Strauss, the first Jewish chairman of a major American political party (1973–77). Siegel became deputy assistant to President Jimmy Carter in January 1977, where he served as the liaison to the American Jewish community. During that tenure he was the first to propose a national memorial to the Holocaust that led to the creation of the President’s Commission on the Holocaust, and the Holocaust Memorial Museum 15 years later on the Mall in Washington.

In 1978 Siegel became the first – and to date the only – Jewish White House official to resign from the inner circle of the president in protest over the Carter Administration’s plan to sell F15 jet fighters to Saudi Arabia. Later that year in Jerusalem, Prime Minister Begin presented Siegel with the Jonathan Netanyahu award for civil courage.

For more than 20 years after leaving the White House, Siegel served as president of Mark A. Siegel and Associates, Inc., and International Public Strategies, Inc., lobbying firms dealing with domestic and international representation. After the September 11, 2001 terrorist attacks, he re-entered government as chief of staff to Congressman Steve Israel of New York, a member of the Arms Services Committee of the House of Representatives.

He has served as speechwriter to a long list of public officials including senators Humphrey, Bill Bradley, and Ted Kennedy, Prime Minister Benazir Bhutto of Pakistan, Prime Minister Henny Eman of Aruba, President Nursultan Nazarbaev of Kazakhstan, President Jimmy Carter, Vice President Walter Mondale, and Vice President Al Gore. Siegel served on the Board of the National Democratic Institute of International Affairs for 15 years, where he oversaw the Institute’s party development and election monitoring in Asia. In 2000, Siegel served as the on-air consultant on the electoral college to the Today show during the presidential recount crisis.

He served as the vice president for government affairs of New Century Financial Corporation. Siegel is married to Judith Siegel, deputy assistant secretary of state for public diplomacy.

[Michael Berenbaum (2nd ed.)]
SIEGEL, MORTON K. (1924– ) , Jewish educator. Born in New York, he graduated from the Teachers Institute of Yeshiva University (1943) and received his B.A. from Yeshiva College and his Ph.D. from Columbia University (1952).

He began his career as educational director of Laurelton Jewish Center (1945–53) and then joined the staff of United Synagogue first as placement director of the Department of Education, and then as director for the Department of Youth Activities, where he led the dramatic growth of United Synagogue youth from 500 to 24,000 members. He initiated USY on Wheels, a tour of the United States for teenagers, and also the Israel Pilgrimage. Both programs have been in existence for more than four decades. He also launched ATID, the college-age program of United Synagogue. USY became the entry point into Jewish life for an entire generation of Conservative Jews, who went on to Camp Ramah – Siegel directed Camp Ramah in Connecticut for a time – and then into the rabbinate and Jewish professional or academic careers. As the Conservative movement was expanding into the suburbs, its youth programming was the most significant teenage programming in the American Jewish community and enabled the Conservative movement to attract and nurture its own leadership.

In 1964 Siegel became director of the Department of Education when Walter Ackerman became dean of the University of Judaism’s Teachers Institute.

The Department of Education set standards for the United Synagogue religious schools and newly emerging Solomon Schechter (Jewish Day) Schools as well as congregation nurseries and high schools. Curricular material was published and the department supervised the regional educational commission.

Siegel was a founder and first secretary of the Jewish Educators Assembly and taught at New York University during the 1970s. As he aged, he created new ways of Jewish learning including Hazak, which is nicknamed “USY for Mature Adults.”

Taking the cue from the ongoing successes of the Kadima and USY youth groups, Hazak offers membership in an organization that provides camaraderie, social interaction, intellectual stimulation, religious guidance, and fun.

He is the author of a manual for the congregational school board member, with text prepared by Morton Siegel and Pesach Schindler and a syllabus on Zionism.

His idea of “ethical realism,” or the need to formulate ethical decision-making on the basis of real circumstances (and only indirectly from idealized ethical principles), is basic to Siegel’s Jewish ethics and view of politics. One of the most profound influences upon Siegel’s formulation of ethical realism was Reinhold Niebuhr who taught at the Union Theological Seminary across the street from JTS. Many of Niebuhr’s life experiences and views are paralleled in Rabbi Siegel’s experiences and views. Siegel’s “epiphany” came as a result of political and social unrest in the late 1960s and early 1970s.

Siegel became politically more conservative in the 1970s and 1980s and became an advisor to three American presidents, Nixon, Ford and Reagan. President Reagan appointed him to be executive director of the U.S. Holocaust Memorial Council (1982–85) that was charged with constructing the national Holocaust Museum.

Siegel was also influenced by Abraham Joshua Heschel (d. 1972) on a number of spiritual and philosophical issues, particularly Heschel’s conviction that the Jews had a vision of society which could and should influence general society as much as the general society influenced Judaism. Siegel marched alongside Heschel in the civil rights marches of the early 1960s and this translated into his work with the President’s Commission for the Study of Ethical Problems in Medicine and Bio-Medical Research (1982). His concept of “A Bias for Life” that he drew from Jewish sources and that summarizes his view of medical ethics was incorporated into some final statements of House of Representatives reports and of the President’s Commission on Bio-Medical Research.

After his death, St. Lawrence University purchased his library and personal archives and has established the Rabbi Dr. Seymour Siegel Memorial Library Collection and Archives and the Seymour Siegel Memorial Lecture on Judaism to benefit Jews and non-Jews who wish to explore Jewish ethics, general ethics and politics.

He was born in New York and studied at Columbia University and at the Juilliard School of Music, New York, as well as in Paris under Nadia Boulanger. In 1946 he formed the...
American Ballad Singers, and later taught at Hofstra University.

Siegmeister's interest in American folk music was reflected in many of his own compositions, such as A Walt Whitman Overture (1940), Ozark Set (1944), and Prairie Legend (1947). He composed symphonies, operas (including The Plow and the Stars, 1963), orchestral works, chamber music, works for piano, choral works, and songs. His publications include Songs of Early America (1943), Invitation to Music (1961), A Treasury of American Song (1940, 19433), and a manual, Harmony and Melody (1965).

**SIEMIATYCKI, CHAIM (Semyatitski; pseudonyms: Khaym Tiktiner, Khaynn; 1908–1943), Yiddish poet. Born in Tykocin (Tiktin), Poland, of a rabbinical family, the yeshivah-trained Siemiatycki, who lost his father at a young age, went to Warsaw in 1929 to work at odd jobs and to write rather than enter the rabbinate. Encouraged in his poetry from his yeshivah days by Hillel *Zeitlin, he contributed poems as well as critical notices on new Yiddish poets to the Warsaw dailies Moment and Haynt, and to other periodicals. He was soon recognized as one of the leading young Polish-Yiddish poets. In 1935 he published his first modest collection of verse, Oysgeshtrekte Hent (“Outstretched Hands,” 1935), followed by another quite slender volume, Tropns Toy (“Dew Drops,” 1938). During the Nazi occupation of Warsaw, Siemiatycki found refuge in Soviet-occupied Białystok. In 1941 he moved to Vilna, suffered in its ghetto, following the liquidation of which he was shot in a labor camp. Despite his modest literary output, Siemiatycki’s remarkably simple and highly individual lyrics mark him as one of the most authentic of modern Yiddish religious poets. An excited sense of wonder at God’s creation characterizes his poetry.

**SIEMIATYCZE,** town in Białystok province, E. Poland. Up to the 19th century Siemiatycze was the private property of Polish nobles; from 1807 until 1915 it was ruled by Russia. Jews are first mentioned as customs and tax farmers in Siemiatycze in a document of 1582. In 1700 R. Gedaliah of Siemiatycze and his brother Moses joined the movement of *Judah Hasid ha-Levi advocating the return of the Jews to Ereiz Israel. Their journey was described by R. Gedaliah in a pamphlet entitled Sha’alu Shelom Yerushlayim (published in Reshumot, 2 (1922), with a foreword by Zalman Rubashov Shazar). Siemiatycze, one of the most prominent communities in the Council of the Four Lands, grew and developed economically in the first half of the 18th century becoming independent of the Tykocin (Tiktin) community in matters of taxation. When the ruling duchess, Anna Jablonowska (1728–1800), built a road through the Jewish cemetery, which was very close to her palace, the community protested; this long caused resentment, and she sought to pacify the Jews by building a beautiful synagogue (1755; still standing in 1971) near the former site. At the end of the 18th century a copper mill was founded under Jewish direction. There were 1,015 Jews in Siemiatycze in 1775; 3,382 in 1847; 4,638 (75.4% of the total population) in 1897; and 3,718 (65.3%) in 1921. Some earned their livelihood in crafts and industry, but the majority engaged in trade, particularly in forest products and grain. At the end of the 18th century, Jewish merchants from Siemiatycze traded as far as Leipzig and Frankfurt. From the 1860s Jewish merchants and contractors developed the local weaving industry. Between the two world wars Jewish industrialists set up a factory producing glazed brick tiles which employed a work force that was 50% Jewish. Jewish craftsmen worked in clothing, leather, lumber, metal, building, glazing, and coach-building. The Jewish economy was also supplemented by vegetable growing in the period of economic depression between the two world wars. It was also assisted by the Jewish Cooperative Peoples’ Bank and by Gemilut Hasadim societies in the city.

In 1905 czarist police attacked Jewish youngsters strolling in the forest on Rosh Ha-Shanah, wounding ten of them and killing one. The next day young Jewish revolutionaries organized themselves into “fighting units,” disarmed the police, and controlled the town for three weeks. Jewish “self-defense units were set up in Siemiatycze. They also showed their strength when Siemiatycze reverted to Poland after World War 1 and they prevented attacks by pogromists. At the beginning of the 20th century the revolutionary movements, with the “Bund in the forefront, won support among the Jewish workers’ and craftsmen’s unions. Between the two world wars undercover Communist groups were also influential in the town. A Zionist society, *Ze’irei Zion, was founded in 1902 and opened a library. The various Zionist parties were all active there in the interwar period. Between the two world wars there were in the town a primary yeshivah and later a Beit Yosef yeshivah; a Yiddish elementary school (up to 1924); a Hebrew *Tarbut and a Yavneh school. The last rabbi of Siemiatycze was Hayyim Baruch Gerstein, a leader of the Mizrahi movement in Poland who perished in the Holocaust.

[Leonard Prager]

**Holocaust Period**

In 1939 there were over 7,000 Jews in Siemiatycze, 2,000 of them refugees from western Poland. The Soviet authorities, who controlled the city from 1939 to 1941, forced Jewish merchants and manufacturers to move to nearby towns on the pretext that they were security risks to the city, which lay in a border area. In the summer of 1940 most of the refugees were exiled to the Soviet interior. On June 23, 1941, German forces entered. They immediately organized a Polish police force which set about attacking the Jews. The Germans set up a Judenrat, headed by J. Rosenzweig, and a ghetto in the area “across the bridge” (Aug. 1, 1941). About 6,000 Jews were imprisoned within the ghetto, including Jews from Drohiczyn,
Miernik, and other towns. In deportations carried out on Nov. 2–9, 1942, the Jews were dispatched to *Treblinka. A second chairman was appointed for the *Iudenrat, Meir Shereshevski. Following the first deportation, the ghetto inmates met to discuss self-defense and planned to set the ghetto on fire should the Germans initiate another *Aktion to liquidate the inhabitants. Shamai Plotnicki was sent to outlying villages to acquire arms. The resistance plan could not be carried out because the dates of deportations were moved forward to November 1942, when all the inhabitants were sent to their death. Some of the ghetto inmates tried to escape deportation by breaking through the walls; 150 of them were shot in the attempt. Of the 200 persons who managed to reach the forest, a number of them were forced back for lack of food and shelter. During this period groups of Jewish partisans were organized, one of which was headed by Hersh Shabbes. Clashes broke out between the Jewish partisans in the Brzezinski forests and the Polish underground *AK (Armia Krajowa). When Siemiatycz was retaken by Soviet forces in May 1944, only about 80 Jews were left, but the Polish *AK units continued to attack Jews. After the war the Jewish community of Siemiatycz was not reconstituted, but a society of former Jewish residents of Siemiatycz was formed and functioned in Israel and the U.S.

[Aaron Weiss]

Siena, city in Tuscany, central Italy. There is documentary evidence that a well-established Jewish settlement existed in Siena in 1229. It consisted mainly of moneylenders, who found conditions there favorable for their business. Although attacked in sermons by the most implacable Franciscan friars – Bernardino da *Siena* at the beginning of the 15th century and Bernardino da *Feltre* at its close – the Jews maintained their position. Between 1453 and the end of the 16th century at least 11 Jews graduated as physicians from the University of Siena. In 1571 Duke Cosimo I, anxious to receive the title of grand duke, gave in to the pressure of the Church and introduced ghettoes in *Tuscany; Siena was one of the two places selected for the purpose. Conditions in the Siena ghetto in the 17th century, its quarrels and personalities, are strikingly illustrated in the diary of an uneducated Jewish peddler of low social and moral standing. In 1786 a new synagogue was built: the elaborate music sung on the occasion has been rediscovered and published. In March 1799, French troops occupied the town and the Jews were given full emancipation, but in the following June gangs of reactionaries from nearby *Arezzo descended on Siena, stormed the ghetto, and massacred 13 Jews, some of them inside the synagogue where the ark still bears the traces of the violence. According to Mussolini's special census of Jews in 1938, there were 219 Jews in Siena and the surrounding area. When the Germans occupied the area, most of these people disappeared into the Tuscan countryside to avoid roundups, but 17 Jews were deported from Siena and died at Auschwitz. In the years after World War II, the community had great difficulties in rebuilding itself. In the early 2000s the Jewish Community of Siena was composed of no more than 50 Jews. The synagogue, one of the most beautiful in Italy, is situated in via delle Scotte.

[Siemiatycz was retaken by Soviet forces in May 1944, only about 80 Jews were left, but the Polish AK units continued to attack Jews. After the war the Jewish community of Siemiatycz was not reconstituted, but a society of former Jewish residents of Siemiatycz was formed and functioned in Israel and the U.S.]

**SIERADZ** (Russ. *Seradz*), town in the province of Lodz, central Poland. Jews settled in the town around the middle of the 15th century and in 1446 there was a Jewish street. In the second half of the 16th century the struggle between the Jewish community and the townsman was intensified as a result of the latter's complaint about competition from Jewish merchants. In 1569 King Sigismund 11 Augustus prohibited Jews from entering the town. They resettled in Sieradz during the 17th century, but their residence was forbidden once more in 1725. In 1765 there were only 17 Jews in Sieradz. Under Prussian rule (1793–1806) Jewish merchants and craftsmen again settled in Sieradz. The Jewish population of Sieradz rose from 177 (10% of the total population) in 1808 to 595 (19%) in 1827; 1,782 in 1857; 2,357 (35%) in 1897; and 2,835 (31%) in 1921. They earned their livelihood from trade in cereals, shopkeeping, tailoring, weaving, carpentry, and haulage. From 1829 to 1862 the authorities of Congress Poland restricted the Jews to a special quarter of the town where not more than one family could reside in a room and the houses were to be built of brick and covered by tiles. A number of Sieradz Jews joined the Polish rebels in 1863. After the retreat of the Russian army (1915), Jewish cultural institutions were established in Sieradz and the Zionists subsequently acquired considerable influence. Between the two world wars, various Jewish social and political organizations were active.

[Arthur Cygielman]

**Holocaust Period**

In 1939, 5,000 (about 40%) of the inhabitants of Sieradz were Jewish. The town was occupied by German forces on the third day of the war (Sept. 3, 1939), and looting of Jewish stores immediately spread. A number of Jewish hostages were taken and some were sent to Germany. In retaliation for alleged cases of shooting in the direction of German soldiers, all Jewish males were assembled and beaten, and some were killed. The ghetto was destroyed and the buildings were burnt. In the next weeks young Jews were taken to the area and gassed in the *Gaskamper Krematorium*. Only a few Jews managed to enter the forest. About 2,000 Jews escaped from Sieradz and survived the war. In 1945–46 the Sieradz ghetto was brought into being. Its existence was over in December 1947.

**BIBLIOGRAPHY:** Add bibliography: A. Toaff, *Sered* (1954), 177–79.
was established on March 1, 1940, but no fence erected around it. During 1940–41 (before and after the establishment of the ghetto) the Jewish population of Sieradz decreased to about 25% of its prewar figure, as a result of deportations and flights to other towns of the Warthegau or to the territory of the General Government. In 1941 there were also sporadic transports of able-bodied Jews to the work camps near Poznan. By the beginning of 1942 only about 1,200 Jews remained and these were ordered to appear at a roll call twice daily. During their absence from their homes the remains of their property were looted. At the end of August 1942 the remainder of the Jewish population was sent to *Chelmno death camp with the exception of a few selected for forced labor in the *Lodz ghetto.

**SIERPC** (Rus. *Serpec*; Yid. *Sheps*), town in Warszawa province, central Poland; passed to Prussia in 1795 and was within Russia from 1815 to World War I, after which it reverted to independent Poland. A Jewish settlement in Sierpc is mentioned in documents in 1739 and 1766. In 1830 a government commission directed that Jews living in houses owned or leased by them were to be permitted to stay in Sierpc, while the rest were to be expelled. The community numbered 649 (67% of the total population) in 1800; 2,664 (56%) in 1856; 2,861 (42%) in 1921; and 3,077 (about 30%) in 1939. Jews earned their livelihood from the retail trade and crafts, generally on a small scale with inadequate earnings. They particularly suffered from the economic *boycott* instigated by antisemites from 1912. Many Jews in Sierpc were dependent on outside relief, being helped by former residents of Sierpc in the United States who established a special “rescue fund” to aid them. Prominent rabbis of the town included Meir Devash (officiated 1790–1812); Moses Leib Benjamin Zilberberg (1830–40; d. Jerusalem, 1865); Mordecai b. Joshua Greenboim (1841–58); and Yehiel Mikhal b. Abraham Goldshlak (1865–1918), a disciple of the *zaddik* of Przysucha.

[Shimshon Leib Kirshenboim]

**Holocaust and Postwar Period**

In World War II, during the German occupation, Sierpc belonged to Bezirk Zichenau, established and incorporated into East Prussia by order of Hitler on Oct. 26, 1939. When the Germans entered on Sept. 8, 1939, German soldiers, Volksdeutsche, and Poles immediately began to loot Jewish shops. Frequent street and house raids to seize Jews for forced labor were made, and Jews were beaten up. During the Sukkot holiday the Germans set fire to the main synagogue. A young boy who entered the burning building to save the Torah scrolls was shot, and the following day, the Germans, on the pretext that the boy had been the incendiary, fined the Jewish community 50,000 zlotys.

On Nov. 8, 1939, deportation of the Jews from Sierpc began. The Jews were then driven out of the town where they were loaded on to wagons and taken some distance. They were subsequently forced to continue on foot in the darkness to Nowy Dwor, many being beaten on the way. The following day the police marched about 1,800 of them to Warsaw, while the rest managed to hide in Nowy Dwor. A few craftsmen whom the Germans wished to exploit remained in Sierpc interned in a special quarter. In addition a small number of the deportees returned to Sierpc, increasing the number in the ghetto to about 500.

The ghetto was liquidated on Feb. 6, 1942. Jews were loaded onto trucks sent to the ghetto in Miawa district. On the way many were murdered.

Few Jews from Sierpc survived the war. Twenty-four survived internment in *Auschwitz*. A few individuals saved their lives by hiding on the “Aryan side.” Two of their number, who had escaped from the ghetto in Strzegow, were members of a partisan detachment in the vicinity of Plock, but after the war was over were murdered by Polish partisans.

In 1948 eight Jewish families, formerly resident in Sierpc, were living there. The societies of former residents of Sierpc influenced the municipal authorities to return the tombstones taken from the Jewish cemetery to pave the streets. The stones were used to erect a monument in memory of the Jews from Sierpc who perished in the Holocaust.

[Danuta Dombrowska]

**BIBLIOGRAPHY:** *Kehillat Sherpc; Sefer Zikaron* (Heb., Yid., 1959).

**SIERRA, SERGIO JOSEPH** (1923— ), Italian rabbi and publicist. Sierra was born in Rome, where he received a rabbinical and university education. As chief rabbi of Bologna (1948–59), he brought new life to the Jewish community after the disasters of World War II. From 1960 he was chief rabbi of Turin, and director of the Istituto Superiore di Studi Ebraici-Scuola Rabbinica “S.H. Margulies-Disegni.” He was a member of the Consulta Rabbinica Italiana and professor of Hebrew literature at Turin University (1969).

Sierra published several essays on Jewish history and literature, particularly from the period of the Middle Ages (*RMI*, 1974) and a review of *Gli Studi Italiani di Ebraico Postbiblico* (1971). Among his books is *Il Valore etico delle Mizvot* (1957), and a scientific edition of Bonafoux Bonfil Astruc’s Hebrew translation (*1433*) of Boethius *De Consolatione Philosophiae* (1967).

[Alfredo Mordechai Rabello]

In 1979–80 he was one of the founders of the Associazione Italiana per lo Studio del Giudaismo (*AISG*); he was professor of Hebrew and Comparative Semitic Languages, University of Genoa (1984–93)
dei Rabbini d’Italia (1987–92), and member of the scientific committee and the editing committee of the Rassegna Men- 
sile di Israel. In 1979 the second edition of his Il Valore etico 
delle Mizvoth was published. Among his publications are Italian 
translations of classical Hebrew works: in 1983 he published 
his translation I dotti dei cuori di Hovot ha-Levavot 
by Bahya ibn Paquda; in 1988 there appeared his translation of Rashi’s Commentary to 
Shemot, Eso; in 1990 La corona 
regale, Keter Malkhut by Solomon ibn *Ga-briol. In 1996 he 
was co-translator of the Tehilim Yerushalayim and in 1998 co-
translator of the mahzor: Seder Tefillot le-Hol, le-Shabbat u-li-
Yamim Tovin). He edited La lettura ebraica delle Scritture and 
Scritti sull’Ebraismo in memoria di M.E. Artom. In 1998 there 
appeared in his honor Hebraica. Miscellanea di Studi in onore 
di S.J.S. per il suo 75 compleanno, edited by E. Israel, A.M. Ra-
bello, and A.M Somekh, with a bibliography and a list of 
publications. In 1992 he made aliyah to Jerusalem.

[Sieby, Gottlieb Isaschar]

SIESBY, GOTTLIEB ISASCAR (1803–1884), Danish au-
thor and editor. A shoemaker turned journalist, Siebsy en-
deavored to further his liberal political views in various pub-
lications. He finally became co-editor of the conservative daily 
Flyveposten, which he acquired together with J. Davidsen in 
1852, but after some initial success the paper had to close down in 
1870. Siebsy published Lyriske Forsøg (1825), poems; two 
volumes of comic verse; and Robinson (1934), a play staged 
in Copenhagen.

[Sievers, Eduard (1850–1932), Germanist, linguist, and 
student of classical Hebrew poetry. Sievers taught at Jena 
(1871), Tübingen (1883), Halle (1887), and Leipzig (1892). In 
addition to his many important works in the field of Germanic 
studies, Sievers published contributions to New Testament 
problems. His main research in the area of Hebraica was on 
the interpretation of the metrical structure of biblical Hebrew 
poetry; the results of these efforts were published as Metrische 
Studien (4 vols., 1901–19). In this important work, he helped 
pioneer the proper understanding of Hebrew accentuation and 
elegiac verse, and was the first to introduce the anapaest as a 
metrical principle in understanding Hebrew rhythm.

[Sieves, Eduard]

SIFRA (Aram. סִיפְרָא), is a midrash halakakh from the school of 
R. Akiva on the Book of Leviticus. The Aramaic word sifra 
means “book” or “The Book.” This name was commonly used 
in Babylonia, and most likely attests to the centrality and im-
portance of this Midrash. In the Land of Israel this Midrash 
was called Torat Kohanim, corresponding to the name given 
to the Pentateuchal book. According to most scholars, Si-
fra from the school of R. Akiva contains Midrashim on Lev. 
tion of the Midrashim in Beḥukotai (Lev. 26:3 ff.) is doubtful). 
Several textual versions contain additional expositions from 
the school of R. Ishmael on Lev. 8:1–10:7; 18:1–7; 18:18; 18:28; 
20:6–22 (see below).

As is indicated by the statement of the tanna R. Simeon, 
the son of R. Judah ha-Nasi, to Bar Kappara (TB Kiddushin 
33a), and by the testimony of geonom and rishonim, Sifra 
was originally divided into nine sections. However, in the extant 
textual versions, the original portion of Sifra, which derives 
from the school of R. Akiva, is divided into eleven or twelve 
“megillot” or “dibburim”; “Nedavah” or “Vayikra” (Lev. 1:1–317); 
“Hovat” or “Nefesh” (4:1–5:26); “Zav” (6:1–7:38); “Sheraẓim” 
(10:8–12:8); “Nega’im” (13:1–59); “Meẓorah” (14:1–57); “Zavim” 
(15:1–33); “Alḥare Mot” (16:1–18:30, with omissions); “Ke-
doshim” (19:1–20:27, with omissions); “Emor” (21:1–24:23); 
“Sinai” (25:1–26:2); “Be-Ḥukotai” (26:3–27:34, with omissions). 
The introduction of a secondary division, corresponding to the 
weekly Torah portions according to the Babylonian custom, is 
probably responsible for the increase in the number of units in 
Sifra. Several proposed reconstructions of the original nine 
parts of Sifra were put forth in the past, but this question was 
satisfactorily resolved only recently, by S. Naeh, who based 
his precise definition of the boundaries of the nine sections 
on the division that is at the shared foundation of the manu-
scripts, and which is accurately preserved in ms. Parma. He 
also showed that the key to the division is not dependent on 
the content of the smaller units, but rather is determined by 
the more or less equal size of these nine units known as “megillot” 
(literally, scrolls). This, along with the name of the work as a 
whole: “Sifra,” attests to its relatively early commitment to writ-
ing in a book. Each megillah or dibbur is divided into “para-
shot,” that are further split into “perakim” (chapters), and these, 
into “halakhot,” with a numerical total at the end of each unit of 
the parashot, perakim, and halakhot that it contains.

Sifra is quoted at the present in accordance with the edi-
tion of L.H. Weiss, that was published some one hundred 
and forty years ago (1862) in Vienna. The Weiss edition is based on the 
Venice printing and corrections in accordance with Yal-
kut Shimonı, along with a section of references to the par-
allels and short interpretive notes. In the absence of a complete 
scientific edition of Sifra, great weight must also be given to 
two photocopy editions of Sifra manuscripts: the photocopy 
of ms. Vatican 66, published with an introduction by Finkel-
stein, and the photocopy of ms. Vatican 31, published by Ma-
kor (Jerusalem, 1972).

A commentary on Sifra, almost to the end of dibbu ra de-
 Nedavah, was published in Breslau in 1915, from the posthu-
mos legacy of R. Meir Friedman (Ish Shalom), who drew 
upon several manuscripts. In 1983–1990 L. Finkelstein pub-
lished a four-volume scientific edition of the first two dibbu rim 
of Sifra (Nedavah and Hovat), consisting of an introductory 
volume, the text volume that included references to the par-
allels and a concise interpretation, a volume of textual variants, 
and a volume with a lengthy commentary. A fifth volume, that 
was sent to press close to Finkelstein’s death in 1992, contains 
indexes to the four preceding volumes, along with a collection of 
Finkelstein’s scholarly articles on halakhic Midrash.
The text of Finkelstein’s critical edition is based on MS. Vatican 66, unquestionably the best text of Sifra, and, in fact, the most accurate extant midrash halakhah codex. This manuscript is of Eastern origin, most likely Babylonia, and is dated to the tenth or ninth centuries. It preserves many remnants of pure Tannaitic language, original terminology, traces indicative of the incorporation of the foreign units from the school of R. Ishmael, and mainly, an abundance of good textual readings. The manuscript has “Babylonian” vocalization above the letters written by another scribe, who in many instances also corrected the writing of the initial scribe, to adapt its traditional and textual version to his method. In the textual variants volume Finkelstein listed the changes in all the manuscripts of Sifra: MS. Breslau 108 (currently in the Jewish Theological Seminary library in New York: IT’S Rab. 2171), that is relatively close to MS. Vatican 66; the Constantinople 1523 (?) printed edition, that comprises most of the portion of Vayikra, and that apparently also reflects an Eastern textual tradition; the Italian MSS. Vatican 31 and Parma 139; the Venice printed edition; the Franco-German MS. Oxford 151 and MS. London 341, that present the Franco-German textual tradition; pages from a Yemenite MS. possessed by Rabbi J. Y. Kafish; many Genizah pages (photo reproductions of which appear at the beginning of the Introduction volume); and the versions of the major indirect textual witnesses in the Yalkutim and medieval commentaries and Midrashim. To complement this edition, attention should also be paid to a considerable number of Genizah Fragments and other Sifra pages, mainly from Eastern Europe, that were identified after the publication of the edition.

Three commentaries on Sifra by rishonim have been published: the commentary of R. Abraham ben David of Posquières, that of Rabbenu Hillel, and the commentary attributed to R. Samson of Sens; and a relatively large number of commentaries by Aharonim. To these we should add commentaries on Sifra still in manuscript form, several of which are being published in the Shoshana edition, and many testimonies of nonextant Sifra commentaries. All in all, we have evidence of fifty copies of Sifra and more than forty commentaries on the Midrash. These figures, that greatly exceed the number of copies and commentaries for the other midrash halakhah, reflect the premier standing during the medieval period of this midrash, that was very commonly studied in the past, and was an unparalleled tool for the comprehension of difficult topics relating to sacred objects and the purity laws. The fate of the scientific publication of Sifra, on the other hand, has not been as positive, and it is to be hoped that this failing will be remedied in the not too distant future.

Sifra is singular in the paucity of aggadic material it contains, the lengthy deliberations characteristic of many of its midrashic expositions, the extensive use made of the extant Mishnah, and in the great proximity of its expositions to their parallels in the MT, that apparently possessed a Midrash very similar to the extant Sifra. According to Finkelstein, the redactors of the extant Sifra made use of an early Midrash on Leviticus, that had been used by the Torah scholars who structured the priests in the work of the Temple and the sacrifices. Based on this assumption, Finkelstein attempted to resolve a long line of difficult expositions, in which the redactors cited the early Midrash verbatim, and added to it a later stratum, so that it would conform to their approach. This view suits Finkelstein’s general stance in midrash halakhah research, but it seems that many of his proofs can be refuted. Brown, on the other hand, asserts that along with the ancient Midrashim, Sifra also contains exegeses reflective of a version later than their parallels in the two Talmuds, but his proofs are unconvincing.

The core midrash of Sifra is from the school of R. Akiva, but in a later period it was augmented by several lengthy passages from the school of R. Ishmael, that apparently came from another halakhic midrash from the latter school that has not survived:

(1) the baraita of thirteen exegetical methods by which the Torah is expounded, at the beginning of Sifra. This baraita appears in all the textual versions, and there is evidence that it was already in this opening position in the geonic period. The positioning of this baraita at the beginning of Sifra might possibly reflect the ancient practice of beginning the study of the Pentateuch with the Book of Leviticus. The baraita is composed of several sources: (a) the count of the thirteen hermeneutical methods, according to R. Ishmael; (b) the exemplification of these rules in the Scholion that does not always correspond to the original meaning of these principles in the initial baraita; (c) the seven hermeneutical methods of Hillel that were inserted in the middle of the rule of she-nei ketuvim.

(2) Mekhilta de-Milu’im, that includes exegeses regarding the narrative of the dedication of the Tabernacle at the end of the portion of Zav and the beginning of Shemini (Lev. 8:1–10:7). Several textual versions of Sifra lack this Mekhilta, or include only a portion of it. The inner division signs of the Mekhilta de-Milu’im in the reliable manuscripts vary from the main body of Sifra, and the Mekhilta contains several terms from the school of R. Ishmael, and several matters whose content is characteristic of this school. The full version of Mekhilta de-Milu’im comprises two cycles of interpretations on Lev. 9:1 (“On the eighth day”), and two such cycles on Lev. 9:22–10:7. Several manuscripts, however, lack the first cycle of expositions on 9:22–10:7, and the beginning of the second cycle does not appear in one manuscript. The second cycle of exegeses on Lev. 9:22 ff. is markedly associated with the school of R. Ishmael, while the first set of exegeses on these verses lacks any clear indicators of its origin.

(3) Mekhilta de-Arayot. The original Sifra, from the school of R. Akiva, does not expound the prohibitions of incestuous and other forbidden sexual relations in Aharei Mot (Lev. 18:7–18, 20–23 and in kedoshim (Lev. 20:10–21). This omission is understandable in light of R. Akiva’s opposition to publicly expounding the passage containing these prohibitions. Several textual versions of Sifra add a second set of interpretations of Lev. 18:1–7, from Aharei Mot, and interpreta-
tions of the sexual prohibitions in Lev. 20:6–22 in Kedoshim. In the conclusion of this unit is an exposition of Lev. 18:18 and 28, not in the order in which they appear in Scripture. These hermeneutical units obviously did not originally belong to Sifra of the school of R. Akiva, as is attested by their absence from most of the textual versions, and from their inclusion, not in their proper place, in other textual versions. The usual division markers of Sifra are missing from these sections in mss. Vatican 66 and Oxford. The hermeneutical method, the names of the rabbis, and the midrashic terms in these two units patently teach of their origin in the second Midrash on Leviticus, from the school of R. Ishmael, that apparently adopted R. Ishmael’s permissive stance regarding the public exposition of the sexual prohibitions.

Along with these large units, Sifra also incorporates several short Midrashim from the school of R. Ishmael. All these remains indicate the past existence of a tannaitic Midrash from the school of R. Ishmael. This conclusion is also supported by a lengthy series of halakhic Midrashim from the school of R. Ishmael that are preserved in the Talmuds, and the paytan Yannai probably possessed such a midrashic work. At the present time, unfortunately, no direct remnant of this lost Midrash has been found.

Translations

SIFREI (Aram. סְפָּרֵי; Heb. ספרי, “books”) on Deuteronomy (sd), primarily a midrash halakah of the school of R. Akiva, encompasses six sections from Deuteronomy: 1:1–30; 3:23–29; 6:4–9; 11:10–26:15; 31:13; 32:1–34:12 (the end of Deuteronomy). Each of these six units opens with the initial verse of a weekly Torah portion according to the custom of the Land of Israel, but the principle that guided the redactors of sd for the inclusion of Midrashim for these specific sections is unclear.

The editio princeps divides sd into piskaot (פסוקאות – “the conclusion of the piska”), like the division of the printed edition of sn. Most of the manuscripts contain a division into verses (פרקיות – “the conclusion of the verse”). In a number of places, there is an alternative division into chapters (פרקיים – “the conclusion of the chapter”), and in a relatively large number of locations, the unclear abbreviation ‘ך appears. In most of the complete manuscripts, however, the division is not regular, as it is in sn, and no division markers are preserved in several remnants from Genizah codices; some of the added notations of piskaot in the relatively complete division of the printed edition disrupt the continuity of the expositions. At the same time, sd preserves several remnants of another, presumably earlier, division into “baraitot” and a later division into the Babylonian weekly Torah portions.

Most scholars regard the central unit of sd, that uninterruptedly expounds the halakhic passages in Deut. 12:1–26:15 (= piskaot 59–303) as belonging to the school of R. Akiva. It is also accepted that the midrashim on the passages “Hear, O Israel” (Deut. 6:4–9) and “If, then, you obey” (Deut. 11:13–21 (= piskaot 31–36; 41–47) contain clear signs pointing to an association with the school of R. Ishmael. The affiliation, however, of the aggadic sections in the first and last parts of sd is the subject of disagreement. Hoffmann initially thought that the entire first part of the midrash (piskaot 1–58) is from the school of R. Ishmael, while the last part (piskaot 304–357) belongs to that of R. Akiva. He later changed his opinion and also attributed the last aggadic section, beginning with piska 304, to the school of R. Ishmael. This view was fundamentally also held by Epstein, but he considered the aggadic section from the school of R. Ishmael at the beginning of sd as en-
comprising only *piska*ot 1–54. Epstein placed the changeover point from the school of R. Ishmael to that of R. Akiva at the end of *piska* 54, under the influence of a *Geniza* fragment of *Mekhilta* on Deuteronomy, from the school of R. Ishmael that was discovered by Schechter and resembles *SD*, *piska* 54, but completely diverges from the latter beginning with *piska* 55.

Goldberg reexamined this question and concluded that the aggadic sections at the beginning of *SD* (*piska*ot 1–54, excluding the passages of “Hear, O Israel” and “If, then, you obey”) and at its end are from the school of R. Akiva, in accordance with his general view that all the lengthy aggadic sections in *HM* belong to this school. It has been noted, however (see “*Midrash HaHalakhah*, (3) The Aggadic Material), concerning the aggadic material in *HM*, that most of the outstanding characteristics of the two schools do not find expression in the aggadic material and that there is in fact a high degree of similarity between the aggadic material contained in the parallel midrashim deriving from the two schools of tannaitic midrash. This similarity is quite noticeable in the aggadic material common to *SD* and *Mekhilta* Deuteronomy. In light of this, the “seam” at the beginning of *piska* 55 is to be viewed as a transition from the aggadic material that does not belong to either of the schools to the halakhic material from the school of R. Akiva.

L. Finkelstein published the scientific edition of *SD*, completed in Berlin in 1939, a month after the outbreak of World War II. Finkelstein based his edition mainly on five almost complete direct textual versions that include both *SN* and *SD* – the *editio princeps* and four manuscripts, six short *Genizah* fragments, *Midrash* Hakhhamim, *Yalkut* Shimon, and additional indirect textual versions. As regards the text, Finkelstein writes in his introduction: “For the most part, I chose the versions of *MS*. Rome, and I rejected it only where it was clear that another version was better and superior to it.” In regard to the spelling in his edition, Finkelstein explained in his introduction that “the textual version of *Sifrei* was redacted in the Land of Israel, and was obviously written in the Land of Israel spelling, or to be more precise, in the Galilean spelling. Many times a *yod* or a *vav* was added as an aid to vocalization, and the plural is usually marked with a *nun*, in place of a *mem*. For the convenience of the reader, I did not pay attention to these fine points and seemingly superfluous letters. In the main, I printed words in their usual spelling, although from the aspect of, and for the study of, Hebrew spelling, as well as for pronunciation, [not even] the crowns of letters nor the ‘point of a *yod*’ should be waived.” To aid the reader, the textual variant section also lists textual versions that support Finkelstein’s text, and not only the versions that differ from it. In the section of commentary and references to parallels, Finkelstein also made use of Horovitz’s literary estate, citing him verbatim within brackets.

The first booklets of this edition were printed individually and were reviewed by Epstein and then Lieberman. Epstein harshly criticized Finkelstein’s eclectic method of determining the text, in which he also incorporated, without any clear marker in the text itself, the versions of *Midrash ha-Gadol* that were taken from the second Midrash (MD) and other parallels, and also the emendations that the editor added on his own, and opposed to all the textual versions. Epstein similarly faulted the method of spelling adopted by Finkelstein in his edition, which frequently diverges from all the manuscripts. In addition to the methodological objections, Epstein also discussed a large number of topics, versions, and interpretations that were set forth in the edition. In conclusion, Epstein stressed that, despite all its drawbacks, “at long last we have the foundation of the text of *Sifrei* on which we can build, and the content and the builder are to be congratulated.” Lieberman’s criticism is more sympathetic. He, too, complained that Finkelstein emended the text in opposition to the manuscripts, but he emphasized the important contribution made by Finkelstein and the advantages of the edition in diverse areas, primarily the small number of corruptions it contains in relation to the size of the book, the stress placed on the mutual relations between the manuscripts that it presents, the large number of quotations from the literature of the *Rishonim*, the numerous references to talmudic and extra-talmudic parallels, and the up-to-date references to the scholarly literature.

A photocopy edition of Finkelstein’s work was published in New York in 1969. In his introduction to this edition, Finkelstein notes, with refreshing candor, “I would still like to correct the mistakes that arose during the copying of the changes; and also the textual version, where I was so audacious as to emend the text in opposition to all the accepted versions, which should not be done, but I was childish at the time.” He also directed the reader to quotations from *SD* in *Yalkut* Talmud Tohorah and Pseudo-Rabad that became available to him during the conclusion of his work and afterwards, and that should be taken into account.

All this compels the reader of Finkelstein’s edition to check the textual variants and commentary sections constantly and thoroughly, in order, with their aid, to reconstruct the manuscript versions and to examine the editor’s considerations in his determination of the text. Most of the direct and indirect textual versions of *SD*, as well as its commentaries, also include *Sifrei Numbers*, as is the case for *MS*. Vatican 32, the best textual version of *Sifrei Numbers* and *SD*. Although Finkelstein wrote that he had preferred its versions, in practice he digressed from it many times, and, in general, did not determine the text in accordance with this manuscript in most of the problematic passages, where he definitely should have remained faithful to its versions. Additionally, new texts of *SD* have since been discovered, in addition to the list of addenda that Finkelstein included at the beginning of his second edition, the most important of which are: some 45 leaves from the Cairo *Genizah*, Yehudah Nachum collection, and the archives of Modena and Nonantola, 13 leaves in *MS. JTS* Rab. 2392, and copious citations from *SD* in the Yemenite midrash in *MS. Cincinnati* 2026.

Dozens of expositions from the corresponding Midrash (Mekhilta Deuteronomy) were added to the central section of
SD (belonging to the school of R. Akiva) in several manuscripts of the latter. These irregular expositions can be identified by their clear exhibition of characteristics of the school of R. Ishmael and especially by their presence in only a few textual versions, at times in a different place in each manuscript, as they interrupt the continuity of the original exegeses of SD. Some are explicitly labeled as “tosefta” (addition) in the commentaries of Rabbenu Hillel and other Rishonim. Finkelstein published these additions in his edition in small print, and Epstein also devoted a special discussion to them, in which he disagreed with several of Finkelstein’s hypotheses regarding the origin of a number of expositions in SD as unoriginal marginal annotations. Now, with the discovery of additional Genizah fragments and Yemenite manuscripts, we see that these additions made their way from the marginal annotations only to the Western manuscripts of SD, while the Eastern textual versions of this Midrash lack these additions.

Regardind the unique nature of SD, Finkelstein observed that it still contains a significant number of early halakhot that follow the view of Beit Shammai and earlier remains from the Second Temple period, possibly even from the period of the prophets. An exacting study of Finkelstein’s proofs teaches that many do not withstand the test of critical examination and that SD does not contain more early halakhot than the other H.M. For a summary of the opinions concerning the redactors of SD, see the study by Epstein; for his commentaries on the Midrash, see the description of Sifre Numbers.

Translutions

[Menahem I. Kahana (2nd ed.)]

SIFREI HA-MINIM (Heb. יִסְפוֹרֵי הָאָמִית, lit. “books of the sectarian”). In Tosefta Shabbat 135, et al., it is stated that gilyonim (lit. “sheets of parchment”) and sifre ha-minim, may not be saved from fire on the Sabbath, but should be left to burn even if they contain Divine Names. On a weekday, however, according to Yose ha-Gelli, these Names should be cut out and the rest burned. For, according to R. Tarfon, unlike ordinary idolators who do not know God and therefore do not deny Him, “minim” (sectsarians) are those who recognize God but nonetheless deny Him. R. Ishmael adds that these books bring enmity between Israel and their Father in Heaven, presumably because they cause them to stray from the true path; minimim should therefore be shunned (referring to Ps. 139:21–22). By gilyonim is meant Gospel texts, as it is explicitly stated in the uncensored version of Shabbat 116a by Meir (second century) and Johanan (third century), who, satirically punning on the term Evangelion, called it aven gilyonim (gilyon; “scroll of falsehood”) and aven gilyonim (gilyon; “scroll of sin”) respectively (see Rabinovitz, Dik. Sof., 260, n. 60). For this reason, despite biblical citations and Names of God contained in these Gospel texts, they are left to be burned.

The term sifrei ha-minim is, however, somewhat more problematic. Bacher (in Rej, 38 (1899) 38–46), followed by Buechler and others, interprets it as meaning Torah scrolls written by minimim (cf. Sif. Num. 16; see A. Buechler, Studies in Jewish History (1956), 272). But the term as found in Hagigah 15b (see Dik. Sof., 59, n. 3) and in Sanhedrin 100b (Dik. Sof., 303, n. 10) clearly cannot bear this meaning, but means heretical writings. Moore (Judaism, 1 (1946), 86f., 243f.), S. Lieberman (Tosefta ki-Feshuthah, 3 (1962), 206f.), and others suggest that sifrei ha-minim refers to Christian writings which abound in (reinterpreted) biblical citations. A new interpretation has been suggested by M. Margaliot, who published a newly recovered “book of magic from the talmudic period” (Sefer ha-Razim, 1966). It is a strange Hebrew treatise of Judeo-heathen character and is dated by the editor to the third or fourth centuries C.E. (p. 23–28). Margaliot concludes that when the Talmud speaks of sifreiha-minim or sifrei kosemin (“books of diviners”; Tosef., Hull. 2:20, etc.), it refers to such a class of syncretist magical literature. However, his early dating of this text is still somewhat uncertain, and his explanation, though attractive, remains doubtful.

The sifrei ha-minim in Tosefta, Yadayim 2:13, mentioned there together with books of the Apocrypha, have no sanctity and therefore “do not render the hands that touch them ritu-
ally unclean." A comparison of this passage with that of Ya-
dayim 4:6 and other related texts demonstrates conclusively, however, that the correct reading is sefer hamirah, meaning Homeric literature (see S. Lieberman, Hellenism in Jewish Palestine (1950), 105-14, especially 106 n. 39). However, this ruling remains true of sifrei hamimtoo.

**BIBLIOGRAPHY:** S. Hahn, in: Emlékkönyv Dr. Mahler (1937), 427-35.  
[Daniel Sperber]

**SIFREI** (Aram. סִפְרֵי) NUMBERS (SN) is a midrash halakhah of the school of R. *Ishmael. The Aramaic word sifrei means "books," and this name was also given to a halakhic Midrash on Deuteronomy. In the past a halakhic Midrash on Exodus was also similarly named. SN consists of Midrashim on 11 biblical units: Num. 5:1–7:19, 7:84–8:4, 8:23–9:14, 10:1–10, 10:29–12:16, 15:1–41, 18:1–19:22, 25:1–14, 26:52–56, 27:1–31:24, and 35:9–34. A comparison of the material that is expounded with what is not teaches that most of the halakhic passages are the subject of exegesis, while a majority of the literary sections were disregarded by the Midrash. This criterion is not absolute, since several narrative sections, such as the complaint by the people in the wilderness or the act of Phinehas at Shittim, were expounded, while several halakhic topics lack any exegesis, such as the commandment to dispossess the inhabitants of the land and the destruction of the cult places (banot).

SN was formerly divided into two books, each named after their beginning. The first was called "Sefer va-Yedabber," after the initial word of the first verse that is expounded in Num. 5:1: "The Lord spoke [va-yedabber] to Moses, saying," and the second apparently was named "Sefer Zot," because it opened with the words "This is [zot] the statute of the Torah" (Num. 19:2). Each of these two books is divided into secondary topics, and each topic is further divided into "baraitot." The numerical sum of the baraitot is listed at the end of each subject, in the interim division of each of the two books, and at the conclusion of each of the two books themselves. Another division of SN is by verses ("תהלים פסוקים" – "the completion of the verse"), but this would seem to be a later apportionment. The division according to the Babylonian Torah portions in several second-rate textual versions is not original.

The scientific edition of SN, the editing of which was the result of thorough consideration, was published by H. Saul *Horovitz in Leipzig in 1917. The body of the edition is generally based on the editio princeps published in Venice 1546, with corrections and additions following two manuscripts – Vatican 32 and London 341 – and numerous citations from SN in Yalkut Shimoni, Midrash Hakhamim, the commentary on SN by Rabbeni Hillel, and in several medieval Midrashim. The text itself is accompanied by an apparatus listing textual variants and another consisting of a concise commentary that also contains references to the parallels. The edition begins with a lengthy introduction that includes, inter alia, a characterization of the hermeneutical method of SN. This is the first critical edition of any work from the tannaitic literature, and Horovitz began the preparation of his editions of Mekhilta of R. Ishmael and Sifrei Deuteronomy only following its completion.

When all is said and done, however, this initial edition suffers from several limitations. Additional direct textual versions of SN were discovered after the publication of Horovitz's edition, most importantly MS. Oxford 151, MS. Berlin Tubingen 1594-33, eight leaves of MS. Firkovich 11 A 269, Yalkut Talmud Torah by R. Jacob ben Hananel Sikili, which quotes extensive portions of SN, several commentaries on SN by Rishonim, Midrashim by Rishonim who made use of SN, and more. In determining the text of SN, Horovitz relied heavily upon the reworked and emended text of Midrash Hakhamim, which he considered to be the best textual version of SN; while MS. Vatican, the oldest manuscript of SN, was regarded by him to be a manuscript of lesser quality. Horovitz's erroneous appraisal of the manuscripts reflects a confusion between the textual versions of SN, on the one hand, and its parallels, on the other, and from an unawareness of several basic principles of talmudic philology that were developed only after the publication of his edition. Note should also be taken of his partial listing of textual variants and the tendency to harmonization that is evident in many of his interpretations.

As was mentioned above, the best manuscript of SN is Vatican 32, whose superiority to the other textual versions is expressed in various ways, such as: traces of the early division of SN, remnants of tannaitic language, rare or difficult words that were emended in other textual versions, original terminology, the style of the exegeses, the Mishnah of SN that other textual versions frequently emended in accordance with the extant Mishnah, baraitot that were not reworked in accordance with their parallels in TB, occasionally surviving remnants of early halakhah, a version of the Bible different from the masoretic text, and "foreign" texts whose exceptional nature is more clearly evident in this version. Along with its original formulations, MS. Vatican also contains many homoteleuton, interchanged letters, and even a small number of emendations and adaptations. Obviously, other textual versions must be employed as well, both in order to reconstruct the original versions of SN and to study their evolution in the medieval period.

A number of Rishonim composed commentaries on SN, most of which also interpret Sifrei Deuteronomy. The most important of these works are the commentaries of Rabbeni Hillel, the commentary attributed to Rabad, the commentary in MS. Mantua 36, and that by R. Soliman Ohana. The especially outstanding commentaries on SN by *Aharonomim include those by R. David *Pardo, R. Meir *Friedmann (Ish Shalom), and R. Naphtali Zvi Judah *Berlin.

An exceptional feature of SN is the relatively large number of "foreign" texts that it incorporates, some of which are inserted in the middle of expositions, interrupting their continuity; while the placement of others does not follow the order of the Pentateuch. Some of these foreign texts are cited in SN in the name of R. *Judah ha-Nasi or were attributed to him in other talmudic parallels. Most of Judah ha-Nasi's other dicta
in SN, which harmonize with the course of the expositions, were included as a last opinion presented in the conclusion of the exegesis. This fact leads us to believe that the initial redaction of SN was followed by the insertion of another stratum from the generation after R. Judah ha-Nasi, which is possibly indicative of the relatively early redaction of this halakhic midrash. The brevity of the exegeses in SN, in comparison with the other halakhic midrashim, and the relative paucity of associative expansions in this midrash would seem to support this suggestion.

Translations

SIFRE ZUTA DEUTERONOMY

SIFRE ZUTA DEUTERONOMY (SZD) is a midrash halakhah of the school of R. Akiva. The Aramaic word “zuta” means “small,” paralleling the name “Sifre Rabbati” [the large Sifre]’ given to Sifrei Numbers (SN) by several of the Rishonim. The Genizah remains of SN, however, do not attest to the limited scope of this midrash as compared to SN, and this name may possibly attest to its rarity. Other names for this midrash are “Sife,” “Zute,” “Sife Yerushalmi,” “Sife shel Panim Aherot,” Mekhilta, “Makahlah,” and others. The exact extent of SN has not been determined, but, like SN, it clearly opened with the exposition of the first halakhah in Num. 5:2 (as is demonstrated from the list of books discovered in a Cambridge Genizah fragment), skipped the expositions of the verses in Num. 31:25–38 (as in the Genizah fragment) just like SN, and as a general rule included midrashim on the same verses that are expounded in SN. In any event, no conclusions can be drawn, based on the chance non-preservation of relevant quotations, that certain passages or Torah portions were not the subject of exposition in SN. This midrash was originally divided into several large subunits, each of which encompassed several topics. The large units, whose scope and names are not known to us, were divided into numbered “parashot.” Zanz was the first scholar to collect material about the Rishonim who brought citations from SN and about the different names of this midrash, and following him, Brull and other scholars thoroughly discussed the midrash. Schechter successfully identified and published a Genizah fragment consisting of two leaves from SN, on the Torah portions of Matot and Masai. At the same time B. Koenigsherver began to reconstruct the midrash in orderly fashion, but he was able to publish only two booklets, from the portion of Bamidbar to that of Behalotekha. The first reconstruction of SN as a
whole was made by Horovitz, initially with notes in German, and afterwards in Hebrew, with an independent apparatus of textual variants and an extensive commentary, that included references to the parallels. The second edition, published in Leipzig in 1917 together with Horovitz's edition of SN, also includes an introduction that describes the unique nature of the midrash.

Horovitz based his reconstruction primarily on the explicit quotations of "Zute" in Yalkut Shimoni, the passages in Midrash ha-Gadol that he asserted were copied from SN, a Genizah fragment published by Schechter, quotations that were incorporated in Num. Rabbah on Nos, and other citations in the literature of the rishonim. After the appearance of the Horovitz edition, Epstein published a fragment of five leaves from SN on the passage of the red heifer that he identified in material that had been sent to him from St. Petersburg. Also published were a small number of new citations from SN found in the literature of the Rishonim, to which we may add several new quotations. The Horovitz edition may also be emended in accordance with MS. Oxford 2637 of Yalkut Shimoni, the manuscripts of Midrash ha-Gadol on Numbers, and the manuscripts and the editio princeps of Num. Rabbah. On the other hand, one should eliminate from the Horovitz edition a relatively large number of passages that were included on the basis of Midrash ha-Gadol, but that did not, in fact, originate in SN, rather in other books, including SN, MS, the Mishnah, Avot de-Rabbi Nathan, the two Talmuds, Tanhuma, Mishnat R. Eliezer, Pirkei de-Rabbi Eliezer, the Mishneh Torah of Maimonides, and the original additions made by the author of Midrash ha-Gadol himself.

SN is the subject of two traditional commentaries (Jas- kowicz and Garbus) and of modern studies written by three major scholars, Epstein, Albeck, and Lieberman, who devoted an entire book to this midrash. Although SN is a Midrash from the school of R. Akiva, it is distinguished from the classic Midrashim of this school in a number of ways. It makes use of a relatively large number of unique terms, mentions the names of several Tannaim who do not appear elsewhere, possesses a style that is at times absent from the other sources, and uses rhetorical and poetical language, includes a large quantity of halakhot undocumented in other sources and otherwise unknown disagreements of Beit Hillel and Beit Shammai, and consistently quotes a mishnaic source that does not correspond to the extant Mishnah. The scholars have also noted that Rabbi's name is absent from this work. Lieberman drew on the basis of early activity, a basalt lintel was uncovered in Dabura in the Golan, bearing the inscription: "This is the beit midrash of Rabbi Eliezer ha-Kappa." The entire issue accordingly requires re-examination, and it seems that only the discovery of new passages from this midrash, and from other midrashim that were redacted by this school, will likely advance the study of such issues.

Translation
D. Borner-Klein, Der Midrasch Sifre Zuta (Stuttgart 2002).

SIGHET (Hung. Máramarosziget), town in Crisana-Maramures, N.W. Romania, between 1940 and 1944, part of Hungary. Jews had already settled there by the 17th century and were taxed from 1728. Community life in Sighet was traditional and also influenced by religious trends, including *Hasidism. The Frankists (see Jacob *Frank) too found adherents there. Ten Jewish families (39 persons) lived in the town in 1746; there were 142 Jews in 1785–87, and 431 in 1831. An organized community already existed during the second half of the 18th century, when the rabbi was Zevi b. Moses Abraham (d. 1771) from Galicia, a determined opponent of the Frankist movement. Other rabbis included Judah ha-Kohen *Heller, who served there until his death in 1819; and Hananiah Yom Tov Lipa *Teitelbaum (1883–1904) of the hasidic family of *zaddikim. The Sighet community had joined the organization of Hungarian Orthodox communities in 1883, but the liberal elements, amid considerable dispute, later founded their “Sephardi community.” From 1906 its rabbi was Samuel Danzig (b. 1878), who perished in the Holocaust. The last rabbi of the Orthodox community was Jekuthiel Judah *Teitelbaum, who also died in the Holocaust. Sighet had yeshivot, Jewish schools, Zionistic organizations, and Hebrew presses and libraries, including the Israel Weiss Library. Attempts were made to publish periodicals in Hebrew, Yiddish, and Hungarian. The majority of Jews in the district were impoverished. The Jewish population increased rapidly during the second half of the 19th century. There were 4,960 Jews in the town (about 30% of the total population) in 1891; 7,981 (34%) in 1910; 10,609 (about 38%) in 1930; and 10,144 (39%) in 1941, the highest proportion of Jews in any Hungarian town. Natives of Sighet included the Yiddish author Herzl Apsán (1886–1944); the humorist, editor, and author, Hirsch Leib *Gottlieb; the rabbi and historian Judah Jekuthiel *Greenwald; the Hebrew and Yiddish poet J. Holder (1893–1944); the author Elie *Wiesel; the violinist J. *Szigiét; the Yiddish author J. Ring; and the pianist Géza Frid. Between the two world wars the local Jews suffered from the Communist Trade Union Education League. Sigman succeeded in defeating the communist challenge during his five years of office but on his resignation in 1928 he left the union a smaller and impoverished organization.

SIGMAN, MORRIS (1880–1931), U.S. labor leader. Born near Akkerman, S. Bessarabia, Sigman left Russia for England in 1901 and settled in New York two years later. He worked as a cloak presser in the needle trades and joined the Jewish labor movement, leading a cloak pressers’ revolt against the International Ladies Garment Workers’ Union (ILGWU). The cloak pressers formed an independent union affiliated to the Socialist Trade and Labor Alliance and later to the radical labor organization, Industrial Workers of the World (IWW). However, the IWW had little appeal to the Jewish workers of New York and in 1907 Sigman’s union rejoined the ILGWU. Sigman devoted his energies to the creation of effective and stable trade unions in the needle trades. He organized the successful shirtwaist workers’ strike (1909–10) and managed the picket committee during the cloakmakers’ strike (1910). He was elected secretary-treasurer of the ILGWU in 1914 only to resign a year later, but after managing the New York Joint Cloak Board (1917–20), he was elected a vice-president of the ILGWU in 1920. He retired in the following year but was recalled from retirement in 1923 to serve as ILGWU president in the face of an impending union split under pressure from the Communist Trade Union Education League. Sigman succeeded in defeating the communist challenge during his five years of office but on his resignation in 1928 he left the union a smaller and impoverished organization.

[Melvyn Dubofsky]

SIGNET (Kaminker), SIMONE (1921–1985), French film actress. Born in Wiesbaden, Germany, the daughter of a French Army officer, Signoret (her mother’s name) was brought up in Paris. A femme fatale role in Macadam (1946) started her rise to stardom in French films. In several productions she appeared with the singer and actor Yves Montand, whom she married in 1951. She achieved international stardom and an Oscar for her role in the British film Room at the Top (1959) and subsequently acted in other British, Italian, French, and American films, including L’Aveu (1970), La Vie devant soi (Madame Rosa; 1977), L’Adolescente (1979), and Chère inconnue (1980).

[Jonathan Licht]

SIGNS AND SYMBOLS. A sign, in biblical Hebrew 'ot, is a mark, an object, or an event conveying some particular meaning. A sign is called mofet (“portent”) when it is portentous or
marvelous in character. Symbols constitute a special category of signs. They are visible objects generally acknowledged to represent, by way of association or analogy, something that is invisible. Symbols are not to be confused with "myths, metaphors, or poetic comparisons. The symbolic acts of the prophets, reported in the Bible, are in fact symbols that are acted out. Ancient Hebrew does not possess a special term that corresponds exactly to modern understanding of a symbol, but words such as 'ot ("sign, token"), mofet ("portent"), demut ("likeness, shape"), zelem ("image, statue"), or temunah ("form") are sometimes used in a similar sense.

The direct or indirect author of an 'ot in the Bible is almost always God. According to C.A. Keller, this indicates that the term originally belonged to the religious sphere. In the oldest biblical texts, 'ot means an oracle or an omen by which God guaranteed that He entrusted someone with a special mission (Ex. 3:12; cf. 4:8–9, 17, 28, 30; Judg. 6:17; 1 Sam. 10:7, 9), or that His might will participate in an undertaking (1 Sam. 14:10), or that a prophetic statement announcing future events is true (1 Sam. 23:4; II Kings 19:29; 20:8, 9; Isa. 7:11, 14; 37:30; 38:7–8, 22; Jer. 44:29). The word mofet is also employed in this sense in 1 Kings 19:16; 20:5, 6, 'ot designates also heathen omens (Isa. 44:25), especially astronomical ones (Jer. 10:2), and sometimes denotes a token of good faith (Josh. 2:12) or kindness (Ps. 86:17), evidence (Job 21:29), an example (Ezek. 14:8; cf. Ps. 71:7), or a distinguishing mark, e.g., the sign of Cain (Gen. 4:15), the blood mark on the Israelite houses in Egypt (Ex. 12:13), or the emblems of the tribes in the wilderness of Sinai (Num. 22; see "Banners").

God's miraculous interventions, principally in Egypt, are often considered "signs" which provided evidence of His supernatural power and of His election of the people of Israel (Ex. 7:3; 8:19; 10:2–3; Num. 14:11–12; Deut. 4:34; 6:22; 7:19; 11:3; 26:8; 29:2; 34:11; Josh. 24:17; Jer. 32:20, 21; Ps. 78:43; 105:27; 135:9; Neh. 9:10; cf. Isa. 55:13; cf. Ps. 74:9). In these texts, the word 'ot is practically synonymous with "wonder" or "miracle," and it is often employed as a parallelism for mofet (Ex. 7:3; Deut. 4:34; 6:22; 7:19; 26:8; 29:2; 34:11; Jer. 32:20; 21; Ps. 78:43; 105:27; 135:9; Neh. 9:10), which is also used in that sense in Exodus 4:21; 7:9; 11:9, 10; Joel 3:3; Psalms 105:5; I Chronicles 16:12; and II Chronicles 32:24, 31. Certain cultic institutions or sacred objects came to be regarded as "signs" commemorating divine actions in the past and containing a lesson for successive generations. Among these "signs" are the unleavened bread (Ex. 13:9), the dedication of the firstborn male (Ex. 13:16), the Sabbath (Ex. 31:13, 17; Ezek. 20:12, 20), the teaching of the Shema (Deut. 6:4; cf. 11:18), the originally ritual malecitions, characterized also as "portents," which are referred to in Deuteronomy 28:46, the censers that were converted into an overlaying of the altar (Num. 17:3), Aaron's rod (Num. 17:25), the twelve stones in the Jordan (Josh. 4:6), and the sanctuaries of the Lord in Egypt (Isa. 19:20; cf. 66:19), such as that of Elephantine, which were probably inspired by the Israelite places of worship. In the Priestly tradition of the Pentateuch, the rainbow (Gen. 9:12, 13, 17) and circumcision (Gen. 17:11) are called "signs of the covenant," 'ot berit, because they are guarantees of a covenant. The sun, moon, and stars are considered divine "signs both for festivals and for seasons and years" (Gen. 1:14; cf. Ps. 65:9).

In the prophetic books a "sign" (Isa. 8:18; 20:3, Ezek. 4:3) or "portent" (Ezek. 12:6; 11:24; 27; cf. Zech. 3:8) can also refer to a symbolic act or symbolic behavior. A number of such "symbolic acts," described or actually performed by the prophets, are recorded in the Bible. For instance, Hosea symbolized Israel's relation to the Lord in an unhappy marriage to an unfaithful wife (Hos. 1–3; but see "Hosea"), and he named his children Lo-Ruhamah ("Not-Loved") and Lo-Ammi ("Not-My-People") to express the fate of the people (Hos. 16–9, 2, 23, 25). Isaiah used the same method and called his children by names such as Shear-Jashub ("A remnant shall return"; Isa. 7:3) and Maher-shalal-hash-baz ("Speed-Spoil-Hasten-Plunder"); Isa. 8:4. Thus he could say: "the sons whom the Lord has given me are signs and portents in Israel" (Isa. 8:18). He himself went "naked and barefoot… as a sign and a portent to Egypt and Cush" (Isa. 20:3). Other acts of this type are Ahijah the Shilonite's tearing his garment into 12 pieces and giving ten to Jeroboam to symbolize the partition of Solomon's kingdom (1 Kings 11:29–31), and Zedekiah son of Chenaanah's butting with horns to show that the king of Israel would gore the Syrians with horns of iron (1 Kings 22:11). Such symbolic actions are particularly common in Jeremiah and Ezekiel. For instance, Jeremiah shattered an earthen vessel in front of the people (Jer. 9:10–11) in order to symbolize in a concrete manner the destruction of Jerusalem. On another occasion, he carried a yoke to show that the yoke of Babylon would be placed upon Judah and its allies (ibid. 27:28). Ezekiel acted out the siege of Jerusalem (Ezek. 4.1–3) and the deportation (ibid. 12:1–16), thus becoming himself a "sign" (ibid. 4.3) and a "portent" (ibid. 12:16, 11) for the Israelites. And when the prophet lost his wife, the Lord forbade him to observe the rituals of mourning (ibid. 24:15–24) in order to serve as a sign for the people (24:24, 27). As noted by Nahmanides in the 13th century (commentary on Gen. 12:6) and stressed by moderns like G. Fohrer, such actions symbolizing future developments are quasi-magical and serve to bring these events about.

The "symbolic acts" of the prophets are only one particular form of symbolism found in the Bible. Many of the Israelite symbols are similar to those of other Near Eastern peoples. In fact, the origins of army, civil, and religious forms which expressed themselves in symbols are the same throughout the Near East. For instance, the impressive symbolic ceremony connected with contracting a covenant is found in Mesopotamia, Syria, and Israel: An animal was killed and dismembered, and the partners in the covenant walked between the pieces to show that they invoked a similar doom of destruction upon themselves if they proved unfaithful to their oath (Gen. 15; Jer. 34:18–19). The verbal agreement was thus accompanied by a symbolic act which produced a profound and lasting impression on the mind, and indicated to both parties the fate they would deserve in case they violated the agreement. A
similar symbolic gesture is found in Deuteronomy 21:4: The calf’s neck was broken to call for the same fate upon the unknown murderer, while the elders of the city, by washing their hands (Deut. 21:6; cf. Ps. 26:6; 73:13), indicated symbolically that the city was free of guilt. It was believed that these symbolic actions were being executed in the presence of the deity who served as a witness and a guarantor of their permanent value. Therefore, lifting up the hand toward heaven and calling upon the authority of the deity was also a symbol used in taking an oath (Gen. 4:12; Deut. 32:40; cf. Ex. 6:8; Num. 14:30; Neh. 9:15, et al.).

In the realm of profane symbols, the giving of the hand showed that a relationship was established between two persons (1 Kings 10:15; Ezek. 17:18). By having a person sit at one’s right hand one showed a willingness to share authority with him (1 Kings 2:19; Ps. 110:1), while by laying one’s hand on a person, one symbolized the transference of power from one party to another (Num. 27:15–23). Similarly, blessing is conveyed, and sin transferred, by laying on of hands (Gen. 48:14; Lev. 16:21). Burial and mourning customs involved numerous symbolic actions. The mourner, for instance, demonstrated his sorrow by lacerating his body and cutting his hair (Jer. 7:29; 16:6; 41:5; 48:37–38; Ezek. 27:31; Amos 8:10; cf. Lev. 19:27–28; Deut. 14:1), by rending his clothes (1 Sam. 4:12; 11 Sam. 1:11–12; 3:31) and girding himself with sackcloth (11 Sam. 33:1), by placing ashes upon his head (1 Sam. 4:12; Ezek. 27:30), and sitting on the ground (Gen. 23:2–3; Ezek. 26:16; Lam. 2:10). There were also funeral meals (Jer. 16:7; Hos. 9:4), originally conceived as a kind of communion with the dead which consoled the survivors. The enthronement of the king and the exercise of his authority, marriage ceremonies, and birth customs also involved different symbolic acts and the use of various symbols. However, it was mainly in the domain of the cult that symbols were employed. The worshiper, for instance, spread out his hands in prayer toward the deity, who was supposed to dwell in heaven or the Temple, to show that he desired to obtain divine mercy and help (Ex. 9:29, 33; 1 Kings 8:22, 38, 54; Isa. 1:15; Ps. 28:2; 44:21; 63:5; 141:2; Job 11:13; Lam. 2:19; Ezra 9:5; 11 Chron. 6:12, 13, 29). Of course, the most important religious symbols were the representations of the gods, called ‘ot (“sign”); Ps. 74:4), zelem (“image, statue”); Num. 33:52; 11 Kings 11:18 = 11 Chron. 23:17; Ezek. 7:20; 16:17; 23:14; Amos 5:26), or temunah (“form”); Ex. 20:4; 12:28; Deut. 4:12, 15, 16, 23, 25; Ps. 17:15; Job 4:16). In fact, the image was not merely a symbol of the god whom it represented. Rather, the god was supposed to be present within the image or to be identical with its essential nature. It is true, of course, that the official cult of the 12 tribes and the later Israelite cult in the Temple of Jerusalem were aniconic. However, the ark of the covenant symbolized God’s presence among His people and Judges 17–18 refers to the Danite idol. A frequent appellative for the Lord is 'abhir Yáqov/Yisrael (“Bull of Jacob/Israel”); Gen. 49:24; Isa. 1:24; 49:26; 60:16; Ps. 132:2, 5) or ‘egel (“Young Bull”); Ex. 32:4, 8; 1 Kings 12:28; Neh. 9:18). There is little doubt that the ancient Israelites borrowed their bull symbolism from the Canaanites. There is not, of course, a perfect equation between the Canaanite and ancient Israelite uses of this symbolism. For the Israelites, the bull signified power, whereas for the Canaanites it was primarily a symbol of sexual potency. It should be noted, moreover, that for the Israelites the “young bull” symbolized the platform upon which the unseen God stood, rather than God himself.

The lion was regarded as a symbol of strength and sovereignty. As an emblem of power, it became, most probably in the times of David and Solomon, the symbol of the tribe of Judah (Gen. 49:9). The figure of the lion is among the few which are found on glyptic. There is a carved figure of a roaring lion on the seal of “Shemâ’, the servant of Jeroboam” (Pritchard, Pictures, 276). Lions also appear, together with oxen and cherubim, on the bases of the brass sea in the Temple (1 Kings 7:29). The two pillars of Jachin and Boaz (1 Kings 7:15–22; 11 Chron. 31:5–17) were probably borrowed from the two pillars of the temple of Melkart at Tyre. But, in general, the various images, cult objects, sacred garments, or rites performed in the Temple symbolized, at least originally, some specific religious conception. Even the cultic “Tabernacle erected for the ark and the Temple of Jerusalem, which were to the Israelites the visible dwelling places of God, were intended to symbolize His invisible abode.

For Talmudic period see “Divination.

[Edward Lipinski]
vedis in the old currency, but, in 1491, the annual tax of the community amounted to 14,974 maravedis. In 1490 the community of Sigüenza was called upon to contribute 206,464 maravedis toward the redemption of the Jews taken captive in Málaga. At the time of the Expulsion of the Jews from Spain in 1492, a number of houses which had been owned by Jews since 1449 were sold to Christians because of the debts still owed by Jews. In 1493 the crown reacted in favor of the Conversos in the townlet and prohibited the use of derogatory names against them. In 1496 it was decided to sell the synagogue and the property attached to it. From that year the notary of the Inquisition tribunal lived there.

[Amnon Cohen (2nd ed.)]

SIHON

(Heb. סִיחוֹן, Ṣîḥôn), Amorite king of *Heshbon, which was a city N.N.E. of Mt. Nebo. According to biblical tradition Sihon conquered the territory of Moab, as far as the Arnon (Num. 21:26). When the Israelites, on their way from the wilderness to the Promised Land, asked his permission to pass through his territory, Sihon refused to grant it, and tried to bar their way. A battle took place, with the result that Sihon was defeated, his land conquered, and Heshbon destroyed (Num. 21:21–25; Deut. 2:26–37). An echo of this conquest was preserved in the poem of the "ballad singers" (Num. 21:27–30). Scholars differ as to the extent of Sihon’s territory. M. Noth (see bibl.) thinks that he controlled only an area surrounding Heshbon, and that the boundaries given in Judges 11:22, for example, reflect the history of the subsequent Israelite occupation of the region. Others maintain that Sihon exercised his power over various Amorite and Midianite princeonds in the southern part of Gilead, from Arnon in the south to Jabbok in the north, and from the desert to the Jordan (cf. S. Ahitub, in bibl.; Num. 21:21–30; Deut. 2:26–37; Josh. 12:2; 13:21, 25–27; Judg. 11:21–22).

SIJILL

is an Arabic word which goes back to a Latin origin, and appears in a Koranic verse (xxi, 104) where it means “a scroll of documents. In classical Arabic it was used for a document that contained the decisions of the kadi, then for a collection of such documents, and it hardly changed over the ages. As early as the second century of the Hijra a kadi was dismissed for failure to keep the Sijill records of his court properly. The keeping of such records became a regular judicial procedure, and the need for the correct formulation of such documents brought about the emergence of a distinct branch of legal literature from the eighth century. In a document from the middle of the 13th century in Jerusalem, the kadi points out the formal duty of the court scribe to count all the pages of the court proceedings and be their custodian (Jerusalem Sijill, Volume 237, page 98).

Scant references in the contemporary literature, as well as an impressive collection of several hundred pages from *Mamluk times recently discovered in Jerusalem, attest to the ongoing practice of registering court decisions by the kadi. However, it was under the Ottomans that this became systematically prevalent throughout the empire; hence, vast collections of court registers have survived to these days. Major towns like *Cairo, Damascus, Aleppo, Hamat, and smaller ones like Jerusalem, *Jaffa and Nablus, hold depositories of long series of bound volumes covering chronologically the cases adjudicated by the kadi.

The sijill of the Shar’i court of Jerusalem consists of more than 500 volumes (averaging 500 pages of 28 by 21 cm. mostly) of proceedings covering 400 years of Ottoman rule, up until the World War I. It stretches over a wide spectrum of topics: Civil and criminal litigations, economic and social matters, inheritances and personal status cases, endowments and religious practices, demography and topography, architecture and buildings, coins and prices, Sultanic decrees and taxation orders. Most cases concern the Muslim majority of the population, however, as Christians and Jews, too, came regularly to the court, this source is a trove of information on the realities of these communities. These registers, which are actually the drafts of the court decisions, mirror the precise chronological order in which they were given; hence, the thousands of cases concerning the Jews who resided in Jerusalem or visited it are inextricably mingled with the rest. They may, however, be grouped under the following categories: communal organization and institutions (leadership, *Karaites and other internal divisions, synagogues, ritual baths, cemeteries, communal debts and real estate, pilgrimage, taxation); relations with their neighbors (conversion to Islam, dress code, moral and physical offenses, wine production, thefts and losses, death); economic activities (professions, guild membership, real estate transactions, leasing and renting, financial transactions, loans and debts, waqf religious endowments); legal status (women and the family, guardianship, legacies, slaves and maids). The sijill thus reveals a totally new perspective for our understanding of Jewish life within the Ottoman society: the formal limitations they were subjected to and the occasional molestations they suffered notwithstanding, they enjoyed religious and administrative autonomy and were a constructive element of the local society and economy.

[Amnon Cohen (2nd ed.)]
SIJILMASSA (Sijdjemessa), town in S.W. *Morocco. Since the late Middle Ages the region has been called Tafilalet. Sijilmassa was founded in 757 by the Zenata *Berbers. An important Jewish community existed there from its inception, whose members controlled the gold trade and also carried on an extensive commerce as far as *Egypt and *India. In the region ancient Jewish tombstones from before the Second Temple period survived. The *Fatimid mahdi *Ubayd-Allah was imprisoned in Sijilmassa in 909 after he had been denounced by a Jew. Once he regained his freedom, he seized the throne of Iriqiyya (present-day *Tunisia) and had the wealthy Jews of Sijilmassa murdered. The Jews who survived, however, rapidly rose to their former economic and social importance. The chronicler Abraham Ibn Daud writes that when Sijilmassa passed to the Cordoba *Umayyads, its community, like all the Jews in the caliphate, was placed under the authority of Jacob ibn Jau. Sijilmassa is repeatedly mentioned in traders’ letters found in the Cairo *Genizah. The town was a desert port and terminal for the caravans going south to the Sudan and east via *Kairouan to *Cairo. S. D. Goitein analyzed *Genizah documents which illustrated the operation of a Jewish network, based on kinship and religious ties, between partners in *Almeria, *Fez, and Sijilmassa along the route to *Cairo.

During the 11th century the Jewish scholars of Sijilmassa established contact with the geonim of *Iraq and Ereẓ Israel. There are responsa sent by *geonom to Sijilmassa. One of them was written by Hai Gaon. There is also one responsa collection which was sent by a Babylon *gaon to Rabbi Joseph ben Amran, the *dayyan of Sijilmassa. During this period new rulers, the Zenātes, remigrated to the region which, in addition to Sijilmassa, consisted of such distant towns with a Jewish majority as *Sefrou and Qal‘at Mahdi ben Tawala in the Fazāz (Middle Atlas) region. In 1054 the *Almoravides occupied Sijilmassa and ravaged all its territories. The Jews shared in the suffering, but once their rule was well established the Almoravides ameliorated the Jews’ situation. A detailed report of events in Sijilmassa as recorded from eyewitness refugees was found in a letter written in 1148 by Shelomo ha-Kohen of Fustat to his father, a native of Sijilmassa who was then in *Aden. Students from Sijilmassa traveled to study Torah in the academy of Rabbi Joseph Ibn Migash (d. 1141) in the Andalusian city of Lucena.

In 1145 Sijilmassa allied itself with the *Almohads. A short while later, a new governor appointed by this dynasty presented the Jews of the town with the alternative of conversion to *Islam or death. Some 150 Jews preferred to die, while the others – led by the *dayyan Joseph b. Amram who later returned to Judaism – converted. One of the town’s scholars, R. Judah b. Farhon, succeeded in escaping: he subsequently returned and became *dayyan of the town. He maintained a correspondence with *Maimonides. Other scholars of Sijilmassa include: R. Saadia b. Isaac, Abu-Yusuf b. Mar Yusuf who was the son of the chief *dayyan Rabbi Joseph b. Amram, and R. Solomon b. Nathan, a great sage, who edited a prayer book in 1203. Another scholar, R. Judah b. Joseph Sijilmassi, lived in Sijilmassa at the close of the 14th century. Toward the end of their rule the fanaticism of the Almohads was mitigated, and Jews held senior positions in the Marinid economy, for in 1243/4 the treasurer of Sijilmassa was a Jew by the name of Ibn Shalukha. In 1247 King James I of Aragon gave a safe-conduct to a Jew, a resident of Sijilmassa, inviting him to move together with his family “and all the Jews and Jewesses” of Sijilmassa to Majorca and Catalonia. After the Merinid occupation Sijilmass’s trade developed considerably. The Jews extended their activities to Catalonia, Sicily, and other countries, to which large numbers of them also emigrated. The economic life of the Jews of Sijilmassa flourished and the Jewish tinsmiths were named by the Muslims “Filali,” after the city name of Tafilalet, and were named “Moroccan” by the European traders. They were also manufacturers of carpets, wool blankets and also developed the indigo trade. Sijilmassa was destroyed after 1393 and all traces of the community disappeared. In the surrounding Tafilalet area many Jewish settlements continued, generally living in peace by paying tribute either to the *Berber rulers or to the Arab nomads. The Jewish community in the region flourished until the massacre in 1492. The expellees from *Spain after 1492 did not have any real influence in the region of Tafilalet, and the Jewish population did not adopt any Spanish or *Fez regulations. Rabbi Hayyim Gagin tells in his book Ez Ḥayyim that in 1526 the Muslim residents of one village in Tafilalet region plundered the Jewish residents and raped Jewish women. In 1623 Jewish women were captured in Tafilalet and sold to Muslims (Ibn Denan, Divrei ha-Yamim shel Fez, p. 42). At the beginning of the 18th century Rabbi Shalom Adhan moved from Tafilalet to *Tetuan.

The capital of the region at that time was Erfūd. In the last years of the 19th century the English missionary Robert Kerr treated a few Jewish patients in Tafilalet. The emissary Raphael Makhlufl Abraham Khayat visited the Tafilalet region in 1836. The Tiberian emissary to Morocco in 1890, Rabbi Elijah Iluz, was born in Mizgida by Tafilalet in 1860, but grew up in Tiberias. Many Jews who escaped from the Jewish quarter in Tafilalet settled in 1919 in Erfūd, while numerous others settled in the Bodinev community and in Algeria. They established their synagogue in Erfūd. The name Erfūd was written in Jewish contracts only from 1950. Many Jews continued to write the name of Sijilmassa in their contracts. The Abihazira family cooperated with the French government of the region and helped the French in occupying the area in the second decade of the 20th century. The Muslim residents took revenge and murdered David Abihazira. In 1942 the local French ruler in the little town Gurama, located in the Tafilalet region, degraded the Jews and behaved toward them with contempt. He obliged them to pay very heavy taxes, to wear only simple clothes with black hats and black shoes, forbade them to ride horses and forced them to fulfill other *Omar covenant restrictions. He also beat Jews who wore a tarbush. In 1947 the community of Erfūd numbered between 1,000 to 2,000. The immense Tafilalet area, which had only 6,500 Jews (2,898 men and 3,608 women) in 1947, was the source of con-
siderable migration to northern Morocco and *Algeria. After 1948 most of the Jews left the Jewish quarter of Tafilalt and immigrated to Israel. According to Professor H.Z. Hirschberg who visited Tafilalt in the mid-1950s, the community of Tafilalt consisted then of the Abiha'iza academy and the O'Haley Yosef Yizhak Talmud Tora (of Chabad). More than 1,000 Jews lived there, many of whom were merchants. The shops were closed on Sabbath. In Risani, built on the ruins of Sijilmassa, c. 625 Jews lived in that time. The family Abiha'iza settled in Tafilalt for a few generations. In the responsa of Rabbi Jacob Abiha'iza, who lived in Risani (d. 1880), there are several historical materials about the local Jewish community. This rabbi was the religious leader of the Tafilalt region. His synagogues were destroyed by a French bomb in 1933. Rabbi Israel Abiha'iza immigrated to Israel only in the last wave of *aliyah from Tafilalt in 1964. The wedding minhagim in the Erfoud community were identified with those of Tafilalt until the mid-1950s and based upon them. The marriage, divorce and mourning minhagim of Tafilalt were written by Shalom Abiha'iza in his book Meliz Tov (1973). In the community, marriage contracts according to the Sijilmassa version have survived. In the communities of Erfoud and Tafilalt there was a special annual ceremony called *Happat Netirim (youth wedding) which was conducted in Tafilalt by Rabbi Jacob Abiha'iza. In Tafilalt a special version of the Sharrh (the translation of the Bible in Morocco) was written. The local sages wrote the words which entered the Sharrh in Hebrew characters according to rules insufficiently crystallized. The community of Erfoud existed from 1917 to 1975. The Jewish cemetery in Erfoud is sandy but otherwise well-preserved. The Jewish cemetery in the town of Risani is unwalled, facing the walls of the town.

[David Corcos / Leah Bornstein-Makovetsky (2nd ed.)]

**SIKARIKON**, a term in tannaitic literature, referring to property, particularly land and slaves, expropriated from Jews by the Roman authorities. Most of the relevant laws deal with the legal status of such land which has been acquired or which one wishes to acquire from the government. The origin of the word itself is obscure. Graetz suggests that it is connected with the *Sicarii* and that the origin of the term is the *ius sikarikon*, so called because the Sicarii not only robbed their opponents but expropriated their lands, the name being later transferred to the Romans who confiscated the lands of the Jews after the destruction of the Temple. There is, however, no evidence at all to connect the Sicarii with the expropriation of land, and furthermore, in the course of time, the rabbinic gradually came to recognize the right of the governments to expropriate, which was not the case with the Sicarii. Safrai also connects it with the *ius sikarikon*, but he takes the Sicarii to be those who defied Hadrian's decree against circumcision and were punished by having their property confiscated. In fact, Hadrian's prohibition of circumcision was based upon the statute *lex Cornelia de sicariis et veneficis*. The term sikarikon is used both for the law which annuls the ownership by the acquirer and for the concept itself, i.e., the expropriation of land by the authorities. According to this view the term sikarikon was coined during the years preceding the Bar Kokhba War, when the edict was decreed. It is possible that the word was extended during the early days to cover all political crimes against the government.

The development of the halakiah in the law of sikarikon may be noted particularly from the Mishnah. "There was no sikarikon in Judea for those killed in the war. From the period of those killed in the war there has been sikarikon there. How does this law apply? If a man buys a field from the sikarikon, and then buys it again from the original owner, his purchase is void, but if he buys it first from the original owner and then from the sikarikon it is valid…. This was the ruling of the early Mishnah. A later bet din laid down, however, that if a man buys property from the sikarikon he must pay a quarter to the original owner. This, however, is only the case when the original owner is not in a position to buy it himself, but if he is, he has the right of preemption. Rabbi *Judah ha-Nasi set up a bet din*, and they decided by vote that, if the property had been in the hands of the sikarikon 12 months, whoever purchased it acquired the title, but he had to give a quarter of the price to the original owner" (Git. 5:6). Upon the identification of the “war” referred to in the first part of this Mishnah depends the difference of opinion referred to above as to the meaning of the term, sikarikon. Graetz (and Gulak) refer it to the Roman War, and Safrai to the Bar Kokhba War. The Mishnah notes
that the law of sikarikon was cancelled in Judea in the time of the war, purchase from the gentile of the confiscated land being permitted. The reason for this law is explained in the parallel passage in the Tosefta: “The rule of sikarikon does not apply to Judea, that the country may be populated” (Tosef., Git. 5:1), i.e., the motive was to prevent the alienation of land in Judea from Jewish ownership. One should note that the distinction between Judea and Galilee (which is particularly stressed in the Jerusalem Talmud: “The rule of sikarikon always applies in Galilee” (TJ, Git. 5:6, 47b)) accords more with the period of the Bar Kokhba War than with the Roman War.

Three successive stages are noted in the development of the laws of sikarikon, making it progressively more lenient. The last stage in the days of Judah ha-Nasi provides that after 12 months the owner's right to his confiscated property lapses, the only obligation of the purchaser being to pay a quarter of the purchase price to him. One may perceive in these stages the results of two processes which had their effect either independently or together: first, the desire to normalize the economic conditions, and second, the gradual but progressive acknowledgment of Roman authority and its laws, as well as the good relations subsisting between the Roman government and the Jewish population at the end of the second century.

[Michael Avi-Yonah]

SIKHINN or SOGANE (Heb. סיקין or סגין), town in Galilee, 20 stadia (3 mi.; c. 5 km.) from Arabah (Jos., Life, 265). It was one of the places fortified by Josephus during his command in Galilee in 66 C.E. (Wars, 2:573; Life, 188). Talmudic sources praise the fertility of the valley in which it was situated (Bikat Sikkhın; Mid. Tan. 26b). Several scholars, including R. Judah, R. Hanina b. Teradyon, and R. Joshua, are mentioned either as residents of or as visitors in Sikkhn. A local synagogue is referred to in the Jerusalem Talmud (Meg. 45b, 75b). In crusader times it was a fief known as Zachanin, for which the Teutonic order and the Barlais family contended. Remains on the site include Roman, Byzantine, and Arab pottery, as well as two tombs of venerable Muslims (maqām). It is the present-day Sakkhn, an Arab village in Israel, numbering about 7,400 inhabitants in 1968 and 22,600 in 2002, 94% of them Muslims. In 1995 Sakkhn received municipal status. Its area extends to 3.7 sq. mi. (9.7 sq. km.). In 2004, the local soccer team, Ilhud Beni Sakkhn, became the first Arab soccer team to win Israel's State Cup.

[Michael Avi-Yonah]

SIKILI, JACOB BEN HANANEL (13th–14th centuries), rabbi and author. His surname indicates that the family originated in the island of Sicily. In his youth he traveled widely, seeking out every available book dealing with the homiletic interpretation of the Bible. He finally settled in Cordoba in Spain. There he began to write the midrashic anthology Talmud Torah, on the basis of the mass of material culled from the 234 books he acquired during his wanderings. At that time there was a movement among the Jews of Spain to emigrate to Erez Israel. Sikili, too, thought it preferable “to be a beggar in the Land of Israel having no fixed home, than to live permanently in the lands of wicked gentiles, the habitations of Edom and Ishmael” (Minhat Bikkurim, Parashat Pekudei).

In order to fulfill this wish he joined his friend R. Hezekiah. On the 20th of Heshvan of 1317, both took a solemn vow to go to Erez Israel within not more than two years. They also took an oath that they would live jointly for seven years from the moment they left Cordova. At the end of two years, after they had sold all their possessions and bought provisions for the journey, Sikili was prevented from fulfilling his vow as a result of a report that Portuguese warships were sailing the seas on the instructions of the pope, “to plunder and rob any Jew or Mohammedan they met on the sea.”

Within a few years troubles beset him. Four of his five children died, and he attributed his sufferings to the nonfulfillment of his vow. He turned to * Asher b. Jehiel, then rabbi of Toledo, for permission to travel alone without waiting for Hezekiah. Asher wrote giving him the necessary permission and he immediately acted upon it. He was in Damascus in 1324, where in that same year he completed the Talmud Torah on the Book of Numbers, and on Deuteronomy in 1337. In Damascus, Sikili was one of the most honored members of the community, being recognized as a halakhic authority and biblical exegete. On the pressing request of the community he agreed to expound the meaning of the weekly portion every Sabbath afternoon (Minḥah; Introduction to Torat ha-Minḥah, Vienna Ms. 138). He collected these sermons and published them under the title Torat ha-Minḥah. Sikili paid frequent visits to Erez Israel, traversing it from end to end. The literary fruits of these visits were incorporated in his Sefer ha-Yahas in which he mentions “every town and village of Israel and the persons buried there.”

The complete manuscript of Torat ha-Minḥah is extant, though scattered among various libraries. Extracts from it were published in Berakhah Meshulleshet by Abraham Bik (1890), and with the Talmud Torah is extensively quoted in the Torat Shelemah of M.M. Kashar (1938– ). There is a great similarity between it and the book of sermons of David b. Abraham ha-Nagid (Midrash R. David ha-Nagid, vol. 1, 1964, vol. 2, 1968). Similarly the whole of Sikili’s Talmud Torah is extant in manuscript, but only extracts of it have been published (see bibl.). An excerpt only from the Sefer ha-Yahas, copied from an incomplete manuscript by Abraham Zacuto, is in Cambridge. Sikili mentions two other books which he wrote, Gullat ha-Koteh and Yayin ha-Meshummar.

[Ephraim Kuper]

SIKKUTH AND CHIUN (Heb. סיקות, צין), deities mentioned in Amos 5:26 in a warning sermon delivered to the people of the Kingdom of Israel, perhaps in Beth-El. Although the vocalization is modeled after shikkuz (shiqquz, “abomination”), the consonantal base suggests a pair of Mesopotamian astral deities, as was recognized by E. Shraeder (see bibl.) and others.

Sikkuth is identified with Sag/k.kud/t (transliterated in a Mesopotamian god list as Sa-ak-ku-ul), an astral deity known also from the “An” god list found at Ugarit (originally from Nippurian and other Mesopotamian sources, see Weidner, in bibl.), where it appears as [dag]a[k.ku.d/t] = [b]a[k.ku.d/t] (Ugaritica, 5 (1969), 214, line 44). In other “non-Western” lists of gods and stars, Sikkuth has recently been identified with Ninurta, one of the chief Mesopotamian deities (known also in the “West” and sometimes identified with Horon). Sikkuth in Amos is a perfect transliteration of this star deity. Its appellation, melēkh (Akk. šarru, “king”), alludes to the high rank of this deity, a (translated) classification device known from Ugaritic and other sources. This means that in the ritual to which Amos alludes Sikkuth is the most important figure. Chים is identified with the Akkadian Kajamānu (in Akka- dian intervocalic m is to be pronounced like w, and so m was often written even for original w), “the steady one” (sometimes Sag.u), the appellation of the star god Saturn (hence Aramaic Kewan, Ar. Kawaiwan). This pair of deities appears in astrological lists (of celestial observations) and also in the “release” (līpūt) passage of the expiatory prayer and ritual known as Surpu (2:180), among other gods of the night and stars: “... Sag.kud. Sag.u ša Immerijara = ilu-wer, mentioned in the inscription of Zakir king of “Hamath” release!” This may be translated as “may Sakkut, Kajamānu release [from sin],” The appellation zalmekhem in Amos denotes the Akkadian star- idol Šalhuu, usually the second participant in the ritual of celestial and expiatory prayers (see Speiser, in bibl.). Amos warns his listeners to exchange the sacrificial cult with the accompanying sacred music for justice, or they will be exiled, along with the images of those deities beyond *Damascus. He thus mentions them only in passing, and nothing is learned about the details of their cult in Israel.

[Pinchas Artzi]

SILANO (ninth century), one of the first Jewish liturgical poets in Italy. Silano is said by Ahimaaz, in his Sefer Yuhasin (= Megillat Ahimazā), to have been one of the scholars of Ve-}

nos in southern Italy. Once an emissary of the Jerusalem yeshivah arrived in Venosa, and, as was the custom there, he was invited to preach on the Sabbath. Silano translated the sermon into the vernacular from a written copy prepared by the emissary. On reading the translation the emissary was greatly distressed by Silano’s introduction into the text of facetious remarks about the townspeople. After the emissary returned to Erez Israel and related what had happened, the scholars of the Jerusalem yeshivah excommunicated Silano. When the aged Ahimaaz went to Jerusalem he was invited by the scholars of the yeshivah to act as reader during the Ten Days of Penitence. Among the selihot he read was one composed by Silano, “Aloḥ ve-khahesh u-reẓoḥaḥ ve-naḥesh (“Cursing and lying and murder and sorcery”), in which the heretics (i.e., the Karaites), who had begun to increase in number during the ninth century, were vigorously attacked. This selihah made a strong impression on the scholars, who, when they learned the author’s identity, decided to revoke the excommunication immediately. Another of Silano’s selihot, one for the eve of Rosh Ha-Shanah, beginning Enk kat mesalledekha ta‘al lif-nei kiihse khevodekha (“The cry of those who praise Thee, to Thy throne shall rise”), was published in Lithuanian books of selihot. The German mahzor inserted the first stanza of this selihah (Enk cat mesalledekha...), together with fragments of other piyyutim, into the Ne’ilah prayer for the Day of Atone- ment. Silano’s compositions confirm the assumption that the paytanim of Israel were influenced by those of Erez Israel, since his style closely resembles that of Eleazar *Kallir, one of the early paytanim of Ereẓ Israel.

[Abraham David]

SILAS.

(1) Jewish commander of the fortress of Lysias, in the region of Lebanon. The fortress was destroyed by Pompey during his campaign in Syria (63 B.C.E.; jos. Ant., 14:40).

(2) A close friend of *Agrippa 1 during the latter’s early hardships and imprisonment at Rome under Tiberius. When Agrippa became king (41 C.E.) Silas was appointed commander of the entire Judean army. His intimate relations with the king, however, eventually brought about his dismissal from office, since his tendency to overemphasize his loyalty to Agrippa in the early years was resented in the royal court. Silas was relieved of his command and imprisoned. Agrippa eventually regretted this harsh treatment and wished to release him, but the prisoner, by now obsessed with his grievance, declined the offer. After Agrippa’s death (44) Si- las was murdered by order of *Herod, king of Chalcis, and Helcias, commander of the Judean army (Jos. Ant., 18:204; 19:299, 317–25, 353).

(3) A Babylonian soldier in the Jewish ranks at the out- set of the war against Rome (66 C.E.). Silas, who had deserted to the Jewish forces from the army of *Agrippa II, later led an
Silber helped found the Beth Midrash l’Torah yeshivah in Chicago, later named the Hebrew Theological College. He assumed its presidency in 1921, working closely with Rabbis Nissan Jablonski and Chaim Isaac Korb, its roshet yeshiva.

[Lynee Schreiber (2nd ed.)]

SILBERBERG, MENDEL (1886–1965), U.S. attorney and community leader. Silberberg, who was born in Los Angeles, practiced law there from 1908. A veteran of World War I, he founded the first American Legion Post in California. He was also active in the Jewish War Veterans, which named a post after him. He was president of the Jewish Community Council (1953), and the Los Angeles Lodge of B’nai Brith. Silberberg was regarded as an astute and knowledgeable leader in political, community, and interfaith matters. He was chairman of the Community Relations Committee of the Jewish Federation Council for 30 years. He was influential in Republican Party circles.

[Max Vorspan]

SILBERBUSCH, DAVID ISAIAH (1854–1936), Hebrew and Yiddish editor and short-story writer. Born in Zaleszczyki, Galicia, his first work appeared in P. Smolenski’s weekly Ha-Mabbib in 1878. Together with Zvi Eleazar Teller, he published a Hebrew monthly Ha-Or in 1882 in Botosani (Romania), where he lived until he moved to Vienna after World War I. In 1934 he settled in Palestine.

One of his stories, Dimat Ashakim (“The Tear of the Oppressed,” 1887), deals with the persecution of Romanian Jews in the 1880s. It was one of the first stories in modern Hebrew literature to depict the poverty, disgrace, and degeneracy of Eastern European life and to suggest that Ereiz Israel was the only solution. His memoirs appeared in Mi-Pinkas Zikhronotai (1936) and Menshen und Geshechenshn (1931). He wrote numerous short stories. Only one volume of his Ketavim Nivharim (“Selected Works,” 1920) appeared.

[Gedalyah Elkoshi]

SILBERFARB, MOSES (1876–1934), political leader and writer in Russia. Silberfarb was born in Rovno, and studied law. He was one of the founders of the *Vozrozhdenie group and *Jewish Socialist Workers’ Party in Russia (1906), and helped to formulate their autonomist program (see *Autonomism). He was imprisoned several times for political activities. After the 1917 Revolution Silberfarb became a leader of the *United Jewish Socialist Workers’ Party. He headed the Ministry for Jewish Affairs of the Ukrainian Central Rada (“council, government”), and drew up a bill on national-personal autonomy. Between 1918 and 1920 he headed the Jewish People’s University and Cultural League in Kiev. In 1921 he left for Warsaw where he continued to be active in Jewish affairs, becoming chairman of *ORT and active in I.E.A.S (Jewish Emigrant Aid Society) and CYSHO (see *Education). In political outlook he moved closer to the ideology of the *Bund. Silber-
fARB wrote articles and books in Yiddish, Russian, and German, including *Dos Yidishes Ministerium un di Yidishe Natsionale Avtonomye in Ukrayne* (1919). His collected works were published posthumously (2 vols., 1935–37).

[Max Wurmbrand]

**SILBERG, MOSHE** (1900–1975), Israeli judge and jurist. Silberg, born in Skaudvile, Lithuania, studied at the yeshiva of Kelm, Mir, Slobodka, and Novogrudok. He continued his studies at the University of Marburg and took up law at Frankfurt University. In 1929 Silberg settled in Palestine and taught in Tel Aviv; during this period he also gave public lectures on Talmud in Tel Aviv. In 1948 he was appointed judge of the district court of Tel Aviv and from 1950 to 1970 he was on the bench of the Supreme Court of Israel, of which he was deputy president from 1965 to 1975. From 1954 to 1969 he taught law of personal status at the Hebrew University in Jerusalem.

As a member of the Supreme Court, Silberg delivered several important decisions on matters of personal status, including controversial questions involving the definition of the term “Jew.” His rulings on other matters cover every aspect of law – civil and criminal, public and private – and substantially contributed to the development of Israeli case law.

[Chaim Ivor Goldwater]

**SILBERMANN, ABRAHAM MORITZ** (1889–1933), publisher, lexicographer, and translator. Born in Hungary, Silbermann was ordained as a rabbi at Berlin Rabbinical Seminary, but engaged in publishing and bookselling. In Berlin he issued the Horab (photographic) editions of Talmudim and Midrashim, while at the same time preparing a Hebrew-German, German-Hebrew dictionary (with S. Gruenberg, 1922), as well as the Hebrew-English-German *Talmudic Dictionary* (with B. Krupnik-Karou, 2 vols., 1927). Silbermann later settled in England where, as publishing director of Shapiro, Vallentine and Co., he produced a translation of Rashi’s Pentateuch commentary (with M. Rosenbaum, 5 vols., 1929–34), which did much to familiarize English-speaking Jews with this classic. Also popular was his *Children’s Haggadah* (with A.S. Su-

**SILBERNANN, ALPHONS** (1909–2000), German lawyer, sociologist, and musicologist. Born in Cologne, Silbermann was music critic of the *Nieuwe Rotterdamsche Courant* from 1933. He escaped the Nazi regime, fleeing through Holland and France and reaching Australia in 1937. Silbermann became a lecturer at the State Conservatory of Music in Sydney. From 1952 he was director of socio-musical research at the French broadcasting service in Paris. In 1959 Silbermann returned to Germany as professor at the University of Cologne. His numerous publications dealing with sociology, music education, and music therapy (among other topics), include *Introduction à une sociologie de la musique* (1955); *Wovon lebt die Musik?* (1957, translated into several languages); *Das imaginäre Tagebuch des Herrn Jacques Offenbach* (1960, 1991); “Zur Neubelebung der Soziologie der Kunst,” in *Hamburger-Jahrbuch-fuer-Musikwissenschaft* (9 [1986], 67–85); “Zum Einfluss deutschsprachiger Emigranten auf das Musikleben Aus-

**SILBERNER, EDMUND** (1910–1985), Israeli economist and historian. Silberner was born in Borislav, Poland. He taught at Geneva University during 1939–41. After teaching in the U.S. at Princeton University from 1946 to 1950, Silberner immigrated to Israel and joined the faculty of the Hebrew University (1951), where he was appointed professor of economics in 1956. Silberner’s main work was an analysis of the relationship between European socialism and the Jewish people, with a special interest in Moses Hess, the Jewish socialist who turned proto-Zionist.

Silberner published a bibliography on Hess (1958); edited his correspondence (1959); and wrote the comprehensive *Moses Hess; Geschichte seines Lebens* (1966). Of particular importance among Silberner’s other works is *Ha-Sozialism ha-Matara u-She’elat ha-Yehudim* (“Western European Socialism and the Jewish Problem”; 1955).

[Michael A. Meyer]
SILBERSCHLAG, EISIG (1903–1988), Hebrew poet and critic. He grew up in a hasidic home in Metri, Galicia, migrated to the U.S., studied at the University of Vienna, and returned to the U.S. He was professor in Hebrew literature at the Hebrew Teachers College in Boston, and was its dean from 1948 to 1968. He published poems in Hadoar, Ha-Tekufah, and other Hebrew journals. The life-loving quality of his verse – mainly influenced by Tchernichovsky and Rilke – is evident in Ha-Raz ha-Hasidi and Yerushat Beit Abba. Silberschlag also wrote critical prose in Hebrew and English, and translated several comedies by Aristophanes. His poems were collected in Bi-Shevilim Bodedim (1931) and Aleh Olam be-Shir (1946).

His book Saul Tschernichowsky – Poet of Revolt was published in 1969. Other works include: Mi-Pi Kushim, Sheva Panim le-Haravah, and Tehiyah u-Tehiyah bi-Shirah (1938), a book of essays; Yehudah Halevi (1925), an epic poem; Bi-Ymei Isabella (1941), a collection of plays; Sefer Turov, edited with Y. Twersky; and Ha-Tekufah (vols. 30–31, 32–33), edited with A. Zeilin. He translated the love songs of Paulus Silentiarius (1945, 1962) and Berenica by Karl de Haas (1945).

SILBERSTEIN, DAVID JUDAH LEIB (d. 1884), Hungarian rabbi. Silberstein was born in Bonyhad and studied under Meir Ash in Ungvar (Uzhhorod). He served in several communities: Ujhely (Satoraljaujhely), Senta (Vojvodina), and Vacz near Budapest. He also lived in Jerusalem for eight years between 1859 and 1867. He was the author of the Shevilei David (1863), on the Pentateuch, and four volumes with the same name (1862–1880) on the four sections of the Shulhan Arukh. He was in communication with the outstanding contemporary Hungarian scholars, among others, Moses Schick, Abraham Judah ha-Kohen Schwartz, Menahem Mendel Baneth, and Amram Blum. He died in Vacz. His son Isaac (1857–1930) was two years old when his father went to Jerusalem, and he returned with him to Hungary. At first he was a cloth merchant but in 1884 became rabbi of Vacz. He was the author of Malaisai le-Melekh (2 vols., 1913–30), on the Mishneh Torah of Maimonides. He was a critic for the literary periodical Tel-Talpiyoit issued in Vacz under the editorship of David Zevi Katzburg, in which, in 1904, he expressed his opposition to Zionism and the Mizrahi, although at the same time he supported the old yishuv in Jerusalem.

SILBERSTEIN, SOLOMON JOSEPH (1845–?), Russian poet and philosopher. Silberstein was born in Kovno. At the age of 19 he received rabbinical authorization from a number of rabbis in the provinces of Kovno and Vilna. He practiced as a rabbi in Dershunisok, Kovno, in 1867–68, and later emigrated to the U.S. He developed a system of natural theology based on the Mosaic, and the rabbinic and talmudic law as natural theology.

Silberstein wrote the following works: Gelai Einayim (1881), poems; Ha-Dat ve-ha-Torah (1887); Me'ir u-Mikha Yehovah ve-ha-Olam (1893); The Universe and its Evolution (1891); General Laws of Nature (1894); The Disclosures of the Universal Mysteries (1896); and The Jewish Problem and Theology in General (1904).

BIBLIOGRAPHY: AJYB, 6 (1904), 187–8.

SILBERSTEIN-ÖTVÖS, ADOLF (1845–99), Hungarian editor and author. Born in Budapest, from 1870 Silberstein-Ötvös was editor, for a short period, of the German-language newspaper Temesvári Zeitung, and later worked for the Pester Journal, Pester Lloyd, and Ungarischer Lloyd. He translated the novels of Jókai and Mikszáth into German, and wrote studies of Aristotle and Gottschall. Much of his own best writing appeared in feuilleton form. His books include Philosophische Briefe an eine Frau (1878) and Im Strome der Zeit (4 vols.; 1894–1905). In Hungarian he wrote Egy pesti Don Juan (“A Don Juan of Budapest,” 1885).

SILESIA (Czech Slezsko; Ger. Schlesien; Pol. Ślask), region in E. central Europe. The earliest documentary evidence for the presence of Jews in Silesia dates from the 12th century. The first settlers whose names are known owned land near *Breslau; among those who arrived in this period were refugees from the *Crusades. Intensive economic development of the region and its consequent need for money brought about a Jewish monopoly in moneylending. Jewish immigration from Germany throughout the 13th and 14th centuries significantly increased the population and numbers of Jewish communities. Though synodal legislation in Breslau in 1267 sought to limit their contacts with Christians, a privilege of Duke Henry IV in 1270 granted them a measure of autonomy as well as physical protection. Over the course of five centuries, more than 50 Jewish communities were established in Silesia, the largest in Breslau, Brieg (*Brzeg), Glatz, *Glogau, Goerlitz, *Liegnitz, and *Schweidnitz. Their economic activities were productive for the region but nonetheless they helped generate hatred of Jews within the Christian community. A series of fires in Breslau in 1349 and 1360 were blamed on the Jews, and they suffered accordingly. Persecution similarly afflicted Jews during 1362 in Brieg (*Brzeg), Głurow (*Gora), Laehn (*Wien), Loewenberg (*Lwowek Śląski), and Neisse. In the mid-14th century, jurisdiction over the Jews had shifted to the municipalities, a development that stimulated persecution and frequent expulsions. The community produced a number of significant scholars in the period, among them R. Jacob b. Judah *Weil and R. David of Schweidnitz. Both the *Hussite Wars and the preaching of John *Capistrano took their toll
of Jewish communities; as a result of the latter’s preaching, the expulsion of the Jews of Breslau, as well as those of Liegnitz and Schweidnitz, took place in 1453 in connection with a trial for desecrating the *Host. By the end of the 15th century there were no Jews in nearly all of Middle and Lower Silesia. In accord with a royal edict of 1582, Jews were also forced to leave Upper Silesia. Only Jews in Glogau (Lower Silesia) and in *Zuelz (Upper Silesia) survived the expulsion, and later on formed the nucleus of the reconstituted Jewish communities of Silesia. Among the significant scholars of the 16th century was R. Benjamin of Silesia, a student of Solomon *Luria and author of Masat Binyamin.

In the 17th century, Jews began to arrive in Silesia once more. After the Thirty Years’ War (1618–48) and following the *Chmielnicki massacres in Poland (1648), many Jews fled westward; some settled in Silesia where, in the main, they were proprietors of country taverns. By 1700 there were approximately 200 Jewish families in Silesia, the greater part of whom lived in Glogau and Zuelz (Bialb), while the rest were on the land; some families lived in Breslau and its suburbs, despite extreme opposition from the local citizens. In 1713 the Austrian government introduced a Toleranzsteuer (“tolerance tax”) for Silesian Jews. In 1737 there were about 800 such taxpayers in Silesia, in addition to those who, like the Jews of Glogau and Zuelz, were exempt from this tax. After the annexation of Silesia by Prussia (1742) there were 1,100 Jewish families in 1751, who were organized in four communities – the Glogau community, the Zuelz community, the Silesian *Landesjudenschaft, and the Breslau community, founded in 1744. While the Glogauer and Zuelz communities were led by rabbis, the rabbinate of Breslau was united with the Landesjudenschaft. Notable among the Landesrabbiner of this period were Baruch b. Reuben *Gomperz (1733–54) and Joseph Jonas Fraenkel (1754–93). From the end of the 17th century a Jewish printing press operated in *Dyhernfurth, where the Talmud was published.

Economically, Silesian Jewry consisted of three groups: the “Landjuden,” who earned their living as lessees and *peddlers; the traders and merchants of Breslau, Glogau and Zuelz; and the privileged class, the wealthiest and most respected group who by their participation in supplying war materials and in the development of manufacture and industry obtained great wealth and at the same time earned the respect of the authorities. This group was also culturally the most advanced. Due to their wealth and influence, despite being a small minority, they occupied leading positions within Silesian Jewry long before the emancipation period. From their ranks came the pioneers of emancipation. In the midst of the internal struggle between traditionalists and proponents of enlightenment, the Prussian edict of March 11, 1812 gave Silesian Jews freedom on the economic and personal level. This law helped Jews even though (as in the rest of Prussia) they found difficulty in following crafts because of the opposition by the guilds. Appointment as a government official was difficult because of the unofficial religious barrier, which allowed only baptized Jews to be given such positions. A census of occupations in 1852 showed that for about 50% the major source of income was commerce, while 10% were to be found in skilled trades, and another 10% in the managing of inns. This division remained fairly unchanged even when Jews could participate in the newly established Silesian industries. On the other hand, the legal position of the Jewish communities, which in 1812 had lost their hegemony, changed. On the basis of the Prussian laws of July 23, 1847, 55 synagogal communities or synagogal districts were created: ten in the administrative area of Breslau, seven in the area of Liegnitz, and 38 in the district of Oppeln (*Opole). In 1888 the Jewish communities of Upper Silesia combined, while the synagogal communities of Lower Silesia, which included the districts of Breslau and Liegnitz, combined in 1897.

With the economic development of the area, the Silesian Jewish population also increased, from 11,500 in 1803 to 52,682 in 1880, which also brought about territorial changes. The community of Zuelz was displaced by the Upper Silesian communities, and Glogau was surpassed by Liegnitz. However, the community of Breslau became by far the most important in Silesia. Silesian Jewry made important contributions to Jewish as well as to German cultural life. Apart from famous rabbis and talmudists, there were also Hebrew writers and maskilim. For German Jewry the Breslau *Juedisch-Theologisches Seminar, founded in 1854, formed a center of Jewish culture and learning, as well as a training school for Jewish theologians.

After emancipation Silesian Jewry played an active part in the intellectual, cultural, and political life around them. One of the first Jewish poets in the German language was Ephraim Moses *Kuh (1731–1820) of Breslau, while one of the first Jewish poetsessess in the German language was Esther Gad-Berlinger. Among the significant scholars of the 16th century were the historian Jacob *Masat Binyamin, the rabbinate of Breslau was united with the Landesjudenschaft. Notable among the Landesrabbiner of this period were Baruch b. Reuben *Gomperz (1733–54) and Joseph Jonas Fraenkel (1754–93). From the end of the 17th century a Jewish printing press operated in *Dyhernfurth, where the Talmud was published.

The community of Zuelz was displaced by the Upper Silesian communities, and Glogau was surpassed by Liegnitz. However, the community of Breslau became by far the most important in Silesia. Silesian Jewry made important contributions to Jewish as well as to German cultural life. Apart from famous rabbis and talmudists, there were also Hebrew writers and maskilim. For German Jewry the Breslau *Juedisch-Theologisches Seminar, founded in 1854, formed a center of Jewish culture and learning, as well as a training school for Jewish theologians.

After emancipation Silesian Jewry played an active part in the intellectual, cultural, and political life around them. One of the first Jewish poets in the German language was Ephraim Moses *Kuh (1731–1820) of Breslau, while one of the first Jewish poetsessess in the German language was Esther Gad-Berlinger. Among the best-known modern writers from Silesia are Alfred *Kerr, Max *Tau, and Arnold *Zweig. In Silesia’s scholarly life, people of Jewish descent played a prominent role. At the University of Breslau there were numerous lecturers of Jewish descent, but Jewish professors were very few in number until the Weimar Republic. Among these were the historian Jacob *Caro and the botanist Ferdinand J. *Cohn. In the political parties Jews were especially active in the liberal movements. They were also prominent in political journalism. One of the first leaders of the German trade union movement, Ferdinand *Lassalle, was from Breslau. Among the more famous Silesian Jews or Sileans of Jewish descent were the Jewish historian Heinrich *Graetz, the medical researcher Paul *Ehrlich, the chemist Fritz *Haber, and the explorer *Pasha (Eduard Schnitzer).

In the 20th century the Silesian Jewish community declined, numbers falling from 44,000 in 1920 to 34,000 in 1933. Under the Geneva convention, Jews were included in the minority rights guarantees for Upper Silesia. After the rise of Nazism, the Jewish community appealed to the League of Na-
tions for aid; as a result their situation was better than that of Jewish communities in the rest of Germany. Even so, after 1933 increased emigration took place (see "Bernheim petition"). In 1939 the number of remaining Jews was only 15,480, most of whom became the victims of the Nazi regime. Immediately after World War II, with the incorporation of the whole of Silesia into Poland, the surviving Jewish partners of mixed marriages also left Silesia, and no native Jews remained. In their stead came Jews from Poland and Russia, numbering about 52,000, of whom around 10,000 settled in Breslau (now called Wrocław). This newly constituted community made use of the Storch synagogue, which had not been destroyed during the war. A Yiddish paper also appeared. Jews also settled in other Silesian cities, among them Liegnitz (Legnica), Reichenbach (Dzierzoniów), and Waldenburg (Walbrzych). With the establishment of the State of Israel, many emigrated there. After the Six-Day War (1967) the majority of Jews left Silesia.

"**SILIUS ITALICUS, TIBERIUS CATIUS ASCONIUS**

(26–101), Roman epic poet and public official. He flatters Vespasian and Titus in referring to their subjugation of Judea, which he, like Statius, calls Idumea (*Punicà 3599E*).

[Jacob Petroff]

**SILK** (Heb. שִׁיר, meshî). Silk is mentioned once in the Bible by Ezekiel (16:10, 13) in his description of the splendid garments of the Israelite woman. The commentators identify this meshî with silk, and there may be an etymological connection between meshî and si, the Chinese word for silk, which may also be the origin of shira, shira'in, the word for silk in rabbinical literature. There is no doubt that Chinese silk was already known in Erez Israel during the time of the Mishnah and Talmud and it is thought to have been brought to the Near East after the expeditions of Alexander the Great. In the Talmud silk is referred to under various names: paranda, kallakh, mitakhsa, gushkera, and sirkin (Gr. σηχνός; Latin, sericum). It is possible that these names were connected with the methods of weaving the silk, as explained by "Nathan b. Jehiel in his Arukh: "Kallakh, gushkera, mitakhsa shira'in, and sirkin are all species of shira paranda (i.e., silk, see Shab. 28b) but their texture differs, some being woven fine and some thick." They may, however, have distinguished between Chinese silk and silk spun by the worms of local moths; a number of species are found in Israel, the largest being the Pachypasa otus moth whose worm spins a large cocoon of white threads. The silk of this moth was already used by the early Greeks, who wove clothes from it. Possibly this is the meshî of Ezekiel, and it is apparently the kallakh mentioned in the Mishnah (Shab. 2:1) among the materials which were not to be used for making the wick for the Sabbath lamp. In ancient times Chinese silk was very expensive and only wealthy people could afford garments made from it. Even Roman nobles could not afford holosirikon, i.e., a garment wholly woven from pure silk, and in the main wore hemiserikon, which was half wool or linen. The Midrash (Eccl. R. 1:7, no. 9) states that the reward of those that love God will be "one day semistririkon garments and on the morrow holosirikon," i.e., that their prosperity will increase. The cocoons were imported from China and woven in Erez Israel, and the mitakhsa is probably this raw cocoon. According to the aggadah, R. Joshua b. Hananiah, in order to prove that Israel lacked nothing, "brought mitakhsa from Gush Hala" (Eccl. R. 2:8, no. 2). In Erez Israel cultivating the Chinese silkworm Bombyx mori began only in the Middle Ages, after the introduction of the white *mulberry*. The earliest archaeological finds of silk found in Israel are from the Byzantine period, with fragments of mixed linen and silk found at Nessana; one fragment of pure silk must have been imported. Late Byzantine and Early Islamic examples of silk are known from Avdat and Nahal Omer. Silk fragments from these periods are also known from excavations in Jordan and Syria. Medieval examples of silk are known from Qarantal Cave 38 (9th–13th centuries C.E.), and according to the researcher Orit Shamir they were made by different techniques (double-faced tabbies, weft-faced compound twills, and lam- pas weaves), and some of these required very sophisticated looms.

[Jehuda Feliks / Shimon Gibson (2nd ed.)]

**SILKIN, JON** (1930–1997), English poet. Born in London, the son of a solicitor, Jon Silkin was a nephew of the British socialist politician Lewis *Silkin. He was educated at Jewish schools, in Wales, and at Dulwich College. At the age of 32, in 1962, he took a first-class degree at Leeds University. Silkin spent some years as a laborer before turning to the writing of poetry. In 1958, he was appointed Fellow in Poetry at Leeds University, but spent much of his time editing *Stand*, an avant-garde literary magazine which he had founded in 1957. Silkin’s own early books of verse were *The Peaceable Kingdom* (1954), and *The Two Freedoms* (1958). In *The Reordering of the Stones* (1961) he experimented with a new and extreme terseness of language and he began to explore fresh terrain with his sequence of *Flower Poems*, republished in *Nature with Man* (1965), which reinterpreted familiar plants and flowers in po-
itical or social terms. His Poems, New and Selected appeared in 1966. His most celebrated poem is “Death of a Son,” dedicated to a one-year-old child who died in a mental hospital. A highly individual critic, he was particularly interested in the poetry of World War I, and was an authority on Isaac *Rosenberg. He wrote an interesting book on World War I poets, Out of Battle (1972), and edited the anthology The Penguin Book of First World War Poetry (1979). Silkin lived much of his life in Newcastle-upon-Tyne. He visited Israel several times and wrote poetry on his Jewish background, which was collected in Testament Without Breath (1998).

[Philip D. Hobsbaum]

SILKIN, LEWIS, FIRST BARON (1889–1972), British lawyer and politician. Born in London, the son of a Hebrew teacher and wholesale grocer who had migrated from Lithuania, Silkin became a solicitor and then a prominent figure in London local government. He entered Parliament as a Labour member in 1936 and from 1945 to 1950 was minister of town and country planning in the Labour government of Clement *Attlee. In this capacity he piloted major planning legislation through Parliament, and was one of the progenitors of Britain’s “New Towns” as well as of its national parks system. In 1950 Silkin was given a peerage with the title Baron Silkin, and from 1955 to 1964 was deputy leader of the opposition in the House of Lords. He was also active in Jewish affairs as president of the Trades Advisory Council, a body protecting Jewish commercial interests from discrimination, and of the British *Technion Committee.

Two of Silkin’s sons also became prominent in law and politics. SAMUEL SILKIN, BARON SILKIN OF DULWICH (1918–1988), a barrister educated at Dulwich College and Cambridge, was elected a Labour member of Parliament in 1964 and in 1966 became recorder (i.e., judge) of Bedford. Silkin was appointed attorney general in the Labour government after the elections in February 1974, serving until 1976, but refused the knighthood which usually goes with the office. He retired from the House of Commons in 1983 and was given a life peerage. His brother John Silkin (1923–1987), who was also educated at Dulwich College and Cambridge, and became a solicitor, was elected a Labour member of Parliament in 1965 and appointed parliamentary secretary to the Treasury and government chief whip in 1966. From 1969 to 1970 he was minister of building. Silkin was appointed minister for planning and local government in the Labour government after the elections in February 1974, with a seat in the cabinet, and minister of agriculture, fisheries and food in September 1976, serving until 1979. Generally on the left of the party, he was often a strong nationalist and opposed British entry into the European Community. In 1979–80 he served as the opposition spokesman on industry and during 1980 he became the shadow leader of the House of Commons. In November 1980 Silkin stood for the leadership of the Labour Party but received only limited support, and was also defeated for the deputy leadership in 1981.

SILKINER, BENJAMIN NAHUM (1882–1933), U.S. Hebrew poet. Born in Vilkija, Lithuania, Silkiner arrived in 1904 in the United States, where he taught Hebrew at a Hebrew elementary school and Bible at the Teachers Institute of the Jewish Theological Seminary in New York, until his death. He published several texts for Hebrew schools and, together with Israel *Efros and Judah *Even Shemu’el (Kaufmann), an English-Hebrew dictionary (1929). His translation of Macbeth appeared in Warsaw in 1939. In 1913–14 he was also one of the editors of the Hebrew periodical Ha-Toren. Silkiner’s main contribution to Hebrew literature is his emphasis on American themes. In his first book Mul Ohel Timmuraḥ (1910), which is an epic poem of the struggles of the American Indian against the Spanish conquistadors, he draws his material from Indian lore and Spanish colonial history. The poem is included in Shirim (1927), a collection of his lyrics and narrative poems.

[Eisig Silberschlag]

SILLS, BEVERLY (née Belle Silverman; 1929– ), U.S. soprano singer. Born in New York City, Sills made her first public appearance as “Bubbles,” becoming a child radio star at the age of three; at six she was singing coloratura soprano arias on “Major Bowes’ Capital Family Hour.” Giving up radio at the age of 12, she began piano lessons with Paolo Gallico and studied singing with Estelle Liebling (the teacher of Galli-Curci). She made her début in opera in 1947 with the Philadelphia Civic Opera (Micaela in Carmen). After joining the New York City Opera Company in 1955, she first sang the part of Rosalinda in Die Fledermaus; among many other parts, she created the title role in Carlisle Floyd’s The Ballad of Baby Doe (1956). In 1961, she retired to care for her deaf child, but in 1965 was persuaded by Julius *Rudel, director of the company, to return to the stage in Offenbach’s Tales of Hoffmann in which she sang all three soprano roles. In 1966, during the opening season at the Company’s new Lincoln Center opera house, she was a much-praised Cleopatra in Handel’s Giulio Cesare; and her playing the title role in Massenet’s Manon in 1968 led several critics to hail her performance, as well as the entire production, as the best in New York since World War II. Sills appeared at most of the major American and world opera houses, including the Vienna State Opera (1967); the Teatro alla Scala, Milan, in Rossini’s seldom performed L’assedio di Corinto (1969); the Royal Opera House, Covent Garden, in Lucia di Lammermoor (1970); and the Teatro la Fenice, Venice, as Violetta in La Traviata (1972). In all these roles, audiences admired her coloratura technique if not always a perfect steadi-
ness or sweetness of voice, and she was an excellent actress with a warm stage personality. Sills announced that she would retire from opera on attaining the age of 50, and after fulfilling an assignment to sing at the world premiere of Menotti’s Juana La Loca in San Diego in May 1978, she was appointed general director of the New York City Opera (1979–89). In June 1980 she was awarded the Freedom Medal by President Carter and in October that year gave her farewell performance. Sills published an autobiography (1987) and became chairperson of Lincoln Center for the Performing Arts (1993).

**SILMAN, KADISH YEHUDA LEIB** (1880–1937), Hebrew writer and satirist. Born near Vilna, Silman taught in Vilna’s first Hebrew school in which Hebrew was the language of instruction, and later directed a “modern heder” in Gomel. In 1907 he immigrated to Palestine and devoted his life to teaching, mostly in Jerusalem. He was one of the founders of Tel Aviv and of the neighborhood of Bet ha-Kerem in Jerusalem.

His literary poems, stories, and articles from Palestine (his series of newsletters to Haolam under the general title of “Mikhvatim el Ah”) became famous. His contribution to the fields of popular ballads, poetry, satire, and humor was also of importance. His books for children include Shirim la-Am (1910); Zimrei Am (folk songs, 1927); Lekhu Nerannelah (70 folk songs with musical notes, 1928); Mordekhai ve-Haman (a play for children, 1934); and Shimon Seivon (a story, 1937). In the field of humor, parody and satire, he published Massekhet Bava Tekhnikah (c. 1910) and Shas Erez Yisre’eli Katan (a parody dealing with the language conflict, c. 1933). He also published satiric newspapers for several decades: La-Yehudim (irregularly between 1909 and 1927) and Aspaklayah (1920).

**SILOAM** (or Shiloah) **INSCRIPTION**, an inscription found in 1880 in the village of Siloam (Arab. Silwān) in Jerusalem. It contains six lines engraved on the rock wall of a tunnel known as the “Siloam tunnel” which, running through the spur of a hill, conveys water from the spring of Gihon to the east of the spur into the pool of Siloam to the west. In biblical times, the wall of Jerusalem made a southward loop, and the pool of Siloam lay within it. The language of the inscription is biblical Hebrew and its script is Paleo-Hebraic. It is about 32 cm. (12 in.) high and 72 cm. (28 in.) long and tells the story of the digging of the tunnel, a very respectable engineering feat for its day. The purpose of the inscription was apparently to commemorate the completion of the excavation by two groups of diggers who began working at the same time from the two ends of the tunnel until they met. The inscription and the tunnel date back to the days of King Hezekiah of Judah, who sealed the springs outside the walls of Jerusalem in order to prevent the water from being used by a besieging army. In order to secure the supply of water for the city during the time of siege, he diverted the waters of the Gihon spring through the tunnel into the city (II Kings 20:20; II Chron. 32:3–4, 30; cf. Isa. 22:11). The project was terminated almost certainly before 701 B.C.E., the year of Sennacherib’s campaign against Judah. In the 19th century, the inscription was cut out of the tunnel wall and removed to the Museum of Istanbul (then Constantinople).

**SILVA, ANTONÍO JOSÉ DA** (known as “o Judeu”; 1705–1739), Portuguese playwright and martyr. Born in Rio de Janeiro, Brazil, Da Silva was of Converso origin and his family secretly remained loyal to Judaism. His father, João Mendes da Silva (1656–1736), was a prominent poet and lawyer who, until his death, managed to maintain the appearance of a faithful Catholic; his mother, Lourença Coutinho, was less compromising and it was as a result of her deportation to Portugal, when she was imprisoned on a Judaizing charge in 1713, that Da Silva and his father moved to Lisbon. While a law student at the University of Coimbra, he wrote a satire which provided the authorities with a pretext for arresting him, and he too was charged with Judaizing. Partly crippled by torture, Da Silva was eventually penanced and released. He practiced law but turned increasingly to writing and swiftly built up a reputation as the outstanding Portuguese dramatist of the era.

A prolific and versatile writer, Antônio da Silva created a series of stage satires criticizing the evils of contemporary society. These “comédies,” which range from burlesque and parody to puppet show and comic opera and mingle prose dialogue with song, include *Vida do grande Don Quixote da Mancha…* (1733), *Esopaida* (1734), *Encantos de Medeia* (1735), *O Anfítrio* (1736), *Variedades de Proteo* (1737), and *O Precipício de Faontite* (1738). They were popularly known as the works of “The Jew” and were performed frequently during and after the 1730s. Da Silva’s collected works (2 vols., 1744–46) were published anonymously until the end of the 18th century under the title *Teatro comico portuguez*.

In 1737 the playwright, together with his mother and newly married wife, was again arrested by the Inquisition. The women were released, but Judaizing charges were pressed against Da Silva, whose plays had made him many enemies. He had, it transpired, undergone circumcision, later joining the Franciscan order to divert suspicion from his heretical activities. Evidence of Sabbath observance and unorthodox fasting was provided by a colored slave girl. Prolonged torture failed to break his will and, when a secret court finally condemned him, not even the king himself could secure a reprieve. In October 1739 Da Silva was garroted and burnt at a Lisbon auto-da-fé. His wife, who witnessed his death, did
not long survive him. Da Silva’s tragic story has inspired several modern writers, including the Portuguese Camilo Castelo Branco (author of the novel O Judeu, 19063), who was himself of Marrano origin.

[Godfrey Edmond Silverman]

**SILVA, FLAVIUS**, Roman commander, conqueror of Masada. Upon the death of Lucilius *Bassus* he was sent to suppress the remaining rebels in the Judean desert. With a large army he undertook the siege of Masada, despite the enormous difficulties which he had to overcome in providing for his army, which included many non-combatants. After a siege lasting several months the fortress was taken. The rebels under *Eleazar b. Jair* chose to die by their own hands rather than fall into the hands of the Romans. Silva returned with his army to Caesarea and later became consul in Rome.

[Cecil Roth]

**SILVA, RODRIGO MENDEZ** (Jacob) DA (1606–c. 1676), Marrano historian and genealogist. Mendez was born in Colôrico, Portugal, and later settled in Madrid where he published numerous books on various aspects of Spanish history and genealogy. The most important was the widely read Catalago real de España. These works led to his appointment as royal chronicler (cronista general) at the Spanish court. In 1659 he was arrested by the *Inquisition on a charge of Judaizing and after prolonged torture was admitted to penance. Later he managed to leave the country and take up residence in the *ghetto at Venice. There he adopted the name Jacob and was circumcised. As a Jew, he is said to have acted inconsistently in his beliefs and religious practices.

[Cecil Roth]

**SILVA, SAMUEL DA** (16th–17th century), Marrano physician. He was born in *Oporto, Portugal, and later went to Hamburg, where he returned to Judaism. His translation into Spanish of the section on repentance (Hilkhot Teshuvah) from the Mishneth Torah of *Maimonides appeared in Amsterdam in 1613 under the title Tratado de la Teshuva o Contrición. Subsequently, having read in manuscript a work by Uriel da *Costa critical of the Jewish tradition, da Silva wrote a polemic in reply entitled Tratado de la Immortalidade da Alma (“Treatise on the Immortality of the Soul”, Amsterdam, 1632), couched in strong language. Da Costa’s Examen das tradicóens Phariseas, published in Amsterdam in 1624, was actually a second version of the manuscript that Da Silva had seen. In it Da Costa replied to the attack and referred to his critic as his “lying slanderer” in the subtitle.

**BIBLIOGRAPHY:** S. da Silva, Tratado da Immortalidade del Alma, ed. by De Jong (1935); Kayserling, Bibl., 40, 102; Brugman, Frank, 517; M. Dos Remedios, Os Judeus Portugueses em Amsterdam (1911), 128–33; H. Kellenbenz, Sephardim an der unteren Elbe (1958), index; Melkman, in: Studia Rosenthaliana, 1:2 (1967), 24–26 (Eng.).

**SILVER, ABBA (Abraham) HILLEL** (1893–1965), U.S. Reform rabbi, Zionist leader. Silver was born in Lithuania and immigrated to the United States with his family in 1902. While studying at Yeshivat Etz Chaim (later, the Rabbi Yitzhak Elchanan Theological Seminary; see *Yeshiva University*), he founded the Dr. Herzl Zion Club, a Hebrew-speaking group which evolved into *Young Judaea, the first Zionist youth organization in the U.S. He received a B.A. from the University of Cincinnati in 1915 and was ordained the same year at *Hebrew Union College, where he earned a D.D. in 1925. He was awarded an honorary L.D. by (Case) Western Reserve University, an honorary D.H.L. by Hebrew Union College, and an honorary D.H. by the University of Tampa.

Following ordination, Silver became rabbi of Congregation Leshem Shomayim in Wheeling, West Virginia (1915–17). In 1917, at the age of 24, and in spite of his outspoken Zionism, he became rabbi of The Temple (Congregation Tifereth Israel) in Cleveland, Ohio, arguably the largest Reform congregation in the country. Committed to the maintenance of basic Jewish tradition, he installed a *Sefer Torah in the sanctuary’s empty ark and moved the temple’s weekly Sabbath worship service from Sunday to Saturday. He was instrumental in laying the groundwork for replacing the Reform movement’s Pittsburgh platform with the 1937 Columbus platform. Infused with the spirit of the prophets of Israel, he denounced segregation and supported the right of labor to organize. He resigned from the Cleveland Chamber of Commerce over its anti-union policies and was a member of the special state labor commission that drafted Ohio’s first unemployment insurance law. A self-appointed defender of the Jewish people, Silver was the founder (with Samuel Untermayer, and over the objections of some Jewish leaders) of the Non-sectarian Anti-Nazi League to Champion Human Rights, which organized a boycott of German goods in the 1930s.

Active in more than 30 local and national organizations, Silver was the founding president of the Cleveland Bureau of
Jewish Education (1924–32); president of the Cleveland Jewish Federation (1935–41); national chairman of the board of governors of the State of Israel Bonds; national chairman of the United Palestine Appeal (1938), and national co-chairman of the United Jewish Appeal; president of the *Central Conference of American Rabbis (1945–47); member of the board of governors of *Hebrew University; president of the alumni association of Hebrew Union College (1936–37), and chairman of its board of alumni overseers (1952); and president (1957–58) and honorary chairman (1945–46) of the *Zionist Organization of America.

A brilliant orator, Silver had the greatest impact and made his most important contributions as a founding chairman of the American Zionist Emergency Council (1943–45), and later as chairman of the American section of the Jewish Agency (1946–49). With the outbreak of World War II, he saw the opportunity to achieve the goal of a Jewish state. Perceiving that the postwar influence of the United States would be decisive, and winning the support of its people and government crucial, he (together with Stephen S. *Wise, although the two frequently clashed) succeeded beyond expectations in mobilizing public opinion, both Jewish and non-Jewish, on behalf of the Zionist cause. His public and private eloquence resulted in the passage of Congressional resolutions favoring the establishment of a Jewish Commonwealth, as well as in commitments of support enunciated in the Republican and Democratic Party platforms. The high point of his Zionist leadership came on May 8, 1947, when he presented the case for an independent Jewish state before the General Assembly of the United Nations, which passed the Partition Resolution on November 29 of that year, establishing the legal basis for the creation of the state of Israel. He returned again to the United Nations in May 1948 to announce that Israel had declared itself an independent state. It has been speculated that, had Chaim Weizmann not become the first president of Israel, Silver – widely considered one of the architects of modern Israel – might have been selected for that position. In 1950, a poll conducted by the *National Jewish Post named him the leading figure of American Jewry. In 1952, he gave the benediction at the inauguration of President Dwight D. Eisenhower.

Although internal rivalries led Silver to leave his official posts in Zionist organizations, he constantly responded to appeals for his service in fundraising or for the use of his enormous prestige on behalf of Israel. Back in Ohio, he opposed a 1958 “right-to-work” amendment to the state’s constitution. He was the recipient of many awards, including the Medal of Merit from the Jewish War Veterans (1951), the National Human Relations Award of the National Conference of Christians and Jews, and the Louis Brandeis Award of the American Zionist Council. The village Kefar Silver in Israel was named after him.

Silver’s major books are *A History of Messianic Speculation in Israel (1927), *The Democratic Impulse in Jewish History (1928), *Religion in a Changing World (1931), *Vision and Victory (1949), Where Judaism Differed (1956), *Moses and the Original Torah (1961), and *Therefore Choose Life (1967), a selection of his sermons, addresses and writings (edited by H. Weiner). Silver died in his 45th year as rabbi of The Temple and was succeeded by his son, Daniel Jeremy *Silver.

[Bezalel Gordon (2nd ed.)]

**SILVER, DANIEL JEREMY** (1928–1989), U.S. Reform rabbi. Daniel Jeremy Silver was the son of Abba Hillel *Silver (1893–1965). Born in Cleveland, Ohio, he was educated at Harvard University, received his rabbinical ordination from Hebrew Union College, and a doctoral degree at the University of Chicago. His first pulpit was Congregation Beth Torah in Chicago. In 1956 he became the associate rabbi at The Temple-Tifereth Israel in Cleveland, Ohio, where his father had been in service since 1917. Upon his father's death in 1963, Silver became the senior rabbi, where he remained until his own death in 1989.

Silver was an active participant in local Jewish and secular affairs. He was appointed to chair a committee of the Mayor’s Commission on the Crisis in Welfare and served as vice president of the Cleveland Museum of Art; he taught Judaism at Cleveland State University and Case Western Reserve University, chaired the Congregational Plenum, and was active in the Jewish Community Federation of Cleveland. Nationally, he held leadership roles in the Reform movement’s Central Conference of American Rabbis and edited the movement’s journal for ten years. He was the president of the National Foundation for Jewish Culture and chaired its Academic Advisory Council. He wrote *Maimonidean Criticism and Maimonidean Controversy, 1180–1240* (1965); *A History of Judaism: Volume I, From Abraham to Maimonides* (1974); *Images of Moses* (1982); and *The Story of Scripture*, published posthumously in 1990.

[Bezalel Gordon (2nd ed.)]

**SILVER, EDWARD S.** (1898–1974), U.S. lawyer. Born in New York, Silver served as secretary to Felix *Frankfurter when the latter was a professor at Harvard. He began his career of public service in 1929, when he joined the staff of the U.S. Attorney in New York. He served as Commissioner of the Alien Enemy Hearing Board, and in 1946 became District Attorney of Kings County, a position he held for ten years. In 1964 he was elected Kings County Surrogate, and from 1969 until the time of his death he was a member of the State Commission of Investigation. He was widely known for his work against crime and for prosecution of criminals and racketeers. Silver was active in many Jewish organizations, among them the Israel Bonds Drive, of which he was chairman of the New York campaign, and was president of the National Council of Young Israel.

[Milton Ridvas Konvitz (2nd ed.)]
SILVER, ELIEZER (1882–1968), rabbi and Orthodox Jewish leader. Born in Abel, Kovno province, Lithuania, Silver early achieved recognition for his unusual scholarly abilities. He studied under Meir Simḥah ha-Kohen and Joseph *Rozin of Dvinsk, Ḥayyim Ozer *Grodzinski of Vilna, and Ḥayyim *Soloveichik of Brest-Litovsk. Silver immigrated to the United States in 1907 and became the rabbi of united Orthodox congregations in Harrisburg, Pennsylvania; Springfield, Massachusetts (1925); and Cincinnati, Ohio (1931), where he remained until his death. Silver was a leading spokesman for Orthodoxy on the American scene. In 1923 he was elected president of the Union of Orthodox Rabbis, and he remained a member of its presidium until his death. He founded the U.S. branch of Agudat Israel in 1939 and served as its first president. When the refugee yeshivah pupils reached Vilna in 1939–40 following the Nazi invasion of Poland, he founded the Va’ad Hazzalah, and during the ensuing years he applied the same body to rescuing European rabbis and scholars, and students. In 1946 Silver visited Europe and Erez Israel as an official representative of the United States government to assist the war refugees. He continued to aid the many centers of rabbinic learning which were reestablished in Erez Israel in cooperation with the Israeli Va’aad ha-Yeshivot.

In appearance and erudition an Orthodox rabbi of the old school, Silver possessed a scintillating and non-conformist personality and a remarkable sense of humor. His dedication and selflessness were highly regarded, and he was often called upon to mediate in disputes in communities throughout the United States. Silver was a constant contributor to talmudic novellae and they were published in two volumes entitled Anfei Erez (1960–62). A biography entitled Ish ha-Halakhah ve-ha-Mū’āseh, edited by Menahem Glickman-Porush of Jerusalem, appeared in 1947.

[Silver, Harold M. (1900– ), U.S. social worker and social welfare administrator. Silver was born in Russia and was educated in the United States. He served as director of the Detroit Jewish Family and Children's Service from 1933 to 1963, taught social work at Wayne University (1934–53), served on the executive committee (1940–50) and as president (1945–46) of the National Conference of Jewish Communal Service, and was active in Po’alei Zion. One of the founders of the National Association of Social Workers (1955), Silver was chairman of the association's commission on personnel standards (1955–58) and helped create the code of ethics and a set of adjudication procedures for professionals. He was also a charter member of the Academy of Certified Social Workers for experienced and especially qualified professionals. Silver immigrated to Israel in 1963 and was a consultant at the Israel Ministry of Social Welfare from 1963 to 1966 and then a member of the faculty of the Hebrew University from 1966.

SILVER, JOAN MICKLIN (1935– ), U.S. film director. Born in Omaha, Nebr., to lumber dealer Maurice and Doris (née Shoshone) Micklin, both Russian immigrants, she studied at Sarah Lawrence College, graduating in 1956. After her marriage she moved to New York, where she worked on films for the Learning Corporation of America and wrote for the alternative newsmagazine The Village Voice in the 1960s. She received a writing credit for one of the first films to address Vietnam veterans, Limbo (1972), and her first turn at directing was a documentary short The Immigrant Experience: The Long Long Journey (1972). While researching Immigrant she came across Yeki, a story about young Jewish newlwyeds. The tale would serve as the basis for her first feature film, Hester Street (1975), which was created outside the Hollywood mainstream for $370,000 with her husband through their company, Midwest Films. Hester Street went on to gross $7 million, drawing resounding critical acclaim for its intimate historical portrayal of Jewish life in New York's Lower East Side, an Oscar nod for star Carol *Kane, and a Writer's Guild nomination for best screenplay. Her next feature film, Between the Lines (1977), drew on her time at The Village Voice but moved the action to Boston. In 1988, Silver put a modern twist on Hester Street with the release of Crossing Delancey. Silver followed this with the films Lover Boy (1989), Big Girls Don't Cry … They Get Even (1992), and A Fish in the Bathtub (1999). Silver increasingly focused on directing intimate made-for-TV films, including the abortion-themed A Private Matter (1992) and the Warsaw ghetto tale In the Presence of Mine Enemies (1997). Silver has also directed plays and musicals for theater, including the Randy Newman-inspired Maybe I'm Doing It Wrong (1982) and A … My Name Is Alice (1992). In 1995, she paired with Leonard *Nimoy to direct the radio series Great Jewish Stories from Eastern Europe and Beyond for National Public Radio.

[Silver, Ron (1946– ), U.S. actor. Born Ronald Zimelman in New York City, Silver graduated from Stuyvesant High School, a specialized school in New York for mathematics, science, and technology. He studied Spanish and Chinese at the State University of New York at Buffalo. After graduating in 1967, he considered a career in intelligence before going on to graduate studies in Spain and Taiwan in 1968. After returning to the United States, he received his master's degree in Chinese history from St. John's University in Queens in 1970. Silver struggled to find a job that appealed to him, from social work to teaching Spanish at Roosevelt High School, a Jewish boarding school in Connecticut. Silver had taken some acting classes in college, and turned to study at the Herbert Berghof Studio and then Lee Strasberg's Actors Studio. He made his stage debut in Kaspar and Public Insult at the City Center Theater in 1971. In 1972, he was a cast member in the off-Broadway farce El Grande De Coca-Cola. In 1976, Silver was cast as

SILVERMAN, ALEXANDER (1881– ), U.S. glass chemist. Silverman was born in Pittsburgh. He worked for MacBeth-Evans Glass Company (1902–04). In 1918 he became professor of chemistry at the University of Pittsburgh. He invented illuminators for microscopes, and several varieties of colored glasses. Silverman was a member of the National Research Council (1938–41, 1947–50).

SILVERMAN, IRA (1945–1991), U.S. Jewish leader. Before his untimely death at the age of 46 from a parasite that he contracted when he visited China, Ira Silverman held some of the most important posts in American Jewish leadership. A native of Rockville Centre, New York, he was a graduate of Harvard University (B.A. 1966) and was an M.A. in International Affairs from Princeton University (1968).

Among the positions that Silverman held was the presidency of the Reconstructionist Rabbinical College (1981–86). He was the first non-rabbi and as of 2006 the last to head the Seminary. He succeeded Ira Eisenstein, who had been the founding president and was to bring the institution from the generation of Mordecai Kaplan and his disciples to a new and younger generation. He was succeeded by Arthur Green, a distinguished scholar of Hasidism.

From the RRC he went on to become the director of the 92nd Street Y (1986–88), the crown jewel of the Y system, which was seeking to reinvigorate the Judaic contact of its many programs. He then returned to the American Jewish Committee where he had previously served as national program director, this time as its executive vice president (1988–90), where he was expected to bring sought after stability to its leadership in the post-Burt Gold era of the Committee. Illness beset him after a visit to China and in 1990 it became clear that he could not carry on the demands of his office. He remained at the AJC and director of the Institute on Human Relations until his death. Earlier in his career he was the director of federal government relations of the Association of American Universities, a Washington correspondent for The Jerusalem Post and Yedioth Aharonoth, a Tel Aviv newspaper. He was also the first director of the Institute for Jewish Policy Planning and Research, which was founded by the Synagogue Council of America. To each of these positions Silverman brought a deep Jewish commitment, which expressed itself in a commitment to social justice and human rights, which was at the core of his Judaism and shaped by its values.

[Michael Berenbaum (2nd ed.)]

SILVERMAN, JOSEPH (1860–1930), U.S. rabbi. Born in Cincinnati, he attended the University of Cincinnati, where he earned his B.A. in 1883. A year later he was ordained as the class valedictorian and received his D.D. from Hebrew Union College in 1887. He was a rabbi in Dallas, Texas, at Temple Emanu-El (1884–85), in Galveston at Temple B’nai Israel (1885–88), and at Temple Emanu-El, New York City (1888–1922), where he began as assistant rabbi and then served as rabbi after 1897. He was the first American-born rabbi to serve in New York. He was president (1900–03) of the Central Conference of American Rabbis and was founder and president of the Emanu-El Brotherhood. He wrote A Catechism on Judaism (1885), made numerous contributions to periodicals, and was active in Zionist work.

Among his other contributions, he was a consulting editor of the Jewish Encyclopedia. He was president of the New York Board of Ministers and founder and first president of the Association of Reform Rabbis of New York and Vicinity. An early opponent of Zionism, he became an active Zionist. Despite Emanu-El’s undeserved reputation as an anti-Zionist congregation he was honorary vice president of the Palestine Foundation Fund and a member of the executive committee of the Masonic Foundation Fund. He was active in the Federation of Jewish Philanthropies, the organization to which his congregation traditionally gave leadership. He visited Palestine in 1923 and then traveled the U.S. encouraging philanthropic work in Palestine. He was more reluctant to advance political Zionism. He was a member of the Committee for Religious Congress of the Chicago World’s Fair in 1893 and twice delivered the invocation at the House of Representatives. He wrote for the major Jewish periodicals of his day and was influential in the adoption of the Union Hymnal. He also wrote The Renaissance of Judaism (1918). He was active in ecumenical affairs, often the lone Jew represented among Christian clergy.

He opposed anti-Jewish portrayals in the theater and brought suit against Sholem Asch’s God of Vengeance, which
helped kill the play (during the Holocaust years Asch would not allow it to be performed lest the portrayal of Jews offer solace to antisemites; in recent years the play has enjoyed a revival in summer stock theater).

[Michael Berenbaum (2nd ed.)]

**SILVERMAN, LESLIE** (1914–1966), U.S. engineer. Born in Chicago, Silverman was a member of the Department of Industrial Hygiene at Harvard University in 1937 where he was professor from 1958 and department head from 1961. This department pioneered studies in industrial hygiene and occupational medicine in the U.S. Silverman's research interests mainly concerned the analysis of airborne dust. During World War II he was responsible for the engineering aspects of programs which developed oxygen provision during high altitude flight and protective gas masks. His engineering and supervisory work after the war included radiological safety, solid waste management, and controlling air pollution. He was a consultant to the Atomic Energy Commission. His books Industrial Air Sampling and Analysis (1947) and Handbook on Air Cleaning (1952) were standard texts.

[Michael Denman (2nd ed.)]

**SILVERMAN, MORRIS** (1894–1972), U.S. rabbi, scholar, and liturgist. Born in Newburgh, N.Y., Silverman was ordained rabbi at the Jewish Theological Seminary in 1922.

From 1923 to 1961 he served as rabbi of the Emanuel Synagogue in Hartford, Conn., and was a leader in virtually every aspect of Jewish life, prominently active in civic affairs, civil rights, interfaith activities, and Zionist work. He built the synagogue into one of the dominant congregations of New England and served with Hartford colleagues who also enjoyed long and distinguished tenures in the rabbinate.

His greatest influence on North American Jewry was through his role as a liturgic innovator and editor. Silverman began creating preliminary and experimental editions of various prayer books and booklets in the early 1930s. He eventually produced nationally distributed editions of twelve liturgical works, most published by the Prayer Book Press, which was established in Hartford to encourage dissemination of his work.

His High Holiday Prayer Book (1939 and 1953) combined the traditional Hebrew liturgy with new readings and notes, and introduced interpretive translations in "responsive reading" formats, which sought to encourage participation by worshipers of diverse backgrounds. It was eventually adopted by more than one thousand institutions, and was still in active distribution in 2005.

Silverman's Sabbath and Festival Prayer Book (1946) produced under the auspices of the Rabbinical Assembly, was adopted by most Conservative congregations; and, like his Mahzor, has influenced subsequent publications in various sectors of Jewish life. For four decades it was synonymous with the liturgy of a Conservative Congregation.

His Prayers of Consolation (1953) introduced a new genre of worship texts for special occasions, combining traditional worship with selections from classical texts and 20th-century sources. Silverman's Passover Haggadah (1959) featured explanatory notes and interpretive readings, and pioneered the inclusion of commemorative material on both the Holocaust and the recently-created State of Israel, within the seder liturgy.

Between 1933 and 1961 Silverman also edited and coedited liturgical and instructional texts for young people. His son Hillel also became a rabbi and his grandson Jonathan is a prominent American actor.

[Michael Berenbaum (2nd ed.)]

**SILVERMAN, SIDNEY** (Samuel; 1895–1968), British politician. Born in Liverpool, the son of a draper, Silverman was imprisoned in World War I as a conscientious objector, and, during the early 1920s, was employed as an English lecturer at Helsinki University. He then returned to London, becoming a solicitor. Silverman was elected to Parliament as a Labour member in 1935, retaining his seat until his death, and immediately established a reputation for independence and forthrightness. This led to numerous clashes with his colleagues in the Labour Party, of whose left wing he was a prominent member. During World War II he was one of the first persons in Britain to campaign on behalf of Jews being killed in the Holocaust, and raised the plight of the Jews in Parliament. In the immediate postwar period he was vocal in opposing Labour's policies in Palestine. On two occasions, in 1954, when he opposed German rearmament, and in 1961, when he voted against a party decision on service estimates, he was suspended from the Parliamentary Labour Party. His great achievement, the result of 30 years of campaigning, was the abolition of capital punishment in 1965.

Silverman was an expert on procedure. He came to be regarded as one of the most accomplished debaters in the House of Commons, and his parliamentary skill and his courage won him the affection of members of all parties. A dedicated Zionist, he spoke passionately and knowledgeably on Jewish causes in Parliament and consistently opposed the Palestine policies of Ernest Bevin, foreign secretary in the 1945–50 Labour Government. He was chairman of the British section of the World Jewish Congress (1940–50) and later member of the World Executive Council (1950–60) and vice president of the Zionist Federation of Great Britain (1947–50).

[Vivian David Lipman]

**SILVERMAN, SIME** (1872–1933), U.S. theatrical journalist. Born in Cortland, New York, Silverman wrote theatrical com-
mentary for the New York Morning Telegraph (1896–1905) until he offended advertisers and lost his job. In 1905, on $1,500 borrowed money, he started Variety, a weekly trade magazine devoted exclusively to show-business content. He was the editor and publisher until shortly before his death. It took him 24 years to make the paper pay, but he turned it into an influential weekly noted for its robust style and authoritative insight. In his latter years he launched a Hollywood edition of the publication. Variety covered vaudeville at first but then expanded to encompass film, radio, television, and music. A rich source of trend-setting phrasing, the paper popularized such terms as “high-hat,” “pushover,” and “belly laugh.”

SILVERSTEIN, ALAN (1948– ), U.S. rabbi. Silverstein was born in Philadelphia, Pennsylvania, and received a B.A. from Cornell University in 1970 and an M.A. from Columbia University in 1973. In 1975, he was ordained at the *Jewish Theological Seminary, where he earned a Ph.D. in 1990. He served as rabbi of Congregation Tifereth Israel in Cornwells Heights, Pennsylvania (1974–79), before becoming rabbi of Congregation Agudath Israel in Caldwell, New Jersey (1979– ). In New Jersey, he was president of the New Jersey Region of the *Rabbinic Assembly (1984–86), of the MetroWest Board of Rabbis (1986–88), of the West Essex Clergy Association, and of the statewide New Jersey Coalition of Religious Leaders [of all faiths] (2003–05). He was also a member of the National Rabbinic Cabinet of the United Jewish Appeal. In 1992, he was elected vice president of the Rabbinical Assembly, becoming president in 1994 (to 1996). As president, Silverstein worked to implement the three-fold approach of Conservative Judaism toward interfaith marriage: ideally promoting marriage within the faith; after the fact of intermarriage, facilitating the creation of Jewish households via conversion; finally, if no conversion is in the offing, advocating *keruv – bringing the intermarried couple closer to Judaism and assisting them in selecting Judaism for their children and raising them unambiguously as Jews. Following his term of office, Silverstein served as vice president of the American Zionist arm of Conservative Judaism, Mercaz USA (1996–2004). In 1997, he became a member of the Founding Executive Committee of the National Council of Synagogues, until 2000, when he was elected president of the World Council of Conservative/Masorti Synagogues (2000–05). In this capacity, he established a central office in Jerusalem and hired the organization’s first full-time executive vice president and other professionals. He also created a formal partnership between the council, whose name he changed to Masorti Olami, and Mercaz Olami, Conservative Judaism’s global Zionist arm. Under Silverstein’s leadership, the number of kehillot affiliated with Masorti Olami grew from 70 to 120, while its international youth movement, Noam, and young adult leadership network, Marom, grew concomitantly. In addition, 15 rabbis were placed in new congregational positions, and Chayl Masorti (the Masorti Peace Corps) was launched.

Silverstein has written numerous articles on intermarriage, conversion, and the Arab-Israeli conflict. He is the author of three books: Alternatives to Assimilation: The Response of Reform Judaism to American Culture, 1840–1930 (1994); It All Begins With A Date: Jewish Concerns About Intermarriage (1995); and Preserving Judaism in Your Family After Intermarriage Has Occurred (1995).

[Samuel Aaron Miller]
SILVEYRA, MIGUEL DE

(c. 1578–1638), Portuguese Marrano poet, physician, and mathematician. Silveyra, who was a relative of the great classical scholar Thomas de Pinedo, began his professional career in Madrid, where he was royal mathematician and, later, physician to the House of Castile. In 1634 he was denounced to the Inquisition and fled to Naples, where he spent the remaining few years of his life. His masterpiece, *El Macabeo* ("The Maccabee"), a baroque heroic poem written in Castilian, was published in Naples at the royal expense in 1638. The 20 books of this epic relate the exploits of Judah Maccabee culminating in the restoration of the Temple. Although modern critics have considered *El Macabeo* excessively bombastic, the poem enjoyed great esteem throughout the 17th century. It was reprinted in Madrid (1731) and published in an Italian verse translation (Naples, 1810). Silveyra’s other works include *El sol vencido* (Naples, 1639).

[Kenneth R. Scholberg]
SILVIU, GEORGE (originally Silviu Goliger; 1899– ), Romanian poet and journalist. Silviu’s verse collections include Flori și fluturi ("Flowers and Butterflies," 1922) and Înfrângeri ("Defeats," 1934). He also wrote children’s plays such as Motanul încălțat ("Puss-in-Boots," 1923), a work of literary importance produced in collaboration, and Întimplări cu tîlc ("Meaningful Incidents," 1957), a volume of classical and ultramodern fables.

"SIMA, HORIA (1908– ), leader of the Romanian "Iron Guard. A secondary school teacher in Transylvania, Sima was among the first to join the Iron Guard of *Codreanu and after Codreanu’s death (1938) became its leader. In 1939 he fled to Germany but, after temporary conciliation with King Carol, accepted a portfolio in the Romanian government (summer 1940). Following King Carol’s abdication (Sept. 5, 1940), he was vice president under *Antonescu at the head of the "National Legionnaire State." Sima then visited several cities to administer personally the expropriation of property belonging to Jewish businessmen. In January 1941 he led the abortive legionnaire rebellion against Antonescu, during which 120 Jews were killed in *Bucharest. Afterwards Sima fled to Germany, where he was interned. In a letter to *Himmler he blamed the Jews for his defeat and accused Antonescu of being manipulated by the Jews. In August 1944, following the anti-Nazi coup in *Romania, he became head of the Iron Guard government in exile in Vienna. After the end of the war, he organized the migration of factions of the Iron Guard who had fallen out with the Romanian authority, and was active in the neofascist movement. In his Destinée du nationalisme (1951) he professed a type of nationalism diverging from national socialism and fascism. He was subsequently reported living in Spain.

[Sila Adalbert Vago]

SIMA, MIRON (1902–1999), Israeli artist. Born in Proskurow, Ukraine, Sima grew up in a secular home with an excellent library that offered him an opportunity to learn about the Russian epic, as well as about European literature and art. Being Jews in Ukraine, Sima’s family suffered from the pogroms, and in 1921 they moved to Poland. This tragic existence had a major influence on Sima’s future artworks. In 1924 Sima moved to Dresden, where he studied at the Academy of Fine Arts until 1930. As a student Sima was granted three prestigious prizes and three honorable mentions. In 1932 Sima was awarded the prize of the City of Dresden for his painting The Tool-Sharpener (this painting was lost). In May 1933 Sima was ordered to leave Germany and, with the money he earned by selling some of his pictures, he immigrated to his family in Tel Aviv.

As soon as Sima arrived in Tel Aviv, he began to create and to exhibit, but the French-oriented art style of that city was not compatible with his approach as an artist. In Jerusalem Sima found German-born artists to whom he could articulate his feelings, and he moved there in 1938.

From his early days as an artist Sima was attracted to melancholic subjects. As a person with social sensibility, he turned to painting scenes of poverty and suffering. In Dresden he had made a woodcut portfolio called, The Scream (1924, Museum of Art, Ein Harod). The tragic images visible on those sheets of paper describe, in very expressive black and white, contrasts symbolizing death and mourning. They were seen as a reflection of his childhood experience. Later in his life Sima continued to deal with tragic subjects in his art. Although he found it unsuited to the atmosphere of renewal of the state of Israel during its first years, he managed to integrate the shady subjects with the colorful composition that expressed the light of the locale.

Sima used to work repeatedly on his subjects. In addition to his stage designs for the Ohel Theater, Sima created a lithographs album of portraits of the famous Israeli actress Hanna *Rovina (1937). Thanks to his visual sensitivity, the actres was described in dramatic, vivid gestures. One of his late woodcuts of Rovina as Medea (1957) hung in her house until she passed away.

Another album by Sima was dedicated to the German poet Else *Lasker-Schueler (the drawings were created in the 1940s, the album was first published in Germany in 1978, and later in Hebrew in 1983). With just a few lines, Sima captured her image, wandering around the streets of Jerusalem bent and lonely.

The melancholic atmosphere in Sima’s art and the serious expression of his self-portrait can be misleading, since Sima was actually a very cheerful and vital person. He used to say that only owing to his sensitivity to the beauty of life was he sensible to its tragic aspect as well.

[Ronit Steinberg (2nd ed.)]

SIMCHONI (Simchowitz), JACOB NAFTALI HERTZ (1884–1926), scholar, historian, and translator. Simchoni was born in Slutzk. He taught at the Hebrew High School in Lodz, Poland, from 1917 to 1924. In 1925 he joined the editorial board of the Encyclopedia Judaica (published by ”Eshkol” in German and Hebrew), contributing many articles to both editions.

Simchoni’s scholarly interests extended over a wide area, including history, archaeology, linguistics, and philosophy. He published essays in Hebrew periodicals (Ha-iivr he-Hadash, Ha-Atid, Ha-Zefirah, Ha-Tekufah, and others) on Judah Halevi, Solomon ibn Gabirol, Gershom Me’or ha-Golah, Joshua Falk, as well as on more recent scholars and writers such as S.D. Luzzatto, H.N. Bialik and Hermann Cohen. Simchoni wrote a textbook of Jewish history (Divrei Yemei Yisra’el, 2 vols. 1922–23) and an introduction to S. Tchernichowsky’s Hebrew translation of the Gilgamesh epic (1924), and translated into Hebrew Josephus’ Wars (1923, repr. several times) and Against Apion (1928). He defended the integrity of Josephus both as a man and as a historian and maintained that his actions, including his defection to Rome, were dictated by moral consid-
erations and that his books were written with passionate love for his people and deep concern for truth. A memorial volume for Simchoni (Ziyyunim) was published in 1928.

[Jacques K. Mikliszanski]

**SIMEON** (Heb. שֵׁם), the second son of Jacob and Leah (Gen. 29:33) and the eponymous ancestor of the tribe of Simeon. The name is formed from the verb *shém* (שמ) with the addition of the suffix *on* (ון), and was given by Leah to her son because “the Lord heard” that she was unloved (*ibid.*).

Simeon the individual is mentioned in connection with the journey to Egypt in time of famine, when Joseph imprisoned him as a guarantee that Benjamin, the youngest brother, would be brought before him (42:24, 36; 43:23). In Genesis 34 he is referred to as, together with Levi, attacking the city of Shechem, killing its inhabitants in retaliation for the rape of their sister Dinah by Shechem, son of Hamor the Hivite, a prince of the land (cf. 49:5–6). However, many scholars see in this story echoes of the sojourn of the tribes of Simeon and Levi in central Palestine and a clash between them and the host population, even before the Israelites conquered the land. Such a supposition might explain why the Book of Joshua lacks any description of the conquest of Shechem and the mountains of Ephraim (but cf. Josh. 12). Shechem, it is presumed, was already in the hands of Simeon and Levi even prior to Joshua’s invasion of Canaan. It was to Shechem that Joshua later gathered all the tribes of Israel and where they entered into a covenant to worship the Lord (Josh. 24). Some also find an allusion to Simeon’s connection with the district of Shechem in the ceremony described in Deuteronomy 27:12, in which the Simeonites head the group delivering the blessing on Mt. Gerizim. Simeon is also cited together with Ephraim and Manasseh in II Chronicles 15:9. According to Judges 1:3, the Simeonites fought alongside the tribe of Judah at Bezek within Manasseh’s district north of Shechem even before they turned southward to conquer the hill country of Judah (cf. Judg. 1:3).

In contrast to this meager evidence showing Simeon to be located in the center of the land, there exists a large body of tradition concerning the settlement of the tribe in the southern region of Canaan. According to the Book of Joshua, Simeon settled in the Negev (cf. I Chron. 4:28–33) “in the midst of the inheritance of the tribe of Judah” (Josh. 19:1). The passage does not trace the boundaries of Simeon’s settlement, but lists its towns, including the principal town of Beer-Sheba. Simeon’s settlement is also included in the description of Judah’s territory in Joshua 15. It lay in the Negev district, since the Simeonites inherited part of Judah’s allotment (Josh. 19:8). Moreover, the listings of the levitical towns include Simeon’s along with Judah’s (Josh. 21:9ff.; I Chron. 6:40–44). For these reasons Simeon’s territory is also called the “Negev of Judah,” to distinguish it from other parts of the Negev which were named after different ethnic groups (I Sam. 27:10; 30:14; II Sam. 24:7). There is no unanimity about the dating of the lists of Simeonite cities (Josh. 19:1–8; I Chron. 4:28–33; cf. Josh. 15:20–32), some regarding them as early as the period of conquest of the land and the time of the Judges, others assigning them to the time of David and Solomon, or even as late as Josiah.

Many of the names of locations within Simeon’s area are composed of the element “ḥazar,” denoting small settlements lacking walls (Lev. 25:31; Neh. 12:29). These served groups of shepherds and semi-nomads who had not attained the level of urban culture (cf. Gen. 25:16; Isa. 42:11; Jer. 49:33). This fits the situation of the tribe of Simeon, which continued its pastoral life, ranging through the wide spaces of the Negev to pasture its livestock. Although Simeon’s area of settlement is included in the Judahite region, which perhaps explains the omission of Simeon in Moses’ blessing (Deut. 33), the Simeonites managed to preserve their tribal unity and traditions. This is proved by the existence of genealogies of Simeonite families from as late as the days of Hezekiah, king of Judah (I Chron. 4:24–43).

The grazing of livestock in the southern part of the land, throughout the Negev, involved constant struggles between the Simeonites and the desert and border tribes, an echo of which may appear in Jacob’s blessing (Gen. 49:5–7) and in the report about families from the tribe of Simeon who in Hezekiah’s time fought against the Meunites and Amalekites in the area of Gerar, spreading with their livestock over the Negev of Judah as far as Mt. Seir (I Chron. 4:38–43).

The genealogies of the Simeonites testify to familial ties between them and other Israelite tribes as well as non-Israelite elements. Shaul son of Simeon is the “son of a Canaanite woman” (Gen. 46:10; Ex. 6:15); Mibsam and Mishma, sons of Simeon (I Chron. 4:25), also appear among the sons of Ish-
mael (Gen. 25:13–14; 1 Chron. 1:29–30); Jamin (Gen. 46:10; Ex. 6:15; 1 Chron. 4:24) is also listed as a descendant of Ram, the firstborn of Jerahmeel (1 Chron. 2:27); Zerah as Simeon's son (1 Chron. 4:24) suggests familial ties between the tribe and the family of Zerah, son of Judah (Gen. 38:30), or possibly with an Edomite family descended from Esau (Gen. 36:17; 1 Chron. 1:37). It is also possible to find traces of familial ties between the tribe of Simeon and the Midianites in the association of Zimri son of Salu, a chieftain of the Simeonites, with Cozbi, daughter of Zur, the Midianite (Num. 25:6–19).

Although Simeon is considered Jacob's second son, the Simeonites enjoyed no outstanding position in the tribal organization of Israel either before or after the conquest and occupation of Canaan. There were no judges appointed from that tribe, and Deborah does not mention Simeon at all. During the period of the monarchy, the Simeonites and their territory formed an inextricable part of the Kingdom of Judah, the fate of its population being tied to that of the kingdom generally. 

[ Bustanay Oded]

In the Aggadah

The rabbinic attitude to Simeon was determined largely by his violent role in the Dinah affair (Gen. 34:25ff.); the need to explain his betrayal by Joseph (Gen. 42:24); Jacob's harsh criticism of Simeon and Levi (34:30; 49:5ff.) though the latter, being a priestly tribe, fared much better later on; the total omission of Simeon in Moses' blessing (Deut. 33); and the virtual disappearance of the tribe during the period of the Judges or the early monarchy. Simeon and Levi were only thirteen years of age when they massacred the Shechemites, and they did so independently and without consulting one another (Gen. R. 80:10). The purpose of this manifest exaggeration was no doubt to emphasize the great physical strength of Israel's ancestors. It was Simeon who devised the circumcision stratagem to weaken the Shechemites (Sefer ha-Yashar, Va-Yishlah on Gen., p. 115); and it was his implacable hostility to Joseph which began the chain of events leading to Joseph's sale into slavery. Simeon was the first to have Joseph put to death (ibid., Va-Yeshev on Gen., p. 147; Tanh. B. Gen. p. 183 et al.), and it was he who threw him into the pit (Gen. R. 91:6; Tanh. Va-Yiggash 4) and ordered large stones to be cast on him to kill him (Tanh. B. Gen. 184). Joseph thus had good reason to arrest Simeon in Egypt (cf. Gen. 42:24), but he also wanted to separate him from Levi to avoid another massacre (Gen. R. 91:6). Simeon, who was endowed with extraordinary strength as well as a powerful voice which frightened all his enemies (Test. Patr., Sim. 233; Tanh. Va-Yiggash 4 et al.), refused to submit to detention, easily overcoming some seventy Egyptian warriors; but eventually he was overpowered by Joseph's son Manasseh (Tanh. ibid.). This account is in line with the general idealization of Israel's progenitors, most of whom were considered to have wielded supernatural powers. According to a more realistic view, however, Simeon was included in a list of the five weakest sons of Jacob (Gen. R. 95:4).

The tribe of Simeon, which was early absorbed by Judah, plays a relatively minor role in rabbinic literature. Along with the tribes of Reuben and Levi, the Simeonites are said to have refrained from idolatry and intermarriage with the Egyptians during the period of the Egyptian bondage (Song R. 4:7). This may be regarded as an apologetic compensation for Jacob's criticism of the ancestors of these three tribes (cf. Gen. 49:3ff.) with a view to removing any taint from Israel, which must be "all fair" and "lawless" (Song R. 4:7; cf. Shab. 51b–56a). It was, nevertheless, conceded that a large proportion of the Simeonites became seriously involved in the Baal-Peor affair (cf. Num. 25:1ff.), opposing the severe punishments ordered by Moses, and causing their chieftain Zimri to enter upon a confrontation with Moses and get involved in a fatal liaison with the Midianite woman (Sanh. 82a–b). In view of the enormous population loss suffered by the tribe of Simeon—from 59,300 in the first census (Num. 1:23) to 22,200 in the second (ibid. 26:14) – it was assumed that all 24,000 who had died in the plague following the sin at Baal-Peor (ibid. 25:9) were Simeonites (Gen. R. 99:7; Num. R. 218 et al.). The relatively low esteem in which the tribe of Simeon was held is indicated by the humble role attributed to it in later Jewish history. Most or all poor people, beggars, and the notoriously poverty-stricken schoolteachers were supposed to be descended from Simeon (Gen. R. 98:5; 99:7; Yal. Gen. 158).

SIMEON BAR ISAAC

(b. c. 950), one of the earliest German paytanim. Born in Mainz, where his grandfather A'ban had settled after leaving Le Mans in France, Simeon was a great scholar and the elder colleague of Rabbienu Gershon b. Judah, "the Light of the Exile"; it is related that "they studied Torah together." His contemporaries and also later scholars claimed that Simeon was descended from the dynasty of King David and "experienced in miracles." In praise of him it was said "that he exerted himself for the communities and brought light to the exiles with his learning," and of his appearance that "he had the countenance of an angel of the Lord of Hosts." Because of his importance, he was called "Rabbana Simeon," and also "Ha-Gadol" ("the Great").

Simeon was an expert on prayers and piyyutim, and on customs in general. It is almost certain that he knew the piyyutim of *Yannai; he was undoubtedly influenced by those of Eleazar *Kallir, Solomon ha-Bavli, and *Moses b. Kalonymus, and it is probable that being a cantor he himself recited his piyyutim. He composed *yozerot, *kerovot, *selihot, hymns, and Rashuyyot le-Hatanim (piyyutim) sung in honor of bridegrooms before they went up to read the law on the Sabbath.

592 ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 18
preceding their marriage and on that following it). His compositions bear clear traces of the language of the early piyyutim; they are suffused with pain at the persecutions and the tribulations which the Jews suffered during his lifetime. But his words are not specific, and there is no way of telling to which particular persecutions he is referring. Similarly, when he speaks in his selihah "Elohim, Kamu Alai Zedim" of those that reject the yoke of the Law, who "desecrate and despise the covenant of the patriarchs," for "the holy Sabbath has been willfully desecrated," it is impossible to know which sect he had in mind.

Simeon's piyyutim are to be found in mahzorim of the French and German rites, and are recited to this day. Some of them mention the names Isaac and Elhanan; and it has been conjectured that these were his sons, and that their father wished to perpetuate their names in his poems. A legend relates that Elhanan was forcibly baptized, and rose to high office in the Church until he finally became pope. Upon the promulgation of a new anti-Jewish edict, Simeon was sent by the community to Rome in order to plead with the pope on behalf of his people. The pope, his son Elhanan, recognized Simeon; and then Simeon recognized his son. Elhanan returned to Judaism, and his father perpetuated his name in a kerovah for Rosh Ha-Shanah. There would appear to be a grain of historical truth in the legend of a Jewish pope; and tradition has attached the story to the son of Simeon.

[Abraham Meir Habermann]

SIMEON BAR YOHA (mid-second century C.E.), tanna. Simeon was one of the most important pupils of *Akiva. In the Mishnah, the Tosafot, and those midrashei halakhah belonging to the school of R. Akiva, he is almost universally called R. Simeon without any patronymic, whereas in the midrashei halakhah belonging to the school of R. Ishmael he is consistently called by his full name, R. Simeon ben Yohai. Because of his close association with the teachings of his master, tradition states that: "every anonymous statement in the Sifrei is by Simeon in accordance with the views of Akiva" (Sanh. 86a). Similarly, the Talmud reports the following statement: "Simeon said to his pupils: My sons, learn my rules, since my rules are refined from those refined by Akiva" (Git. 67a). The aggadah tells that Simeon and *Hanina b. Hakhamai studied under Akiva in Bene-Berak for 13 years (Lev. R. 21:8), and that when Akiva was imprisoned for teaching Torah in public, Simeon continued to study under him and attended on him (Pes. 112a). According to another tradition, Akiva once said to him, "It is sufficient for you that I and your Creator recognize your power" (TJ, Sanh. 13, 19a), and in this context it is stated that Simeon was also ordained by Akiva. Simeon was among the small group of Akiva's closest pupils who survived the failure of the Bar Kokhba revolt and "revived the Torah at that time" (Yev. 62b; cf. Gen. R. 61:3), establishing new centers of study in the Galilee. According to another tradition, Simeon was one of the five (or six) sages ordained later by "Judah b. Bava at the cost of the latter's life (Sanh. 14a). The historical authenticity of this tradition, however, has been seriously questioned, both because of the alternative tradition concerning the circumstances of Judah b. Bava's death (Tosef. BK 8:3), and also because of the alternative tradition concerning the ordination of Meir and Simeon by Akiva himself (cf. TY Sanh. 13, 19a; see Oppenheimer, 78–79).

In one tannaitic source, Simeon is quoted as saying, "Even the best of gentiles should be killed" (Mekh. Be-Shallah 2), and it is reasonable to understand this statement against the background of the harsh decrees and religious persecutions of the Hadrianic era and the cruel martyrdom of Simeon's teachers. According to certain talmudic traditions preserved in Palestinian sources, Simeon spent an extended period of time in hiding, apparently in fear of the gentle authorities (Gen. R. 90:6, Eccles. R. 10:8, PRK 11:6, TY Shev. 9:1, 38d). In the Babylonian Talmud, these traditions are combined with other earlier aggadic sources to form an extended and continuous legend concerning the causes and circumstances of Simeon's flight from the Roman authorities, as well as the events surrounding his eventual triumphant emergence from the cave. According to this legend, "Simeon b. Yohai said (during a discussion with his companions): 'All that (the Romans) have accomplished is in their own interests. They have built market places to set harlots in them; baths to rejuvenate themselves; bridges to levy tolls.' Judah b. Gerim went and repeated this conversation, which reached the ears of the government. They decreed ... 'Simeon, who uttered censure, is to be executed'" (Shab. 33b). To save their lives, Simeon and his son Eleazar were compelled to flee. They concealed themselves in a cave for 12 years and were preserved by miracle (ibid.). This solitary life and concentration on the study of Torah led to an uncompromising devotion to the study of Torah, almost to the exclusion of any other value or concern. This attitude is reflected in a number of other aggadic dicta associated with the name of R. Simeon. "Simeon b. Yohai says: 'Is that possible? If a man plows in the plowing season, and sows in the sowing season, and reaps in the reaping season... what is to become of the Torah? But, when Israel performs the will of God, their work is performed by others'" (Ber. 35b); "He who is walking by the way and reviewing what he has learnt, and breaks off and says, 'How fine is that tree, how fine is that field,' Scripture regards him as if he had endangered his soul" (Avot 3:7). Other dicta ascribed to R. Simeon include: "If Israel were to keep two Sabbaths according to the laws they would be immediately redeemed" (Shab. 118b); "It is better for a man to cast himself into a fiery furnace than put his fellow to shame in public" (Ber. 43b). Among four categories of people whom Simeon disliked was "one who enters his own house suddenly – much more so, his neighbor's house" (Lev. R. 21:8). He is also quoted as expressing an ardent love for the land of Israel, as "one of the three precious gifts given by God to the people of Israel" (Ber. 5a), and only it was found fit to
be given to them (Lev. R. 13:2). The land of Israel is unique in the world, wanting for nothing (Sif. Deut. 37), and Simeon regarded departure from the land of Israel as a serious offense (Ex. R. 52:3). According to one tradition Simeon did not participate in the activities of the Sanhedrin in *Usha (of Ber. 63b), but according to another tradition, however, Simeon did participate in Usha (Song R. 2:5). He also participated in the intercalation of the month in the valley of Rimmon (Tj, Hag. 31:78c). In any case, he is portrayed as an active leader of the people, serving as an emissary of the Sanhedrin to Rome to plead for the abolition of the decrees against the observance of the commandments (Me'il. 17a–b).

He is mentioned as living in various places: in Sidon (Nid. 52b), in Bet Pagvi (Tosef., Me'il. 1:5), and in Galilee (ibid.), but he established his yeshivah in the town of Tekoa, southeast of Jerusalem. The sages detected many typical principles in his methods, such as the establishing of general rules (Hor. 9a; Zev. 19b; et al.), the use of numbers (Kid. 16b; Hull. 127b), “definitions” (Tosef., Neg. 5:3), and interpreting the reason for the biblical law in order to establish thereby the halakhah (bM 115a). R. Simeon was chosen by the author of the *Zohar as the leading figure of this classic medieval kabbalistic work, and as a result this work was for centuries ascribed to the 2nd century *tanna. For Simeon's death and place of burial, see *Meron, *Lag ba-Omer.

[Israel Burgansky / Stephen G. Wald (2nd ed.)]

**SIMEON BEN ABBA**

Third century, Babylonian-born *amora.* A pupil and kinsman of *Samuel, Simeon was a priest, the descendant of distinguished ancestors who were classified by *Johanan to the patriarch Abraham (Tj, Bik. 53, 65d). When Simeon went to Ereẓ Israel, he studied under the great *amoraim* of the first generation such as *Hanina and Joshua b. Levi, and he transmitted their dicta. His main teacher however was Johanan, whom he served as a disciple serves his teacher, learning from him not only formally but practically through his behavior. Simeon transmits many of the customs of Johanan. He was a poor man, and Johanan applied to him the verse (Eccles. 9:11): “Neither is there bread to the wise.” Nevertheless he would not accept gifts, and it is stated that Johanan would scatter coins when out walking so that Simeon could acquire them as finder (Ruth R. 57). Johanan was distressed that he was not able to ordain Simeon, who was consequently unable to receive the high office that was his due. Abbahu received the appointment but acknowledged that it should have gone to Simeon (Tj, Bik. 33:65d). Since he could not establish himself in Ereẓ Israel he wished to leave and asked Hanina for a reference, but the latter refused, saying that in the world to come Simeon’s ancestors would say, “We had one choice plant in Israel, yet you permitted it to depart from there” (Tj, MK 3:1).

Simeon also suffered in his family life. On the advice of Hanina he married his kinswoman, a daughter of Samuel who had been taken captive and taken to Ereẓ Israel by her captors. She did not live long; after her death he married her sister, who also died during his lifetime. Simeon bore his sufferings with courage and accepted them with equanimity. He expressed his submission to divine judgement in his homily (Gen. R. 9:11): “‘Behold it was very good’ (Gen. 1:31) refers to the attribute of retribution.”

[Israel Burgansky]

**SIMEON BEN BOETHUS** (surnamed Cantheras), high priest, appointed by Agrippa I in succession to Theophilus b. Anan. According to Josephus, Simeon's two brothers were also high priests, as was his father, Boethus, who because of his son Miriam (Mariamme) was nominated to the high priesthood by Herod (Jos., Ant. 19:297). This account, however, differs from another statement (ibid. 15:319–322) by Josephus to the effect that Herod married the daughter of Simeon b. Boethus, whom he appointed high priest and whose two brothers (according to another suggestion, his sons), Jozezer and Eleazar, were also high priests. Of these two versions, the former is to be preferred, namely, that Boethus was appointed to the high priesthood by Herod, and his son Simeon by Agrippa I. Simeon Cantheras was not high priest for long, being deposed by Agrippa in favor of Matthias b. Anan (ibid. 19:313–6), who was likewise removed by Agrippa after a short while and replaced by Elyhoenai (Elioneaus) b. Cantheras (ibid. 19:342). A high priest of this name is mentioned in the Mishnah (Par. 35) as the son, not of Cantheras, but of Ha-Kayaf (Caiphas). Since the name Elyhoenai occurs nowhere else, it would appear that both the Mishnah and Josephus refer to the same high priest. Talmudic sources (Pes. 57a; Tosef., Men. 13:21) mention the house of Katros, and despite its similarity to Cantheras the two are not identical. Since the Talmud explicitly distinguishes between the house of Boethus and that of Katros: Woe is me because of the house of Boethus, woe is me because of their staves... Woe is me because of the house of Katros, woe is me because of their pens; according to Josephus, however, Cantheras and Boethus refer to the same family.

[Lea Roth]

**SIMEON BEN ELEAZAR** (second century), *tanna;* a contemporary of *Judah ha-Nasi. He was probably the son of *Eleazar of Bartota. Simeon dwelt in Tiberias and Johanan
SIMEON BEN GAMALIEL II

SIMEON BEN GAMALIEL II (of Jabneh), nasi (first half of second century C.E.), the son of Rabban *Gamaliel of Jabneh and the father of *Judah ha-Nasi. Simeon was one of the few survivors after the Romans destroyed the house of the *nasi in revenge for the Bar Kokhba revolt (Sot. 49b), and he was compelled to conceal himself during the whole period of the persecutions that followed the destruction of Bethar (Ta'an. 29a, on the assumption that the reference is to Simeon b. Gamaliel and not to his father). Even after the death of *Hadrian, Simeon could not appear in public, and for this reason apparently was absent from the meeting of the scholars that took place in order to renew the intercalation of the calendar in the valley of Rimmon, after the revolt (Tj, Hag. 3:1, 78c.). Similarly, he is not mentioned as having been present at the first session of the scholars in *Usha. When the persecution abated and the danger to his life passed, he was appointed nasi of the Sanhedrin at the second meeting of the sages in Usha, as the son of the nasi Gamaliel and a link in the chain of the nesim descended from Hillel. It is probable that the lengthy period when the Sanhedrin functioned without a nasi rendered Simeon's task a difficult one and he had to win his place with flexibility and understanding. According to the Babylonian Talmud (Hor. 13b), Simeon shared authority with the av bet din, Nathan the Babylonian, and with a third figure, the hakham (apparently the head of and the deciding factor in the yeshivah), Meir. It has, however, been argued that this three-fold division of authority is an invention of the later aggadic tradition and was not in effect during the rule of Simeon, if ever (Goodblatt).

The fact that the scholars of Usha – Meir, Judah, Simeon b. Yohai and others – were recognized as the tradents of the heritage of the Oral Law as it began to crystallize in the period of Jabneh (see Sanh. 86a) made it difficult for Simeon to command the authority and status enjoyed by his father. As a result there was greater cooperation between Simeon b. Gamaliel and the members of the Sanhedrin than in the previous generation. He himself transmitted halakhah in the names of many members of the Sanhedrin and even accepted their rulings in practical halakhah: “Simeon b. Gamaliel said:

SIMEON BEN GAMALIEL I (first century C.E.), nasi of the Sanhedrin in the foundation of the destruction of the Temple. Josephus (Life, 191f.), of whom Simeon was a bitter opponent, praises Simeon as: “A man highly gifted with intelligence and judgment; he could by sheer genius retrieve an unfortunate situation in affairs of state.” Simeon's words in Avot (1:17), “All my days I have grown up among the wise, and I have found nothing of better service than silence; not learning but doing is the chief thing; and he who is profuse of words causes sin,” probably reflect the attitude he adopted during the stormy period of the conflict of opinions and sects, against the background of the dangers inherent in the revolt and the war. Some assert that Simeon was killed by the extremists who were opposed to his moderate leadership, but the view in the sources (Sem. 8; et al.) that he met a martyr's death at the hands of the Romans seems more probable, and he is thus traditionally included among the “Ten Martyrs. The Simeon b. Gamaliel mentioned without qualification in the Mishnah and in beraitot is usually Simeon b. Gamaliel II. However, the practical halakh and takkanot connected with the Temple, such as the energetic action to keep down the price of birds for women to sacrifice after childbirth (Ker. 1:7), must apply to Simeon b. Gamaliel I. Especially striking is the description of him at the time of the Simhat Bet ha-Sho'evah ("Festival of Water-drawing"): “He used to juggle with eight burning torches and not one of them fell to the ground, and when he prostrated himself he placed his finger upon the pavement, bowed, kissed the ground, and immediately stood upright” (Suk. 53a). One halakhic ruling by him is quoted in Eravin (6:2).

[Israel Burgansky]
'It happened that my eyes were paining me in Caesarea, and Yose bei Rabbi permitted me and my servant to sleep outside the sukkah'” (Tosef., Suk. 2:2); and on another occasion, it is stated: "Simeon b. Gamaliel sent to the sages, and they said: ‘That is a blemish!’” (Bek. 69). In addition he was known for his humility and his son Judah described his virtue in superlative terms (BM 841.).

According to the aggadic tradition of the Babylonian Talmud, Simeon b. Gamaliel took concrete steps to strengthen the status of the office of the nasi within the Sanhedrin and made specific decrees with this end in view: “When the nasi enters, all the people shall rise… when the av bet din enters, one row rises on one side and one row on the other… when the hakham enters, everyone rises (as he passes) and (then) sits down, until he has sat down in his place.” According to this tradition Meir and Nathan took this decree as a personal affront, and decided to attempt to discredit Simeon b. Gamaliel and to remove him from office. Their plan was foiled and Simeon in turn attempted, unsuccessfully, to have them removed from the bet ha-midrash. Nevertheless, as a punishment for their opposition to the nasi, it was decreed that all subsequent statements made by Meir and Nathan should be introduced anonymously, the former being quoted merely as “others say,” and the latter as “some say.” (Hor. 13b–14a). While some scholars have held that this story accurately reflects the forms of communal leadership practiced during the late tannaitic period and have also accepted it as evidence of a power struggle between these well-known historical figures, Goodblatt has shown quite convincingly that this story is in fact a late Babylonian elaboration and embellishment of certain earlier Palestinian traditions (cf. TJ MK 3:1, 81c), and has little or no historical value.

Another tradition which relates to the need to strengthen the status of his office concerns the restoration of the dependence of Babylon upon Erez Israel, particularly in regard to intercalating the month. Here too he encountered opposition from the Babylonian scholars (cf. TJ, Ned. 6:1; Ber. 63a). Readiness for, and predisposition toward cooperation with his colleagues, on the one hand, and a firm stand on the authority of the nasi, on the other, enabled Simeon to consolidate and further the status of the highest national institution.

There are some hundred halakhot in his name in the Mishnah and still more in the bera’hot and the Tosefta. His authority is reflected in the well-known rule of R. Johanan: “Wherever Simeon b. Gamaliel taught in our Mishnah the halakhat follows him” (except in three cases, Ket. 77a). The Jerusalem Talmud (BB 1014, 17d) gives the reason: “Because he gave fixed halakhot according to his bet din.” Many aggadic statements are also ascribed to him on a variety of topics. Traces of the devastation and religious persecution of his time are easily discernible in them, such as: “Whoever eats and drinks on the Ninth of Av is as if eating and drinking on the Day of Atonement” (Taan. 30b); “Since the Temple was destroyed we ought not to eat meat or drink wine…” he used to say, since they decree upon us not to study Torah, we ought to decree upon Israel not to marry… but do not interfere with Israel [by enacting such laws specifically] – better [if they transgress] that they act inadvertently rather than willfully” (Tosef., Sot. 15:10). In speaking of the value of remembering troubles and inscribing them in a book, in connection with the “Megillat Tannit, he said: “We too cherish the memory of troubles, but what are we to do, for they are so numerous that if we came to write them down we would not be able to do so.” (Shab. 13b). He gives a number of reminiscences of Jerusalem in previous ages and of the customs of its inhabitants (Ta’an. 4:8; BB 93b; Tosef., Ar. 1:13, and 2:5).

Some of his well known aggadic dicta are: “All my life I attended my father, yet I did not do for him a hundredth part of what Esau did for his father” (Gen. R. 65:16); “The ancients, because they could avail themselves of the Holy Spirit, ascribed their names to the event, but we… ascribe them to our ancestors” (ibid. 37:7); the reference is doubtless to the continuity of the dynasty of the nasi. He frequently preached in praise of peace: “By three things is the world preserved: by judgment, by truth, and by peace” (Avot 1:18); “Whoever makes peace in his own house is as if he makes peace in Israel” (ARN 1:28, 85); “Great is peace, for even the ancestors of the tribes resorted to a fabrication in order to make peace” (Gen. R. 100:8). He also spoke in praise of God’s manner of conducting the world: “How different are God’s ways from man’s! Man heals the bitter with the sweet, but the Holy One heals the bitter with bitter. How so? He puts something harmful [bitter wood] into something that has been harmed [the bitter waters] in order to perform a miracle” (Mekh., Va-Yassa 1). Especially does he give expression to his love for the people of Israel: “Come and see how beloved Israel is before the Omnispresent… in the past bread sprang up from the ground and dew came down from heaven… but now the reverse occurred, bread began to come down from heaven and dew to ascend from the ground” (Mekh., Va-Yassa 3).

[Israel Burgansky / Stephen G. Wald (2nd ed.)]

SIMEON BEN HALAFTA

(end of the second century C.E.), tanna in the transition period between the tanna‘im and the amoraim. Nothing is recorded concerning him in the Mishnah or the Tosefta, except for the one dictum: “The Holy One found no vessel that could contain Israel’s blessing save that of peace” (Uk. 3:12), which was appended to the tractate Uzkin and is thus the concluding statement of the whole Mishnah.

Simeon lived in Ein-Tenah, between Sephoris and Tiberias (TJ, Taan. 4:2). He studied under Meir, and his col-
leagues Hiyya and Simeon b. Rabbi (Judah ha-Nasi) were the outstanding scholars of the transition period. He frequented the home of Judah ha-Nasi (MK 9b), who also supported him financially in such a way as to cause him no embarrassment (Ruth R. 5:7). Most of his statements belong to the sphere of aggadah and he is in fact called “a tanna of the aggadah.” Many remarkable stories are related about him (Eccles. R. 3:4), and about his sustenance which came in a miraculous manner, such as (Ruth R. 3:4) when “a hand came down to him from heaven,” or when he was attacked by hungry lions and two pieces of flesh came down from heaven, one of which satisfied his hunger, and the other was declared apparently suitable for his own consumption (Sanh. 59b). He supported himself by means of a field that he leased from Hiyya (Ruth R. 5:12). He apparently was accustomed to examine independently the veracity of traditional statements regarding flora and fauna. Thus he investigated the truth of the verse in Proverbs (6:6–7) on the wisdom of the ant in order to arrive at its meaning (Hul. 57b). Similarly concerning the laws of terefarah in birds, he sought to prove that defects which according to other scholars rendered the bird terefarah because their injuries were fatal could in fact be cured. He is also found exaggerating about unusual phenomena in the plant world: “I had a single pepper stalk in my property and climbed it as if climbing to the top of a fig tree” (T, Pe’ah 7:3). His inclination toward independent “empirical” investigation is also reflected in the story that he went out to listen to the vernacular employed by the common people in order to learn from it the meaning of difficult biblical words (Gen. R. 79:7). His wife bore their poverty with courage and even prevented him from using the gift he received miraculously from heaven (v. supra) in order not to diminish the reward preserved in the hereafter (Ruth R. 3:4).

[Israel Burgansky]

SIMEON BEN JEHOZADAK (first half of the third century), Palestinian amorah. Simeon, who came of a family of priests, was the teacher of Johanan, who transmitted halakhah and aggadah in his name (Yoma 22b, et al.). His name may also be mentioned in a baraita in Sukkah 11b (see Tos. ibid.; but see also the reading on 33a there). He died in Lydda and Yahannai and Johanan were among those who attended his funeral (T, Naz. 7:1, 56a). Among his aggadic dicta are “Any scholar who does not avenge himself and retards anger like a serpent is no scholar” (Yoma 22b) and “A man should not appoint an administrator over the community unless he has a basket of reptiles suspended on his back, so that if he becomes arrogant, he can say to him: Turn around!” (ibid.). The Talmud (Sanh. 26a) relates that he once went with Hiyya b. Zarnuki to intercalate the year at Asia (Ezion-Geber on the bank of the Red Sea – see Klein (ed.), Shefa ha-Yishuv (1939), s.v.). On their way they saw men working their fields in the sabbatical year. “Simeon b. Lakish, who accompanied them, criticized these men, but Simeon b. Jehozadak justified their action. It is possible, however, that the reference is to another amorah of the same name.

[Yitzhak Dov Gilat]

SIMEON BEN JUDAH HA-NASSI (first half of the third century C.E.), the younger son of Judah ha-Nasi. The Talmud tells that Simeon transmitted traditions to such outstanding contemporary scholars as Hiyya, Levi, Bar Kappara, although they apparently did not regard themselves as his pupils (Kid. 33a–b). Similarly, it tells that Judah 1, on his deathbed, transmitted to Simeon “The orders of wisdom,” when appointing him hakham of the yeshivah (Ket. 103b, but see ṢYY Kil. 9:3, 32a, Ket. 123, 34d, Gen. R. 101 (100)). The view widely held is that Simeon served in the office of hakham during the whole period that his brother Gamaliel was nasi, as well as in the time of Judah 11 (Nesiah 1). Speaking of the great reward of those performing precepts, he said “If a person is rewarded for refraining from partaking of blood (Deut. 12:33), which is repugnant to man, how much more so will he and his future generations be deemed meritorious for refraining from robbery and incest to which men are attracted?” (Mak. 3:15).

[Israel Burgansky]

SIMEON BEN LAKISH (third century C.E.), Palestinian amorah. Simeon b. Lakish or Resh Lakish, as he is more commonly and commonly referred to in the Babylonian Talmud, was active in the communal and religious spheres mainly in Tiberias, where he may have been born as may be inferred from a conversation with a guard of the bet ha-midrash (Ecclus. R. 3:9). Nothing is known of his origins except that his father’s name was Lakish. He apparently studied under several sages (T, Kil. 9:4, 32b, end) among whom were Bar Kappara and Oshiaiah of southern Ereẓ Israel, but it is not known who was his principal teacher. In his youth he sold himself to men who hired participants in gladiatorial contests – a common practice in Ereẓ Israel at the time (see T, Git. 4:9, 46a–b) – presumably because he had no other means of earning a livelihood; he made reference in his old age to this period of his life (T, Ter. 8:5, 45d). For a time he also worked as a plantation guard (T, MK 3:1, 8:5). According to the aggadah, R. Johanan prevailed on him to study the Torah and gave him his sister in marriage (BM 84a). They had a son who was a scholar (Taan. 9a). Resh Lakish devoted himself with great diligence to the study of the Torah, systematically repeating his studies 40 times before having a lesson with Johanan (Taan 8a), and in time became one of the most esteemed sages in the Tiberias academy headed by Johanan. His halakhic argumentation was grounded both on keen logical deduction and on a knowledge of the traditions (Sanh. 24a; T, Git. 3:1, 44d), and when he died Johanan himself stated that a void had been created (BM 84a).

Resh Lakish showed partiality to no one in whatever concerned a halakhic decision and the actions of a bet din. He often argued against and disagreed with the views of Johanan,
who on such occasions would say, "What can I do when one of equal authority differs from me?" (Ket. 54b, 84b). Neither did he defer to his contemporary Judah ha-Nasi in any halakhic matter (TJ, Sanh. 2:1, 19d) and even reminded him of his duty to provide schools for children (Shab. 19b). Resh Lakish’s interpreter, Judah b. Nahamani, on one occasion also condemned Judah ha-Nasi it’s household for having appointed incompetent judges (Sanh. 7b). Whenever he saw or met Babylonian Jews in Erez Israel, Resh Lakish criticized them in the harshest and most biting terms for not having returned to the country (in the days of Ezra and Nehemiah) and thus having been a contributory cause to the destruction of Erez Israel (Yoma 9b). In this he expressed the general feeling current among people in Erez Israel (Kid. 39b; TJ, Ber. 2:5c; et al.). Resh Lakish would assemble the sages of the academy and review with them Johanan’s discourses so as to explain to them what they had been unable to grasp by themselves (bk 117a, and see Rashi ad loc., s.v. mesayym). He was highly esteemed by the pupils of the academy and also by the people for his personal integrity, which was so great that it was said that if he was seen talking in public with anyone, that person would be lent money without any witnesses (Yoma 9b). He was always ready to help others even if it involved danger, risking his life to save Rav Assi (TJ, Ter. 8:10, 46b).

In his addresses, both to the academy pupils and to the wider public, he emphasized the importance of the **mitzvah** of studying the Torah, the great reward of its students and of supporting the poor among them. He admonished students to be diligent in their studies, for otherwise “if you forsake me [the Torah] for one day, I shall forsake you for two days” (TJ, Ber. 9:8, 14d; and in a clearer version in Midrash Shir ha-Shirim, ed. by E. Gruenhut (1897), 5:12, 40a–b). To him the study of the Torah was a divine task which was not to be neglected. Hence he held that a disciple of the sages was forbidden to afflict himself by fasting (Taan. 11b). He also said that “the words of the Torah abide only with one who kills himself for them” (Git. 57b); that one was not to accept services from a scholar (Meg. 28b); and that the sages were to be exempted from paying taxes for the city wall (bb 7b). He did indeed hold that “sometimes the neglect of [the study of] the Torah is its fulfillment” (Men. 99a–b, and see Rashi ad loc., s.v. *she-bi-tutluh*), when such neglect is in order to observe certain **mitzvot**. He enjoined scholars to be amiable and to respect one another in their halakhic discussions (Shab. 63a); he deprecated undesirable traits: “If a sage becomes angry, his wisdom departs from him; if a prophet, his prophecy departs from him” (Pes. 66b), and “whoever scoffs will fall into Gehenna” (Av. Zar. 18b); and he warned against the evil inclination in one’s heart: “Every day a man’s evil inclination threatens to master him, and seeks to kill him” (Suk. 52b), “a man should always incite his good inclination against his evil inclination” (Ber. 5a), and “a person does not commit a transgression unless a spirit of folly enters into him” (Sot. 3a).

His love for the Jewish people was as great as his love for the Torah. Once when he and Abbahu went to Caesarea, which was inhabited by large numbers of non-Jews and hellenized Jews, and Abbahu denounced its inhabitants, Resh Lakish stopped him by saying, “God does not want evil spoken of Israel” (Eccles. R. 1:6). The difficult political and economic situation of the Jewish population in Erez Israel in the third century C.E., a period of appalling military anarchy, forms the background of many of Resh Lakish’s homilies in which he spoke of God’s love for His people even when their fortunes had “declined to the lowest ebb” (TJ, Ber. 9:1, 13b; PR 140b). These conditions are also reflected in Resh Lakish’s appraisal of the Roman government and its actions (Sot. 41b; Gen. R. 9:13; Lev. R. 13:5). Later generations referred to Resh Lakish and Johanan as the “two renowned authorities” (TJ, Ber. 8:7, 12c). According to the *aggadah*, Resh Lakish died from grief after Johanan, in a halakhic discussion between them, referred to the former’s past as a gladiator by saying “A robber knows his trade.” Deeply regretting this slip of his tongue, Johanan was so stricken with remorse that he died from mental anguish (BM 84a).

[Moshe Beer]

**SIMEON BEN MEGAS HA-KOHEN** (sixth century?), Palestinian **paytan**. Though the precise period of Simeon’s literary activity cannot be ascertained, certain structural elements in his **piyyutim** indicate that he preceded Eleazar b. Kallir, but not Yannai. Fragments of his work, which was evidently copious, are known only from Genizah b. *Kallir*, which was evidently the ***kaddisha*** that belongs to the category of *kerovot*. He probably composed a cycle of *kedushtaot* (liturgical poems) for all the weekly portions of the Torah, in accordance with the triennial reading customs (see “Triennial Cycle” of Palestinian Jewry. Fragments of 30 such *kedushtaot* are preserved in the manuscripts of the Genizah; several of his *kedushtaot* for festivals have also survived. While the style and manner of his **piyyutim** are generally close to those of Yannai, Simeon’s *kedushtaot* excel in a number of unique structural details.

[Erza Fleischer]

**SIMEON BEN MENASYA** (second–third century C.E.), **tanna**; a contemporary of Judah ha-Nasi. Simeon’s statements both in halakhah and aggadah are found mainly in beraitot. At times he disagrees with the Mishnah and at times supplements it. Only one of his statements is mentioned in the Mishnah (Hag. 1:7): “Who is it ‘that is crooked and cannot be made straight’ [Eccles. 1:15]? He that has incestuous relations with a woman and begets by her a *manzer*,” but the whole passage is taken from the Tosefta. He is also mentioned once in the sixth chapter of Avot (6:8) which is, however, a later addition to the Mishnah. He was a pupil of Meir in whose name he transmits several halakhot. In a dispute with Judah ha-Nasi he fixed the
halakhah according to the stricter view in a dispute of tannaim of an earlier generation (Bezah 26a). It is possible that there is here a hint of his method of deciding the halakhah. He himself said of Judah: “These seven qualifications which the sages enumerated as becoming to the righteous, were all realized in Judah ha-Nasi and in his sons” (Avot 6:8). Judah used to quote him in matters of piety and abstinence (Eccles. R. 9:9).

He and his colleague Yose b. Meshullam were called “holy brotherhood” (TJ, Ma'as. Sh. 2:4; in TB, Bezah 14b “holy community of Jerusalem” – see ‘Holy Congregation in Jerusalem’). It seems that they were the heads of a movement which followed Pharisaic practices of a special stringency. The essence of their attempt to “combine Torah with a worldly occupation” (cf. Ber. 35b) is reflected in the following Midrash:

Judah ha-Nasi said in the name of the holy brotherhood: ‘Acquire a craft for yourself together with Torah…’ and why does he call them ‘holy brotherhood?’ Because it included Yose b. Meshullam and Simeon b. Menasya who used to divide the day into three parts – a third for Torah, a third for prayer, and a third for work. Others say that they labored in the Torah throughout the winter and in their work throughout the summer (Eccles. R. 9:9, no. 1).

More widely known is his homily that also testifies to a similar outlook on life, regarding the law that the saving of life overrides the Sabbath: “And the children of Israel shall keep the Sabbath” [Ex. 31:16] – the Torah said, profane for his sake one Sabbath, so that he may keep many Sabbaths” (Yoma 85b). He also laid great emphasis upon the education of children in the study of Torah: “Even God is filled with love for him who has a son toiling in Torah…” (Gen. R. 63:1).

SIMEON BEN NETHANEL (second half of the first century c.e.), tanna. One of the five outstanding disciples of Johanan b. Zakkai who called him “sin-fearing” (Avot 2:8). Simeon was a priest and married the daughter of *Gamaliel I (the Elder; Tosaf., Av. Zar. 3:19). Very few of his sayings have been preserved. His saying in Avot (2:13) is: “Be careful in reading the Shema and the Amidah; and when thou prayest, regard not thy prayer as a fixed mechanical task, but as an appeal for mercy and grace before the All-present… and be not wicked in thine own esteem.” His reply to the question of his master as to “the good way to which a man should cleave” was “foreseeing the consequences” of all acts. “The evil way which man should shun” is “borrowing and not repaying, whether from man or from God,” i.e., ingratitude (Avot 2:9). He plays a role in the later development of the mystic traditions surrounding the vision of the merkavah (Tj, Hag. 2:1; cf. TB 14b), but his role in these stories in all likelihood has no historical foundation (Wald).

SIMEON BEN PAZZI (second half of the third century c.e.), Palestinian amora. According to the Tosafot (bb 149a) Pazzi was his mother’s name, but according to Frankel (Mevo 121a) it was that of his father (Dik. Sof., Meg. 13a). Although Simeon was considered a halakhic authority, very few of his decisions are mentioned in the Talmud. He instructed those who fixed the calendar to draw it up so that neither Rosh Hashanah nor the seventh day of Tabernacles (“Hoshana Rabba”) should fall on the Sabbath, but when it became necessary for one of them to fall on the Sabbath the latter should be chosen. Simeon was essentially an aggadist. He handed down a large number of biblical interpretations by his teacher Joshua b. Levi, of whose aggadot he is the principal transmitter. His own aggadot contain exegetic and homiletic interpretations and comments, including parables, sentences, and maxims on God, the world, prayer, and the study of the Torah. He interprets the double yod in ‘yisra’el in Genesis 2:7 as emphasizing the inner struggle within man between the sensual (yezirah) and the divine (yozar), and comments: “Woe to me because of my impulses; woe to me because of my Creator” (Ber. 61a). “When the patriarch Jacob was about to reveal the messianic time to his children (Gen. 49:1) the presence of God departed from him, whereupon he said ‘Has an unworthy child sprung from me as Ishmael sprang from my grandfather Abraham and Esau from my father Jacob?’ In answer his sons exclaimed ‘Hear O Israel, the Lord our God the Lord is one’ (Deut. 6:4) as only one God is in your heart so only one is in ours.’ Jacob then said ‘Praised be the name of the glory of His kingdom for ever and ever’” (Pes. 56a). In other texts this passage is ascribed to Rеш Lakish. His statement in Sotah 41b that one may be obsequious to evil people in this world is a reflection of social conditions in his time.
SIMEON BEN SAMUEL OF JOINVILLE (12th–13th century), French scholar. Simeon's father was a contemporary of Jacob *Tam, who on one occasion relied upon him for a halakhic ruling. Simeon was a pupil of *Isaac b. Samuel of Dampierre, with whom he was on particularly intimate terms. He is very frequently mentioned in the standard tosafot and his commentary on various tracts of the Talmud is cited in the works of *rishonim. A few of his responsa have survived.

**BIBLIOGRAPHY**: Gross, Gal Jud, 255; Urbach, Tosafot, 280–1, 504, 522.

[S. ukotai, ch. 1, cf. TB Ta'an. 23a) was the leader. According to a tradition of R. Meir, Simeon was *av bet din but the view of R. Judah (or the anonymous sages) is that he was *nasi (Tosef., Hag. 2:8). According to one tradition (Tosef. Sanh. 6:6) Simeon b. Shetah once criticized a halakhic decision of Judah b. Tabbai, who thereafter accepted upon himself “never to make a halakhic ruling without Simeon b. Shetah's consent.” The attempt in the Babylonian Talmud (Ḥag. 16b) to use this tradition to determine which of them was *nasi and which *av bet din was inconclusive. Moreover, in the parallel version of this story (Mekh. Nezikin, 20), the roles of Judah b. Tabbai, and Simeon b. Shetah are reversed, and S. Friedman and others have shown that the version in the Mekhilta is the more original.

Tannaitic sources mention Simeon in a number of different contexts. In the Ṣifra (Beḥukotai, ch. 1, cf. TB Ta'an. 23a) "the days of Simeon ben Shetah and Shlomzuv the Queen" are remembered as a time of extraordinary blessedness, when the rains were so plentiful that the "wheat was a large as kidneys, the barley as large as olives, and the lentils as large as gold dinari." The wheat of these legendary days was referred to in later times simply as "the wheat of Simeon ben Shetah" (Ḥul. 119b). Similarly, Simeon ben Shetah plays a role in the tannaitic aggadah concerning the wonder-working rainmaker, *Ḥoni ha-Meʿaggeṭ (Ta'an. 3:8, TB Ta'an. 23a). In this context Simeon threatens Ḥoni with excommunication, and in one place (Ber. 19a) the Bavli ascribes to Simeon a similar threat with regard to Todos of Rome, though it is clear from the parallel sources (Tosef. Bez. 2:15, Ṣif. Pes. 7:1, 34a, Bez. 2:7, 61c, MK 31:81d, TB Pes. 53a, Bez. 23a) that the association of Simeon ben Shetah with the case of Todos is a late literary embellishment of an earlier tannaitic tradition. Both the Mishnah (Sanh. 6:4) and a tannaitic midrash (Ṣifre Deut. 221) mention a tradition according to which Simeon ben Shetah "hanged 80 women in Ascalon on a single day," "because of the pressing need to make an example of them to others" (Ṣifre). No further information is reported in the tannaitic sources regarding this remarkable event, but the later aggadic tradition has woven around this tradition a number of fascinating legends concerning Simeon ben Shetah and "the witches of Ascalon," involving spells and counter-spells, intrigues and counter-intrigues, false witnesses and revenge (TY Ḥag. 2:2, 77d–78a, TY Sanh. 6:6, 23c; Midrash Ten Commandments, end; cf. TY Sanh. 63:23b). Though not brought in the Babylonian Talmud itself, Rashi quotes this legend at length in his commentary to Sanh. 44b (cf. Rashi to Sanh. 45b). According to a Palestinian amoraic aggadic tradition (TY Ber. 7:2, 11b, Naz. 5:3, 54b, Gen. R. 91, Ecc. R. 7), Simeon ben Shetah once came into conflict with King Alexander Yannai regarding a certain financial obligation which Simeon accepted upon himself, and which Yannai was led to believe that Simeon had failed to live up to. Simeon, fearing the king's anger, went into hiding, until a number of foreign dignitaries who were visiting Yannai requested Simeon's presence at court, in order to hear from him the words of wisdom for which he was famous. Simeon was then asked to lead the blessing over the meal, despite the fact that he had not himself partaken of the bread. In the version of this tradition found in the Babylonian Talmud (Ber. 48a–b), this minor incident is portrayed as all-out warfare between King Yannai and the Pharisees, of whom Simeon ben Shetah was the leader. According to this tradition, Simeon ben Shetah was summoned to court because Yannai “had killed all the sages, and there was no one left who knew how to perform the blessing after the meal." In a number of other places in the Babylonian Talmud, Simeon ben Shetah is portrayed as playing a role in an ongoing, and frequently violent, conflict between the king and the sages (Sot. 47a, cf. TY Ḥag. 2:2, 77d, and Sanh. 6:6, 23c; Kidd. 66a, cf. Meg. Ta'an., concerning the 28th of Tevet; Sanh. 19a–b), though there is little or no evidence for such a conflict in the earlier Palestinian talmudic tradition.

Tradition ascribes to Simeon b. Shetah a number of *takanot in the spheres of domestic life and education. According to a tannaitic tradition, he introduced the stipulation that all the husband's property is pledged for the payment of the ketubbah (Tosef., Ket. 12:1 and parallels). He is credited with having pioneered education for the young by introducing school attendance for children (TB, Ket. 8:11, 32c), hitherto the education of children being regarded as the responsibility of the parents alone. According to another tradition, Simeon established schools in Jerusalem and in the district towns and obliged parents to send their children to them (cf. BB 21a). He is also credited with a decree concerning the ritual impurity of metal vessels (TB, Ṣhab. 1:4, 3d, TB Ṣhab. 14b).

Friedman, “If They Have Not Slain They Are Slain; but If They Have Slain They Are Not Slain,” in: Sidra, 20 (2005).

[Yitzhak Dov Gilat / Stephen G. Wald (2nd ed.)]

SIMEON HA-PAKULI (late first and early second century C.E.), one of the scholars of Jabneh in the time of “Gamaliel II. He is mentioned only once in the sources: “Simeon ha-Pakuli arranged the 18 benedictions in order before Rabban Gamaliel [11] in Jabneh” (Ber. 28b). It is assumed that this activity included a number of elements: the determination of the number of blessings, their subject matter, and their order (see ‘Amidah). According to Rashi his name refers to his occupation as a seller of cotton tufts (pakuli).

[Israel Burgansky]

SIMEON THE HASMONEAN (called Thassis; d. 134 B.C.E.), the second son of *Mattathias. The origin of the name Thassis is obscure, and many conjectures have been put forward. Some think it is to be connected with the Hebrew toses (תוש, “vigorous”) or tashshu’a (תשוח, “weakening”), while others regard it as a variant of the Hebrew name Assi or the Syrian Tarsi.

On his deathbed, Mattathias recommended Simeon as counselor for Judah, who was military commander against the Syrians. Under Judah he played an independent role as commander of the expedition that went to the aid of the Jews of Galilee. According to 11 Maccabees (14:17) he attacked *Nicanor and was defeated by him. When Judah died, Simeon and his brother Jonathan buried him in the family sepulcher in *Modi’in. Simeon was Jonathan’s right-hand man in the wars with the hellenizers and the Syrians. He distinguished himself, among other things, by relieving the city of Bathbasi which had been besieged by *Bacchides. He also took part with Jonathan in the war against Apollonius. At the time of Tryphon’s rule in Syria, with Jonathan’s rule at its zenith (145–143 B.C.E.), Simeon was appointed military governor of the whole coastal region of Israel from the Ladder of Tyre to the Egyptian border. During Jonathan’s campaigns in Galilee, Simeon remained in authority in Judea, during which time he conquered Beth-Zur and fortified Aditha. On Jonathan’s treacherous capture by Tryphon in 143 B.C.E., the leadership passed inevitably to Simeon, now the sole survivor of the Hasmonean brothers. He fortified Jerusalem, strengthened his hold on Jaffa, and prepared to face Tryphon, all the time endeavoring, but in vain, to ransom his brother from him. Tryphon’s efforts to penetrate Judea were repelled by Simeon and he was forced to withdraw, but put Jonathan to death. Simeon buried Jonathan at Modi’in, where he erected a splendid monument in his memory. In the dispute over the throne in Syria Simeon supported *Demetrius II, who recognized his rule and waived his claim to tribute. The year 142 B.C.E. was regarded as the beginning of Judean independence and the years of Simeon’s rule were reckoned from that date. Simeon also conquered Gazara (Gezer) and Judaised it, driving out the Syrian garrison from the citadel.

For a while after this Judea enjoyed a period of peace. The ties with Sparta and Rome were renewed. In the year 140, Simeon’s position was confirmed by the nation. He and his children after him were appointed by a public assembly to the position of high priest, ethnarch, and commander of the army, thus establishing the Hasmonean dynasty. A copy of the resolution was engraved upon tablets which were set up in the Temple court. During the latter half of Simeon’s rule the danger to Judean independence was renewed. Antiochus V11 Sidos became ruler of Syria, and endeavored to revive the shattered Seleucid Empire. Syrian relations with Simeon deteriorated and Cendebaeus was sent against Judea, but Simeon’s sons defeated him. Soon after, during a tour of the country, Simeon was murdered in Jericho by his son-in-law *Ptolemy b. Abubus, who may have conspired with the Syrians. Simeon was succeeded by his son John *Hycanus.

[Uriel Rappaport]

SIMEON HA-TIMNI (second century C.E.), tanna, a member of the Sanhedrin in the era of *Jabneh. His name derives from the town of Timnat near Beth-Shemesh (Judg. 15:6; cf. Rashi to Bezah 21a) and has no connection with Yemen (Heb. Teiman). According to R. Nahman b. Isaac the sages referred to him in the anonymous formula: “It was discussed before the sages,” are five well-known tannaim, of whom Simeon ha-Timni is one (Sanh. 17b). These rabbis apparently enjoyed the intermediate status of scholars of the bet ha-midrash who had graduated from that of “pupils” but had not yet been ordained. In point of fact none of these five scholars had the title “rabbi.” Two of them are generally mentioned by their patronymics – Ben Azzai and Ben Zoma – and the phrase “Those who discussed before the sages” is sometimes used instead of the authors of the statement (Eduy. 1:10). To Simeon ha-Timni was applied a special attribute – the knowledge of “70 languages” – denoting exceptional members of the Sanhedrin, although its exact nature is not clear (Sanh. 17b). He is mentioned in the Mishnah and Tosefta as disputing with the greatest scholars of the generation, Akiva and Joshua, and especially noteworthy is his stand in the great dispute which agitated the scholars of that generation, on the halakhic definition of the “mamzer. Simeon’s ruling was already accepted as the halakhah in practice close to his time (Yev. 4:13).

Also preserved are some of his aggadic statements that were also made in the course of a discussion with several of his colleagues on the meaning of the words of his teacher, Akiva (Tosef., Ber. 4:16). Another dictum by him, preserved in the aggadah, is also connected with a question to which many answers were propounded by the tannaim: by what merit was the Red Sea parted for the children of Israel? Simeon’s view was: “By the merit of circumcision” (Mekh. Be-Shallah 4). References to his beneficent activities on behalf of the com-
munity have also been preserved (Tosef., Beẓah (Yom Tov) 2:6). Another dictum which some of the sources attribute to Simeon ha-Timni (Sif. Num. 103) may perhaps indicate his connection with mystic lore; he supports the view of Akiva, and even adds that the angels and “holy hayyot” do not see the Divine Presence.

**BIBLIOGRAPHY:** Hyman, Toledot, 1225f.; Bacher, Tann. [Israel Burgansky]

### SIMEON THE JUST

**SIMEON THE JUST**, high priest in the time of Alexander the Great who was surnamed the Just both because of his piety toward God and his benevolence to his countrymen (see also Jos., Ant. 12:157). According to Josephus (Ant. 12:43), he is identical with “Simeon I, the son of Onias I and the grandson of Jaddua. Simeon the Just is also referred to in rabbinical literature. In *Avot* (1:2) he is mentioned as one of the survivors of the Great Assembly, and he is the author of the saying, “Upon three things the world is based: upon the Torah, upon divine service, and upon the practice of *gemilut hasadim* [charity].” In the same source he is indicated as the first in a chain of scholars descending from Hillel and Shammai. According to the Talmuds (TJ, Yoma 6:3, 43c–d; Men. 109b), he was the father of the “Onias who built a temple in Egypt. If this is so, then Josephus erred in identifying Simeon the Just with Simeon I and he is to be identified with Simeon 11, the father of Onias III, who lived about 200 B.C.E. The chronology in *Avot* also supports the latter view. To the praise of Simeon the high priest given by Josephus and the rabbis (TJ, loc. cit.; Yoma 39a–b) may be added the words of Ben Sira referring to Simeon 11 (50:1–6): “Great among his brethren and the glory of his people was Simeon, the son of Johanah the high priest, in whose time the House was renovated, and in whose days the Temple was fortified. How glorious was he when he came out from the sanctuary! Like a morning star from between the clouds and like the full moon on the feast days.” Ben Sira praises his communal activities after the conquest of Judea by Antiochus 111 and his repair of the Temple (cf. Jos., Ant. 12:141). The great importance and honor given by Ben Sira to Simeon 11 also supports the view that it was he who was Simeon the Just, and that Josephus erred. Simeon the Just is also mentioned as the high priest who went forth to welcome Alexander (Yoma 69a; Meg. Ta an. 9), but chronologically it can apply to neither of the Simeons. In general the historical value of this story is very doubtful. However the suggestion that the origin of the story is to be found in a meeting that took place between Simeon (11) the Just and Antiochus 111, who was his contemporary and ally, may be correct. Some scholars prefer the testimony of Josephus. Azariah dei Rossi (Meor Einyayim, Imrei Binah, ch. 22) makes the suggestion that perhaps Simeon the Hasmonean is meant.

### SIMEON OF MIZPAH

**SIMEON OF MIZPAH** (mid-first century C.E.), *tanna* at the close of the Second Temple era. As his name suggests he came from the town of Mizpah in Judah. It is related of him: “It once happened that R. Simeon of Mizpah sowed his field before Rabbai Gamaliel, and they went up to the Chamber of Hewn Stone and put a question. Nahum the Scrivener said: ‘I have a tradition from R. Measha who received it from his father, who had it from the ‘zugot, who had it from the prophets as a halakhah given to Moses at Sinai ...’” (Pea 2:6). The Gamaliel referred to is Rabbai Gamaliel the Elder, and at that time Simeon must have been still a young man. The incident vividly portrays the custom of clarifying halakhah in the Chamber of Hewn Stone when the local scholars were unable to decide. R. Johanan states that Simeon was the *tanna* who taught the Mishnah *Tamid* (TJ, Yoma 2:2). According to another opinion in the Babylonian Talmud (Yoma 14b), the intention of the tradition is to attribute to Simeon those mishnayot dealing with the daily sacrifice in the Mishnah *Yoma* which parallel those in *Tamid*. The tractate *Tamid* is written in a descriptive, lively, and flowing style, which has led some scholars to conjecture that Simeon presented an eyewitness account of the order of the Temple service.

**BIBLIOGRAPHY:** Epstein, Tanna‘im, 27–31; Hyman, Toledot, s.v. [Israel Burgansky]

### SIMEON SON OF ONIAS I

**SIMEON SON OF ONIAS I** (first half of the third century B.C.E.), high priest. He was the grandson of *Jaddua, high priest in the time of Alexander the Great. According to the genealogical list given by Josephus, Simeon's son, *Onias 11, was a minor when his father died, and in consequence Eleazar, the brother of Simeon, and Manasseh, his uncle, filled the office after Simeon. Only subsequently did Onias 11 become high priest. Josephus relates in two places that Simeon was called the Just because of his fear of heaven and love of his fellow-Jews (Ant. 12:43, 157). On the trustworthiness of this description see “Simeon the Just.”

**BIBLIOGRAPHY:** Schuerer, Gesch, 2 (1907), 419f.; 3 (1909), 217; Klausner, Bayit Shenii, 2 (1951), 161ff. [Uriel Rappaport]

### SIMFEROPOL

**SIMFEROPOL**, city in the Crimea, now in Ukraine. Simferopol was founded in 1784 and until the 1917 Revolution it was the chief town of the province of Tauria (Taurida), Crimea peninsula. Krimchaks (Crimean Jews) from other localities in the Crimea and Ashkenazi Jews from the regions of the Pale of Settlement began to settle there soon after its foundation. The number of Jews registered as taxpayers in 1803 was 471. During the 19th century the Jewish settlement increased considerably as a result of intensified emigration from other regions of the Pale of Settlement to the Crimea peninsula. In 1897 the Jews numbered 8,951 (18.3% of the total population), about 500 of whom belonged to the Krimchak community. Some 1,000 Karaites also lived in Simferopol at that time. About a quarter of the Jews were small merchants and craftsmen. Some Jews
were working in tobacco factories and printing houses, many of which belonged to Jews. There was a community hospital, two talmudei torah, 2 private schools, a vocational school for girls, and a public library. In October 1905 pogroms broke out in the city and 42 Jews were killed. During World War I and the Civil War years many Jews who fled or were expelled from the battle regions or who otherwise escaped the riots bands found refuge in Simferopol. The city became an important Zionist center for helping Russian emigrants to Palestine via Constantinople. In 1926 there were 17,364 Jews (19.6% of the population) in Simferopol, with their number growing to 22,791 in 1939 (16% of the total population). In the 1920s Simferopol was a place from where the Jewish farm settlers dispersed over Crimea. Nine Jewish settlements with 324 families were organized in the environs of the city, concentrated in two Jewish rural councils. A Jewish vocational school and several Yiddish elementary schools operated in the city. The Germans captured Simferopol on November 1, 1941. According to them they found 12,000-14,000 Jews. Sonderkommando 11b who settled in the city started with executions and by December 13, 1941, had murdered more than 10,000 Jews and about 2,500 *Krimchaks. In 1959 according to the census there were again about 11,200 Jews in Simferopol. One synagogue was closed down in 1959, but as of 1968 another was still functioning and mazot were officially permitted to be baked there. Outside the city there is a mass grave of 14,000 Jews murdered by the Nazis. No monument has been erected in their memory. Several kolkhozes housed about 50% of the Jews of the area. Most of the city's Jews emigrated in the 1990s.

**BIBLIOGRAPHY:** Die Judentpropfte in Russland, 2 (1909), 163–8.

[Avraham Yaari]

**SIMHAH BEN JOSUHA OF ZALOZHTSY** (1711–1768), Polish author and Torah scribe. A preacher in the town of Zalozhitsy, near Brody, Poland, he was one of a group of ascetic Hasidim who had gathered around R. Nahman of Kossov, many of whose teachings he cites. He composed two works containing moral preaching in homiletic style and principles of conduct according to the kabbalist Isaac *Luria: Lev Simjah* (Zolkiew, 1757) and *Neti'ah Shel Simjah* (ibid., 1763). Several times in his books, he implies that the redemption will take place in 1768. He left Zalozhitsy in May 1764, later encountering R. Nahman of Horodenka and R. Mendel of Peremyshlyany, pupils of Israel b. *Eliezer Ba'al Shem Tov, who were also traveling to Erez Israel. Sailing from Constantinople on September 15, they reached Jaffa on September 26 (the eve of Rosh Ha-Shanah). Simhah and the hasidic leaders continued their journey by ship to Acre. Arriving in Safed, they found only 40–50 Sephardi families there. Unable to earn a living as a scribe, Simhah returned after seven months to Europe. Arriving in Leghorn, Italy, he found a generous Jew, who welcomed him into his home. At his request, Simhah wrote a book containing the full story of his journey. *Sippurei Erez ha-Galil* ("Tales of Galilee") is a firsthand account of his experiences. Returning to Poland, Simhah became a preacher in Brailow, where he remained until his death. A copy of his book was published by his son-in-law, Solomon *Dubno* (Grodno, 1790), under the title *Ahavat Ziyyon* ("Love of Zion"). Solomon Dubno added extracts from the writings of other travelers, notably chapters on Jerusalem, Hebron, Nablus, and Egypt, which he took from the narrative of the Karaite *Samuel b. David* (1641–42). He also added excerpts from various non-Jewish works. The book was republished under the title *Doresh Ziyyon* (1887) by Hayyim Eliezer Hausdorf. It was first published in its original form by A. Yaari.

**SIMHAH BEN JOSUHA OF SPEYER** (second half of the 12th and the beginning of the 13th century), German scholar. He may have been a descendant of Judah ha-Kohen, author of the *Sefer ha-Dinin* (see Aptowitzer). Simhah was one of the rabbis and dayyanim of the Speyer bet din together with his kinsman (cousin?) Judah b. Kalonymus, who was also one of his teachers, and with Nathan b. Simeon (*Or Zarua*, Bk no. 460 and *Beit ha-Keneset* no. 388). He studied – together with his colleagues Eleazar b. Judah (of Worms), author of the *Roke'ah*, and *Eliezer b. Joel ha-Levi* (Ravayah) – under *Eliezer b. Samuel of Metz* (Maharshal, resp. no. 29), Moses b. Solomon ha-Kohen of Mainz (*Ravayah* no. 1,024), and *Isaac b. Asher ha-Levi*. There were ties of close intimacy between Simhah and Eliezer b. Joel ha-Levi, and they corresponded on numerous halakhic problems, exchanging responsa (see Aptowitzer's list, pp. 200–5, 222ff.).

Some of the responsa he addressed to various other scholars are extant (see *Germania Judaica*, 1 (1934), 344ff.). Among those who addressed problems to him was the renowned Italian scholar, Isaiah di Trani, who, though generally one of the severest critics of the scholars of Germany and France, expressed great esteem for Simhah. Other quotations from his teachings are in the work of his distinguished pupil Isaac b. Moses of Vienna (*Or Zarua*), and Abraham b. Azriel in his *Arugat ha-Bosem* copies whole pages from Simhah (*Urbach*, 344 n. 29). There are quotations in the books of French, German, and Italian authors. Urbach (p. 346) conjectures that most of the quotations, with the exception of the responsa and oral traditions, are from his large work, *Seder Olam*, which is no longer extant although there are many indications that such a work did exist (*Zunz, Lit Poesie*, 621). From quoted fragments it may be concluded that the work encompassed many fields. They reveal that it was his custom to enlarge on the details of the subject under discussion, and it can therefore be assumed that it was this, combined with the widespread habit of compilers to include quotations and abridgments of it in their compilations, that caused the disappearance of the work. There is mention of his commentary to the *Sifra* (Or

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 18
Zaru’a, Mikva’ot, no. 333, 336), and to the tractate Horayot (Tos. to Hor. 4a–b). There is no evidence that he wrote tosafot to tractates of the Talmud or a commentary to the Mekhilta, as some scholars thought (see Urbach, pp. 346f.). Ten of his selihot have been listed by Zunz (Lit Poésie, 311). Among his distinguished pupils was also Avigdor Katz of Vienna, who wrote down his teacher’s words in his presence. Samuel b. Baruch of Bamberg also appears to have been one of his pupils and addressed queries to him (Urbach, 354).

**BIBLIOGRAPHY:** Zunz, Lit Poésie, 284, 309–11; H. Gross, in: mgwi, 34 (1885), 309 n. 12, 558; B. Ratzner, Mavo le-Seder Olam Rabba (1894), 143; V. Aptowitzer, Mavo le-Sefer Ravvyah (1938), 200–5, 222f., 412–4; Urbach, Tosafot, 341–7 and index.

[Shalom Zalman Havlin]

**SIMHAH BUNEM OF PRZYSUCHA (Pshiskhah; 1765–1827), hasidic zadik in Poland. He was born in Wodzislaw, Poland. His father, R. Zevi, was an itinerant preacher (maggid) in Poland and central Europe. R. Simhah Bunem traveled to central Europe to learn from R. Jeremiah of Mattersdorf, and then to Nikolsburg (Mikulov) to learn from R. Mordecai Benet.

Upon returning to Poland he married Rivka, who faithfully accompanied him all of his life. It was then that he was drawn to Hasidism by R. Moshe Leib of Sasov and R. Israel of Koziernice. He worked for the Bergson family, which was close to hasidic circles, as a supervisor in their timber firm. R. Simhah Bunem traveled to Leipzig and Danzig for business and took part in their cultural and social life, visiting the theater, playing cards, and socializing with the local maskilim. Later he learned pharmacology in Danzig and opened a pharmacy in Pshiskha. He knew German, Polish, and Latin, and dressed in modern style. At the same time he became close to R. David of Lelov, who convinced him to travel to R. "Jacob Isaac Horovitz (ha-Hofez) of Lublin. Jacob Isaac recognized his qualities, but R. Simhah Bunem, though deeply impressed, did not come under his influence. Afterward he met R. Jacob Isaac (ha-Yehudi ha-Kadosh) of Przysucha and became his disciple.

After the death of R. Jacob Isaac of Przysucha (1814), his eminent disciples accepted R. Simhah Bunem as their rebbe. Under his leadership the character of Pshiskha Hasidism was crystallized, drawing many prominent disciples as well as bitter criticism. At a wedding known as "the big wedding in Ostila," where many rebbes gathered, there was an attempt to convince R. Abraham Joshua of Apta to excommunicate R. Simhah Bunem and his followers. However, a delegation led by R. Isaac Meir Alter successfully defended him.

He was involved in Poland’s political life as a member of the Jewish council, established by the authorities of Congress Poland. In his testimony to the government he said that the government’s role is not to interfere with internal Jewish matters, but rather to improve the material condition of the Jews who suffer poverty, expressing a modern concept of the duties of the state.

In his last years he became blind. As he was dying he told his wife: “Why are you crying, all of my life I learned how to die.”

**His Religious Path**

Already in Lublin R. Simhah Bunem was known as “the wise,” a quality that well describes his character and portrays his leadership. Like Jacob Isaac of Przysucha, he set the search for truth as the focal point of his religiosity. He exposed people’s self-deception, pretensions, and shallowness in order to purify their intentions. Like his teacher, he recognized humility as the quality of a sincere person who does not deceive himself. In his time, the critical attitude toward social and religious order, typical to Pshiskha, became more extreme. Pshiskha Hasidim, who left their families behind to live in poverty in a group intensively searching for self-improvement, ridiculed religious conventions and conventionalism, and used to mock people who were full of importance, including unworthy rebbes.

However, unlike Jacob Isaac of Przysucha, the innocent, mystical devotee, the core of R. Simhah Bunem’s religious life was his insightful view of the world, holding a positive attitude toward the world and the human role in it. A stranger to his teacher’s ecstatic life, he was involved with worldly life. He taught that one’s duty is to delve into the essence of this Godly world, which leads to a higher degree of religious knowledge. This knowledge involves happiness and brings a person to dvekut, different in its nature from that of Jacob Isaac of Przysucha. Accordingly, the literature that influenced his religious path was found less in the Kabbalah and more in the works of Maimonides, R. Judah Halevi’s Kuzari, and the Maharal. But, above all, he was a talmudic scholar, and praying, though still important, became less central.

Among R. Simhah Bunem’s disciples were R. Menahem Mendel of Kotsk, R. Isaac of Warka, R. Isaac Meir Alter of Gur, R. Mordecai Joseph Leiner of Izbica, and R. Hanoch of Aleksandrow.

R. Simhah Bunem did not write a book. His teachings and biographical stories about him were first published more than 30 years after his death, among them Kól Simhah (1859, 1903 revised); Ramatayim Zofim (1881); Simhat Yisrael (1910); and Siah Sarfei Kodesh (1913–1932).

[Yehuda ben Dor (2nd ed.)]
Torah, as a separate festival, was not known during the talmudic period. In designating the haftarah for this day, the Talmud refers to it simply as the second day of Shemini Azeret (Meg. 31a). Similarly it is termed Shemini Azeret in the prayers and the Kiddush recited on this day. Its unique celebrations began to develop during the geonic period, when the one-year cycle for the reading of the Torah (as opposed to the "triennial cycle") gained wide acceptance.

The Talmud already specified the conclusion of the Torah as the portion for this day (i.e., Deut. 33–34; see Meg. 31a). The assignment of a new haftarah, Joshua, is mentioned in a ninth-century prayer book (Seder Rav Amram, 1 (Warsaw, 1865), 52a, but see Tos. to Meg. 31a). Later it also became customary to begin to read the Book of Genesis again on Simhat Torah. This was done in order "to refute Satan" who might otherwise have claimed that the Jews were happy only to have finished the Torah, but were unwilling to begin anew (Tur, Orh 669; see Sif. Deut. 33).

During the celebrations, as they continue to be observed by Orthodox and Conservative congregations, all the Torah scrolls are removed from the Ark and the bimah ("pulpit") is circled seven times (*hakafot*). All the men present are called to the Torah reading (*aliyyot*); for this purpose, Deuteronomy 33:1–29 is repeated as many times as necessary. All the children under the age of mitzvah are called for the concluding portion of the chapter; this *aliyah* is referred to as *kol ha-néarim* ("all the youngsters"). A tallit is spread above the heads of the youngsters, and the congregation blesses them with Jacob's benediction to Ephraim and Manasseh (Gen. 48:16). Those who are honored with the *aliyyot* which conclude and start the Torah readings are popularly designated as the Ḥatan Torah and Ḥatan Bereshit; they often pledge contributions to the synagogue and sponsor banquets for their acquaintances in honor of the event (see *Brides of the Law*). In many communities similar ceremonies are held on Simhat Torah eve: all the scrolls are removed from the Ark and the bimah is circled seven times. Some communities even read from the concluding portion of Deuteronomy during the evening service, the only time during the year when the Torah scroll is read at night (Sh. Ar., Orh 669:1).

The Simhat Torah festivities are accompanied by the recitation of special liturgical compositions, some of which were written in the late geonic period. The Ḥatan Torah is called up by the prayer Me-Reshut ha-El ha-Gadol, and the Ḥatan Bereshit by Me-Reshut Meromam. The return of the Torah scrolls to the Ark is accompanied by the joyous hymns "Sisu ve-Simhu be-Simhat Torah" and "Hitkabbezu Malakhim Zeh el Zeh." A central role in the festivities is allotted to children. In addition to the *aliyyot* to the Torah, the children also participate in the Torah processions: they carry flags adorned with apples in which burning candles are placed. There have even been communities where children dismantled *sukkot* on Simhat Torah and burned them (Darkhei Moshe to Orh 669 n. 3 quoting Maharil).

Hasidim also hold Torah processions on Simhat Torah eve. Reform synagogues observe these customs, in a modified form, on Shemini Azeret, which is observed as the final festival day. In Israel, where the second day of the festival is not celebrated, the liturgy and celebration of both days are combined. It has also become customary there for public *hakkafot* to be held on the night following Simhat Torah, which coincides with its celebration in the Diaspora: in many cities, communities, and army bases, seven *hakafot* are held with religious, military, and political personnel being honored with the carrying of the Torah scrolls.

[Aaron Rothkoff]

**In the U.S.S.R.**

Among Soviet Jewish youth seeking forms of expressing their Jewish identification, Simhat Torah gradually became, during the 1960s, the occasion of mass gatherings in and around the synagogues, mainly in the great cities Moscow, Leningrad, Riga, and others. At these gatherings large groups of Jewish youth, many of them students, sang Hebrew and Yiddish songs, danced the *hora*, congregated and discussed the latest events in Israel, etc. In the beginning, the Soviet authorities tried to disperse these "unauthorized meetings," but when Jewish and western public opinion began to follow them, and press correspondents as well as observers from various foreign embassies began attending them, the authorities largely reversed their attitude and even instructed the militia to cordon off the synagogue areas and redirect traffic, so as not to cause clashes with the Jewish youngsters, whose numbers swelled rapidly in Moscow into the tens of thousands. In many cities in the West, notably in Israel, England, the United States, and Canada, Simhat Torah was declared by Jewish youth as the day of "solidarity with Soviet Jewish youth," and mass demonstrations were staged voicing demands to the Soviet authorities for freedom of Jewish life and the right of migration to Israel.

**The Simhat Torah Flag**

Among the customs of Simhat Torah, the object associated most with the holiday, at least in the world of children, is undoubtedly the ornamental flag known in Hebrew as *degel Simhat Torah*, made of paper or cardboard, printed with rich and colorful pictures reflecting the meaning of the holiday. Until some years ago flags were customarily attached to coarse wooden sticks topped by apples, hollowed out and filled with a burning candle.

While it is not known when and where this custom originated, it is certainly an Ashkenazi *minhag*, especially popular in eastern Europe. The earliest known source mentioning such a flag is found in the enactments (*Tikkkanot*) issued in 1672 by Polish Jews who settled in Amsterdam. From this document it is evident that the custom originated earlier. The German Hebraist Johann “Bodenschatz describes the custom in his book *Kirchliche Verfassung der heutigen Juden* (Erlang, 1748): “They [the children] hold onto their flags upon which is inscribed ‘standard of the camp’ and the names of the tribes. They march as if they were soldiers.”
Extant Torah flags from 19th-century eastern Europe are decorated by representations of Hasidim dancing with Torah scrolls, sukkaḥ building, and biblical scenes and figures, and the deer and lion with the saying, "Be swift as a deer and strong as a lion" (Pirke Avot 5:20). Later, the images included Zionist heroes and slogans. The custom has continued to the present day, adopting new symbols and heroes associated with the State of Israel but keeping the more traditional designs as well.

[Shalom Sabar (2nd ed.)]

**SIMHONI, ASSAF** (1922–1956), Israeli military officer. Born in Nahalal, Simhoni was descended from a pioneering family which moved to Ereẓ Israel from the Jewish agricultural settlements of south Russia and settled in various kibbutzim. His uncle, ZERUBAVEL YEVZERICHIN, was a leading member of the legal faction of the He-Ḥalutz movement in the U.S.S.R. who was arrested in 1926 for his Zionist activities and died in a Soviet labor camp. Assaf’s mother, YEHUDIT SIMHONI, settled in Geva and became a leading figure in the Israeli labor movement. Simhoni joined the Haganah during the Arab riots of 1936–39 and in 1941 joined the Palmah. During the War of Independence (1948) he participated in the battle for Mishmar ha-Emek and was the commander of the Palmah battalion that broke through to kibbutz Negbab. He continued to serve in the Israel Defense Forces (IDF) and in 1951 was promoted to brigade commander under the rank of colonel. At the beginning of 1956 he went to England for an advanced military course but was recalled in the autumn of the same year and appointed commander of the southern command. On October 29 he commanded the IDF in the “Sinai Campaign and received the surrender of the Egyptian governor of the Gaza Strip. Simhoni died shortly after the Sinai Campaign when his plane crashed inside Jordan. His body was returned to Israel, and he was posthumously promoted to major general.

[Yehuda Slutsky]

**SIMLAI** (second half of the third century c.e.), amora. Simlai was born in Nehardea, in Babylonia, (TJ, Pes. 53, 52a), but spent most of his life at Lydda, in Ereẓ Israel (Av. Zar. 36a). He also lived for some time in Galilee, where he ministered to Yannai the Great (BB 111a), and was the associate of young Judah 111 (Bek. 36b). He seems to have been a prominent member of Judah 111’s entourage (Av. Zar. 37a), and when the latter made a particularly controversial decision (TJ, Shab. 14, 3d), Simlai was sent to “Nisibis, in Babylon, in order to transmit it to the local authorities (Av. Zar. 36a). His ruling at Antioch, in Syria, is also recorded (TJ, Kid. 315, 66d). He transmitted sayings in the name of Eliezer b. Simeon (Sanh. 98a) and Samuel (Park 53b), and, despite Jonathan’s initial scruples (Pes. 6:25), studied aggadah under him (TJ, Pes. 53, 32a). Simlai was a renowned authority in aggadah (Ber. 32a–b). One of his teachings is that in the time to come God will take a scroll of law in his embrace and proclaim, “Let whoever has occupied himself herewith, come and take his reward!” All the nations of the world will rush to testify for themselves, but, ultimately, God will Himself testify on behalf of Israel (Av. Zar. 2b–3a). He also explained that Moses’ desire to enter Ereẓ Israel was based not on a wish to taste its fruit or enjoy its goodness, but on his eagerness to fulfill all the Torah (Sot. 14a). Simlai is the author of the statement (Mak. 23b) that the Torah contains 613 *commandments – 365 negative corresponding to the number of days in the solar year and 248 positive, corresponding to the number of organs in the human body (cf. Oho. 1:8). These he reduced successively to 11 (based on Ps. 15), to six (Isa. 33:15–16), to three (Micah 6:8), and to two (Isa., 56:1) fundamental principles, and finally to the single credo expressed by Habbukuk (2:4), “the righteous shall live by his faith” (Mak. 23b–24a). He also taught that “the Torah begins and ends with the practice of lovingkindness” (Sot. 14a).

**SIMLEUL-SILVANIEI** (Hung. Szilágyosmolyó; referred to in Jewish sources סميلסלויא), town in Transylvania, N.W. Romania; until the end of World War 1, and between 1940 and 1944, within Hungary. Jews began to settle there during the 18th century. An organized community was established in 1841; from its inception, the community was Orthodox. A synagogue was erected in 1850. In 1885 the community became the official center for the Jews in the surrounding area. Many local Jews fought in World War 1 in the Austro-Hungarian army. The influence of Hasidism was felt, particularly between the two world wars. The Jewish population numbered 838 (18.4% of the total) in 1891; 1,586 (21%) in 1930; and 1,496 (16.4%) in 1941. Between the two world wars Zionist activity was curtailed. The community’s institutions included an elementary school for boys, opened in 1894, and one for girls (1921). The rabbi of the community from 1898 was the extreme Orthodox Samuel Ehrenreich (b. 1863), who was deported in the summer of 1944 with the members of his community to “Auschwitz.

**Holocaust and Contemporary Periods**

During World War II Jews from the vicinity, as well as from outlying regions, were interned in the ghetto which was established in Simleul-Silvaniei. Jews from other towns were also concentrated there before their deportation to Auschwitz. About 8,000 Jews passed through this ghetto on their way to the death camps.

Of those who survived after World War II, about 440 Jews gathered in Simleul-Silvaniei in 1947; they rehabilitated
the community and maintained the synagogue, still standing in 1971. A rabbi headed the community for a while. The number of Jews subsequently declined as a result of emigration to Israel and other countries. In 1971 there were 40 Jews. Between the two world wars there was also a small Hebrew press in Simleul-Silvaniei. A Hebrew book was printed there in 1960.

[Yehouda Marton]

**SIMMEL, GEORG** (1858–1918), German philosopher and sociologist. Born in Berlin of converted parents, in 1885 Simmel became a lecturer at Berlin, but his appointment as professor (extracurricular) at Strasbourg was delayed until 1911 because of his Jewish origin and because he followed no religion. In 1914 he finally became full professor. In his early work *Ueber soziale Differenzierung* (1890) Simmel sees the essence of the modern development in the dissolution of the substance of society in a sum of interrelationships of participating individuals. Another early book, *Einleitung in die Moralwissenschaft* (1892), which he later rejected, sought to construct a system of morals describing man’s moral life psychologically without evaluating it. *Die Probleme der Geschichtsphilosophie* (also 1892), greatly altered by Simmel in later editions, had considerable influence. In this work Simmel postulates that events must be distinguished from history. The philosophy of history seeks out those a priori assumptions of historical consciousness, the foundations on which “the historical world is built.” Simmel pursued this idea in “Das Problem der historischen Zeit” (The Problem of Historical Time) and “Vom Wesen des historischen Verstehens” (The Essence of Historical Comprehension), which are included in the collection *Brucke und Tuer* (1957). He suggests there is no road to objective reality itself, only diverse subjective worlds, dependent on their categorical assumptions.

Simmel’s relativism reached its peak in *Philosophie des Geldes* (1900), in which he tried to discover the relation of money to all spheres of our life – its influences on all branches of culture – and expose the spiritual, moral, and religious assumptions of historical materialism in order to overcome it. He especially emphasized the intellectual character of monetary economy. Simmel published his research on Kant in his book *Kant* (1904). Besides Kant’s expression of intellectuality, others, no less true, are possible, as Simmel indicated in *Schoenauer und Nietzsche* (1907), *Goethe* (1913), and *Rembrandt* (1916). Influenced by the antipsychological views of the neo-Kantians and Husserl, Simmel saw culture as a process itself, an objective view through which the contents moved from the soul into an objective framework having its own laws. Cultural values have autonomy of validity separated from their creator’s spiritual source. The soul’s or life’s essence is to produce the objective contents of culture from itself. “Life is more than life.” Thus objective culture becomes the soul’s path back to itself.

His studies on art, religion, and philosophy tried to show that each is a world in itself, not a derivative of another, because it depends on special subjective functions of life. In his books *Soziologie* (1908) and *Grundfragen der Soziologie* (1917), as well as in numerous essays, Simmel analyzes all processes of association and dissociation as psychic phenomena, but he also constitutes the science of sociology by separating the forms of association from their content in such a way that purely formal concepts of relationships become generalizable and thereby scientific in character. They remain constant in a multitude of concrete events. In this sense, Simmel has analyzed the formal nature and significance of numbers (“The Dyad and the Triad”), space, conflict, poverty, fashion, adornment, secret societies, and a host of other formal relationships, always recognizing the dialectical interplay of the individual and the group as the essence of all relationships. But he has not arrived at a systematic ordering of these relationships. But he has not arrived at a systematic ordering of these relationships. But he has not arrived at a systematic ordering of these relationships.

[Samuel Hugo Bergman and Werner J. Cahnman]

**SIMMONS, GENE** (Chaim Witz; 1949– ), bass guitarist for veteran U.S. rock band *Kiss*, which he formed in 1973 with Paul Stanley (Stanley Harvey Eisen). Born in Haifa, the only child to Hungarian Holocaust survivors Flora and Feri, Simmons immigrated to New York with his mother in 1958, after his parents divorced. Adopting the family name Klein, his mother’s maiden name, Simmons also changed his name to Gene, and in the late 1960s changed his name again, dropping Klein in favor of Simmons. As a boy Simmons was educated at a yeshivah in Williamsburg, Brooklyn. After graduating from Sullivan County Community College in South Fallsburg, NY, and Richmond College in Staten Island, Simmons taught sixth grade in Harlem in New York City. After putting together *Kiss* and after several false starts, the band finally hit the big time in 1975 with the release of *Dressed to Kill*, the studio album that spawned “Rock and Roll All Nite” and “C’mon and Love Me,” the band’s first radio hits. A string of platinum albums followed, but the band remained most acclaimed for its live performances, which featured Simmons – under his stage persona of Demon – spitting “blood” (primarily yogurt and food coloring) and “breathing fire.” The shows were accompanied by ostentatious pyrotechnics throughout. Simmons did little to play down his hell-raising image, and often encouraged it: In his autobiography *Kiss and Make-Up* (2001), he claims to
have had sex with 4,600 partners. Simmons was also a movie and record producer, and appeared in a number of movies, including Michael Crichton's sci-fi movie *Runaway*. In 2004, Simmons sparked controversy during a KISS tour of Australia when he claimed that Islam was a "vile culture" that treated women worse than dogs.

[Simon Spungen (2nd ed.)]

**SIMON**, family of British printers and typographers. OLIVER SIMON (1895–1956) was born in Sale, Cheshire, the son of a cotton merchant. His mother was the sister of Sir William *Rothenstein. Simon was educated at Charterhouse and in Germany, served as an officer in the British army in World War I, and fought in the Palestine campaign. He trained as a printer in London and joined the Curwen Press of which he later became chairman and managing director. In 1923 he was a founder and editor of *The Fleuron*, a typography journal. He was also a founder of the typographers' Double Crown Club of which he was president in 1929. Simon was a director of the Soncino Press. As a typographer Simon had an enormous influence on the improvement of printing, typography, and type design. He edited with J. Rodenberg, *Printing of Today* (1928) and the *Curwen Press Miscellany* (1931), and was the author of *Introduction to Typography* (1945) and an autobiography, *Printer and Playground* (1956). Simon had a notable interest in Palestine, founding the Paladin Club, an influential discussion group whose members included Chaim *Weizmann.*

His brother, HERBERT SIMON (1898–1974), was also a founding member of the Double Crown Club. He succeeded Oliver as chairman of the Curwen Press in 1956.

**SIMON**, family of U.S. entrepreneurs. MELVIN SIMON (1926– ) and his brother, HERBERT (1934– ), the sons of a tailor, were born in Brooklyn, N.Y., and raised in the Bronx. Mel earned an accounting degree from the City College of New York and later a master's degree there. He went into the Army, winding up in 1953 at Fort Benjamin Harrison in Indianapolis. He decided to stay in the city. After working as a leasing agent, he studied real estate in college and thought there was great potential. In 1959 he formed his own real-estate investment company, Melvin Simon & Associates, with Herb, who had also worked in real estate. The business was incorporated in 1960, with Mel owning two-thirds of the business and Herb, who was also educated at the City College of New York, the rest. Another brother, Fred, worked for the company but left in 1961. Their parents moved from New York to Indianapolis in 1961. Melvin Simon & Associates began by developing strip shopping centers anchored by groceries and drug stores. Their first shopping center was Southgate Plaza in Bloomington, Ind. Within five years the Simons were developing enclosed malls. By 1967 the company owned and operated more than 3 million square feet of retail property. It continued to expand throughout the country, adding one million square feet of property every year. By the 1980s the company opened three enclosed malls every year. In the 1970s Mel tried his hand at moviemaking. His production company lost millions. In 1983, the brothers bought the professional basketball team the Indiana Pacers. In 1990, DAVID (1961– ), Mel's oldest son, a graduate of the University of Indiana and with a master's from Columbia, joined the company as chief financial officer. He became chief executive officer in 1995. The company went public in 1993, folding most of its properties into Simon Property Group and raising nearly $1 billion, at the time the largest real estate stock offering ever. Following a $3 billion merger with DeBartolo Realty Corporation in 1996, the company became Simon DeBartolo Group, the nation's dominant shopping center owner. In 1998 the company reverted to Simon Property Group, becoming the No. 1 mall owner in the United States. Also in 1998, Simon bought the Fashion Mall at Keystone at the Crossing, taking control of six of the seven regional shopping malls in Indianapolis. The company's projects include the Mall of America, outside Minneapolis, completed in 1992, and Circle Center Mall in Indianapolis, which opened in 1995. Overall, the Simons owned or operated about 350 properties in North America, Japan, and Europe. The Simons were known for their philanthropy. The family contributed $9 million toward construction of a research and teaching facility at the University of Indiana. They also served in Indianapolis on the boards of United Cerebral Palsy, the Muscular Dystrophy Association, and the Jewish Welfare Foundation.

[Stewart Kampel (2nd ed.)]

**SIMON, ABRAM** (1872–1938), U.S. Reform rabbi. Born in Nashville, Tennessee, he was educated at the University of Cincinnati where he earned his B.A. in 1894, the same year he was ordained by Hebrew Union College. In 1917, long after he had become rabbi of Washington Hebrew Congregation, Simon earned a Ph.D. from George Washington University, writing on the "The Constructive Character and Function of Religious Progress."

Upon ordination he served as rabbi of B’nai Israel Congregation in Sacramento and then as rabbi of Temple Israel in Omaha, Nebraska (1899–1904). Under his leadership the temple began to prosper financially, owing to an increase in pew rent. He earned a national reputation for innovation in Jewish education and was elected as the first rabbi of Washington Hebrew Congregation in Washington, D.C., in 1903. His predecessor had been *hazzan*. Gracefully and reluctantly, Temple Israel released him from his contract.

The history of Washington Hebrew Congregation records that "Rabbi Abram Simon came to the Congregation in 1904 and dedicated his life to scholarship and community activity. The photograph of his first Confirmation class in 1905 hangs in Ades Hall and begins a long series of pictures of every Confirmation class since. Rabbi Simon was a member of the Red Cross during World War I, broadcast radio lectures, and was
president of both the Board of Education in Washington as well as the Conference of Christians and Jews. After his death, the Abram Simon School, a public elementary school, served as an ongoing recognition of his contributions.”

In Washington, Simon became a communal leader. In addition to the Board of Education he was a trustee and later president of the Columbia Hospital for Women and also president of the Public Library of Washington. On the national level he was president of the Central Conference of American Rabbis from 1923 to 1925, a founder and later president of the Synagogue Council of America.

He was a founding member of the Reform movement’s Committee on Jewish Education. His wife, Carrie Obendorfer Simon, whom he married in 1896, founded the National Federation of Temple Sisterhoods, which eventually reached 100,000 women in 585 chapters during her lifetime. Pam Nadell, a distinguished American Jewish historian, said: “They pledged dues to help pay down the mortgage and recessed to polish the door knobs… They were extending their roles as homemakers to the synagogue.”

As the federation’s founding president until 1919, Simon launched the National Committee on Religion, which boosted synagogue attendance and set up Hebrew schools. She also pushed for more women on congregation boards and temple inclusion of interfaith families. She also worked for the Jewish Baille Institute. Her husband was an early enthusiast of women’s participation. Fay Sonnenreich recalled that in the 1920, with the permission of Rabbi Abram Simon, she and another young girl sat in the pulpit, held the Torah and read from it.

“I still remember the shocked expressions on the faces of the congregation,” she recalled many years later. “Dr. Simon told us afterwards that the board of trustees was angry with him for permitting girls to participate in what traditionally belonged to the men. But he believed in developing the potential of each individual, and his encouragement made a lasting impact on our lives.”

Rabbi Simon wrote A Child’s Ritual (1909); A History of Jewish Education (1916); and The Principle of Jewish Education in the Past (1909).

[Michael Berenbaum (2nd ed.)]

SIMON, AKIBA ERNST (1899–1988), educator, religious thinker, and writer. Born in Berlin, he became an active Zionist in 1918, and co-edited Der Jude with Martin Buber, who had a decisive influence on his concept of Jewish nationalism and whom he joined in his relentless struggle for Arab-Jewish understanding. In his positive attitude to Jewish tradition he followed Franz Rosenzweig. With a broad humanistic outlook, based on his historical and literary erudition and scholarship, he began his work as an educator in Germany and continued it, after settling in Palestine in 1928, as a teacher and co-director of secondary schools and seminaries. In 1934 he accepted Buber’s call to join him in teachers’ training and adult education programs for German Jewry under Nazi rule.

In 1935 Simon joined the staff of the Hebrew University, where he became professor of philosophy and history of education and, finally, director of the School of Education. He participated in Jewish education programs in various parts of the Jewish world and was a co-editor of the Enzyklopaedjah Pimniah ("Encyclopaedia Judaica"; 5 vols. 1961–66). Simon was a co-founder and board member of the Leo Baeck Institute and a contributor to its scholarly publications. He has served as a coeditor of Rosenzweig’s letters and Buber’s correspondence. In his religious conception Simon identified himself with the “Conservative Movement.”

Simon defined his philosophy in numerous articles as a religious humanism. In his view our world is neither theocentric nor anthropocentric. It is to be looked upon not as a circle but as an ellipse with two foci; God and man, bound to each other by that mutuality of correlation and tension that is meant by the concept of the Covenant. Certainly the human partner is the weaker one, but he is not nil. God has not created a perfect world, but rather has left it to man to work on its growing perfection. This activity takes on mainly two forms: politics and education, the former representing the problems in their full tragical rigor and the latter offering a modest chance of finding a way out.

In Judaism, the Covenant is realized by the Law of the Torah that forms the main link between God and His people. The halakhah, as a continuous dialogue between the written and oral tradition on one side and the changing reality of Israel and the world on the other side, is the classical way of translating prophetic ideas into human, individual, social, national, and international relations.

Simon was an active member of virtually every group advocating a binational state in Palestine. He was early a member of the “Berit Shalom and later of the League for Jewish Arab Rapprochement. He held that the Jews must give the Arabs equal economic rights and accept Arab nationalism as valid as well as acknowledge the reality of the Arab fear of Jews.

BIBLIOGRAPHY: M.L. Diamond, Martin Buber, Jewish Existentialist (1960), 165–70; A.A. Cohen, Arguments and Doctrines (1970),
SIMON, ARYEH (1913– ), Israeli educator. Simon was born in Mainz, Germany and studied classical languages and philosophy at Heidelberg. Immigrating to Israel in 1935, he studied education and began to teach at the *Ben Shemen youth village in 1937. He served in the Jewish Brigade of the British Army in World War II and as an officer in the Israel Defense Forces in the War of Independence. After the war he devoted himself to education and was appointed director of Ben Shemen in 1964. In 1975 he was awarded the Israel Prize for education.

SIMON, CARLY ELISABETH (1945– ), New York City-born folk and pop songwriter and singer who achieved the greatest part of her success in the 1970s, when several of her songs scored high on the pop music charts. Simon is one of four children of New York publishing magnate Richard L. Simon, co-founder in 1924 of the publishing house Simon & Schuster, and non-Jewish mother Andrea. Her father was an accomplished pianist who often hosted musicians, including Richard *Rodgers, Oscar *Hammerstein, and George *Gershwin, at the family home. Simon spent two years at Sarah Lawrence College before dropping out and forming a folk duo with her sister, Lucy, singing in 1960s coffeehouses as the Simon Sisters. They recorded the children's tunes "Wynken, Blinken' and Nod," presaging her later work on children's music. Her early solo career met with little success. Her first manager, Albert Grossman, asked Bob *Dylan to rewrite the song "Baby Let Me Follow You Down" for Simon, but the recording was never released. Simon's second album in 1971 resulted in a Best New Artist Grammy Award and the Top 10 hit "That's the Way I've Always Heard It Should Be." She next reached #13 on the charts with "Anticipation" (later used in a famous ketchup commercial) in 1972. The song reputedly was about her love interest at the time, singer-songwriter Cat Stevens, later Yusuf Islam. She continued to write about her celebrity lovers, who included actors Warren Beatty and Jack Nicholson, and singers Mick Jagger and Kris Kristofferson, in her biggest hit, "You're So Vain," (#1, Adult Contemporary, 1973). The subject of the song has never been publicly revealed, although Dick Ebersol, president of NBC Sports, paid $50,000 to find out the name in a charity auction in 2003. Other 1970s chart hits included, "Mockingbird," with her husband James Taylor (#5, 1974) and "Nobody Does It Better," the theme from the James Bond film *The Spy Who Loved Me* (#2, 1977), presaging her later work on film scores. Her work failed to make major dents in the pop charts in the 1980s and 1990s, but her song "Let the River Run" won the Academy Award for Best Song in 1988 for the film *Working Girl*. As her mass appeal waned, Simon turned to recording albums of pop standards and Christmas tunes, as well as continuing her confessional, folk-tinged records, but returned to regular concert tours in 2005. Her children from her marriage to Taylor, Ben and Sally, continued the family tradition as folk music singer-songwriters. Simon was ranked 28th on TV music channel VH1's 100 Greatest Women of Rock and Roll, and by 2005 had released 29 albums and had 18 Top-20 singles on the U.S. and U.K. charts. Simon, who was inducted into the Songwriters Hall of Fame in 1994, wrote five children's books: *Amy the Dancing Bear* (1989), *The Boy of the Bells* (1990), *The Fisherman's Song* (1991), *The Nighttime Chauffeur* (1993), and *Midnight Farm* (1997).

SIMON, CARRIE OBENDORFER (1872–1961), founding president of the *National Federation of Temple Sisterhoods*. Born in Uniontown, Alabama, Obendorfer moved with her family to Cincinnati, Ohio, where her mother began a chapter of the *National Council of Jewish Women* (NCJW) in 1895. Carrie, a graduate of the Cincinnati Conservatory of Music, served as section secretary and became familiar with new possibilities for women's public identities as Jews. After her marriage in 1896 to Hebrew Union College graduate Rabbi Abram Simon, Carrie Simon encountered many settings where she would push these possibilities in new directions.

Simon continued to advance NCJW work while living in Sacramento, where her husband took his first pulpit in 1896, and then in Omaha and Washington, D.C., where they moved in 1899 and 1904, respectively. As NCJW struggled to reconcile the differing religious approaches of its diverse membership, Simon turned her attention to local congregational work. Synagogue sisterhood organizations devoted to congregational aid first emerged in the 1890s. Simon's husband is credited with the 1903 founding of a sisterhood at Omaha's Temple Israel. Carrie Simon established the Ladies Auxiliary Society of Washington Hebrew Congregation in 1905 for the purpose of "congregational work, pure and simple, and to endeavor to establish a more congenial and social congregational spirit."

In 1913 the Union of American Hebrew Congregations (UAHC), the synagogue federation of Reform Judaism, issued a call "to all ladies' organizations connected with congregations" to send delegates to Cincinnati "for the purpose of organizing a Federation of Temple Sisterhoods." Simon's work in organizing the meeting, attended by 156 delegates from 52 congregations (mainly the wives of delegates to the concurrent UAHC convention), was recognized in her election as president of the newly formed National Federation of Temple Sisterhoods (NFTS).

The new organization galvanized women in hundreds of Reform congregations. New sisterhoods were formed and many existing groups were revolutionized. The Ladies Auxiliary at Simon's own congregation renamed itself a Sisterhood and moved from holding occasional synagogue fundraisers to transforming the synagogue into a true social center. Simon's new role turned her into a speaker in demand across the country. She insisted that "there was no militancy" involved when she filled a pulpit; it simply represented "recognition accorded to the sisterhood."
NFTS grew quickly under her leadership, introducing thousands of women to unaccustomed public roles within the Jewish community. Simon was often one of a very few women representatives in national and international gatherings of Jewish leaders. She retired as NFTS president in 1919, but remained active in the organization as honorary president for the rest of her life.

[Karla Goldman (2nd ed.)]

**SIMON, ERNST** (1902–1973), Israeli biochemist. Simon was born in Berlin and received his education at the universities of Munich, Jena, and Berlin. In 1925, he was appointed research assistant at the Kaiser Wilhelm Institute of Biochemistry in Berlin, where he remained until Hitler’s rise to power in 1933, when he moved to Paris and joined the Institute of Biological Physicochemistry there. He immigrated to Erez Israel in 1935, joining the Daniel Sieff Research Institute, the forerunner of the Weizmann Institute of Science, a few months after its foundation, and remained at the Weizmann Institute until his death. He spent his early years there working closely with Weizmann on problems of fermentation, but was best known in later years for his pioneering studies on the mechanism of diabetes, carried out in the department of biodynamics.

**SIMON, SIR FRANCIS EUGENE** (1893–1956), physicist. Simon, who was born in Berlin, served through World War I and was awarded the Iron Cross for distinguished service. After the war he continued at Berlin University and became research assistant to the German chemist Walter Herman Nernst (1864–1941), as well as a lecturer on low-temperature physics. In 1931 he became professor and director of the laboratory for physical chemistry at the Technische Hochschule in Breslau. In 1933 Simon was invited to the Clarendon Laboratory in Oxford, where he built up one of the foremost low-temperature laboratories in the world. In 1935 Simon was appointed university reader (later to occupy a chair specially created in 1946) in thermodynamics. During World War II, he was responsible for some key research on an aspect of the manufacture of the atom bomb, although he was classified as an "enemy alien." In 1941 he was elected a Fellow of the Royal Society.

Simon was a vigorous campaigner for the proper use of science, the avoidance of waste, and the utilization of scientists in public affairs. From 1948 to 1951 he was scientific correspondent of the *Financial Times*. He was knighted in 1955.

[J. Edwin Holmstrom]

**SIMON, HEINRICH** (1880–1941), German journalist and editor. Simon was the eldest son of Felix Simon, owner of Köenigsberger Allgemeine Zeitung, and Therese, whose father, Leopold Sonnemann, had founded the *Frankfurter Zeitung*. The family ran both papers. Baptized as a child, Simon later left the Church but never formally returned to Judaism. He studied philosophy, art history, and economics in Berlin, Freiburg/Breisgau, and Erlangen. In 1905 he earned his doctorate with a work on Novalis. Simon joined the *Frankfurter Zeitung* in 1906 and eventually controlled its liberal editorial policy. In 1931 he wrote Sonnemann’s biography. Forced to resign from his post, Simon immigrated to Palestine via Paris in 1934. He was a friend of *Huberman* and first manager in 1936 of the Palestine Symphony Orchestra. In 1939 he retired and went to the U.S. His murder in Washington, in 1941, remains an unsolved mystery.

[Johannes Valentin Schwarz (2nd ed.)]

**SIMON, HERBERT ALEXANDER** (1916–2001), U.S. political scientist; authority on public administration, Nobel laureate. Born in Milwaukee, Wisconsin, Simon received his Ph.D. in political science from the University of Chicago (1943). In 1949 he was appointed professor of computer science and psychology at Carnegie-Mellon University in Pittsburgh, where he founded the Department of Computer Science. He remained at the university for his entire career. In his principal treatise on public administration, *Administrative Behavior* (1947), Simon discussed the position of the individual in the administration process and the psychological mechanisms that influence and condition his behavior. He laid down principles for the scientific study of public administration in a technological society and rejected the preexisting principles of public administration as mere “proverbs” or summaries of crude homely wisdom. In 1978 Simon was awarded the Nobel Prize for economics, for his pioneering research into the decision-making process within economic organizations. He is also considered a pioneer in the development of computer artificial intelligence.

Simon’s other works include *Organizations* (1958), of which he was co-author; *The New Science of Management Decision* (1960); *The Shape of Automation for Men and Management* (1965); *Representation and Meaning* (1972); *The Sciences of the Artificial* (1981); *Scientific Discovery* (1987); *Models of Thought* (1989); and *Models of My Life* (1992).

[Nimrod Raphacli / Ruth Beloff (2nd ed.)]

**SIMON, JAMES** (1851–1932), German commercial magnate and philanthropist. After completing high school Simon joined his family’s flourishing textile firm, Gebruder Simon,
which under his management became one of the largest firms in the world – boasting 40 to 50 million marks profits annually before World War I. Simon became an art collector and patron on a large scale, his largest donation being one of 350 items of Renaissance and Gothic art to the Neues Deutsches Museum in 1920. Ironically, his firm was at the same time in serious economic difficulties caused by the postwar crisis. These difficulties, compounded by his business integrity in a time of economic inflation, eventually caused the decline and bankruptcy (1931) of his firm. With his friend Paul Nathan, Simon helped found the *Hilfsverein der deutschen Juden (1901), whose chairman he remained until his death. He helped to finance many of its activities, in particular by a 100,000 mark donation for the Haifa *Technion and support of vocational and manual training programs for East European Jews. Another of his achievements was helping to found the Deutsche Orientgesellschaft, which established the reputation of German Orientalists and archaeologists. Simon personally largely financed the excavations of Jericho and Tell el-Amarna.

[Reuven Michael]

**SIMON, JEAN HENRI** (1752–1834), engraver. Born in Brussels, the son of a seal engraver, Jacob Simon, Simon worked as early as 1767 as a gem engraver for Prince Charles of Lorraine. Moving to Paris, he became an engraver to Louis XVI. He held this position until 1792, when he joined the forces of the French Republic and became a lieutenant colonel in the Republican army. Falsely accused of treason, he fled France and worked as an engraver to the court of Spain. Simon returned with the advent of Napoleon and, after being twice wounded when a colonel in a regiment of lancers, he left the army and was appointed an engraver to the cabinet of Napoleon and engraver of title seals to the empress Josephine. He returned to Brussels after the fall of Napoleon and became engraver to King William I of the Netherlands. The medal production of Simon, though not as well known as his gem engraving, is also extraordinary. The Hague Museum has a fine collection of some two dozen of his medals. Simon engraved a series of 100 medals of illustrious men of the Low Countries. His two brothers, Mayer Simon (1764–1821), better known as Simon de Paris, and Samuel Simon (b. 1760) had distinguished careers as engravers, as did Jean Marie Amable Simon, his son.

[Daniel M. Friedenberg]

**SIMON, SIR JOHN** (1818–1897), English lawyer and politician. Simon was the first Jew to practice at the common law bar and exercise the functions of a judge. Born in Jamaica, the son of a merchant, Simon went to England in 1833, graduated from London University in 1841, and was called to the bar a year later. After practicing in Jamaica for two years he returned to England, where he quickly won distinction in the courts. In 1858 he was junior counsel in the state trial following the Orsini conspiracy, a cause célèbre surrounding the attempted assassination of Napoleon III, and in the same year became an assistant to the judges of the county courts. He was later appointed president of the City of London court and became a sergeant-at-law in 1864 and a queen's counsel in January 1868. From 1868 until 1888 Simon was Liberal member of Parliament for Dewsbury. In the House of Commons he availed himself of every opportunity to champion the cause of oppressed Jewry throughout the world, and his efforts to arouse public opinion against the Russian pogroms led the lord mayor of London to convene a public meeting at Guildhall to register British indignation at the czarist persecution of Jews. His devotion to the Jewish cause in parliament led him to be known as “the member for Jewry.” Simon was a founder of the Anglo-Jewish Association and a member of the Reform Synagogue. He was not related to either of the other prominent non-Jewish men with the same name as his, the Victorian surgeon and officer of health (1816–1904) or the barrister and cabinet minister (1873–1954), with whom he is sometimes confused. His son Oswald John Simon (1855–1932) followed in his father’s footsteps and continued to draw the attention of the British public to the plight of East European Jewry.

**ADD. BIBLIOGRAPHY:** *ODNB* online.

**SIMON, JOSEPH** (c. 1712–1804), pioneer U.S. merchant and land speculator. Simon, whose birthplace is unknown, lived in Lancaster, Pennsylvania, in 1732 and opened a general store. His business prospered, and he began to trade with Indians, accepting land in payment for his goods. In addition, the colony of Virginia granted Simon large tracts of land in the area which is now Kentucky. As his holdings were valueless while they remained vacant, Simon encouraged settlement by establishing a network of traders to supply the inhabitants of the backcountry with the goods they required. During the French and Indian War, Simon supplied General Braddock’s army, and during the Revolution he performed the same service for General Washington.

**BIBLIOGRAPHY:** Rosenbloom, Biogr Dict, 159.

[Neil Ovadia]

**SIMON, JOSEPH** (1844–1915), Hungarian lawyer, secretary of the national council of Hungarian Jews. Born in Kapocs, he became a member and secretary of the Hungarian Jewish Congress of 1868–69, and from 1871 directed the National Council of Hungarian Jews (the *Neologist* trend), a position he held through 25 years of stormy conflict. Simon first launched the struggle for opening a rabbinical seminary in 1877. He took up the defense for the accused during the *Tiszaeszlar blood libel* case in 1882, and played an active role in the struggle for official recognition of the Jewish religion. Simon initiated a scholarship fund for needy Jewish students in institutions of higher learning, and organized a pension and relief scheme.
for families of the communal employees. He was among the founders of the Hungarian scholarly periodical *Magyar Zsidó Szemle* and the Jewish literary society Israelita Magyar Irodalmi Társulat (IMIT).

[Jeno Zsoldos]

**Simon, Julius** (1875–1969), Zionist leader and economist. Simon was born in Mannheim, Germany but was an American citizen because his father had participated in the American Civil War. At the height of his economic activities in Germany, particularly in banking, Simon became associated with the Zionist movement, especially after the “practical” Zionist trend began to prevail (1911). During World War I he engaged in banking in Switzerland and Alsace and became associated with the management of the *Jewish National Fund* and its director, Nehemia de *Lieme*, with whom he worked on its behalf in The Hague. After World War I he was invited by Chaim Weizmann to direct the economic activities of the Zionist Organization and devise economic plans for the period following the Balfour Declaration. It was then that he began to identify with the economic ideas expounded by the U.S. Zionists under the leadership of Louis D. *Brandeis*. At the Zionist Conference in London, in July 1920, this group succeeded in appointing him to the Zionist Executive. Together with de Lieme and Robert Szold, he was sent to Palestine (November–December 1920) for the purpose of reorganizing the activities of the Zionist Organization. The report published by this committee (1921), with its scathing criticism of the work of the Zionist Organization and the Zionist Commission, aroused the opposition of Weizmann and the labor sector, as well as that of European Zionists. Its conclusions were not endorsed by the 12th Congress (1921), and Simon and the Brandeis group resigned from their posts in the Zionist Organization. They continued, however, to engage in economic activities in Palestine.

Between the two world wars Simon lived for a time in Jerusalem and later in the United States. He headed the *Palestine Economic Corporation*, which played a prominent role in various economic projects in Palestine and remained active in economics until his death. His writings included Die Juden und die Gebildeten unserer Tage (“The Jews and the Educated of Our Days,” 1916) and Preparatory Steps for the Jewish Colonization of Palestine (n.d.).

**Bibliography:** R. Weltsch, in: Mbb (Sept. 7, 1945).

[Getzel Kressel]

**Simon, Kate** (1912–1990), U.S. memoirist and travel writer. Born in Warsaw as Kaila Grobsmith to David and Lonia (Babicz) Grobsmith, Simon immigrated to New York City at the age of four with her mother and brother, joining her father, a cobbler, who had arrived three years earlier. Married twice, Simon wrote under the name of her second husband, Robert Simon, from whom she was divorced in 1960.

Simon’s three memoirs, *Bronx Primitive: Portraits in a Childhood* (1982), *A Wider World: Portraits of an Adolescence* (1986), and *Etchings in an Hourglass* (1990), describe her childhood, youth, and adulthood, recounting her intellectual and social journey from the confines of a poor, ethnically mixed neighborhood to a cosmopolitan life of adventuresome travel. Simon’s autobiographical writings bring a strong and unsentimental feminist focus to the Jewish immigrant experience. They are unusual in their frank depictions of such topics as sexuality and its ramifications, including child molestation and the lack of reliable birth control methods; familial discord; abandonment of religious tradition; her involvement in left wing politics; and the personal tragedies Simon experienced, including the deaths of her first husband, her daughter, and her sister from brain tumors, and the failure of her second marriage in the late 1950s.

[Judith R. Baskin (2nd ed.)]

**Simon, Sir Leon** (1881–1965), English Zionist leader, Hebrew writer, and British civil servant. Born in Southampton and educated at Manchester Grammar School and Oxford, in 1904 Simon entered the service of the General Post Office, becoming director of telegraphs and telephones (1931–35) and director of the savings bank (1935–44). For his services, he was knighted in 1944. Simon received a Jewish and Hebrew education from his father, a Manchester rabbi. He was particularly influenced by *Ahad Ha-Am*, who settled in London in 1907. He was also a member of the group of Zionists who were influenced by Chaim *Weizmann* and supported his political efforts during World War I that led to the *Balfour Declaration* (the Hebrew version of the Declaration was written by Simon). Simon was a member of the *Zionist Commission* that visited Palestine in 1918 and took part in laying the cornerstone of the Hebrew University in Jerusalem. Later he served as chairman of the university’s Executive Council (1946–49) and Board of Governors (1950–53). In 1945–46 he was a member of the Commission of Inquiry into Jewish Education in Palestine, on behalf of the British government. The only Jew on the commission, Simon objected to the conclusion that English should be the language of instruction in higher education. He lived in Jerusalem from 1946 to 1953; during that period he also worked in the Israeli Ministry of Posts, laying the plans for the post office bank (1950–53). After his return
to England, he continued his association with several cultural projects in Israel.

Simon was a brilliant writer in both English and Hebrew. He published essays and articles in English on Zionism and Hebrew culture and literature. Some of his essays were collected in *Studies in Jewish Nationalism* (1920). He edited the anthology *Aspects of The Hebrew Genius: Essays on Jewish Literature and Thought* (1910) and wrote *The Case of the Anti-Zionists: A Reply* (1917) and *Zionism and the Jewish Problem* (1918). Together with Leonard Stein, he edited *Awakening Palestine* (1923). Simon's main work in English is his translation of Ahad Ha-Am's writings, which were first published in journals and later in books (a list of translations and their editions is to be found in Goell, *Bibliography*, 83–84). In collaboration with J. Heller, Simon wrote a book entitled *Ahad Ha-Am: Asher Ginzburg* (Heb., 1955; Eng., 1960), and together with I. Pograbinski he edited the second edition of Ahad Ha-Am's letters (6 vols., 1956–60).

From 1910 Simon began to publish a series of essays in Hebrew on Greek literature (the first of their kind in Hebrew) in *Ha-Shiloah*. They were later collected (1951) in his book *Perakim be-Sifrut Yavan ha-Atitakah* (“Chapters on Ancient Greek Literature,” 1951). He also translated into Hebrew seven of Plato's *Dialogues*, the *Memos of Xenophon*, and *On Liberty* by John Stuart Mill. On his 80th birthday, an anthology, *Eshkolot*, dedicated to the study of classical culture and including a bibliography by Haim Toren (4th vol., 1960), was published in his honor.

[Getzel Kressel]

His brother, Maurice Simon (1874–1955), a Hebraist and translator, was born in Manchester. Because of a breakdown in health, Simon lived in South Africa for a while. Later he became associated with the work of the Soncino Press, founded in London by his relative J. Davidson, and was co-translator (into English) of the *Zohar* (1931–34) and *Midrash Rabbah* (1939). He also cooperated in the Soncino translation of the Talmud (1935–52) and its Minor Tractates (1965). Simon edited the *Speeches, Articles and Letters of Israel Zangwill* (1937) and was coeditor of the *Essays and Addresses*, by Samuel Daiches (1955). He also wrote *Jewish Religious Conflicts* (1950) and numerous short studies in periodicals and reviews.

[Ruth P. Lehmann]

**BIBLIOGRAPHY:** Kressel, Leksikon, 2 (1967), 497f.

**SIMON, NEIL** (1927– ), U.S. playwright. After working for television, Simon wrote his first successful comedy, *Come Blow Your Horn* (1961), which was followed by the book for the musical *Little Me* (1962), *Barefoot in the Park* (1963), *The Odd Couple* (1965), *Sweet Charity* (1966), and *Plaza Suite* (1968). Some of these were successfully adapted for the screen.

Simon's play, *God's Favorite* (1975), based on the Book of Job, in which a "messenger from God" announces to a successful cardboard box manufacturer that his faith in God is to be put to test, was widely acclaimed. Very often, Simon bases his plays on autobiographical experiences and observations. Three plays from the 1980s, sometimes referred to as the "Eugene Trilogy," parallel the growth of Simon from teenager to successful writer. *Brighton Beach Memoirs* (1984) centers on Eugene Jerome, a Jewish adolescent growing up in 1930s Brooklyn. The characters, particularly Eugene's family, are taken from Simon's own childhood memories; Stanley, the brother whom Eugene idolizes, is based on Simon's brother Danny. *Biloxi Blues* (1986) follows Eugene's experience in army basic training during World War II. Away from his family and his Brooklyn neighborhood, he is confronted with fellow trainees from a variety of locales and backgrounds. Eugene also finds time to fall in love, lose his virginity, and confront an apparently psychotic drill instructor. In short, he grows up in this play. *Broadway Bound* (1987) relates Eugene and Stanley's attempt to break into comedy writing. The dissolution of their parents' marriage becomes fodder for their comedy sketches. At the end of the play, Eugene leaves home when his writing career takes flight, the boy at last becoming a man.

He wrote more comedies, among them *The Prisoner of Second Avenue* (1972), *The Sunshine Boys* (1973), *The Good Doctor* (1974), *Rumors* (1990), *Jake's Women* (1993), and *Laughter on the 23rd Floor* (1995), a play based on his time as one of Sid Caesar's television comedy writers. His *Plaza Suite* (1971) and *Chapter Two* (1979) were made into films, as were *The Prisoner of Second Avenue* (1975) and *The Sunshine Boys* (1975). He wrote the screenplay for *The Odd Couple II* (1998), a sequel to his play. His other writing includes the memoirs *Rewrites* (1996) and *The Play Goes On* (1999).

[Robert L. DeBane (2nd ed.)]

**SIMON, NORTON** (1907–1993), U.S. industrialist. Simon was born in Portland, Oregon. His business career began in 1932 when he bought a small food-packing plant. He developed his company into Hunt Foods Inc., which by 1943 had become one of the largest food-processing businesses on the West Coast. From this modest start, he developed a rapidly expanding diversified industrial complex, the holding company Norton Simon Inc., which included food processing and packaging, container manufacturing, soft drink industries, printing, and publishing, such as McCall's Publishing, *The Saturday Review of Literature*, Max Factor, Canada Dry, and Avis Car Rental. In 1969 Simon resigned as director and finance committee member of the holding company to concentrate on his cultural and educational interests through several foundations, mainly established to acquire and display works of art, to provide scholarships, and to support various charities. One major program of the foundations was the loan of art to public museums and universities. The *Duveen collection is centered on the Old Masters; other collections include paintings, drawings, and sculpture of the 19th and 20th centuries.*
In 1974, seeking a permanent home for his collection, he was approached by the Pasadena Museum of Modern Art, of which he ultimately assumed control and the naming rights. Today, the Norton Simon Museum of Art in Pasadena has an extensive permanent collection of Western and Asian art, and promotes art education through special exhibitions, tours, and lectures.

Simon was married to actress Jennifer Jones from 1971.

[Joachim O. Ronall / Ruth Beloff (2nd ed.)]

SIMON, PAUL FREDERIC (1941– ), U.S. pop and folk music songwriter known both for his collaboration with childhood friend Arthur ("Art") "Garfunkel and for three decades of solo albums; member of the Rock and Roll Hall of Fame. Simon was born in Newark, N.J., to Belle and Louis, a professional bassist who performed in television orchestras. The family relocated to Queens, New York, when Simon was in grade school, where he met Garfunkel. In 1957, Simon and Garfunkel were performing together as "Tom and Jerry," concerned that their real names sounded too Jewish, and recorded a minor hit song, "Hey Schoolgirl." Simon attended Queens College, where he earned a degree in English literature but spent a great deal of time on the fringes of New York's Brill Building songwriting scene. In 1964 Simon left for London to escape the insular New York folk music scene, which was dominated by Bob Dylan. Simon maintained an antipathy to Dylan for decades, only resolving it with a joint tour in 1999. Simon and Garfunkel reunited in 1964 and helped create the wave of "folk rock" music. A version of "The Sound of Silence" from their first album, Wednesday Morning 3 A.M., with electric guitar, bass, and drums, hit No. 1 on the pop charts. They followed up with a string of albums and songs that heralded the era of politically influenced, confessional singers, including Parsley, Sage, Rosemary & Thyme (1966), and the soundtrack of the 1967 film The Graduate (starring Dustin Hoffman and Anne Bancroft), with the multiple Grammy-winning song, "Mrs. Robinson." Bridge Over Troubled Water (1970), Simon and Garfunkel's final album together, was their biggest hit. The gospel-influenced title song presaged the 1970s' search for spiritual tranquility following the turbulent 1960s, and spent six weeks at #1. The album included three other Top-20 hits: "El Condor Pasa" (#18), "Cecilia" (#4), and "The Boxer" (#7), and won eight Grammy Awards. The duo split after that, but periodically returned to tour together, including a 2004 concert at Rome's Colosseum that drew 600,000. Simon recorded successful solo albums in the 1970s, peaking with Still Crazy After All These Years (1975), which topped the charts, won the Grammy for Album of the Year, and included his only solo No. 1 single, "50 Ways to Leave Your Lover." In 1986 Simon released Graceland, which brought African music into the mainstream and paid homage to rock pioneer and early influence Elvis Presley in the title track about Presley's home, Graceland. It featured South African artists and rhythms and presaged the fall of that country's apartheid regime, but was criticized for abetting the white-led government. Graceland became Simon's biggest-selling solo album, and was named the Album of the Year. By 2005, Simon had released 41 albums including reissues, and placed nine solo tunes in the Top 20. Simon and Garfunkel had placed seven songs in the Top 10, including three No. 1 hits. Like many American Jewish songwriters, Simon rarely made overt reference to his religion or background. In his 1983 album Hearts and Bones, which chronicles the breakup of his marriage to half-Jewish actress Carrie Fisher, Simon referred to "one and one half wandering Jews." He and Garfunkel were named to the Rock and Roll Hall of Fame in 1991, and Simon went on his own in 2000. He received Kennedy Center Honors in 2002. Simon appeared in the 1977 Woody Allen film Annie Hall.

[Alan D. Abbey (2nd ed.)]

SIMON, PIERRE (1925– ), French physician and politician.

Simon was born to a typical Jewish family from Alsace-Lorraine in which rationalism and tradition were combined. After World War II, he engaged in the two domains of gynecology and endocrinology in which the status and representation of women and life are implied. In 1953, he brought to France from the U.S.S.R. new obstetrical methods of painless childbirth, violently criticized at the time both by the church and the right-wing medical establishment. Despite the fact that in the France of the 1950s regulating birth was still a religious question, Simon introduced contraceptive methods, and notably the intra-uterine device which he named "stérilet." In 1956, he was active in the foundation of French Family Planning, which was aimed at educating medical staff in scientific innovations and progressive ideas regarding childbirth. Gaining the support at first of teachers and Protestants, Family Planning had to overcome the strong opposition of the Communist Party and of the right wing and Church representatives. The fight for contraceptive methods was then linked to political commitment, since the French law of July 1920 criminalized abortion as well as birth control promotion. In 1951, Simon created the Jacobin Club with Ch. Hernu, of the Radical Party, and conducted a public debate at the Commissariat au Plan. Taking into account the fact that French society was not yet ready to accept the idea of birth control, his first struggle was to dissociate the notions of abortion and birth control. In this regard, his Contrôle des Naissances, Histoire, philosophie, morale (1966) was a success, since it led to the passing, in 1967, of the so-called Neuwirth Law, legalizing contraceptive methods in France. He gained support from the Freemasons, in which he was active, and served as a member of several government cabinets. Author of the Simon Report about the French attitudes toward sexuality, known as the “French Kinsey" (1971), Simon was the first to conjoin sociological approaches and political thought in order to rethink sexuality. The legalization of abortion, by the so-called “Veil Law” (see Simone “Veil”) enacted in 1975 was the realization of his efforts. As a Grand Master of the Grand Lodge of France (1969–71; 1973–75), Si-
mon initiated a dialogue between the Catholic Church and Masonry – which had previously been anathematized by the Church. During the 1980s he pursued the fight for his ideals and was active in favor of the methods of artificial reproduction, simultaneously involving himself in the rethinking of the period of the end of life in the movement for the “right to die with dignity.”

Among other books, he wrote Rapport sur le comportement sexuel des Français (1971), De la vie avant toute chose (1979), and La Franc-Maçonnerie (1997).

[Perpine Simon-Nahum (2nd ed.)]

SIMON, RALPH (1906–1996), U.S. Conservative rabbi. Simon was born in Newark, New Jersey, and received his B.A. from New York’s City College in 1927. In 1931, he was ordained at the *Jewish Theological Seminary, and served as rabbi of Congregation Rodef Shalom in Johnstown, Pennsylvania (1931–36), and the Jewish Center of Jackson Heights in Queens, New York (1937–43). He was appointed rabbi of Congregation Rodfei Zdek in Hyde Park, Illinois (1943–1996; emeritus in 1987). Under Simon’s leadership, Rodfei Zdek became one of the leading Conservative synagogues in metropolitan Chicago, boasting a Hebrew high school and model adult education institute. Simon served as president of the Chicago Board of Rabbis (1952–54), on the Board of Directors of the Jewish Federation of Metropolitan Chicago (1954–66), and as general chairman of Metropolitan Chicago’s Israel Bonds Organization (1965–66). He was also vice chairman of the Illinois Board of Mental Health Commissioners (1955–62) and a member of the Chicago Commission on Human Resources (1958–71) and the Chicago Youth Welfare Commission (1956–63).

Simon is credited with one of the greatest initiatives of Conservative Judaism: the establishment of the first Camp *Ramah, in Wisconsin in 1947, the progenitor of a series of Hebrew-speaking, religiously oriented summer camps operating under the auspices of the Conservative movement. In 1968, he was elected president of the *Rabbinical Assembly (1968–70), where he worked to strengthen the Masorati movement in Israel and launched a program for the conversion of non-Jewish spouses of intermarried couples. He also brought his ecumenical activism as former president of the multi-racial Hyde Park–Kenwood Interfaith Council to the national post, inviting the still-controversial Martin Luther King to address the r.a. In 1974, he was nominated to the Board of Directors of the *World Council of Synagogues.

Simon wrote The Talmud for Every Jew (1942) for the National Academy of Adult Jewish Studies and Challenges and Responses, a collection of his sermons (1985). His son Matthew was also a Conservative rabbi of B’nai Israel in Rockville, Maryland.

[Bezalel Gordon (2nd ed.)]

"SIMON, RICHARD (1638–1721), Catholic priest of the Oratorians Order. Simon first became interested in the Jews of his day while studying Hebrew at the Sorbonne. In order to further his studies, particularly in rabbinic literature, he established a friendship with an Italian Jew, a tobacco merchant named Jonah Salvador, even planning to cooperate with him in translating the Talmud. When Salvador informed him about the persecution of the Jews of *Metz resulting from the blood libel raised against Raphael Lévi, Simon came to their defense in his Factum servant de réponse au Livre intitulé: Abrégé procès fait aux Juifs de Metz (1670), a work which was widely circulated. Refuting the libel, the author recalled that Christians too had been the victims of similar accusations and that the popes themselves had come to the defense of the Jews on this account. On one occasion he demonstrated his solidarity with persecuted Jews of his day by signing a questionnaire for the Oratory as R. Simeon b. Joachim. Later, in his introduction to Cérémonies et coutumes qui s’observent aujourd’hui parmi les juifs (Paris, 1674), his translation of Leone *Modena’s Historia dei riti ebraici, Simon declared that it is impossible to understand the Christian religion without some instruction in that of the Jews, on which it was patterned. He published a supplement to this work in 1681, entitled Comparaison des cérémonies des juifs et de la discipline de l’Eglise. Between these two books he published his major work, Histoire critique du Vieux Testament (Paris, 1678), which gave rise to a storm of controversy. Simon was expelled from the Oratory and virtually the whole edition of Histoire critique was destroyed. In this book he relied to a great extent on the orientalist Gaulmin, one of the leading Christian scholars of talmudic and rabbinic literature in his day, although subsequently, and unjustly, almost completely forgotten. Simon was even more severe than Gaulmin in his strictures on Jewish writers, and in his later work, Histoire critique des principaux commentateurs du Nouveau Testament (Rotterdam, 1692), he was equally harsh in his attacks on hallowed Church doctrines. Simon’s other works bear further witness to his scholarship, his insight into biblical criticism, and his fearlessness of controversial topics.

[Bernhard Blumenkranz]

SIMON, SHLOME (1895–1970), Yiddish educator and children’s author. Born in Kalinkovichi (Belorussia), Simon had a traditional education and worked as a village melamed before immigrating to the U.S. in 1913. After working in various jobs and serving in the army during World War I, he taught in Hebrew schools and became a dentist. Extensively active in Jewish education, for 15 years he was president of the Sholem Aleichem Folk Institute, edited the Yiddish children’s magazine Kinder-Zhurnal, published extensively on Yiddish folklore, the Bible, and Jewish problems in Yiddish periodicals throughout Europe and North America, and wrote numerous children’s books in Yiddish (some translated into English...
SIMONE, ANDRÉ (1895–1952), Czech journalist and Communist activist. Born into a bourgeois German family, he became a Communist in his youth, contributing regularly to the Communist press in Czechoslovakia and later in Germany. He joined the KPD in 1922, when he moved to Berlin to work for the publishing house of Leopold Schwarzchild. Siding with L. “Trotsky, he left the party in 1926. Beginning in 1927, he worked for the German theater director Erwin Piscator and, starting in 1929, in close cooperation with Willi Muenzenberg (1889–1940), for the Universum library of the Internationale Arbeiterhilfe (IAH). In 1930 Katz escaped a tax trial, leaving for Moscow, where he managed the Mežrabpom film company. When Hitler came to power in 1933, Katz was called to Paris to support Muenzenberg in his anti-Fascist work. From 1936 to 1939, Katz was involved in the Spanish Civil War, leading the Republican press agency “Agence d’Espagne” in Paris under his assumed name André Simone. In 1938, he joined the editorial staff of L’Ordre. After the outbreak of World War II he escaped to the United States and, in the summer of 1940, went on to Mexico. There he was among the founders of the Mexican branch of the KPD, the journal Freies Deutschland, and the publishing house El Libro Libre. In 1942, however, he worked as an advisor for the Latin American trade union, and in 1944 became an editorial staff member of the pro-Zionist Tribuna Israelitica. Returning to Prague in 1946, he was readmitted to the Communist party and was appointed foreign affairs editor of the party organ Ruda Právo and editor of the political review Svetové rozhledy (“World Views”). In the Šląský trial in 1952, he was among those accused of “Trotskyite-Titoist-Zionist” activities, sentenced to death, and executed. In 1963, Simone was fully rehabilitated and in 1968 was posthumously awarded the Order of the Czech Republic. Among his works are Neun Männer im Eis (1929), Das Braune Netz (1935), Spione und Verschwörer in Spanien (1936), J’accuse. The men who betrayed France (1940), Men of Europe (1941), and La batalla de Rusia (1943).

[Avigdor Dagan / Johannes Valentin Schwarz (2nd ed.)]

**Simons, James H.** (1938– ), U.S. mathematician, hedge-fund owner. A graduate of the Massachusetts Institute of Technology, Jim Simons earned a doctorate in mathematics from the University of California at Berkeley. From 1961 to 1964 he taught mathematics at MIT and Harvard University. In 1968 he became chairman of the math department at the State University of New York at Stony Brook. Simons was also a crypt analyst, or code breaker, and did important work in mathematics that helped lay the foundation for string theory. In the late 1970s he left academia to run a fund that traded in commodities and financial instruments on a discretionary basis. Over the next quarter of a century, his company, Renaissance Technologies, which uses computer-based models to predict price changes in easily traded financial instruments, was at the forefront of research in mathematics and economic analysis. Renaissance’s models were based on analyzing as much data as can be gathered, then looking for nonrandom movements to make predictions. In 2006, Renaissance managed over $5 billion of hedge fund assets on which, over the previous 10 years, the compounded return was approximately 40 percent. Renaissance Technologies’ Hedge Fund, the Medalion Fund, was perhaps the most successful large hedge fund ever. It was closed to new investors after 1991. In 2006 Simons was launching the Renaissance Institutional Equities Fund, designed to handle upwards of $100 billion, one that would become the industry’s largest. The minimum investment was set at $20 million.

[Stewart Kampel (2nd ed.)]

**Simonsen, David Jacob** (1853–1932), Danish rabbi, scholar, and bibliophile. Born in Copenhagen, Simonsen was the son of Jacob Simonsen, a banker and leader of the Jewish community. He studied Oriental languages at the University of Copenhagen and in 1874 was admitted to the Jewish theological seminary in Breslau where he was ordained as rabbi. He then returned to Copenhagen to assist the aged chief rabbi, Abraham Alexander *Wolff*. When Wolff died in 1891 Simonsen was chosen to succeed him but he resigned his office in 1902. During a vacancy in the Copenhagen rabbinate from 1918 to 1920 he again functioned as rabbi.

When the Jews from Eastern Europe reached Denmark about 1904 after the *Kishinev pogroms*, they helped them to integrate in their new home. During World War 1, he led activities on behalf of war victims, taking special interest in the Jewish community in Palestine. An enthusiastic book collector, Simonsen had a library of about 40,000 volumes covering every field in Judaism, which he presented to the Royal Library of Copenhagen in the last year of his life; it now constitutes the principal part of the Judaica department, called “Bibliotheca judaica Simonseniana” in his honor.

Simonsen had an extensive Jewish knowledge but his literary output was confined mainly to scholarly articles. In addition, he contributed to the Dansk biografisk leksikon, the Jewish Encyclopaedia, Judeisches Lexikon, the German Encyclopaedia Judaica, and the Danish Tidsskrift for jodisk historie og litteratur. Simonsen published a descriptive catalog in Danish and French of sculptures and inscriptions from Palmyra in the Glyptothek in Copenhagen (1889), a treatise on the history of Hebrew printing (1901), and a translation into Danish of Jewish tales and legends (1928). About 100 of his articles are listed in the festschrift dedicated to him on the occasion of his 70th birthday (Festschrift… David Simonsen, Hebrew title Nir David, 1923).

**Bibliography:** Israeliet (March 17, 1923): 1C (June 24, 1932); Montzen, in: American Hebrew (Sept. 2, 1932); R. Edelmann, in: Hokhmat Yisrael be-Ma’arav Eireopah, 1 (1958), 361–8; Festschrift Anledning of Professor David Simonsens 70 Aars Fødselsdag (1923).

[Julius Margolinsky]

**Simonsohn, Shlomo** (1923– ), Israeli historian. Simonsohn was born in Breslau, but immigrated to Erez Israel as a child in 1933 and studied at the Hebrew University. From 1942 until 1947 he was a member of the *Haganah*. He received his doctorate from London University. In 1957, he was appointed head of the department of Jewish history at Tel Aviv University, a position he held until 1988. From 1961 until 1964 he served as the director of the central library. He became a full professor in 1968. From 1969 to 1971 he was the dean of the Jewish Studies School, and from 1969 to 1992 the director of the Diaspora Research Institute. In 1970 he was one of the founders of the Bet Berl Teachers Training College. In the same year he was also one of the founders of the Diaspora Museum, serving on its board. Simonsohn served as rector of the University in 1971–77, while in the years 1973–74 he was also the chairman of the President’s and Rector’s Committee. He retired in 1993 and became chairman of the Diaspora Research Institute council. Simonsohn devoted himself mainly to the history of the Jews in Italy, on which he has published *Leon de Modena* (1953); *Magen va-Herev* (1960), on Leone *Modena’s* anti-Christian tract; and *Toledot ha-Yehudim be-Dukkasut Mantovah* (2 vols., 1962–64). He was one of the founders and leaders of “Shurat ha-Mitnadvim,” a voluntary public movement that was active in Israel in the 1950s with the aim of raising the standards of public life. Simonsohn was awarded the Ben Zvi Award in 1964 and the Shazar Award in 1996.

[Shaked Gilboa (2nd ed.)]

**Simon Wiesenthal Center**, Los Angeles international human rights organization originally aimed at Holocaust remembrance. Founded in 1977 by Rabbi Marvin *Hier*, as The Simon Wiesenthal Center for Holocaust Studies the center opened its doors in Los Angeles two years later.

Named for Holocaust survivor and Nazi hunter Simon *Wiesenthal, the center’s initial mission was to promote remembrance of the Holocaust, its victims and its perpetrators.
With widening interest in other fields, the name was shortened to Simon Wiesenthal Center; it defined its status as an international human rights organization, with a membership of more than 400,000 families. It continues its emphasis on Holocaust remembrance "by fostering tolerance and understanding through education, outreach and social action," and the prosecution of Nazi war criminals. It membership was gained by the skillful use of direct mail, just as the science of direct mail was beginning to flourish and was becoming an integral part of American political life. Thus, unlike B'nai B'rith, which has lodges, or the ADL, which has individual chapters and boards, and Hadassah, which is shaped by local and regional chapters, Simon Wiesenthal's membership is its base of contributors.

In expanding its original mission, the Center confronts contemporary issues, including racism, antisemitism, terrorism, and genocide. It monitors and acts on developments in Israel and the Middle East, extremist groups, neo-Nazism, and hate on the Internet.

The first major American Jewish institution to establish its headquarters in Los Angeles and on the West Coast, the center maintains offices in New York, Toronto, Miami, Jerusalem, Paris, and Buenos Aires, and is accredited as a non-governmental organization (NGO) to the United Nations and UNESCO. Its Jerusalem office, headed by Efraim *Zuroff, is the one arm of the center that is actively engaged in hunting Nazi war criminals; it was instrumental in engaging post-communist East European countries in focusing of their war-time record of collaboration and cooperation with allied or occupying German forces in implementing the final solution. Its Paris office, headed by Shimon Samuels, organizes its efforts with the NGO and has been active in the fight against antisemitism in early 21st century Europe.

In 1993, the center opened the Museum of Tolerance, adjoining its Los Angeles headquarters, as a high-tech, hands-on experiential museum, which uses interactive exhibits to involve visitors in two major themes: the dynamics of racism and prejudice in America and the history of the Holocaust. The museum is called Beit Hashoah in Hebrew and the Museum of Tolerance in English, thus giving differently shaded emphasis to its double mission. The Holocaust part of the exhibition is portrayed not through artifacts but through innovative dramatization of key themes, which, by the use of sound, light, and action, pulses the visitor through each exhibition at a set pace.

During the first decade of its existence, the Museum of Tolerance received some four million visitors. An additional 110,000 public school students annually tour the exhibits as part of their studies.

The museum’s Tools for Tolerance program conducts courses for American and foreign law enforcement officers, educators, judges, and other professionals, while many more people are reached through Internet programs, documentaries, teaching guides, conferences, and collaborative projects with ethnic community groups.

Using its own in-house production facilities, the Wiesenthal Center’s Moriah Films division won Academy Awards for two of its feature documentaries, *Genocide*, narrated by Elizabeth Taylor and Orson Welles, in 1981, and *The Long Way Home* in 1997. These accomplishments forged close ties with glamorous Hollywood stars, who grace the center’s banquets and public events.

In two major expansion moves in 2005, the Wiesenthal Center opened its New York Tolerance Center and broke ground in Jerusalem for the Center for Human Dignity–Museum of Tolerance, scheduled to open in 2009. When completed, the new complex, designed by Los Angeles architect Frank O. Gehry, will consist of seven buildings, including a museum, theater complex, international conference center, education center, and library. The idea of the Jerusalem center was met with considerable opposition by many Israelis and by Yad Vashem, the state’s official Holocaust memorial authority.

Partially in response to such objections, the Wiesenthal Center pledged that its new project would not deal with the Holocaust, but stress tolerance among the different ethnic and religious groups within Israel, and between Jews and adherents of other faiths.

The New York Center in Manhattan functions mainly as a multimedia training facility, which has adapted the Tools for Tolerance program in courses for police, teachers, and others.

From its very beginning, under the leadership of Hier and his closest associate, Rabbi Abraham Cooper, the center’s modus operandi has been characterized by bold, aggressive actions in response to perceived antisemitism or neo-Nazism anywhere in the world. Barely opened, the center in 1979 launched a successful national campaign to pressure the German chancellor and administration into rescinding the statute of limitations on the prosecution of Nazi war criminals. It played a highly public role in advancing the Office of Special Investigation of the Department of Justice, which was the arm of the American government that was responsible for the prosecution of Nazi war criminals. Martin Mendelsohn and Zuroff, who formerly served on the OSI staff, now work with the Wiesenthal Center.

The campaign’s success put the center on the front page of the *New York Times* and on the map of Jewish organizational life. The center has never joined the Conference of Presidents of Major American Jewish Organizations, is perceived as a lone actor, and has often used this outsider status to its own advantage.

In other well-reported interventions, the center brought wider recognition to the World War II rescue efforts of Swedish diplomat Raoul Wallenberg, prodded Chile and other South American countries to extradite resident Nazi fugitives, offered a $1 million reward for information leading to the capture of Auschwitz doctor Josef Mengele, and sent a mission to the Soviet Union to investigate the plight of Jewish refuseniks.
In 1985, the center was part of the international protest against President Reagan’s visit to a German military cemetery in Bitburg. Two years later, the center gathered 250,000 signatures on a petition to the Vatican to establish full diplomatic relations with Israel.

Following a fact-finding mission to Japan, the center drew attention to the proliferation of antisemitic works in Tokyo bookstores.

In the late 1980s and early 1990s, Hier helped organize an international conference on Jewish solidarity with Israel and engaged in a correspondence with Chancellor Helmut Kohl on the obligations facing a reunified Germany. Hier himself personifies the more aggressive and often more militant attitude of contemporary American Orthodoxy, though on the issue of tolerance, his is a strongly moderating influence in the Orthodox community.

Other campaigns have targeted anti-Israel actress Vanessa Redgrave, Holocaust deniers, Russian skinheads, Swiss banks, and black extremist Louis Farrakhan.

Exhibits have dramatized, among other topics, genocides of Armenians and Rwandans, the civil rights movement, and immigrants in the United States. In the early 21st century, the center was accused of diminishing its consideration of the Armenians in order not to gain the disfavor of the Turkish government, an important moderate, democratic Muslim ally of the United States and Israel.

The Center’s high profile has drawn the attention of numerous critics from the very beginning. A Los Angeles group of survivors, which had been planning its own Holocaust museum for many years under the auspices of the Jewish Federation Council, the communal umbrella organization, was deeply resentful when the quick-acting Hier preempted their plans and secured the endorsement of Simon Wiesenthal.

In subsequent years, the Wiesenthal Center and its leaders have been criticized for a variety of reasons.

Hier’s dual role as head of the center, as well as “dean” of Yeshiva University of Los Angeles, has come under fire, especially in light of some $50 million appropriated by the State of California for the Wiesenthal Center up to 2005, which critics contend violates the separation of church and state.

An early criticism, which has somewhat lessened with time, centers on the high-tech, interactive approach of the Museum of Tolerance exhibits, which, some complain, has given Holocaust remembrance a touch of Disneyland.

However, the popular success of the Museum of Tolerance has spawned some imitations and appears to endorse its 21st century multimedia approach.

The Wiesenthal Center has also earned the dislike of older established defense and communal organizations for allegedly encroaching on their “turf,” assuming the role of spokesman for the entire Jewish people, and purposely exaggerating the dangers of antisemitism. Regarded as alarmist by some, its scholarly resources and achievements have also been challenged by critics.

[Tom Tugend (2nd ed.)]

SIMSON, early American New York family. SOLOMON (1738–1801) was born in New York City. A prominent merchant, he and his family were active throughout their lives in the Spanish-Portuguese Congregation Shearith Israel. He and his brother Sampson (see below) were active in founding the Chamber of Commerce of New York. Simson espoused the U.S. cause during the American Revolution, moving to Connecticut during the British occupation of New York City. After the war he returned to New York City. As head of Congregation Shearith Israel, he was active in having his congregation and those of Philadelphia, Richmond, Virginia and Charleston, South Carolina, jointly send a congratulatory letter to President George Washington in 1790. In 1795 he and Alexander Hirsch of New York City addressed a Hebrew letter to the Chinese Jews of Kai Feng Fu in Honan province, China. Active in New York politics, Simson was one of the founders of the Democratic-Republican Party of New York, serving as a vice president of the party and becoming its president in 1797.

Simson’s brother, SAMSON (the elder; c. 1725–1773), was also born in New York and was a prominent merchant there. Some time before the American Revolution he loaned a biblical Hebrew manuscript to Benjamin Kennicott of England for use in the latter’s Vetus Testamentum Hebraicum.

Solomon Simonson’s son, SAMPSON (the younger; 1781–1857), who was born in Danbury, Connecticut, was a lawyer and an Orthodox Jew, and was active in Congregation Shearith Israel as well as in philanthropic endeavors. At the Columbia College commencement exercises in 1800, he delivered a Hebrew oration of the “Historical Traits of the Jews from Their First Settlement in North America,” which was the first sketch of U.S. Jewish history by a U.S. citizen. He studied law under Aaron Burr and was admitted to the bar in 1802, one of the first Jewish lawyers in New York City. For reasons of health, he gave up the practice of law after a few years, and lived quietly in Yonkers, New York, as a bachelor country gentleman. Simson was interested in prison reform, in Westchester County politics, and in religious and charitable movements in Yonkers, New York City, and Palestine. He aided in the founding of a number of institutions, serving as president of some. He corresponded with Isaac *Leeser and Warder *Cresson on matters concerning Palestine.

Among the agencies he helped establish were the North American Relief Society for the Indigent Jews in Palestine (1833), the Jews Orphan and Indigent Asylum (1852), the Jewish Theological Seminary and Scientific Institution (1852), and the Jewish Hospital of New York (the present Mount Sinai Hospital). He enabled the Russian Jewish congregation Beth Hamedrash Hagadol of New York to acquire a synagogue building. Simson made a cash bequest to Columbia College, the first of its kind.

[Isidore S. Meyer]

SIMSON, BERNHARD VON (1840–1915), German historian. Born in Königsberg, the son of Martin Eduard von Simson, Bernhard von Simson was appointed lecturer at the University of Jena in 1863. He published two volumes of documents connected with the reign of the elector Frederick William of Brandenburg. He then entered the Prussian civil service as a recorder at the archives of Dusseldorp, but returned to teaching in 1874 as professor at the University of Freiburg im Breisgau. In 1887 he was elected to the Bavarian Academy of Sciences. Retiring in 1905 he returned to Berlin and was named a member of the general directorate of the Monumenta Germaniae Historica in 1907.

Among his most important works were: Jahrbuch der fränkischen Reichs unter Ludwig dem Frommen (2 vols., 1874–76); and Jahrbuch der Fränkischen Reichs unter Karl dem Grossen 780 bis 814 (1883), which completed the work on Charlemagne begun by George Abel. Perhaps von Simson’s most significant work was the revelation of the pseudo-Isidorian Le Mans forgeries which he described in Die Entstehung der Pseudoisidorischen Faelschungen in Le Mans (1886). He also wrote the sixth volume of Giesebrecht’s Geschichte der deutschen Kaiserzeit (1895) and edited his father’s memoirs, Erinnerungen aus seinem Leben (1900).

[Howard L. Adelson]

SIMSON, MARTIN EDUARD VON (1810–1899), German lawyer and politician. He was born in Königsberg into a distinguished Jewish family which converted to Christianity and he was baptized at the age of 13. In 1831 Simson was appointed lecturer in Roman law at the University of Königsberg and in 1836 was made professor. An active member of the Frankfurt National Liberal movement, he was also a member of the Frankfurt National Assembly in 1848–49 and its chairman from December 1848. In 1849 he led the delegation from the National Assembly which offered the crown of the German Empire to the king of Prussia, Frederick William IV. Von Simson was elected a member of the North German Parliament and subsequently of the Reichstag in which he sat as a National Liberal and became known as a brilliant orator. In 1870 he was leader of the parliamentary delegation which asked the king of Prussia to accept the crown offered by the princes as William I. Von Simson was president of the German High Court which sat in Leipzig and in 1888 he was ennobled. A distinguished and highly cultured personality, he was a founder and first president of the Goethe society.

BIBLIOGRAPHY: B. von Simson, Eduard von Simson (1900); Wininger, Biog. 5 (1930), 535f.

SIMSON, PAUL (1869–1917), German historian. Born in Elbing, East Prussia, Simson accepted a teaching post at the municipal college of Danzig. In 1906 he was appointed professor. During the interim he developed an interest in the city of Danzig and its history. His four-volume Geschichte der Stadt Danzig (1903–16) won him prominence as the author of the first scholarly history of Danzig. He was also active in Danzig’s civic affairs, and became a member of the city council, where he was considered politically liberal. He started a civic group for conserving all architecture of significance in Danzig. Over the years, Simson maintained his stature as a scholar by publishing studies on East Prussia, Pomerania, Poland, and on the political and cultural history of Danzig.

SIN. In biblical Hebrew there are about 20 different words which denote “sin.” It may be inferred, therefore, that the ancient Israelites had more concepts expressing various nuances of sin than Western thought and theology. A study of the biblical concept of sin, therefore, cannot disregard the diversity of words denoting sin. These words must be examined in their context, i.e., in the formulas and literary units in which they occur. An analytic study of the three most commonly used terms – ḥet’, peshah’ and avon (’awon) – has been undertaken by R. Knierim. As these are often found together (Ex. 34:7; Lev. 16:21; Num. 14:18; Isa. 59:12; Jer. 33:8; Ezek. 21:29; Micah 7:18–19; Ps. 32:1, 5; 51:3–7; 59:4–5; Job 7:20–21; 13:23; Dan. 9:24; cf. Isa. 1:2, 4; Ezek. 33:10, 12), even in poetic parallelism, there cannot be an appreciable difference of meaning among them, yet they are not simply synonymous.

The root ḥt’ occurs in the Bible 459 times. The original meaning of the verb ḥata’a “to miss” something, “to fail,” as can be seen from Genesis 31:39; Leviticus 5:15–16; Numbers 14:40; Judges 20:16; Psalms 25:8; Proverbs 8:36; 19:2; and Job 5:24, which indicates that sin as denoted by ḥt’ was originally viewed as a failure, a lack of perfection in carrying out a duty. The root ḥt’ signifies a failure of mutual relations and corresponds, then, to the modern idea of “offense” rather than to that of “sin,” which is a theological concept. One who fulfills the claims of a relation or an agreement is righteous, ṣaddik (ṣaddiq); one who does not, offends (ḥt’ l-) his partner. “What is my offense that you have so hotly pursued after me?” Jacob asks Laban (Gen. 31:36). David puts a similar question to Jonathan in connection with his relation to Saul (1 Sam. 20:1). This relation was of such a nature that it required of David that he devote all his abilities to the service of Saul, and of Saul that he treat David as his loyal subject. The obligation was mutual as long as it was upheld by both parties. When Saul and David were in the same cave, and David was content to cut off the skirt of Saul’s robe, he called out to Saul that it was now clear that he had not "offended” him (1 Sam. 24:12). Then Saul ac-
knowledged that David was righteous and that he himself was the offender (cf. 1 Sam. 26:21), since he had not fulfilled his obligations. All lack of obedience toward superiors is "offense," because in the relations between subordinates and superiors the former are expected to obey the latter. The Egyptian baker and cupbearer who were in prison with Joseph had been sent there because they had "failed" to obey the orders of Pharaoh (Gen. 40:1; 41:9). The people of Pharaoh were accused of "failing" (ḥyt) in their duty, when they did not give any straw to the Israelites so that they might make bricks (Ex. 5:16). The same applies to every deed that is in conflict with, or causes the dissolution of, a community. So Reuben acknowledged that his brothers "sinned" against their brother Joseph (Gen. 42:22). When the king of the Ammonites attacked Israel, Jephthah sent him word explaining that there had always been a relation of peace between the two peoples, and he addressed to him the following reproach: "I have not 'sinned' against you, but you do me wrong to war against me" (Judg. 11:27). The "sin" is here a breach of the covenant relation between the peoples. When Sennacherib threatened Judah in 701, King Hezekiah sent a messenger to him, saying: "I have 'sinned'" (1 Kings 18:14). The "sin" of Hezekiah consisted in a violation of his vassal duties. A "sinful" act, i.e., one of dereliction of duty, is thus a matter between two parties. The one who does not fulfill his obligations in relation to the other is a sinner with regard to the latter; he "sins against him," i.e., "he fails him," and so gives the other a claim upon him.

According to 1 Samuel 2:25, failure in carrying out one's duty can concern the relations between men or between God and man: "If a man offends against (ḥyt) a man, God will mediate, but if a man offends against (ḥyt) God, who shall act as mediator?" This passage indicates that the "sin" against God was conceived as an "offense," as a failure to fulfill one's obligation toward God. Since the root ḥyt denotes an action, that failure is neither an abstraction nor a permanent disqualification but a concrete act with its consequences. This act is defined as a "failure," an "offense," when it is contrary to a norm regulating the relations between God and man. So, for instance, the infringement of the law of ban (herem) appears in Joshua 7:11, 20 and 1 Samuel 15:3–19 as an "offense" or "sin" against God in view of the traditions partially recorded in Deuteronomy 20:10–18. That adultery is a "sin" against the Lord (Gen. 20:6, 9; 39:9; 11 Sam. 12:35) results from a law such as Exodus 20:14. Social mischiefs stigmatized as "sins" by the prophets (Isa. 58:1ff.; 59:2ff.; Jer. 2:35; 5:25; Ezek. 14:13; 16:51; 33:14; Hos. 12:9; Amos 5:12; Micah 3:8; 6:13) are, in fact, contrary to commandments of the divine law such as Exodus 20:16 (13); 23:1–9; Deuteronomy 27:17–19. The concept of ḥyt extends not only to juridical, moral, and social matters, but also to cultic obligations, and even to involuntary infringements of ritual prescriptions (Lev. 4–5) or of occasional divine premonitions (Num. 22:34).

The root ḥṣ occurs in the Bible 136 times, and it too is found in early texts as Genesis 31:36; 50:17; Exodus 22:8; 1 Samuel 24:11; 11 Kings 8:20, 22; Amos 1–2; Micah 3:8; and Proverbs 28:24. Its basic meaning is that of "breach." In terms of international law, the breach of a covenant is thus called peshā (1 Kings 12:19; 11 Kings 1:1; 3:5, 7; 8:20, 22; Hos. 8:1). In the realm of criminal law, peshā is the delict which dissolves the community or breaks the peaceful relation between two parties (e.g., Gen. 31:36; Ex. 22:8; Prov. 28:24). This is also the meaning of ḥṣ when used to express the sinful behavior of man toward God (e.g., 1 Kings 8:50; Ps. 25:7; 51:3). The verb ʾawaw, found in the Bible 17 times, basically expresses the idea of crookedness, and thus means "to wrong" (Lam. 3:9), and in the passive form (nifʿal), "to become bent" (Ps. 38:7). The noun ʾawon, from the same root, is found 227 (229) times, and designates "crookedness." The use of these words in a figurative sense to denote the transgression, the guilt incurred by it, or the punishment, is of popular origin. The metaphor does not belong to the juridical terminology, but was assumed by the theological language. Isaiah 59:2, for example, says that the ʾawonot set up a wall between the Lord and the sinner.

The nouns het, ʾataḥa or ḥattat, peshā, and ʾawon, and also the corresponding verbs, denote a "sin" in the theological sense of the word when they characterize a human deed as a "failure," a "breach," or a "crooked" action with reference to prescriptions that proceed finally from the stipulations of the Covenant. It is not the external nature of the act that makes it sinful. In biblical thought, the relation that creates the right to God's protection also creates the sin. There would be no sin if there were no covenantal law. The sinner is one who has failed in his relation to God, insofar as he has not fulfilled his obligation to God. In other words, it is a "sin" to violate, or to break, the Covenant (cf. Jer. 14:20–21). The biblical doctrine of sin is thus described in Jeremiah 16:10–12 in the following way: "When you tell this people all this, and they say to you: 'Why has the Lord threatened us with such terrible misfortune? What is our crime? What is the offense (ḥyt) we have committed against the Lord our God?'—then answer them: 'It is because your fathers forsook Me. They followed other gods, worshiping them and doing obeisance to them, and forsook Me and did not keep My law. And you have done even worse than they did, each following his own stubbornly wicked inclinations and refusing to listen to Me.'" Even the sin of Adam and Eve, although not described as such in the Bible, was an act that destroyed a special relation between God and man (Gen. 3). The original sin does not appear in the Bible as an innate depravity common to all human beings in consequence of the fall of the first parents. Rather, the biblical tradition knows that "there is no man who does not sin" (1 Kings 8:46; cf. Eccles. 7:20). The hyperbolic language in which the psalmist describes his own sinfulness, "I was even born in iniquity, my mother conceived me in sin" (Ps. 51:7; cf. Gen. 8:21), only stresses the ineluctable character of sin. Nobody can escape from it, as the sin can also be involuntary (Lev. 4–5) or proceed from ignorance (Gen. 20:6; Num. 22:34). A man is responsible for all his actions. Therefore sick people may conclude that their illness is a punishment for having offended God (Ps. 38:4, 19; 41:5). This does
not mean, however, that the ancient Israelites did not make a distinction between an inadvertent sin and one that is committed willfully. This distinction clearly emerges in Numbers 15:27 and 30. The psychological sentiment of guilt is also expressed in various texts (Ps. 51:7; Prov. 21:4; 24:9; Job 31:30; cf. Gen. 4:7; Deut. 15:9; 22:26). The subjective aspect of a deed is even taken into account by the law, especially in Exodus 21:13–14 and Deuteronomy 19:4–5.

The idea of "deadly" or "mortal" sin originates in biblical expressions connecting hif‘ with mwt ("to die," "death"); Num. 18:22; 27:3; Deut. 21:22; 22:26; 24:16; 11 Kings 14:6; Ezek. 3:20; 18:4, 20; Amos 9:10; 11 Chron. 25:4). The oldest text connecting the two is probably Amos 9:30, dating from the eighth century B.C.E.: "All the sinners of my people shall die by the sword." The connection of the formula expressing the death sentence with such an indefinite word as "sin" or "offense" cannot be original. It must be regarded as a generalization proceeding from theological reflection. Its original "setting in life" (sitz im leben) is still visible in Deuteronomy 21:22 and 22:16, which refer to the proceedings of the civil tribunal. Numbers 18:22 and 27:3, both of which belong to the Priestly tradition, reflect instead the sphere of sacral law. The remaining passages use the concept of "mortal sin" in a context of "prophetic" preaching.

In a certain sense, every sin may be regarded as "deadly"; for, if all people die, it is because all have sinned, and not in consequence of "the original sin." That the sinner must die is stated or assumed by many texts (Ex. 32:33; Lev. 20:20; 22:9; 24:15–17; Num. 9:13; 16:26; 17:3; 18:22, 32; 1 Sam. 15:18; 1 Kings 13:3; 14:11–18; 15:29–30; 16:12–13, 18–19; Isa. 1:9; 3:17; 43:27–28; 64:4–5; Jer. 8:14; Ezek. 3:20; 18:24; Amos 9:8, 10; Ps. 104:34). Stereotyped formulas say even that "each man shall die because of his sin" (lh!; Num. 27:3; Deut. 24:16; 11 Kings 14:6) or "because of his transgression" (awon; Josh. 22:20; Ezek. 4:17; 7:13; 16; 18:17; 20; 33:6, 8, 9; cf. Gen. 19:15). The sinner must indeed "bear (nis) his sin." The expression means practically "to take the blame upon oneself," and it normally refers to the sinner himself (Gen. 4:13; Ex. 28:43; Lev. 5:1, 17; 7:18; 19:8, 17; 20:17, 19; 22:9; 24:18; Num. 5:3; 9:13; 14:34; 18:22, 23, 32; Ezek. 14:10; 44:10, 12). The law of retaliation demands, in fact, that the offender should be punished according to his sin. However, the same expression also occurs in early pleas for forgiveness (Gen. 50:17; Ex. 10:17; 32:32; 1 Sam. 15:25; Hos. 14:3; Ps. 25:18), in doxological formulas (Ex. 34:7; Num. 14:18; Micah 7:18; Ps. 32; 85:3), in a thanksgiving psalm (32:5), in a predicition (Jos. 24:19), and in a Song of the Suffering Servant in Deutero-Isaiah (Isa. 53:12). In these texts, the one who takes the blame upon himself is God, the offended person, or a substitute of the sinner (cf. 11 Sam. 12:13–14). There are still other cases when one's awon is borne by another person: by the priests (Num. 18:1), by Aaron (Ex. 28:38), by the husband (Num. 30:16), by the prophet Ezekiel (Ezek. 4:4–6), by the community (Lev. 22:16), by the scapegoat (Lev. 16:22), or even by a sacrificed goat (Lev. 10:17). It means that there was a possibility that the sin might not work its consequences upon the sinner. Accordingly, there was sense to the prayer for the forgiveness of sin (cf. 1 Kings 8:30, 34, 36, 50; Ps. 51:4; 79:9) or the intercession of a prophet (Gen. 20:7; Ex. 9:27–29; 10:17; 32:30–33; Num. 21:7; Deut. 9:18–20; 1 Sam. 7:5; 12:19; Jer. 14:11; 15:1). The ancient remedy, the sin-offering (hata‘al), also worked both for the purification of the person and to obtain the forgiveness of the Lord. It is probable that the killed animal was originally regarded as a substitute for the sinner (cf. Lev. 10:17). The confession of sins was another means of winning forgiveness. In this way the sinner expels the sin from his heart; he shows at the same time that he does not intend to conceal his sin and to deceive the Lord.

The formula of the individual's confession of sins, expressed by the verb hata‘al ("I have sinned"), is found in the Bible 30 times. It has beyond any doubt a ritual character, even if it is used twice in a rather colloquial way (1 Kings 18:9; Neh. 6:13). In the other instances, it is employed with reference to sacral judicial proceedings, as shown by the juridical terminology of the context. It is used not only when someone has sinned against God (Gen. 39:9; Ex. 9:27; 10:16; Num. 22:34; Josh. 7:20; 1 Sam. 15:24, 30; 11 Sam. 12:13; 24:10, 17; Jer. 23:5; Micah 7:9; Ps. 41:5; 51:6; 1 Chron. 21:8, 17; cf. Job 7:20; 10:14; 33:27) but also against man (Gen. 20:9; 43:9; 44:32; Judg. 11:27; 1 Sam. 24:11; 26:21, 11 Sam. 19:21; 11 Kings 18:14; Jer. 37:18). More than half the occurrences are in ancient texts. The oldest form of the proceedings is most likely the one in Joshua 7:13–23, on the occasion of “Achan’s sin at Jericho; it seems to be presupposed in Leviticus 5:5 and also Psalms 32:5. After the sinner was designated by the sacred lots, Urim and “Thummim, he had to present a public confession of his sin, which was confirmed by an inquiry. The sin could be forgiven or not, it could be expiated by a sacrifice or by putting the sinner to death. On the other hand, in 1 Samuel 15:24 and 11 Samuel 12:13 (cf. 11 Sam. 24:10–19), the casting of lots and public confession are dispensed with, the sin being confessed before the cultic prophet who accused the sinner in God’s name. This procedure was probably characteristic of the early monarchical period. The individual confession of sins is also expressed by the words pesh‘a‘ot (Ps. 5:27; 325:39; 51:3, 5) and ‘awonotai (Ps. 38:5; 40:13), by the singular pish‘i‘ (Micah 6:7; Job 7:21; 14:17) and ‘awoni (Gen. 41:3; Ps. 125:38:19), or else by various locutions using one of these words (Gen. 44:16; 1 Sam. 25:24; 11 Sam. 14:9). These confessions occur in many different contexts: prayer, praise, interrogation, etc.; the confession of sins is thus often indirect.

The formula of the national confession of sins is expressed by the verb hata‘nu ("we have sinned"). This verbal form occurs in the Bible 24 times, but only twice in texts that are definitely ancient – Numbers 12:11 and 14:40, which seem to belong to the Elohistic tradition of the Pentateuch. However, the first of these two passages does not actually contain a national confession of sins, since the sinners are Miriam and Aaron; thus an individual confession of sins is applied to two persons at once. None of the remaining 22 attestations of the form can safely be dated before the late seventh century.
b.c.e. (Num. 21:7; Deut. 1:41; Judg. 10:10, 15; 1 Kings 8:47; Isa. 42:24; Jer. 3:25; 8:14; 14:7, 20; 16:10; Ps. 106:6; Lam. 5:16; Dan. 9:5, 8, 11, 15; Neh. 1:6 (twice); 11 Chron. 6:37). All these texts have a cultic or sacral character. Other formulas of national confession of sins, expressed by the word peshâ'enu ("our sins") can be found in Isaiah 53:5; 59:12; Ezekiel 33:10; Psalms 65:4; 103:12; and Lamentations 1:14, 22. As far as these texts can be dated, they were all composed in the sixth century b.c.e. The term 'awonedenu, or 'awonotenu, also occurs with that meaning, namely, in Isaiah 53:5–6; 64:5; Psalms 90:8; Daniel 9:13; and Ezra 9:6, 13 – texts which are all Exilic or post-Exilic. It seems, therefore, that, contrary to the individual confession, the national one is a relatively late innovation in Israel's penitential liturgy (cf. E. Lipinski, La liturgie pénitentielle dans la Bible (1969), 35–41).

When God "forgives" one's sin, He "covers" or "hides" it (Micah 7:18; Ps. 32:1, 5; 85:3; Prov. 10:12; 17:9; 19:11; 28:13; Job 31:33). He "does not remember [i.e., that He overlooks]" it (Isa. 64:8; Ps. 25:7). He "bears" it Himself (Ex. 32:32; 34:7; Num. 14:18; Josh. 24:19; Hos. 14:3; Micah 7:18; Ps. 25:18; 32:21, 5; 85:3). Though it is merely said that the sin is forgotten, covered, not imputed to the sinner, God's forgiveness of sins is identical with the curing of the man and with the regeneration of his strength. It means, indeed, that God will not take him away "in the middle of his days" (Jer. 17:11; Ps. 55:24; 102:25), but will permit him to spend on earth the full span of human life, i.e., "70 years" (Isa. 23:15; Ps. 90:10). Then He will cut him off by death, for "there is no righteous man on earth who does good and never sins" (Eccles. 7:20).

[Edward Lipinski]

Rabbinic Views

The usual rabbinic term for sin is averah, from the root avar ("to pass over"; i.e., sin is a rejection of God's will). The rabbis rarely speak of sin in the abstract but usually of specific sins. There are sins of commission and omission – in the rabbinic terminology, the transgression of negative precepts and the failure to perform positive precepts (Yoma 8:8). Sins of commission are more serious than those of omission (Yoma 85;86a), and the term averah generally refers to the former. In one respect, however, the latter are more severe. If positive precepts have to be carried out at a certain time and that time has passed, the omission cannot be rectified, e.g., the failure to recite the Shema on a particular day. To this is applied the verse (Eccles. 1:15): "That which is crooked cannot be made straight, and that which is wanting cannot be numbered" (Ber. 26a). Sins involving the transgression of negative precepts are of two kinds – offenses against God and offenses against one's neighbor. The Day of Atonement brings forgiveness for sins committed against God, i.e., for purely religious offenses. It only brings forgiveness for offenses against other human beings if the wrong done to the victim has first been put right (Yoma 8:9). The intention to sin is not reckoned as sin except in the case of idolatry (Kid. 39b).

Sins are also divided into light and severe sins. The three most serious sins for the rabbis are murder, idolatry, and adultery and incest. It was eventually ruled that rather than commit these, a man must forfeit his life (Sanh. 74a). The light sins are those which "a man treads underfoot" (Tanah. B. Deut. 8b). A marked tendency to be observed in rabbinic homiletics is to encourage people to take the lighter sins more seriously by treating them as if they were far weightier offenses. Thus, whoever leaves the Holy Land to reside outside it is as if he had worshiped idols (Sifra, Be–Har 6); whoever bears evil tales is as if he denies the root principle of faith (Ar. 15b); whoever shames his neighbor in public is as if he had shed blood (BM 58b).

Those who cause others to sin were severely castigated by the rabbis. One who causes another to sin is worse than one who slays him, because the murderer only excludes his victim from this life, while the one who causes another to sin excludes him from the life of the world to come (Sif. Deut. 252). Jeroboam is the prototype of the one who leads others to sin (Avot 5:18).

Sin is caused by the evil "inclination (yezer ha-ra), the force in man which drives him to gratify his instincts and ambitions. Although called the "evil inclination" because it can easily lead man to wrongdoing, it is essential to life in that it provides life with its driving power. Were it not for the yezer ha-ra, remarks a rabbinic Midrash (Gen. R. 9:7), a man would not build a house, or marry, or have children, or engage in commerce. In similar vein is the curious legend (Yoma 69b) that the men of the Great Synagogue wanted to kill the yezer ha-ra, who warned them that if they were successful the "world would go down," i.e., would come to an end. They therefore imprisoned him for three days and then searched all the land for a new-laid egg without finding one. Passages such as these, however, must not be construed as suggesting any rabbinic acceptance of the inevitability of sin or of its condemnation. The strongest expressions are used of the heinousness of sin and surrender to the yezer ha-ra. R. Simeon b. Lakish said "Satan, the yezer ha-ra, and the angel of death are one and the same" (BB 16a). The yezer ha-ra entices man to sin in this world and bears witness against him in the future world (Suk. 52b). The yezer ha-ra assaults man every day, endeavoring to kill him, and if God would not support him, man could not resist him; as it is said (Ps. 37:32): "The wicked watcheth the righteous and seeketh to slay him. The Lord will not leave him in his hand" (ibid.). Unless severe control is exercised man becomes the prey of sin. Commenting on 11 Samuel 12:4, it is said that the yezer ha-ra is at first called a "passerby," then a "guest," and finally "one who occupies the house" (ibid.). When a man sins and repeats the sin, it no longer seems to him as forbidden (Yoma 86b).

The much discussed question of whether there are any parallels to the Christian doctrine of original sin in rabbinic literature can be disposed of simply by noting that there are no such parallels. The passages which state that "four died through the serpent's machinations" (Shab. 55b) and that "the serpent copulated with Eve and infected her with his filth" (Shab. 146a), quoted in this connection, expressly exclude
Israel from the effects of the serpent's machinations and his filth, and in all probability are an intentional polemic against the doctrine of original sin. Nevertheless, while the rabbis do not see sin as hereditary — that man is bound to sin because of Adam's sin — their views are far removed from "liberal" optimism regarding man's inherent goodness, as the doctrine of the yezer ha-ra clearly demonstrates. It is recorded that the rival schools of Hillel and Shammai debated for two and a half years whether it were better for man not to have been created (i.e., because of his propensity to sin); it was finally decided that it would have been better if he had not been created, but since he has been let him investigate his deeds (Eruv 13b).

Counsels are given to man as to how he can rise above sin. He should know that above him there is a seeing eye and a hearing ear and that all his deeds are recorded in a book (Avot 2:1). He should reflect that he comes from a putrid drop, that he goes to a place of dust, worms, and maggots, and that he is destined to give an account and a reckoning before the King of kings (Avot 3:1). But the study of the Torah and the practice of the precepts are the best method of avoiding sin (Sot. 21a).

God says: "My children! I created the evil inclination, but I created the Torah as its antidote; if you occupy yourselves with the Torah you will not be delivered into [the inclination's] hand" (Kid. 30b). The school of R. Ishmael taught: "My son, if this repulsive wretch [the yezer ha-ra] attacks you, lead him to the house of learning: if he is stone he will dissolve; if iron, he will shiver into fragments" (Kid. 30b).

SIN, WILDERNESS OF (Heb. נחל סין).

(1) An area between Elim and Sinai, traversed by the children of Israel in their exodus from Egypt (Ex. 16:1); it is defined more specifically in Exodus 17:1 as the area before Rephidim.

In the recapitulation of the wanderings through the desert in Numbers 33:11–12, the order is: Elim-Red Sea-Wilderness of Sin-Dophkah. The location of Sin naturally depends on the view taken of the route of the Exodus (see *Exodus*). Accepting the traditional southern route, the desert of Sin would be identical to the plain of al-Marha (or al-Markha), between Wadi Ru’ba and Wadi Sidri on the west coast of the Sinai peninsula; its position would then be between Elim (Wadi Gharandal?) and Dophkah (Sāraḥ ib al-Khādīm (?), the turquoise mines exploited in ancient times).

(2) Sin is mentioned in connection with the "stronghold of Egypt" in Ezekiel 30:15–16. It is probably identical with Syene (Aswān; Ezek. 29:10; 30:6), the southern boundary fortress of Egypt.

BIBLIOGRAPHY: Abel, Geog. 2 (1938), 212–3. [Michael Avi-Yonah]

SINAI (Heb. סיני), peninsula situated between the two northern gulfs of the Red Sea, the Gulf of Elat on the east and the Gulf of Suez on the west. It forms a triangle, each side of which measures about 200 mi. (320 km.). The peninsula consists of three main regions, each different in its geographical aspects. In the north is a sandy coastal plateau, partly traversed by dunes 20 mi. (32 km.) deep, which reach a height of 60–90 ft. (c. 18–27 m.), but which are passable in a northeast-southeast direction. A few wells of brackish water and palm groves in oases make the passage of this region easier. The sandy areas are narrow on the east, but expand into the desert of al-Jīfār (the desert of Shur) on the west. The second zone is a limestone plateau intersected by valleys and ridges and known as Badiyat al-Tih. Its northern limit is formed by a series of mountains, including, from west to east, Jebel al-Jiddī (2,058 ft.), Jebel Ya‘allaq (3,200 ft.) and Jebel Halāl (or Halāl; 2,714 ft.). South of these mountains, whitish limestone cliffs rise in a line of sheer precipices from the gravel-strewn surface of the ground. The Tih desert extends eastward into the area around Kadesh, and westward up to the Suez region. Its sandy and rocky ground contains few watering points. The southernmost region of the Sinai Peninsula consists of a group of granite mountains intersected by deep wadis and their tributaries, between which rise rocky masses with high pinnacles and deep gorges. The outstanding peaks in this area are Jebel Katerina (8,652 ft.), Jebel Mūṣā, the traditional Mt. Sinai (7,486 ft.) and Jebel Sīrbāl (6,791 ft.). The waters flowing from these snow-clad peaks in the winter have created several oases, the most important one being the central oasis of Firān (Paran). The mountain range of the south extends northward along the west coast; this part is rich in copper and turquoise, the greatest concentration of which exists at Sarābīt al-Khādīm. West of it, the plain of al-Marha (Markha; see "Sin, Wilderness of") follows the west coast.

Situated between the Nile Valley and the land of Israel, Sinai was from earliest times traversed by a series of roads running from west to east, of which the three most important are a) the coastal road, known in the Bible as the "way of the land of the Philistines," which runs from the vicinity of Pelusium to Gaza, passing from one well to another; it is the shortest and most frequented route; b) the road which crosses the Tih desert from Ismailia on the Suez Canal by way of Bīr Jaʃāfa (or Gafgafa) and Bīr al-Hamma to Abu Aweigila and to Niẓzānah (Awjā al-Ḥajf); c) the Darb al-Ḥajj ("route of the pilgrimage") to Mecca from Egypt), which crosses the southern part of the Tih desert by way of Qalʿat al-Nakhl and Bīr al-Thamad, and by way of al-Kuntilla descends the Ra’s al-Naqb to Elat. The less important north-south routes are, in the east, the road
along the Wadi el-Arish (Brook of Egypt) by way of Kadesh-Barnea (ʿAyn al-Qudayrat) and al-Quseima to Kuntilla and, in the west, a road which follows the west coast to al-Tur and Sharm el-Sheikh on the southern tip of the peninsula. Side roads lead from the latter road to the copper mines at Ṣarābiḥ al-Khadim and to Jebel Mūsā by way of Wadi Firān.

Pre-Biblical Period
Historically, the importance of the Sinai Peninsula has always been a result of its character as an area of transit from Asia to Africa and vice-versa. Evidence of settlement in this area begins with the Paleolithic Age, at which time Sinai was not yet a desert. In the Chalcolithic period it apparently served as a link between pre-dynastic Egypt and the settlements around Beersheba in Canaan. In the time of the early dynastic period in Egypt, expeditions were sent from the Nile Valley to exploit the copper mines, as Egypt itself had no metals; the presence of a serekh (hieroglyph) of Pharaoh Narmer at Tel Erani and a walled city, perhaps a symbol of Canaan, represented on the Narmer palette (from Hierankonopolis), show that the pharaonic armies were already traversing the peninsula at the beginning of the First Dynasty. In the Middle Bronze Age, the period of the Patriarchs, Sinai was relatively more densely settled than at later stages in its history; it was crossed by Abraham and Jacob on their way to Egypt. Later, it was traversed by the Hyksos invaders of Egypt. In their wake, the desert was occupied by nomadic tribes, related to Ishmael in the Bible (Gen. 25:17–18); the Egyptians referred to them collectively as Shasu. After the expulsion of the Hyksos (16th century B.C.E.), the pharaohs took steps to secure their kingdom by building a wall (shur) across the western end of the peninsula and by establishing a chain of forts along the coastal road to secure the watering points.

Biblical Period
It was during the New Kingdom that Sinai acquired its biblical fame. In the Bible, the desert of Sinai is situated between Rephidim and Mt. Sinai, with the wilderness of Sin between it and Elim (Ex. 16:1; 19:1–2). According to Numbers 33:15–16, it lay between Rephidim and Kibroth-Hattaavah and in Numbers 10:12, the wilderness of Paran is situated to the east of it. Mt. Sinai eclipsed the desert of Sinai in later literature as the identification of the place where the Law was given to Israel (Deut. 33:2; Judg. 5:5; Ps. 68:8, 18; Neh. 9:13). The identification of Mt. Sinai, and by implication that of the desert of Sinai, depends on the view taken of the route of the Exodus (see *Exodus*); the traditional theory places Mt. Sinai at Jebel Mūsā, while others place it at Jebel Halal (or Halâl), or even in the Arabian Peninsula. The last identification is supported by the assumed connection between Sinai and the moon god, Sin. During the period of the Exodus, the desert was occupied by the Amalekites, who disputed the passage of the Israelites at Rephidim. The Egyptians left the desert nomads alone, while keeping control of the coastal road and the copper and turquoise mines at Ṣarābiḥ al-Khadim (Dophkah?). The beginnings of an alphabetic Semitic script, the so-called proto-Sinaitic alphabet, are evident in the inscriptions written by slaves who worked in the mines. In the period of the monarchy, Saul and David fought the Amalekites (1 Sam. 15:7, 27:8) and controlled northwest Sinai. The nomads of the region helped in Esarhaddon’s campaign against Egypt, although some served as mercenaries in the Egyptian army. Later, they brought water to the army of Cambyses of Persia during his invasion of the Nile Valley; in return, the Persians allowed the kings of Kedar (the predecessors of the Nabateans) to maintain harbors on the coast of Sinai, between the Serbonic Lake and Ienysos, south of Gaza.

See also *Sinai, Mount.*

Post-Biblical Period
In Hellenistic and Roman times, the interior of Sinai was left to the Nabateans as part of Arabia Petrea; only the coastal road was controlled by the Ptolemies and later by the Romans. After annexation of Nabataea by the Romans, it was regarded as part of Provincia Arabia, and after Diocletian, as part of Palæstina Tertia (Salutaris). In the Byzantine period, the biblical associations with the region led to an increase in trade and pilgrimages across the desert. Justinian built a fortified monastery near Jebel Mūsā (Mount Sinai) and a bishopric was established at Paran. A chapel was constructed on the top of Jebel Mūsā. Ephrem the Syrian in one of his hymns (CSCO 323, 71–73) compares Mount Sinai to the Old Testament and the church on the mountain’s summit to the New Testament, in-
indicating that he viewed the church as a symbol of the ascendency of Christianity over Judaism. Sinai was largely left to the Bedouin in Islamic and medieval times, until the excavation of the Suez Canal on the west increased its importance.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

Modern Period
A Zionist plan, in Herzl’s time (1902), to settle the El-Arish area (then under British administration as part of the British protectorate of Egypt), as a prelude to Jewish settlement in Erez Israel (see El-Arish Project), proved abortive. A border dispute between Britain and Turkey led, in 1906, to the final demarcation of a border line between the British protectorate and the Ottoman Empire running from Rafa to Taba south of Akaba. This line was crossed during World War I by Turkish forces, which attacked the Suez Canal, and then by the British army, which conquered Palestine. The same line became the international boundary of Egypt and Mandatory Palestine. For several years after the war, Sinai formed a separate British administrative unit under Major C.S. Jarvis.

During Israel’s War of Independence (1948–49), the Israeli army, in pursuit of the retreating Egyptian forces, crossed the line and occupied eastern Sinai but was forced to withdraw unconditionally under political pressure from the United States and threats of British military intervention. In the Sinai Campaign in 1956, the Egyptian army was routed by the Israeli army, which occupied the entire peninsula except for a strip along the Suez Canal. In 1957, Israel was again forced, mainly by the United States and the Soviet Union, to withdraw behind the armistice lines of 1949 without achieving a peace treaty with Egypt. The rapid aggressive buildup of huge Egyptian forces in Sinai in May 1967 was a major factor leading to the Six-Day War, when the whole of Sinai, up to the Suez Canal, was occupied by Israel. At the end of 1967 a census was conducted in northern Sinai and 33,800 Arabs and Bedouin were registered, 30,000 in El-Arish alone. After the Six-Day War the Israeli military administration carried out a series of economic development projects, e.g., helping to erect factories in El-Arish; introducing better medical and educational services for the local population, including the Bedouin; and paving a modern highway from Eilat along the western coast of the gulf to Sharm el-Sheikh. Extensive geological and archeological surveys of the entire peninsula were carried out by Israeli scientists and experts. In the wake of the Yom Kippur War, Israel withdrew inland from the Suez Canal following the 1974 disengagement agreement and the 1975 interim agreement, returning the Abu Rudeis oil fields to Egypt and allowing it to reopen the Suez Canal.

In the meanwhile Jewish settlement activity had commenced in the Rafa Salient (Pithat Rafi‘ah) in the northeast corner of Sinai, including the town of Yammit, which had grown to 2,000 inhabitants by 1977, with another 2,000 in the surrounding settlements. These were abandoned in stages in accordance with the peace treaty signed with Egypt in 1979, in which Israel agreed to withdraw from all of Sinai by 1982, including the Yammit Region, whose settlements were razed.

SINAI, MOUNT.

The Biblical Narrative
The mountain of God is first mentioned when God revealed Himself to Moses in the burning bush. God told Moses “when you have freed the people from Egypt, you shall worship God at this mountain” (Ex. 3:12), but in this tradition the mountain is called Horeb (חָוֵרָב) and D prefer “Horeb” to the “Sinai” of I and P. Elsewhere in the Torah we read that the People of Israel encamped at the foot of the mountain called Sinai, from the third month after the Exodus until the 20th of the second month of the second year (Ex. 19:1–Num. 10:1). While the people prepared themselves during three days for the theophany (divine manifestation; according to later Jewish tradition this was seven weeks after the Exodus), Moses set up a boundary line beyond which approach was prohibited under penalty of death, and himself ascended the mountain. On the third day God descended upon the mountain and uttered the Ten Commandments (Ex. 20; Deut. 5). He also gave Moses many more laws and ordinances for the people. Moses built an altar at the foot of the mountain and set up 12 stones representing the 12 tribes of Israel (Ex. 24). Moses, Aaron, “Nadab, “Abihu, and 70 of the “elders of Israel then went up the mountain, where they saw the God of Israel. Mt. Sinai was then enveloped in a cloud for six days, while fire burnt on its summit. On the seventh day Moses ascended the mountain to receive the Tablets of the Law, remaining there for 40 days and nights. During his absence the people, led by Aaron, erected the “golden calf” (Ex. 32). Moses returned, accompanied by his servant Joshua, and angrily broke the stone tablets. Later he returned to the mountain and received the second tablets, as well as many other laws concerning different aspects of life, and the instructions for the erection of the Tabernacle (Ex. 35 ff).

Mt. Sinai is regarded in biblical theology as the place of divine revelation and is often mentioned in the poetical passages describing theophany (Deut. 31:2; Judg. 5:5; Ps. 68:9, 18); when Elijah sought God he went to the Mount of God, Horeb (1 Kings 19:8). No other narrative of pilgrimage to this mountain is found in the Bible. Noth suggested that Numbers 33 is
actually a "pilgrims' itinerary to Mt. Sinai in reverse." Since the mountain was called "The Mount of God" even before God's revelation to Moses, scholars have assumed that it was a place of worship even before the Hebrews came to it.

In its present context in the Pentateuch the tradition of Mt. Sinai is closely interwoven with that of the Exodus. Since the study of G. von Rad (1938), scholars tend to agree that this pericope originally formed a separate element in what Christian scholars call Heilsgeschichte, "History of Salvation." According to biblical scholars, the description of the events at Mt. Sinai does not reflect a historical occurrence; in fact it is a miracle tale adjudged by some to be a liturgical narrative (Festlegende) belonging to an ancient Festival of the "Covenant (berit). In Judges 5:5, the Hebrew god is called "Yahweh-of-Sinai" (Cross) unconnected to either covenant or revelation of the law. The same holds for the ancient poem Deut. 33:2-5, 26-28 (the remaining verses are later; see Seeligmann).

Location

There is no Jewish tradition of the geographical location of Mt. Sinai; it seems that its exact location was obscure already in the time of the monarchy (B. Mazar, and see below). Rabbinical literature was always more concerned with the contents and ideas of the Torah than with the question of where it was given. The Christian hermits and monks, mostly from Egypt, who settled in southern Sinai from the second century C.E. on, made repeated efforts to identify the localities of the Exodus with actual places to which the believers could make their way as pilgrims. The identification of Mt. Sinai either with Jebel Sirbāl near the oasis of Fīrān (Paran; Nilus, Cosmas Indicopleustes), or with Jebel Mūsā, can be traced back as far as the fourth century C.E. At the foot of Jebel Mūsā, the location of Mt. Sinai which came to prevail, the monks built a church and tower (Ethera) on the spot which they believed to be the place of the burning bush. In the sixth century C.E. Justinian added a fortress/monastery which, from the tenth century on has been connected with the legend and relics of St. Catherine of Alexandria. In spite of the gap between the biblical period and the rise of these traditions, they were accepted by many scholars, such as E. Robinson and E.H. Palmer.

In the 19th century an opinion arose that the description of the theophany on Mt. Sinai reflects a volcanic eruption. Since no volcanoes were active in historical times in the Sinai Peninsula, scholars removed the location of Mt. Sinai to the Arabian Peninsula. This seemed to fit in well with other data about the wanderings, such as the identification of Elim Elath, and the close connection of the Midianites who inhabited Arabia's west coast, with the story of the Exodus (Gal. 4:25 "For this Hagar Sina is a mountain in Arabia"). Although most modern scholars reject the theory that most of the wanderings took place in Arabia, it was maintained that Mt. Sinai is in Arabia by some (M. Noth, O. Eissfeldt, J. Koenig, H. Gese). Comparisons of the descriptions of theophanies in Ancient Near Eastern literature show that the appearance of the divinity on a mountain top with thunder and fire is a common element. Therefore there is no need to connect the theophany on Mt. Sinai with an actual volcanic eruption.

If the location of Mt. Sinai is inseparable from the route of the Exodus, all that remains to be done is to find a prominent mountain along one of the three main routes alternatively proposed for the Exodus. Those who hold that the route passed through the northern part of the Sinai Peninsula identify Mt. Sinai with Jebel Halāl (or Ḥalāl), Jebel Ya'allaq, or Jebel Maghāra. Advocates of the route through the central region of Sinai suggest Jebel Sinn Bishr. The hypothesis of a southern route proposes the identification of Mt. Sinai with one of the many lofty peaks in the southern mountain range, such as Jebel Sirbāl, Jebel Mūsā, Jebel Katherina, Jebel Um Shomar, etc. If, however, the historic-traditional conclusion that the account of the Exodus and the tradition of Mt. Sinai were originally independent is accepted, there is no necessity to bring Mt. Sinai in geographical relation with the route of the Exodus. The Torah is shaped by the ideology that a unified nation of Israel entered the promised land with a complete set of laws that it received in the "land that no human passed through" (Jer. 2:6), taking nothing of the "practice of the land of Egypt … and the practice of the land of Canaan" (Lev. 18:3).

There are very few data by which one could locate the holy mountain. Even if Yahweh was originally associated with a specific southern mountain or mountains, as indicated in the ancient traditions of Deut 33, Judges 5, and Habakkuk 3, the multiple traditions surviving in the Pentateuch make an identification impossible (see above). The distance of a threeday journey from Egypt (Ex. 5:3) is not a criterion, not only because Moses might have understated his real objective, but mainly because this would mean deriving an actual geographical distance from a literary formula, the three days being a typological number. The same applies to the distance of 40 days from Beer-Sheba (1 Kings 19:8). The only indication of distance seems to be Deuteronomy 1:2: "Eleven days from Horeb to Kadesh-Barnea by the Mount Seir route"; but this itself is not enough to make even a plausible suggestion.

[Ora Lipschitz / S. David Sperling]

In recent years E. Anati has attempted to identify Mount Sinai at Har Karkom in the Negev Desert on the modern border between Egypt and Israel; his identification has not won many supporters, even though he has unearthed unusual finds at the site.

[Shimon Gibson (2nd ed.)]

In the Aggadah

The world is firmly established by virtue of two holy mountains, Moriah and Sinai (Mid. Ps. to 8:71). Had Israel not stood before Mount Sinai, the world would long have collapsed and been reduced to chaos (Ruth R. Proem 1). This mountain had five names: the mountain of God, Bashan, Gavnunim, Horeb, and Sinai (Ex. R. 2:4). Others say that it had three names: the mountain of God, because there God made known His Divin-
ity; Sinai, because there He rejected (sana, נָשָא lit. “hated”) the celestials (He did not give them the Torah) and showed His love for the terrestrials (men, by giving them the Torah); Horeb, because the Torah, called herev (”sword,” Ps. 149:6) was given there (Ex. R. 51:8). Another interpretation given of the name is that from there "sinah [”hatred,” i.e., for the Jewish people] descended to the world” (Shab. 89a).

The mountains quarreled for the honor of having the Torah given on them, but God declared: “Sinai is the only mountain on which no idolatry has been practiced; therefore it alone is fit for the honor” (Gen. R. 99:1). Another reason is that Sinai alone modestly assumed that it was too low to expect the honor; therefore God chose it (Num. R. 13:3). He therefore brought down the upper and the lower heavens and spread them over Sinai, like a bedspread over a bed (Mekh. to Ex. 19:20), and He came from Sinai to welcome Israel like a bridegroom goes out to welcome his bride (ibid., Yitro 19:17).

God caused Sinai to tower menacingly over the children of Israel and said to them: “If you accept the Torah, it will be well with you; if not, here will be your burial” (Shab. 88a). When they accepted it, the lusciousness with which the primeval serpent had infected mankind left them (ibid., 146a), and when they proclaimed at Sinai, “We will do and we will listen” (Ex. 24:7), they were vouchsafed the luster of the heavenly Shekhinah” (Pr 21:10a). Further, there were no unclean persons or lepers, no lame, blind, deaf or dumb, impbeciles or fools, and there was no dissension among them (Song R. 4:7 No. 1). Every day a bat kol (“heavenly voice”) proclaims from Mount Horeb: “Woe to men for slitting the Torah” (Avot 6:2).

[Harry Freedman]

SINAI CAMPAIGN (also known as Operation Kadesh), the short war (Oct. 29–Nov. 5, 1956) between Egypt and Israel, partly coinciding with the Anglo-French Suez Campaign, launched by Israel in the wake of mounting aggression by Egyptian fedayeen (“suicide”) squads.

Causes of the Campaign

Israel’s “War of Independence” (1948–49) was terminated by “Armistice Agreements, not peace treaties, between the State of Israel and the neighboring Arab states. The vague conditions of the agreements (especially the provisions for demilitarized zones), the refusal of the Arabs to enter into negotiations for peace, and the absence of progress towards the solution of basic problems inevitably led to the aggravation of relations between Israel and her neighbors. Between 1949 and the Sinai Campaign in 1956, Arab acts of hostility caused approximately 1,300 Israeli civilian casualties. In August 1955 Egypt launched the fedayeen squads for murder and sabotage inside Israel, and Israel, in turn, conducted reprisals on an ever-increasing scale.

At the end of September 1955, Egypt and Czechoslovakia, with Soviet blessings, concluded an arms deal for the provision of large quantities of Russian arms to Egypt. This confirmed Israel’s suspicions of Egypt’s aggressive intentions and, since it changed the balance of armament in the Middle East, provoked a new arms race. On Oct. 24, 1956, two weeks after an Israeli reprisal raid on Qalqiya, a joint Arab military command was established, including Egypt, Jordan, and Syria, with the Egyptian chief of staff at its head. At the same time, Egypt fortified the Straits of Tiran and placed heavy guns at Ra’i’s Nuṣrānī, thus blocking the Red Sea route to Eilat. The passage of Israeli shipping through the Suez Canal was already blocked. Operation Kadesh (the code name of the Sinai Campaign) was a preemptive offensive to catch the Egyptians off balance before their hostile preparations were completed. The timing of the campaign gave Israel apparent advantages. The Egyptian leadership had dissipated its efforts between several uncoordinated political and military objectives. After the nationalization of the Suez Canal, Egypt’s expectation of military intervention by the Western Powers (particularly Great Britain and France) compelled her to move armored forces back from Sinai to the canal zone. Nevertheless, she continued to convert the Sinai peninsula into a military base for the invasion of Israel and, simultaneously, continued to provoke Israel with large-scale fedayeen raids. As a result of the arms deal, the Egyptian army was expanding, and engaged in absorbing new Soviet weapons—hitherto, it had been equipped primarily with British arms and its organization had been based on British patterns. The wholesale transition to Soviet weapons necessitated remodeling the army and its operational doctrine. At such a critical time it was a grave blunder to provoke the Western Powers by nationalizing the Suez Canal and to provoke Israel by intensifying fedayeen activities. The reasons for, and objectives of, the Anglo-French attack on Egypt were quite different from those of Israel. Nevertheless, the timing of both campaigns, which was termed by many outside observers as a “collusion” between Israel and the West European powers, had a direct tactical impact on Operation Kadesh. The objectives of Israel’s operations, as defined in the order given to the Israel Defense Forces (IDF), were: destruction of the fedayeen bases in the Gaza Strip and on the Sinai border; prevention,
for however short a time, of an Egyptian attack on Israel by destroying Egypt’s logistic establishment and the airfields in Sinai; and opening the Gulf of Eilat to undisturbed Israeli shipping. All these objectives were achieved.

The IDF had undergone many changes since the War of Independence: methods had been organized for the rapid mobilization of reserve units and of civilian vehicles and heavy mechanical equipment; weapons had been standardized and the forces trained in their use, especially in the air force and the armored corps; and a new system of tactics had been formulated and inculcated.

The Campaign

Though the Sinai Campaign lasted only eight days – from Oct. 29 to Nov. 5, 1956 – it may be divided into three phases: the opening phase on October 29–30; decision, October 31–November 1; exploitation, November 2–5.

PHASE 1: OCTOBER 29–30. In the late afternoon of October 29, an airborne battalion was dropped near Colonel Parker’s Memorial in the west central area of the Sinai peninsula. Other units of the same airborne brigade moved as a mechanized column toward the same point, capturing al-Kuntilla, Thamad, and Nahal, and reaching their destination on the night of October 30/31. With this opening move, all the Egyptian positions in northeast Sinai were outflanked, and the Suez Canal directly threatened.

In the early hours of October 30, the vital road junction of al-Quseima was captured, affording an additional gateway into Sinai from the east. This directly exposed the southern flank of the Third Egyptian Division in the northeast corner of Sinai. The seizure of the road junction enabled further Israeli forces to outflank the Third Division and, at the same time, provided a second link-up with the paratroopers near Parker’s Memorial. The most important achievement of this phase was the gaining of air superiority by the Israel Air Force long before the Anglo-French air forces attacked airfields in Egypt.

PHASE 2: OCTOBER 30–NOVEMBER 1. On the afternoon of October 30, a reconnaissance company ascertained that the Dayqā Pass was free of enemy forces. This enabled the armored brigade of the central task force to avoid a frontal clash with Egyptian forces, to get to the rear of the Abu Aweigila positions, and, in the most spectacular armored battles of the campaign, to seize the Abu Aweigila road junction and the enemy positions at the Rawāfat Dam. These victories blocked the escape route of the Egyptian brigade at Um Mqataf and Um M Shaykhān, between the frontier and Abu Aweigila. On the same afternoon, Israeli forces captured the enemy positions at ‘Awja Maṣrī near the frontier, along the Nizzanah-Isma‘iliya road. By the early evening the positions at Tarat Um M Basis, seven kilometers from the border, had been occupied.

During the night, an infantry force, supported by artillery, took up positions on both sides of the road at Um M Türfa, halfway between Um M Basis and Um M Qataf, encircling the positions at Um M Qataf and Um M Shaykhān. In spite of transport difficulties caused by an Egyptian attempt to block the road through Umm Shaykhān, fuel and ammunition reached the Israeli armored brigade in the rear of the enemy positions. Head-on IDF attacks on these positions had failed, because they had been based on incorrect information and errors of judgment; but during the night of November 1/2, Egyptian troops withdrew from the positions, leaving their heavy equipment. During the next few days, these soldiers roamed aimlessly in the area between El-Arish, Abu Aweigila and the canal, until they were rounded up and taken prisoner.

At the same time, one armored force advanced westward. It had been reported that an Egyptian armored force was moving from the canal zone eastward, and the Israeli force laid an ambush at the Jebel Libni road junction. However, the Egyptian armored force never reached this point, for on the morning of October 31, pilots of the Israel Air Force sighted it on the road between Bir Gafgafa and Bir Hamma and proceeded to immobilize 90 of the vehicles. The remaining vehicles withdrew, and the Israeli armored force continued its advance westward, meeting stiff resistance from armor and artillery intended to delay the Israeli advance and allow the main body of Egyptian troops to withdraw across the Suez Canal. Orderly, organized retreat however, had already become impossible.

During the night of October 31–November 1, the IDF northern task force attacked in the northern sector and the fortified positions at Rafah were stormed, thus opening the way to the Suez Canal for an armored brigade. By the evening of November 1, armored forces had reached El-Arish, fighting all the way. At the same time there was a bloody clash in the southern sector, where the airborne brigade advancing westward from Parker’s Memorial ran into an enemy ambush positioned in the caves of the Mitlā Pass. Only after fierce fighting were the paratroopers able to overpower the enemy. The general retreat from Sinai, ordered by the Egyptian high command on November 1, soon turned into a rout, with attacks by the Israel Air Force increasing the turmoil. Many Egyptian officers abandoned their men in order to save their own lives. During this phase the Egyptian destroyer Ibrahim al-Awwal was captured off Haifa by a combined operation of the Israel Navy and Air Force.

PHASE 3: NOVEMBER 2–5. In compliance with the Anglo-French ultimatum, the armored spearheads of the IDF halted at points ten miles from the canal on November 2, near Ismailiya on the central axis, and on November 3, in the vicinity of Qantara on the northern axis. There still remained two objectives: the capture of the Gaza Strip and the seizure of the Egyptian strongpoints at Ra’s Nusrānī and Sharm el-Sheikh on the Straits of Tiran. After the capture of Rafah, the Gaza Strip was cut off, and there remained only the troublesome task of mopping up scores of fortified positions and taking over the townships of Gaza, Khan Yunis, and Beit Hänūn. This action began on November 2 and was completed the following day.
The capture of Raʿs Nuṣrānī and Sharm el-Sheikh was allotted to a reserve infantry brigade moving as a mobile column down the western shore of the Gulf of Elat. On October 31 this column reached el-Kuntilla and, on the following day, Raʿs al-Naqb, which had been seized two days earlier by other IDF troops. Since the Israel Air Force was fully occupied on the central axis, the mobile column waited until November 2 before continuing its advance. As bad road conditions and sporadic clashes with the enemy caused further delay, the general staff ordered the parachute brigade to move from Parker's Memorial toward the southern tip of the Sinai peninsula along the eastern shore of the Red Sea as far as the oil fields of Raʿs Sudar. Simultaneously, paratroopers were dropped on the airfield at el-Tur. A pincer movement now threatened the last remaining Egyptian positions in Sinai. Raʿs Nuṣrānī was evacuated by its garrison and, as the final act of the Sinai Campaign, Sharm el-Sheikh was stormed by the reservists on November 5.

IDF losses in the campaign were 171 dead, several hundred wounded, and four Israelis taken prisoner. Egyptian losses were estimated at several thousand dead and wounded, while 6,000 prisoners were taken. Immense quantities of armored vehicles, trucks, guns, and other military equipment were seized.

The Aftermath
As the result of a prolonged political struggle, in which both the United States and the Soviet Union opposed Israel, the IDF was compelled to evacuate the Sinai peninsula and the Gaza Strip. Troops of the United Nations Emergency Force (UNEF) were posted on the Egyptian side of the frontier and at Sharm el-Sheikh to guarantee free passage of Israeli shipping through the Straits of Tiran. Israel made it clear that any deviation from these arrangements would constitute a casus belli. The mobile column waited until November 25, 1967, when Egypt ordered the evacuation of UNEF and closed the entrance to the Gulf of Elat, thus precipitating the *Six-Day War.*

*Jehuda Wallach*

**SINDABAR** (or Sindbad, Sindabot), Indian sage who is the hero of an ancient book, *Mishlei Sindabar* (Parables of Sindbad) or *Sippurei Sindabot* (Tales of Sindbad), a collection of short stories of Buddhist origin. These belong to the type of stories dealing with the life of Asoka, “defender of the faith of Buddha,” but in the course of time foreign motifs were blended into them. After many transmutations this book reached world literature, including Hebrew literature, by way of Arabic. In almost every language the names became distorted and the form of the stories underwent changes. The medieval translations were generally adaptations, every translator introducing changes in the original text, leaving out some things and adding others, and finally changing the stories round as he saw fit. Because of all these adaptations it is at times impossible to discern the original text on which the collection rested.

The Hebrew book called *Mishlei Sindbad* exists in various mss, having first been printed in Constantinople in 1516 and appearing in five subsequent editions. Neither the translator nor his source is known. The Hebrew text is therefore an important source in investigating the history of the work. The framework of the stories is simple:

An Indian king has a son in his old age. When the latter is seven years old the king entrusts him to Sindabar, “the chief sage of India,” to teach him wisdom and knowledge. The son grows up to become the wisest man in the realm. Just as the prince is about to return to his father, he and Sindabar see in the stars that if upon reaching home the prince does not preserve complete silence for the first seven days, but speaks like other men, he will be killed. The prince returns and the king is greatly troubled by his silence, for which he does not know the reason. The king has 80 wives, one of whom loves the prince. She tries to entice him to kill his father and rule in his stead. Shocked by what she says, the prince is silent. Fearing that he will expose her behavior to his father, the woman tells the king that the prince has tried to rape her and begs that he be condemned to death. When this becomes known to the king’s seven advisers they go to him one by one to try and persuade him not to kill the prince. They tell him moving stories to influence him. The woman then comes to contradict the advisers, telling suitable stories of her own. When the seven days of silence are over the prince tells his father the truth. The king wishes to kill his wife, but the prince is sorry for her and begs his father to pardon her. The king recognizes the wisdom of his son, the pupil of Sindabar.

This book is also known in another Hebrew version, based on an Italian translation called *Parables of Erasto* by Isaac Uziel (15–16th centuries), published in Jerusalem in 1945.
The Hebrew version has been translated into Yiddish, German, and English (Tales of Sendebar (1967), tr. by M. Epstein).

[Abraham Meir Habermann]

**SINGAPORE, republic; major entrepôt of S.E. Asia, formerly a British crown colony.** The first Jews to settle there were of Baghdadi origin, mainly from India, who migrated to Singapore in 1840 when the Sassoon family established business interests. Prayers were first held in a house in the street still known as "Synagogue Street." The Maghain Aboth synagogue was opened in 1878; it possessed a number of Torah scrolls in beaten silver cases brought from Baghdad. Another synagogue, Chased El, was built in 1904 by Sir Manasseh Meyer, reputed to be the richest Jew in the Far East. He also endowed a *talmud torah.* Local custom sanctioned conveyance to synagogue by rickshaw on Sabbath. The community remained largely Sephardi, but Ashkenazi immigrants from England, the Netherlands, China, Russia, and Germany also settled there. Most engaged in business and the professions. The community continued to be highly prosperous and important out of all proportion to its size. The 1931 census records that the 812 Jews and larger number of Arab residents were the largest house property owners in the city. There were over 1,500 Jewish inhabitants by 1939. Many were interned by the Japanese during World War II, and a number subsequently immigrated to Australia, England, the United States, and Israel. Apart from their contribution to commerce, Jews have taken a considerable part in political life and in 1955 David S. Marshall became the first chief minister of the republic. The community is represented by the Jewish Welfare Board which publishes a monthly bulletin. There exist two synagogues with one officiating rabbi; social activities center in the Menorah Club. The community numbered approximately 450 in 1968. In the early 21st century the community numbered 300, many of them expatriate Israelis and American and British Jews. There was a rabbi and Sabbath services were held at the Waterloo Road and Maghain Aboth synagogues (Sephardi). The expatriates founded the United Hebrew Congregation. Sunday school classes were held for children and the community had a quarterly publication, Shalom. The community center was a focus of Jewish life and there was also an old age home.

**Relations with Israel**

From the beginning of the 1960s, trade relations began to develop between Singapore and Israel. Israeli experts extended technical aid to Singapore, while a number of mutual visits were made by ministers, public figures, and senior officials. In 1968 a trade agreement was signed by the two countries and an Israeli trade mission opened in Singapore. In May 1969 diplomatic relations were established, and in July the Israeli ambassador presented his credentials. Technical cooperation included the dispatch of Israeli advisers to the Singapore army. In 1970 the two countries signed an aviation agreement. The Singapore-Israel Industrial R&D Foundation (SIIRD) was established in 1997 to promote, facilitate, and support joint industrial R&D projects between Singaporean and Israeli high-tech companies. The Economic Development Board (EDB) of Singapore and the Office of the Chief Scientist (OCS), of the Ministry of Industry and Trade of Israel are the two cooperating government agencies responsible for the research and development support fund.

**SINGER, ABRAHAM** (1849–1914), Hungarian rabbi and scholar. He served as rabbi at Varpalota and wrote studies on the history of Hungarian Jewry and his community in particular. Among his publications is a work on the development of the Reform movement in the 19th century, Paris, Braunschweig, Arad (1899), as well as Deutsch-ungarisches Handbuch der Matrikelbuchführung (1884). His son LöSinger (d. 1944) also served as rabbi in Varpalota and wrote on Hungarian Jewish history.

He translated a number of Hebrew texts into Hungarian: Psalms (Zsoltárok, 1962); the Passover Haggadah (1929); parts of Bahya ibn Paquda’s Hovot ha-Levavot (1907); and S. Ganzfried’s Kizzur Shulhan Arukh (3 vols., 1934–39; repr. 1962). He also wrote belletristic works, among them Asmodaj (1922), a drama, and Eszter királyné (1928, 1940). In 1944 he was murdered by the Nazis.

**BIBLIOGRAPHY:** Magyar Zsidó Lexikon (1929), 790.

**SINGER, BRYAN** (1965– ), U.S. writer, director, producer. Singer was born in New York, N.Y., and raised in Princeton Junction and Lawrenceville, N.J., by father Norbert (businessman) and mother Grace Sinden (environmental activist). Introverted as a child, Singer played piano from an early age, loved movies and the TV show Star Trek, and at 12, became fascinated with still photography. By his early teens, he was shooting 8-mm and Super-8 films in his backyard, with friend Ethan Hawke and schoolmate Christopher McQuarrie (who wrote the Oscar-winning screenplay for Singer’s The Usual Suspects). He graduated high school in 1984, attended the School of Visual Arts in New York, then transferred to the University of Southern California. He was only 23 when his first major release, Public Access, garnered the prestigious Sundance Grand Jury Prize. Two years later, Singer directed the hit The Usual Suspects (1995). He directed and produced Apt Pupil (1997), adapted from a Stephen King short story which involved a neighbor with a Nazi past. He followed this by directing X-Men (2000), a $75-million reworking of the famed Marvel comic book for the big screen. This tale of reluctant superheroes piqued his interest, he said, because it is "about a gang of outsiders. They’re mutants. The films I’ve made so far are about characters who hide something below the sur-

[Amy Handelsman (2nd ed.)]

SINGER, CHARLES JOSEPH (1876–1960), British historian of science and medicine. The son of R. Simeon Singer, Charles Singer spent several years as a physician before his interests turned to the history of medicine. He taught the subject at Oxford from 1914 to 1920, when he transferred to University College, London. He was promoted to a professorship in 1930. Singer served as president of the International Union of the History of Science (1947–1949), and in 1956 he and his wife Dorothea were joint recipients of that organization's highest award, the Sarton Medal. Singer's contributions to scholarship were prodigious. He produced over 400 books, translations, articles, and reviews. He published The Evolution of Anatomy (1925); A Short History of Medicine (1928, 1962); and A Short History of Biology (1931). He translated many great anatomical works, including Vesalius on the Human Brain (1952) and Galen on Anatomical Procedures (1956). Among his extensive writings on the history of magic and its relationship to medicine and science was his From Magic to Science (1928). On the history of technology, he published a study of alum manufacture, The Earliest Chemical Industry (1948), and he helped to edit a five-volume History of Technology (1954–58). Throughout his career Singer maintained an active interest in Jewish history and affairs. In 1927 he collaborated with Edwyn R. Bevan in editing The Legacy of Israel, contributing jointly with his wife an essay on "The Jewish Factor in Medieval Thought." During the 1930s and 1940s, in response to the rise of Nazism, he wrote several articles and pamphlets on contemporary Christian attitudes toward Jews. He was also active in the rescue and protection of victims of Nazi oppression. His wife, DOROTHEA WALEY SINGER (1882–1964), social worker and scholar, was chairman of the bibliographical commission of the International Academy for Historical Science from 1947 to 1950, and vice president from 1950 to 1953.

[Theodore M. Brown]

SINGER, GEORGE (1908–1980), conductor, composer and pianist. Born in Prague, Singer studied piano and composition at the Music Academy (1924–26) and won a piano competition (1925). He made his début as an opera conductor in the Neues Deutsches Theater (1926–30). Thereafter, Singer went to Hamburg to conduct the Staatsoper. In 1934 he returned to Prague, where he gave the first radio performance of the concert version of Dvořák's first opera, Alfred. When the Nazis invaded Czechoslovakia, he went to Palestine in 1939 on the "illegal" immigrant ship Tiger Hill. He was among the founders and conductor of the Palestine Opera, serving until 1945. On the establishment of the Israel Opera in 1947, he became its permanent guest conductor. Singer often conducted the Israel Philharmonic Orchestra, the Israeli Broadcasting Orchestra, the Israel Chamber Orchestra, the Haifa Symphony Orchestra, and the Rubinstein Festival. From 1947 he also toured widely conducting orchestras and operas in Europe, the United States, and Russia (1956), giving especially noteworthy performances of the works of Czechoslovakian and Israeli composers. Among the opera premières he conducted were Darius Milhaud's King David (1954); Avidom's Alexander the Hasmonean (1959), and Karel Salomon's Wov. He gave the premières of several Israeli orchestral works, such as Avidom's Symphony no. 4; Ben Haim's To the Chief Musician for orchestra, Symphony No. 2 and The Sweet Psalmist of Israel; *Boskovitch's Oboe Concerto; and *Gelbrun's Rikle Songs. He was known for his phenomenal facility in sight-reading and conducting every nuance of an orchestral score. Among his compositions are Sinfonietta for orchestra (1950), two suites for orchestra (1957, 1960), a piano concerto (1965) and vocal and piano music.

SINGER, ISAAC BASHEVIS (1904–1991), Yiddish novelist, critic, and journalist. The younger brother of the novelists Esther Kranyatman and I.J. *Singer, Isaac was born into a rabbinical family in Leonicin, Poland. He grew up in Warsaw, where he made his career until his emigration to America in 1935, though in 1917 he left the city with his mother and younger brother and lived for a few years in his mother’s hometown of Bilgoraj, where his grandfather was rabbi. His education was traditional. He taught himself German and Polish. In Warsaw his home was on the poor and teeming Krochmalna Street, where his father held a bet din. The old-world tradition and way of life and his father’s rich library inspired in him an interest in philosophy in general and in the Kabbalah in particular. His brother’s example as a secular Yiddish writer was also of the greatest importance to Singer’s artistic and moral development.

Singer’s Pseudonyms

Prolific and versatile, Singer’s multiple talents group themselves behind his various pseudonyms. He made his debut in the literary world with "Oyf der Elter" (in Literarishe Beter, no. 60, 1925) which he signed "Tse" (22). In the same journal that year (no. 80), his story "Vayber" was published under the pseudonym "Isaac Bashevis" (a derivative of his mother’s first
name, Bas-Sheva (Yid. for Bath-Sheba), which he used only for his serious literary creations. Its adoption was prompted by the desire to avoid confusion with his famous brother, Israel Joshua Singer. For his more or less serious journalism Bashevis adopted the name Y. Varshavski, and for his feuilletons and lighter pieces, that of D. Segal. However, his pseudonyms are not inflexible: with shaping and reordering, Varshavski’s memoirs became Singer’s Mayn Tatn’s Beys-Din Shtub.

Imagistic Portrayals of Inner Forces

Singer was recognized early in his literary career. His first major fictional work, Sotn in Goray (1935; Satan in Goray, 1955), had been preceded by short stories in such respected journals as Varshever Shriftn (1926–27) and the Warsaw Globus (1932–34), where Sotn in Goray and its antecedent “Der Yid fun Bond” first appeared. The kabbalist protagonist of the latter, after life-long traffic with the occult, is finally claimed by the satanic host, despite his conscious will to resist. Here we see the implacable workings of dark inner forces which Singer projects in images derived from folklore. The typical Singer hero is virtually helpless before his passion: he is “possessed.” The town of Goray in Sotn in Goray is “possessed” by the false messianism which in 17th-century Poland wrought havoc on Jewish life. “Let none attempt to force the Lord” is the moral of this parable for all times. This “anti-Prometheanism” (a term used by Shlomo *Bickel in his criticism on Bashevis) is a dominant note in Singer’s work.

U.S. Publications in English Translation

In the United States, Singer’s stories and serialized novels became a regular feature of the New York Yiddish daily Forward, and in the 1950s his stories began to appear in translation in serious magazines. His first Forward serial, Di Familie Mushkat (1950; The Family Moskat, 1950), is a realistic epical novel of pre-World War II Warsaw. Satan in Goray initiated the U.S. acclaim of Singer as the artist of the grotesque and demonic who generated more interest than the realistic conjuror of the more recent Polish Jewish past. Of the volumes that Bashevis published in English from 1955, only three appeared in book form in Yiddish; two of these, five to six years after their English translation. Singer was thus in the curious position of writing for two very distinct audiences: the sophisticated public that read him in translation in Commentary and in the New Yorker, and the Jewish Daily Forward Yiddish readership, less sophisticated, but with wider Jewish knowledge. Singer declared that “nothing can spoil a writer more than writing for the translator” (Commentary, vol. 36, no. 5, 1963); yet the suspicion that he himself did persists.

Motifs and Styles of His Works

Singer was above all a marvelous and interesting storyteller, no matter where he might be leading his expectant, and often puzzled, reader. If his demons, imps, and spirits are regarded as a shorthand (“a kind of spiritual stenography” Singer called it) for complex human behavior, then one need not be distressed by the author’s professed belief in their substantive reality. Singer’s fictional writings include a variety of narrators and protagonists living on the margins of Jewish society, such as the mentally disturbed, criminals, prostitutes, and various other extraordinary individuals (e.g., the Magician of Lublin, 1960). Many of his fictional writings tend to center around the sexual and the sacred, especially their interrelationship: “In my stories it is just one step from the study house to sexuality and back again. Both phases of human existence have continued to interest me” (In My Father’s Court, p. 175). Though eroticism has been present in Yiddish literature for over half a century, many Yiddish readers, preferring a “balanced view” of Jewish life and of man in general, find the sexual motif in Singer overworked and exaggerated.

Singer’s serious fiction falls into three groups: his realistic novels, his short romances or novellas, and his short stories. To these may be added his memoirs (like Mayn Tatn’s Beys-Din Shtub, 1950; In My Father’s Court, 1966, a work which is both art and documentary; Gloybn un Tsveyfl, 1974, 1976, 1978; A Little Boy in Search of God, 1976; A Young Man in Search of Love, 1978; Lost in America, 1981; and others which only appeared in the Forverts), and also his autobiographical novels (like Der Sertificat, 1967; The Certificate, 1992; Neshome Ekspeidysyes, 1974; Shosha, 1978: and others). Singer is at home in a variety of styles, modes, and subjects; he moves freely from the medieval to the contemporary, from the naturalistic to the fantastic, from psychological illumination to parapsychological mystification. His typical pose is one of ironic detachment.

Realistic Novels

The Manor (1967; written in 1953–55), first serialized in the Forward under the title Der Hoyf of which it constitutes part 1, is a realistic family chronicle of late 19th-century Polish Jewish life. Similar in style to The Family Moskat, it suffers from the same loose structure but is largely redeemed by the same vividness. A continuation was called The Estate (1970).

Set in 19th-century Poland, The Magician of Lublin (1960) has for its protagonist a Jewish magician-acrobat Don Juan whose Faustian striving eventually leads to penitential self-incarceration. The Slave (1962; Yid., Der Knekhit, 1967), a universalistic parable set in 17th-century Poland after the *Chmielnicki massacres, portrays an enslaved Jew who falls in love with the daughter of his peasant master; the gulf between them is bridged by the unifying and transcendent power of love. The miracle at the end of The Slave disturbs readers who look amiss at interference, whether authorial or supernatural.

Shadows on the Hudson (1998) is another realistic novel which introduces a large variety of New York Jews from different backgrounds and describes the complex interactions between them.

Shorter Fictional Works

It is in the shorter forms of fiction that Singer excels, and some of his stories (e.g., “Gimpel the Fool”) are among the finest in any language. Gimpel the Fool and Other Stories (1957; Yid., Gimpl Tam un Andre Dertseyhungen, 1963), The Spinoza of
Market Street (1961), and Short Friday (1964) are quite varied collections of short stories written over a period of many years. Their typical setting is the shtetl, often visited by Satan’s emissaries. The demonic tales, rich in grotesquerie and often narrated by devils and imps, range from studies in pathology to parables of the arbitrariness of the evil in life. Typically, it is through the weakness of the flesh that Satan conquers.

Free of demons and asserting the freedom to behave irrationally, The Spinoza of Market Street concerns an ineffectual philosopher who achieves salvation through the flesh. The irrational expresses itself in a context of “normalcy,” where soup and sympathy come to acquire magical properties. “Gimpel the Fool” is in the great divine-fool tradition and recalls *Peretz’s “Bontshe Shvayg.” Its theme is the ambiguous nature of sublunary truth and reality: “No doubt,” says Gimpel, “the world is entirely an imaginary world, but it is only once removed from the true world.... Whatever may be there, it will be real, without complication, without ridicule, without deception. God be praised: there even Gimpel cannot be deceived.”

**Singer’s Place in Yiddish and World Literature**

The leading exponent of Yiddish imaginative prose, Singer is also an important figure in contemporary world literature. Enjoying a somewhat ambiguous place among Yiddish writers, he is nonetheless firmly rooted in Jewish tradition. Like Yiddish literature itself, Singer’s art is a unique amalgam of the indigenous and the naturalized, of specifically Jewish and general world culture. In recognition of his literary work he was awarded the Nobel Prize for literature in 1978, the first awarded for Yiddish literature.

[Leonard Prager / Nathan Cohen (2nd ed.)]

**SINGER, ISIDORE** (1859–1939), writer and editor. Singer, born in Weisskirchen, Moravia, edited the Oesterreichische Literaturzeitung in 1884–85 and then became literary secretary to the French ambassador in Vienna. In 1887 he moved to Paris where he was employed by the press bureau of the French foreign office. Active in the defense of Alfred Dreyfus, he founded and edited La Vraie Parole (1893–94), which was intended to counteract *Drumont’s La Libre Parole. Singer was a man of vision; among the plans which he cherished was one for an “encyclopedia of the history and mental evolution of the Jewish race.” An article in the American Hebrew convinced him that this purpose could only be accomplished in the U.S. and on reading it he traveled to New York (1895) where he set about enlisting support for his project. After many difficulties, The Jewish *Encyclopedia appeared in 12 volumes (1901–09), with Singer as managing editor. He was also managing editor of the International Insurance Encyclopedia (7 vols., 1910) and coeditor of German Classics of the 19th and 20th Centuries, in 20 volumes. From 1882 onward he wrote a steady stream of books in German, French, and English. He was the editor of a memorial volume for the victims of the Kishinev pogrom, Russia at the Bar of the American People (1904), and in 1922 he founded the American League for the Rights of Man.

**BIBLIOGRAPHY:** AJYB, 6 (1904/05), 188–9.  

[Sefton D. Temkin]

**SINGER, ISRAEL** (1942– ), chairman of the *World Jewish Congress and of the Conference on Jewish Material Claims Against Germany (the Claims Conference). Raised in Brooklyn, Singer was the child of refugees from Vienna who sought refuge in Switzerland, Germany, and France, eventually landing in a detention camp in France. They came to the United States in 1942. His father had a doctorate in economics and went into the costume jewelry business. His background was a mixture of right-wing religious views and Zionism. He went to Brooklyn College despite the fact that this was not permitted in the yeshivah in which he studied. He attended college at night, in a clandestine manner, where those few people who were also earning their rabbinical ordination were not deprecated. Jewish education and secular education were separate domains of learning and were considered in conflict with one another. He was ordained a rabbi in 1964 at Yeshiva Torah vo’Daath, and taught philosophy and Middle Eastern Studies at the City University of New York and, from 1969 to 1971, political theory in the department of politics at Bar-Ilan University in Israel. He made two brief departures from the academic world, to serve in the office of the mayor of New York during the Lindsay Administration, and, later, to assist President Ford’s administration during his re-election campaign.

Singer became an adjunct professor of political science at Brooklyn College in the late 1960s, where he led a sit-in to show Jewish students how to get the Judaic Studies department they wanted. He was a catalyst for one of the most active Jewish student bodies in America, and largely because of his actions, Brooklyn College eventually developed an excellent Judaic Studies Department that, among other things, pioneered Holocaust Studies.

Singer met Nahum *Goldmann, then the president of the World Jewish Congress, in Israel in 1969, when Goldmann was
trying to make contact with the Russians in order to promote peace after the 1967 war. Singer, who was an activist on behalf of Soviet Jewry, introduced him to Ambassador Anatoly Dobrynin. Singer became a WJC expert on East-West relations. He became their operative, then their major activist. That was about the time that Edgar Bronfman arrived, at the behest of his father Samuel, who wanted him to get involved.

Together Bronfman and Singer took an organization with an impressive title but not much of a constituency and transformed it into an effective arm of the Jewish community, raising its profile and leading many causes, including pressuring the Kurt Waldheim Affair to make the Australians come to terms with his record as a German soldier during World War II and the Swiss Banking issue, forcing the Swiss to confront their record of expropriation of survivors’ bank accounts and their refusal to turn these account over to rightful heirs. In each of these cases, critics accused them of provoking antisemitism, but despite the accusations they persevered and were ultimately vindicated. Singer conducted the negotiations with the German government regarding the settlement of outstanding claims. His conduct was described even by critics as brilliant and indefatigable. As a result, after the death of Israel Miller, he also became chairman of the Conference on Jewish Material Claims Against Germany. Critics of their work at the WJC accuse Bronfman and Singer of being too dovish and too critical of the Israeli government.

As chairman of the World Jewish Restitution Organization, Singer carried out negotiations to benefit Holocaust survivors and heirs of Holocaust victims around the world. In early 2006, pursuant to an agreement between the World Jewish Congress and the attorney general of the State of New York, Singer, while not charged with any criminal violation, was removed from all fiduciary responsibility for the World Jewish Congress and was named to head a policy advisory group. [Jeanette Friedman and Michael Berenbaum (2nd ed.)]

SINGER, ISRAEL JOSHUA (1893—1944), Yiddish novelist, playwright, and journalist. Born in Bilgoraj, Poland, the son and grandson of rabbis, Singer was the second child of a family of Yiddish writers that included his elder sister, Esther Singer Kreitman, and younger brother, Isaac Bashevis Singer. He received a traditional Jewish education and was influenced by the opposing strains of Jewish thought represented by his misnagdic mother and his hasidic father. When he was 14, the family moved to the hasidic court at Radzimin and then to Warsaw, where Singer worked as an unskilled laborer and proofreader. He studied painting and hid in an artists’ atelier to avoid military service. By 1918, when he traveled to the Soviet Union, he had already begun publishing his earliest stories. Returning to Warsaw in late 1921, he was associated with the small, fluid group of writers called Di Khalyastre ("the Gang"), who opposed both social realism and romanticized depictions of Jewish life. Their journal, Khalyastre, included illustrations by Marc Chagall and poems, stories, and essays by Peretz Markish, Melekh Ravitch, Uri Zvi Greenberg, Y. Opatoshu, Oser Warszawski, David Hofshtein, and Singer. When Singer published his most ambitious work up to that time, a short story entitled "Perl" ("Pearls," in Ringen, 1921), he attracted the attention of Abraham Cahan, the editor of the New York daily Forverts. Singer served as a correspondent for the newspaper, reporting on his travels throughout Poland, the Soviet Union, and, in 1934, the U.S., where he finally settled in 1934. His travelogue, Nay Rusland ("New Russia," 1928), like his subsequent work, appeared first in Forverts. He wrote fiction under his own name and journalistic essays primarily under G. Kuper, his wife’s maiden name.

His early works included Erd-Vey ("Earth Pangs," 1922), a symbolist drama which was effectively staged in 1923 by the New York Yiddish Art Theater; the short-story collections Perl un Andere Dertsheyungen ("Pearls and Other Stories," 1922); and Ofy Fremder Erd ("On Foreign Ground," 1925). His first novel, Shtol un Ayzn ("Blood Harvest," 1935, and Steel and Iron, 1969), generated considerable controversy about the place of politics in fiction. Accused of not understanding politics and convinced that his critics were merely political hacks, Singer publicly renounced Yiddish literature, turning to journalism instead. But only four years later he published his second and most successful novel, Yoshe Kalb (1932; The Singer, 1933, and Yoshe Kalb, 1965), a psychologically astute novel about a man who adopts two personalities and remains, until the end, an enigmatic figure. Savinkov: Drame in 12 Bilder ("Savinkov: a Play in 12 Scenes") appeared in Globus in 1933, before Singer’s departure from Poland. He published three more novels after his arrival in the U.S.: Di Brider Ashkenazi (1936; The Brothers Ashkenazi, 1936, 1980); Khaver Nahkmen (1938; East of Eden, 1939); Di Mishpokhe Karnovski (1943; The Family Carnovsky, 1969). Adapted for the stage, Yoshe Kalb was performed in New York in 1932 and became one of the most successful plays ever produced in the Yiddish theater; less successful adaptations of his other novels followed: Di Brider Ashkenazi in 1938, Khaver Nahkmen in 1939, and Di Mishpokhe Karnovski in 1943. In addition, a collection of stories, Friling ("Spring," 1937) appeared in Warsaw and two more posthumous works appeared in New York: his autobiographical memoir, Fun a Velt Vos iz Nishto Mer (1946; Of A World That Is No More, 1970), and Dertsheyungen ("Stories," 1949).

Singer was a successful and admired literary figure, most of whose works were translated into English during his lifetime. His family sagas, The Brothers Ashkenazi and The Family Carnovsky, written after the rise of Nazism, present a view of Jewish history as inexorably cyclical, repeating itself in every generation, even when the rest of the world moves on. His epic novel, The Brothers Ashkenazi traces the history of twin brothers and of the industrial city of Lodz. Written in the first years of Nazi rule, it ends with World War I, the Russian Revolution, and the establishment of an independent Poland. The fates of the religious and the Marxist, the assimilated and the traditional Jew are all identical. By the time Singer wrote The Family Carnovsky, he was explicitly coming to terms with the
early years of what was already being called in Yiddish *khurbn* ("Holocaust"). The novel traces three generations through half a century, following the family from a Polish *shtetl* to Berlin to New York and ending almost at the moment of publication. At the end of the novel, Singer leaves his characters’ fates uncertain, a sign of the difficulty of conceiving of a coherent conclusion to the conflicts of the novel and current history. Singer’s energies were no doubt elsewhere. His correspondence during the period is full of increasing concern about his family’s fate under the Nazis (he could not maintain contact with his mother and youngest brother, caught in the war’s upheaval; neither survived the war, though Singer died still uncertain of their fates).

Singer’s fiction examines the political and cultural upheavals in Jewish life between the two world wars and on two continents. They portray a seemingly endless series of wars, class conflicts, pogroms, shifts in borders, and messianic ideologies, critiquing every one of the many choices available to Jews of the period: traditional religious life, secularism, Yiddish culturalism, Zionism, socialism, even individualism. His primary theme is the ultimately destructive nature of any messianic belief in religious, social, or historical resolutions for the problems that beset the individual and the Jews. His fictions offer no resolutions to the tensions in which his characters find themselves, telling instead of the modern Jewish writer’s responsibility to articulate these dilemmas and analyze them.

[Anita Norich (2nd ed.)]

SINGER, JOSEF (1823– ), Israeli aeronautical engineer. Born in Vienna, Singer went to Palestine in 1933. He served in the RAF (1943–46) and the Israel Defense Forces (1949–55), where he rose to the rank of major and was chief testing and development engineer. From 1965 he was professor of aeronautical engineering at the Technion in Haifa. He was also president of the Technion in 1982–86 and chairman of the board of Israel Aircraft Industries 1986–87. Singer did research work on aircraft structural analysis and shell theory. In 2000 he was awarded the Israel Prize.

[Samuel Aaron Miller]

SINGER, JOSEPH (1797–1871), Austro-Hungarian soldier. Born in Lemberg, Galicia, he was one of the first Jewish career officers in the Austro-Hungarian Army and fought against Napoleon in Italy. In 1832 as captain he was attached to the general staff of Field Marshal Radetzky. He fought in the Italian campaign of 1847/48. When Field Marshal Hess succeeded Radetzky in command of the Austrian army in Italy, Singer was appointed his chief of staff. He was promoted to field marshal-lieutenant in 1859. Throughout his life, Singer remained a Jew, and did not succumb to pressure to convert. On his death he received a state funeral.

[Mordechai Kapla]

SINGER, KURT (1885–1944), musicologist. Born in Berent in German Poland, Singer was music critic for the socialist newspaper *Vorwaerts*. In 1935 he became musical director of the Juedischer *Kulturbund*. He moved to Holland in 1939 but

*art*}
was arrested during the German occupation and taken to the *Theresienstadt concentration camp, where he died. Singer wrote Richard Wagner (1913), Bruckner's Chormusik (1924), Berufskrankheiten des Musikers (1927), Diseases of the Musical Profession (1932), and Heilwirkung der Musik (1927).

SINGER, LUDVIK (1876–1931), Czech political leader. Born in Kolin, Singer established himself as a lawyer first in his native town and afterward in Prague. In 1907 he joined the Zionist movement and soon became the leading personality among Czech-speaking Zionists. In 1916, his proposal to establish a Zionist newspaper led to the creation of the Czech Židovské Zpravy and the German Selbstwehr.

In 1917, during World War I, Singer advanced the idea of recognizing Jewish nationality in his country. It was quite natural for him to put forth the idea of founding the Jewish National Council (Židovská Národná Rada) in October 1918, following the example of the Czechoslovak National Council in Prague, which took power in the new state on October 28, 1918. He understood the necessity of reaching an understanding with the Czech National Council. On October 28 he led a delegation to discuss the future situation and the status of Jews. His initiative met with understanding. As chairman of the Jewish National Council, Singer participated in the Paris Peace Conference and achieved recognition for Jewish nationality in the Czechoslovak constitution of 1920, the first recognition accorded Jewish nationality in Europe. On January 4–6, 1919, the first Czechoslovak Jewish National Congress convened. The republic’s Zionist leaders who participated in the Congress elected Singer president of the temporary Zionist Central Committee on January 5, 1919. Thus Singer became the head of two key political bodies of Czechoslovak Jewry, and its spokesman. He was also active in the regional leadership of Czech Jewry. On June 15, 1919, he was elected to the City Council of Prague, the first Jew to hold such a position. In 1930, when the Zionists defeated the Czecho-Jews (Cechužidů) in the Prague elections of the Jewish community, Singer replaced the former president, August Stein.

Various tasks called for Singer’s intervention. In 1918–19, when the Jews of Slovakia were regularly attacked and robbed and the national authorities discriminated against them, Singer met with Czech president Thomas Garrigue Masaryk on June 24, 1919, to protest. The president intervened on behalf of the Jews in Slovakia. Similarly, when authorities in Slovakia and Carpatho-Rus discriminated against Jewish businesses on the Sabbath and Sunday and tried to force them to regulate their opening hours according to the Christian calendar, Singer intervened on behalf of the Jews.

SINGER, MILTON B. (1912–1994), U.S. anthropologist. Born in Warsaw, Poland, Singer was brought to the United States as a child and grew up in Detroit, Michigan. He received his B.A. (1934) and M.A. (1936) from the University of Texas, and his Ph.D. in philosophy from the University of Chicago. In 1940 Singer was appointed professor of social science at the University of Chicago, where previously he had served in other capacities. His primary interests were Indian civilization, theory of culture and culture change, and philosophical anthropology. In 1948 he received the Quantrell Award of Excellence in Undergraduate Teaching. He became a professor in the anthropology department in 1954 and continued to teach until his retirement in 1979, and was then named professor emeritus. Singer did considerable fieldwork in India. He helped organize and lead the Committee on Southern Asian Studies at the U of C (1955–70) and was instrumental in developing South Asia Studies at the university. He then expanded his work to include an anthropological approach to the study of American culture. In 1984 Singer received the Distinguished Scholar Award of the Association for Asian Studies.

SINGER, PAUL (1844–1911), German socialist leader. Born in Berlin, Singer and his brother founded a successful ladies’ clothing factory. At first a member of the German Liberal Party, he joined the Social Democrats in 1878 in protest against the passing of anti-socialist legislation and was elected to the Reichstag in 1884. His exposure of the spy system operated by the Berlin police led to his expulsion in 1886, but he was allowed to return in the following year, when he was made a member of the party executive and its chairman in 1890. Singer took part in several congresses of the Socialist International and gave financial assistance to the Berlin socialist daily Volksblatt, forerunner of the central organ of the German Social Democratic Party, Vorwaerts. Singer was known for his strong sense of justice and his charitable contributions, being one of the founders of a refuge for the homeless in Berlin. He took no part in Jewish affairs.

SINGER, PEŞAH (1816–1898), Hungarian rabbi. Born in Ungarisch-Brod (Uhersky Brod), Singer studied at the yeshivah of Moses Sofer in Pressburg. For a number of years he was director of education of the Papa community. In 1846 he was appointed rabbi of Varpalota and in 1871 of Kirchdorf (Szepesfužal). He was renowned as a talmudist, and A.B.S. Sofer, author of the Ketav Sofer, said wittily of him “there is
no ‘Second Pesah’ in our times.” He was an assiduous student all his life and used to study standing, garbed in tallit and tefillin.

**BIBLIOGRAPHY:** A. Stern, Melizei Esh al Ḥodhei Nisan ... Tammuz (1962), 67; P.Z. Schwartz, Shem ha-Gedolim me-Erez Hagar (1914), 29b no. 36/2.

[Samuel Weingarten-Hakohen]

**SINGER, PETER** (1946– ). Australian-American philosopher of ethics. Born in Melbourne and educated there and at Oxford, Singer was one of the more controversial of recent philosophers. He was especially noted for pioneering the philosophy of “animal rights” in such books as Animal Liberation (1976) and for his controversial views on handicapped infants, described in Should the Baby Live? The Problem of Handicapped Infants (with Hega Kuhse, 1985). Because of his apparent reluctance to see a total divide between animals and humans, his views have aroused fierce debate. Singer taught at Monash University in Melbourne, Australia, before becoming professor of philosophy at Princeton in 1999.

[William D. Rubinstein (2nd ed.)]

**SINGER, SIMEON** (1848–1906), English rabbi. After serving as headmaster of Jews’ College School, he was appointed minister of the Borough New Synagogue in London and from 1879 until his death of the fashionable New East End Synagogue. He edited and translated into English the Authorised Daily Prayer Book, first published in 1890 and known since as “Singer’s Prayer Book,” of which 522,000 copies in 27 editions had been distributed by 1970. Although minister of an Orthodox congregation, he was progressive in his religious views. He was not a Zionist but it was nevertheless in his home that Herzl first explained to Anglo-Jewry his idea for a Jewish state. He helped Sir Samuel *Montagu (later Lord Swaythling) to draw up in 1892 a petition to the sultan in the name of the Hovevei Zion for the cession of lands in Transjordan for Jewish settlement. His literary remains, including some historical studies, were published in three volumes by his son-in-law Israel *Abrahams (1908).

[Vivian David Lipman]

**SINGER, YVONNE** (1944– ). Canadian artist. Singer was born in Budapest, when Hungary’s Jews were most threatened and subject to extermination. Her father worked with Raoul *Wallenberg, the Swedish diplomat who rescued many Hungarian Jews, and as hospitals were closed to Jews, Yvonne was born in Wallenberg’s flat, with Wallenberg as her godfather. After brief sojourns in postwar Holland and Switzerland, the family settled in Montreal in 1950. Scarred by the Holocaust, the family, like many other survivor-immigrants, left their Jewishness behind. Singer was unaware of her Jewish identity until an adult. Small wonder Yvonne Singer’s art bespeaks re-current themes of identity, subjectivity, gender and the body, history and memory.

With a B.A. in English and French literature from McGill University, the artist studied at the Ontario College of Art and received an M.F.A. with honors from York University, where she became associate professor of visual arts.

Singer works in sculpture, mixed media installation, and video art. Drawing on childhood experience and family life, her art explores immigrant uncertainties, the negotiations of intimacy, and the ineradicable anxieties of the Holocaust. The Veiled Room (1998) drapes the gallery with gauzy veils, one layer printed with texts from Sigmund Freud and the other with the names of influential German philosophers, politicians, writers, and artists. The fabric panels complicate the interior space, making a labyrinth of semi-translucent passages, and rendering the assertions of the printed texts vaporous and uncertain. In the video installation The Trouble with Translation (2004), two confronted monitors play off the languages and demeanors of family members. Mother, husband, and daughter tell their stories in regal Hungarian, sputtering and explosive Yiddish, and gracefully performed sign language. Each figure seems to counter the others with varying degrees of warmth, elegance, humor, and hauteur.

Singer’s later works – bronze castings of the artist’s hands and feet – turn to traditional sculpture media. Each piece captures the minutiae of skin, bone, and sinew in its surface, and in doing so conveys the tensions underlying ordinary poses and gestures. At the same time, the works offer much wider allusions, for they evoke fragments of ancient sculpture – the pinnacles of a classical past – as well as the broken bodies and dark history of Jewish catastrophe.

[Carol Zemel (2nd ed.)]

**SINGERMANN, BERTA** (1901–1998), Argentine actress and poetry recitalist. Born in Minsk, Belarus, Berta Singerman immigrated to Buenos Aires as a child and made her professional debut with the Compañía Nacional (National Theater Company). After a recital in Montevideo in 1913, she became the most celebrated reader of poetry in Latin America and toured throughout the continent. She became well known for her recitations of Federico García Lorca, Pablo Neruda, Juan Ramón Jiménez, and many other Spanish and Latin American poets. In 1946 she returned to the theater and acted for two years with an Argentine company in Buenos Aires and in Chile and Uruguay. One of her outstanding performances was in the title role in Ibsen’s The Lady from the Sea. She was also well known in Brazil. In addition, she was also a cinema actress. Her first film, La vendedora de Harrod’s (1921), was also her first step to celebrity. After two more films – Nada más que una mujer (1934) and Ceniza al viento (1942) – she dedicated herself exclusively to the theater but returned to the screen in the early 1980s. Her last film was Estigma (1982).

Berta Singerman also took part in Jewish and Zionist causes. In her career she donated proceeds from many performances all over Latin America to the Jewish National Fund.
and other Jewish campaigns. Her last performance was in 1990 in the opera theater of Buenos Aires – Teatro Colón.

Her younger sister, Paulina (1911–1984), born in Buenos Aires, was also a well-known actress. She performed on the stage, in 12 movies – the first La rubia del camino (1938) and among others Hay que casa a Paulina (1944) – and on television. She had her own theater company and played in many countries of Latin America, in the United States, and in Spain.

[Efraim Zadoff (2nd ed.)]

**SINIGAGLIA**, Italian family originating from *Senigallia, a town in central Italy, on the Adriatic. Among its members may be mentioned: SOLOMON JEDIDIA, rabbi of Scandiano in 1639. He later moved to Modena. His son ABRAHAM VITA, rabbi in Modena in the first half of the 18th century, left many works in manuscript including a commonplace book (Ms. Kaufmann nos. 464–66) covering the years 1722–33. His grandson, also called ABRAHAM VITA, was rabbi in Modena in the 18th and beginning of the 19th centuries. He wrote unpublished novellae on the Mishnah. JACOB SAMSON SHAB-BETAI (d. 1840) of Ancona was the author of various collections of ritual responsa and novellae on the Talmud: Shabbat shel Mi (Leghorn, 1807) and Mattan ha-Sefer (Leghorn, 1843). SOLOMON JEDIDIA was rabbi of Modena in the 18th century. Some of his religious poems were published in the Tikkun HaZot (Leghorn, 1800). His son, MOSES ELIJAH (1763–1849), also rabbi of Modena, wrote sermons, ritual responses, and novellae. LEONEL (1868–1944), of Turin, a musician, composed a number of works based on Piedmontese folklore.

**BIBLIOGRAPHY:** Mortara, Indice, 62; G. Bedarida, Ebrei d’Italia (1950), 142, 144; Ghirondi-Neppi, 158, 228–30.

[Ariel Toaff]

**SINIGAGLIA, LEONE** (1868–1944), composer. Born in Turin, Sinigaglia studied in Vienna, and in Prague with Dvořák, who interested him in folk music. His most important works are Danze Piemontese, for orchestra (first conducted by Toscanini, 1905) and the overture to Goldoni’s play, Le baruffe chiozzotte (1907). He incorporated many of the tunes of his native Piedmont in his work and also published them in a collection, Vecchie canzoni popolari del Piemonte (6 fasc.), which appeared posthumously in 1957. Sinigaglia and his sister Alina both died of strokes on May 16, 1944, in the Ospedale Mauriziano in Turin, where they had fled from Fascist police who were rounding up Jews for deportation.

**ŠINKO, ERVIN** (Franjo Spitzer: 1898–1967), Yugoslav author and literary Communist from his youth. He published his first Hungarian verse collection, Éjszakák és hajnalok (“Nights and Dawns”), in 1916. He later wrote fiction and drama which appeared in both Croatian and Hungarian, and became a prominent editor and critic of Hungarian literature. Having played a part in Bela *Kuni’s abortive revolution and Soviet regime (1919), Šinko subsequently fled to Paris, where he wrote his most realistic novel, Optimisti (“The Optimists”) in 1934. Although the book – which describes the revolution, its Jewish heroes, and its overthrow – gained the enthusiastic commendation of Romain Rolland, it was first published 20 years later in Yugoslavia (1953–54). Šinko’s vain attempt to have his novel published in Moscow at the time of the Great Purges (1935–37) is depicted in his diary, Roman jednov romana (“A Novel about a Novel,” 1955). After his return to Yugoslavia in 1939, Šinko fought with Tito’s partisans and gained official recognition for his skillful polemics against the Soviet line following the split in the Cominform (1948). He wrote other novels, short stories, essays, and literary studies, and some of his works appeared in German and Russian periodicals. Šinko displayed a positive attitude toward his Jewish origin and cultural background in his literary and autobiographical writings. Aronova ljubav (“The Love of Aaron,” 1951), a lyric story, with hasidic motifs interwoven in the central character, tells of a Jewish revolutionary who fights in the Spanish Civil War and later perishes in the Holocaust. In 1959, Šinko was appointed professor of Hungarian language and literature at the University of Novi Sad. As a Croatian author, he was also elected to full membership of the Yugoslav Academy of Arts and Sciences in Zagreb.

[Cecil Roth]

**SINZHEIM, JOSEPH DAVID BEN ISAAC** (1745–1812), first chief rabbi of France. Born in Trier, he married the sister of the wealthy communal leader H. *Cerfber, and headed the yeshivah founded by his brother-in-law in Bischheim (1786), later transferred to *Strasbourg (1792). The persecutions during the Reign of Terror under Robespierre compelled Sinzheim to escape (1793). On his return, he acted as rabbi of Strasbourg (together with his nephew Abraham *Auerbach). In 1806 he was appointed to the “Assembly of Jewish Notables convened by Napoleon in Paris. His erudition and sagacity impressed many of the delegates from Italy and the German provinces, who accepted him as the leading authority on halakhic problems. Sinzheim was therefore entrusted with formulating the replies to the 12 questions put to the assembly by the government to test if Jewish precepts allowed the Jews to live on equitable terms with their French neighbors. He succeeded in satisfying the emperor that the Jews would accept the authority of the state and fulfill their obligations as citizens without giving up the principles of their faith and their traditions. The sermons that Sinzheim delivered in the synagogue (in Judeo-German) in honor of Napoleon also evidenced his loyalty to the state. Sinzheim was appointed president of the Great French *Sanhedrin in 1807 and became chief rabbi of the Central French *Consistory on its establishment in 1808. He was also chief rabbi of the Strasbourg consistory, although represented in office by R. Jacob Meyer, formerly one of the delegates for Alsace (Lower Rhine) at the assembly. While Sinzheim adopted flexibility in drafting the replies of the assembly, he adamantly opposed any change in the fundamental principles of Jewish tradition and religion as
he interpreted them. Sinzheim was buried in the Père Lachaise cemetery in Paris, but his burial was not recorded, or the record was lost. In 1974 Mrs. Renée Neher-Bernheim located the grave.

[Moshe Catane]

He wrote the responsa Yad David (only one part published, Offenbach, 1799) on tractate Berakhot and the order Midd, his avowed purpose being to complete the work of Hayyim *Benveniste’s Keneset ha-Gedolah and Aaron *Alfandari’s Yad Aharon by giving additional source references and comments scattered in other works. He claims to have added comments from no less than 300 works. Yad David also gives valuable autobiographical details. Sinzheim eschews the method of *pilpul, maintaining that his father had thus instructed him. At the beginning of the work there are comments by his nephew Abraham Auerbach, whom he also quotes frequently in the body of the book, and it also contains novellae by his brother-in-law Selig Auerbach. A booklet on the permissibility of the sale of the synagogue of Griessheim (Basle, 1804) includes a responsa of Sinzheim, written in Strasbourg, in which he permits the sale of synagogues and cemeteries, adding that this was a frequent occurrence in his days (p. 21). In 1810 he wrote an interesting responsa to a query by Jehiel Hayyim Viterbo on the question whether Jewish girls are permitted to benefit from a government lottery to provide dowries for poor brides. The Jewish authorities were reluctant to accept it, but Sinzheim decided in favor. The responsa reflects the attitude he adopted at the Assembly of Notables. He pointed out that despite the talmudic prohibition against accepting gifts from idolaters, to accept this one was in the interest of good public relations; that in any case Christians are not regarded as idolaters; and that “at the present time it is our duty to pray for the welfare of the king and the royal family, as indeed we do every Sabbath.”

[Yehoshua Horowitz]

**SIPONTO**, coastal town in Apulia, S. Italy. By the ninth century there was a Jewish settlement in Siponto, which became a considerable center of rabbinic learning. Young scholars from there went to study under *Hai Gaon in Pumbedita, becoming outstanding scholars; they included Leon b. Elhanan, Menahem ha-Kohen, and R. Judah, who spread Jewish learning in Italy. Another important scholar of Siponto was *Isaac b. Melchizedek, author of a commentary on the Mishnah, whose son Judah was encountered by *Benjamin of Tudela in Salerno. Among the liturgical poets of Siponto was Anan b. Marinus ha-Kohen, also a noted rabbinical scholar. Between the years 1256 and 1258 Siponto was deserted by its inhabitants because of an outbreak of malaria. Since then, there are no further records of Jews in the town.

[Ariel Toaff]

**SIPRUTINI, EMANUEL** (18th century), cellist. The son of a Dutch Jew, Siprutini is known to have traveled in Italy and Spain. Leopold Mozart, father of the great composer, met him in London in 1764 and mentioned him as a great virtuoso on the cello. He also tried to convert him to Catholicism, but although Siprutini had by this time abandoned Jewish observances there is no evidence that he ever left Judaism. He dedicated his *Six Solos for a Violoncello* (1773) to the English Jewish communal leader, Moses Franks (1719–89). At a later date Siprutini lived in Belgium as a wine-merchant.

[Cecil Roth]

**SIRAT, RENE SAMUEL** (1930– ), rabbi and scholar, former chief rabbi of France. Sirat was born in Bone, Algeria, and received his rabbinical ordination from the *Séminaire Israélite de France* in 1954. In the same year he was appointed rabbi of Toulouse, remaining there until 1955, when he was appointed to be in charge of youth activities of the Consistoire Central of France. From 1965 to 1970 and again in 1977 he was professor at the seminary. He received his doctorate from the University of Strasbourg in 1965, when he was appointed professor of Modern Hebrew at the National Institute of Oriental Languages and Civilization at the Sorbonne. From 1970 to 1973, he was director of the department for overseas students at the Hebrew University. In 1973, he published a new edition of Omer ha-Shikhehah, written in the 16th century by the Algerian rabbi Abraham ben Jacob Gibichon, first published in Leghorn in 1748. In 1973 he created the General Inspection in charge of the teaching of Modern Hebrew in French public schools and headed it until 1981.

In 1980, following the decision of Rabbi Max Warschawski, chief rabbi of Strasbourg, to withdraw his candidature, Sirat was unanimously elected chief rabbi of France succeeding Rabbi Jacob *Kaplan. During his term as chief rabbi, which ended in 1988, he focused his activity on the promotion of Jewish education, particularly in the academic field, and on inter-religious dialogue, including the controversy surrounding the Carmelite monastery at Auschwitz, which provoked a crisis between the Catholic Church and the Jewish world in 1986.

In 1988 he became chief rabbi of the Consistoire Central. He published an autobiography in 1990, *La joie austère*. He was the chairman of the Conference of European Rabbis and
a founder and co-president, in 2002, of the European Council of Religious Leaders, an affiliate of the World Conference on Religion and Peace. Particularly notable were his participation, on January 24, 2002, in the Day of Prayer for Peace in Assisi (Italy), and his presence in front of the cathedral of Lyon when Cardinal Debrétray, a close friend of the Jewish community, was to be buried. He published articles on Judaism and a volume of a conversation with the historian Martin Lemalet, *La tendresse de Dieu* (1996).

[Philippe Boukara (2nd ed.)]

**SIRET** (Ger. *Sereth*) town in Bukovina, N. Romania, one of the oldest urban settlements; capital of Moldavia between 1363 and 1376. Situated at the crossroad of European routes linking the cities of Cernăuți and Suceava, Siret was an important customs city and trade center (cereal, cattle, horses, swine, raw hides, etc.). A census of 1774 mentions eight Jewish families with a total 43 persons. Their number must have been higher if we are to consider the funeral stelae prior to 1775 and the fact that, after only seven years (1782), the Austrians evicted 61 Jews from the town. For the year 1787 we know the names of 36 house and distillery owners there. Representatives of the Siret Jews were among those who signed a memorandum to the authorities during this period, in which they requested permission to trade in wine and alcohol. Their request was rejected, and they were authorized to maintain one inn in the town and were restricted to serving Jews in transit through Siret to other places in Bukovina.

During the period when Bukovina and Galicia were united (1786–1849), the number of Jews in Siret grew substantially, so that in 1880 the Jewish population numbered 3,122 (37.1% of the total). Jews played an important role in Siret's economic development and were also active in general public life, owing to their position in trade, crafts, banking, the food and textile industries, and the professions. Between 1912 and 1918, there was a Jewish mayor, and other Jews were elected to the municipal council. The communities were led by a guild-master (*staroste*), a well-known type of organization in Moldova. The epitaphs mention people with the function of *aluf, more horâh, dayyan*, illustrating a complex community life. The cemeteries contain graves dating from the beginning of the 18th century, with impressive funeral stelae presenting a diversity of adornments; several epitaphs constitute the traces of a community which stood out by virtue of its organization, accomplishments, and personalities. The community expanded and during the 18th century already had a rabbi. At first it was affiliated to the community of Suceava but gradually became independent. The regulations of the independent community were ratified in 1887. At the beginning of the 19th century, in addition to the central synagogue, there were four *batti midrash* and four houses of prayer. Their activity in the community sphere (social assistance, education, religion) is well-known. Before Bukovina was incorporated into Romania after World War I, the Jewish youth studied at the local German high school. There was also a yeshivah with a large number of students. The Vishnitz trend of Hasidism was dominant in the community. Cultural activity deeply rooted in Judaism and initiated by the elites unified the Jews from all social layers. Their interest was directed towards the vigorous cultural and political life of the metropolis of Bukovina. During World War I, Siret and its Jewish inhabitants suffered severely, particularly under Russian occupation. After the war, there were about 3,000 Jews living there.

After its reunification with Romania, there were many integration problems, owing to the loss of some important positions in economic, political, and social life, in administration, education, and adjustment to the new official language. Community life improved, its rehabilitation aided by the American Jewish Joint Distribution Committee.

There is information on Zionist organizations of different social statuses operating there, and from the Siret community there arose leaders of the Zionist movement in Romania and then of the development of Israel (among others, Yitzhak *Artzi* and Iehuda Shaarai).

The antisemitic movements intensified, and the anti-Jewish laws, especially after 1938, marked the beginning of successive exclusion from socio-political life, which led to the annihilation of the economic base and to poverty. In July 1941 evictions occurred in Calafat, and in October 1941 many Jews were deported to Transnistria, where cold, famine, and typhus claimed 700 victims from among the members of the Siret community. During the post-war period, the population of the re-established community gradually decreased from 500 to 100 (1980) and completely disappeared by 2000.

[Yehouda Marton / Silviu Sanie (2nd ed.)]

**SIRILLO, SOLOMON BEN JOSEPH** (d. c. 1558), rabbi, posek, and commentator on the Jerusalem Talmud. Sirillo was born in Spain, and with the expulsion of 1492 proceeded to Adrianople and *Salonika. In a work written in Adrianople he makes mention of his teacher *Elijah b. Benjamin ha-Levi*, one of the most important scholars in Constantinople at the time. From Salonika he proceeded to Ereẓ Israel, settling in *Tel Aviv*. Apparently after the death of Levi ibn Ḥabib in 1544 Sirillo moved to Jerusalem and was appointed to succeed him. His rulings are occasionally mentioned in the responsa of his great contemporaries, such as *David b. Solomon ibn Abi Zimra* (Radbaz), *Joseph *Caro, Moses b. Joseph di *Trani, Samuel b. Moses *Medina, and others.

Sirillo’s fame rests upon his commentary to the Jerusalem Talmud which covered the whole order *Zera'im* and tractate *Shekalim*, which he compiled in at least two editions. He began to compile the first edition while he was still in Salonika and the second, improved edition, in Ereẓ Israel. In the second edition he already used, in addition to manuscripts, the
printed edition of *Venice in about 1522. Sirillo's interest in the Jerusalem Talmud arose from a practical consideration of *halakhah, which resulted from his settling in Ereẓ Israel, where the agricultural laws applied to a much greater extent than in the Diaspora. These laws are contained in the order *Zera'im which (apart from Berakhot which does not deal with agricultural laws) have no Gemara in the Babylonian Talmud but only in the Jerusalem Talmud. Since little attention had been paid to the Jerusalem Talmud, he found that many passages were obscure and the texts corrupt. "Unable to find in my generation a scholar well versed in the Jerusalem Talmud" and urged on by his colleagues, he devoted himself to writing a commentary to the 12 relevant tractates. It is one of the best commentaries to the Jerusalem Talmud, despite the fact that his readings are not the most exact, although he had before himself accurate manuscripts. The part on Berakhot was first published in 1875 by M. Lehmann, who also added notes in the margin, and that to the whole of *Zera'im, in Jerusalem from 1934 to 1967. The commentary to Shekalim was published in 1958. Sirillo also compiled a commentary in the form of a Gemara to the Mishnah Evedyot, which has not yet been published.

[Abraham David]

**SIRKES, JOEL** (known as BaḤ, an abbreviation of *Bayit Hadash; 1561–1640), one of the greatest talmudic scholars of Poland. Sirkes was born in Lublin and was rabbi in a number of communities, including Belz, Brest-Litovsk, and Cracow, where he was appointed *av bet din and head of the yeshivah in 1619. Many of his students became leading rabbis in Poland, the most famous being his son-in-law, *David b. Samuel ha-Levi* (the TaZ). Sirkes' chief work was the *Bayit Hadash* (Cracow, 1631–39), a critical and comprehensive commentary on the *Arba'ah Turim* of *Jacob b. Asher, in which he traced each law to its talmudic source and followed its subsequent development through successive generations of interpretation. He viewed with alarm the constriction of the law through codification and the growing dependence of his contemporaries on the Shulḥan Arukh. His major authorities were the Talmud, the geonim, the tosafists, *Aflasi, *Asher b. Jehiel, and Maimonides.

Sirkes, a scholar of independent judgment, rendered many controversial decisions. He allowed the acceptance of emoluments and special privileges by rabbis in return for their services. He extended the permission to sell leavened food to a non-Jew before Passover to include the sale of the room in which such food was found. Sirkes performed a marriage on the Sabbath when an orphan's future was at stake. He permitted the reading of secular, non-Hebrew books on the Sabbath and liberalized certain laws to allow for the greater enjoyment of the festivals. He saw no valid reason for the prohibition against listening to a woman's voice in song and permitted church melodies in the synagogue if they were universal in appeal. He was, however, very strict in issues of *issur ve-heter.* Though opposed to philosophy and an adherent of Kabballah, he rejected kabbalistic practices that were contrary to the *halakhah.*

Sirkes' literary legacy includes two volumes of responsa published posthumously, Shechelot u-Teshuvot Bayit Hadash (Frankfurt, 1697) and Shechelot u-Teshuvot Bayit Hadash ha-Hadashot (Koretz, 1785). In the Shechelot u-Teshuvot ha-Geonim Batri (Turka, 1760) there are 22 responsa either by Sirkes himself or dealing with responsa which he had written.

[Max Jonah Routtenberg]

**SIROTA, GERSHON** (1874–1943), *hazzan.* Born in Podolia, Sirota took his first position as *hazzan* in Odessa when he was 21. He officiated in Vilna for eight years, and in about 1908 became *hazzan* of the Tłomacka Street Synagogue in Warsaw. Sirota was regarded as one of the most accomplished tenors of his generation and was one of the most gifted *hazzan* virtuosos of all time. He possessed a dramatic tenor voice of great beauty and power, with a brilliant coloratura and climactic top notes, and a perfect voice control in all registers which enabled him to produce trills of exceptional length. His listeners were often deeply moved by the emotional intensity of his rendering of the liturgy, and he could also sing with a delicate sweetness. Sirota was a master of improvisation and recitative in the East European tradition, always remaining faithful to the appropriate *shtayger,* but he himself never composed. In partnership with his choral directors, notably Leo Low and David Eisenstadt, he made famous many outstanding hazzanic compositions including Isaac Schlossberg's *Rezeh* and A.M. *Bernstein's Adonai, Adonai.*

Sirota undertook numerous concert tours throughout Europe and the U.S. and was often compared to the leading operatic tenors of his generation. During his years at Vilna he sang annually for Czar Nicholas II and in 1903 became the first *hazzan* to make recordings. After leaving the Tłomacka Street Synagogue in 1927, Sirota devoted his time entirely to concert tours, but in 1935 took up the post of *hazzan* at Warsaw's Norzyk Synagogue. He was the only one of the great *hazzanim* of the time not to accept a position in the U.S. He and his family perished in the Warsaw ghetto. A monument was erected on his grave in the Gesia cemetery in 1961.

[David M.L. Olivestone]

**SISEBUT,** Visigoth king of Spain (612–621). He succeeded King Gundamar, and within three years his forces put down
a revolt in Asturias and defeated the Byzantines twice. Better known, however, for his literary talent and personal piety, Sisebut was a likely continuator of anti-Jewish religious policies of *Reccared which had been abandoned by the latter’s successors. Soon after ascending the throne, Sisebut ordered the Jews of his kingdom either to convert to Christianity or leave Spain. He further decreed that Jews who converted Christians to Judaism were to be executed and their property was to go to the royal treasury. In addition, Christian slaves owned by Jews were either to be sold to Christians or set free. Sisebut’s policy of forced conversion found little support and was condemned at the time by Spain’s foremost theologian, *Isidore, bishop of Seville. The king’s general anti-Jewish religious policies were not popular in the realm, and his successor, Suintila, reversed them, permitting Jews who had accepted baptism under duress to return to Judaism without penalty and encouraging those who had fled from Spain to return. The legislation forbidding Jews to own Christian slaves remained largely unenforced.

[Bernard Bachrach]

**SISERA** (Heb. שִׂסְרָה), the leader of the coalition opposing Israel “by the waters of Megiddo” in the days of *Deborah (Judg. 4–5). Sisera is the object of extreme scorn in the poetic sequel, the archaic Song of *Deborah, which celebrates Israel’s victory. No evidence exists concerning the involvement of the city of *Megiddo itself in this episode, and so the event is roughly dated at 1150–1125 B.C.E., before Megiddo’s revival and following the destruction of the early 12th-century city. Sisera’s name is entirely uncharacteristic of the Semitic context; the best linguistic affinities are found in Illyrian names with the element -ero. In the prose narrative, Sisera, “who dwelt in Harosheth-Goiim,” is represented as field commander for “*Jabin king of Canaan, who reigned at *Hazor” (Judg. 4:2). The tradition is an old one and was long effective, as known from 1 Samuel 12:9 where the events surrounding Sisera stand as an example of God’s judgment and deliverance. (It is believed that Bedan, in 1 Samuel 12:11, is miswritten for Barak.) On the other hand, in the bitterness which evoked Psalms 83:10, only the victory over Jabin and Sisera is important.

A location for Harosheth-Goiim has been suggested in the vicinity of Hazor. However, with the evidence for the historicity of Judges 4, the site of Tell-‘Amr, at the southern edge of the Esdraelon plain near the mouth of the pass into the plain of Acre, remains the most probable location of Sisera’s town. The tradition that calls it Harosheth “of the Gentiles,” plus Sisera’s non-Semitic name, combines with the fact that Tell-‘Amr was founded in the early Iron Age to suggest that it belonged to one of the recently arrived Sea Peoples. (For another view see *Deborah.)

The implication of the narrator is that Sisera and his force fled the battlefield in opposite directions, the troops being overtaken and overwhelmed at Harosheth. Sisera escaped alone as far as Elon-Bezaannim, whose location is uncertain, but is generally sought in Naphtali. It was a place to which certain *Kenites had migrated in an earlier period and where they had settled after contracting a treaty with Jabin, king of Hazor. The connection between the Kenites and Jabin is clear in the shift from standard narrative tenses to the use of a sentence having no verb at the point at which the Kenites and Jabin are mentioned together (“there (was) a peace treaty between Jabin… and the house of Heber the Kenite,” Judg. 4:17).

Thus, the final irony of both the prose and the poem is that Sisera, desperately seeking the relative safety of the borders in the far north, was killed by one whose clan had broken away from the Mosaic alliance, and by a woman at that. A glimpse of the later vicissitudes of Sisera’s people is provided in the mention of “sons of Sisera” in the lists of Nethinim (Ezra 2:53; Neh. 7:55). Most of the Nethinim families were descended from prisoners of war (see Gibeonites and *Nethinim).

[Robert G. Boling]

**SISKIND, AARON** (1903–1991), U.S. photographer and teacher. Born in New York City, he attended City College of New York, where he graduated with a degree in literature in 1926. Siskind then taught English in New York public schools, only taking up photography as a pastime. In 1930, he joined the Photo League, a group of photographers who confirmed their solidarity with the political far left by creating documentary photos with social content. Under their auspices, Siskind produced photos of Harlem and of Bucks County, Pennsylvania, among other subjects. As the head of the Feature Group of the League, Siskind and others created the *Harlem Document* (1937–40), recording the overcrowded African-American New York neighborhood in a push for social justice. During the 1940s, Siskind’s work reflected a growing interest in photographing natural objects from a close perspective, which lent his images an abstract quality only hinted at in his earlier documentary photographs. Organic material, such as leaves, or social detritus, such as defaced walls, muddied papers, weathered woods, and rusted metals, occupied Siskind’s pictorial interest in their flatness and reservoir of rich indexical detail, like shadows, smudges, and graffiti. Between 1947 and 1951, he exhibited frequently at the Charles Egan Gallery, where many of the Abstract Expressionists exhibited. Siskind himself is considered one of the only Abstract Expressionists working in photography. He taught at Black Mountain College in 1951, and then at the Illinois Institute of Technology in
Chicago between 1951 and 1971, where he became director of the department of photography. In 1959, he published his first book *Aaron Siskind: Photographs*. Between 1971 and 1976, he taught at the Rhode Island School of Design. He was a founder and member of the Society for Photographic Education and the Visual Studies Workshop, Rochester, New York. He received many prestigious awards, including a grant from the National Endowment for the Arts, the Guggenheim Foundation, and the Governor’s Prize for the Arts, Rhode Island. His work is in the collections of numerous institutions, including the Eastman House Museum, Getty Museum, the National Gallery of Art, and the Smithsonian American Art Museum. His work has been exhibited at many museums and galleries, including the Art Institute of Chicago, the Jewish museum, New York, the Museum of Contemporary Art, Los Angeles, and the Museum of Modern Art.

[Nancy Buchwald (2nd ed.)]

**SISTERON**, town in the Basses-Alpes department, S.E. France. After *Marseille*, *Arles*, and *Tarascon*, Sisteron was the fourth place in Provence where Jews settled. At the beginning of the 13th century there was a popular uprising in which 80 Jews were among the victims. According to Solomon *Ibn Verga's Shevet Yehudah*, these events occurred in 1204 and 1205, but local sources date them around 1235. (The latter are more reliable because they are confirmed by an order of Charles I, count of Provence, who in 1257 was still penalizing those who had destroyed the castle of Sisteron and massacred Jews.) At the beginning of the 14th century Jews were also mentioned as living in at least five small localities of the bailiwick of Sisteron, namely, Bayons, Mison, Vaumel, La-Motte-du-Caire, and Barles. Jews were last recorded in Sisteron in 1452. During World War II an internment camp situated in the town held many Jewish prisoners.

[Bernhard Blumenkranz]

**SITBON**, prominent family of wealthy merchants, rabbis, and community leaders in 18th-century *Tunis*. ABRAHAM SITBON, who lived for many years in Bizerta, was an official and tax collector, who bore the title of qaid. As a leader of the Jewish community he entertained H.J.D. *Azulai* on his visit to Tunis in 1773–74 and is mentioned in the latter’s writings. SAMUEL and JUDAH were merchants and shippers; the latter traveled to Leghorn. JOSEPH (late 18th century) was a rabbi and kabbalist in Tunis. His kabbalistic treatise, *Ahuvat Adonai*, a commentary on the *Idra Zuta*, was written in 1778 and published in Leghorn in 1871.

**SITRUK, JOSEPH** (1945–), chief rabbi of France. Sitrak was born in Tunisia, but raised from early childhood on in Nice. His brilliant high school record seemed to indicate a career in science, but his extracurricular activities, such as those in the French Jewish scouting movement, led him to choose a career in the rabbinate instead.

After completing his studies at the Seminaire Rabbinique of France, he began in 1970 to serve as the rabbi of Strasbourg. In 1975 Rabbi Jacob Kaplan, chief rabbi of France, put him in charge of the Marseilles community, the second largest in France. Within a few years Sitrak had succeeded in reorganizing this rather disparate community made up of various successive waves of immigration. In ever-increasing numbers Jews began to attend synagogue and return to religious practices.

On June 14, 1987, Joseph Sitrak was elected chief rabbi of France; he assumed office in January 1988. As successor to Chief Rabbi René *Sirat, he was the second Sephardi chief rabbi of France. His election confirms the role that Sephardi Jews now play in the leadership of French Jewry following the large immigration of North African Jews to France.

[Doris Bensimon-Donath]

**SITTEON (Sutton) DABBAH, SHAUL DAVID** (1850–1930), rabbi of the Aleppan community in Buenos Aires. Born in *Aleppo, Syria, in 1877 he was appointed a member of the bet din (rabbinic tribunal) there, and four years later became the rabbi of the city of Ain Tab. After ten years (1881–91), he returned to Aleppo and founded a yeshivah. In 1912 he went to visit his sons who had immigrated to Buenos Aires and was appointed rabbi of the Aleppan community in that city. Critical of the religious laxity that reigned in Buenos Aires, he started to impose strict halakhic rules on the immigrants from his home town who were used to a strong rabbinical authority. He founded the congregation Yesod Hadat, which controlled the *shelhita* and sale of kosher meat, and opened a *talmud torah* where studies were conducted in Arabic. His traditional approach was manifested in his resistance to the establishment of a modern system of learning “Hebrew in Hebrew.” He was also active in the foundation of the burial society – Hesed Shel Emet Sefaradit de Aleppo – that later became the main communal framework of the Aleppan community (AISA – Asociación Israelita Sefaradí Argentina). Sitteon became famous with the ban against conversions in Argentina that was published in his book of *Responsa Dibber Shaul* (Jerusalem, 1928). The ban, which is still valid in several Sephardi communities in Latin America, was issued under the influence of Rabbi Aharon Goldman of Moisesville and received the *haskamot* of the chief rabbis of Erez Israel. It decreed that no conversion would be accepted in Argentina, but permitted the acceptance of conversions by rabbinic tribunals in Jerusalem. Sitteon rarely participated in Zionist activities.
SIVAN (Heb. סיוון), the post-Exilic name of the third month of the Jewish year. Occurring in the Bible and in the Apocrypha (Esth. 8:9; 1 Bar. 1:8) and frequently in rabbinic literature (as in Megillat Ta‘anit), the name is held to be etymologically connected with samu or asamu (“to mark” or “to appoint”) in Assyrian, akin to sim in Hebrew. The zodiacal sign for this month is Gemini. In the present fixed Jewish calendar, it invariably consists of 30 days, the First of Sivan never falling on Monday, Thursday, or the Sabbath (see Calendar). In the 20th century Sivan in its earliest occurrence extends from May 11th to June 9th and in its latest from June 9th to July 8th.

Historical anniversaries in Sivan comprise: 1. Third–Fifth of Sivan, the “Three Days of the Bounds” commemorating the three-days’ preparation for the revelation on Mount Sinai (Ex. 19:10–16); 2. Sixth of Sivan (in the Diaspora also Seventh of Sivan), *Shavuot* (the festival of Weeks); 3. Seventh, fifteenth, and sixteenth of Sivan, anniversaries of Hasmonaean victories (Meg. Ta’an. 3); 4. Twenty-fifth of Sivan, Israel’s defeat of Ishmael, Canaan, and Egypt in a contest adjudicated by Alexander the Great (bibd.); (7, 8, 9) Twenty-third, twenty-fifth, and twenty-seventh of Sivan, once observed as fasts (bibd., 13; Tur and Sh. Ar. 1015 b) commemorating Jeroboam’s suspension of pilgrimages to Jerusalem and the martyrdom of the tanaim, *Simeon b. Gamaliel 1, *Ishmael b. Elisha, *Hananiah Segan ha-Kohenim, and *Hananiah b. Teradyon.

[Shemuel Jehudah Wiesenberg]

SIVAN, ARYEH (1893–1992), Hebrew poet. Born in Tel Aviv, Sivan was a member of an elite unit in the Palmah and took part in Israel’s War of Independence. He studied Hebrew language and literature at the Hebrew University, worked as a high school teacher, and published his first collection of poems, *Shirei Shiryon* (“Poems of Armou”), in 1936. This was followed by a dozen collections, including *Lihyolet be-Erez Yisrael* (“To Live in Erez Israel,” 1984), *Kaf ha-Kela* (“Hollow of the Sling,” 1989), and *Hoger HaHilalah* (“Recurrence,” 2004). “Selected Poems 1957–1997” appeared in 2001. A member of the literary group *Likrat* (“Towards”) in the 1950s, which sought to imbue Hebrew poetry with a refreshing poetic diction, Sivan’s idioms avoids hyperbole and pathos, appealing in its directness and simplicity and yet retaining a clear melodious cadence. Many of the poems address the landscape and nature of Israel, recollect moments of childhood in the city of Tel Aviv, or contemplate the changes in the socio-political climate of Israel. Sivan wrote one novel, *Adonis* (1992; German translation: 1994), an enjoyable detective story, set in Tel Aviv during the Gulf War, which takes the reader back to the 1930s, depicting the political life and love affairs of the city’s literati. Individual poems have been translated into diverse languages, and information about translation is available at the *Ithl* website at www.ithl.org.il.

[Anat Feinberg (2nd ed.)]

SIVITZ, MOSHE (1855–1936), U.S. rabbi. Born in Zhitovian in the Kovno District of Lithuania, he went to study at Rabbi Isaac Horowitz’s *Yeshiva* before returning to Zhitovian and studying with Rabbi Solomon Horowitz, after which he studied in Telz. He was ordained by Rabbi Eliezer Gordon of Telz and by Rabbi Isaac Elhanan Spektor. He continued his studies in Kovno and became a rabbi at about the age of 30, in Pikelien, Lithuania. He immigrated to the United States a year later and then accepted an offer to become rabbi of the Russian Shul in Baltimore. Within two years he moved to Pittsburgh to serve as rabbi of B’nai Israel and later of Kahal Yereim. He became a major figure in Pittsburgh Jewry, working with the larger community to build a community Jewish hospital, Montefiore. He opened the Crawford Street Talmud Torah, a school that was available to all members of the community.

His attitude toward America was negative. He was a staunch opponent of Reform Judaism, which had but recently proclaimed its Pittsburgh Platform. He regarded the focus on money and success prevalent in the United States as compromising the integrity of Judaism, as he felt that spirituality could flourish amidst poverty and found material success threatening. He was against preaching in English and continued to sermonize in Yiddish.

One of the speakers at the funeral of Rabbi Jacob Joseph, he admonished the crowd for their mistreatment of the chief rabbi. He struggled for a living, as did many Orthodox rabbis of his generation, when rabbis were paid less than cantors, and sought to maintain economic independence in order to limit the power of his congregants, whom he did not regard as being of the stature of the European laymen he had left behind. He felt that the economic condition of the American rabbi – essentially a hired employee of his congregants – compromised his authority.

Kimmy Kaplan, who wrote on his preaching, stressed that Sivitz regarded leaving Eastern Europe as exchanging spiritual values for corporeality. The *goldene medina* was a land of spiritual dryness; a land of ignorance and impiety. In the United States the values of the country were the main problem for Judaism. Thus, he was firmly in the camp of the rejectionist Orthodox, who refused to embrace the American vision. He helped form and was a vice president of *Agudat Harabbonim.*
He wrote a number of books: *Hikrei Da'at* (2 volumes, 1898 and 1902), sermons based on the weekly Torah portion; *Sefer Beil Paga* (1904); *Peri Yehezkeli* (1908); and *Matteh Aharon* (1914), material for sermons. He also authored a commentary on the Jerusalem Talmud entitled *Masbiḥat al Ye-rushalmi* (2 volumes, 1913, 1918) as well as *Zemah ha-Sadeh* (1935). He also contributed to Judah Eisenstein's *Ozar Yisrael* (1907–1913).

[Michael Berenbaum (2nd ed.)]

**SIX-DAY WAR**, the war between Israel and *Egypt*, *Jordan*, *Syria*, and *Iraq* that lasted from June 5 to June 10, 1967, and in the course of which Israel routed the threatening Arab armies and occupied the Sinai Peninsula, the "West Bank" (*Judea and Samaria*), and the Golan Heights.

**Background to the Conflict**

The diplomatic negotiations following Israel’s occupation of the "Sinai Peninsula in Operation "Kadesh" in October–November 1956 (see "Sinai Campaign") and, in particular, joint United States and Soviet pressure on Israel brought about a withdrawal of Israeli forces from the Sinai Peninsula and the "Gaza Strip early in 1957. They handed over their positions to the newly formed United Nations Emergency Force (UNEF), which took up positions on the Straits of "Tiran and along the Israel border with Sinai and with the Gaza Strip. Israel’s action followed the receipt of assurances from the great powers, particularly concerning the freedom of passage for shipping to and from Israel passing through the Straits of Tiran.

The Arab world was racked by upheavals. On July 14, 1958, King Feisal of Iraq was deposed and killed, and the regime, headed many times by General Nuri Sa’id, was overthrown by General Kassem. His unstable regime enabled the Soviet Union to achieve its first foothold in oil-rich Iraq and make its first moves in establishing a position in the Persian Gulf. A general reaction of unrest fomented by Nasserist elements throughout the area developed in Lebanon and Syria. In November 1964 an Arab Summit Conference in Cairo, attended by the heads of state, decided to proceed actively with the diversion of the waters of the "Jordan River and to recognize a Palestinian entity. At this conference and at the Casablanca Conference which followed it, some £400 million were allocated for the purpose of implementing these decisions. In recognizing the Palestinian entity the Arab states gave official standing to Ahmed Shukeiri, head of the "Palestine Liberation Organization, and following the decisions of the conference he proceeded with the establishment of a Palestinian army.

The work on the diversion of the Jordan waters proceeded apace both in Lebanon and in Syria, where a canal was dug to divert the waters of the Ḥazbani in Lebanon and the "Banias in Syria into the "Yarmuk River in Jordan and thus deprive Israel of most of the Jordan waters. Israel had on many occasions declared that either the closing of the Straits of Tiran or the diversion of the Jordan waters would be considered a *casus belli*. Israel reacted to the diversion operations in a controlled but very firm manner, and in a series of engagements, involving artillery and tank fire, obstructed the diversion operations from time to time. In November 1964 Israeli planes were in action against parts of the diversion works out of artillery range. The Arab states were unwilling to be drawn into an all-out war as a result of this Syrian initiative. Indeed, Israel’s activities brought the work to an end, for it became clear to the Arab leadership that pursuit of the diversion meant war with Israel.

The internal upheavals in Syria brought to the fore extreme segments of the Ḍāḥith party and the Syrians continued to send saboteurs to Israel through Jordan and Lebanon. King Hussein was at times unable or unwilling to control his own borders and prevent the incursions against Israel. In November 1966 the Israel Defense Forces struck at the village of al-Sam’ū in the Hebron hills, a center of terrorist attacks; this was their first reprisal raid carried out in daylight together with armored and air elements. Following this attack King Husse-

in’s regime appeared to be tottering and was bolstered by additional military aid from the United States.

Meanwhile Syrian provocations along the northern frontier continued, and infiltration into Israel from Syrian-based camps, via Jordan and Lebanon, continued. In April 1967 their interference with farming operations in the demilitarized zones on Lake Kinneret were stepped up, with increased shelling of Israeli border villages. On April 7, 1967, unusually heavy fire was directed by long-range guns against Israeli villages, and Israeli aircraft were sent into action against them. An air battle developed in which Syria lost six planes. Fearful of Israel’s reaction to their provocations, the Syrians tried to impress on the Egyptians their apprehension of an impending Israeli attack.

The Arab Threat
Early in May 1967 Nasser was at one of the lowest ebbs in his career. For five years his forces had been involved in the civil war in the Yemen without success against ill-armed tribesmen. He was in conflict with King Hussein, whom he described on May 1 as an “agent and slave of the imperialists.” His relations with Saudi Arabia were near breaking point, and he could make no headway in the struggle against Israel. Against this background came the urgent request for assistance from Syria, strengthened by the appearance in Cairo on May 13 of a Soviet parliamentary delegation, which informed the Egyptians that Israel had massed some 11 brigades along the Syrian frontier. The Soviets, with an embassy in Tel Aviv, were obviously aware that this information was untrue, but they were interested in pressing Syria’s case for political reasons of their own. The U.S.S.R. was particularly interested in strengthening the regime in Syria, which had afforded the Soviet Union her first major foothold in the Middle East, and, by influencing Egypt to threaten Israel from the south, gambled on strengthening Syria’s security and hence the regime in Damascus.

In a well-publicized mass demonstration, Nasser proceeded to move large forces through Cairo en route to Sinai. Within a few days, by May 20, some 100,000 troops, organized in seven divisions of which two were armored (with over 1,000 tanks), had been concentrated in Sinai along Israel’s border. A mass hysteria enveloped the Arab world. Nasser was again at the peak of his popularity, as one Arab government after the other volunteered support and was caught up in the enthusiasm of the impending strike against Israel. On May 17 Nasser had demanded the withdrawal of the UN Emergency Force, and the secretary-general of the United Nations, U Thant, acceded to the request without demur.

Once again, after ten years, Israel directly faced Egyptian forces along the frontier, and on May 22 Nasser declared the Straits of Tiran closed to Israeli shipping and to shipping bound to and from Israel. That such an act would be a declaration of war had been made clear by Israel. The major powers attempted to establish a naval force in order to implement the assurances made to Israel in 1957, but no force or action emerged. On May 26 Nasser told the Arab Trade Unions Congress that this time it was their intention to destroy Israel. On May 30 King Hussein flew to Cairo and signed a pact with Egypt placing his forces under the command of General Riad of Egypt; Iraq followed suit and signed a similar agreement. Contingents arrived from other Arab countries, such as Kuwait and Algeria. Israel was ringed by an Arab force of some 250,000 troops, over 2,000 tanks, and some 700 frontline fighter planes and bombers. The world looked on at what was believed by many to be the impending destruction of Israel, but no action was taken, and every effort was made by the Soviet and Arab delegates to the UN to minimize the seriousness of the situation and to permit developments to take their course. The Israeli government, headed by Levi *Eshkol, made urgent efforts to solve the crisis by diplomatic means, dispatching Foreign Minister Abba Eban to the heads of government of the Western great powers. The mission was in vain. A sudden change in French policy emerged and the traditional sympathy of the French government for Israel disappeared, against the background of a new French bid for Arab support.

The Israeli government was enlarged by the cooptation of representatives of the opposition factions Gahal (M. Be- gin and Y. Sapir as ministers without portfolio) and Rafi (M. Dayan as minister of defense) and constituted an emergency government of national unity. World Jewry rallied behind Israel, and a total identification with Israel, such as had never been known before, was evinced by the Jews. Massive financial support was mobilized, and thousands of volunteers besieged Israel’s embassies and consulates.

Israel Strikes Back: the Southern Front
The morning of June 5, 1967, found the Israeli armed forces, which under the command of Major General Yizâk *Rabin had been mobilized since May 20, facing the massed Arab armies around Israel’s frontiers. Israel’s citizen army had been quietly and efficiently mobilized to defend the country against the impending Arab attack, which every Arab medium of mass communication announced was imminent. That morning the Israel Air Force commanded by Brigadier General Mordekhai Hod undertook a preemptive attack designed to destroy the Arab air forces and their airfields. Flying in low, under the Arab radar screens, Israeli planes destroyed the air forces of Egypt, Jordan, and Syria and planes of the Iraqi air force. In less than three hours 391 planes were destroyed on the ground and an additional 60 Arab planes were destroyed in air combat, compared to Israel’s loss of 19 planes, some of whose pilots were taken prisoner. This brilliant air operation accorded Israel complete superiority in the air, and thereafter the Israeli Air Force was free to give close combat support in the ground operations which ensued.

At 8 A.M. on June 5, while the Israel Air Force was pounding Arab strength, Israel’s Southern Command, under Brigadier General Yeshayahu Gavish, moved its forces against the massed Egyptian armies in Sinai. (See Map: Six-Day War: Six-Day War)
Egyptian Front). The command, facing seven Egyptian brigades including some 1,000 tanks, was composed of three divisional task forces commanded by Brigadier General Israel Tal on the northern sector of the front, Brigadier General Abraham Yoffe in the central sector, and Brigadier General Ariel Sharon in the southern sector.

The breakthrough was achieved in the general area of Khan Yunis-Rafa by Tal’s forces. The brunt of the fighting was borne by S brigade, which exploited the breakthrough by overcoming very heavily defended positions at Sheikh Zuwayd and al-Jiradi and reaching El-Arish on the evening of June 5. The other main breach of the Egyptian front was effected jointly by the divisional task forces of Yoffe and Sharon. Yoffe’s group moved across a trackless desert area and introduced itself in depth into a position north of the line Nizzanah-Abu Aweigila in the rear of the Egyptian defensive positions. The morning of June 6 found this force firmly positioned in the area of Bir Lahfan and straddling the Abu Aweigila-Bir Lahfan road, in the rear of the main Egyptian positions. Meanwhile Sharon’s division carried out a perfectly executed night attack on the main Egyptian positions at Umm-Qataf covering the crossroads at Abu Aweigila. An infantry brigade marched across the dunes and attacked the positions from the north, while at the same time a parachute brigade landed by helicopter in the gun lines of the Egyptian force concentrated at Umm-Qataf and Abu Aweigila and destroyed them. By morning an armored brigade had passed through these positions, destroyed the armored elements in the area, and proceeded to break through in the direction of Jebel Libni. Meanwhile Israeli forces, following through the breakthrough at Khan Yunis, fanned northward and were engaged in bitter fighting with the Egyptian and Palestinian forces in the Gaza Strip. Following the capture of Deir al-Balah, parachute and infantry forces, after a fierce struggle, finally captured the Ali Munir Hill dominating the town of Gaza.

Jerusalem and the Jordanian Front – the First Day
On the morning of June 5 a message was sent by the government of Israel through General Odd Bull of the UN Truce Supervision Organization advising King Hussein that Israel had no designs on Jordan and that, granted quiet on the Israel-Jordanian border, no harm would befall his country. On the same morning, however, King Hussein decided to honor his pact with Nasser, and his forces opened up a heavy barrage along the armistice lines, shelling Israeli villages and towns, including the outskirts of Tel Aviv, and bombing a number of inhabited areas sporadically. (See Map: Six-Day War: Jordanian Front).

The major brunt of the Jordanian shelling was felt in Jerusalem. Heavy indiscriminate shelling caused many casualties in the city. At approximately 11 A.M. the Jordanian forces moved against Government House in a demilitarized area on the Hill of Evil Counsel in Jerusalem, used as UN Headquarters. Israel’s Jerusalem Brigade counterattacked and drove the Arab Legion out of this position. The Israeli forces maintained

the impetus of their attack, taking a number of positions, including the village of Sūr Bāhir on the road to Bethlehem. In the meantime a reserve armored brigade broke into the Jordanian positions on the north of the Jerusalem Corridor, the heavily fortified “radar” positions near Ma‘aleh ha-Hamishah and positions of Sheikh ‘Abdal-ʿAzīz. A further breakthrough was effected at Beit Iksa. These forces fanned out on the high ground north of the Jerusalem Corridor, taking the Jordanian positions at Biddū and Nabi Samwil, and reaching the main road from the north to Jerusalem at Tell al-Ful south of Ramallah.

On the night of June 5–6 an infantry brigade attacked the ‘Latrun enclave, captured the village and the police post, and advanced into the Judean Hills eastward along the Beit Horon road in order to join forces with the armored brigade at the gates of Ramallah. The Central Command, under Brigadier General Uzi Narkiss, was thus committed in Jerusalem, developing its counterattack toward the south of the city and an armored brigade followed by an infantry brigade from the coast taking the commanding features to the north of the corridor and moving eastward to cut the link of the Jordanian forces in Jerusalem with the north.
At this stage a reserve paratroop brigade under Colonel Mordekhai Gur, rushed to Central Command, was thrown into the battle on the night of June 5–6 without time for adequate preparation against the most heavily fortified Jordanian positions, which covered the northeast of Jerusalem and were manned by some two brigades. The fiercest fighting took place at the Police School and Ammunition Hill. The brigade suffered very heavy casualties before a breakthrough was achieved. It enabled the paratroopers to take the district of Sheikh Jarrah, the American Colony, and the Rockefeller Museum area, and to reestablish a direct link with the Israeli enclave of Mount Scopus, which had been isolated from Israel by Jordanian forces for the past 20 years.

Meanwhile Israel’s Northern Command, under Brigadier General David Elazar, attacked from the north with an armored brigade supported by infantry and broke into Jordanian-held territory on the West Bank along two axes of advance in the general area of Jenin. A heavy armored battle took place in this area, with the Jordanians reinforcing their armored forces from the Jordan Valley area. An Israeli counterattack finally smashed the Jordanian opposition. Israel’s forces of the Northern and Central Command were, after 24 hours of fighting, converging from the south, the east, and the north of the West Bank triangle in the face of very obstinate Jordanian opposition. In the meantime Israel’s naval forces under the overall command of Rear Admiral Shlomo Erel were operating on the approaches to Alexandria and a number of frogmen, who were later taken prisoner, succeeded in penetrating the defenses of that port and attacking a number of ships.

The Second Day’s Fighting
The second day saw the forces of Tal in the northern sector of the Sinai front fanning out from El-Arish, one force continuing along the coastal road westward toward the Suez Canal and another force, which moved southward after a tank battle to take the El-Arish air field, attacking the heavily fortified Egyptian positions at Bit Lahyan, already outflanked by Yoffe’s intrusion across the desert. From this point the forces under Tal and Yoffe continued with a coordinated attack, Tal’s task force advancing westward along the central road to the Suez and Yoffe’s moving southward. Sharon’s force continued to mop up in the general area of Umm-Qataf-Abu Aweisgila and southward toward Quseima. At the same time a reserve infantry brigade, strengthened by armored forces and paratroopers, launched an attack on the city of Gaza, which was taken after very heavy fighting. The Gaza Strip was now in Israel’s hands. Brigadier General Moshe Goren was appointed military governor of the Gaza Strip.

Meanwhile the historic battle for Jerusalem was being waged with all its ferocity. To the north of Jerusalem the reserve armored brigade continued the battle to clear the area between Jerusalem and Ramallah, a vital crossroads for the development of operations in the West Bank of the Jordan Kingdom. Tell-al-Fül was captured after an armored battle. Part of the brigade moved southward, taking Shuafat to the north of Jerusalem and the general area of Givat ha-Mivtar, which fell after a second attack was launched against it. The hilly ground north of the Jerusalem Corridor was now safely in the hands of the Israel Defense Forces, thus enabling them to develop their push northward. The town of Ramallah surrendered. Meanwhile the forces of the Northern Command maintained their pressure southward toward the center of the West Bank. An infantry force attacked from the west, taking Qalqilya and reaching al-Azzun. Jenin was finally taken by an armored force at noontime on June 6, and the armored brigade which captured the city proceeded southward, engaging in a major armored battle at the Qabatiyya crossroads. An additional Israeli armored force reached the Tubas-Nablus road and was engaged by Jordanian armor. At midnight the Israeli forces renewed their attack, taking Tubas and moving toward the Damia bridge on the Jordan River, thus sealing off the northern part of the West Bank from possible reinforcement from eastern Jordan. The Israel Air Force was by now free to give close ground support to the forces on all fronts, which it proceeded to do with considerable effect.

The Third Day – the Capture of the Old City
June 7 was to be one of the most historic days in the history of Jewish arms. That morning Gur issued his orders for the capture of the Old City of Jerusalem, which had by now been completely surrounded by Israeli forces occupying all the heights around the historic city. The Lions’ Gate, otherwise known as St. Stephen’s Gate, was chosen as the break-in point. A sharp battle took place there, the paratroopers, supported by a small armored force, breaking in at the gate. Despite the fact that Israeli forces had avoided attacking the holy places, the Arabs used the al-Aqsa Mosque as a sniping post and the entire area of the Temple Mount as an ammunition dump – despite pleas to the contrary from the Jordanian governor of Jerusalem and the Muslim religious authorities. The area was rapidly cleared with a minimum of damage to the holy places; at 10:15 A.M. the Israeli flag was raised over the Temple Mount and Jewry’s holiest site, the “Western ("Wailing") Wall, was once again in Jewish hands.

Meanwhile the armored forces which had taken Ramallah continued toward Jericho, while the unit advancing from the direction of Nablus met with those coming from Ramallah and fanned down toward the Jordan River. At the same time the Jerusalem Brigade continued southward, taking Bethlehem and Hebron, which surrendered without a shot being fired, and also retaking the area of the Ezyon Bloc, a group of Jewish settlements which had fallen to the Arab Legion in 1948. The entire West Bank was in Israel hands. Brigadier General Chaim Herzog was appointed military governor of the West Bank.

In the south Israeli naval forces sailing in the Gulf of Akaba took *Sharm el-Sheikh and opened the Straits of Tiran. Once again shipping was free to move through the straits to and from Israel. Meanwhile the race across the sands of Sinai
was coming to its close as the three Israel divisional task forces pushed forward in an attempt to seal off Egyptian armored forces in the center of Sinai and prevent their withdrawal to the Suez Canal. Tal’s forces captured the Egyptian military base of Bir Gifgafa and there withstood the last heavy armored counterattack on the part of the Egyptians. Yoffe’s forces captured Bir Hassneh and rushed for the Mitla Pass in order to seal it off in the face of the retreating Egyptian armored forces. A huge trap for Egyptian armor was now being created. The Egyptian defenses in the area of Quseima, Abu Aweigila, and Kuntilla collapsed before the advance toward Nakhl of Sharon’s forces, which proceeded systematically to destroy the Egyptian forces attempting to withdraw.

The Fourth Day – Israel’s Forces Reach the Suez
On the fourth day of fighting, Tal’s forces reached Qantara in the north and Ismailiya in the center and linked up along the bank of the Suez Canal, Yoffe’s forces advanced in a two-pronged attack toward the city of Suez and in the direction of the Bitter Lake, while another section of his forces moved south toward Res Sudar on the Gulf of Suez. Israeli forces fanned southward along the Gulf of Suez toward Abu Zenima where they linked up with parachute forces that had landed at Sharm el-Sheikh and were moving northward. Desperate Egyptian attempts to break out were broken by the armored forces and above all by the Israel Air Force, and the Mitla Pass was converted into one huge Egyptian military graveyard. In this area one of the largest battles in the history of armored warfare, with approximately 1,000 tanks participating, had resulted in a decisive Israeli victory. The Israeli flag was raised along the Suez Canal, the Straits of Tiran were open, and the Egyptian forces, which only four days before had been poised to destroy Israel, were in disarrayed retreat, having lost most of their air force and leaving behind vast quantities of equipment, including some 800 tanks. Meanwhile in the north the Syrian forces had been continuously shelling the Israel villages along the border and a number of infantry and armored attacks against Israel villages were beaten off.

The Fifth and Sixth Days – the Golan Heights Taken
The Syrian attacks increased in intensity and covered a large number of Israeli towns and villages. The Israel Air Force, now freed from other fronts and having already destroyed the Syrian air force, brought the gun positions under attack. On Friday June 9 at noon, the Israel Defense Forces attacked the Syrian army on the Golan Heights. (See Map: Six-Day War: Syrian Front). The main break-in point was chosen in the northern sector of the Syrian front in the area of Tall ‘Azaziyah. An infantry brigade and a reserve armored brigade bore the brunt of the attack against heavily fortified positions sited in tactically advantageous places, and the infantry forces dealt with one position after another in close hand-to-hand fighting, particularly fierce fighting taking place at Tell Fakhr. Losses were heavy on both sides. The armored force finally broke through the first line of defense, reaching the objective with two tanks in operation out of an entire battalion.

An additional armored force advanced and captured Banias, and while the breakthrough force now advanced rapidly toward Mansura and Kuneitra, a force under Brigadier General Elad Peled, which had previously been in operation on the West Bank, attacked in the area of Tawfiq; paratroopers were landed from helicopters in depth behind the enemy lines; an additional armored force moved up through Darbashiyya and at 2:30 P.M. on Saturday, June 10, 24 hours after the commencement of hostilities, the town of Kuneitra was in the hands of the Israel Defense Forces, which were now firmly established on the Golan Heights. The danger of Syrian shelling had been removed from the Israeli villages. General Elazar’s Northern Command forces ceased operation, following a UN-sponsored cease-fire, and established themselves along the lines reached.

by the advancing forces. The Israel Defense Forces were now established on the main highway leading to Damascus.

In six days the military force of the Arabs had been destroyed, their air forces were in ruins, hundreds of tanks were destroyed or captured, over 15,000 casualties had been inflicted on them, and almost 6,000 prisoners were in Israeli hands. Israel's military losses were 777 killed, 2,586 wounded, and a handful of prisoners, primarily pilots, all of whom were subsequently exchanged in return for the thousands of Arab prisoners. The Egyptian and the Syrian governments accepted a cease-fire agreement and UN observers were posted along the Suez Canal front and on the Golan Heights. Sporadic shooting took place, particularly along the neck leading from Qantara northward to Port Said, but by and large a period of comparative military quiet descended on the area. Nasser announced his resignation in a broadcast to the Egyptian people on June 9, but withdrew in the face of mass demonstrations calling for his return. In his resignation speech he made clear the part played by the Soviets in bringing on the war.

**After the Six-Day War**

Israel proceeded rapidly with the administration of the occupied areas and in a very short time had gained full control and had reestablished all essential services for the population. During the fighting approximately 100,000 Arabs fled from the West Bank to the East Bank, and following the occupation tens of thousands left voluntarily in order to join their families. The Israeli military policy was to allow the Arabs to govern themselves up to and including the municipal level as far as possible. The city of Jerusalem was reunited and the barriers of wire, mines, and hate fell as the people of two nations which had been divided for 19 years mingled once again, meeting and trading with each other. Gradually the government's open-bridges policy, as enunciated by the minister of defense, General Moshe Dayan, evolved, Arabs from the West Bank moving freely to and fro across the Jordan River and trade developing between the occupied territories and the Arab world, particularly in the field of agricultural supplies. A liberal military administration ruled in the areas. The scene was set for some form of accommodation between the Arab world and Israel: King Hussein visited the capitals of the world, and it appeared that there was a preparedness to discuss some form of peace or coexistence with Israel; but all decisions were postponed pending the convening of the Arab Summit Conference at Khartoum in August 1967.

Before this conference, however, President Podgorny of the Soviet Union and Marshal Zakharov, the Soviet chief of staff, visited Cairo and committed themselves to the resurrection of the Egyptian armed forces. President Podgorny later visited Damascus and made similar commitments, and a vast Soviet airlift began to replace almost two billion dollars' worth of equipment lost to the Israelis. Against this background, and doubtless influenced by it, the Khartoum Conference took place and the Arab policy of the "three noes" – no recognition of Israel, no negotiations with Israel, and no peace with Israel – was enunciated. Following this the prospects for a peaceful settlement waned in the face of Arab intransigence. The Palestine Liberation Organization was reorganized and Yahya Hammuda was named acting chairman of the Palestine Liberation Organization in place of Ahmed Shukeiri. All the Palestinian terrorists and guerrilla organizations joined this new federation, apart from the Popular Front for the Liberation of Palestine, an extreme left-wing organization that engaged in terrorist activities against civilian aircraft and Israeli institutions abroad.

A concentrated attempt was made to mount terrorist and resistance operations in the occupied areas and in Israel. These took two forms: indiscriminate terrorist activity, such as bombs in the Tel Aviv bus station, the Hebrew University cafeteria, or on the grounds of the American consulate in Jerusalem, in which innocent civilians and passersby were killed and wounded; and a guerrilla war to be mounted from bases mainly on the east bank of the Jordan River. Gradually the Israeli security services developed a counteroffensive and, although terrorist activities were perpetrated from time to time, the situation was kept well in hand, and after three years most of the terrorist rings involved, both in the occupied areas and in Israel, had been rounded up.

The Israel Defense Forces took special action against the terrorists based in Jordan and in March 1968 destroyed their main base in Karama, near the east bank of the Jordan, in a major attack. Following this attack the Palestinian guerrillas withdrew their main bases from the area near the border and adapted their training and mode of operation accordingly. From time to time the Israel Air Force attacked their bases and concentrations, but the main battles took place in the darkness of the nights along the Jordan River, very heavy casualties being inflicted on the infiltrators. By mid-1969 Yasser Arafat admitted to over 700 killed, in addition to over 3,000 guerrillas held as prisoners by Israel. By the introduction of improved operational methods and new technological devices, the Jordan River was closed off to the guerrillas, and once again the Israel Defense Forces scored a resounding victory. The guerrillas, thwarted in their attempts to penetrate into Israel-held territory, devoted more and more energy to inter-Arab affairs and gradually became a source of considerable danger to the established regimes, particularly in Jordan and Lebanon. Their activity led to a number of serious clashes between the authorities and their forces in both Jordan and Lebanon, resulting in an unstable political situation.

The main military effort against Israel after the war was mounted by Egypt. From time to time Egyptian forces violated the cease-fire arrangement along the Suez Canal. In October 1967, an Israeli destroyer, the "Eilat," was sunk while on patrol off the coast of Sinai by missiles fired by an Egyptian missile boat from the shelter of Port Said harbor. In retaliation Israel shelled the Egyptian oil refineries at Suez. Nasser announced a policy based on three phases: defensive, retaliatory, and offensive. In September–October 1968 he declared the opening of the retaliatory phase with heavy artillery bombardments along
the canal, inflicting heavy casualties on the Israeli forces. Israel retaliated both along the canal and by deep commando penetrations into Egypt, in the Nile Valley and along the coasts. At the same time Israeli forces developed the construction of “the Bar-Lev Line,” a series of fortifications along the length of the entire canal.

In March 1969 Nasser announced the opening of the offensive phase, declaring that the cease-fire no longer existed. The war of attrition that he waged against Israel escalated, and Israel’s casualties along the canal rose, reaching a peak of 30 killed and over 70 wounded in July 1969. Israel’s forces under the command of Lieutenant General Chaim Bar-Lev went over to the counterattack, choosing air power as its means of counteracting Egyptian superiority in artillery along the canal. Heavy air battles took place in the summer and autumn of 1969, when heavy casualties were inflicted on the Egyptian air force and control of the air was firmly established by the Israel Air Force. Between the end of the Six-Day War and the end of March 1970, 85 Egyptian planes had been shot down by Israel, and Egyptian losses were averaging eight planes to every one of Israelis. In September 1969 an armored Israeli force crossed the Gulf of Suez and sojourned over 20 hours on the Egyptian side, clearing a stretch of Egyptian military installations, including radar posts, some 31 mi. (50 km.) long. Following this action the Israel Air Force proceeded systematically to destroy Egypt’s radar-warning system and anti-aircraft defenses, including SA-2 missiles supplied by the Soviets. This battle continued until, in November 1969, Egyptian missile bases along the canal had been destroyed for the third time, and Israel continued to counterattack the Egyptian forces along the canal. In January 1970 Israeli planes began to attack similar missile sites and other military installations deep in Egypt, including the Cairo area. At the same time commando raids designed to keep the Egyptian forces off balance, such as that involving the temporary occupation of Shadwan Island in the Red Sea, took place. Israeli planes continued to attack positions in Egypt and particularly along the canal with comparative freedom, and Israel gained the upper hand in the war of attrition.

At this stage, in March 1970, it was announced that Egypt had been supplied with SA-3 ground-to-air missiles manned by Soviet personnel. The Soviet penetration, which had been going on for years in Egypt and in Syria and which had brought thousands of advisers and technicians to these two countries, now intensified. This policy was part of a general build-up of a Soviet presence in the Mediterranean that had been going on for a number of years and in which the Soviet fleet played a major part, attaining a strength of over 60 vessels, including two helicopter carriers, the Moskva and the Leningrad. Israel’s defense of the cease-fire lines and of her borders continued to be maintained. The administration of the occupied territories developed, and the first moves were made by Israel toward solving the Arab-refugee problem. Trade from the occupied territories to the Arab world reached IL 70,000,000 in exports in 1969, and imports from the Arab world to them topped IL 25,000,000. The Arab guerrilla forces had been fought to a standstill by Israel but had become an increasingly serious internal factor in the Arab countries. The Arab world was racked by revolution and unrest. Since the Six-Day War there have been revolutions or attempts at revolution in the Middle East in Iraq, South Yemen, Somalia, Sudan, Libya, and Saudi Arabia. Arab has fought Arab on the South Yemen-Saudi border, in Jordan, and in Lebanon, and Arab intransigence has continued to postpone any approach of peace.

In June 1970 the U.S. secretary of state William Rogers proposed that discussions be held between Israel, Egypt, and Jordan under the auspices of Ambassador Gunnar Jarring (as UN representative). On August 4 Israel accepted the Rogers proposal in order to achieve “an agreed and binding contractual peace agreement.” This agreement also initiated a cease-fire with Egypt, from August 7, for a period of three months, even though Israel regarded the original Security Council cease-fire resolution as still binding. Israel charged that Egypt with Soviet connivance had violated the cease-fire agreement by moving up missile sites into the Canal zone. The cease-fire was renewed by Egypt for a further period of three months on Nov. 5, 1970, and again for one month on Feb. 5, 1971. On March 7, 1971, President Sadat announced Egypt’s refusal formally to extend the cease-fire but did not resume fighting.

"SIXTUS IV (b. Francesco della Rovere; 1414–1484), pope from 1471 to 1484. In Italy the reign of Sixtus IV marks a high point of tolerance. The pope used Jewish physicians, and perhaps employed Jews for the collection, copying, and translation of Hebrew works. He refused to canonize Simon of Trent, allegedly a victim of Jewish ritual murder. It is clear, however, that the pope’s tolerance was offset, outside his own domains, by local hostility. A generous bull of 1479 concerning the Jews of Avignon was questioned and subsequently withdrawn. In November 1478 the pope issued a bull investing Ferdinand and Isabella with extraordinary powers to appoint inquisitors in all parts of Castile. In January 1482 he condemned the excessive harshness with which they were carrying out their task, in a letter to the king and queen. Six chief inquisitors were appointed, including the notorious Tomás de..."
*Torquemada (Feb. 11, 1482), and invested with discretionary powers (April 17, 1482). The next year, yielding to pressure from King Ferdinand, the pope placed Torquemada at the head of the *Inquisition in Castile and Aragon.

**SIXTUS OF SIENA** (1520–1569), Italian convert and anti-Jewish polemist. Sixtus was born in Siena. Shortly after his conversion he entered the Franciscan order and devoted himself to the study of the Bible. After a short while, he was charged with heresy and sentenced to die at the stake. Pope Pius *V saved him and transferred him to the Dominican order. In the Papal States Sixtus and another convert, Filippo Moro, preached the conversion of the Jews and incited the rabble against them. In 1559 he was instrumental in the burning of the Talmud in Cremona. On the other hand, he saved the Zohar from destruction, in the hope that mysticism and Kabbalah would turn the Jews to Christianity. His most important work was *Biblìotheca sancta ex praecipuis Catholicæ Ecclesiæ auctoribus collecta* (Venice, 1566), an introduction to the Bible which includes an alphabetical list of Jewish commentators.

[Menachem E. Artom]

**SIYYUM** (Heb. סיום; “conclusion”), designation for celebrations held on certain occasions.

1. **Siyyum *Sefer Torah* is** a consecration ceremony held at the conclusion of the writing of a new Torah Scroll. The last, and sometimes the first, verses of the Torah are written by members of the congregation (each congregant filling in one letter); the scroll is then solemnly sanctified with special prayers and songs. The celebration is based on R. Eliezer’s interpretation of 1 Kings 3:15 (Song R. 1:1 no. 9).

2. **Siyyum Massekhet or Siyyum ha-Shas** is the celebration held at the conclusion of the study of a Talmud tractate or of the whole Talmud. On this occasion the members of the study group recite special formulas of appreciation called סים (hadran), in which they give thanks for having had the privilege of studying Torah; they petition for the opportunity to be “to return again” to the study of this tractate. The hadran is chosen from rabbinic sources in the Talmud (Ber. 16b–17b) and is usually printed at the end of each tractate. On the occasion, a festive banquet is held (see *Së`udah*) at which the lecturer delivers a discourse on his novellae to the Talmud tractate that has just been completed (also commonly known as hadran). The custom of the festive banquet dates back to talmudic times (Shab. 118b–119a), and it is a mitzvah to participate. Study groups often plan, if possible, to complete a Talmud tractate on the day before Passover to allow the firstborn male to dispense with fasting on this day; partaking of the siyyum meal overrides the fast. (See *Fast- ing and Fast Days.*

3. In North African Jewish communities, especially in Algeria, a siyyum, called *Hag Siyyum or Se`ledat Yitro u-Moshe*, was yearly celebrated on the Thursday before the Sabbath on which the Torah portion *Yitro* (Ex. 18–20) was read in the synagogue. At the celebration (based on Ex. 18:12) the *Ten Commandments were solemnly read to the congregation and a festive banquet held at which chicken was served.

**SKALAT** (Pol. Skalat), town in Tarnopol district, Ukraine. Formerly within Poland, Skalat passed to Austria in 1772, reverting to Poland between the two world wars. There was a Jewish settlement in the town during the 16th century, and 686 Jews lived there in 1765. The Jewish population increased during the 19th century and numbered 3,256 (55% of the total) in 1890 and 2,791 (49%) in 1900. During the 19th century Hasidism had considerable influence in the community, but the Jews in Skalat had to contribute toward the maintenance of the German school, headed by Joseph *Perl, in Tarnopol. As a result of Skalat’s proximity to the Russian border, economic life came to a standstill following World War I and many Jews were compelled to leave. In 1921 there were 2,919 Jews (49.1%) living in the town. Between the two world wars they engaged in commerce, retail trade, and crafts. The influence of the national movement and Zionism increased.

[Shimshon Leib Kirshenboim]

**Holocaust Period**

By 1939 there were 4,800 Jews in Skalat. When the town passed to Soviet rule (1939–41), all independent political activity was suppressed, and as private enterprise was stifled, Jews sought employment in government service and cooperatives. When the Soviet–German war broke out on June 22, 1941, about 200 Jews in Skalat fled with the retreating Soviet army. The town fell to the Germans on July 5, and that day 20 Jews were murdered by German troops. On July 6, 1941, 3,000 victims were sent to Belzec. A Judenrat was set up, headed by Meir Nierler. He was accused of collaboration with the Germans in rounding up Jews for deportation. In the autumn of 1941, 200 young Jews were sent to a slave labor camp in Velikiye Borki. A group of Jewish women were sent for forced labor to Jagielnica. Early in 1942, 600 sick and elderly persons were rounded up and assembled in the synagogue, and from there taken to Belzec death camp. In an *Aktion* on Oct. 21, 1942, 3,000 victims were sent to Belzec, while 153 Jews were shot in Skalat itself. On November 9, in a second raid, 1,100 were rounded up and sent to the death camp. On April 7, 1943, about 750 persons were murdered and buried in mass graves near the town. Following this *Aktion* a resistance group was organized, headed by Michael Glanz. The young members collected arms, but the Germans, aware of the existence of the group, advanced the date of the next *Aktion*, for which the group was still unprepared. In this *Aktion*, carried out on May 9, 1943, 660 persons...
were killed. The city was then declared Judenrein. Only 400 Jews survived in the local labor camp. A resistance group was formed in the camp as well, and when the partisan units under General Kowpak began operating in the vicinity, 30 Jews escaped and joined their ranks. All but seven fell in fighting against the Germans. On July 28, 1943, the last of the Jews in the Skalat camp were murdered. About 300 Jews had found temporary refuge in the forests in the vicinity, but they were attacked by the Ukrainian bands led by Bandera, and only 200 survived the war.

There are three monuments to the Jewish community of Skalat: the Holocaust memorial to the memory of what was done to the Jews of the town; the cemetery memorial for the community that lived before the Holocaust; and the Skalat Holocaust memorial in the Holon cemetery, erected by the surviving families of the people of Skalat.

"SKARGA, PIOTR (Piotr Powecki; 1536–1612), Polish Jesuit preacher and antismite. Skarga was one of the leaders of the Uniatic Church in Brest (*Brest-Litovsk), which recognized papal authority. He supported the candidacy of King Sigismund III Vasa (1587–1632) for the Polish throne and upon the latter’s selection was appointed preacher in his court, a position which gave him great political influence. His opposition to any form of accommodation or compromise with Protestants was a factor in the abolition of laws of religious tolerance in 1606. His hatred of Jews found expression in his works Żywoty swiętych ("Lives of the Saints," 1579) and Kazania na niedzielę i Święta ("Sermons for Sundays and Festivals," 1597). Both books attempted to prove that Jews made sacramental use of Christian blood. Skarga’s venom and his closeness to the king were responsible for outbreaks against the Jews of Cracow more than once in the 1690s and encouraged the authorities to conduct *blood libel and *Host desecration trials. His hatred of Jews was particularly apparent in the plan of the Jesuits of Lemberg to seize the *Nachmanovich family synagogue and in litigations on this matter conducted in the presence of the king during the years 1603–08.

SKARZYSKO-KAMIENNA (until 1928 Kamienna), town in Kielce province, E. central Poland. A mine workers’ quarter in the 19th century, the locality received municipal rights in 1923. Jews settled in Kamienna in the 1890s with the development of industrial enterprises for steel production and tanning. A Jewish community was organized on the eve of World War I. In 1921 1,590 Jews constituted 20% of the total population. In addition to shopkeeping, they engaged in hide processing, shoemaking, mechanics, and dyeing.

Holocaust Period

Before World War II, 2,200 Jews lived in Skarzysko-Kamienna. The German army entered on Sept. 7, 1939, and immediately initiated anti-Jewish terror. On May 5, 1941, the ghetto was established. In October 1942 an *Aktion took place in which the town’s entire Jewish population was deported to the *Treblinka death camp and exterminated. After the liquidation of the ghetto a massive *Julag (Judenlager), a slave labor camp, was set up in the town. In January 1944 the camp officially became a concentration camp. It existed until August 1944, when all its inmates were deported to other concentration camps, mainly *Buchenwald in Germany and the *Czestochowa “*Hasag” camp in western Poland. Altogether, about 15,000 Jewish prisoners passed through this camp, but over 10,000 of them perished there. Many prisoners died of hunger and disease due to the subhuman conditions prevailing in the camp. Others were murdered by the SS men on the camp’s staff. A resistance organization active in the camp smuggled out a small number of prisoners for guerrilla activities, but preparations for a general armed revolt failed. After the war the Jewish community in Skarzysko-Kamienna was not reconstituted.

SKEPTICS AND SKEPTICISM. Skepticism in philosophy refers to the principle that all knowledge, whether sensory or conceptual, is subject to the limitations of the human mind and, thus, unreliable. No certain or absolute knowledge can be attained by man. This position was advanced by such Greek schools as the Sophists and the Pyrrhonists. They did not, however, consider revelation. In religious philosophy some thinkers, while accepting the skeptical view concerning knowledge acquired by natural means, have held that certain knowledge can be attained through the supernatural act of revelation. But others, while denying the skeptics’ claim about natural knowledge, have found the claim of certain supernatural knowledge open to unresolvable doubt, requiring either rejection or suspension of judgment regarding its validity.

Although medieval Jewish thinkers offered varied interpretations of Judaism, none subscribed to extreme skepticism about man’s ability to acquire certain knowledge naturally, though the historical forms of this skepticism were known to them (cf. Saadiah Gaon, Emunot ve-De'ot, ch. 4). All affirmed the existence of positive knowledge upon which the truths of Judaism, however understood, could be based. Joseph ʿAlbo epitomized this viewpoint in his specific rejection of philosophic skepticism. Moreover, unlike such medieval Christian mystics as Peter Damian (1007–1072) and Bernard of Clairvaux (1091–1153), who minimized the possibilities of natural against supernatural knowledge, most Jewish philosophers
were confident of the validity of human sensation and thought. This confidence generally exceeded even that of such Christian scholastics as Thomas Aquinas, who affirmed natural knowledge but still denied man's capacity to apprehend fully theological truth. *Saadiah Gaon expressed the general Jewish viewpoint in his discussion of the sources of knowledge in E embrunot ve-Dėot (Introduction: 5). Of the four sources Saadiah enumerates, three are natural: sense perception, self-evident rational knowledge, and inference based on logical necessity; the fourth is reliable tradition. Saadiah further asserts that the theological truths of natural knowledge and revelation are fundamentally the same.

*Judah Halevi and Ḥasdai Crescas came closest among Jewish thinkers to skepticism about naturally acquired knowledge. But natural knowledge to medievalists consisted of neoplatonic Aristotelian metaphysics and physics, and Judah Halevi and Crescas denied the adequacy of these theories as ultimate theological truths. However, in their refutations of neoplatonic Aristotelianism, Judah Halevi and Crescas relied on reason and assumed the validity of empirical knowledge.

The question whether any medieval Jewish thinkers were skeptical of revelations as a source of knowledge cannot be unequivocally determined. This issue arises particularly in the thought of *Maimonides and *Levi b. Gershom. Maimonides specifically rejected the opinion that non-Mosaic prophecy arose supernaturally, but his view of Mosaic prophecy was deliberately obscure. From a number of veiled remarks, Maimonides' view appears to be that Moses' prophecy arose naturally as well. Levi b. Gershon's position seems, in the main, similar to that of Maimonides.

[Alvin J. Reines]

**SKIDEL,** town in Grodno oblast, Belarus; in Poland-Lithuania until 1785, and from 1807 incorporated into Russia. Jews settled in Skidel in the mid-18th century and later became the majority in the town. In 1765 there were 463 Jews in Skidel and nearby settlements. The number had grown to 1,080 in 1847; 2,222 (80% of the total population) in 1897; 2,231 (76.7%) in 1921; and about 2,800 (c. 80%) in 1931. Jews earned their livelihood by trading in grain and timber, in the retail trade, crafts, and tanning, especially from the end of the 19th century. Jewish craft guilds were established in Skidel as early as the beginning of the 19th century and political and trade unions (Bund, Po'alei Zion, etc.) at the beginning of the 20th. A Zionist movement was established in 1898. In the fighting in the area during the retreat of the Russian armies, much Jewish property was destroyed. At the end of World War 1, when the Germans left in fall 1918, a town council and committee of organized Jewish workers functioned independently for a time.

During the interwar period, under Polish rule, all the Jewish parties were active in Skidel. In the municipal elections of 1927, eight Jewish representatives gained seats, two-thirds of the municipal council. A Jew was elected mayor. Jewish institutions included schools of "Tarbut and of the Central Yidnish School organization (CYSHO). The community came to an end in the Holocaust.

After World War 1 Skidel became part of Russia again, and all traces of its past as a Jewish shtetl rapidly disappeared. The town center, which had featured yeshivas, synagogues, factories, hospitals, and homes, was never rebuilt. The remaining townspeople dismantled the Jewish cemetery and used the stones to build their homes. Skidel became the region's "Red City," or regional Communist Party headquarters. In the early 2000s, it had a train station, a rebuilt Catholic Church, a sugar refinery, a poultry factory, and an agricultural commune.

[Dov Rubin / Ruth Beloff (2nd Ed)]

**SKIIERNIEWICE,** town in Lodz province, central Poland. Jews settled there at the end of the 18th century. M. Balaban mistakenly attributed a charge of *Host desecration in 1562 as occurring in Skiernievice (in his Historia Żydów w Krakowie i na Kazimierzu, 1 (1931), 156). There were 73 Jews residing in Skiernievice (7% of the total population) in 1808, and 216 (11%) in 1827. At first, up to about 1850, the Jews there buried their dead in the Jewish cemetery at Lowicz. Between 1827 and 1863 most of the Jews were allowed to reside only within the limits of a special quarter. An organized community was established in 1850, and some years later a large synagogue was erected (in 1970 the building was in use as a municipal club). Jews engaged in small trade and crafts, such as weaving, shoemaking, and tailoring, in transportation, horse dealing, and services to the local Russian army garrisons. In the second half of the 19th century the influence of Ḥ asidism, mainly of Gur (see Ḥ asidism, of *Kovno) and *Aleksandrow, grew among the Jews of Skiernievice. In 1886 the *Admor of Worky, Simon Kalish, moved his "court" to Skiernievice. At the end of the 19th century the rabbi of the town was Meir Jehiel ha-Levi Holzstock, later *Admor of Ostrowiec. The Jewish population numbered 766 (29% of the total) in 1857; 2,898 (36%) in 1897; and 4,333 (33%) in 1921. At the beginning of World War 1, in 1914, most of the Jews were expelled from Skiernievice by the retreating Russian army, and the refugees did not begin to return to their homes until 1916. After the end of the war branches of the Zionist parties, the *Bund, and *Agudat Israel were organized in the town.

[Arthur Cygielman]

**Holocaust Period**

On the outbreak of World War 11 there were about 4,300 Jews in Skiernevice. The German army entered the town on Sept. 8, 1939, and persecution of the Jewish population began. In 1940 over 2,000 Jews from Lodz and the towns in its vicinity were forced to settle in Skiernevice, whose Jewish popu-
lation grew to about 6,500. In December 1940 a ghetto was established, but after two months all the Jews were ordered to leave and settle in the “Warsaw ghetto. By the beginning of April 1941 there were no Jews left in Skierneiwice. They shared the fate of Warsaw Jewry.

SKINK (Heb. שֶׁקֶן, *homet*), a reptile of the family Scincidae, of which six genera are found in Israel. These differ greatly in their bodily structure, some lacking legs entirely and resembling snakes, while others have atrophied feet or resemble the lizard. The *homet* is included among the reptiles that are forbidden as food and render unclean men and articles which come into contact with their carcasses (Lev. 11:30). The identification of the *homet* with the skink is based on the rendering of the Targum as well as on its description in rabbinical literature. Some commentators identify the *homet* with the snake, but it is highly improbable. The *homet* is enumerated among other species of reptile, and in addition it is difficult to accept that the stringent laws of ritual uncleanness would apply to snakes, which abound in Israel, and some of which are so small that it is difficult to avoid contact with them.

**SKIRBALL CULTURAL CENTER**. The Skirball Cultural Center was established in Los Angeles in 1996 to promote Jewish heritage and American democratic ideals. Originally conceived in the 1980s as an offshoot of the Reform movement’s Hebrew Union College – Jewish Institute of Religion, the center was founded by Rabbi Uri D. Herscher (1941–), then the College-Institute’s executive vice president and dean of faculty, who was elected president and chief executive of the center upon its separate incorporation in 1995. Named for one of its early donors, noted philanthropist Jack H. Skirball, the center was designed by Israeli-Canadian architect Moshe Safdie. The campus includes a museum, a performing arts center, conference hall, classrooms, libraries, courtyards, gardens, and a café. In its first decade, the center attracted nearly five million visitors, becoming one of the world’s major Jewish cultural institutions.

When Herscher transferred his administrative office to the Los Angeles branch of the College-Institute in 1979, the city was emerging as the second largest Jewish community in the United States and third largest in the world. Yet surveys showed that only one in five Jews belonged to a synagogue or any Jewish organization. The trend toward assimilation was so pervasive that rates of Jewish observance were barely higher among affiliated Jews than among the unaffiliated. Herscher immediately sought to raise the profile of the College-Institute. In 1981, he persuaded its board of governors “to explore the concept of establishing a cultural center to celebrate American Jewish life.” The celebratory aspect of the project was crucial to Herscher’s concept: American Jewry, the most populous, powerful, and prosperous of all Diaspora communities, had yet to appreciate its own accomplishments and promise; nor had it fully acknowledged its debt of gratitude to the nation whose hospitality and goodwill knew no precedent in Jewish history. While insisting that remembrance of the Holocaust and solidarity with the State of Israel were essential – Herscher himself was born in Tel Aviv, to parents whose families were decimated by the Nazis – he argued that Jewish life in America, if it were to survive, required its own foundation: a renewed acquaintance with ancestral Jewish values and an inclusive vision of American society. He came to envisage the center as a new institutional paradigm distinct from the synagogue or the Jewish community center: a “tent” where Jews and non-Jews alike would be welcome. In Los Angeles, “the Ellis Island of the twenty-first century,” he saw the ideal home for such a venture. Inspired by his own formative experience as a 13-year-old immigrant, when the United States accepted him and his family with open arms, he conceived of the center as a way to “return that embrace.”

Herscher’s project found an early champion in Jack Skirball, a Reform rabbi whose later success as a film producer and real estate investor earned him a considerable fortune. A generous contributor to Hebrew Union College, Skirball underwrote the relocation of its museum collection from Cincinnati to Los Angeles in 1972. Skirball believed that the museum’s Judaica artifacts could function as “storytellers,” visual objects that could engage an audience less attuned to purely textual learning. Herscher’s vision of a cultural center and Skirball’s hopes for the museum coalesced in the notion of a core exhibition in which the artifacts would tell the story of the Jews from their biblical origins to their integration into present-day American life. The center would also present an array of cultural programs: changing exhibitions, concerts, lectures, theater, dance, literary readings, symposia, film, and educational activities for adults and children. This multivalent approach, Herscher and Skirball believed, would have the best hope of attracting those who had abandoned existing Jewish institutions.

Skirball was also instrumental in opening doors to the wider community, introducing Herscher to corporation executive Franklin D. Murphy, a former chancellor of UCLA. Murphy viewed the prospect of a Jewish cultural center as a salutary expression of American democracy: a “stitch in the fabric” of pluralism, strengthening society as a whole. With Murphy’s endorsement, Herscher succeeded in garnering major pledges from the Ahmanson, Kress, and Times Mirror Foundations, the Getty Trust, and others. Remarkably for an avowedly Jewish project, nearly one-third of the center’s capital funds derived from non-Jewish sources. Another key
source of support was Robert D. Haas, then president of the Levi Strauss corporation and a personal friend of Herscher’s from their college days at U.C. Berkeley. The Levi Strauss family and its many branches were renowned for their philanthropy in San Francisco, where Jewish and American civic virtue had long been seen as fully compatible. With Haas leading the way, San Francisco Jewry’s leading families responded generously to Herscher’s appeals for support.

Although the College-Institute’s board of governors finally approved the project, it was on the daunting condition that Herscher raise the funds independently. Through singular gifts of persuasion and unremitting efforts over 15 years, he succeeded. A 15-acre site, adjoining a major freeway and linking the two centers of Jewish population in West Los Angeles and the San Fernando Valley, was acquired in 1983, and Safdie was engaged as architect the following year. Morris Bergreen, a prominent New York attorney, carried forward the leadership of Jack Skirball, who died in 1985, succeeding him as chairman of the Skirball Foundation. Construction began in 1990, and the center opened six years later. Its board of trustees, consisting of both Jews and non-Jews, was chaired by renowned Los Angeles attorney Howard I. Friedman, a former international president of the American Jewish Committee. It also included Bergreen and Audrey Skirball-Kenis, Skirball’s widow.

The core exhibition, titled “Visions and Values: Jewish Life from Antiquity to America,” incorporated the museum’s artifacts, artworks, documents, photographs, and sound recordings in a sequence of gallery displays and multimedia installations. Predicated on the concept of a journey through history, the exhibition described how Jews adapted to different civilizations, periodically reimagining themselves while retaining their age-old ethics and beliefs. Special emphasis was laid on the consonance of those ethics and beliefs with American democratic principles: Hanukkah and Passover were associated with constitutional commitments to religious liberty and political freedom; Purim with the assertion of minority rights; Sukkot with Thanksgiving; the Hebrew prophets with the founding fathers; the decalogue with the Declaration of Independence. The emblem of the exhibition was a Hanukkah lamp, each of its branches surmounted by a miniature Statue of Liberty.

In its array of public programs, the center sought the same alloy of visions and values, reflected by the institutional collaborations that produced two of its changing exhibitions: “Freud: Conflict and Culture” (2000), organized in conjunction with the Library of Congress and the Getty Trust; and “Einstein” (2004–05), presented jointly by the American Museum of Natural History, the Hebrew University, and the Skirball Cultural Center. Complementing its schedule of exhibitions, the center presented a diverse range of performing arts, lifelong learning classes, and an active program of outreach education to local youth. Designed to acknowledge and engage the multiplicity of cultures represented in Los Angeles, the program grew to accommodate some 50,000 students annually, the vast majority from the public school system.

In the early decades of the 20th century, Horace Kallen suggested that Jewish culture, properly appreciated, constituted a crucial aspect of America’s national history and character, with unique potential to revitalize the nation’s democratic possibility. His contemporary Mordecai Kaplan argued that in the open society of the United States, the humane values of Jewish civilization were more likely to prevail than the narrow credal and theological claims of past generations. Nearly a century later, the Skirball Cultural Center effectively revived, or perhaps recast, these hopes for an American-Jewish synthesis. Under Herscher’s leadership, the center’s facilities, programs, and endowment grew rapidly. It broadened its vision as well: in 2000 its mission statement was expanded to address “people of every ethnic and cultural identity.” Citing the example of Jonah at Nineveh, Herscher contended that the prophetic ideals of Judaism applied both within and beyond the Jewish community. The center’s ultimate goal, he said, was “to take the walls down completely.”

[Robert Kirschner (2nd ed.)]

SKLARE, MARSHALL (1921–1992), U.S. sociologist. Born in Chicago, Sklare received his M.A. from the University of Chicago (1948) and his Ph.D. from Columbia University (1953). Sklare was a study director in the Division of Scientific Research of the American Jewish Committee (1953–66), and from 1966 until 1970 he was professor of sociology at Yeshiva University.

Sklare directed numerous research projects under the auspices of the American Jewish Committee, chiefly using the techniques of survey research. From 1970 to 1990 he was professor of sociology at Brandeis University, where he founded the Cohen Center for Modern Jewish Studies, the first research center devoted to social scientific study of contemporary American Jewry. Sklare also served as president of the Association for the Social Scientific Study of Jewry (1973–75). In his memory, the association established the annual Marshall Sklare Award for outstanding scholarship in that field.

[Werner J. Cahnman / Ruth Beloff (2nd ed.)]

SKLAREW, MYRA (1934– ), U.S. poet, essayist, short fiction writer, and educator. A Maryland native, Sklarew was a
professor of literature at American University, where she also co-directed its MFA in Creative Writing. Her published writing focuses on Jewish themes, including her maternal grandmother’s family’s experiences in small villages in Lithuania, the Holocaust, and the relationship between the neuroscience of memory and Holocaust testimony. She is the recipient of numerous awards for poetry and fiction and was the president of the artist community Yaddo. Her work has been recorded for the Library of Congress’s Contemporary Poets’ Archive.

Sklarew trained as a biologist at Tufts University and worked in genetics research and neurophysiology at Cold Spring Harbor Laboratory and Yale University School of Medicine. Poetry courses and seminars encouraged her lifelong interest in writing and the murder of family members who had remained in Lithuania infused her life as well as her work. Her frequent journeys to Lithuania to interview bystanders, witnesses, and survivors are reflected in her poems in Lithuania (1995) and The Witness Trees (2000). Widely published in a diverse group of journals, Sklarow’s eight books also include In the Basket of the Blind (1975), From the Backyard of Diaspora (1976), Blessed Art Thou, No-One (1982), The Science of Good-byes (1982), The Travels of the Itinerant Freda Aharon (1985), Alamira (1987), Like a Field Riddled by Ants (1988), Eating the White Earth (1994), and Over the Rooftops of Time (2003).

[Myrna Goldenberg (2nd ed.)]

SKOLE, city in Lvov district, Ukraine; formerly within Poland, passed to Austria in 1772, and reverted to independent Poland between 1919 and 1939. A Jewish community existed in Skole from the 18th century. There were 1,063 Jews in the city and surrounding villages who paid the poll tax in 1765. In the second half of the 18th century Jews in Skole imported wine from Hungary. In the second half of the 19th century many Jews in Skole earned their livelihood in the timber trade, wood processing, manufacture of building materials, commerce in agricultural produce, and transportation. Jewish workers were employed in the local match factory. When Skole became a summer mountain resort toward the end of the 19th century, the Jews there also derived a livelihood in occupations connected with the holiday season. A summer camp for Jewish children of Lvov was situated there. The community numbered 1,338 (65% of the total population) in 1880; 2,095 (61%) in 1900; 3,099 (48%) in 1910; and 2,410 (40.2%) in 1921. In the period of independent Poland, after World War 1, the Jews in Skole were impoverished, and received support from Jewish relief funds. There was an active communal and cultural life. The Zionist movement gained many adherents among the youth.

In the 1930s antisemitism grew rampant in the area. In 1938 there were 2,670 Jews in Skole. Commercial and community life were brought to an end in September 1939 when Skole was annexed to the Soviet Union. The Hungarian army arrived in July 1941; in August, the Germans took over and set up a Judenrat. In September 1942 most of the Jews were sent to labor camps. The Jews of Skole were ultimately executed in June and August of 1943.

[Shimshon Leib Kirshonboim / Ruth Beloff (2nd ed.)]

SKOPLJE (Macedonian Скопје; Turkish Üsküb; Heb. יקופ), capital city of the Former Yugoslav Republic of Macedonia. In view of its favorable trade situation and the fact of Jewish settlement at nearby “Monastir, it is likely that Jews already lived in Skopje during Roman times. Documentary mention of Jews there occurs during the time of the medieval Serbian empire. The first synagogue known to exist dates to 1366. A charter (povelja) of Czar Stephan Dušan speaks of lands leased to Jews, and another one refers to Jews as “possessions of the Empire,” granted to a monastery. In the 16th century, Jews expelled from Spain arrived and settled, and were joined in the 17th century by numerous Marranos from Holland and elsewhere. There was possibly a Jewish cemetery in the 19th century, but one is definitely known of in the 16th century, when a cortijo (“communal yard”) existed in 1548. In reality it was a small Jewish quarter consisting of two-story houses built around the kurtiz (court-patio in local Judeo-Spanish). The private courtyards contained workshops of tanners and smiths and storage rooms for wool which was exported to Ioannina, Greece, and Venice, as well as home-produced goods.

By the end of the 17th century Skopje had two distinct synagogues: di abasho (downtown), known as Beth Aron, and di ariva (uptown), known as Beth Yaacov. The town and its Jews suffered from many fires, epidemics, and foreign occupations. In 1689 Skopje had 60,000 inhabitants, 3,000 of them Jews. In the 18th century Jews were cheese manufacturers, miners, spinners, peddlers, dealers in cotton, wax, etc. During the 19th century there was a great influx of Serbians, who pushed the Jews, Walachians, and Armenians out of the commercial trade. The Jewish community stagnated and its members reverted mainly to money lending and changing, brokerage, and sub-proletarian occupations such as fruitmongering, street peddling, etc. The Yugoslav regime did not bring any notable change in the economic and social situation of Jews, which was rather backward and pitiful, their number reaching 4,000 by 1940. The pre-Holocaust Skopje kehillah was a traditionalist Sephardi community, with Judeo-Spanish as the common language – which was even used in some prayers – and a lively Judeo-Spanish folklore.

During the Ottoman and earlier Serbian rules, Jews had to pay a special tax, in addition to the haratch (poll tax). Jewish sources mention a mas ha-beqadim (clothes tax for the army), and the gabelle was an internal Jewish duty, an impost (excise) paid to the community for kasher meat. The first of the relatively few known rabbis was Aaron Perahyah ha-Kohen. R.
Joseph b. Leb of Salonika complained in a responsum of 1560 about the ignorance of Skopje Jews, sending them a teacher, R. Aaron Avuya, who founded a *talmud torah*. Later rabbis were Hayyim Baruch, Hayyim Shabbetai, and Samuel Jacob Kalderon. The kabbalist Nehemiah Hyya Hayon, author of *Moda’ah Rabbah*, taught in Skopje in 1689. According to some sources, there was a Karaite group in the city for a while, but it disappeared rapidly.

**Holocaust Period**

In April 1941 Skopje, and the whole of Yugoslav Macedonia, was occupied by the Germans, who later put their Bulgarian satellites in control. Jews were immediately subjected to humiliations, plundering, and individual murders by German and Bulgarian troops, and Jewish businesses were quickly liquidated. Jewish refugees from Serbia – after the capitulation of Yugoslavia – were sent back north and murdered at Jajinci, near Belgrade. Persecutions and expropriations went on throughout 1942. Following an agreement reached between Danecker and Delev (see *Bulgaria*), mass arrests were begun. Jews from Skopje, together with their brethren gathered in from all over Macedonia – 7,215 in all – were brought to the ill-famed tobacco factory. They were left there without food or sanitary arrangements for four days and between March 22 and March 29 transported to Treblinka. None of them survived. A few Skopje Jews escaped, spending the war years as prisoners of war in Germany. Some of them, like Zionist leader Joseph Bekhar, reached Israel after the Holocaust. After the war a small Jewish community was reconstructed, almost none of whose members belonged to the prewar kehillah.

In the early years of the 21st century around 40 Jewish families were living in the city, with a prayer house installed in the community’s former offices. The cemetery was restored.

[Leon Nemoy]

**SKULNIK, MENASHA** (1892–1970), U.S. comedian. Born in Warsaw, Skulnik went to the U.S. in 1913, and toured with Yiddish stock companies in the U.S., South America, and Europe. From 1918 he acted in Yiddish musical shows in the theaters on New York’s Second Avenue, becoming known for his portrayal of the little guy against the world. He played Uncle David in the radio serial *Rise of the Goldbergs* (1931–50) and subsequently starred in his own television program, *Menashe the Magnificent*. From 1953 he appeared in a number of plays on Broadway.

**SKUODAS,** city in N.W. Lithuania. In the 17th century the community of Skuodas was subject to that of Kedainiai and belonged to "the state of Zamut." Occasionally the state commission assembled in Skuodas, and in 1766 576 Jews paid the poll tax there. In 1847 the number of Jews in the city was 1,872; in 1897 there were 2,292 (60% of the total population). A synagogue existed from the early 18th century, housing an elaborate wooden ark. When an independent Lithuania was established in 1918, the Skuodas community also had a Hebrew-school system, including a secondary school. The cutting off of the sources of trade in Luebeck and Memel, however, contributed to the decline of the community and to a move to the larger cities. In 1921 there were 385 Jews in Skuodas; in 1939 there were approximately 250, all of whom were killed by the Nazi occupation forces.

[Yehuda Slutsky]

**SKVIRA,** city in Kiev oblast, Ukraine. Skvira was an ancient town which was completely destroyed at the end of the 16th century. In 1736 it was mentioned as a village leased by a Jewish lessee. In 1789 there were 37 Jewish houses out of a total of 197 houses counted that year. In 1847 Jews registered in Skvira numbered 2,184. During the 1840s the *zaddik* R. Isaac Twersky (of the Chernobyl dynasty) settled in Skvira. The Jewish community was primarily engaged in the trade of grain and other agricultural products. In 1897 there were 8,910 Jews (49.5% of the population) in Skvira. During the Civil War, Jews suffered

severely from belligerent armies and during the pogroms which frequently occurred, several hundred Jews were killed. The number of Jews decreased considerably after World War I and in 1926 there were only 4,681 Jews (33.6% of the population) remaining. Under the Soviet regime the religious and communal life of the Jews of Skvira was dissolved. The Germans entered the town in September 1941. Almost 1,000 Jews who did not succeed in escaping were murdered. The Jewish population was estimated in the late 1960s at about 500. The "Twersky hasidic line emanating from Skvira eventually settled in the U.S. where they founded their own township called New Square (Skvira) in Rockland County, New York.

SLANDER. The only instance of defamation in biblical law for which a penalty is prescribed is that of the virgin (Deut. 22:19) – and that defamation is in the nature of a matrimonial stratagem (cf. Deut. 22:16–17) rather than of a specifically defamatory offense. Still, in order to invest the prohibition of defamation with the greatest possible weight, talmudic jurists interpreted the biblical injunction, "Thou shalt surely rebuke thy neighbor, and not bear sin because of him" (Lev. 19:17), as meaning that you may reprove your neighbor so long as you do not insult him; but if you make him blush or turn pale from shame or fury, then you have incurred guilt because of him (Sifra, Kodshim 4:8; Ar. 16b). Other biblical exhortations – like "Thou shalt not go up and down as a tale bearer" (Lev. 19:16), or "Thou shalt not utter a false report" (Ex. 23:1), or "Thou shalt not hate thy brother in thy heart" (Lev. 19:17), or "Thou shalt not take vengeance, nor bear any grudge" (ibid., 18), and "Love thy neighbor as thyself" (ibid.) – have all been summoned to help the investigation of slander with biblical authority (Israel Meir ha-Kohen of Radin, Ḥafez HaYyim, Petihah). Partial prohibitions of insult, such as "Thou shalt not curse the dead" (Lev. 19:14), or "Thou shalt not put a curse upon a ruler of thy people" (Ex. 22:27), were interpreted as particular instances of a general prohibition against insulting (Sifra, Kodshim 2:13; Mekh., Mishpatim 19; Shev. 36a).

Though regarded as the violation of express biblical negative injunctions, slander is not punishable even by "flogging, because mere talk does not amount to an overt act, and only such acts are punishable (Yad, Sanhedrin 18:2). More severe are the moral and religious admonitions against slanderers: "even though the slanderer is not flogged, his sin is very great indeed, and the sages have said that he who makes another's face turn pale in public, has no share in the world to come" (Avot 3:12). "Therefore everybody must be very careful not to abuse another man in public, not to call him a name which puts him to shame, nor to say anything that might embarrass him" (Yad, De'ot 6:8). Some scholars went so far as to put the slanderer on the same footing as a murderer, because both "shed blood" (_bm 58b); and all slanderers are characterized as wicked and stupid (Yad, Hovel u-Mazzik 3:7).

It would appear that mere moral exhortations were found insufficient to curb the mischief. A later source provides specific sanctions as follows: A person calling another a slave, shall be placed under a ban (niddui; see *herem); a person calling another a bastard (*manzzer) shall be liable to 40 stripes; and if a person calls another wicked, the other may interfere with his livelihood (Kid. 28a). Attempts were made to interpret these particular sanctions as talionistic (cf. Tos. and Beit ha-Behirah, Kid. 28a); but it is not impossible that they simply reflect decisions taken in cases which had actually occurred. The sanction of niddui for calling a man a slave has been codified (Yad, Talmud Torah 6:14: Sh. Ar., yD 334:43); and as for the administration of disciplinary floggings (makkat mardut), the rule was eventually held to be subject to local customs: where customary local regulations provided for different sanctions for slander, the customary rule prevailed (Rosh, rep. 1013; Rema, ḤM 420:41). In fact, disciplinary floggings appear to have remained in most places the most common punishment, at least for graver cases of slander (see e.g., Maharshal, rep. nos. 11, 28, and 59; Yam shel Shelomo BK 834, 48, and 49). In other places, and in lighter cases, fines were imposed – and we often find fines substituted for niddui or for floggings at the option of the insulted person who had first to be appeased (Tur, ḤM 420:33 and Beit Yosef thereto).

A particular instance of punishable slander is insulting a scholar. A person convicted of having insulted a scholar is liable to niddui as well as to a fine of one litra of gold awarded to the aggrieved scholar (Yad, Talmud Torah 6:12). This preferential treatment of scholars left its traces also in the civil law: while a person is not liable in damages for mischief done by word of mouth only (bk 91a; Yad, Hovel 3:5; ḤM 420:39), where a scholar was put to shame, he is awarded 35 gold dinars by way of fine (bk 91b; Yad, Hovel 3:5; Rashba, rep., vol. 1 no. 475; Ribash, rep., nos. 27, 216, and 220). The civil and criminal remedies are, of course, overlapping and identical. The insulted scholar may always forgo the fine (Yad, Hovel 3:6). The remedy allowed to "scholars" was soon extended to all pious people (Rosh, rep. 15:10; Tur, ḤM 420:32), and eventually became obsolete when remedies for slanders were no longer confined to particular classes of persons.

Another particular instance of slander is that of widows and orphans. "Mistreating" widows and orphans means, literally, causing them distress; if you cause them distress by insulting them, God will heed their outcry as soon as they cry out to Him; His anger will blaze forth and He will put you to the sword, and your wives shall become widows and your orphans. "Mistreating" widows and orphans means, literally, putting a man under a ban (Yad, Kid. 3:6). The remedy allowed to "scholars" was soon extended to all pious people (Rosh, rep. 15:10; Tur, ḤM 420:32), and eventually became obsolete when remedies for slanders were no longer confined to particular classes of persons.
are dicta to the effect that speaking the truth cannot constitute slander (Rema, ḤM 420:38), the better view seems to be that it is irrelevant whether the slanderous words were true or not (Israel Meir ha-Kohen of Radin, Hafez Hayyim 1:1). In the State of Israel, the Knesset enacted "The Prohibition of Defamation Law 5725 – 1965" (as amended in 1967).

About Jewish legal principles in this law, see Elon, in bibl. [Haim Hermann Cohn]

Even inanimate objects should not be disparaged, and the Talmud uses the biblical account of the ten spies who, upon their return from their mission, slandered the Holy Land (Num. 12–14) to emphasize the gravity of this sin. In fact, rabbinic tradition considers slander a violation of moral and spiritual obligations, and assigns to it a weight that is almost equal to the cardinal sins of idolatry, adultery, and murder combined (TJ, Pe'ah 1:1).

The most vicious form of slander is false accusations of calumnies made to a ruling authority (malshinut) with the intent of endangering a man's livelihood and even his life. *Informers, through slanderous accusations, sometimes jeopardized entire Jewish communities. They were, therefore, regarded as particularly vicious. They were placed in the category of those who commit assault with intent to kill, and putting them to death was authorized. If their intention to slander was clear, death was sanctioned even before the crime was committed. The extent to which Jewish communities were harassed by slander is indicated by the inclusion, in the daily Amidah service, of the prayer, "And for slanderers, let there be no hope." [Sol Roth]

**Israeli Law and Jewish Law**

The halakhic principles of the laws of slander provided inspiration for legislation of the Defamation Law, 5725 – 1965, in its general approach if not in its details. For example, Section 14 of the Law grants protection in cases where "the matter published was true and the publication was in the public interest" while, according to the halakah, as stated, the truth of the matter would apparently not constitute a defense. Acceptance of the overall approach of Jewish law in this matter, without necessarily adopting all of its numerous and specific details, seems the proper approach in this matter. It does not seem appropriate to turn the details of the halakah into legal prohibitions, but they should be left, rather, as religious prohibitions alone. Furthermore, the various situations in which it is permitted by law to publish slander also originate in the need to balance between the individual's right to a good name, on the one hand, and freedom of expression and the freedom of public criticism, on the other. Decisive importance is accorded in Jewish Law to publish slander also origi

**INTERPRETATION OF THE LAW IN ISRAEL IN LIGHT OF THE PRINCIPLES OF JEWISH LAW.** The Supreme Court ruled that Jewish Law is an important source for construing the Defamation Law, in reliance on the explanatory notes to the original and amended draft bills, as well as in reliance on the Knesset debates conducted during passage of its legislation, which included extensive reference to the prohibition of defamation in Jewish Law, the scope of the prohibition and the sanctions found therein (L.CA 531/88 Avneri et al. v. Shapira, PD 42 (4) 20; Justice Menachem Elon). In the Avneri case, the District Court had issued a temporary injunction against the publication of a book which, according to the plaintiff, defamed him. The Supreme Court decided not to intervene in the District court's decision, relying extensively on the principles of Jewish Law in the matter of prohibition of slander, on the one hand, and freedom of public criticism, on the other. In another case, the Jerusalem Magistrates Court utilized the halakhic principles regarding "beneficial defamation," as specified in the book Hafetz Hayyim (Hilkhot Lashon ha-Ra, sec. 10; Hilkhot Issurei Rekhilut, sec. 9) in its interpretation of the requirement of "public interest" in the aforementioned Section 14 of the Defamation Law:

There is a need for credibility ... nothing should be added or detracted. A first time publication is not the same as the publication of something already generally known. The wording must be fair, providing an exact description of the events as they occurred. Information that is dubious should be presented as such, and [should be published – ME] only if the chances of benefit deriving from the publication reasonably outweigh the chances of damage being caused. The publisher's intention should be thoroughly examined, for if he was motivated... by alien considerations, there is suspicion as to the credibility of the matter in general and the manner of its presentation in particular. Defamatory material should not be published for its own sake. Proportionality and sincerity are required. It should be recalled and mentioned that "life and death are in the hands of the tongue" (TA 374/02 Cohen v. Olmert; Judge Noam Solberg. See also 612/02 Segev v. Eyal; Judge Noam Solberg).

There is a special prohibition against reminding a sinner of his previous offenses, which is part of "the Enactment for the
Encouragement of Penitents” (takkanat ha-shavim), and this prohibition, together with the other rules of Jewish Law, inspired legislation of the Crime Register and Rehabilitation of Offenders Law, 5741 – 1981 (see also "Punishment; and see A.L.A. 18/84 Adv. Anon. Adv. v. The State Prosecutor, 44 (1) P.D 355, per Justice Menachem Elon. CF (Jerusalem) Anon v. Anon, PM 54 (2) 397; Justice Zvi Tal).

What is the law when a person claims that a publication stating that he acted lawfully constitutes defamation exclusively because the society in which he lives regards actions in accordance with the law as negative and scandalous on the part of those engaged in them? In the Dardarian case (C.A. 466/83 Ajman v. Dardarian, 39 (4) P.D 734), the injured party was a Jordanian citizen who served as Archbishop of the Armenian Church in Jerusalem. He claimed that a publication stating that he cooperated with Israeli authorities and supported their actions and policy in Judea and Samaria constituted defamation because, in the society in which he lived, this fact could make him an object of hatred. The Supreme Court ruled that the claim should be rejected. Justice Elon's ruling was based on an analogy from Jewish Law concerning an illegal contract, invoking the Foundations of Justice Law, 5740 – 1980 (see "Mishpat Ivri"). Under Jewish Law, the court will not deal with a contract whose purpose is the commission of an illegal act. On the other hand, where the very making of the agreement involves a transgression of a religious prohibition, it does not nullify the validity of the agreement, and the court will have recourse to it (see "Contract"). This position was adopted in part by Israeli Law, in Sections 30 and 31 of the Contracts (General Part) Law, 5733 – 1973, according to which a contract "the making, contents or object of which are illegal, immoral or contrary to public policy is void" (Section 30). At the same time, the court may, if it deems it just to do so, exempt a party from reimbursement of monies paid under a contract and, if one of the parties fulfilled his obligation under the contract, may require the other party to fulfill the corresponding obligation (Section 31). Justice Elon ruled that, similarly, the court may provide a remedy to a person claiming that he was defamed by a publication that stated that he behaved lawfully, if that publication defamed him in the society in which he lives. On the other hand, there are cases in which the State's interest "not to support to actions and opinions which would undermine the rule of law and State sovereignty" (p. 734) may prevail, and in those cases the court will not provide the claimant with a remedy. Justice Elon ruled that the instant case fell into the latter category. The view that cooperation with the Israeli authorities in the maintenance of law and order in Judea and Samaria is undesirable is "so heinous and serious … from the perspective of the foundations of the legal system of the State of Israel as a state governed by law, and from the perspective of the maintenance of Israel's security against its enemies, and is so opposed to the basic concepts of law and order, that it [the rejection of that view] overrides the right of the appellant not to be harmed in the eyes of members of his circle who hold this perversive view," As such the court was not prepared to award the plaintiff damages by reason of damages caused to him by that publication, which defamed him in the society in which he lived (ibid.).

[Menachem Elon (2nd ed.)]

**SLÁNSKÝ TRIAL**, the first of a series of antisemitic show trials held in Czechoslovakia in the early 1950s whose prime victim was Rudolf Slánský (1901–1952), secretary-general of the Czechoslovak Communist Party after World War II. Of the 14 leading party members prosecuted for conspiracy against the state, 11 were Jews. Eight of these defendants – Ludvík Frejka, head of the economic department of the President's Office; Bedřich Geminder, head of the party's international department; Bedřich Reicin, deputy defense minister; Rudolf Margolius, deputy minister of foreign trade; Otto Fischl, deputy finance minister; Otto Sling, first secretary of the party in Brno; and André (Katz) *Simone, a leading Communist journalist, in addition to Slánský himself – were executed. The remaining three Jewish defendants – deputy foreign ministers Arthur *London and Vavro Hajdu and deputy minister of foreign trade Evžen Löbel – were sentenced to life imprisonment. Show trials aimed at eradicating the Titoist "heresy" from the leadership of the Soviet satellites were held shortly before in other East European countries (e.g., the Kostov trial in Bulgaria and the Rajk trial in Hungary), but the Slánský trial evolved a distinct anti-Jewish character. Foreign Minister Vlado Clementis, one of the three non-Jewish defendants sentenced to death (the other two being Slánský's deputy, Josef Frank, and deputy security minister Karel Šváb) was accused of Slovak "bourgeois nationalism" and Titoism, and an attempt was made to present him as "the Czechoslovak Rajk. But the main orientation of the prosecution was "anti-Zionist," anti-Israel, and openly antisemitic. The Slánský trial thus formed a direct link with the *Doctors plot and the wave of antisemitism in the Soviet Union in the last years of Stalin's regime (see "Antisemitism: the Soviet Bloc"). In these trials, for the first time in the history of Communism, the antisemitic accusation of a worldwide Jewish conspiracy was openly proclaimed by an authoritative Communist forum (it was linked by the prosecution with the activities of the American Jewish *Joint Distribution Committee). The Jewish origin of the accused was repeatedly stressed, and their alleged crimes were traced to this prime cause. The prosecution stigmatized the accused as Zionists, although they had never had any con-
nection with the Zionist movement and had, in fact, opposed Zionism all their lives.

The trials were part of an effort to consolidate power inside the Czechoslovak Communist Party in the hands of a group of leaders approved and manipulated from Moscow. The fact that Jews held many key posts in the party and state machinery – although Slánský was the only Jew in the Politbureau at the time – prompted an increase of latent popular antisemitism. This circumstance was utilized to strengthen the position of the inner circle of the Communist leadership and to put the blame for the rapidly worsening economic situation on prominent Jewish Communists. The trials were conducted under the direction and supervision of secret agents from Moscow and were also intended to help explain the change of Communist policy toward the State of Israel. The Israel legation in Prague was depicted as a center of espionage and anti-Czechoslovak subversion. Accusations were directed mainly against the first Israeli minister in Prague, Ehud ‘Avriel, and his successor, Aryeh *Kubovy, who was declared persona non grata. Two Israeli citizens, Mordekhai Oren and Shimon Orenstein, were arrested, used as prosecution witnesses to prove Slánský’s alleged contacts with “Zionist conspirators,” and were later sentenced in a separate trial to long prison terms. The trials were a signal for a wave of anti-Jewish persecution. Hundreds of Czechoslovak Jews were thrown into prison or sent, often without trial, to forced labor camps. The situation gradually became less frenzied after Stalin’s death; but only at the end of the 1950s, and in some cases even later, were victims of the Slánský Trial rehabilitated. The accusations against the Zionist movement and Israel, however, were not revoked, and relations between Czechoslovakia and Israel remained tense and unfriendly.

[Avigdor Dagan]

SLATKIN, LEONARD (1944– ). U.S. conductor. Born in Los Angeles into a distinguished musical family, he studied violin, viola, piano, and composition. He took conducting lessons at Indiana University (1962) and Los Angeles City College (1963), continuing his training with *Suskind at Aspen (1964) and with Morel at the Juilliard School of Music (1964–68). Slatkin made his Carnegie Hall debut at age 22. He was associated with the Saint Louis SO (1968–96) and became its music director in 1979. Under his direction the orchestra became a leading American ensemble. He was appointed musical director of the New Orleans Philharmonic SO (1977–79) and music director of the BBC SO (2000–4). In 1996 he became music director of the National SO of Washington. He has been guest conductor with major U.S. and European orchestras, festivals, and opera companies, making numerous recordings and appearances in radio and television programs. Slatkin combines the roles of internationally celebrated conductor, staunch advocate for music education, and champion of American music. He is known for his sure command of form and superb performances, for his adventurous programming, and for his interpretations of 20th-century American music as well as of the standard classical repertory. He worked with student orchestras and became in 2000 the director of the National Conducting Institute, a school that trains young music directors. Among his honors are Grammy awards, the National Medal of the Arts, and honorary doctorates as well as honors for his artistic contributions and for his work in the community.

[Naama Ramot (2nd ed.)]

SLATKINE, MENAHEM MENDEL (1875–1965), bibliographer. Born in Rostov on the Don, Russia, Slatkine studied at the yeshivah in Volozhin. He evinced an early interest in Hebrew bibliography and in 1903 published in the Hebrew daily Ha-Melz (no. 241) an article, “Pinnah Nishkahat” (“A Forgotten Corner”), in which he drew attention to the need for an
updated bibliography of Hebrew literature. In 1905 he settled in Switzerland where he engaged in the sale of old Hebrew books. He died in Geneva.

Slatkine was the author of *Shemot ha-Sefarim ha-Ivrim* (2 vols., 1950–54), on the titles of Hebrew books; *Reshit Bikkurei ha-Bibliyofyah ba-Safra ha-Ivrit* (1958), about Shabbetai *Bass and his Siftei Yesherim*, the first Hebrew bibliographical work; and *Ozar ha-Sefarim, Helek Shenii* (1965), which contains notes, corrections, additions, and an author index of Isaac Ben Jacob's *Ozar ha-Sefarim*. Slatkine also wrote *Mi-Sefer ha-Zikhronot shel Rav Litai*. The book, which was published in Paris in the years following World War II, describes Jewish life in the 18th century in the form of “selected chapters” from the “memoirs” of the Lithuanian rabbi of the time.

[Tovia Preschel]

### SLAVERY.

#### BIBLICAL LAW

The Hebrew term for slave, *eved* (pl. *'avadim*), is a direct derivation from the verb 'bd, “to work”; thus, the “slave” is only a worker or servant. The *eved* differs from the hired worker (sakhir) in three respects: he receives no wages for his work; he is a member of his master's household (cf. Gen. 24:2; Lev. 22:11; and see below); and his master exercises patria potestas over him; for example, the master may choose a wife for the slave and retains ownership of her (Ex. 21:4) and he has proprietary rights in him (see below).

#### Classification

The following classes of *'avadim* are to be distinguished:

**HEBREW SLAVES.** A Hebrew could not become a slave unless by order of the court (for which see under Criminals, below) or by giving himself voluntarily into bondage (for which see under Paupers, etc., below; Yad, Avadim 1:1). Other slaves were always recruited from outside the nation. It has been opined that the epithet “eved *ivri*,” and the laws relating to Hebrew slaves (Ex. 21:2–6) would apply also to such non-Jewish slaves as were born into the household as the offspring of alien slaves (see, for instance, Saalschuetz, *Das Mosaische Recht* (1853), ch. 101).

**ALIEN SLAVES.** “Of the nations that are round about you, of them shall ye buy bondmen and bondwomen. Moreover of the children of the strangers that do sojourn among you, of them may ye buy and of their families that are with you which they have begotten in your land; and they may be your possession” (Lev. 25:44–45).

**PAUPERS AND DEBTORS.** A debtor who is unable to pay his debts may give himself in bondage to his creditor (cf. Lev. 25:39; Prov. 22:7; see also II Kings 4:1; Isa. 50:1; Amos 2:6, 8:6; Neh. 5:5). According to other opinions, the verse in Leviticus 25:39 deals with an ordinary pauper who sold himself and the debtor's bondage was against strict law, although it happened from time to time in practice (see Elon, *Hirut ha-Perat*, 1–10, and n. 9; *Execution (Civil)*).

**CRIMINALS.** A thief who is unable to make restitution is “sold for his theft” (Ex. 22:2).

**PRISONERS OF WAR.** It would appear from Numbers 31:26–27 and Deuteronomy 20:10–11 that prisoners of war could be, and were, taken into bondage, but it has been contended that no prisoners of war were ever taken into private slavery (Kaufmann, Y., *Toledot* 1 (1937), 651).

**FEMALE SLAVES.** A father may sell his daughter into slavery (Ex. 21:7), usually apparently for household duties and eventual marriage (Ex. 21:7–11).

**CHILDREN OF SLAVES.** The Bible mentions “the son of thy handmaid” (Ex. 23:12), “he that is born in the house” (Gen. 17:12; 13; Lev. 22:11), indicating that the status of slaves devolved upon their children.

#### Termination of Bondage

**HEBREW SLAVES.** Hebrew slaves serve six years only and must be freed in the seventh (Ex. 21:2; Deut. 15:12). “And when thou lettest him go free from thee, thou shalt not let him go empty; thou shalt furnish him liberally out of thy flock, and out of thy threshing floor, and out of thy wine-press; of that wherewith the Lord thy God hath blessed thee” (Deut. 15:13–14; and see *Ha’anakah*). This short period of bondage conditioned the price of slaves: there is some indication of their market value in the provision that if an ox killed a slave, the owner of the ox must pay 30 shekels of silver to the master of the slave (Ex. 21:32). Whatever the master may have paid for the slave, “It shall not seem hard unto thee, when thou lettest him go free from thee; for to the double of the hire of a hireling hath he served thee six years” (Deut. 15:18). If the slave refuses to go free and wishes to stay on in his master’s service, then the master pierces his ear with an awl and in this way the slave is bonded to him forever (Ex. 21:5–6; Deut. 15:16–17). If a Hebrew slave has been sold to an alien, he must be redeemed at once; he then enters into the redeemer’s service, which terminates with the jubilee year (Lev. 25:47–54).

**ALIEN SLAVES.** Alien slaves serve in perpetuity: “Ye may make them an inheritance for your children after you, to hold for a possession, of them ye may take your bondmen forever” (Lev. 25:46). The same rule would appear to apply to prisoners of war.

**DEBTORS.** Whatever the amount of debt for which the debtor sold himself he must be freed on the first ensuing jubilee year (Lev. 25:40). The same is true of a pauper. In that year he regains his lands and holdings (Lev. 25:10, 13) and can go back to his family and ancestral home (Lev. 25:41).

**FEMALE SLAVES.** Female slaves sold into bondage by their fathers go free if their master’s sons deny them their matrimonial rights (Ex. 21:11). Slaves must be released for grievous bodily injury caused...
to them: the master must let the slave go free "for his eye's sake" or "for his tooth's sake" (Ex. 21:26–27), if either be gouged out or knocked out by him.

Status of Slaves

Slaves are members of the master's household, and as such enjoy the benefit and are liable to the duty of keeping the Sabbath (Ex. 20:10, 23:12; Deut. 5:14–15) and holidays (Deut. 16:11–14, 12:18). They must be circumcised (Gen. 17:12–13); partake of Passover sacrifices when circumcised (Ex. 12:44), as distinguished from resident hirelings (Ex. 12:45); and may inherit the master's estate where there is no direct issue (Gen. 15:3) or perhaps even where there is (Prov. 17:2). Although slaves are the master's property (Lev. 22:11, etc.), they may acquire and hold property of their own; a slave who "prospers," i.e., can afford it, may redeem himself (Lev. 25:29; instances of property held by slaves are to be found in 11 Sam. 9:10; 16:4; 19:18, 30; cf. 1 Sam. 9:8). The killing of a slave is punishable in the same way as that of any freeman, even if the act is committed by the master (Ex. 21:20).

Treatment of Slaves

In the case of a pauper who sells himself into slavery or a man who is redeemed from bondage to a stranger, no distinction may be made between a slave and a hired laborer (Lev. 25:40, 53). A master may not rule ruthlessly over these slaves (Lev. 25:43, 46, 53) nor ill-treat them (Deut. 23:17); Ben Sira adds: "If thou treat him ill and he proceeds to run away, in what way shalt thou find him?" (Ecclus. 33:31). A master may chastise his slave to a reasonable extent (Ecclus. 33:26) but not wound him (Ex. 21:26–27). The workload of a slave should never exceed his physical strength (Ecclus. 33:28–29). A fugitive slave must not be turned over to his master but given refuge (Deut. 23:16). There was no similar rule prevailing in neighboring countries (cf. 1 Kings 2:39–40). The "abduction of a person for sale into bondage is a capital offense (Ex. 21:16; Deut. 24:7). In general, "thou shalt remember that thou wast a bondman in the land of Egypt" (Deut. 15:15), and that you are now the slaves of God Who redeemed you from Egypt (Lev. 25:55).

Implementation of Slavery Laws

From a report in Jeremiah (3:48–16) it would appear that the laws relating to the release of Hebrew slaves after six years' service were not implemented in practice: King Zedekiah had to make a "covenant" with the people that every man should let his slaves go free "at the end of seven years"; but hardly had the people released their slaves than they turned round and brought them back into subjection. In retribution for the failure to grant liberty to slaves, God would proclaim liberty and I will make you a horror unto all the kingdoms of the earth" (Jer. 34:17). According to Ezra (2:64–65) and Nehemiah (7:67), it would appear that in addition to the 42,360 people returning from Babylonia there were 7,337 slaves, male and female, and another 245 (or 200) musicians.

Talmudic Law

Opinions are divided among modern scholars whether and to what extent slavery was practiced in post-biblical times. There is repeated mention of Tebi, the slave of Rabban Gamaliel (Ber. 2:7; Pes. 7:2; Suk. 2:1), and a freed slave formerly belonging to Tobiah the physician (RH 17) is also mentioned. In amoraic sources there are reports of cases of men selling themselves into slavery as gladiators (Git. 46b–47a), apparently from dire necessity (Tj, Git. 4:9). There is a strong talmudic tradition to the effect that all bondage of Hebrew slaves had ceased with the cessation of jubilee years (Git. 65a; Kid. 69a; Ar. 29a; Maim. Yad, Avadim 2:10), which would mean that from the period of the Second Temple the practice of slavery was at any rate confined to non-Hebrew slaves.

Classification

Hebrew Slaves. The term eved lavi is reserved for, and identified with, a thief unable to make restitution who is sold for his theft or a pauper who sold himself into bondage (Kid. 14b; Yad, Avadim 1:1). This implies that a Hebrew slave may not be resold. The earlier Mishnah provides that a Hebrew slave may be acquired by the payment of money or the delivery of a deed of sale (Kid. 1:2).

Female Hebrew Slaves. Many provisions applying to slaves in general do not apply to female slaves. Thus, a woman may not sell herself into slavery (Mekh. Nezikin 3; Yad, Avadim 1:2), nor is a woman thief sold into slavery, even though she cannot make restitution (Sot. 3:8; Yad, Genevah 3:12). Contrary to an express scriptural provision (Deut. 15:17), a female slave's ear may not be pierced (Sif. Deut. 122; Kid. 17b; Yad, Avadim 3:13). The female Hebrew slave can only be a minor below the age of 12 years whom her father (not her mother: Sot. 3:8; Sot. 23b) has sold into bondage (Ex. 21:7; Ket. 3:8; Yad, Avadim 41); he may do so only when he has no other means of subsistence left (Tosef. Ar. 5:77; Mekh. Shb-Y 217; Yad, Avadim 4:2) and must redeem her as soon as he has the means (Kid. 18a; Yad, loc. cit.).

Non-Hebrew Slaves. Non-Hebrew slaves (eved Kenaim) may be acquired by the payment of money, the delivery of a deed of sale, or three years' undisturbed possession (Kid. 1:3; BB 31a) – to which were later added barter or exchange, and the physical taking into possession (Kid. 22b; Yad, Avadim 5:1; Sh. Ar., YD 267:25).

Terminations of Bondage

Hebrew Slaves. As well as release after six years' service or the beginning of the jubilee year, five more possibilities were added. The slave may redeem himself by paying his master part of the purchase price proportionate to the period served; for example, if he had been bought for 60 dinars and had served four years, he could redeem himself by paying 20 dinars, the whole period of service being six years. The redemption money is paid by a third person, either to the slave or to the master, on condition that it is used only for the re-
Slavery

demption (Kid. 1:2; Yad, Avadim 2:8). A slave may be released by a deed of release delivered by his master (Kid. 16a; Yad, Avadim 2:32). He is released on the death of his master, provided the master left no male descendants (Kid. 17b; Yad, loc. cit.). Where the slave has had his ear pierced, he is released on the death of his master, irrespective of the master’s surviving issue (Kid. 1:2; Kid. 17b; Yad, Avadim 3:7). Where the master is a non-Jew or a *ger, the slave is released on his death (Kid. 17b; Yad, loc. cit.).

Female Hebrew Slaves. The provisions relating to release after six years’ service, in the jubilee year, by payment, or by deed, also apply to female slaves. In addition, their bondage is terminated when the slave comes of age, i.e., shows “signs” of puberty (simanim: Kid. 1:2; Yad, Avadim 4:5; also see Legal Capacity), and by the death of the master, irrespective of the issue he left (Kid. 17b; Yad, Avadim 4:6).

Alien Slaves. For alien slaves the bondage is terminated in various fashions. Release may be by payment of money, the price demanded by the master being paid to him by a third party, either directly or through the slave (Kid. 1:3; Yad, Avadim 5:2). A deed of release may be delivered by the master (Kid. 1:3; Yad, Avadim 5:3). A verbal release, or a promise of release, is not sufficient in itself, but the court may enforce it by compelling the master to deliver a deed (Sh. Ar., YD 267:73–74). The slave is freed if the master causes him grievous bodily injury: the two biblical instances of gouging out the eye and knocking out the tooth are multiplied, and a long list of eligible injuries has been laid down (Kid. 2:6–25a; Yad, Avadim 5:4–14; Sh. Ar., YD 267:27–39). While the list in the codes was intended to be exhaustive, the better rule seems to be that all injuries leaving any permanent disfigurement are included (Kid. 2:4a). The rule is confined to non-Hebrew slaves only (Mekh. Nezikin 9); injuries inflicted on Hebrew slaves, male or female, are dealt with as injuries to freemen (bk 8:3; Yad, Hovel 4:13 and Avadim 4:6). A slave may also be released if his master bequeaths him all his property (Pe’ah 1:3; Git. 8b–9a; Yad, Avadim 7:9; YD 267:57). By marriage to a freewoman, or by his de facto recognition, in the presence of his master, as a free Jew (e.g., using phylacteries and reading the Torah in public; Git. 39b–40a; Yad, Avadim 8:17; YD 267:70) a slave obtained his freedom. Marriage to the master’s daughter seems to have been a not infrequent means to emancipation (Pes. 113a).

Status of Slaves

Discussions went on for centuries whether slaves, qua property, are to be regarded as belonging to the category of movables or immovables; Gulak (Yesodei i (1922), 92) held that originally they were likened to land and only much later to personal property. In effect, they were likened to land as regards modes of “acquisition (money, deed, possession: Kid. 1:3); and in that they could not be the subject of “theft or *onah or bailment (see “Shomerim; Sifra Be-Ḥar 7:3; BM 4:9), but in other respects were treated as movables (cf. Tos. to BB 150a s.v. avda; Rashbam BB 68a s.v. ella; and see Herzog Institute, 1, (1936), 92–95. For the discussions on this question, see bk 12a; BB 68a, 150a; Yev. 99a; Git. 39a; Tjd. Kid. 13; etc.). Slaves may be mortgaged (Git. 4:4; BB 11b; HM 175:7; YD 267:68; and see “Pledge). Slaves could be authorized to act as “agents for their masters, and for certain purposes were so authorized by law or custom (Tosef. BK 11:2–7; BK 119a; BM 96a, 99a; BM 83; Tosef. Pes. 7:4; Er. 7:6; Tj, Er. 7:6; Māʿās. Sh. 4:4; etc.). Slaves could not act as agents for “divorce (Git. 23b). Slaves could hold property of their own (Tosef. Ar. 1:2; Shek. 1:5; Pes. 81b, 88b; Yev. 66a; Tj, Yev. 7:1; Tosef. BK 11:1; BB 51b–52a; Sanh. 91a, 105a; Ket. 28a; Meg. 16a; etc.), but they could not dispose of their property by “will (Rashi and Tos. to Nazir 61b). A slave must be circumcised (Shab. 135b; Yad, Milah 1:3; YD 267:1).

A slave is not answerable for his “torts, but when he comes into property after his release he may be held liable in damages for torts committed during bondage (bk 8:4). A slave has the right to stay in the Land of Israel, and may not be sold for export (Git. 4:6). If he is with his master abroad, he may compel him to take him to the land of Israel (Ket. 110b; Yad, Avadim 8:9; YD 267:84), and he may flee with impunity to the Land of Israel, the prohibition on extradition (Deut. 23:16) being applicable to him (Git. 45a; Yad, Avadim 8:10; YD 267:85).

A slave may not be sold to a non-Jew: such sale is tantamount to the slave’s release, and the vendor may be ordered by the court to repay the buyer not only the price he received but as much as tenfold of the price as a fine. When the slave is redeemed in this way, he does not return to the vendor but goes free (Git. 4:6; Git. 44a–45a; Yad, Avadim 8:1; YD 267:80). Any slave – except a pauper who sold himself in bondage – can be married by his master to a non-Jewish female slave (Kid. 14b; Ker. 11a; Yad, Avadim 3:12). A bastard (“mamzer”) can legitimize his issue by marrying a female slave: her son would be a slave by birth and would become a pure freeman on his release (Kid. 313). A slave who has been jointly owned by two masters and is released by one becomes half-slave half-freeman; the remaining master may also be compelled by the court to release him (Git. 4:5; Yad, Avadim 7:7; YD 267:62–63).

Treatment of Slaves

The biblical “for to the double of the hire of a hireling hath he served thee six years” (Deut. 15:18) was interpreted as allowing slaves to be given double the work of hired laborers: while the latter work only during daytime, slaves may be required to work also at night (Sif. Deut. 123). The Talmud (Kid. 15a) states that this merely gives the master the right to give the slave a bondwoman in order to beget children. There is some early authority to the effect that a slave has no right to maintenance which can be enforced in law, notwithstanding his obligation to work (Git. 1:6; Git. 12a), the biblical “he fareth well with thee” (Deut. 15:16) being attributed to Hebrew slaves only (Kid. 22a). However, the predominant view, as expressed by Maimonides, is: “It is permissible to work the slave hard; but while this is the law, the ways of ethics and prudence are
SLAVE TRADE

that the master should be just and merciful, not make the yoke too heavy on his slave, and not press him too hard; and that he should give him of all food and drink. And thus the early sages used to do — they gave their slaves of everything they ate and drank themselves, and had food served to their slaves even before partaking of it themselves... Slaves may not be maltreated or offended — the law destined them for service, not for humiliation. Do not shout at them or be angry with them, but hear them out, as it is written [Job 3:13–14]: "If I did despise the cause of my man-servant or maid-servant when they contended with me, then what shall then I do when God riseth up? and when He remembereth what shall I answer?" (Yad, Avadim 9:8; and cf. YD 267:17). In another context, Maimonides says of the laws relating to slavery that they are all "mercy, compassion, and forbearance": “You are in duty bound to see that your slave makes progress; you must benefit him and must not hurt him with words. He ought to rise and advance with you, be with you in the place you chose for yourself, and when fortune is good to you, do not grudge him his portion” (Guide 3:39).

POST-TALMUDIC LAW

Slavery became practically extinct in the Diaspora, and was prohibited except insofar as the secular laws allowed it, for instance, where rulers sold tax defaulters into bondage or offered prisoners of war for sale into slavery (Yad, Avadim 9:4; Tur and Sh. Ar., YD 267:18). However, it was laid down that even these “slaves” ought not to be treated as such, except if they did not conduct themselves properly (Yad, Avadim 1:8; YD 267:16). An incident related in the Talmud (BM 73b) was relied on as a precedent for the proposition that bondage may be imposed as punishment for misconduct (YD 267:15).

[Haim Hermann Cohn]

SLAVE TRADE. Jews engaged in the slave trade — although they never played a prominent role in it — from the early Middle Ages to the early modern period. While it was not proscribed to pagans, none of the three monotheistic religions either prohibited slavery or trade in slaves except insofar as converts to a particular religion were concerned. It was as if three circles were drawn, each opposing only the enslavement of its own members by a member of one of the other two. Thus the only legitimate objects of slavery and the slave trade were pagans and Jews, Christians, and Muslims captured in war by victors of either of the other religions. In Europe, aside from the Nordic countries, in the early Middle Ages there remained pagans in the Slav countries only (and their generic name, or variations thereof, became the appellation for the slave throughout Western Europe). Slaves were needed for agriculture, domestic service, and as eunuchs in Muslim harems. They were one of the few “commodities” that Europe could export to the Byzantine and later Muslim Mediterranean, from which it imported so much, thus restoring to some extent the balance of payments. The Jewish slave owner, however, was expected by the Church to release his slave the moment the latter converted to Christianity, sometimes by inducement. Jews also used slaves in their vineyards, and a forced conversion of a slave was a loss to them. As each slave owner in all religions considered himself responsible for the soul and behavior of his slaves, he felt in duty bound to convert them to his faith; in the case of the Jews, who were in a minority everywhere, this caused friction and problems for the Jewish owners. Thus tension colored the attitude to Jewish ownership of slaves and participation in the slave trade in Christian countries.

Under the Muslim rule in Spain, where there was a slave market in Baena in the ninth century, Jews owned slaves without hindrance as long as the slaves were not Muslims. However, there is no evidence of a slave trade carried on by Jews in Christian Spain (Baer, Spain, 1 (1961), 417). Slaves were employed primarily for domestic and agricultural service in the households of the Jewish upper classes, and this situation persisted for some time under Christian rule, especially in *Majorca, where Jews owned large estates and many slaves; in the middle of the 13th century James I put obstacles in the path of Jewish ownership of Moorish slaves in Majorca, who wished to be baptized and thereby freed. In late Roman Spain and Frankish Gaul, Church opposition to Jewish ownership of slaves was much in evidence. *Church councils repeatedly denounced Jewish ownership of Christian slaves and of those slaves who wished to convert to Christianity; but these denunciations remained ineffectual. Pope George the Great (sixth century) inveighed against a Jewish merchant, because
his import of slaves from Gaul into Italy included some Christians. The Muslim conquest of Spain created a nearby market for slaves, to which Jews were accused of catering. Emperor Louis I the Pious granted a number of Jews (c. 825–8) the right to import foreign slaves and sell them within the confines of the empire. Archbishop *Agobard of Lyons claimed that royal officials in Lyons accepted the Jewish traders’ view that heathen slaves who requested baptism should be considered as doing this solely in order to gain their freedom, and that this should not be granted unless the owner was paid the sum he demanded. Agobard denounced this view, claiming in the course of his arguments that in some cases Jews even sold people born Christian into slavery. Jewish slave traders (among others) are recorded in 906 in the custom dues rolls of Raffelstetten on the Danube, a major interregional market in the early Middle Ages. The Arab geographer Ibn-Khurud-dah (c. 870–92) includes slaves (eunuchs) among the many articles sold by the *Radhanites, said to have traveled from Franconia to China by sea or land. *Ibrahim ibn Ya’qub, the Jewish traveler, recorded the presence of Jewish slave traders in Prague around 970 (alongside Muslims and Turks), and Bishop Adalbert of Prague resigned in 988 after failing to buy the freedom of a group of slaves bought by a Jewish trader. The Jews of that period regarded the Slavic east as the land of slaves par excellence – “Canaan” (see Gen. 9:25 and Midrashim to this verse). Jewish slave traders appear in the *Koblenz custom rolls of 1004; they are mentioned in 1009, when the margrave of Meissen was accused of selling slaves to Jews, and in 1085, when a Polish princess in Silesia was praised for buying up Christian slaves from Jews and freeing them. With the Christianization of most of the Slavs, this trade ceased as far as Jews in Christian Europe were concerned.

While responsa and deeds of manumission indicate the frequency of slaves, mainly women employed as housemaids and occasionally men who were business agents, in personal service in Jewish households in Muslim lands, a thorough study of conditions in Egypt in the 11–13th centuries reveals that “during the classical Genizah period the Jews had no share in the slave trade” (S.D. Goitein, A Mediterranean Society (1967), 140), in particular after Maimonides’ time. Slave ownership in Muslim lands raised the problem of responsibility for the slaves’ conversion to Judaism and, frequently, that of sexual relations between the owner and his female slave. Ketubbah quoted in Maimonides’ responsa include the condition that the husband promise not to buy a female slave without his wife’s consent, parallel to his promise not to take a second wife against his first wife’s will. He also referred to the question of castration (forbidden in Jewish law) and the sale of eunuchs.

In the Ottoman Empire slavery flourished through the wars of expansion. Most wealthy Jewish families owned one or more slaves for domestic purposes. The Marrano Diaspora in the New World (particularly in the Carribean) became both customer for, and trader in, African and Indian slaves. Slave-owning Marranos settling in Protestant countries created serious legal difficulties (as in London and Hamburg); a Portuguese relative of Albertus *Denis was forced to leave Danzig because of public indignation at his treatment and ownership of slaves. The Ottoman authorities opposed Jewish participation in the slave trade, but one exception occurred during the 1571 war against *Cyprus when Jewish slave traders were required to pay a special state tax. Toward the end of the 16th century the sultan decreed also that a special tax be paid by Jews who owned slaves. Subsequently, slaves and slavery gradually disappeared from Jewish life. Modern European and U.S. historians up to the mid-1950s (including Jewish historians) confused the ownership of slaves by Jews with their part in the slave trade. The role of the Jews in the slave trade was also vastly exaggerated. This was done either to overemphasize the importance of Jews in early medieval trade or to put the odium of this trade onto the Jews (according to modern views – in disregard of the acceptability of slavery during the period of Jewish participation in it). This tendency was reinforced by antisemitic prejudices.

[Toni Oelsner and Henry Wasserman]

### In the Americas

Until 1730 the Dutch West India Company maintained a monopoly on the importation of slaves into all the Dutch colonies in the Americas, but Jews appear to have been among the major retailers of slaves in Dutch Brazil (1630–54), because Jews possessed ready money and were willing to trade slaves for sugar. The bylaws of the Recife and Mauritius congregations (1648) included an *imposta* (Jewish tax) of 5 soldos for each slave which a Brazilian Jew purchased from the West Indies Company. In Curaçao, the Dutch occasionally gave permission to a merchant to conduct independent transactions in slaves; two such Jewish entrepreneurs were the brothers David and Jacob Senior, who came to the island from Amsterdam about 1685. Another Curaçao Jew, Manuel Alvares Correa (1650–1717), who was active in the local slave trade for many years, served in 1699 as an intermediary between the Dutch and Portuguese West Indies companies for the transfer of a shipment of slaves from Africa to Mexico via Curaçao.

In all of the American colonies, whether Dutch, French, or British, almost every merchant or trader had dealings in slaves: when he acted as auctioneer or agent for the sale of an estate, when he served his planter clients in the sale or purchase of slaves or in the pursuit of runaways. In the Barbados, until 1706, Jews were limited by law in the number of slaves they themselves could own, but in Jamaica there was no such restriction. Among the Jamaican Jewish merchants who seem to have specialized in the slave trade were David Henriques, Hyman *Levy, and especially Alexander Lindo (1753–1812), who was a major importer of slaves during the period 1782–92. During an investigation of slave mortality conducted in Jamaica in 1789, Lindo testifies that 150 slaves on a ship “consigned to” him had died in the Middle Passage and that another 20 perished after their arrival in Jamaica, but it is unclear whether he owned this slave shipment or any
of the others in which he was involved. Members of the well-known *Gradis family of Bordeaux were active in the shipment of slaves from West Africa to such French colonies as Santo-Domingo (Dominican Republic).

On the North American mainland, a number of Jews were active participants in the infamous triangular trade, which brought slaves from Africa to the West Indies, where they were exchanged for molasses, which was in turn taken to New England and converted into rum for sale in Africa. David *Franks of Philadelphia was in this business during the early 1760s; Aaron *Lopez and Jacob Rodriguez *Rivera of Newport, Rhode Island, had at least one slaver on the high seas each year after 1764, and in 1772 and 1773 had a total of eight such ships under sail. Isaac Da *Costa of Charleston was another large-scale importer of slaves. In Louisiana, under both French and Spanish rule, the Monsanto brothers made frequent transactions in slaves; during 1787 they purchased 44 blacks.

Although Jews in Philadelphia and New York City were active in the early abolition movement, Jewish merchants, auctioneers, and commission agents in the Southern states continued to buy and sell slaves until the end of the Civil War. The fact that Jacob Levin of Columbia, South Carolina, and Israel J. Jones of Mobile, Alabama, two merchants who often dealt in slaves, were leaders of their Jewish communities in the 1850s is evidence that at no time did Southern Jews feel tainted by the slave trade. Levy Jacobs was an active trader in slaves both in New Orleans and in Mobile during the 1820s; Ansley, Benjamin, George, and Solomon Davis of Richmond and Petersburg, Virginia, went on the road to sell gangs of slaves in the states of the lower South beginning about 1818; B. Mordecai of Charleston had large slave pens alongside his warehouses and purchased $12,000 worth of slaves at one sale in 1859. But the total business activity of all the Southern Jews who dealt in slaves in any way probably did not equal the turn-over of the largest single non-Jewish firm which specialized in slaves, Franklin and Armfield.

[Bertram Wallace Korn]

**SLAVSON, SAMUEL RICHARD** (1891–1981), U.S. group psychotherapy expert. Born in the Ukraine, Slavson arrived in New York with his family after escaping the pogroms in Russia. Working by day, he attended evening school at the Cooper Union, where he received a B.S. in engineering. He became a member of the Socialist Party in 1904, which led to his involvement with the labor movement. He was a key figure in the formation of the *International Ladies Garment Workers Union. Slavson was departmental director of New York's progressive Walter School from 1918 to 1921 and from 1921 to 1927 he was educational consultant of the Pioneer Youth of America. In 1927 he became director of research in child psychology at Malting House, Cambridge, England. In 1929 he returned to the United States and was consultant to a number of agencies dealing with problem children. In 1934 he became director of group psychotherapy at the Board of Jewish Guardians in New York, where he introduced group treatment for emotionally disturbed children. A pivotal figure in modern psychology and psychoanalysis, Slavson retired from that position in 1956. His *Introduction to Group Therapy* (1943) describes his principles, processes, and methods, as well as his criteria for accepting disturbed children for group therapy. Slavson was president of the American Group Psychotherapy Association (1943–45), and editor-in-chief of the journal *Group Psychotherapy*. From 1956 on, he continued to work and formulate new theories regarding the treatment of delinquent adolescents and institutionalized psychotics. He also wrote and lectured extensively.

**SLAVUTA**, city in N. Kamenets-Podolski district, Ukraine. Slavuta was annexed by Russia after the second partition of Poland (1793) and was in the province of Volhynia until the 1917 Revolution. In 1765 the poll tax was paid by 2,46 Jews registered in Slavuta. During the late 18th and first half of the 19th century, the community became known for its printing
press, founded in 1791 by R. Moses Shapira, son of the zadik R. Phinehas b. Abraham of *Korets. Later Moses’ two sons, Samuel Abba and Phinehas, took over the administration of the press. Three editions of the Babylonian Talmud, an edition of the Bible (with commentaries), the Zohar, and many other religious works, especially hasidic literature, were all produced handsomely and with great care by the press. In 1835 the press was closed down when the owners were arrested for the alleged murder of a worker who had supposedly denounced them for printing books without permission from the censor. There were 1,658 Jews registered in the community in 1847 and 4,891 in 1897 (57% of the total population). Under Soviet rule the community’s institutions were destroyed. The Jewish population numbered 4,701 in 1926 (44.9%). During the German occupation of the city during World War II, those Jews who did not manage to escape were murdered. A mass grave marks the place where Jews were massacred by the Nazis in the vicinity of the town, with a monument erected to the memory of the dead and with inscriptions in both Russian and Yiddish. In the late 1960s the Jewish population was estimated at about 3,000. There was one synagogue administered by a rabbi. Most left in the 1990s.

**BIBLIOGRAPHY:** H.D. Friedberg, *Toledot ha-Defus ha-Ivri be-Polanyah* (1950), 104–9. [Yehuda Slutsky]

**SLAWOW-SKLADKOWSKI, FELICJAN** (1885–1962), Polish politician. From May 15, 1936, to September 1939 he was Poland’s prime minister and minister of interior. The period of Slawoj-Skladkowski’s premiership was marked by political and social unrest. His government endorsed the antisemitic program of the *OZON to distract the Polish masses from the real problems of the prewar crisis. His declaration “nobody in Poland should be injured. An honest host does not allow anybody to be harmed in his home” reflected his policy toward the Jews. Nevertheless, sources of livelihood were taken away from Jews; Saturday was made a market day from Jews; Saturday was made a market day.

**SLEPIAN, JOSEPH** (1891–1969), U.S. electrical engineer. Slepian was born in Boston, Mass., receiving his B.Sc. degree in 1911, M.Sc. in 1912, and Ph.D. in mathematics in 1913 from Harvard. After postdoctoral work at the University of Gottingen in Germany, the Sorbonne in Paris, and Cornell University, he joined the Westinghouse Company in 1916, where he held research posts of increasing seniority at the company’s Forest Hills research facility until he retired in 1956. His mathematical knowledge and engineering skills led to many inventions in the electrical supply industry. His research on lightning arresters disclosed the need for surge protection. His studies of ionized gases led to his invention of the deion circuit breaker and the ignitron for initiating and controlling electrical arcs. Late in his working career and after his retirement he worked on plasma methods for isotope separation. He was associated with the Manhattan Project in World War II. He found the atmosphere of a commercial laboratory highly conducive to his work, where he also organized teaching courses in basic and applied physics. His honors included the prestigious Edison Medal (1947).

[Michael Denman (2nd ed.)]

**SLIOZBERG, HENRY** (1863–1937), Russian jurist and communal worker. Born in Mir, Belorussia, Sliozberg was taken to Poltava, eastern Ukraine, by his family. Although he was an honors student in law at the university of St. Petersburg, Sliozberg was not accepted as a teacher there because he was a Jew. He became a successful private advocate but resigned to accept the (unofficial) position of legal counsel for the Russian Ministry of the Interior. In 1889 he became legal counsel on
SLOBODKA YESHIVAH, a leading European yeshivah which was dedicated to the ideals of the *Musar movement. In 1882 the yeshivah was founded in Slobodka, a suburb of Kourou, Lithuania, by R. Nathan Zevi *Finkel as an advanced school for the graduates of the local elementary yeshivah which had previously been established by R. Zevi Levitan. The new school made rapid strides after the leading yeshivah of this era, the *Volozhin yeshivah, was closed by the czarist government on Jan. 22, 1892. Many former Volozhin students enrolled at Slobodka, and in 1893 R. Finkel appointed two brothers-in-law, both brilliant Volozhin graduates, R. Isser Zalman *Meltzer and R. Moses Mordecai *Epstein, to be the heads of the Slobodka yeshivah. R. Meltzer left in 1896 to organize the Slutzker yeshivah, but R. Epstein remained associated with the school until his death in 1933. R. Finkel remained the yeshivah’s dominant personality and fashioned its unique musar environment. He instituted a daily half-hour period devoted solely to the study of musar texts, and on Saturday nights he delivered musar lectures to the assembled students. In 1896 the yeshivah was caught up in a public controversy with those students and rabbis who had long opposed the innovations of the Musar movement. The yeshivah split in 1897 and those loyal to the ideals of R. Finkel and R. Epstein renamed their school Yeshivah Keneset Israel, in memory of the founder of the Musar movement, R. Israel *Lipkin (Salanter). The other students organized a new school which they called Keneset Bet Yizhak, in memory of R. Isaac Elhanan *Spektor of Kovno. It was later headed by R. Baruch Ber Leibowitz and following World War I relocated in Kamenetz, Poland.

R. Finkel’s yeshivah continued to expand; by 1899 it had an enrollment of over 300 students and a new building was constructed for the school. The yeshivah’s position was further strengthened with the 1910 selection of R. Epstein to serve as the chief rabbi of Slobodka. Additional heads of the yeshivah were appointed, including R. Finkel’s son, R. Moses Finkel, and son-in-law R. Isaac Sher. With the outbreak of World War I the school was compelled to move from Slobodka to Minsk, and afterward to *Kremenchug, where it remained for the duration of the war. After its return to Slobodka, the yeshivah continued expanding rapidly during the 1920s. The student body increased to over 500, including scores of foreign students from Germany and the English-speaking countries. R. Finkel organized new divisions of the yeshivah to complement its educational program, including an elementary school named Even Israel and a secondary school called Or Israel. The culmination of these schools was the Slobodka kolel, which was established in 1921.

In 1924, following the Lithuanian government’s decision to discontinue its previous practice of exempting all yeshivah students from military service, it was decided to open a branch of the school in Palestine, and Hebron was chosen for its location. R. Finkel joined the new school in 1925, and it soon attracted over 150 students. Following the Arab massacre of 1929 in which 25 yeshivah students were murdered, the school relocated in Jerusalem, where it continued to function under the name of the Hebron yeshivah. The original Slobodka yeshivah, under the leadership of R. Isaac Sher, continued its activities until June 23, 1941, when the Nazi invasion was imminent. Although most of the faculty and students perished during the Holocaust, the Slobodka yeshivah was reopened in *Bene- Berak following the conclusion of the war.

[Yehuda Slutsky]
SLONIK, BENJAMIN AARON BEN ABRAHAM

(c. 1550–c. 1619), Polish rabbi. Slonik was probably born in Grodno. He studied there in his youth under Nathan Nata Spiro. He was rabbi in Silesia (Joseph Katz, She'erit Yosef (Cracow, 1590), no. 47) and Podhajce (Meir of Lublin, Responsa, no. 110). He claims to have been in “Russia” as a youth (Masat Binyamin, no. 62), probably referring to southeastern Poland, which included the Ukraine and the Podolia region. He lived in Cracow for a period of time before and after the death of Moses *Isserles (ibid., no. 80), but since no questions in his responsa were addressed to him from Cracow or its environs, it is not likely that he served there as rabbi.

“Benjamin Aaron, harif of Tykocin,” appears as one of 30 signatories of the 1590 decree of the *Council of the Lands which reenacted the prohibition against offering a bribe in order to acquire a rabbinic post (Harkavy, Perles). This probably refers to Grodno since Tykocin bordered it. The two communities disputed sovereignty over a large territory, and if Slonik was born in that area he could have been considered to have come from either community, which explains why his name does not appear in the records of Tykocin. Slonik studied under Solomon *Luria (Maharshal), Moses Isserles, and Solomon b. Leibesh of Lublin whom he calls the “second Maharashl.” Luria had the greatest influence on his work.

From him he learned lucidity, expositional skill, stylistic and grammatical precision, and a scientific approach to Jewish law. Isserles’ influence is apparent in Slonik’s use of the responsaum as a vehicle for a thoroughgoing discussion of the legal background and principles which pertain to the question under discussion. Solomon b. Leibesh and Nathan Spiro were themselves influenced by Kabbalah, and inspired Slonik’s interest in that subject, expressed in chance statements (nos. 7, 99) and in his giving unusual weight to the opinion of the Zohar (no. 62).

His Works

Slonik was the author of the following works:

1. Masat Binyamin (Cracow, 1633; often republished), containing 112 responsa, for the most part arranged chronologically, and several pages of the author’s novellae on the Shulhan Arukh:

2. Seder Mitzvot Nashim, Eyn schoen Frauenbuechlein, a very popular Yiddish book printed three times during the author’s lifetime and translated into Italian, dealing with the three principle duties of women, but also giving moral teachings on the conduct of women in every phase of family life (Cracow, 1577, 1585; Basle, 1602; and often reprinted; first translated into Italian by Jacob b. Elhanan Heilbronn in 1614, published in Padua, 1625);

3. Sefer ha-Ebronot, a treatise on the leap year in the Hebrew calendar;

4. Seder Halitzah, on release from the requirements of the levirate marriage. The latter two books are not extant.

In his response he included questions and comments by his two sons, Abraham and Jakel. He also mentioned his grandson Faivel (no. 95), and his two daughters, one of whom died during her father’s lifetime. Abraham, who was rabbi of Brest-Litovsk, wrote several notes to his father’s responsa, and edited them. He showed high regard for his relation by marriage, Moses b. Abraham of Przemysl, author of Sefer Matthe Moshe and Sefer Ho’il Moshe, who was a signatory, together with Slonik, on the 1603 proclamation of the Jaroslaw synod of the Council of Four Lands authorizing the printing of new books.

His Decisions

Slonik had an independent mind and, unafraid of controversy, frequently disagreed with his teachers and colleagues. He opposed the decisions of his colleagues in Podhajce even as a newcomer to the area (no. 21). He issued decisions on controversial questions which colleagues had hesitated to answer (no. 7). Some of his decisions are based on entirely novel principles. Thus, he uses the scientific observation that quick freezing preserves a body for long periods of time to validate testimony identifying a victim long after the three-day limit after death would ordinarily apply (no. 104). He accepted no source without having seen it himself (nos. 11, 26, 37, 47, 75, 76, 109). He disparaged the method and the judgment of R. Mordecai *Jaffe, accusing him of eclecticism (no. 32). His attitude in questions dealing with cases of deserted wives (*agunos) is in opposition to the strict interpretation of Ashkenazi rabbis. Although an Ashkenazi himself, he accepted the more lenient ruling of the Sephardi rabbi Elijah Mizrahi, in order to help these unfortunate women (nos. 105, 109), for times had become troubled and there were many Jews who lost their lives in the wars which raged along their trade routes through Walachia to Constantinople (nos. 29, 44, 45, 63, 65, 98, 105, 109).

He decided some cases purely on the basis of logic (nos. 72, 90, 109), historical evidence (nos. 38 and 57), empirical

SLOMAN, HENRY (Solomon; 1793–1873), British actor. Born in Rochester, Sloman was a popular comedian at the Coburg Theatre in London (later the Old Vic) and became a celebrity in the pantomimes and melodramas staged by Joseph Glossop. After Glossop’s death in 1835, he went into partnership with his brother, CHARLES SLOMAN (1808–1870), in running the Rochester Theatre. Both were comic singers, and in addition Charles composed a number of songs, among them Daughter of Israel and Maid of Judah.

SLOMOVITZ, PHILIP (1896–1993), U.S. journalist. Born in Minsk, Russia, Slomovitz worked on Jewish papers in Detroit, Mich., and became editor of the Detroit Jewish News, the first Jewish periodical in the country to be sponsored by a community, when it was founded in 1942. His syndicated articles appeared in both Jewish and non-Jewish journals. Slomovitz was active in Zionist and other American Jewish organizations. In 1943 he founded the American Association of English-Jewish Newspapers, of which he remained president until 1953.
observation (nos. 69 and 108), medical knowledge, and anatomical research (no. 49). He rejected R. Shalom Shakna’s method of pilpul in deciding Jewish law (no. 16). He permitted the calling of blind or illiterate men to the “reading” of the Torah, and pleaded for understanding and tolerance for the feelings of estranged Jews and sensitive women, so that they may be brought closer to Judaism (no. 62). His responsa include an analysis of the grammatical differences between the two versions of the Decalogue and he castigates cantors for improperly preparing the Torah reading, as well as for introducing into the synagogue service melodies borrowed from secular songs and the theater (no. 6). He dealt with community disputes, taxation, elections, sale of synagogues, divorce given under duress, murder, and manslaughter. Several of his decisions were aimed at resolving famous controversies of the day (nos. 22, 76, 77).

His decisions remained an authoritative source, not only for his contemporaries, but also for Polish and German rabbis for many years to come. They are often quoted and usually considered definitive by noted commentators to the Shulhan Arukh, such as *Shabbetai b. Meir ha-Kohen and Abraham Abele *Gombiner.

[Nissos E. Shulman]

**SLONIM**, city in Grodno district, Belarus; passed to Russia in 1795 and reverted to Poland between the two world wars. Slonim is mentioned in 1583 as one of the communities which were declared exempt from the special tax called “srebshhtzina.” Jewish merchants from Slonim traded with Lublin and Posen. By decision of the Lithuanian Council (see *Councils of the Lands*) in 1623, the Jews of Slonim were placed under the jurisdiction of the *Brest community*. From 1631 Slonim appears in the accounts of the *pinkas* of the Council of Lithuanian Jews as an independent community. A magnificent stone synagogue was erected there in 1642. In 1660 the Jews suffered persecutions by the armies of Stephan *Czarnecki*. In the latter part of the 17th century the Jews of Slonim traded in wheat and timber with *Koenigsberg*; later on wealthy merchants traveled to the *Leipzig* fairs. Others earned their livelihood in contracting, manufacturing alcoholic beverages, and crafts. In 1764, after danger to the community from the advancing Russian armies had been averted, the day of deliverance, the 26th of Sivan, was subsequently commemorated in the community. The Jewish population numbered 1,154 in Slonim and its surroundings in 1766; 5,700 in 1847; 11,435 (78% of the total population) in 1897; 6,917 Jews (71.7%) in 1921; and 8,605 (52.95%) in 1931.

During the 19th century Jews engaged in wholesale trading in timber, furs, and hides, in transport and supplying the army, iron foundries, agricultural machinery, matches, tanneries, sawmills, and brick kilns. Jews also operated steam mills. The first textile factory in Slonim was founded in 1826 by a Jew, employing 35 workers, of whom 20 were Jewish. In the late 19th and early 20th century Jews engaged in the manufacture of woolen scarves, curtains, yeast, matches, agricultural machinery, and Jewish ritual articles.

Many Jewish homes were burned as a result of anti-Jewish hooliganism in 1881. Due to expulsions from nearby villages in 1882 the Jewish population in Slonim increased. In 1897 Jewish workers in Slonim began to organize in trade unions, and between 1902 and 1906 the *Bund*, *Po’alei Zion* and the *Zionist Socialist Workers’ Party* (SS) were influential. They established *self-defense groups to protect Jews against attacks, especially in the stormy period after the *Bialystok pogrom of 1906*. In 1913 Jewish workers staged a strike to protest against the *Beilis* case.

Traditional spiritual leaders of Slonim included Moses b. Isaac Judah *Lima, author of Hekhat Mehokot*, who served the community in the 1660s; Simeon b. Mordecai (officiated 1735–69); and Joshua Isaac b. Jehiel *Shapiro, author of Nahalat Yehoshua* (1851), in the 1830s. In the mid-19th century Abraham b. Isaac Weinberg (1804–1884) founded a new branch of Hasidism and became the first of the *Slonim* dynasty. The Slonim yeshivah, one of the oldest and most honored Lithuanian yeshivot, came under the influence of this hasidic trend.

All Jewish parties were active in Slonim between the two world wars, in independent Poland, including a hakhsharah farm of the He-Halutz movement. The community had schools of the *Tarbut*, of CYSHO, and Tahkemoni. A Yiddish quarterly, *Unzer Zhurnal*, was published from 1921 to 1925, and the weekly *Slonimer Vort* from 1926–1939.

[**Dov Rabin**]

**Holocaust and Contemporary Periods**

Immediately after the outbreak of World War II (Sept. 1, 1939), Slonim was inundated by thousands of Jewish refugees escaping from the advancing German army. Under the Soviet-German agreement the city passed to Soviet rule. In 1939–41, all Jewish community life was repressed, though Zionist groups attempted to function underground. Young people sought ways to reach Vilna, then under Lithuanian control, in an effort to reach Palestine from there. On April 12, 1940, about 1,000 Jewish refugees were exiled to Russia, among them Yizhak Efrat, head of the community and the Zionist federation before the war.

On June 25, 1941, after war broke out between Germany and the Soviet Union, Slonim fell to German troops, who began to attack the Jews. On July 17, they carried out an *Aktion* in which 1,200 Jewish men were rounded up and murdered on the outskirts of the city. The German authorities exacted a fine of 2,000,000 rubles from the Jewish community, and set up a *Judenrat, first headed by Wolf Berman, but its members*
were murdered when they showed resistance to Nazi demands. The second chairman of the Judenrat was Gershon Kwint. At the end of August 1941 a “Jewish quarter” was allocated, but not sealed off immediately. On Nov. 14, 1941, in a second Aktion, Germans, Lithuanians, and Belarusian Jews murdered 9,000 Jews in nearby Czepelow. A very few managed to escape from the death pits, returned to the ghetto, and received aid in its hospital. When the Germans found out, they were seized and murdered at the pits. Following this Aktion the ghetto, which now contained about 15,000 Jews, including refugees from the vicinity, was closed off. In the ghetto the Jews began to build hideouts in expectation of another raid. On June 29, 1942, the Germans and their collaborators surrounded the ghetto and set it on fire. In this Aktion, which continued up to July 15, many Jews perished in the flames; those who escaped and were caught were murdered in the fields of Pietralewicze. The Germans met with armed resistance from some of the youth who managed to wrest their arms from them and escaped to the forests. Only 800 Jews remained alive at the end of the attack, most of whom fled to the forests. About 300 of the remaining Jews were murdered in December 1942. Those who survived in the forests joined partisan activities. A group of Jews from Slonim became active members of the Schorr’s partisan unit. In the struggle against the Germans they reached the swamps of the Pinsk area. On July 10, 1944, when the city was taken by Soviet forces, only 80 Jews were found there. Former Jewish partisans joined the Soviet army to continue the fighting against the Germans until the end of the war. In 1949 there were about 30 Jews living in Slonim.

[Aharon Weiss]

SLONIM, hasidic dynasty. The founder of the dynasty was R. Abraham ben Isaac Mattathias Weinberg (1804–1883) who, after heading the yeshivah in Slonim, became a ḥasid. His teachers in Ḥasidism were the zadikim Noah of Lachowicze (“Lyakhovichi”) and Moses of “Kobrin. When Moses died, Abraham assumed the role of zadik and became one of the leading rabbis of his time. His influence extended mainly throughout the northwestern part of the province of Polesie, Poland-Lithuania, between the cities of Slonim and BrestdLitovsk and between Kobrin and Baranovichi. Abraham’s writings include Hesed le-Avraham (1886) and Yesod ha-Avodah (1892). His works, which include principles of his hasidic teachings, attest great scholarship. He advocated the study of Torah for its own sake, prayer with devotion (devekut), love and fear of the Creator, humility and confidence. He saw asceticism and mourning as ways of repentance. He also wrote a homiletic commentary on Mekhilta, entitled Be’er Avraham (1927). During Abraham’s lifetime, his grandson Noah (d. 1927) emigrated to Ereẓ Israel and settled in Tiberias, where Slonim Ḥasidim found a special place in the history of Ḥasidism in Ereẓ Israel from the late 19th century. The letters of the rabbis of Slonim to their fellow Ḥasidim in Ereẓ Israel were included in their writings. Abraham’s disciple Menahem Nahum Epstein established his own dynasty of zadikim in Bialystok. Another grandson, Samuel (d. 1916), succeeded Abraham as rabbi and excelled in strengthening religious life and institutions as well as in collecting funds for the Jewish community in Ereẓ Israel. Under Samuel, the Slonim dynasty became famous beyond its own circles for its special hasidic melodies. Samuel’s teachings were incorporated in the works of his Ḥasidim, Kunteres Kivvi Kodesh (1948), Kunteres Beit Avraham (5 vols., 1950–54), and Beit Avraham (1958). After Samuel’s death, a split occurred among the Slonim Ḥasidim. The majority chose as their leader Samuel’s younger son, Abraham (II; d. 1933), who lived in Bialystok and later in Baranovichi. In 1918 Abraham II established a major yeshivah in Baranovichi called Torat Ḥesed, where Lithuanian-Jewish scholarship and Ḥasidism were combined. Abraham made journeys to Palestine to visit his hasidic following there (1929, 1933). His teachings on the weekly portion of the Torah were published by his Ḥasidim in the Beit Avraham, mentioned above. His successor in Baranovichi was his son Solomon, who perished in the Holocaust in 1943 with many of his fellow Ḥasidim. His teachings and letters were published in the Zikhron Kadosh (1967). Meanwhile, in Slonim itself, Samuel’s eldest son, Issachar Aryeh (d. 1928), inherited his father’s position. On Issachar’s death his son Abraham succeeded him and emigrated to Palestine in 1935, but did not serve as ḥador. In 1942, the Slonim Ḥasidim in Jerusalem established Yeshivat Slonim Beit Avraham. In 1955 the Slonim Ḥasidim elected Abraham (III), the son of Noah (mentioned above), who had immigrated to Ereẓ Israel in his youth, as their ḥador.

[Wolf Zeev Rabinowitsch]

SLONIM, MARC (Marc Ivovich; 1894–1976), literary scholar. A member of the 1917 Russian Constituent Assembly, Slonim later moved to Prague, where he edited an émigré periodical (1922–32), and settled in the U.S. in 1941. He taught at Sarah Lawrence College, Bronxville, from 1943 onward, becoming the director of foreign studies there in 1962 and European consultant for foreign studies in 1968. His works include The Epic of Russian Literature… (1950), Modern Russian Literature from Chekhov to the Present (1953), and Soviet Literature (1964, 1967).

SLONIM, REUBEN (1914–2000), Canadian rabbi and journalist. Slonim was born in Winnipeg. After his immigrant fa-
ther suffered a stroke, Slonim’s mother was left to tend to her husband and three children. She and her children boarded at Jewish Orphanage and Children’s Aid of Western Canada, where she was the cook. In his memoir Grand to Be an Orphan (1983), Slonim recalled that while the Orphanage offered educational opportunities, some of the staff also dished out beatings. With Orphanage support, Slonim studied at a yeshivah in Chicago and attended the Illinois Institute of Technology, where he received his B.S.A.S. in 1933. He then attended the Jewish Theological Seminary, where he was ordained and earned an M.H.L. in 1937. He also attended the Albany Law School, New York, between 1935 and 1937. In 1937 he became rabbi at Toronto’s McCaul Street Synagogue, one of the first Canadian-born rabbis to serve a Conservative congregation, and he remained there for three years. For the next seven years he occupied pulpits in Cleveland and Troy (N.Y.) before returning to Toronto in 1947 to serve the McCaul Street Synagogue until its 1955 merger with the University Avenue Synagogue. He was not named to the senior position in the newly established Beth Tzedec Congregation.

Slonim held a variety of community positions, including president of the Toronto Zionist Council (1947–52) and chair of the Synagogue Council State of Israel Bonds (1955–60). Slonim grew angry, however, over the policies of the State of Israel and what he perceived as the uncritical support of Israel within the Jewish community. And to the horror of the Jewish community, he had a vehicle in which to express his views. In 1955 The Toronto Telegram hired Slonim as associate editor on the Middle East; between 1935 and 1937 he occupied pulpits in Cleveland and Troy (N.Y.) before returning to Toronto in 1947 to serve the McCaul Street Synagogue until its 1955 merger with the University Avenue Synagogue. He was not named to the senior position in the newly established Beth Tzedec Congregation.

Slonim held a variety of community positions, including president of the Toronto Zionist Council (1947–52) and chair of the Synagogue Council State of Israel Bonds (1955–60). Slonim grew angry, however, over the policies of the State of Israel and what he perceived as the uncritical support of Israel within the Jewish community. And to the horror of the Jewish community, he had a vehicle in which to express his views. In 1955 The Toronto Telegram hired Slonim as associate editor on the Middle East. Until the newspaper’s demise in 1971 and later in the Jewish Standard, Slonim often attacked Orthodox influence on Israeli politics and Israel’s treatment of Palestinians. He also championed Israeli withdrawal from occupied territories and strongly opposed the 1982 Lebanon war.

In 1971, Slonim was hired by a small and unaffiliated liberal Toronto congregation, Congregation Habonim, established in the spirit of German Liberal Judaism, by central European Holocaust survivors. Slonim attracted younger, Canadian-born congregants but, to the consternation of some, he also used his pulpit to condemn Israeli policy. After the war in Lebanon, he was dismissed. He described his time as a pulpit rabbi in To Kill a Rabbi (1987). He subsequently co-founded the Association for the Living Jewish Spirit, which until 1999 met on High Holidays.

Towards the end of his life, Slonim received belated recognition from the Jewish community. Rabbi Gunther *Plaut, who had often been at loggerheads with Slonim, later admitted that Slonim was unjustly ostracized by the Jewish community and regretted his own part in the process. In 1998, the Jewish Theological Seminary honored Slonim for his years of service.

In addition to his two memoirs, Slonim published In the Steps of Pope Paul (1965), an account of Pope Paul’s visit to the Middle East; Both Sides Now (1972) summarizing his career at the Toronto Telegram, and Family Quarrel: The United Church and the Jews (1977) chronicling disputes over Israel between the Jewish community and the United Church.

[Richard Menkis (2nd ed.)]

SLONIMSKI, ANTONI (1895–1976), Polish poet, author, and critic. The son of a converted Warsaw physician and grandson of the Hebrew writer Hayyim Selig *Slonimski, Slonimski began his literary career during World War I, publishing his early Sonety and founding the “Pikador” group of poets in 1918. From the early 1920s he rose rapidly to become the leading personality in Poland’s literary and cultural life, a master of the verse form and a keen and versatile drama critic. In 1920 he was the cofounder with Julian “Tuwim of the futurist “Skamander” group, and during the years 1924–39 wrote the leading theater reviews for the weekly Wiadomości Literackie, also contributing a regular satirical column from 1927.

Slonimski published more than 40 books, including verse collections. He became a major focus of Polish intellectual interest in the 1930s, and also translated many foreign classics (Rimbaud, Mark Twain, Itzik “Manger). In 1939 he fled to England by way of Paris and during the years 1947–48 was head of UNESCO’s literary section, subsequently directing the Polish Cultural Institute in London (1949–51). His verse that appeared during the war years included Alarm (1940) and Popiół i wiatr (“Ashes and Wind,” 1942).

In the prewar Poland of Marshal Pilsudski, Slonimski trenchantly satirized bourgeois ignorance and stupidity and spurious racial and social theories. Though rehabilitated as chairman of the Polish Writers’ Union (1956–59), he remained a nonconformist in postwar Communist Poland, preferring silence to any compromise with a totalitarian regime. His works and his personal stand exemplified the intellectual’s independence and freedom of thought. Though raised as a Christian, Slonimski had a profound emotional regard for the Jewish people, which may be detected in poems such as his Pieśń o Januszu Korczaku (“Song about Janusz Korczak”), Ahaswer (on the Wandering Jew), and Elegia miastecez zydowskich (“Elegy of the Shtetlakh”). Israel’s War of Independence had wide repercussions in his poetry, and in 1967 Slonimski condemned those calling for Israel’s destruction during the period preceding the Six-Day War.

Stanisław Wygodzki and Moshe Altbauer

SLONIMSKI, HAYYIM SELIG (1810–1904), Hebrew popular science writer and editor. He also used the pseudonym Ḥazas (the Hebrew initials of his name). Born in Bialystok, he wrote popular science articles during the Haskalah period. His
initial acquaintance with science was derived from old Hebrew books, but later he also read scientific literature in German. In 1834, he published the first part of his mathematics textbook entitled Mosedei Hohmah (“Bases of Wisdom”). Halley’s Comet appeared in the following year, and Slonimski wrote a popular work on astronomy, Kokhva de-Shavit (“Comet,” 1835, 1857). He wrote another book on the same subject entitled Toledot ha-Shamayim (“The History of the Skies,” 1838, 1866), which caused great controversy, because it demonstrated errors in the Hebrew calendar. Slonimski also explained his views on the Hebrew calendar in Yesodei ha-Ibbur (“Basic Intercalation,” 1852, one part only; completed in 1853, 1883).

His later works include Mezir‘at ha-Nefesh ve-Kiyyumah Ha‘az la-Guf (“The Existence of the Soul and its Life Outside the Body,” 1852), and Yesodei Hohmat ha-Shit’ur (“Foundations of the Science of Calculation,” 1865, 1899). Slonimski coined new Hebrew terminology where necessary. Some of his mathematical and astronomical interpretations of obscure passages in the Mishnah found their way into editions of the Mishnah printed in Zhitomir.

Slonimski was also an inventor. Among his inventions was a calculating machine, for which he was awarded a prize by the Russian Academy of Sciences (1844). In 1862, Slonimski founded Ha-Zefirah, a Hebrew newspaper devoted mainly to popular science articles written by himself and a team of collaborators, adherents of the Haskalah. The paper ceased publication after only a few months, upon Slonimski’s appointment as inspector of the Government Rabbinical Seminary in Zhitomir and Hebrew censor for South Russia. In 1874, when the Seminary was closed down, he renewed publication of Ha-Zefirah, first in Berlin and, from 1875, in Warsaw. The periodical was edited in the moderate spirit of the Haskalah, avoiding conflicts with the Orthodox by presenting scientific innovations in a manner acceptable to them.

In 1884, Slonimski’s disciples and admirers celebrated the 50th anniversary of his literary career, and two collections of his articles appeared under the title Maimarei Hohmah (“Essays of Wisdom,” 1891–94). In 1886, when Ha-Zefirah began appearing daily, Nahum Sokolow joined the editorial board, and, in effect, took over the editorship, though Slonimski continued to contribute articles. A list of his articles appeared in Ha-Zefirah, 14:91 (1887), 5–6. Slonimski’s son Leonid *Slonimski converted to Christianity. Many of his grandchildren achieved distinction. Antoni *Slonimski, son of Stanislaw, was a well-known Polish poet; Alexander, a literary critic, Mikhail *Slonimski, a writer, Nicolas, a composer, and Henry *Slonimsky, a scholar.

[Yehuda Slutsky]

---

**SLONIMSKY, LEONID ZINOVIEVICH** (1850–1918), lawyer and publicist; son of Hayyim Selig *Slonimski, he was born in Zhitomir and graduated from the faculty of law of Kiev University in 1872. He settled in St. Petersburg and converted to the Greek Orthodox religion. He was a regular contributor of legal and sociological articles to Russian and international periodicals. From 1882 he was member of the editorial board of the liberal journal Veshnik Tovrogh. Slonimski wrote on the juridical situation of Jews in Russia and abroad (Yevreyskaya Biblioteka, vol. 6, 1877), and dealt with the Jewish problem in many of his general articles. In 1906 he published a text of the Russian constitution, with a preface which caused its official suppression. Slonimski criticized the teachings of Karl Marx in his work Ekonomecheskoye ucheniye Karla Marksa (1898). His son Alexander Slonimsky (1881–?) was a critic and novelist. He edited the authoritative editions of Pushkin’s work. His son Nicolas *Slonimsky was an American musicologist, conductor, and composer. Another son, Mikhail *Slonimski, was a distinguished Russian-Soviet writer.

**SLONIMSKI, MIKHAIL LEONIDOVICH** (1897–1972), Soviet Russian author and critic. Born in Pavlovsk, of a prominent, highly assimilated family, Slonimski was the son of Leonid *Slonimski, nephew of the literary historian Semyon Vengerov, and a cousin of the famous Polish poet Antoni *Slonimski. He was one of the founders of the Serapion Brothers, a loose association of writers that came into being in 1921 for the purpose of protecting the autonomy of a literature already threatened by political pressures.

Slonimski’s best work was written early in his career. In addition to some investigations of literary theory, this includes Shestoye st (1922), a collection of tales about the senseless horror of war and the Revolution; the autobiographical novel Lavrovsky (“The Lavrovs,” 1927), which portrays a young man who breaks with his petty, ineffective, and selfish family to join the Revolutionary cause; and its less successful sequel, Foma Kleshnov (1930). In 1949, at the height of the Stalinist terror, Slonimski published Pervye gody (“First Years”), a revised and more militantly Communist version of Lavrovsky.

[Leonid Zinovievich Slonimsky]
teaching,” it is possible to see the thrust of his thinking from his sparse writings. On the face of it, his concern with human needs and emotions would seem to separate him from his great teacher H. Cohen, the rationalist par excellence, but on closer consideration the latter’s decisive and pervasive influence becomes clear. The importance Slonimsky attaches to the Platonic tradition in the history of human thinking, his wariness of the “bourgeois” dangers to the Jewish truth, and his reinterpretations of episodes in general and Jewish philosophy exemplify the spirit of the “Marburg School.” His single most important doctrine, that of the “humanized,” finite, growing (i.e., anthropomorphic) God, had three constituent considerations: (1) the idea of a “limited God” explains the dyste-
leology of human suffering; (2) man’s ethical responsibilities are greatly enhanced when they are needed for the “growth of God” (cf. Cohen’s “correlation”); (3) the Jewish formulation of Kant’s “asymptotic” concept of the ideal is echoed in Slonimsky’s commitment to messianism, God and “religion of the future.”

[Steven S. Schwarzchild]

SLONIMSKY, NICOLAS (1894–1995), musicologist, lexicographer, composer, and conductor. Born in St. Petersburg, Slonimsky was the son of Leonid *Slonimski and grandson of Hayyim Zelig *Slonimski. He studied at the St. Petersburg Conservatory (piano with Vengerova, his aunt, and composition with Kalafaty and Shteinberg). He went to the United States in 1923 and worked as opera coach at the Eastman School of Music in Rochester, New York (1923–25), and as secretary to Serge *Koussevitzky (1925–27). He founded and conducted the Chamber Orchestra of Boston from 1927 to 1934; he also conducted the Harvard University Orchestra (1927–30). Slonimsky was a lecturer at Colorado College (1940, 1947–49), Peabody Conservatory (1956–57), and UCLA (1964–67). He became a champion of modern American music, which he pre-
ented on lecture and performance tours. He edited the 4th to 7th editions of Thompson’s International Cyclopedia of Music and Musicians (1946, 1949, 1952, 1956) and the 5th edition of Baker’s Biographical Dictionary of Musicians (1958, re-issued with supplements in 1964 and in 1971). His writings include Music since 1900 (1937), Music of Latin America (1943), Th,
aurus of Scales and Melodic Patterns (1947), and A Lexicon of Musical In
tective (1953) as well as a number of scholarly ar-
ticles. He composed a number of works, some of them frankly tongue-in-cheek, such as Moebius Strip Tease (1965).

[Marina Rizarev (2nd ed.)]

SLONIMSKY, SERGEI MIKHAILOVICH (1912– ). Russian composer, pianist, and musicologist, son of the writer Mikhail *Slonimski and nephew of Nicolas *Slonimsky. Slonimsky was born in St. Petersburg and studied composition (at the age

of 11) with Shebalin (in Moscow from 1943 to 1945) and later with Volfovson, Eulaklov, and Arapov in St. Petersburg, as well as piano with Nilsen. He graduated from the St. Petersburg Conservatory in 1956, where he taught composition and became professor in 1976. The music of Mussorgsky and Prokofiev influenced Slonimsky, yet he developed his own idiom based on Russian folklore, which he articulated in his works in a variety of compositional techniques.

ber works, vocal and choral pieces in many genres, and music for the theater and cinema. As a musicologist, he wrote *Simfoniya Prokofeva* (1964, based on his Ph.D. thesis) and essays on Mahler, Stravinsky, Shostakovich, Balakirev, and Russian folklore. A volume of his reviews and memoirs, *Burleski, elegii, difiramby v presrennom prose* (“Burlesques, Elegies, Dithy\nrambs in Contempible Prose”), was published in 2000. He also devoted his energies to the revival of music by forgotten composes of previous generations. His creative work inspired unusually rich musicological research.

[Marina Rizarev (2nd ed.)]

SLOSS, MARCUS CAUFFMAN (1869–1958), U.S. lawyer and jurist. Sloss, who was born in New York City, practiced law in San Francisco. He was elected superior court judge for San Francisco city and county in 1900. In 1906 Sloss was ap-
pointed to fill a vacancy on the California Supreme Court and was then elected presiding judge of that court in the same year. Relected in 1910 and 1918, he resigned the judgeship in 1919 to return to private law practice.

Extremely active in Jewish affairs, Sloss served as president of the Jewish National Welfare Fund of San Francisco and the Pacific Hebrew Orphan Asylum and Home Society, was associated with the Joint Distribution Committee, and was active in the American Jewish Committee. In other public af-
fairs, Sloss was a member of the California Board of Bar Examiners, a trustee of Stanford University, and a board member of the San Francisco Public Library.

SLOTKI, ISRAEL WOLF (1884–1973), scholar and educator. He was born in Jerusalem and went to England in 1906, liv-
ing first in London and later in Manchester. There he served as principal of the Talmud Torah school (1911–50) and later as director of Jewish education for Manchester (1946–50). He organized the first conference of religious Zionists in England (1918) and was secretary of the Mizrachi Center of the United Kingdom (1926–28). His publications include studies of an-
cient Hebrew poetry, annotated translations of 16 tractates of the Talmud (Soncino Press), commentaries and introductions to three books of the Bible, books on local Jewish history, and many contributions to scholarly periodicals. His son, JUDAH JACOB SLOTKI (1903–1988), also born in England, arrived in Jerusalem, arrived in England as a boy. He was superintendent of Jewish education in Manchester (1942–46), director of Jewish education in Leeds (1946–55), and from 1955 director of the Central Board of Hebrew Education in Manchester. In 1956 he established the S.H. Steinhardt Training College for Hebrew teachers. From 1959 he was a vice president of the British Mizrahi Federation. He published translations of part of the Midrash Rabbah (Soncino Press) and of five books of the Bible, works for Jewish children, and a biography of Manasseh Ben Israel. His edited edition of The Babylonian Talmud was published in 1990.

[Godfrey Edmond Silverman]

SLOUSCHZ, NAHUM (1871–1966), scholar and writer, archaeologist and historian, traveler and translator. Born in Smorgan near Vilna, son of David Solomon Slouschz, rabbi, maskil, and early Zionist, Slouschz was taken as a child to Odessa. Odessa became the center of the Ḥovevei Zion movement and of the Hebrew renascence, and Slouschz took an active part in those political and cultural activities. He sided with Ahad Ha-Am’s critics and early became a political as well as a practical Zionist. He wrote on a variety of subjects for the Hebrew press both in Russia and in Ereẓ Israel, and for a time edited a Russian-Jewish paper, Odeskaya Gazeta (1897).

He visited Ereẓ Israel for a year in 1891 on behalf of the Odessa Palestine committee with a view to establishing a new settlement, then returned for a year in 1896. Slouschz then went to Geneva, where he studied classical and French literature. Here too he was active as a Zionist and was among the founders of the Swiss Zionist Federation. He was an early follower of Herzl, but in the wake of the Uganda affair he joined for a time the Jewish Territorial Organization (see *Territorialism), investigating the possibilities of Jewish settlement in *Tripoli-Cyrenaica, which he visited (see his confidential report, translated by P.H. Magnus, 1907).

From Geneva Slouschz proceeded to Paris to study Semitics at the École des Hautes Études and French literature at the Sorbonne. He published *Renaisance de la littérature hébraïque, 1743–1885* (1902), which was translated into English by H. *Szold (1909); *Poésie lyrique hébraïque contemporaine* (1911); *David Frischmann – poète* (1914); and *Poésies hébraïques de Don Jehouda Abrahanel* (1928).

In 1904 Slouschz was appointed to a newly founded chair of Hebrew language and literature at the Sorbonne. He also taught (1903–18) at the Ecole Normale Orientale of the Alliance Israélite Universelle. Between 1906 and 1914 he undertook a series of exploratory journeys on behalf of the Académie des Inscriptons et Belles Lettres to North Africa, where he studied Phoenician and Greek inscriptions, and also the life and history of the Jewish communities of the region.

The results were published under the following titles:

During World War I Slouschz was involved in activities to influence the French government in agreeing to the *Balfour Declaration,* and he visited the United States in the same cause. While in New York he contributed to the Hebrew and Yiddish press, and acted as editor of the *Jewish Morning Journal.* In 1919 Slouschz settled in Ereẓ Israel, where he revived the Palestine Exploration Society and edited its publications. He conducted excavations at Tiberias, where he discovered the ancient second-century synagogue of Hammat (mentioned in the Talmud), including a beautiful stone menorah (Ha-Hafriot be-Hammat shel Teveryah, 1921). He also excavated at Absalom’s Tomb in Jerusalem and began to excavate in Transjordan (*Ever ha-Yarden,* 2 vols., 1933).

In his early years Slouschz translated works by the Italian writer Paulo Montegazza, and during his years in Paris, a number of French writers, into Hebrew: Emile Zola (stories, and also a biography, 1899); Guy de Maupassant (with biography, 7 vols., 1903–04); and *Salammbo* by Flaubert (1922). A collection of his writings appeared under the title *Ketavim Nivharim* (2 vols., 1938–43).

SLOVAKIA (Slov. *Slovensko,* Ger. *Slowakie,* Hung. *Szlovákia,* Central European republic; 1918–1993, part of *Czechoslovakia;* formerly a part of *Hungary.* Since Slovakia was part of Hungary for almost 1,000 years, the annals of the Jews of this region were submerged in the history of the Jews of Greater Hungary. The Jews of Slovakia (termed “Upper Hungary,” “Northern Hungary,” or “Highland”) were commonly called “Highland Jews” (*Oberlaender*).

Jews appeared for the first time on the contemorary Slovakia in the Roman fortification of the first century C.E. (limes) in the southwest, along the Danube River. This was several hundred years before the appearance of the Slavonic tribes in the region. These Jews might have been
slaves, tradesmen, or soldiers serving in the Roman Legions. In archaeological excavations of the fortifications, Jewish artifacts were discovered. The next possible appearance of Jews in the region might have been in the seventh century C.E. when a Frank tradesman named Samo (Samuel?) unified the Slavonic tribes against the Mongol Avars in 623–624. In the ninth century C.E., the first political bodies of the western Slavs were established. It seems that Jews had settled in municipal locations of the so-called Great Moravian Empire. These Jews might have been related to Jewish-Arabic tradesmen who wandered between Mesopotamia and Eastern Europe. The next significant Jewish appearance took place in the 10th century, when Jewish Khazar tribes accompanied the Magyar tribes that conquered the region. There is written evidence as well as that of names of localities along the Nitra River.

Jewish settlements, in both urban and rural locations, continued to appear in southwestern and western upper Hungary. A further influx of Jewish settlers, who came along the trade routes from Germany and perhaps the Balkans, established themselves in Greater Hungary. Papal and Magyar royal legislation testified to Jewish existence in ancient Hungary. In the territory of upper Hungary, they lived along the lower Hron, Vag, and Nitra rivers, as well as the Danube. By the end of the 11th century, they experienced severe persecutions, particularly during the First Crusade, which crossed the region. Most hard hit were the Jews of Bratislava (former Slovak name Presporok; Pressburg in German; Pozsony in Hungarian).

Sporadic references to the existence of Jews in the region are found from the mid-13th century. Official contemporary documents and rabbinical literature record a number of flourishing Jewish communities in Pressburg, Senica (Szenice), Trnava (Tyrrnauo, in German; Nagyszombat in Hungarian); Nitra (Nyitra in Hungarian); Pezinok (Hung. Bazin); and Trnecin (Trentschin in German; Trancsén in Hungarian.) In the Pressburg (Bratislava) community alone in the 14th century there were 800 Jews, forming an autonomous political unit headed by a communal leader. Some of the Jews of this region engaged in agriculture and owned and cultivated vineyards, but the majority engaged in commerce and moneylending.

After the Tartar (Mongol) invasion of 1241, which left behind a devastated land, the ruling dynasty invited foreign settlers, including Jews, to rebuild the country. Again Jewish communities established themselves, frequently at the same location as the earlier ones. But their life was not tranquil, and in 1360 the Jews of Kosice (Kaschau in German; Kassa in Hungarian) were expelled from the city in 1494. Several Jews of Trnava were burnt at the stake because of a blood libel; the same happened in Pezinok in 1529. Local incidents occurred from time to time. A rigorous wave of persecution followed the defeat at Mohacs in 1526, where the Ottomans annihilated the army of the Magyar kingdom. Jews were expelled from towns and could live only in villages and places where they were admitted by the local nobles. In time, the nobles’ willingness to accept Jews increased. Aware of the Jews’ contribution to the economy, they would settle them on their estates and granted land for synagogues and cemeteries. They granted certain privileges in exchange for hefty taxes and the promotion of trade and industry. Jewish life began to flourish again in western and southern upper Hungary, where Jews expelled from Austria and Germany settled, augmented by Czech and Moravian Jewish settlers. There were large numbers of Jews in the northern part of upper Hungary which, in the 17th and 18th centuries, was known as “Magyar Israel.” Many of these Jews were refugees from the atrocities of the Ukrainian Hetman Bogdan *Chmielnicki and the outrages of the *Haidamaks in Poland.

According to the 1785 census, the Pressburg community was the largest in Hungary, second to Nové Mesto nad Vahom (Waagneustadt in German; Vágúhely in Hungarian). Trade routes, and in particular the movement of wine merchants from Hungary to Poland, helped promote Jewish life in eastern upper Hungary and Carpatho-Rus. From the 17th century, there was an increase in the influx of Moravian Jews seeking a haven from the Kurutz riots (1683), the residence restrictions, and the Familiants Law (1726). The majority of the newcomers settled in the western districts, bordering on Moravia, in places like Holic, Senica, Myjava, Nové Mesto nad Vahom, Trenecin, and Nitra. For many decades they preserved their old traditions, maintaining close spiritual and commercial ties with their kinsmen beyond the border. They even continued for some time to pay taxes to their former Moravian communities and to bury their dead there. Their synagogues were built on the models of those in Moravia, and services were conducted according to the Moravian rites. Youngsters from upper Hungary flocked to the Nikulov (Nikolsburg), Prostejov, and Boskovice *talmud torah schools, and those from Moravia frequented the famous Pressburg and Vrbova yeshivah. Eventually, they started to establish their own centers of learning, such as Brezova pod Bradlom and Puchov. These were later replaced by wealthier communities or those with local importance. The Huncovec (Unsforf in German; Hunfalva in Hungarian) yeshivah served the Jews of north and east upper Hungary, the Dunajská Streda (Dunaszerdahely in Hungarian) and Galanta yeshivah served the center and southern Jewish population. Those three, along with the leading yeshivah of Pressburg, became the four leading yeshivot of upper Hungary. The leader was the yeshivah of Pressburg, which had been in existence since 1700, and was subsequently recognized by the government as an institution for the education of rabbis. It became particularly prominent through the influence of R. Moses Schreiber-*Sofer, whose descendants officiated for generations as rabbis of Pressburg and other towns. The yeshivah drew students from all over Europe.

The landlords of those regions – the Hungarian counts Palfy, Eszterhazy, Pongracz, etc. – welcomed Moravian Jews, most of whom were industrious merchants and craftsmen who helped to develop their estates and foster trade with neighboring countries. They granted them protection and, in some cases, even erected synagogues and contributed land for cem-
eties. But the Jews were only slowly incorporated into the life of the region. In 1831 a cholera epidemic resulted in anti-Jewish riots in eastern Slovakia. The Jews were accused of having poisoned wells and causing the plague. During the Spring of Nations (1848–49), riots took place in many locations in western and central Slovakia. Many Jews enlisted to defend the Magyar Revolution by serving in the army. Some Jews joined the Slovak forces, defending Slovak national interests. During the Tisza Eslztr outrages, there were pogroms in upper Hungary (1882, 1883) as well. They were repealed when the Reception Law was accepted by the Hungarian parliament in 1896.

From the mid-18th century, a schism developed among Hungarian Jewry. While the Orthodox asked to preserve their centuries-long religious traditions, others promoted reforms (in local parlance, *Neologs). The schism led to the convocation of the Hungarian General Jewish Congress (1868–69) (see *Hungary), after which the communities split into three main congregations: Orthodox, Neolog, and Status Quo Ante.

With the establishment of the dual monarchy of Austria-Hungary in 1867, the Hungarian parliament passed the Emancipation Law the same year. The main aim of Hungarian domestic policy was assimilation of the minorities. To this end, Magyar became the official language of instruction and public administration. This "Magyarization" brought about a considerable amount of assimilation, especially among well-to-do middle-class Jews, who began to gravitate politically and culturally toward Budapest instead of Vienna. The liberal Hungarian authorities encouraged Jewish cooperation in the development of local industry, commerce, and finance. Jews began to be prominent in the free professions, such as education and journalism. The political economist Eduard (Ede) Horn of Nové Mesto nad Váhom became undersecretary at the Ministry of Commerce, the first Jew to rise to such a position in Hungary. While being a member of the Hungarian Parliament, Horn defended the interests of the Slovaks, thus promoting Jewish-Slovak understanding.

But the Slovak-Jewish understanding was a difficult affair, as the Magyars encouraged assimilation of the Jews into Magyar culture and policies, and encouraged their participation in the Magyarization drive of the authorities. Many Jews, in particular inhabitants of larger cities, the well-to-do, and those affiliated with Neology, actively supported Magyar nationalist interests. Thus they clashed with the Slovak nationalists. During the second half of the 19th century, Slovak nationalism increased. Attempts of some Slovak leaders to foster an understanding with Jews living in the territory were unsuccessful. This was exacerbated by the fact that several Slovak leaders, beginning with Ludovit Stur (1815–56), took a severe anti-Jewish stand, and the national poet Svetozar Hurban-Vajansky (1847–1916) was a racist. Many of these leaders were Lutherans, who represented the young but developing bourgeoisie. The nationalistic feelings of members of a religious minority merged with clashing economic interests. The Lutherans, sensing the pressure of the Catholic Church, wanted to cement their position in Slovak society. Thus the Slovak li-

terati, many of them Lutherans, promoted Judeophobia in the land, which naturally added to the hostility toward the Magyarization. Soon the Lutherans were joined by the Catholics. Here the clergy, partially Magyarized, waved the first banners of Judeophobia. With the expansion of nationalism within the Catholic public, it took a leaf from the Protestant books and combined nationalism with antisemitism. Significantly, Jews from nationalistic cities, particularly the rural countryside, were less affected by Magyarization, and there were cases of Jewish-Slovak understanding. Immigrants from Galicia who flocked in particular to eastern Slovakia after the annexation of part of Polagon by the Habsburg Monarchy (1771), not familiar with local conditions and needing to establish themselves economically, contributed much toward the hatred of Jews. An open campaign was conducted in the Hungarian parliament (see *Istóczy affair), and anti-Jewish riots took place in a number of towns (1882, 1883). The Reception Law (1896), which placed the Jewish religion on an equal standing with the Christian religion, gave rise to the foundation of the Slovak Clerical People's Party, whose basic tenets were anti-Liberalism and the struggle against Jewish influence, and became a major factor in spreading antisemitism among the devout Catholic population. The rise of Slovak nationalism at the end of the 19th century coincided with the beginning of Zionism; of the 13 local Zionist groups established in Hungary subsequent to the First Zionist Congress, eight were in Slovakia (Bratislava, Nitra, *Presov, *Kosice, Kezmarok, * Dolni Kubin and *Banska Bystrica). Moreover, Bratislava was the site of the first Hungarian Zionist Convention, held in 1903, as well as of the first World *Mizrachi Congress (1904). However, Zionist activity came to a standstill during World War 1, only to reemerge with new impetus after the establishment of the Czechoslovak Republic (1918).

The end of the war (1918) was accompanied by a wave of political and social disturbances and outright robbery with no ideological basis. Dozens of Jews were killed, executed, and injured. The Bolshevik revolution in Hungary in 1919 spilled over into Slovakia. As many Jews were involved in leading the revolution, the situation of Jews in Slovakia was affected as well. Only when the Prague authorities took over the management of the country did the situation quiet down. During the disturbances, Jews escaped from the villages or were expelled. Occasionally Jews would defend themselves with weapons. Poverty among the Jewish population, one of the results of the disturbances, was slightly ameliorated by the Joint Distribution Committee.

The newly created democratic state brought about radical changes in the political status of Jews: for the first time, the Jews had the right to declare themselves members of the Jewish nation. The new framework also permitted collaboration among the Czech, Slovak, and Subcarpathian Jewish leaders. The first official contact was made with the participation of the delegation from Slovakia at the Congress of the Jewish National Council, which convened in Prague (Jan. 3–6, 1919). At this congress the foundation was laid for the formation of
the Jewish Party (*Židovská strana). Upon the return of the delegates, the National Federation of Slovak Jews (Svaz Židov na Slovensku) was established at *Piestany on the model of the *Prague and *Brno National Jewish Council. It was to play an important role in the consolidation of the life of the Jewish population after the hardships of war and the revolutionary transition period (1918–19). Another factor that contributed significantly to the improvement of the situation of the Jewish masses was the work of the American *Joint Distribution Committee, which established credit cooperatives and granted individual loans. The organ of the Federation of Slovak Jews, *Juedische Volkszeitung (“Jewish People’s Paper”), launched in Bratislava on Aug. 2, 1919, came to play an important role in the struggle for the rights of the Jewish minority of Czechoslovakia. According to the first Czechoslovak population census (Feb. 15, 1921), 135,918 persons in Slovakia (4.5% of the total population) declared themselves Jewish by religion; 70,522 of them declared themselves Jewish by nationality; of them 34.62% were gainfully employed, and the rest were dependent family members. The majority of the Jewish population was engaged in commerce and finance, followed by industry, handicrafts, and agriculture. In the free professions, lawyers and physicians were predominant. Of the 217 existing congregations, 165 were Orthodox, governed by the Bratislava Autonomous Center; the remaining 52 were organized in the Congress (Neology) and Status Quo Ante associations, which later unified under the name “Jeshurun.” The political chasm dividing the different congregations became manifest during the parliamentary elections, and factions such as the Conservative Jewish Party and the Jewish Economic Party attracted votes from the Jewish Party, which was struggling for the rights of the Jewish minority. Individual Jews were also members in the Social Democratic Party, the Magyar National Party, and the Communist Party. In the first two elections (1920, 1925), the Jewish Party was unable to muster 20% of the vote in one constituency and failed to enter the parliament of Prague; it was only during the third elections (1929) that it achieved representation through Ludvik *Singer (succeeded by Angelo *Goldstein) and Julius Reisz of Bratislava. The latter was also a delegate to the Provincial Assembly, created in Slovakia in 1927; his place in parliament was taken after the fourth elections, in 1935, by Hayyim *Kugel.

The years of stability in the late 1920s brought prosperity to a wide stratum of the Jewish population and a general upheaval in social and cultural life, centering mainly around the Zionist organizations, the newly founded youth movements, and *WIZO, all of which were instrumental in disseminating Jewish culture and the Hebrew language and fostering relations with Erez Israel.

A new generation, for the most part socialist in outlook, was educated at Bratislava and Prague universities. The German and Hungarian language tradition still prevailed among the older generation, and Jewish writers and journalists continued to write in either of these languages. Blaming them for the process of Magyarization and claiming that they owned two-thirds of the nation’s property, the spokesmen of the rightist Slovak People’s Party openly incited the people against the Jews. In the late 1930s, anti-Jewish demonstrations in Slovakia were led by the Nationalist Youth Movement (Om ladina) and the Volksdeutsche students. In 1937 the delegate of the People’s Party even proposed in the parliament of Prague that the Jews of Slovakia and Subcarpathian Ruthenia be transferred to *Birobídzhan because of their high birthrate and since anyhow they were Communists.

The situation of the Jews deteriorated greatly in the autumn of 1938. After the Munich conference, the Prague government was compelled to grant autonomy to Slovakia, and the Slovak People’s Party seized power at the *Zilina conference (Oct. 6, 1938) and established a quasi-Fascist and anti-semitic regime.

For Holocaust and contemporary periods, see *Czechoslovakia; *Czech Republic and Slovakia.

SLOVO, JOE (1926–1995). South African politician. Slovo was born in Lithuania and taken to South Africa when he was eight. After war service, he graduated in law at Witwatersrand University. In 1942 he joined the Communist Party, but after it was outlawed he was arrested and detained on several occasions in the 1950s and 1960s. He was one of the accused in the 1956–61 Treason Trial, which ended with charges being dropped or acquittal for all 156 defendants. He was one of the drafters of the Freedom Charter, the African National Congress’s non-racist manifesto of 1955, and helped to organize the Congress’s guerrilla wing, serving as its chief of staff. He worked from countries neighboring South Africa. Slovo was the first white appointed to the Congress’s national executive (1985). In 1986 he became secretary general of the South African Communist Party. After 27 years of exile he returned to South Africa in 1990 and played a leading role in the negotiations leading to the transition from white minority rule to multiracial democracy in April 1994. He was appointed as the first minister of housing in the post-apartheid South African government under Nelson Mandela, a position he held for six months before dying of cancer early in 1995. His autobiography, Slovo – The Unfinished Autobiography, appeared posthumously later that same year.

[David Saks (2nd ed.)]

SLUCKI, ABRAHAM JACOB (1861–1918), Hebrew writer. Born in Novogorod Severski, Slucki began publishing articles in *Ha-Meliz in 1884 and became assistant editor of the peri-
SLUTSK, BORIS ABRAMOVICH (1919— ). Soviet Russian poet. Though one of the most talented Soviet lyric poets of the middle generation, Slutski was believed to have been silenced for a number of years because of the often defiantly Jewish tone of his verse. His first efforts appeared as early as 1941, but it was not until well after Stalin’s death that he was discovered by Ilya *Ehrenburg and the first anthology of his verse was allowed to appear (Pamyat, 1957). Slutski thereafter became firmly identified with the liberals in Soviet literature, sounding the alarm over the increasingly technocratic character of Soviet civilization that threatened destruction to the country’s humanistic cultural heritage in Fiziki i liriki (‘Physicists and Lyricists,’ 1959). Slutski’s World War II army service brought him to the devastated Jewish settlements of western Russia, and the Holocaust inspired some of his most eloquent verse, much of it published only after Stalin’s death. Following the sensation created by Yevgeni *Yevtushenko’s poem “Babi Yar” in 1961, and particularly after the vitriolic attacks on the non-Jewish poet for singing out the martyrdom of the Jewish victims of Nazism, an embittered and impassioned anonymous poem about the tragic fate of Russia’s Jews was widely circulated in the U.S.S.R. Its author was said to be Slutski, but this was neither confirmed nor denied by

[Yehuda Slutsky / Ruth Beloff (2nd ed.)]
SLUTZKI, DAVID

Slutski himself. In 1963 a Moscow publishing house brought out Poety Izraeliya, the first collection of Israel poetry ever published in the U.S.S.R. In which many of the poets represented were either Communist Party members or sympathizers, and some of the texts were mutilated by Soviet censors. Slutski was listed as the editor of the collection, but he did not write the introduction which, in the U.S.S.R., was invariably entrusted to the editor.

[Encyclopedia Judaica]

SLUTZKI, DAVID (d. 1889), publisher and businessman in his native Warsaw. Slutski spent some time in St. Petersburg, where he befriended J.L. *Gordon, and moved to Hamburg, living there in great poverty. He was familiar with Jewish literature of all periods, particularly philosophic and meditative literature, and sought to publish new editions for the masses in a modern format with biographical introductions and notes. Accordingly, he published a proclamation at the beginning of the 1860s calling for a comprehensive edition of all the works of the Oral Law and the literature of the Middle Ages.

From 1863 to 1871 he published the following works in Warsaw: Hokhmat Yisrael, a series of works containing comprehensive introductions, prefaces, biographies of the authors, etc., as well as Jedah ha-Perenim's Behinat Olam (1864); Solomon ibn Gabirol's Mivhar ha-Perenim (1864); Maimonides' Shemonah Perakim (1864) and Be'ur Millot ha-Higgayon (1865); Saadiah Gaon's Emunot ve-De'ot (1864); Judah ibn Tibbon's Ruah Hen (1865); Judah Halevi's Kuzari (1866); and Bavya ibn Paquda's Hovot ha-Levavot (1870). In addition, he published new editions of Manasseh of Ilya's Sefer Alfi Menashesh (Warsaw, 1860), Megillat Antiyokhush (1863), and S. Pappenheim's Arba Kosot (1865).

[Getzel Kressel]

SMELA (Smiela) city in Kiev district, Ukraine. By 1765 there were 927 Jews in Smela. During the 18th century Smela was subjected to many attacks by *Haidamacks, and was particularly affected by that of 1768. In 1847 the Jews numbered 1,270, and by 1897 the number increased to 7,475 (50% of the total population). During a pogrom perpetrated in Smela by the bands of Grigoryev in May 1919, over 80 Jews were killed and hundreds of Jewish houses, stores, and workshops were destroyed. The number of Jews in Smela was 5,867 (25.7% of the population) in 1923. Under German occupation during World War II the entire Jewish community was exterminated. In 1959 there were again approximately 1,800 Jews in Smela (4% of the total population). Most left in the 1900s. Within the Jewish community in Smela there is a Jewish community center, a Sunday school, a youth club, and a children’s choir called Hatikva.

SMELER, NELL JOSEPH (1930– ), U.S. sociologist. Born in Kahoka, Missouri, Smelser received bachelor’s degrees from Harvard University (1952) and Magdalen College, Oxford (1954) and a Ph.D. from Harvard in 1958. That year, he became a faculty member of the department of sociology at the University of California at Berkeley. After retiring from teaching, he became professor emeritus of sociology at Berkeley.

Smelser is one of the major representatives of a trend in American sociological theory that aims at the construction of systematic models as a guide to and determinant of concrete research. This provides the common denominator for many of Smelser’s published works.

Smelser was elected to the American Academy of Arts and Sciences (1968), the American Philosophical Society (1976), and the National Academy of Sciences (1993). In 1994 he was elected director of the Center for Advanced Study in the Behavioral Sciences, an independent institution located on the campus of Stanford University. He had served on its board of trustees (1981 to 1993) and was chairman of the board (1985–86). He was also chairman of the center’s Advisory Committee on Special Projects. In 1997 he was elected president of the American Sociological Association.

[Getzel Kressel]

"SMEND, RUDOLPH (1851–1913), German Bible critic. Smend taught at the Halle (1875), at Basle (1881), and Goettingen (1889). His major works dealt with source criticism of the Bible. His Die Erzaehlung des Hexateuch auf ihre Quellen untersucht (1912) defined the Hexateuch-Synopsis (2002) and the pentateuchal criticism of H. Holzinger, J. Meinhold, and W. Eichrodt among others. In Lehrbuch der alttestamentlichen Religionsgeschichte (1893; 1899) he advanced the theory that Isaiah became a nationalist only in light of Assyrian domination, and with W. Nowack and A. Lods, who followed J. *Wellhausen’s lead, he maintained that Hosea opposed in principle the institution of the monarchy. His study of the "I" references of the Psalter, in which he maintains that they refer to the congregation and not to...
the individual, provoked a vigorous reaction by opponents of this view. He wrote a detailed exegesis on the Wisdom of Ben Sira; a study of the Meshia stele (1886, with A. Socin); on the influence of the sayings of *Ahikar on the Greek Aesop fables (1898); and a commentary on Ezekiel (1880).

[Zev Garber]

SMILANSKY, MEIR (pseudonym, M. Secco; 1876–1949), Hebrew writer. Born in Kiev district, the brother of Moshe *Smilansky. Meir went to Ereiz Israel in 1891, and joined his family at Hadera, which had just been founded. In 1892 he returned to Russia where he was employed in his father’s business enterprises. He went blind in 1915, and subsequently endured the pogroms in the Ukraine. In 1921 he finally returned to Ereiz Israel, after several years of wandering, and, with the help of his relatives, rehabilitated himself.

Encouraged in his writing by N. *Sokelow, he published stories in *Ha-Zefraḥ, in Luḥah Ahītāsaf, and especially in Ha-Shiloḥah, edited by *Bialik, who also helped Smilansky improve his style. These earlier works dealt with the Ukrainian village and its Jewish inhabitants. His later stories dealing with the pogroms against Ukrainian Jewry were collected in the volume Even Tizak (1940).

[Getzel Kressel]

SMILANSKY, MOSHE (literary pseudonyms, Heruti; Ha-Waja Mussa; 1874–1953), Hebrew writer and agricultural pioneer in Ereiz Israel. Born in Telepolo, a village in the province of Kiev, into a family of Jewish tenant farmers, he went to Ereiz Israel in 1890 and was one of the founders of Hadera. In 1893 he settled in Rehovot where he was the owner of orange groves and vineyards.

An active Zionist, much of Smilansky’s literary career, which he began in 1898, was devoted to publicistic writings. He contributed prolifically to the Jewish press in Russia (*Ha-Zefraḥ, Ha-Melitz, Ha-Zofeh, Luḥah Ahītāsaf, Ha-Shiloḥah, and Ha-Olam), and to Hebrew periodicals in Ereiz Israel and other countries, and was one of the co-founders of the literary journal Ha-Omer. Smilansky saw himself as a disciple of *Aḥad Ha-Am, and was one of the first contributors (writing under the pen name “Heruti”) to Ha-Po’el ha-Za’ir. Deeply concerned with Arab-Jewish labor problems Smilansky opposed the demand by the Second Aliyah for exclusively Jewish labor in the colonies for economic and political reasons. After World War I he was active in organizations for the reclamation and acquisition of land. He was one of the founders of the Hitahadut ha-Moshavot in Judea, whose chairman he became during World War 1, and of Hitahadut ha-Ikkarim (*Farmers’ Federation), which he headed during its early years and whose periodical, Bustanai (1929–39), he edited. In 1918 he volunteered for the *Jewish Legion. Smilansky participated in unofficial and unpublicized talks with Arab leaders in 1936. After World War I he was a faithful supporter of Chaim *Weizmann’s views, which are reflected in many of his articles in the Hebrew press (particularly Haaretz), and in the 1940s he opposed the struggle of the yishuv against the British regime in Palestine.

Much of Smilansky’s literary activity was devoted to the history of Jewish agricultural settlement in Ereiz Israel. Among his many works in the field are Hadera (1930), Rehovot (1950), and Peraki bim-Toledot ha-Yishuv (6 vols. (1959) which ran into several editions). Mishpahat ha-Adamah (4 vols., 1943–53), a book of memoir sketches and first-hand impressions of the pioneers of the First and Second Aliyyot, is one of his finest works. During the last years of his life he wrote a sequence of autobiographical novels: Bi-Sedot Ukraina (1944), Ba-Aravah (1947), Bein Karmei Yehudah (1948), Be-Zel ha-Pardeisim (1951), Tekumah ve-Sho’ah (1953), and Hevele Leidah (1954).

Smilansky’s fiction contains in particular stories on Arab life (under the pseudonym “Ha-Waja Mussa”) which he began in 1906. These stories (collected in Benei Arav, 1964), written in a vivid descriptive style, are the first of their kind in Jewish literature. Smilansky reveals to the Jewish reader a new world – exotic, colorful, throbbing with its own rich humanity. Though in many of the stories Arab life is romanticized, the author’s direct knowledge of the Arab ambience and way of life is documentarily valuable and the stories are of literary merit. Composed before World War I, the stories convey an amicable relationship between Arab and Jew. Other works by Smilansky include Haddassah, a novel depicting the beginning of the Second Aliyah; Toledot Ahavah Ahat (1911), a short novel; Sippurei Sava (1946); Ba-Har u-va-Gai (1949); Shemesh Aviv; and Im Peridah (revised edition 1955). There are several collections of his works including Kitvei Moshe Smilansky (1924–1945), but none is complete.

[Yehuda Slutsky]

“SMITH, SIR GEORGE ADAM” (1856–1942), Scottish scholar of the Bible and geography of Palestine. Smith was ordained as a minister in the United Free Church of Scotland, became professor of Hebrew and Old Testament studies at Church College, Glasgow (1892), and was principal of Aberdeen University (1909–35). His main work was the Historical Geography of the Holy Land (1894, followed by 25 editions), which proved immensely popular as the best-written and most scholarly account of the subject. He had a profound
understanding of the permanent geographical factors and their influence on history.

He also prepared an *Atlas of the Historical Geography of the Holy Land* (1915, 1936) and wrote *Jerusalem: The Topography, Economics, and History from the Earliest Times to A.D. 70* (2 vols., 1907–8). In the field of biblical research he wrote commentaries on Deuteronomy (1918), Jeremiah (1929), and the Twelve Prophets (1928). [Michael Avi-Yonah]

**SMITH, JOHN MERLIN POWIS** (1866–1932), U.S. Protestant biblical scholar. Smith taught Semitic languages and literatures at the University of Chicago, where he became full professor in 1915. He developed a longstanding attachment to biblical translations which culminated in *The Complete Bible: An American Translation* (co-edited by E.J. Goodspeed, 1941).

Smith was also a member of the American Standard Bible Committee responsible for the revision of the American Standard Version. To the *International Critical Commentary* he contributed the commentaries on Micah, Zephaniah, Nahum (1912; 1943), and Malachi (1912; 1937). In 1903 he helped to establish the Oriental Exploration Fund. In his writings, Smith advanced the theory that the Hebrew religion was a product of Israel's social experience reacting to alien cultures (*The Origin and History of Hebrew Law*, 1931, 1960; *The Religion of the Psalms*, 1922). In *The Moral Life of the Hebrews* (1923) he maintained that the uniqueness of the Hebrew religion was its ethical consciousness. Smith also contributed commentaries on Amos, Hosea, and Micah to the *Bible for Home and School series* (1914).

**SMITH, JONATHAN Z.** (1938– ), scholar of religious studies. A native of New York City, Smith received his bachelor's degree from Haverford College in Pennsylvania and his Ph.D. from Yale's newly established Department of Religion in 1962. He taught in the department of religious studies at the University of California, Santa Barbara; then, in 1968, he joined the faculty of the University of Chicago, where he became the Robert O. Anderson Distinguished Service Professor of the Humanities. He also serves on the university's Committee on the Ancient Mediterranean World and on the Committee on the History of Culture, and he is an associate faculty member at the Divinity School.

Considered one of the most influential scholars of religion, Smith is best known for his analyses of religious studies and the problem of comparative work. Much of his research focuses on the religions of antiquity, including ancient Judaism and early Christianity, but he is renowned for his wide range of study and comparison of different historical periods and cultures. Calling religion "the creation of the scholar's study," Smith emphasizes the role of analytic purpose and choice in the academic study of religion. His work, in particular his examination of the implications of choice and his insistence on a relentless scrutiny of scholastic selection and viewpoint, is considered to have influenced the field's move toward an emphasis on theory and an inclusion of the study of politics.

Smith's works include *Map Is Not Territory: Studies in the History of Religions* (1978); *Imagining Religion: From Babylon to Jonestown* (1982); and *To Take Place: Toward Theory in Ritual* (1987), which stresses the importance of constructed ritual environments. His *Drudgery Divine: On the Comparison of Early Christianities and the Religions of Late Antiquity* (1990) examines four centuries of scholarship, discussing the mytheme of the "dying and rising god." In Smith's acclaimed 2004 work, *Relating Religion: Essays in the Study of Religion*, he provides an overview of his theoretical approach, connecting his theory to general education, and he outlines the methods of comparative study, including procedures of generalization and redescription, that he deems so essential to religious scholarship. [Dorothy Bauhoff (2nd ed.)]

**SMITH, MORTON** (1915–1991), U.S. scholar, educator, and historian of the ancient world. Smith, who was born in Philadelphia, served on the faculties of Brown, Drew, and Columbia universities, becoming professor of ancient history at the last. Smith made contributions to a number of fields, ranging from biblical studies to the history of magic.

In 1948 at Mar Saba, a Greek Orthodox monastery near Bethlehem in Israel, Smith found a copy of a letter ascribed to *Clement of Alexandria, the second-century director of the catechetical school of Alexandria. It contained excerpts of a Secret Gospel of Mark*, which Smith subsequently translated. The letter remains a subject of great controversy.

Smith was particularly interested in the history of Judaism during the Second Temple period. Part of his comprehensive study of this topic was published as *Judaism in Palestine; vol. 1, To the Reign of Antiochus Epiphanes* (1971). He treated the latter part of the period in his "Palestinian Judaism in the First Century" (in: M. Davis (ed.), *Israel: Its Role in Civilization*, 1965). In this essay he assessed the actual role and influence of the Pharisees as simply one among several Jewish sects. Also relevant to this period is his *Makbilot bein ha-Besorot le-Sifrut ha-Tanna'im* (1945; *Tannaitic Parallels to the Gospels*, 1951; revised form of diss. in Heb.).

SMOIRA-COHN, MICHAL

(Smith, William Robertson (1846–1894), Scottish theologian and Semitist; born at New Farm, Aberdeenshire. His appointment as professor of Oriental languages and Bible exegesis in the Free Church College at Aberdeen in 1870 was ended in 1881 due to his radical views in regard to biblical revelation which he expounded in a series of articles for the Encyclopaedia Britannica. At that time at Edinburgh and Glasgow he delivered a series of lectures which were published as The Old Testament in the Jewish Church (1881, 1892) and The Prophets of Israel (1882). His stay in the Near East in the winter of 1879–80 and the following year influenced his views in regard to the religious institutions of the Semites, their religio-cultural beliefs, and the historical influence of their religion on biblical Judaism and early Christianity. He resumed his academic career in 1883 when he was appointed professor of Arabic at Cambridge. Poor health prevented him from publishing more than the first series of Lectures on the Religion of the Semites (1889, 1894); ed. by S.A. Cook with introd. and notes, 1927), a major scholarly endeavor which applied anthropological principles to biblical research.

Smith is remembered principally as an investigator of the nature of early Semitic religion. His study of primitive Arab life, as recorded in literature and as observed in the contemporary setting, led him to believe that it was identical in all its fundamentals with the early Semites as a whole. In his Kinship and Marriage in Early Arabia (1885) he expounded the theory that the most primitive social organization was matriarchal, with exogamous polyandry and a totemistic cult system. His assumed parallels among the Hebrews are unfounded and lack a critical scientific base. In his Lectures on the Religion of the Semites Smith maintained that the nature and significance of the earliest religious expression were best understood through a study of ritual practices exhibited within the social cult. He thus thoroughly investigated the ritual of sacrifice and its corollaries, communion and atonement, and championed the theory that these were the primary conceptions in primitive Semitic religion. His interpretation posited the common anthropological belief that religion was an integral part of society which cannot be separated from the social and political institutions of a group. He further stated that certain concepts labeled Priestly and post-Exilic by the K.H. *Graf-J. *Wellhausen school had an early date since rituals tended to remain unchanged from their beginnings down through recorded history. Successive periods of ritual practices reflected advances in religious psychology, but essentially the original ideas remain. Smith's root theory that the phenomena of Semitic religion are derived from a single source and are coordinated into a fixed system appears untenable. Yet his description of Israel's origins remains refreshing for a period dominated by the evolutionary approach of the school of biblical criticism.

(Smoira, Moshe (1888–1961), Israeli jurist, the first president of the Supreme Court of Israel. He was born in Koenigsberg, Prussia, into a Russian-Hasidic family which had settled in Germany. He was enlisted into the German army during World War I. Between 1919 and 1922 he headed the first Hebrew school in Germany. He settled in Palestine in 1922. Between 1923 and 1948, he lectured on civil procedure at the Mandate law school. He became an expert on labor problems and participated in the drafting of the Workmen's Compensation Ordinance and in determining the legal status of the kibbutzim. Smoira was president of the Jewish Bar Association, as well as president of the honorary court of the World Zionist Organization. Upon the establishment of the State of Israel in 1948, he was appointed the first president of the Supreme Court in Jerusalem and held this position until 1954. Smoira was active in various institutions, including the board of governors of the Hebrew University.

SMOIRA-COHN, MICHAL (1926– ), Israeli musical administrator, educator, musicologist. Born in Tel Aviv, daughter of Moshe *Smoira (Israel's first Supreme Court president). She studied piano with Joseph Tal, graduated from the Palestine Academy of Music in piano and music history (1947), and became a teacher at the Israel Conservatoire in Jerusalem (1953). She was appointed director of the Haifa Orchestra. In 1956, she went to Sweden. After graduating from Uppsala University in 1958, she returned to Tel Aviv, where she was editor of Bat Kol and lecturer at the Music Teachers' Training Seminary and the Thelma Yellin School of Arts (1959). She wrote music criticism in Haaretz (1963–66) and was lecturer on music aesthetics at the musicology department of Tel Aviv University (1965–67), and on music history and literature at the Rubin Academy of Music in Jerusalem (1966–73). In 1968, she became director of the music department of the Israel Broadcasting Authority, Jerusalem, and directed the Rubin Academy of Music in Jerusalem from 1979 to 1984. Active in Israel's cultural life and education, she chaired the Pedagogic Section of the education and culture department (1983), and served as chair and member of the jury of the "Arthur Rubinstein" and of the "Voice of Music Young Artists" competitions. Smoira-Cohn was a political and public activist for decades and one of the driving forces of the volunteer and non-profit sector in Israel and an advocate for women's causes. She was chair of Israel's Women's Organization; she became a member of the city council of Jerusalem and also created the Svolanut (Tolerance) movement in 1982 (serving as the movement's chair for ten years). She received the Jerusalem Foundation Marthe Prize for Tolerance and Democratic Values in Jerusalem, for...
the year 2001. Among her Hebrew writings are Ha-Musikah, Mavo Histori (1966); Folk Song in Israel (1963); On Eastern and Western Foundations in the Music of Israel (1968); On Meanings in Music (1982); an autobiography, A Personal Repertoire (1997), and several articles. She also edited publications on the activity of the Jerusalem Rubin Academy of Music and Dance (in Hebrew, 1997/2003), and participated in the writing of the autobiography of her husband, Judge Haim *Cohn (1911–2002), published in 2005.

[Uri (Erich) Toepplitz and Yohanan Boehm / Naama Ramot (2nd ed.)]

**SMOL (Samuel)** of Derenburg (14th century), *Court Jew to four archbishops at Magdeburg, Germany; one of the earliest of the Court Jews. First mentioned in 1347, Smol was a member of a commission arbitrating a dispute between the archbishop and the city of Hollefön in 1365. He was also referred to as representative of the prelate, and in 1366 he was one of four warrantors of a sum promised to the archbishop. In 1370 Smol was among those who participated in the decision in a dispute over the archbishop’s inheritance. He was closest to the last archbishop, Peter, who called him “our Jew” and granted him and his children protection in 1372. Peter was, however, given warning about this relationship when the pope, Gregory XI, cautioned him that he would take strong measures if it were indeed true that he had permitted Smol to turn a church into a synagogue. On another occasion Gregory complained to the bishop of Naumburg about the latter’s favoring a certain Jew “Marquand” who in all probability was Smol’s brother. According to a report of 1372, Smol and several articles and his children protection in 1372. Peter was, however, given warning about this relationship when the pope, Gregory XI, cautioned him that he would take strong measures if it were indeed true that he had permitted Smol to turn a church into a synagogue. On another occasion Gregory complained to the bishop of Naumburg about the latter’s favoring a certain Jew “Marquand” who in all probability was Smol’s brother. According to a report of 1372, Smol and several articles

**SMOLAR, HERSH** (1905–1993), leader of the Jewish community in Poland after World War II. Born in Zambrow near Bialystok, Smolarc became active in the Communist Party in his early youth and from 1920 to 1928 he lived in the Soviet Union. He studied in Moscow at the Yiddish Department of the Communist University of the Peoples of the West and edited and wrote for Yiddish youth publications. In 1928 he was sent to Poland as a Comintern agent. Arrested for these activities, he spent four years in prison. In 1939 he escaped from prison and arrived in Soviet-occupied Bialystok, where he became secretary of the short-lived Yiddish newspaper, Bialystoker Shtern. When the Germans occupied Bialystok in 1941, he was active in the underground in the *Minsk ghetto. Later, he fought with the partisans in the Namiboki forest, helped to organize many partisan units, and was editor of the party press. In 1946 he arrived in Warsaw and became head of the cultural department of the Jewish Central Committee in Poland, and then editor of the Yiddish newspaper Folks-shtime and chairman of the Jewish Cultural Alliance. His Folks-shtime editorial (Apr. 4, 1968), reprinted or cited by many periodicals all over the world, became the first semi-official source of information about the liquidation, in 1948–52, of Soviet Yiddish cultural institutions and their leading personalities. During the anti-Jewish campaign of 1967–69 he was expelled from the Polish United Workers Party and from his editorial position. In 1971 Smolar immigrated to Israel. His works include Fun Minsker Geto (“From the Minsk Ghetto,” 1946); Yidn on Gele Lates (“Jews without Yellow Patches,” 1948); and A Posheter Zelner (“An Ordinary Soldier,” 1952), a drama. His Yiddish memoirs Vu Bistu Khaiver Sidorov? (“Where Are You, Comrade Sidorov?” 1975), Fun Inveytnik (“From Inside,” 1978), and Oyf der Letser Pozitsye mit der Letster Hofmenung (“On The Last Position with the Last Hope,” 1982) describe political and cultural activities in the Soviet Union and Poland relative to the Jews.

[David Sfard / Gennady Estraiikh (2nd ed.)]

**SMOLENSK**, city in western Russia. From 1404 to 1514 Smolensk was a Lithuanian possession and from 1611 to 1654 it came under Polish rule. Jews are first mentioned in Smolensk at the end of the 15th century; in 1489 there were three Jewish tax farmers in the city. Although King Sigismund I prohibited Jews from residing in Smolensk when the city passed to Poland, Jews nevertheless continued to live there. According to the “Old Resposa” of the Bah (R. Joel Sirkes), about 80 Jews resided in Smolensk in 1666. When Smolensk was reconquered by the Russians (1654), Jews were compelled to convert and those who did not do so were either put to death or taken captive and deported to the Russian interior. Jewish merchants from Lithuania, however, continued to visit Smolensk or pass through the city on their way to Moscow even after the Russian conquest. At the beginning of the 18th century Lithuanian Jews again began to settle in Smolensk and its vicinity. They engaged in commerce and the lease of various utilities. This activity aroused the jealousy of their Christian rivals, and in 1722 two Christian townsmen of Smolensk appealed to the Synod for Jews to be expelled from the region on the claim that the Jews derided Christianity. One Jew, Baruch b. Leib (who was also accused a few years later of having converted a Russian officer, Alexander *Voznitsin, to Judaism) had erected a synagogue in his home village of Zveronich, near Smolensk. In 1727, on the basis of Christian complaints, instructions were given for Baruch and his coreligionists to be expelled from the region of Smolensk. During the same year Czarina Anna ordered the expulsion of all the Jews of Russia, but by 1731 Jewish merchants were authorized to visit Smolensk for business purposes. For all practical purposes Jews continued to live in Smolensk on a permanent basis. When the *Pale of Settlement was established in 1791 the region of Smolensk was not included in it, and until the abolition of the Pale in 1917, Jews were officially prohibited from living in the Smolensk region. Even so, some Jews who fell into the categories of those authorized to live outside the Pale settled in Smolensk during the 19th century, where they continued to play an especially active role in the timber trade of the region. In 1897 the number of Jews in Smolensk was 4,651, forming 10%
of the total population. In the whole of the region there were 11,485 Jews. The number of Jews in Smolensk increased considerably after the 1917 Revolution; in 1926 there were 12,887 Jews (16.2% of the population) in the city. In 1922 the Great Synagogue was confiscated by Soviet authorities. In 1929 the Jewish Teachers’ Seminary, founded by the *Yevsektsiya, was transferred to Smolensk from Gomel. The Germans occupied the city in August 1941 and almost immediately established a ghetto for the Jews of Smolensk in Sadki. In June–July 1942 about 2,000 Jews were murdered. In the late 1960s there was a Jewish population of about 5,000. There was no synagogue. In the early 2000s, after the emigration of the 1990s, there were nearly 1,000 Jews in the entire Smolensk district. The city had a synagogue, a Jewish community center, a newspaper called Yachad, a youth club, a Sunday school, a drama club, a group of performers called Menora, and a social service that distributes food packages.

[Yehuda Slutsky]

**SMOLENSKIN, PEREZ** (1840 or 1842–1885), Hebrew novelist, editor, and publicist. A leading exponent of the *Haskalah in Eastern Europe and an early advocate of Jewish nationalism, Smolenskin is best known for the important Hebrew monthly *Ha-Shahar* which he founded in 1868, and edited – 12 volumes in all – until his death.

**Early Life**

Born in Monastyrshchina, in the province of Mogilev, White Russia, into a life of privation, hardship, and sickness, he witnessed at the age of five the press-ganging of his eldest brother, himself a mere child, into the army of Czar Nicholas I. The lad was never heard of again, and Smolenskin included a description of the terrifying experience in the second part of his largest and best-known novel, *Ha-Tōżh be-Darkhei ha-Hayyim*. His father, who had earlier been a fugitive for more than two years because of false accusations, died when Perez was barely 11. A year later Smolenskin left home to join his elder brother at the yeshivah of Shklov, where he remained for nearly five years, maintaining himself by “eating days,” i.e., his material needs being provided for by a different member of the community every day – in the manner of poor yeshivah students. Introduced to the ideas of Haskalah by his brother, he began to read secular books and to learn Russian. For these practices he was so persecuted that he fled to hasidic centers, first to Lubavich and then to Vitebsk, where he spent the years 1858–60/1. The portrait of Hasidism later reflected in his novels is highly critical. After a year of wandering through southern Russia and the Crimea, supporting himself by singing in choirs and preaching in synagogues, he reached Odessa in 1862. There he remained for five years, studying music and languages, and earning his living as a Hebrew teacher.

**Early Literary Career**

It was in Odessa that Smolenskin also embarked upon his literary career when he published a number of articles in the Hebrew journal *“Ha-Melih.* His first story, *“Ha-Gemul,”* describing the ingratitude of the Poles toward the Jews who sided with them in the revolt against Russia (1861–63), appeared in Odessa in 1867. Simultaneously, he had composed his first novel *Simhat Hanef* (“The Joy of the Godless”), which voices a series of lengthy expositions tracing the dependence of certain aspects of Shakespeare’s *Hamlet* and Goethe’s *Faust* on the singular Hebrew spirit informing the Books of Job and Ecclesiastes within the framework of a story depicting the shallow and frivolous attitudes of many of the ostensibly enlightened Jewish teachers in Odessa.

**Founder and Manager of Ha-Shahar**

Leaving Odessa in 1867, Smolenskin traveled through Romania – acquiring Turkish nationality en route – Germany, and Bohemia, before finally settling in Vienna in 1868, where he worked first as a proofreader and Hebrew teacher. Realizing that his plan to study at the university was quite impracticable, he abandoned hope of obtaining a systematic secular education and founded *Ha-Shahar*, which he henceforth published, edited, and managed, while serving simultaneously as proofreader, distributor, and one of its principal contributors. The journal became the most effective Hebrew literary platform for the Haskalah (Enlightenment) movement in its later period, and for the nationalist movement in its early stages. For almost 17 years Smolenskin devoted himself, body and soul, to the production of his cherished monthly, which consumed both his energies and his financial resources. From the outset Smolenskin conceived the journal as an instrument to make the Jewish people increasingly aware of its terrible plight and strengthen its internal resources, fostering at the same time the spread of a genuine enlightenment and a broad culture. Simultaneously, the monthly was to serve as a powerful weapon against any sham or hypocritical aspects of Orthodox Judaism or Hasidism which Smolenskin considered inimical to the public interest. It was equally committed to waging war on the exponents of a false enlightenment, whose assimilationist tendencies were undermining the national unity and eroding the distinctive life based on adherence to Torah and the later traditional literature. Above all, the journal epitomized Smolenskin’s passionate loyalty to the Hebrew language and Hebrew literature, which he regarded as the real foundations of Jewish nationalism and a substitute for national territory as long as the nation lacked a state. To despise the language, therefore, was tantamount to an act of treachery toward Judaism and the Jewish people. As the fame of his journal spread, Smolenskin’s contribution to the development of modern Hebrew literature became increasingly important. In the field of Jewish research, the monthly facilitated the publication of many weighty articles and even whole books by major scholars. It also served as a forum for the propagation of ideas and the discussion of a wide range of contemporary issues. In ad-
dition, it provided a hospitable framework for the publication of belles lettres, literary criticism, and book reviews. Primarily, however, it enabled its indefatigable editor to publish his own arresting articles, stories, and novels.

Financial Difficulties
In spite of all the effort required to produce Ha-Shahar, Smolenskin's literary activities yielded no financial reward; he was thus compelled to embark upon two long and tiring journeys – the first to Western Europe in 1870, and the second to Russia in 1881 – to seek support for his journal. To meet the additional obligations arising from his marriage in 1875, he undertook the management of a printing house, while in 1878 he launched a new magazine which, however, did not survive for more than nine months. The first eight numbers appeared fortnightly, under the title Ha-Mabbit. The remaining 18 issues appeared on alternate weeks under the titles Ha-Mabbit and Ha-Mabbit le-Yisrael. In addition to his manifold literary activities, Smolenskin also devoted much time and energy to public affairs. As one of the leading exponents of the Jewish return to Erez Israel, he conducted negotiations with Laurence "Oliphant to obtain support for Jewish settlement there. Finally his health broke under the strain of so strenuous a life. Stricken with pulmonary tuberculosis in 1883, he continued writing to the end of his life, and completed his last novel, Ha-Yerushah, shortly before his death.

As Novelist
An impassioned defender of Israel's cause and a ferocious critic of its failures, Smolenskin poured his talent wholesale into articles and stories alike. The latter, indeed, frequently serve as vehicles for the conveyance of his ideas. The attempt to combine an attractive tale with the propagation of ideas and social criticism resulted in a hybrid novel, whose major elements are frequently at odds with each other, and which at best are forced to nestle uncomfortably within a single framework. The belief that it is the task of literature to perform a positive service for society is responsible for the bitter satire and didactic moralizing which permeate the stories. Of all his novels, Ha-Töch be-Darkhei ha-Hayyim ("The Wanderer in the Paths of Life," 1876; first three parts originally published in Ha-Shahar, 1 [1868/69] and 2 [1871]), remains, perhaps, the most important. Picaresque and autobiographical in flavor, the story reflects contemporary Jewish life, mainly in Eastern but also in Western Europe, in vivid colors. In spite of the crudities and exaggerations, the tortuous plot and melodramatic villainies, the kaleidoscopic nature of the work, bolstered by the author's obvious sincerity and personal experience, exerts a considerable appeal even for the modern reader. By the end of part three, however, the story has worn itself out, so that the final part, written many years later, has little organic connection with the rest of the novel. It is important only for its penetrating analysis of, and proposed solutions for, the problems of Jewish life. Nowhere else in Smolenskin's novels is the storyteller so completely ousted by the publicist. Much the same applies to Simhat Hanef ("The Joy of the Godless" in Ha-Shahar, 3 [1872]), the flimsy plot of which serves only to house the long philosophical and critical discussions comprising the core of the book. Linguistically the novel displays traces of a simpler and clearer mode of expression, and some of the conversations are quite lively. Many of the epithets, however, are stock-phrases, and the style is frequently stilted and artificial. At many points the author's vitality and power of thought come through the story. But the work exhibits signs of carelessness and over-hasty composition, which are offset only in part by the author's spontaneity and verve. The opening chapters of Keverat Hamor ("A Donkey's Burial," in Ha-Shahar, 4 [1873]) are excellent; the humor is uproarious, and the plot original. While the half-mocking style is fairly consistent, the level is not maintained throughout, and the limitations of language are still painfully obvious. The novel is permeated with bitter social criticism, while fierce invective is leveled against the Jewish community leaders; but the author does produce very moving arguments in extenuation. The characters develop little and suffer from the author's fondness for exaggerated emotionalism. The hero is neither convincing nor consistent, but the principal villain is far from being merely a melodramatic scoundrel, even though his final sanctification is more effective as satire than as story. There is, however, much powerful writing, and the climate of superstition, bigotry, and persecution is outlined with considerable skill. In spite of a promising beginning, the narrative framework of Gôn va-Shever ("Pride and Fall," in Ha-Shahar, 5 [1874]) is painfully naive, while the clumsily contrived "happy ending," with its deus ex machina in the shape of an inheritance of 15 million rubles, is in keeping with the general low level. The novel is not so much a continuous narrative as it is a number of short stories related by a group of ten fugitives on their way to the United States following the collapse of the Viennese stock exchange in 1873. Some of the individual stories are well related, and contain many points of similarity with Ha-Töch be-Darkhei ha-Hayyim. There are also a number of interesting attempts at characterization; but many of the people are mere personifications of a single quality. The fact that some remain nameless throughout the story is indicative of their shadowy existence. The novel is loosely concluded by a brief reference to the ultimate destinies of the respective travelers. The first part of Gemul ha-Yesharim ("The Reward of the Righteous," in Ha-Shahar, 6 [1875]) far outstrips the previous novels in artistry, dramatic techniques, dramatic tension, and characterization; even the dialogue is more natural at times. The main didactic themes are handled skillfully, without obtruding too awkwardly into the plot. The second part (in Ha-Shahar, 7 [1876]) is interesting for its ideas on nationalism as well as for its severe condemnation of the Poles for their maltreatment of the Jews. The literary quality of the third part (ibid.) is much inferior. The author seems almost to have become bored with his story and to be making sporadic attempts to tie up the loose ends. Smolenskin's last great novel, Ha-Yerushah ("The Inheritance"), takes place, for the most part, in Romania, where the author had spent three months in 1874 on behalf of the Alliance Israelite Universelle, follow-
ing a wave of pogroms against Romanian Jewry. *Ha-Yerushah* reflects the growing maturity of Smolenskin’s art. While the first part (in *Ha-Shahar*, 8 [1876/77]) of the novel is even better than its predecessor in structure, artistry, characterization, and dialogue, in the middle of the second part (in *Ha-Shahar*, 10 and 11 [1880/82, 1883]) probability and cohesion are suddenly lost in a burst of melodramatic nonsense. Although the story is brought to a close, the denouement of the plot in the third and final part (in *Ha-Shahar*, 12 [1884]), hastily composed during his last illness, is premature and forced. The story clearly remains unfinished, with the main theme of “the inheritance” left hanging in mid-air. The novel illustrates Smolenskin’s remarkable talent as well as his inconsistency and lack of critical awareness. There is no marked linguistic development, and the gap between his writings and the Hebrew versions of Mendele’s (S.Y. *Abramovitch*) stories, which appeared within a decade of Smolenskin’s death, is very great. He was, nevertheless, the leading Hebrew novelist in the 20 years following the death of Abraham *Mapu, whose influence is clearly recognizable in his novels.*

**Philosopher of Jewish Nationalism**

Smolenskin was less a publicist than a philosopher of Jewish nationalism. His understanding of the nature of Judaism and the Jewish people was unfolded and developed in copious and often loosely repetitive articles in *Ha-Shahar*, which included: *Am Olam*, his first major study on this subject (in *Ha-Shahar*, 3 [1872]); *Et Lásot*, which may be regarded as a continuation of *Am Olam* and which makes a number of practical suggestions for putting the theories of the earlier works into effect (in *Ha-Shahar*, 4 [1873]); and *Et Lataát* (in *Ha-Shahar*, 6, 8, 9 [1875, 1876/77, 1878]). Convinced that Jewish nationalism was progressive and not reactionary, he regarded it primarily as a matter of the spirit. The Jewish people had received its Torah in the wilderness before conquering its land and founding a polity. Apart from Torah, however, Israel had always been sustained by its messianic hope and its loyalty to the Hebrew language. The nation’s present plight demanded a strengthening of its spiritual forces and national awareness in order to bolster its self-respect. Hence his hostility toward the kind of Enlightenment propagated by the disciples of Moses *Mendelssohn, the so-called Berlin Haskalah, which reduced Judaism to a mere religion and advocated assimilation. Smolenskin discerned the roots of antisemitism in the contempt felt by the nations for the inferior national status of the Jews, a situation that could be reversed only by a real affirmation of Jewish nationality. The pogroms of 1881 convinced Smolenskin not only that the hope of emancipation was chimerical, but that spiritual nationalism alone was not enough. Henceforward, he became an ardent advocate of a physical return to the homeland, as expressed in 25 articles published in the last three volumes of *Ha-Shahar* (vols. 10–12, 1880/82, 1883, 1884). The time had come to establish a political, economic, and spiritual center in Ereẓ Israel in preparation for a future Jewish state. Agricultural settlement by itself would not be able to support mass immigration. Industry was essential, if the stream of refugees from antisemitism and persecution was to be directed successfully toward the homeland. But at the same time Torah and a knowledge of Hebrew literature must be disseminated throughout the people, so that Israel might become once more a free and highly cultured nation in its ancestral land. In great measure, Smolenskin laid the foundations for the Zionist movement which gradually took shape in the following two decades. At the same time he anticipated the concept of a spiritual center, which was later to be argued so forcibly by *Ahad Ha-Am. Smolenskin’s percep-

**General Evaluation**

Admittedly, many of Smolenskin’s ideas concerning nationalism and the particular qualities of Judaism may be discovered in the writings of S.D. *Luzzatto, Nachman* *Krochmal, S.J. *Rapoport, Leopold *Zunz, Abraham *Geiger, and Moses *Hess, although Smolenskin denied any indebtedness to Hess. But Smolenskin endowed their concepts with new life and vigor, refashioning them and adding to them until they became his own. Moreover, through his journal he was able to give them wider currency than had previously been possible. It was not without reason that Smolenskin claimed that he had implanted a love of nation and a new spirit in many a heart and mind. Not merely a thinker, but somewhat of a visionary, Smolenskin’s strength lay in his imagination, intuitive foresight, and breadth of perspective. In retrospect, much of what he wrote seems tinged with prophecy. There is something prophetic, too, about his determination and his fire. One of the great fighters of all time in Hebrew literature, he argued his beliefs passionately and with conviction. As an observer of contemporary Jewish life, he remains an important source of information, while his place in the history of Hebrew literature and the growth of Jewish nationalism is equally secure. Of the numerous collections of Smolenskin’s writings, the most laudable are *Kol Sifrei Perez Smolenskin* (6 vols., 1905–10), the first of which includes a biography of Smolenskin by R. *Brainin* and *Ma’amarim* (4 vols., 1925–26; 1975). A new edition of the works appeared in 1975.

SMOLI (formerly Smoler), ELIEZER (1901–1985), Hebrew writer. Born in Volhynia, Smoli immigrated to Palestine in 1920 with a group of pioneers, and graduated from a teachers' seminary in Jerusalem (1923). From 1948 he was supervisor of schools for the Sharon region. Smoli was encouraged by Asher *Barash to write fiction instead of poetry, and his stories were published in the daily Davar and in Davar li-Yladim.

His books, which manifest his love for the land and for the early pioneers, were the first of their kind. Notable among them is Anshei Bereshit (1933; 1965); an English translation entitled Frontiersmen of Israel appeared in 1964. Smoli also wrote Or ba-Galil (1939; 1956); Bein Shekiyah li-Zerihah (1946); Bein Hameron ve-Gilboa (1946; Between the Hermon and Gilboa, 1946); Yafah ar Arzenu (1948; 1963); Laylah ha-Mishlat (1951); Olam ha-Hayot (1952); and several works on plant and animal life in Israel.

[Getzel Kressel]

SMORGON (Pol. Smorgonie), town in Grodno district, Belarus, passed from Poland to Russia in 1793; between 1921 and 1945 within independent Poland. From the 16th century until the second half of the 19th century, the town was the private property of the princes of Radziwill. Jewish settlement in Smorgon is believed to date from the early 17th century. From 1628 the Jews of Smorgon paid their taxes to the community administration of Grodno. In 1631 the community of Smorgon became the center of a galil (province) within the framework of the Council of Lithuania (see Councils of the Lands). The autonomous status of the community was confirmed in 1651. In 1765 there were 6,49 Jews in the community of Smorgon who paid the poll tax. During the 1830s a Jewish agricultural settlement, Karka, with 30 farmsteads, was established near the town (on the eve of World War I, 40 Jewish families there worked on the land). In 1847 there were 1,621 Jews living in Smorgon. In the 1860s a tanning industry was begun in the town as a result of Jewish initiative. In addition to this, the Jews of the town earned their livelihoods from carpentry, the knitting of socks, the baking of bagels (which were famous throughout Russia), retail trade, and peddling. The *Bund gained many adherents among the workers in Smorgon. From 1899 a Zionist organization was active in the town and in 1905 a branch of the ssek (Zionist Socialist Workers' Party) was established. In 1897 there were 6,743 Jews living in Smorgon (76% of the population). On the eve of World War I, there were two beit midrash, seven synagogues, three elementary yeshivot, and a Jewish hospital in the town. A section of the town's Jewish population were *Habad Hasidim. In 1915, during World War I, many of the Jews in Smorgon were expelled to the Russian interior. Jewish refugee tanners from Smorgon founded the tanning industries in Kharkov, Rostov, and Bogorodsk. When Smorgon reverted to independent Poland after World War I the Jewish refugees began to return to their destroyed houses. Between the two world wars, a Hebrew *Tarbut school, a drama circle (Bamati), sports clubs, Zionist youth circles, and branches of Po'alei *Zion, *He-Halutz and *Betar functioned in the town.

The spiritual leaders of the community during the early second half of the 18th century included the rabbi of the community Hayyim Cohen. In 1827–28 the town rabbi was the renowned Manasseh b. Joseph of *Ilya, a native of Smorgon. Subsequently, a dynasty of rabbis descended from R. Leib Shapiro established themselves in the town. From 1910 to 1917 Judah Leib Gordin, the author of Teshuvat Yehudah, held rabbinical office in the town. Nahum *Sloucsch, the author Aaron Abraham *Kabak, the Yiddish poet Moshe *Kulbak, and David *Raziel, commander of the Irgun Ze'evi *Le'ummi, were natives of Smorgon.

SMORGON, Australian business dynasty. The Smorgon family, one of the most successful in contemporary Australia, lived in the Ukraine. Poor before the 1917 Revolution, they temporarily became prosperous during the NEP era under Lenin but immigrated to Melbourne, Australia, in 1926 as collectivization took hold. There Gershon Smorgon, the head of the family, opened a kosher butcher shop in Carlton, Melbourne. By the start of World War II the family had developed a successful meat-exporting and food-canning business. They became major business leaders in the late 1940s, developing a rabbit-meat exporting business to the United States and also a large-scale paper manufacturing business, chosen by the family's new head Victor Smorgon (b. 1913) as being virtually recession-proof. By the 1960s Smorgon Consolidated Industries, the family's private holding company, had also become one of Australia's largest steel manufacturers and, later, large-
snake
dscale glass manufacturers. The family, located in Melbourne, is also noted for its philanthropy. Australia’s Business Review Weekly, publishers of the country’s annual “rich list,” estimated the family’s collective wealth at $150 million in 1983, $650 million in 1992, and $2.37 billion (about U.S. $1.8 billion) in 2004, making them the richest family ranked on the list.

[William D. Rubinstein (2nd ed.)]

“SMUTS, JAN CHRISTIAAN (1870–1950), South African statesman, soldier, and philosopher. In the first half of the 20th century Smuts was a dominant figure in South African public life, both in war and peace; he occupied a place in world history for his part in the two great wars and in the creation of the League of Nations and of the United Nations. As a member of Britain’s Imperial War Cabinet in World War 1 and a long-standing supporter of the Zionist cause (he was a personal friend of Chaim *Weizmann), he helped to formulate the Balfour Declaration on the Jewish National Home as well as the Palestine Mandate. On many subsequent occasions he manifested his concern for the proper fulfillment of the mandate and used his influence with the British government to defend Jewish rights in Palestine. When the State of Israel was founded in 1948, the South African government, of which Smuts was then prime minister, immediately accorded de facto recognition. Shortly after, Smuts was defeated in a general election by the Nationalists. A settlement established with the help of the South African Zionist Federation, *Ramat Yohanan, was named after Smuts. Smuts was on friendly terms with prominent Jews and showed a deep understanding and love of the Bible. He strongly condemned the Nazi-inspired antisemitic agitation in South Africa in the 1930s. He criticized immigration restrictions on Jews under the Quota Act (1930), though in 1937 the Hertzog government, in which he was deputy prime minister, under political pressures imposed further immigration restrictions under the Aliens Act (see *South Africa). In 1945, Smuts was the author of the Preambule of the United Nations Charter.

[Louis Hotz]

SNAKE (Heb. נחש, nahash), a generic name for various species of snake, poisonous and harmless. Both in the Bible and generally in rabbinical literature it is mentioned with ignominy as harmful. It already appears at the dawn of history in the Bible as the enemy of man, enticing Eve. Its punishment was that it would have to crawl upon its belly and lick the earth, and enmity would prevail between it and man: “they shall bruise thy head, and thou shalt bruise their heel” (Gen. 3:13–15). Slander and speaking evil is compared to the venom of the snake (cf. Ps. 140:4), and it has even been suggested that the Hebrew term for this, lashon ha-ra, is an abbreviation of leshon ha-nahash ha-ra (“the tongue of the evil snake”). Simeon b. Yohai stated: “Even with the best of snakes, crush its head” (TJ, Kid. 4:11, 66c). It is permitted to slay “the snake of Israel,” apparently the viper common in inhabited localities, even on the Sabbath (Shab. 121b). On the other hand, it was recognized that in the ordinary way even the poisonous snake does not attack man unless it is afraid of being attacked. Hence the directive that the recital of the Amidah may not be interrupted “even if a snake is coiled around one’s heel” (Ber. 5:1). According to the Jerusalem Talmud, however (Ber. 9a), one may defend oneself against it even when praying, if it appears about to bite. Despite the hatred in general toward snakes, their value in destroying mice was recognized. Some even raised “house snakes” for this purpose (Gen. R. 19:10; this is the “house snake” referred to in TJ, Ter. 8:5, 46a).

Only a few of the species of snakes in Israel are poisonous. Eighteen species of nonpoisonous snakes are to be found, seven whose poison kills small creatures only, and seven which are dangerous to man. In addition to the comprehensive term nahash there is mentioned the saraf which appears to be the general name for poisonous snakes whose poison, so to speak, *soref (“burns”) the body. Four individual snakes are mentioned in the Bible: יזף or יעלית (yeha or zifoni), נחש (heh), and פתן (pethon), all of which are poisonous. The yeha-zifoni is identified with the Palestine viper, *Vipera palasinae, recognizable by the two dark brown wavy stripes extending along the length of the light brown skin. This is the only poisonous snake dwelling in the inhabited regions of Israel. The Bible notes that the zifoni “excretes” its poison while the snake “bites” (Prov. 23:32), i.e., the latter bites with all its teeth while the poisonous snake only pricks with the anterior teeth, thus excreting the poison, The genus *Viper is also found in northern countries, while other poisonous snakes dwell in hot regions. The Israeli viper is unique in that it lays eggs, while the other species are viviparous. Isaiah (59:5) already notes that the zifoni lays eggs and whoever eats them is liable to die from the bite of the serpents breaking out of them. A closely related species, black in color, Atractaspis eingadensis, is found in En-Gedi and its vicinity.

*Efeh is mentioned in the Bible as a dangerous desert snake (Isa. 30:6). According to the Midrash, this is the ekhes (Mekh. Va-Yassa, 1), apparently a snake of the genus Echis being meant, two species of which are found in the desert areas of Israel. It can be recognized by the white bands breadthways upon its light brown body. It makes a noise by the rubbing of its scales that sounds like a cry and this may be the origin of its name (נחש; “to cry”). Its poison is very dangerous though it very rarely does harm as it is not found near inhabited places. Sheffison is identified by the Septuagint with Cerastra, a genus of poisonous snakes of which the species Pseudocerastes fieldi, recognizable by glands like protrusions above its eyes, is found in the Negev. It digs into the sand, only its “horns” protruding.

ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 18
The birds, taking them to be worms, peck at them, whereupon the snake strikes, killing them. This apparently is referred to in the verse: “Dan shall be ... a sheffilion in the path, that biteth the horse’s heels” (Gen. 49:17). Its name appears to be connected with the rustling made by its scales. *Peten* has been identified with the Egyptian cobra, *Naja haje*. It is not found in Israel though there are indications that solitary specimens may exist in the southern Negev and in Sinai. It is the most dangerous snake of the region. Even outward contact with it can be dangerous (cf. Job 20:14–16). The *peten* was used by charmers, as is the Indian cobra today, and it is noted that it does not always obey charmers (Ps. 58:3–7). The words (Ps. 58:7), “Break their teeth, O God, in their mouth,” may be a reference to the fact that the charmers used to extract the poisonous teeth of the *peten*. The black *peten*, *Walterinnesia aegyptia*, is found in the Judean desert. It is a dangerous poisonous snake in appearance similar to the nonpoisonous black snake. Rabbinical literature mentions poisonous snakes called *havarrar, arvad*, and *akhkhai*, whose identity has not been established.

[Sneh]  

**SNEERSOHN, HAYYIM ZVEI** (1834–1882), proto-Zionist. Sneersohn settled in Ereẓ Israel with his family in childhood. He was one of the first *maskilim* in Jerusalem, and arrived at the conclusion that reeducation would come gradually and naturally. He left Ereẓ Israel on public missions a number of times. In 1861 he traveled to India and Australia on behalf of the Jerusalem committee for the establishment of Houses of Shelter and Hospices (Battei Mahaseh ve-Hakhnasat Oreḥim). On this trip he succeeded in winning the support not only of heads of Jewish communities and rabbis, but also of Christians, among them senior ecclesiastics and statesmen. In his speeches in the large towns of Australia, Sneersohn described the project as the beginning of the return to Zion, the redemption of Israel, and the redemption of the world. He spoke in Hebrew, and his speeches were translated into English (his speech in Melbourne was printed in a pamphlet, 1862). He traveled to Paris and London and from there to the United States (1869) in order to gain assistance for the agricultural settlement of Jews of Tiberias. As a result of his representations to the U.S. government, the Jewish consul in Jerusalem was changed, and a Jewish consul (Benjamin P. Peixotto) was sent to Romania (1870). In a letter (printed in the paper *Ha-Ivri*, 1872, 47–50) Sneersohn called on the *Alliance Israélite Universelle* to convene a world congress in order to discuss the condition of the Jewish people and the establishment of a Jewish state. In New York he published a selection of his lectures and articles on Ereẓ Israel and Romania entitled *Palestine and Roumania, a Description of the Holy Land, and the Past and Present State of Roumania and the Roumanian Jews* (New York, 1872). In 1875 he returned to Ereẓ Israel. His activities aroused the opposition of the heads of the Ashkenazi community in Jerusalem, who banned, cursed, and persecuted him. As a U.S. citizen, he requested the protection of the American consul. He later left Ereẓ Israel for South Africa, where he died.

[Israel Klausner]

**SNEH (Kleinbaum), MOSHE** (1909–1972), Israeli politician and publicist, member of the First to Fifth, and Seventh Knessets. Born in Radzyn, Poland, Sneh received a traditional Jewish education and then graduated from the University of Warsaw in medicine. He took part in the Jewish students’ movement in Poland and belonged to the “radical” wing of the “General Zionists led by Yitzhak *Gruenbaum. In 1935 he was one of the founders of the General Zionists A. After the outbreak of World War II he managed to flee from Warsaw to Vilna and from there to Palestine, where he settled in 1940. Sneh was co-opted to the *Haganah command, becoming chief of the national command in 1941. After World War II Sneh was one of the protagonists of the violent struggle against the British anti-Zionist policy and the British Administration in Palestine, and in 1945 joined the *Israel Communist Party*. On June 29, 1946 (Black Saturday), he managed to escape arrest and left clandestinely for Europe. As he objected to the restriction of the struggle against the British, he resigned from his post as chief of the Haganah command. At the end of 1946 he was appointed head of the European Political Branch of the Jewish Agency, and head of the Illegal Immigration Department in it. Around the time of the publication of the UN partition plan, at the end of 1947, Sneh underwent an ideological change that led to his resignation from the Jewish Agency Executive and his joining the newly formed *Mapam* party in 1948 as a member of its more extreme Left wing. He was elected to the First Knesset in 1949 on the Mapam list, but following the *Slansky trial in Prague* left the party in February 1952 and formed the Left Faction with two other former Mapam members, later joining the Israel Communist Party (Maki) in November 1954. In his book *Sikkunim ba-Shelëlah ha-Le’ummit: Le-Or ha-Marksizm- Leninizm* (“Conclusions concerning the Jewish Problem in the Light of Marxism-Leninism”), which he published in 1954, Sneh explained the change in his political views. When the Arab members and some of the Jewish members of the Israeli Communist Party broke away to form Rakah, Sneh remained in Maki, which was now predominantly Jewish, and became editor of its daily *Kol Ha’am* – a position he held until 1969. After the *Six-Day War*, he became increasingly critical of the anti-Israel policy of the Soviet Union, supporting negotiations between Israel and the Arab states while insisting on the Palestinian right for self-determination in the territories occupied by Israel during the Six-Day War.

Among his other publications are *Li-Veyyot ha-Komunizm, ha-Demokratyah ve-ha-Am ha-Yehudi: Rashei Perakim*...
Bibliography: B. Balti, Ba-Ma'āvak al ha-Kiyyum ha-Yehudi: Li-Demuto shel Moshe Sneh (1981); E. She'alit, Tamid be-Meri: Moshe Sneh, Biographyah (2000).

SNEH, SIMJA (1914–1999), Argentinean author. Born in Pulawy, Poland, Sneh received a Jewish education in his youth and later studied history and philosophy at the Free University of Warsaw. He worked as a teacher and journalist. With the emergence of Nazism and Hitler's military aggression, Sneh joined the Polish army and fought under General Anders and with the Jewish Brigade of the British Army in Italy. He arrived in Argentina under precarious circumstances and without papers. Nevertheless, he had an active career as a teacher of Yiddish and Hebrew in the Jewish school system of Buenos Aires. In addition, he worked as a journalist for a variety of Jewish and mainstream newspapers and periodicals. He wrote in Yiddish, Hebrew, and Spanish and his works earned him recognition, praise, and several prestigious awards. Sneh worked for many years in the Department of Culture of the Asociación Mutual Israelita Argentina – AMIA, the Ashkenazi community in Buenos Aires. He was present in the community building on July 18, 1994, when a terrorist bomb destroyed it, killing over 80 people. Sneh survived the attack and died of natural causes in April 1999.

Sneh's El pan y la sangre (1977) contains 12 short stories, which are remarkable for the way they recreate specific moments and events. Perhaps the most outstanding quality in Sneh's texts is the fact that they are not merely the stuff of fiction. His writing comes from his own experience, which makes the horrific realism contained in them all the more penetrating. That is not to say that all the stories in the collection are literal recreations of actual events he lived through and witnessed. However, his experience as a Shoah survivor serves as the inspiration for the characters, places, and circumstances of which he writes.

Sneh's true masterpiece is to be found in his subsequent work completed just two years prior to his death. Sin rumbo constitutes a truly monumental undertaking. Published between 1993 and 1997 (in Spanish), the six-volume text is over 1,600 pages in length. It was originally written in Yiddish as a trilogy and published in serial form in the Yiddish periodical Di Pesse in Buenos Aires. One-hundred fifty weekly chapters appeared between 1947 and 1952. The first volume was published as a book under the title of Na’ Venad (1952). It is part testimonial narrative, part memoir, part novel, and part historical document. It comprises a substantial social and historical record of the Holocaust, and is certainly the single most important Holocaust work written in Spanish. Together, El pan y la sangre and Sin rumbo constitute a remarkable legacy of an even more remarkable human being who overcame incredible odds and who left the world a gift of momentous significance.

[Darrell B. Lockhart (2nd ed.)]

SNYATYN

(Snįatyn), city in Ivano-Frankivsk district, Ukraine; incorporated in 1340 into Poland, passed to Austria in 1772, and reverted to Poland from 1919 to 1939. Jewish merchants from Poland and the east visited the Snyatyn fairs from the 15th century. An organized community was formed in the mid-16th century; in 1572 Jews owned 11 houses in the town. In 1578 King Stephen Báthory accorded the Jews in Snyatyn the right to trade freely there. In 1628, to strengthen its economy, King Sigismund 111 Vasa authorized members of all nations to settle in Snyatyn. At that time the customs collection at the border station was leased by Jews (see *Nahanovich). In 1650, after the devastations by the Cossacks under *Chmielnicki (1648–49), the king granted the community a privilege to produce and sell liquor to facilitate their rehabilitation. There were 1,111 Jews living in the town in 1765; 2,333 (22% of the total) in 1880; and 4,386 (36%) in 1910. In 1894 a Jewish school was established, financed by the Baron de Hirsch *Fund; in 1910 it had 186 pupils. The Jewish population numbered 3,248 (31%) in 1921. After World War I, during the period of independent Poland, the Jews in Snyatyn were severely affected by antisemitic agitation and the economic boycott against them. They were compelled to seek the assistance of Jewish relief institutions.

[Shimon Leib Kirshenboim]

Holocaust Period

When the German-Soviet war broke out, Snyatyn was captured by the Hungarian allies of Germany (July 1941). They imposed economic restrictions on the Jews, but prevented violent attacks by the Ukrainian population. In September 1941 the city was transferred to German administration, and the systematic murder of the Jews began. From September to December, hundreds were killed in the nearby Potoczec forest. A ghetto was established in Snyatyn. In April 1942 the first deportation to the Belzec concentration camp took place. The Jews began to construct bunkers in the hope of taking shelter there during the coming deportations. On Sept. 7, 1942, the ghetto was liquidated and the last of the Snyatyn Jewish community were sent to Belzec. Jewish life was not revived in the city after the war.

[Bibliography: Halpern, Pinkas, index; R. Mahler, *Yidn in Amolikn Poyln in Likht fun Tisfern* (1958), index; M. Bersohn, *Diplomataryusz dotyczące Żydów w Polsce* (1910), nos. 152–275, 365; B.
SO (Heb. שֹׁם), according to the received text of II Kings 17:4 the name of the king of Egypt with whom King "Hoshea of Israel entered into relations in approximately 725 B.C.E. when he discontinued the annual payment of tribute to his Assyrian suzerain.

Whereas שֹׁם does not correspond to the name of any known Egyptian prince or general, it can very well be equated with Egyptian 스ים, cuneiform .getBean, and Greek Σαίς, the name of the city in the western Delta which was the residence of the pharaoh Tefnakhte; and since it now appears that the latter was already reigning over Lower and Middle Egypt at this time, H. Goedicke has suggested that this is the Pharaoh in question. After Goedicke, W.F. Albright has proposed for the pertinent clause in II Kings 17:4 a reconstruction which yields the required sense. But it can be achieved more simply: the mere inversion of the words סים and סון, without any addition, makes the clause mean, "For he had sent a mission to Sais, to the king of Egypt" (cf. 1 Sam. 23:3b; 11 Sam. 3:20b; 1 Kings 2:26ab). R. Sayed has suggested that שֹׁם is shortened from שָׁמֵם, which is now known to have been Tefnakhte’s Horus-name; but he observes that the normal thing is for a foreign document to refer to Pharaoh by his name or (in the *el-Amarna correspondence) his praenomen (or merely by the title Pharaoh), not by his Horus name. Most recent scholarship (contrast Green) has accepted Goedicke’s 1963 identification of “So” as a place name, and the identification of the Pharaoh ruling there as Tefnakhte.

[Harold Louis Ginsberg]

**SOAP.** It would appear that in the biblical period soap was derived almost exclusively from plants. Many such plants grow in Israel. They contain chiefly potash and soda, and their ash, dissolved in oil, was used until as late as a generation ago for making a liquid soap. Most of these plants grow in the salty regions of the Arabah, in the Negev, and on the seashore. These belong to the botanical genera *Salicornia*, *Salsola*, *Mesembryanthemum*, *Saponaria*, *Statice*, and *Atriplex*. In the Bible these washing materials are referred to as **bor**, **borit**, and **sheleg**. **Borit** is mentioned in apposition to neter (“soda”) in the Bible as a material for cleansing stains (Jer. 2:22). The messenger of the covenant will purify the people on the day of the Lord as “with fuller’s soap” (borit, Mal. 3:2). In other places in the Bible the term **bor** is used for material for the cleansing of hands and clothes (Job. 9:30), and metaphorically for cleanliness of hands (Job. 22:30; 11 Sam. 22:21). **Bor** and **borit** are connected with the word **baroh** (“clean”). According to the Tosefta, **borit** and **ahal** are perennial plants that disappear from the field at the end of the season (Shev. 5:6) and the Jerusalem Talmud (Shev. 7:2, 37b) characterizes them as “species of laundering plants.” According to the Babylonian Talmud (Nid. 62a), “**borit** is identical with **ahal**;” i.e., both are species of aloe. **Ahal**, in Akkadian **ahu-lu**, Syrian **ahala**, and Arabic **gasul**, are soap-producing plants containing soap-making matter such as *Salicornia*, and in particular the genus *Mesembryanthemum*, called in modern Hebrew **ahal**. One species, *M. crystallinum*, grows on walls and rocks facing the Mediterranean Sea, and it is grown in some countries in order to extract the soda it contains. In the Arabah other species of *Mesembryanthemum* are widespread. These can be recognized by their finger-like thick leaves. After the rains they spread widely.

In rabbinical literature **ashlag** is mentioned together with washing materials (Shab. 9:5; Nid. 9:6). According to the Jerusalem Talmud (Shab. 9:5, 12b), a plant called *озерот руп* ("wind collector") is meant. It seems that the reference is to the plant *Vaccaria (Saponaria) segetalis* which contains saponin. In fields of cereal it grows as a weed whose calyx expands when the fruit ripens as if it is “collecting wind.” It is called **ashlag** also in Arabic. Perhaps the **shaleq** (“snowwater”) of Job 9:30 is actually **ashlag**, as suggested by the parallel with **bor** (“soap”).

[Jeheuda Feliks]

**SOARE (Sonnenfeld), JULIA** (1920–1971), Romanian author. Soare’s semi-autobiographical novel, *Familia Calaff* (“The Calaff Family”, 1956), was a sober appraisal of middle-class Jewish life in a Romanian provincial town during the years.
1910–20. Her other works include a fictionalized biography of Stendhal (1957) and Virsta de bronza ("The Age of Bronze", 1969), a collection of historical novels.

SOAVE, MOISE (1820–1882), Italian scholar and teacher in Venice. Soave contributed to Il Vessillo Israelitico, Il Corriere Israelitico, and to Geiger's Juedische Zeitschrift fuer Wissenschaft und Leben. Apart from studies such as L'Israelitismo Moderno (1865), he wrote mostly on the history of Jews in Italy, biographies, and on Italian Jewish literature. One of his works on the *Soncino family (Dei Soncini celebri tipografi italiani…, 1878) includes a list of books they printed. Soave corresponded with major Jewish scholars of his time, among them S.D. Luzzatto, E. Renan, and M. Steinschneider.

[Alfredo Mordechai Rabello]

SOBEDRUHY (Czech Sobedruhy; Ger. Soborten), town in N. Bohemia, Czech Republic. Jews are first recorded there in 1534. In 1500 the wooden synagogue was replaced by a stone structure; a lamp there is inscribed with the year 1553. The earliest tombstone inscription dates from 1669; the cemetery served many communities, including Dresden (until 1751). At times Sobedruhy was exclusively inhabited by Jews. In 1750 Empress Maria Theresa donated a tower clock for the synagogue. There were anti-Jewish riots in Sobedruhy in 1744. The burial of a Frankist from Sobedruhy in Prague in 1800 caused communal disturbances there. In the 19th century Sobedruhy remained an Orthodox community, in contrast to the nearby community of Teplice which was liberal. A community building was opened in Sobedruhy in 1900. There were 120 Jewish families living in Sobedruhy in 1724, 245 persons in 1842, and 393 in 1893. The community numbered 376 persons living in 17 localities in 1902, and 51 in 1930 (3.2% of the total population). Most of the Jews left Sobedruhy at the time of the Sudeten crisis (1938), and the community was dissolved. The congregation building was demolished and the clock placed in the custody of the municipality. The cemetery, damaged under Nazi rule, continued to exist.

[Jan Herman]

SOBEL, JACOB ZEVI (James H. Sobel; 1831–1913), U.S. Hebrew writer. Born in Lithuania, Sobel was ordained as rabbi and headed a yeshivah, but, influenced by the Haskalah, broke with orthodoxy, and criticized it in his Ha-Hezech Hezyonot be-Arbah Olamot (1872). In 1876 he arrived in New York, and later moved to Chicago where he earned his living as a Hebrew teacher. He contributed to Hebrew periodicals in Russia and the United States but also wrote for the Yiddish and American press. Some of his satire he directed against Gershom *Rozenzweig and signed with the pseudonym “Binocle.” His Shir Zahav li-Khevod Yisrael ha-Zaken (1877), although of slight literary merit, is historically significant as the first book of Hebrew poetry published in the United States. A paean to Jewry, Hebrew language, and American democracy, it also condemns the ignorance and spiritual emptiness of Jewish immigrants.

[Eisig Silberschlag]

SOBEL, RONALD (1935– ), U.S. Reform rabbi, interfaith activist. Sobel was born in Cleveland, Ohio, and received his B.A. from the University of Pittsburgh in 1957. He was ordained at *Hebrew Union College in 1962 and earned a Ph.D. from New York University in 1980. He was awarded an honorary D.D. from HUC-JIR in 1987, an honorary D.H.L. from Long Island University in 1983, and an honorary D.L. from St. John's University in 1994. Immediately following his ordination, he was appointed assistant rabbi at New York City's Temple Emanu-El and elevated to associate rabbi in 1968. In 1973, at the age of 37, he became the youngest senior rabbi in the history of the world's largest Jewish house of worship. By the time he became emeritus, in 2002, he had served in that position longer than any of his predecessors.

In the Reform movement, Sobel served as chairman of the Board of Rabbinic Alumni Overseers of HUC-JIR as well as a member of the college's board of governors. He was also a member of the board of governors of the American Jewish Committee (1972–75); chairman of the National Program Committee of the Anti-Defamation League; chairman of the Commission on Jewish Life and Culture of the American Jewish Congress (1982–84); chairman of the Synagogue Council of America's Commission on International Affairs (1975–77); and a trustee of the Jewish Braille Institute.

Sobel has been particularly active in interfaith affairs. In 1975, he was the first rabbi to preach from the high pulpit of Manhattan's St. Patrick's Cathedral, as part of a dialogue he initiated between Temple Emanu-El and the Cathedral. From 1977 to 79, he was chairman of the International Jewish Committee for Interreligious Consultation, the organization that represents the interests of world Jewry vis-à-vis the Vatican and the World Council of Churches. He also served on the boards of governors of the National Conference of Christians and Jews, the Religious News Service, the Association for Religion and Intellectual Life, and the Institutes of Religion and
Health, in addition to serving as a vice chairman of the National Board of Religion in American Life. He also co-founded two grass-roots interfaith coalitions in New York City: the Yorkville Emergency Alliance on the upper East Side (1982) and A Partnership of Faith in New York (1991), a coalition of congregational clergy throughout the five boroughs.

In 2002, Sobel was the recipient of the annual Clergy Person of the Year Award from the Religion in American Life organization. He was appointed chairman of the New York Civil Rights Coalition in 2003.

Sobeloff, Isidor (1894–1973), U.S. social worker and community leader. Sobeloff, who was born in Baltimore, Maryland, and was the brother of Simon E. Sobeloff, became the city editor of the Cumberland (Md.) Daily News in 1920. He subsequently worked as director of the Jewish Community Center in Jersey City, New Jersey (1922–25), then joined the Federation of Jewish Philanthropists in New York (1925–30) and the Travelers' Aid Society (1930–34). While serving as director of public education for the Welfare Council of New York (1934–37), Sobeloff was also managing editor of the Jewish Social Service Quarterly (1932–36) and editor of Better Times, a social-work publication (1934–37). As executive vice president of the Jewish Welfare Federation of Detroit from 1937 to 1964, Sobeloff made the Jewish philanthropic campaigns in that city among the most effective in the United States. He attempted to do likewise as director of the Jewish Federation Council of Greater Los Angeles (1964–69). In other social-work activity, he was president of the National Conference of Jewish Social Welfare (1945) and a lecturer at the Training Bureau for Jewish Social Work. Sobeloff's many Jewish community positions included secretary of the allotment committee of the United Jewish Appeal (1944).

Sobeloff, Simon Ernest (1894–1973), U.S. jurist. Sobeloff was city solicitor of Baltimore from 1943 to 1947. He became chief judge of the Maryland Court of Appeals in 1952. He was appointed solicitor-general by President Eisenhower in 1954. In this capacity he played a significant role in helping to formulate the government's stand in regard to the Brown v. Board of Education cases (1954). As a result, the U.S. Supreme Court ruled that separate but equal facilities for blacks in public schools did not meet the constitutional requirement of equal protection by the law. Sobeloff broke with precedent by refusing, although solicitor-general, to sign the brief in a case before the Supreme Court in which the government attempted to support the blacklisting of a professor. The court later vindicated his position. In 1956 he became a judge of the fourth circuit U.S. Court of Appeals and its chief judge in 1958. A prominent figure in Jewish communal circles, Sobeloff was a national vice president of the American Jewish Congress and a member of many other Jewish philanthropic and educational organizations.

Sobibor (Sobibór), one of the six Nazi death camps situated in German-occupied Poland, three miles west of the Bug River and five miles south of Wlodawa in the General Government. It was situated in a wooded area near a small village by the same name in the Lublin District. It was built along the Chel-Wlodawa railway line. The camp measured 1,312 by 1,969 feet. Barbed wire – some 9.5 feet high – interspersed among the trees for concealment, surrounded the camp and the outer perimeter was mined.

In March 1942 the Germans began construction work on the camp in preparation for the mass murder of Polish and other Jews. Jewish slave workers were employed on the site. It was the second camp in Aktion Reinhard to be built. *Belsen preceded it and was functioning before it was built, and *Treblinka followed. The camp functioned from May 1942 until October 1943, but the largest transport of victims arrived during June–October 1942, the peak period of killing. Sobibor was used mainly for the murder of Jews from German-occupied eastern Poland and occupied parts of the Soviet Union. Non-Jewish prisoners of war as well as Jews from *Czechoslovakia, *Austria, *Holland, *Belgium, and *France were also put to death at Sobibor. The total number of victims is estimated at 250,000. The victims usually arrived by train and their belongings were immediately taken away. They were then ordered to undress, the women's hair shorn, and the naked mass of people was forced into five gas chambers, which had a total capacity of 500 persons. The gassing lasted 15 minutes. Various systems for the disposal of the dead were used: at first mass graves were dug; later the corpses were burned in heaps, and in the last stage the Nazis burned the bodies on disused iron rails. The ashes were usually taken away by train to an unknown destination. The victims' belongings were carefully sorted and sent to Germany. Women's hair was also crated to Germany.

The camp was divided into three sections. Sector I was for administrative functions. Sector II, or the Reception area, was where Jews, who would arrive by train, were received; it was there that their valuables were confiscated, their hair shorn, and their clothes removed. Sector III was the killing center in the northwest area of the camp, equipped with gas chambers and mass graves. A 492-foot path 9–13 feet wide led from Sector II to Sector III. Victims were marched naked from one camp to the other. The gas chambers were powered by a 200 horsepower engine which produced carbon monoxide. Special accommodations were made for those too weak to walk; a narrow gauge railway was used from the station to the gas chambers to take these Jews to their destination. Those who could not manage the final steps, including infants, were shot. The camp staff consisted of approximately 30 persons and about 100 Ukrainians, under the command of Richard Thomalla and afterward of Franz Stangl. Most of the German guards as well as Stangl were veterans of the killing process; they had participated in the T-4 *Euthanasia program. The Ukrainians were mostly Soviet prisoners of war trained at Trawniki. A few were ethnic Germans. The number of Jew-
ish laborers never exceeded 1,000. Those who weakened were killed and were continually replaced by stronger persons from the new transports. About 200 laborers worked near the gas chambers and in connection with the disposal of corpses. The others were employed in the administrative and economic sections of the camp, especially in sorting out the victims’ belongings. Artisans and specialists were usually treated better than other workers.

There were two stages to the killing. The first, from May–July 1942, utilized the gas chambers, which proved inadequate under the strain of massive deportations. Then, as at Belzec, Sobibor camp operations were halted while three more gas chambers were created under the same roof. The capacity was doubled from 600 to 1200.

At the beginning of October 1943, some 300 Arbeitsjuden (Jewish laborers) were employed in the camp; most had spent 10–16 months there. Having learned what was in store for them they decided to kill the camp commandant and escape. Poorly armed, they revolted on Oct. 14, 1943, led by Alexander Sobol, a Soviet Jewish prisoner of war, and his deputy, Leon Feldhendler, who had been chairman of the Judenrat at Zolkiew in Eastern Galicia. Several German supervisors and Ukrainian Hiwis (Hilfswillige, “volunteers”) were killed. The German supervisors and the Hiwis opened fire on the Jews fleeing and prevented them from reaching the exit of the camp. The Jews then came into the area of barbed wire fences and minefields. Some 300 Jews escaped, but most were later killed by the Germans. In the end only 50 survived. Immediately after the revolt, Sobibor was closed down and a grove of trees planted over the site. This was done by some 30 Jewish laborers brought from the General Gouvernment, who were all shot in November 1943. No lists of the victims are extant, possibly because the Germans did not conduct any registration at the camp, or perhaps these lists, with all the other files of the camp, were removed when the camp was closed.

In 1965 a trial was conducted in Krasnodar, U.S.S.R., at which a number of functionaries from Sobibor were tried. A year later, at Hagen, Germany, 11 functionaries were tried: one committed suicide, one was sentenced to life imprisonment, five were given relatively light sentences, and four were acquitted. After the war a monument was erected on the site in memory of the 250,000 victims murdered there.

SOBOL, ANDREY MIKHAILOVICH (1888–1926), Russian novelist and playwright. Sobol was born in Saratov of wealthy parents. He joined the revolutionary movement at 16 and in 1906 was jailed and sentenced to hard labor in Siberia. In 1909 he escaped from prison and wandered throughout Europe in poverty, returning to Russia illegally in 1915. He began writing for both liberal and radical periodicals under the pseudonyms of Konstantin Vinogradov and Andrey Nezhdanov. Sobol had misgivings about Bolshevism and retained his faith in humanistic socialism, but, in an open letter published in Pravda in 1923, he recanted his “errors.” Three years later, disillusioned with the Soviet regime, he committed suicide.

Many of Sobol’s semi-autobiographical books, impressionistic and often despairing in tone, depict political émigrés. His most important novel, Pyl (“Dust,” 1915), describes the Jewish émigrés in Paris as people who “graze in foreign fields” and have no land or roots. To Sobol, Jews were strangers everywhere, even within the Russian revolutionary movement, which he regarded as riddled with antisemitism. Other works of Jewish interest written by Sobol are Nechayanno (“Inadvertently,” 1916), which deals with an apostate Jew who finds no peace in his new life; Rasskazy v pis’ma (“Tales in the Form of Letters,” 1916), satirical sketches of Jewish intellectuals who convert in order to further their careers; and Pereryva (“Intermission,” 1923), a picture of a Paris Yiddish theater from the inside. Sobol’s collected works, in four volumes, appeared in 1926 and 1928.
SOBOL, MORDECHAI (1951– ). hazzan. Born in Hadera, Sobol’s musical abilities were evident at an early age. When only eight, he was accepted as a pupil by the venerable cantor Solomon Rawitz, who considered him one of his best pupils. In addition to the basics of the prayer services, Cantor Rawitz taught him the principles of sight-reading, harmony, and counterpoint. Sobel was the lead soloist of the Oneg Shabbat choir of Ohel Shem in Tel Aviv. At the age of 12 he began to study with the conductor Samuel Rivlin and sang in his choir, gaining fame throughout Israel for his renditions of cantorial works, particularly those sung by Cantor Mordecai Hirschman. When 16, for the first time he led High Holiday services accompanied by a 40-person choir conducted by Cantor Solomon Rawitz. He served in the Israeli army as a member of the choir of the Army Chief Rabbinate. He arranged and orchestrated melodies for choir and orchestra and wrote original works for passages from the prayer services. Sobol established the Yuval ensemble for cantorial and Jewish music, which had 50 singers and 30 instrumentalists. In 1985 he began a special series of concerts in which the greatest cantors of the world participated. These concerts proved so popular that subscription series were offered to the public annually. The Yuval ensemble also promoted recordings of their concerts.

SOBOL, YEHOSHUA (1939– ), Israeli playwright, prose writer, and director. Sobol was a well known theatrical figure in Israel and abroad. He wrote more than 40 plays, many of which were translated into various languages and performed in theaters around the world. From 1992 he directed his plays, as well as plays by others, in Israel, Switzerland, and the U.S. Between 1984 and 1988 he served as Co-Artistic Director of Haifa Municipal Theater, together with Gedalia Besser. Sobol taught playwriting and conducted drama workshops at the department of theater studies at Tel Aviv University, at the department of Hebrew Literature at Ben-Gurion University of the Negev, and at Wesleyan University in Middletown, Connecticut. He published two novels: Shetikah (“Silence,” 2000) and Whisky ze beseder (“Whisky’s Fine,” 2005).

After studying literature and history at Oranim College, Sobol received a degree in philosophy from the Sorbonne, Paris, in 1969. His theatrical career started at the Haifa Municipal Theater, in 1971, where he collaborated with director Nola Chilton and wrote the text for The Days to Come, a performance based on monologues he collected in an old age home in Haifa. The plays of his playwriting decade – Leyl ha-Esserim (“Status Night of the 20th,” 1976), “The Last Worker” (1980), and “Wars of the Jews” (1981) – exposed his inclination toward historical drama. In these plays the intrigue revives a historical moment in the history of the Jewish community or Israeli society; by analyzing its socio-political components. Sobol displays the conflicts involved, the process of cause and effect, the outcome and its influence on present reality. His plays have direct socio-political messages and are written with a clear didactic aim, namely to further spectators’ understanding of the complexity of contemporary state of affairs and to promote tolerance and compassion toward minorities.

In the 1980s, Sobol continued to probe the past as a tool for understanding the present. In Nefesh Yehudi (Weiner’s Night, 1982), Ghetto (1984), Adam (1989), and Underground (1991), he went back to European history, analyzed the complexity of “Jewish Fate,” and demonstrated past conflicts and events that brought about the transformation of Jews from victims into persecutors. In The Palestinian Girl (1985) he reflected upon the unjust conduct of Israelis toward Arabs, and in Jerusalem Syndrome (1987) he went back to the events that had led to the destruction of the Temple, showing how the conduct of Jewish extremists fueled conflict and hatred between Jews. Jerusalem Syndrome received bad reviews in the press, and its reception by religious audiences was violent and tumultuous: performances were stopped by demonstrations and manifestations during the show and outside the theater. Solo (1991), performed in Habimah, Israel’s National Theater, echoed Sobol’s reflections on the reception of Jerusalem Syndrome. For the plot of this play he turned to the life story of Baruch Spinoza and demonstrated a closed, paranoid society that rejected his innovative way of thinking.

Sobol’s international career began in 1983, when the Haifa production of his play Weininger’s Night was invited to participate in the Edinburgh Festival. This was followed by The Ghetto Triptych (Ghetto, Adam, Underground). Ghetto became world famous shortly after its premiere in Haifa in May 1984. The play won the Israeli David’s Harp Award for Best Play. The Israeli opening was followed by Peter Zadek’s much acclaimed German premiere of the play in Berlin in July 1984. The play and the production were chosen by the leading German theater journal, Theater Heute, as the best production and the best foreign play of the year. By 2006 the play had been translated into over 20 languages and had been performed by leading theaters in more than 25 countries throughout the world. Following Nicholas Hytner’s production of the play at the Royal National Theatre of Great Britain in 1989, the play won the Evening Standard and the London Critics Award for Best Play of the Year, and was nominated for the Olivier Award in the same category.

From 1995 Sobol cooperated with director Paulus Manker on a number of projects exploring new forms of the theatrical experience. In 1996 the two created the polydrama Alma, based on the life of Alma Mahler, for the Wiener Festwochen. It was performed in Purkersdorf, Austria, for six successive seasons. Alma was taken to Venice, Italy, and was performed at the Palazzo Zenobio in August and September 2002.
Sobol received many important Israeli awards for his plays and productions. Among these are the David's Harp Award (five times), the David Pinski Award, the Meskin Award, and the Issam Sartawi Award. In 2001 he received the Sapir Award for his prose debut, Silence, as best novel of the year, and in 2003 the Rosenbaum Award for his contribution to Israeli theater.

[Nurit Yaari (2nd ed.)]

SOBOTKA, HARRY HERMAN (1899–1965), U.S. biochemist. Born in Vienna, Sobotka joined Rockefeller Institute for Medical Research, New York (1924), and Bellevue Hospital Medical College, New York University (1926). He was appointed director of the chemical department, Mount Sinai Hospital, New York (1928). He wrote papers on chemistry of steroids and other organic chemicals of pharmaceutical significance.

SOCHACZEW (Rus. Sokhachev), city in Warszawa province, central Poland. There is evidence of a Jewish settlement in Sochaczew in 1427, when the city was under the jurisdiction of the princes of Mazovia. An organized Jewish community existed from the end of the 15th century, after the city had been annexed to the kingdom of Poland in 1476. In that era the Jews of Sochaczew engaged in moneylending and trading in cloth and spices. In the first quarter of the 16th century a Jewish physician, Felix, practiced in the city. In 1556, during the Catholic synod of Lwowicz, the local authorities, and heads of the church, incited by the entourage of the papal nuncio, L. Lippomano (1500–59), accused Sochaczew Jews of "Host desecration. The three Jews condemned to death were immediately executed although it was evident that the accusation was false and despite the fact that King Sigismund 11 Augustus had ordered a retrial. Those responsible for the hasty execution, the governors of Rawka province and of the cities of Sochaczew and Plock, were subsequently sued by the heads of the community. By 1599 the Jews of Sochaczew owned 20 houses, a synagogue, hospital, mikveh, and cemetery, and engaged in commerce in live-stock, leather, and wool, and in such crafts as tailoring and carpentry.

A "blood libel in 1619 resulted in the death at the stake of one Jew. After the Jewish quarter burned down the following year, the burgthers opposed its reconstruction and the Jewish community temporarily came to an end. In 1749 King Augustus III granted permission to certain Jewish merchants and craftsmen from Warsaw to renew the settlement in Sochaczew. They established a tannery, a distillery, and tailoring and shoemaking workshops, and traded in agricultural produce. In 1765, there were 1,349 Jews who paid the poll tax in the city and surrounding villages. A new synagogue was built in 1793, which remained standing till World War II. During the Kosciusko rebellion (1794) the Jews of Sochaczew donated considerable sums to his cause. In 1800, 52 of the 91 craftsmen in the town were Jews. In 1808 the 1,085 Jews of Sochaczew formed 81% of its population; there were 2,322 Jews (74%) in 1827; and 2,936 (76%) in 1872. During the uprisings of 1863 several Jews fought on the side of Polish rebels in the local battles. In the latter years of the 19th century the Jews established various industrial enterprises and transport firms. In 1883 the rabbi, Abraham Bornstein of "Sochaczew, founded a hasidic court and later a large yeshivah. Rabbi Samuel Isaac Landau served the community from 1902 to 1912. From 1912 to 1915 the number had dwindled to 2,419 (48%). Between the world wars all the various Jewish parties were active in the city and established educational and cultural institutions. Half of the 24 members of the city council were Jews in 1925 and Moshe Szwarc ("Folkspartei) was vice mayor. During the 1930s a biweekly periodical, Sokhatshever Tsaytung, was published. At that time Rabbi A. Zisha Frydman, general secretary of "Agudat Israel, and the writer O. Varshavsky lived in the city.

On the outbreak of World War II there were about 4,000 Jews in Sochaczew. In February 1941 all the Jews were deported to the "Warsaw ghetto and shared the fate of that community. After the war the Jewish community of Sochaczew was not reconstituted.

[Arthur Cygielman]

SOCHACZEW, ABRAHAM BEN ZE’EV NAHUM BORNSTEIN OF (1839–1910), Polish rabbi, head of the bet din of Sochaczew. He became famous as a child prodigy. At the age of 14 he married the daughter of Menahem Mendel of...
SOCIALISM.

Introduction

The words socialism and socialist were first used about the year 1830 but the origin of the ideas which led to the establishment of the modern labor movement goes back to the time of the French Revolution. For a variety of reasons Jews were attracted to socialism as it developed in Western Europe. Some regarded it as the building of a “just society” based on the teachings of the Bible and the Prophets, while others were attracted by its revolutionary nature. Thus, while some Jews saw socialism as a reply to antisemitism, there were also Jews who saw in it a way of getting rid of their Jewish heritage and serving the cause of the “Brotherhood of Man.” Socialism was particularly attractive for Jews anxious to leave the ghetto behind them and who, disappointed with the slow progress of 19th-century liberalism, were keen to embrace a new universal faith.

France

The forerunners of modern socialism were two Frenchmen, Count Henry Claude de Rouvroy de Saint-Simon (1760–1825; see *Saint-Simonism) and Charles *Fourier (1772–1837). Saint-Simon was impressed by Jewish messianic ideals and, referring to the persecution of the Jews, wrote that he looked forward to the time when all men would be brothers. Two of his followers, Barthélemy Prosper Enfantin (1796–1864) and Armand Bazard (1791–1832), considered the “emancipation of the Jews as being one of the preconditions for the liberation of humanity. They believed that Jewish monotheism foreshadowed the approaching unity of mankind and their supporters included many French Jews, among them the poet Léon *Halévy, the bankers Emile and Isaac *Pèreire, and the financier Olindé Rodrigues (1794–1851). On the other hand, Charles Fourier identified Jews with capitalism and opposed their emancipation on the grounds that they were “parasites, merchants, usurers.” Nevertheless, in his last writings he argued that the Jews should be helped to escape from persecution in Europe by returning to Palestine and once more become a recognized nation with their own king, their own flag, their own consuls, and their own currency. A number of Fourier’s followers were Jews who rejected his master’s antisemitism. Thus Alexander Weil wrote in 1845 that it was unfair to blame one section of the population for what he regarded as the iniquities of Catholicism and capitalism. He also described the serious condition of the Jews in Eastern Europe, in order to draw the attention of the public to their plight. Similarly, Jean Czynsky, a Polish refugee of Jewish origin, wrote that freedom for Poland and the emancipation of Polish Jews were concepts for which all socialists must strive.

Great Britain

The early development of socialism in Britain at the beginning of the 19th century had little to do with the Jews, who numbered only 20,000 in the country. Nevertheless, Robert Owen (1771–1858), “the father of British socialism,” actively campaigned for equality for the Jews and in 1830 submitted a petition to the House of Commons urging the abolition of religious disabilities. His example was followed by a number of leaders of the Chartist movement. Jews first became prominent in British socialism in the latter half of the 19th century and in May 1876 the *Agudat ha-Sozalitshim ha-Ivrim was formed in London, its founders including A.S. *Liebermann and Lazar *Goldenberg. German radical groups were also active in London and largely influenced the ideology of Jewish socialists in Britain. They kept in contact with the Russian revolutionary Peter Lavrov (1823–1900), who published the socialist organ, Vpered, in London. Toward the end of the 19th century an increasingly large number of Russian Jews became active in British socialism. Theodor Rothstein was a leader of the Marxist Social Democratic Federation, founded by H.M. Hyndman in 1884. Rothstein, who was shocked by an antisemitic outburst by Hyndman, later played an important part at the congress of the Russian Social Democratic Party in London in 1907, and after the Bolshevik seizure of power in 1917 was their unofficial representative in London. Later he helped found the British Communist Party, in which his son Andrew Rothstein was a prominent figure for many years. He was anti-Zionist, as were Joe Finberg, and Boris and Zelda Kahn, all refugees from Russia who played a major part in the British socialist movement. An outstanding figure of the British socialist movement was Eleanor Marx-Aveling (1855–1898), Karl Marx’s youngest daughter, who felt a close affinity with the Jewish people and affirmed that “my happiest moments are when I am in the East End of London amid Jewish workpeople.”
Germany
In Germany, many of the pioneers of socialism were Jewish. Among them was Moses Hess, whose study Die Philosophie der Tat ("The Philosophy of Action"), linked the ideas of the German philosophical school with the concept of historical materialism on which communism was based. Hess largely influenced the thinking of Karl Marx and Friedrich Engels but differed from them in that his brand of socialism was based upon ethical concepts. The course of socialism in Germany, however, was dominated not by Hess but by Marx and Ferdinand Lassalle, the former as the founder of the school of economic materialism and the latter as the father of German Social Democracy. But while Marx was the great theoretician who set out to revolutionize international politics, Lassalle was the political strategist who brought socialism into German political life. Both showed a marked hostility to Judaism. On the other hand, Marx’s non-Jewish colleague Friedrich Engels, who at first equated Jews with capitalists, later took a stand against antisemitism which he described as the weapon of the German governing class.

The First International
A number of Jews became prominent during the 19th century in the International Working Men’s Association, formed in 1864 by Marx and Engels, which became known as the First International. Among them were several French Jews, including E.E. Fribourg, an opponent of Marx, who was a disciple of the non-Jewish anarchist writer Pierre Proudhon (1809–1865). Fribourg advocated membership in the association only to people engaged in physical work, a move against Marx, whereas Lazare Lévy, another leading member of the French section of the First International, was a strong supporter of Karl Marx. Jews were also prominent in the workers’ uprising in the Paris Commune in March 1871, one of the leaders being Léo Frankel.

The Second International
The Second International set up at the Paris Congress of 1889 was largely dominated by German socialists, whose delegates represented a strong socialist party in effective control of the trade unions. They included August Bebel, William Liebknecht, Clara Zetkin, and Eduard Bernstein, the son of a Jewish worker, who had a profound influence on the development of socialism in Germany and elsewhere. Bernstein combined Marxist ideology with British pragmatism in a concept which became known as "Revisionism." He considered assimilation the best solution to the Jewish problem but Jewish suffering in World War I made him a supporter of Jewish settlement in Palestine and of *Póalei Zion. His non-Jewish colleague August Bebel was also sympathetic to the Jewish cause, describing antisemitism as "socialism of the fools;" and, while there were antisemites among the German socialists, the party was committed to fight against discrimination. By 1912 there were 12 Jews among the 100 Social Democrats in the German Parliament. Many other Jews were prominent in the party, the majority of them favoring assimilation, especially after Karl Kautsky’s book, Race and Judaism, was published in 1914. Most members of the Social Democratic Party were hostile to Zionism, as was the party organ Die Neue Zeit, but the Revisionists showed understanding of the labor Zionist cause and their newspaper Sozialistische Monatshefte, edited by Joseph *Bloch, was pro-Zionist. In Austria, many prominent figures in the Socialist Party were Jews, among them Victor Adler, Friedrich Adler, Otto *Bauer, Max *Adler, Hugo *Breitner, and William *Ellenbogen. They all supported assimilation and opposed Jewish national aspirations. In particular, Otto Bauer’s work Die Nationalitätenfrage und die Sozialdemokratie (1907), which denied that the Jews were a separate nationality, had considerable influence in socialist circles. On the whole, Jewish socialists in Austria avoided discussion of the Jewish question and were hostile to Zionism, but a notable exception was Julius *Braunthal, who supported the labor Zionist movement.

1914–1939
During World War I several Jewish socialists were among the most outspoken critics of the war, among them Rosa *Luxemburg and Hugo *Haase in Germany, Friedrich *Adler in Austria, Julius *Martov and Lev (Leon) *Trotsky from Russia, and Angelica Balabanov in Italy. In the chaotic conditions after World War I, Jewish socialists held top cabinet posts in socialist administrations in Germany, Austria, Hungary, and Russia. Thus Haase and O. Landsberg joined the German provisional government following the collapse of imperial Germany, Hugo Preuss became minister of the interior in the Weimar Republic, Paul Hirsch (1868–1938) was prime minister of Prussia, Kurt Rosenfeld was Prussian minister of justice, and Kurt Eisner was prime minister of "Soviet" Bavaria. In Austria, Victor Adler, Otto Bauer – who became foreign minister – and Friedrich Adler all played a major part in the Austrian revolution of 1918, and following the Hungarian revolution of 1919 Bela Kun became dictator in a "Soviet" Hungarian government containing 14 Jewish commissioners. In Russia, many Jews held senior posts in the first Bolshevik administration and the Communist Party (see "Communism; Russia").

Between 1918 and 1939 individual Jewish socialists held prominent positions in several European countries, but their importance tended to be exaggerated by antisemites. Thus in Germany, the Nazis represented the few Jewish socialists as having far greater influence than they actually had. In Austria, Otto Bauer was foreign minister from 1919 to 1920, Oscar Pollak was editor of the party organ Arbeiter-Zeitung, and Matilda Pollak was leader of the Social Democratic women. Léon Blum was prime minister of France and Jules *Moch was minister of public works. In Czechoslovakia Ludwig *Czech was minister of social welfare, while in Holland Saloman Rodrigues de Miranda was minister of housing, and in Britain Emmanuel Shinwell was secretary of mines. The socialist movement in continental Europe gradually weakened as the pace of the Nazi advance increased.
After the outbreak of World War II, socialist parties survived only in Britain, Sweden, and Switzerland. Most of the socialist refugees fled to England, where the British Labor Party took the initiative in convening regular meetings to discuss matters of common concern. Among them were several Jewish socialists, including Oscar Pollak and Karl Czernitz from Austria and Claudio Treves from Italy.

**Post-World War II**

After World War II, Jews continued to be prominent in the socialist movements of France and Great Britain. In France, Léon Blum, Jules Moch, Pierre Mendès-France, and Daniel Mayer emerged as leading French socialists and all held posts in French coalition governments. All four were active in Jewish affairs and supporters of the State of Israel. In Britain, Jewish participation in the Labor movement considerably increased in the postwar years. There were four Jewish cabinet ministers in the Labor government of 1945–51: Emanuel Shinwell, Harry Nathan, Lewis Silkin, and George Strauss, and the Labor government of 1964–70 at various times included Jews in senior or junior offices, among them Austen Albu (1903–1994), John Diamond, Harold Lever, Reginald Freeson (1926– ), Baroness Serota, Edmund Dell (1921–1999), and John Silkin. In addition, Harold Laski was chairman of the Labor Party from 1945 to 1946, Emanuel Shinwell was chairman of the Parliamentary Labor Party and Ian Mikardo (1908–1993), Frank Allan (1913–2002), and Sydney Silverman were members of the Labor Party national executive. One particularly noticeable feature of the growth of Jewish participation in the Labor movement was the sharp increase in the number of Jewish Labor members of Parliament, from four in 1935 to 26 in 1945, around 36 in 1966, and 30 in 1970. Many of the Jews prominent in the Labor Party were associated with the British Po’alei Zion and a Zionist group formed in 1936 called Labor Friends of Israel.

In the British Commonwealth, too, Jews have played an increasingly important part in socialist politics. In Canada a number of Jews were actively associated with the leadership of the socialist New Democratic Party formed in 1961. The most prominent of them was David Lewis – leader of the parliamentary party. Other Jewish MPs representing the NDP were Max Saltman (Toronto) and David Orlikow (Winnipeg). In Manitoba, five Jews were members of the Provincial Legislature: Saul Cherniak, C. Gonick, Sidney Green, Saul Miller, and Sidney Spivak. In British Columbia, too, a number of Jews were prominent in the party, but not in Montreal where the NDP was, generally, a weak body. While the Canadian Labor Zionist movement was not affiliated to the party, there was close cooperation in a number of provinces. Leading personalities of the NDP, which is a member of the Socialist International, visited Israel and showed a friendly attitude to its socialist party. The Canadian Congress, formed in 1956, had a close association both with the Histadrut in Israel and local Jewish labor bodies. In Australia, too, Jews played an increasingly active part in socialist politics. Sidney Einfeld and Senator Sam Cohen were Labor Party parliamentarians for a number of years. In 1969, three Jewish socialist candidates were elected to the Australian House of Representatives: Joe Berison (Perth), Moses Cass (Melbourne), and Barry Cohen (Robertson Constituency – near Sydney). In 2005, the only Jewish member of the Australian Parliament was the Labor MP Michael Danby. In recent decades the participation of Jews in left-of-center parties has probably declined sharply, while socialism as a viable ideology would seem to be a thing of the past. The movement of most Jews into the upper middle class, the diminution of right-wing antisemitism, and, above all, the hostility of much of the extreme left to Israel's post-1967 policies, have made it difficult for many Jews to identify as socialists in the old sense. Events such as the end of the Soviet Union in 1991 have also made it difficult for many to see what socialism might be like in the 21st century, especially any such ideology entailing widespread nationalization or sympathy for the radical enemies of Israel.

While many Jews, especially in the United States, remain committed to the value system of liberalism, it would seem clear that the engagement of the Jewish people with socialism is increasingly a thing of the past.

By contrast, the Holocaust and the Communist takeover in part of Europe reduced the Jewish participation in socialist politics to a mere fraction of what it had been before 1939. Nevertheless, a small number of Jews held important posts in European socialist parties after 1945, among them Ludwig Rosenberg, who was president of the German Confederation of Trade Unions, Siegfried Aufhauser (1884–1962), president of the German Federation of Labor in Berlin, Bruno Kreisky, who in 1970 became chancellor of Austria, and Karl Czernetz, who was international secretary of the Austrian Social Democratic Party.

**Eastern Europe**

Russia. Socialism developed in Russia later than in Western Europe, in the second half of the 19th century. The death of Nicholas I and the accession of Alexander II in 1855 led to the emancipation of the serfs in 1861 and a relaxation of the repressive regime. Jews became less isolated from the general stream of Russian public life, and the number of Jewish children in Russian secondary schools rose from 8 to 2,362 between 1840 and 1872. Many Jewish socialists came from traditional homes and were influenced by the writings of Russian philosophers, whose works they studied at secondary schools. They were largely in favor of assimilation, since they regarded Judaism as obsolete and believed that Jewish emancipation would come about through the liberalization of the Russian people with whom the Jews should integrate. Thus, most of the early Jewish socialists regarded the growth of Russian socialism as more important than Jewish emancipation. Many young Jews chose to join the revolutionaries and "go to the people." A number of Jewish socialists converted to Christianity to facilitate their activities among the people, while Jewish women socialists became estranged from Judaism by marriage to non-
Jewish revolutionaries. Though the persecution of Jews was an important motivating force in bringing Jews into the revolutionary camp, the pogroms of 1881 came as a great shock to many Jewish revolutionaries. Particularly disappointing were the antisemitic trends in the Populist movement and the indifference of non-Jewish revolutionaries to violent outbreaks against Jews. In addition Jewish socialists who neglected their own people because they believed them to be tradesmen and middlemen discovered the existence of Jewish workers who were facing oppression and social exploitation.

Some of the first Jewish socialists were prominent in revolutionary uprisings outside the borders of Russia. Robert Feinberg fought in the German revolution of 1848 and was later deported to Siberia, where he died, and Nicolai Utin, son of a rich Jewish contractor, was a liaison officer for the Polish revolutionaries in 1863. Utin fled to Germany, where he became a colleague of Karl Marx and established the Russian section of the First International. However, others were prominent in the ideological movements of the 1860s and 1870s which grew up in the wake of the acute poverty of the Jews. Marc Natanson (1849–1920), son of a Jewish merchant from Grodno, was the organizer of the Zemlya i Volya ("Land and Liberty") group from which emerged some of the famous non-Jewish revolutionary figures, such as Prince Peter Kropotkin, Vera Zasulich, and Georg Plekhanov. Joseph Aptekman (1850) and Lev Deitsch (1855–1941) were leaders of the Narodniki (Populists), a movement which developed among the intelligentsia to redress the injustices done to the Russian peasants. The revolutionaries dressed like peasants and lived with the peasants in the countryside. They soon exposed themselves to ridicule and many were arrested and imprisoned. The failure of the Populists led the revolutionaries to attempt fresh measures. In 1878 the terrorist group known as the Narodnaya Volya ("People's Will") was formed to combat oppression by violence. A number of Jews joined the organization. Many were made desperate by their increasing poverty resulting from the emancipation of the serfs, which enabled the latter to enter trades which had previously been mostly occupied by Jews. Several Jewish members of the Narodnaya Volya were captured and executed, among them Aaron Gobet, who had participated in a plot to assassinate Czar Alexander II in 1879, Solomon Wittenberg, Meir Mlodetsky, a yeshivah student from Slutsk, and Grigori Goldenberg (1855–1880), who committed suicide in the fortress of Petropavlovsk after being arrested for assassinating the governor-general of Kharkov. Other Jewish revolutionaries included Aaron Zundelevich (1850–1923) and Saveli Zlatopolovski, who were members of the executive committee of Narodnaya Volya. The assassination of Czar Alexander II in 1881 led to a reign of terror against the revolutionaries, but the latter continued to work against the regime and many joined the underground socialist organizations that sprang up toward the end of the 19th century.

Jews were exceptionally prominent in the Social Democratic movement and some eventually became leaders of the Russian Social Democratic Party, such as Julius Martov and Lev Trotsky. Others were active in Jewish workers' groups which united in 1897 as the *Bund and by 1904 numbered 23,000 Jews from Lithuania, Russia, and Poland. The Bund and the Russian Social Democrats were united in their opposition to Zionism, but while the Social Democrats insisted that the Jews should assimilate with the general Russian population, the Bund campaigned for recognition of a separate Jewish nationality within a federation of nationalities. After the 1903 split in the Social Democratic Party into Bolsheviks and Mensheviks, some Jewish members of the two groups were particularly vociferous in their opposition to Jewish national aspirations. The Bolsheviks argued that the revolution would solve the Jewish question by giving Jews complete equality and thus lead to their assimilation with the rest of the population.

A third organization in which Jews of Russia played a prominent part was the Russian Social Revolutionary Party formed in Switzerland in 1901. A successor party to the terrorist Narodnaya Volya, the party advocated agrarian reform by violence and the establishment of a Russian federation. Among the forerunners of the movement were Chaim "Zhitlowksy, who later settled in the United States, Mendel Rosenbaum, who immigrated to Israel, and Charles *Rapoport, who became an important figure in the French Communist Party. The movement included a terrorist "fighting organization" in which Mikhail Gots (1866–1906), Abraham Gots (1882–1937), Grigori *Gershuni, and Yevno *Azeff were prominent. Unlike the Social Democratic Party, they were not hostile to Zionism and did not actively struggle for assimilationism. The ultimate success of the Bolsheviks under *Lenin eventually brought about the end of Jewish participation in the socialist movement in Russia. Those Jewish socialists who were opposed to the Bolsheviks were forced to go into exile, and while many other Jews held prominent positions in the Communist Party, they were ultimately purged from the party hierarchy either between 1936 and 1939 or between 1948 and 1953.

**Poland and Romania.** In Poland, Jews were among the pioneers of the socialist movement in the latter part of the 19th century. The first socialist group, Proletariat, was an underground organization responsible for numerous workers' strikes. It included a number of Jews, among them Zigmund Dering and Szymon *Dickstein. Proletariat gave way to the Social Democratic Party (SDKP), a Marxist party which rejected Polish independence and advocated partnership with the Russian socialist movement. Among its leading members were Rosa Luxemburg, Leo Yogiaches and Adolf *Warski-Warsawhski, all of whom opposed the Bund and the nationalist Polish Socialist Party (PPS). Nevertheless, the Bund and the PPS attracted considerable support from prominent Jewish socialists such as Herman *Diamand, Herman *Liebermann, and Boleslaw *Drohner. In Romania, too, Jews were among the founders of the socialist movement. Thus Constantin Gherea-Dobrogeanu (1855–1920) organized a peasants' revolutionary group in Russia and later settled in Romania, where
he advocated universal suffrage. The Romanian Socialist Party was largely antisemitic, however, and when the Jewish Social Democratic group, Lamina, submitted a memorandum to the international Socialist Congress (1896) on the plight of the Jews in Romania, the Romanian socialists defended their party's inimical attitude to the Jewish question. The New Socialist Democratic Party formed in 1910 urged equality for the Jews but had little influence on the reactionary governments of Romania during the first half of the century.

[Schneier Zalman Levenberg]

United States

Jews played little part in the brand of American socialism which derived from agrarian and populist discontent with the social order. Nor did they appear in the numerous short-lived utopian communities which sprang up early in the 20th century or in the proletarian constituency of the revolutionary syndicalist Industrial Workers of the World which flourished from about 1908 to 1920. The role of Jews in American socialism lay within the urban, industrial environment where the movement had its main strength, and whose ideology was more or less Marxist. They were most prominent in the American Socialist Party from about 1915 until the 1930s, the period when ethnic minorities generally played a key role in the socialist movement. Socialism developed among industrial workers and intellectuals during the 1870s, when the Socialist Labor Party was founded (1877) with one of its strongest bases in the largely Jewish International Cigar Makers Union. Adolph Strasser (1844–1939), a leader of that union, had been secretary of its predecessor, the Social Democratic Party, in 1874. However, he and Samuel *Gompers, also a cigar maker, as founders and leaders of the American Federation of Labor (1886), firmly led it away from socialist involvements and toward "pure and simple" trade unionism. During the 1880s, Jews were among the leaders of short-lived municipal labor or socialist parties in such cities as Detroit, Milwaukee, and New York. After 1890, the Socialist Labor Party was dominated by Daniel *De Leon who maintained the SLP's doctrinal purity by expelling all dissenters and losing practically all influence in the socialist and trade-union movements.

American socialism reached its climactic years between 1900 and 1920. Although Eugene V. Debs was the party's orator, presidential candidate, and moral symbol, its real leaders were Victor *Berger, the first Socialist Party congressman, and Morris *Hillquit. Louis Boudin was a leading Marxist scholar and theoretician. One socialist stronghold was the Jewish labor movement which had begun among East European immigrant proletarians during the 1880s. Their weak, unstable unions were fervently socialist and revolutionary in temper. After 1910, trade unionism, which was overwhelmingly Jewish in membership and leadership, won control of labor conditions in the garment industry by means of a series of dramatic strikes. The International Ladies Garment Workers Union and the Amalgamated Clothing Workers of America remained explicitly socialist, but the revolutionary content of their socialism was relegated to rhetorical flourishishes about a vague, ultimate end. The unions' socialist activity emphasized the creation of a comradely environment for their members, who included perhaps 200,000 Jews. The tone of Yiddish-speaking fraternal orders, literature, and theater was also socialist. Abe *Cahan's prosperous *Jewish Daily Forward, with a maximum circulation of about 150,000 in 1917, wielded great influence, and the monthly *Zukunft was a notable organ of socialist letters. It was the Jewish East Side which sent the Socialist Party's Mayer *London to Congress in 1914 for the first of three terms, and elected socialists to the state legislature.

Although the Socialist Party had a very high proportion of Jews among its followers and leaders, it took no position on Jewish problems as such. Its general view was that Jewish problems did not exist, being imaginary constructs to divert attention from the true problems of all oppressed. Thus, Jews would achieve a full and final solution with the ultimate social revolution. The existence of the Jews as a people, it was tacitly assumed, might then end. American socialism had nativist elements who pushed it into an anti-immigration policy for several years after 1908, but perceptible antisemitism such as in some European socialist movements did not exist. Nevertheless, it was charged that some of the opposition in 1932 to Hillquit's leadership was antisemitic. In 1908 a Jewish Agitation Bureau was established in order to spread socialism among Yiddish-speaking Jews. Stimulated by immigrants with experience in the East European Bund, the Bureau developed into the Jewish Socialist Federation (JSF) from 1912, over strong opposition from Abe Cahan and other Yiddish-speaking stalwarts opposed to such "separatism." Actually the JSF disavowed any distinct Jewish purpose and attempted only to spread socialism, while it vigorously combated Zionism. Its membership was drawn mainly from immigrants of Bundist background. American socialism was greatly weakened by its opposition to American entry into World War I and by the Communist split in 1919. Among Jews it remained strong, although racked by savage quarrels with Communists. However, as the Democrats from 1928 became the party of urban liberalism, ethnic groups, and social reform, they drew increasing numbers of Jews and other socialists into their ranks. Jewish unions and voters moved en masse to the Democrats during the 1930s as F.D. *Roosevelt's New Deal enacted social legislation and provided national political recognition for Jews and other urban ethnic groups. Such Jews as Gus Tyler, Max and Robert Delson, Sidney *Hook, and J.B.S. Hardman were significant Socialist leaders during the 1930s. The American Socialist Party, led after Debs' death in 1925 by Norman Thomas, turned toward pacifism and isolationism in the face of Nazism and did not change its view on Jewish problems. The magnet of the New Deal and the inadequacies of the Socialist Party left the latter with very little Jewish or other following by the time of World War II.

[Lloyd P. Gartner]

The years after World War II, with their combination of economic prosperity, cold war, and political conformism,
witnessed the near total collapse of the socialist movement as a serious political force in the U.S. Many older Jewish socialists joined this trend by moderating their criticisms of American society so as to be reabsorbed into the American political mainstream. Typical of this process was the emergence in New York City and State of the mildly reformist Liberal Party, which was dominated by Jewish labor leaders such as David *Dubinsky and Alex *Rose, nearly all of whom had been active socialists in the 1920s and 1930s.

Nevertheless, although socialist politics remained moribund in America for two decades after World War II, a community of influential socialist thinkers, many of them Jews, continued to exist and to sustain a tradition of radical political critique that served as an intellectual seedbed for the radical revival of the late 1960s. The individuals who composed this community held a wide divergence of views, ranging from the revolutionary Marxism of Herbert *Marcuse to the anarchism of Paul *Goodman and the social democratic humanism of Irving *Howe. All joined in rejecting both Soviet communism and American capitalism as viable social models for the future, though most openly expressed their preference for the latter as the less malign of the two evils and the more amenable to structural change. Other prominent figures from these years whose approach to public issues was socialist in tenor, were academicians such as Lewis A. *Coser and Daniel Bell, writers and journalists like Norman *Mailer, Harvey Swados, Paul Jacobs, and I.F. *Stone, and the psychoanalyst Erich *Fromm. Many socialists published in the pages of the journals *Dissent, edited by Irving Howe, and *Partisan Review, edited by Philip Rahv, and a number were identified with the League for Industrial Democracy directed by Tom Kahn.

As in earlier decades, the majority of American Jewish socialists tended to regard specifically Jewish issues as peripheral to broader social and economic problems, but many supported the establishment of the State of Israel both as a result of the Holocaust and as a legitimate expression of Jewish national aspirations. The revival of radical politics in the U.S. toward the end of the 1960s led to profound differences of opinion among socialist intellectuals. Some, such as Marcuse, supported the *New Left despite reservations about its ideological unclarity and tendencies to violence. Others, such as Howe, strongly attacked it for its contempt of intellectual values and climate of "left fascism." Among the points of contention in this debate was the State of Israel, particularly after the Six-Day War (1967). Many New Left supporters tended to side with the anti-Israel position, while its socialist detractors generally defended the Jewish state, though often with noticeably more ambivalence than in former years.

[HiIlel Halkin]

**Latin America**

Jewish work for socialism in Latin America was mainly the result of the efforts of various Jewish labor organizations established by immigrants from Europe. However, in Argentina, where the socialist movement is one of the oldest in the world, Jewish workers played a part in the development of the General Labor movement and were active in both general politics and the trade unions. Enrique *Dickmann was one of the outstanding socialist leaders in the early 1940s. The establishment of the military regime in Argentina greatly limited the activities of the Socialist Party, which nonetheless retained its long-standing association with the Socialist International, its representatives including persons of Jewish origin. In Chile, where the socialist movement had deep roots in the country's history, individual Jews played a part within the various left-wing groups. Jews were active, to a lesser degree, in Uruguay, where the socialist groups were weaker than in Chile. In other Latin American countries with a sizable Jewish population, the socialist movement was either very weak or its development was hampered by totalitarian regimes and the contribution of individual Jews was marginal.

**Asia and Africa**

Of special significance was the impact made by Israeli socialism in Asia and Africa, where it often served as an example for post-colonial development. The achievements of the *Histadrut, the unique character of the *kibbutz and the *moshav, the development of Israel's people's army and the industrial and scientific progress of the Jewish state, were greatly admired in many developing countries. In 1960, the Histadrut established the Afro-Asian Institute. By 1970, about 2,000 students from the “Third World” had attended its various courses conducted alternatively in English or French. The number of visitors to Israel from African and Asian countries increased substantially during the 1960s and the Histadrut sent many technical advisers to developing countries.

In the political field, the Israel Labor Party played an active part in the establishment of the Asian Socialist Conference (1953). Its activities were suspended after the establishment of totalitarian governments and the suppression of socialist groups in a number of Asian countries. A new attempt at setting up a center for the socialist movement in Asia and Oceania was made at a conference held in Wellington, New Zealand, in 1969; the Israel Labor Party was elected as a member of the secretariat established in Singapore. In Africa, the Israel labor movement established close contact with the socialist parties in power in Madagascar and Mauritius.

Within the Socialist International, the Israeli party *Mapai pressed for greater understanding of the specific conditions and needs of Asian and African countries, and was instrumental in the formation of the special committee for underdeveloped countries within the organization. The Israel Labor Party made clear on a number of occasions that it would welcome the affiliation of genuine Arab socialist groups to the International but it opposed cooperation with semi-Fascist or semi-Communist parties using the label "socialist" for political purposes.

**Anarchism**

The modern anarchist movement emerged during the 19th century. Some of its leaders believed in violent action, oth-
ers confined themselves to putting forward their own highly individualistic theories on the transformation of authoritarian societies into free cooperation between individuals and groups. The impact of anarchist ideas has differed from country to country.

Famous anarchists had an indirect influence on the development of Jewish radical thought. The ideas of Proudhon, Bakunin, Elisée Reclus (1830–1905), Kropotkin (1842–1906), Enrico Malatesta (1853–1932), and other libertarian writers were studied in Jewish revolutionary circles, but the impact of socialism on the Jewish labor movement was incomparably stronger than that of anarchism. Political action had a greater appeal to Jewish workers than the belief in the possibility of a violent and sudden transformation of society. Some of the “giants” of anarchism had a friendly attitude to Jews but others, such as Proudhon and Bakunin, showed clear antisemitic tendencies. Bakunin’s anti-Jewish sentiment was considerably influenced by his struggle with Karl Marx for the leadership of the First International. The greatest impact of anarchism was in Mediterranean countries – Spain, Italy, and southern France; and in Mexico, Cuba, Argentina, and southern Russia. In all these countries Jewish participation in the movement was of a minor character; of greater significance was the part played by Jews in the development of libertarian ideas in America and Britain.

Anarchism as an organized movement among Jewish immigrants began in the United States in 1886. A new organization, The Pioneers of Liberty, attracted a number of Jewish radical thinkers, among them the poets David Edelstadt and Morris Rosenfeld, the journalist S. Janovsky, Emma Goldman, and Alexander Berkman. At first, Jewish supporters of the new creed were influenced by German immigrants, but they gradually began to make a direct appeal to Jewish workers and to issue literature in Yiddish. Violent clashes with Jewish socialists and religious elements soon followed. During World War I the number of Jewish anarchists fell; some returned to Russia after the Revolution or otherwise departed. Nevertheless, small groups continued their activities.

The Jewish anarchists in the United States kept in close touch with those in Britain, where the movement found a strong foothold among Jewish workers in Whitechapel. One of the leaders of the British group was Rudolf Rocker, a German non-Jewish anarchist who lived in London from 1895 to 1914. He was a colorful figure among the Jewish supporters of the libertarian ideas and became editor of Yiddish publications. After 1917, anarchism declined as an active force among Jewish workers; some returned to Russia after the Revolution or otherwise departed. Nevertheless, small groups continued their activities.

On the continent of Europe, anarchism attracted support among the Jewish socialist leaders. Thus in Germany, Moses Hess, who knew both Proudhon and Bakunin, was for a short time influenced by their ideas. He adopted the title “anarchist” for his own social philosophy developed in Die Philosophie der Tat (1843). A prominent anarchosocialist intellectual in Germany with an international reputation was Gustav Landauer. In France, Léon Blum in his early years was influenced by anarchist ideas, as was Bernard Lazare, who combined his social revolutionary ideas with belief in Zionism.

In Russia, the anarchists were a marginal factor in the development of the Jewish labor movement. While their ideas influenced some of the Jewish revolutionaries, anarchism played only a minor part among Jewish radical elements. During the years 1918–21, peasants of the southern Ukraine joined the anarchist guerrilla leader Nestor Makhno, whose Revolutionary Insurrection Army was responsible for some of the most brutal pogroms against the Jewish population. Makhno had a number of Jewish supporters and denied responsibility for the brutalities. Toward the end of 1918, Aaron and Fanya Baron helped form the Confederation of Anarchist Organizations in Ukraine. In September 1921, Fanya Baron and eight of her comrades were shot in a Moscow prison. Alexander Shapiro – another Jewish anarchist – hoped to bring about an amelioration of conditions through working with the Soviet regime. But Jewish anarchism, and the movement as a whole, ceased to exist as a vital force in Russia after the “purge” of its supporters in the early 1920s. A number of former anarchists were attracted by kibbutz life in Israel, but after World War II anarchism virtually ceased to exist as an organized force in Jewish life. Nevertheless, “revolt against authority” and belief in libertarian ideas can be found among Jewish New Left intellectuals and students in various countries.

SociaLism and the jews

The first socialists were greatly divided about their attitude to the Jewish problem. Some ignored the issue because of ignorance, indifference, or the small number of Jews in their respective countries. Others were imbued with the general antisemitic prejudices prevailing in both Western and Eastern Europe during the 19th century. Another group – among the pioneers of socialism – was sympathetic to the Jews and championed their right to freedom and equality. Moses Hess, who was the first Zionist among the socialist theoreticians, was an exceptional case. The First International (1864–76) never adopted resolutions on the Jewish problem; the views expressed by its various leaders were of a personal nature. However, three official representatives from Jewish labor organizations were present at the first congress of the Second International (1889): Philip Kranz from London’s Jewish International Workers’ Educational Club, and Joseph Barsky and Louis Miller from the New York’s United Hebrew Trades. The latter submitted a report on the activities of Jewish trade unions; this was the first time that an international socialist conference received information about the existence of an independent Jewish labor movement. The Jewish issue was raised at the second congress of the International (Brussels, 1889) by Abraham Cahan, who represented 30,000 “Yiddish-speaking workers” from the U.S.; he did it against the private advice of Victor Adler and Paul Singer and a number of other leading figures in the organization, who believed that a public discussion on antisemitism was both unnecessary and harmful. After a de-
bate in the course of which two delegates from France made reference to the exploitation of workers by Jewish capitalists and denounced "philo-Semitic agitation," the congress adopted the following resolution:

Considering that the socialists and workers' parties have always affirmed that there cannot exist for them racial or national antagonism, but only the class struggle of the proletariat of all races and countries against the capitalists of all races and countries;

Considering that for the proletariat of the Jewish race and Yiddish language there exists no other way to achieve emancipation than to join the workers' organizations of their respective countries;

Condemning antisemitic and philo-Semite outbursts as one of the means by which the capitalist class and the reactionary circles seek to divert the Socialist movement from its purpose and divide the workers;

The Congress decides that the question raised by the delegation of the Yiddish-speaking group of American comrades was superfluous and passes to the next item on the Agenda.

The Russian socialists were not represented at the congress, but the resolution on the Jewish problem was sharply attacked for its lack of understanding in an article written by Georg Plekhanov in Sotsial-Demokrat (Geneva, 1892). In 1903, the Second International condemned the Kishinev pogrom but refused to take a clear stand on the Jewish question. Jewish Social Democratic groups had been represented at congresses of the International from 1893, when Jacob Stechenberg represented both Lemberg and Cracow, but the Bund was allotted 12 out of the 29 mandates of the Russian Social Democratic Party. On the other hand Jews also represented the Russian Social Revolutionary Party at congresses of the International, Chaim Zhitlovsky and Ilya Rubanovich representing the party at the congress of 1904. The World Confederation of Po'alei Zion applied for membership of the International in March 1907. It submitted a special memorandum to the bureau of the organization, in the course of which attention was drawn to the unique nature of the Jewish problem which, it claimed, was primarily a result of the abnormal class-structure of the Jewish people and the special economic conditions of the Jewish working masses. The specific character of Jewish emigration was stressed as was the need for a territorial solution of the Jewish problem through the establishment of a Jewish National Home in Palestine. The Zionist socialist memorandum ended with the following request for admission:

According to the latest resolution of the International Socialist Bureau, representation will henceforth be determined not on the basis of states but of nationalities. The Jewish Socialist Labor Party – Po'alei Zion – which numbers more than 19,000 organized Jewish workers in Russia, Austria, America, England, and Palestine requests the International Socialist Bureau to grant it – as a socialist party of proletarians of Jewish nationality – representation in the Bureau.

In October 1908, the Po'alei Zion Confederation put forward the idea of the creation of a Jewish section within the Socialist International which would comprise all the existing socialist parties of the Jewish proletariat: the Bund, the Po'alei Zion Confederation, the *Jewish Socialist Workers' Party* ("Sejm") of Russia, and the *Zionist Socialists* (ss) Party of Russia. The request was renewed in May 1911. Po'alei Zion's efforts to obtain admission to the International did not produce any tangible results – ostensibly on account of objections on organizational grounds. Actually, the request was not granted because of the opposition by the majority of socialist leaders – especially of the large parties – to Jewish national aspirations and labor Zionism. Prior to World War I, the large majority of socialist leaders believed in assimilation as the solution of the Jewish problem. Even those of them who recognized that the Jews were a people, either failed to see any justification for their separate existence or did not believe that they would survive as an independent entity. Many socialist leaders of Jewish origin favored assimilation, and for some the Jewish problem was a personal embarrassment. Others were sincere in their belief that socialism would solve the problem of all minorities and that there was no need for the Jews to be singled out as a special issue. There were also individual socialist spokesmen of Jewish origin who suffered from "self-hatred" and expressed antisemitic sentiments. Nevertheless, even prior to 1914, there were leading socialists who showed understanding of Jewish national aspirations and were sympathetic to the Zionist cause. Toward the end of World War I, Jewish socialists renewed their demands for recognition in the world socialist movement. In 1917, Po'alei Zion submitted a detailed memorandum on the Jewish situation to the Dutch-Scandinavian Socialist Committee, and presented concrete demands on behalf of the Jewish labor movement. In the same year the committee, whose secretary was the pro-Jewish leader, Camille Huysmans (1871–1968), issued its peace manifesto to the warring powers and urged an international solution to the Jewish problem, involving autonomy for the Jews living in compact masses in parts of Poland, Russia, Austria, and Romania. In December 1917, a special conference of the British Labor Party and Trades Union Congress approved a memorandum on war aims which was later endorsed by a meeting of all the socialist parties in allied countries. The memorandum included, inter alia, the following section on the Jewish question:

The conference demands for the Jews equal elementary rights in the sense of freedom of conscience, residence and trade, and the same political rights that ought to be extended to all citizens. But the conference further maintains that Palestine ought to be set free from the harsh and oppressive government of the Turk and ought to be transformed into a free state, under international guarantee, to which the Jewish people may return if they desire to do so, and where they may develop their own civilization free from the influence of alien races and religions.

During 1919 a number of international socialist conferences were held to discuss problems of a peace settlement. One of them, held in Amsterdam in April, adopted a special resolution dealing with Jewish rights. Beside the demands for equal civil rights, freedom of immigration and settlement in all countries, national autonomy, and representation of the Jew-
ish people in the League of Nations, the motion contained the following clause:

Recognition of the right of the Jewish people to build their National Home in Palestine, and the establishment of conditions favorable thereto under the protection and control of the League of Nations, which shall also safeguard the rightful interests of the existing non-Jewish population.

These resolutions showed a radical change in the attitude of a number of socialist parties to the Jewish problem. The Po'alei Zion Confederation was permitted to take an active part in the various socialist consultations dealing with a peace settlement and the reconstitution of the International. After the war, the Second International was reconstituted in February 1921 from among the socialist parties which did not join the Communist International. Po'alei Zion accepted an invitation to attend as a separate group and, at the Hamburg conference in May 1923, was represented by seven delegates. In the following year the position of the Po'alei Zion within the International was finally settled by a resolution of the executive in February 1924:

1. Palestine is included in the list of nationalities.
2. The only Palestinian party who has so far declared its readiness to affiliate is the Po'alei Zion Confederation.
3. The Po'alei Zion Confederation also has members in countries other than Palestine and demands – in accordance with article 10 of the bylaws relating to factions and parties – that these members be accredited to the Palestinian party. Accordingly, the members of the Confederation who do not belong to other affiliated parties will be accredited to Palestine.
4. Palestine is granted two votes at Congresses. These votes are allotted to the Po'alei Zion Confederation with the understanding that there will have to be a reallocation in case other parties in Palestine will affiliate to the International.

There was still considerable opposition to the Po'alei Zion within the Second International, largely from Jewish assimilationists such as Friedrich Adler and members of the Bund among the Polish delegation. However, the Po'alei Zion succeeded in forming a representative Socialist Committee for Palestine, whose sponsors included Emil Vandervelde, Léon Blum, and Eduard Bernstein. In addition, 40 leading socialists representing ten European states responded to an invitation to attend a conference in Brussels in August 1928 to extend moral and political support for the labor movement in Palestine.

The persecution of the Jews in Nazi Germany, and the extermination of the Jewish population on the continent of Europe during World War II, finally made the socialist movement alive to the Jewish problem. This, in turn, led to an increasing understanding of Zionist aspirations. The British Labour Party led the campaign for increased Jewish immigration into Palestine and against the anti-Zionist *White Paper introduced by the Conservative government (May 1939), and its program of postwar aims envisaged the establishment of a Jewish state. The reversal of the party's pro-Zionist platform by the Labour government after 1945 came as a shock to many socialists in both Britain and elsewhere. A number of European socialist parties – while deeply sympathetic to the plight of Jewish refugees – were reluctant to criticize the policy of the British Labour government. The situation changed after the UN Partition resolution of 1947 and the establishment of the State of Israel (1948), whose emergence was greeted by many socialist leaders in various parts of the world. From its revival in 1951, the Socialist International gave consistent support to Mapai and later to the Israeli Labor Party, which played an active part in the meetings of the bureau, council conferences, and congresses of the organization. The Socialist International, mainly on the initiative of Israeli delegates, took an active interest in the problem of Soviet Jewry and several times officially demanded its positive solution. (See *Russia, Struggle for Soviet Jewry.) The 11th Congress of the Socialist International (June 1969) adopted a resolution which expressed deep concern that two years after the war of the Arab states against Israel, no advance had yet been made toward a settlement based on security and lasting peace in the area. It stated that flagrant violations of the cease-fire agreement and senseless acts of terrorism threatened to lead to an escalation toward a new war. It also pledged full support for the mission of the UN representative Gunnar Jarring and directly negotiated peace treaties between Arab states and Israel. The International appointed a special working group to study the situation of Soviet Jewry and actively identified itself with the struggle for the attainment of its legitimate rights; it also urged Arab governments to allow Jews to emigrate.

Conclusion

Summarizing the Jewish contribution to the Socialist movement the following picture emerges regarding the situation at the end of 1970.

(1) The Nazi-Fascist period and the Holocaust led to a decline both of the Jewish population in Central Europe and in its contribution to the socialist movement; individual Jews, however, continued to play their part in the various labor parties.

(2) The establishment of Communist regimes in Eastern European countries led to the suppression of socialist parties and thus brought to an end the long chapter of Jewish participation in the struggle for democratic socialist ideas in Russia, Poland, Romania, and other countries of the region.

(3) The period of Gaullism in France was followed by both a decrease in the strength of the socialist movement and the part of Jews in its leadership.

(4) A feature of the postwar period was a considerable increase in Jewish participation in the activities of the British Labour Party, and a parallel process, on a smaller scale, was discernible in the Canadian New Democratic Party. A tendency to greater Jewish participation in labor politics was also felt in Australia where the Jewish community was still comparatively small. Similar currents were noticeable in South American countries but the outlook was unclear due, on the one hand, to military dictatorships and, on the other, to the possibility of revolutionary upheavals.
(5) The major center of the Jewish socialist movement with wide links in many parts of the world was Israel. It was the Israel Labor Party and the Histadrut which attracted the interest of both international labor circles and non-aligned countries in the "Third World." The center of gravity of Jewish socialist thought and actions shifted from Diaspora countries to Israel. During the 19th century, the world was mainly familiar with the contribution to socialism made by individuals of Jewish origin, but it is now aware of the collective Jewish contribution created by Jewish labor in the Jewish state.

[Schnieer Zalman Levenberg]

SOCIALISM AND WOMEN

Jewish women's involvement with socialism began in 19th-century Europe with the emergence of modern Jewish political movements that sought to address the dislocations caused by industrialization, urbanization, and the breakdown of traditional religious structures. Socialists aspired to create a just society, often conceived in utopian, classless terms. Some Jewish women who worked within socialist movements, parties, trade unions, and causes added gender to their class and national analyses of modernity's problems, insisting on an amalgam of socialism and feminism.

The first Jewish socialists, including female intelligentsia such as Rosa *Luxemburg in Germany, Angelica *Balabanov in Italy, and Matilda Pollak of Austria, put their energies into general socialist movements. However, by the end of the 19th century, the composition and nature of Jewish involvement with socialism was transformed by the growth of a massive Jewish artisanal working-class in Eastern Europe. As Jewish women flocked into light industry, primarily the needle trades, but also tanning, bristle making, and cigar and cigarette production, many began to organize as workers and as Jews to protest their exploitative working conditions. Jewish women joined the socialist-oriented Bund when it formed in Vilna in 1897, comprising one-third of its membership, and occupied many of its middle rank leadership roles. Esther Frumkin (b. 1880), despite being born to a life of privilege, devoted herself to the Bundist cause.

Emigration from Eastern Europe stimulated socialist activism. Jewish immigrant communities in Europe, the Americas, Palestine, and elsewhere, were deeply sympathetic to socialist ideals, many of which were expressed through trade unionism. Women played an important role in realizing many of these aspirations. Although Jews comprised 40 percent of New York's garment workers in the early 20th century, Jewish women often found themselves in less skilled, lower-paying positions, and were viewed skeptically by the labor establishment. Yet, the American and American Jewish trade union movements only became secure when galvanized by labor activities spearheaded by young Jewish women workers in the first decade of the 20th century.

The most important female labor action of the period, the so-called Uprising of the Twenty Thousand (also known as the 1909 Shirtwaist Strike; see *International Ladies Garment Workers Union), involving thousands of Jewish and Italian working girls, began a series of strikes that spread to Philadelphia, Chicago, Cleveland, and Kalamazoo – later called "The Great Revolt" – and emboldened the American labor movement. By 1919, half of all garment workers were members of a union. Fannia M. *Cohn, Rose *Schneiderman, Pauline *Newman, and Clara Lemlich *Shavelson, all East European-born, experienced the shirtwaist strike as the formative event of their activist youth, as did Theresa *Makkiel, who later became an important Socialist Party activist and immortalized her experiences in the novel *Diary of a Shirtwaist Striker (1910). Many female Jewish trade unionists continued their socialist-inspired activism through progressive and reform politics in the New Deal. Most notable was Bessie Abramowitz *Hillman, who at 21 led a walkout with 16 other young women against a Chicago clothing firm that began the 1910 strike and later became an organizer for the Women's Trade Union League (WTUL). Similar narratives are told of other young Jewish women raised in immigrant communities, such as Rose Kerrigan, whose socialist activism informed her earliest years as a rent striker and her later years as a pension activist in Glasgow, Scotland. While most female Jewish socialists felt loyalty foremost to the working-class from which they came, they also supported middle-class feminist issues, such as suffrage, in disproportionate numbers.

Socialism's strength on the New York Jewish street before World War I made the Jewish Socialist Federation (JSF), established in 1912, the third largest foreign-language federation within the Socialist Party. When the 1917 October Revolution radicalized and split the international socialist and trade union movement, Jewish women joined the ranks of both the Socialist Party (and the nascent Communist Party). Many others became fellow travelers who worked for socialist ideals through the expansive Jewish immigrant fraternal, educational, and cultural networks that included the Yiddish press, supplementary Yiddish schools, theater, and housing and consumer cooperatives.

Socialist activism also informed the Zionist movement and as early as 1907 the Po'alei Zion applied for membership in the Socialist International, asserting that the needs of the Jewish proletariat merited a special Jewish organization. Opposition to Zionism ran strong in the international socialist community, and labor and social Zionists found their successes in the Israeli kibbutz and labor movements. *The Plough Woman (1931; rep. 2002) recorded the testimonies of female pioneers, such as Rachel *Katzenelson-Shazar and Yael Gordon among many others, who were imbued with the socialist ideals that underpinned labor Zionism.

Because socialism was so intimately tied to immigrant labor, culture, and community life, post-World War II suburbanization and upward mobility led to the decline of socialist activism among Jews, including women. An exception was the prominence of certain Jewish women activists in "Second Wave" feminism, which as a movement criticized society chiefly through the lens of gender. Individuals such as Clara
Goodman Fraser, a Jewish feminist from East Los Angeles, believed that resolution of class conflict was necessary to ameliorate the condition of women in a patriarchal society. She combined socialism and feminism on behalf of the Freedom Socialist Party (FSP) and Radical Women (RW) throughout the 1960s and 1970s. In Latin America, many Jewish women, such as the socialist Alicia Portnoy, suffered as leftists under the Argentinean junta in the 1970s.

**SOCIALISM, JEWISH.** This article refers to specifically Jewish movements and parties which envisaged the creation of a socialist society as an essential aspect of the solution to the Jewish question. This definition, while far from perfect, has the virtue of excluding Jews who happened to be socialists, as well as socialist movements in which many Jews were active but which had no specifically Jewish content or aims (for which see *Socialism*).
Jewish proletariat is followed by the demand for a specifically Jewish organization, justified on technical grounds by reference to the obvious empiric differences between Jewish and Russian workers. Liebermann went no further than this, and his organizational schemes left no lasting impression in Russia, though he succeeded in establishing a Jewish workers' union in London. He was, however, a true pioneer, not only because he edited the first Jewish socialist journal, *Ha-Emet*, but because his conception of the needs of the Jewish proletariat was accepted by all his successors. His career offered a point of departure, while his quarrel with Smirnov hinted at what was to become a major dilemma for generations of Jewish socialists.

During the 1880s and 1890s socialist circles (*kruzki* in Russian) were founded in the major cities of Lithuania. These circles succeeded, for the first time, in joining together members of the Jewish intelligentsia and the Jewish working class. The leaders were russified Jews, to a far greater extent than Liebermann, who had retained the characteristics of a *maskil* and published his socialist organ in Hebrew. There were both Populists and Marxists among them, though Marxism was more attractive (after all, Populism placed its hopes on the peasants and there was no Jewish peasantry) and eventually won the day. The aim of the circle was to produce cadres of trained revolutionaries who would dedicate their lives to the Russian revolution. It was, in accordance with both Populist and Marxist teachings, essentially a school for socialism. The worker participants were first taught Russian and then studied economics, literature, and even the natural sciences, the purpose being to make them "class conscious." There was nothing particularly Jewish about these circles except that all the participants were Jews. This was the result not only of the preponderance of Jewish workers in the cities of Lithuania and Belorussia (Vilna, Minsk, Gomel, Dvinsk, etc.) but also of the gulf which separated Jews from Christians, the "estrangement" felt even by russified Jewish intellectuals when they sought to make contact with non-Jews. The all-Jewish character of the circles, therefore, reflected necessity rather than the desire to establish a Jewish movement, a practical example of Liebermann’s view that special conditions dictated the creation of a special movement.

The idea of creating a special Jewish movement, however, as apart from circles dedicated to supplying revolutionaries for the Russian movement, was not formulated by the circle leaders until the circles themselves were transformed into trade unions. This transformation, the famous transition from cultural "propaganda" to economic "agitation," occurred in the early 1890s, by which time the circle movement had reached a point of crisis. While the circle was intended to be a school for socialism, a significant number of worker participants used it as a means to attain secular education and to escape the poverty of proletarian existence. Some emigrated, some became students, and others even opened their own shops, thus becoming, in the eyes of the leadership, "exploiters." Searching for a way out of this impasse the intellectuals leadership resolved to appeal to the economic interests of the Jewish masses, an idea which came to them partly as a result of new developments within Russian Marxist thought, partly from the example of Polish socialism, and partly from their own experience of early Jewish strikes. Thus the educational circle made way for the strike, and the dominant figure of the circle movement, the teacher, gave way to the labor leader, the "agitator." Class consciousness would be achieved not through studying economics but through the hard school of the strike movement, which would demonstrate to the workers the alliance between the boss and the regime. The new slogan was "through economics to politics." Rather than concentrating on the elite of the circles, the intellectuals went "into the streets, to the masses."

The transition from propaganda to agitation was accompanied by the ideological formulation, expressed in the writings of A. *Kremer*, S. *Gozhansky*, and J. *Martov*, of the need for a specifically Jewish socialist organization. These men, who formerly thought only in terms of Russian socialism, now argued that the Jewish proletariat, miserably exploited and extremely responsive to the slogans of the agitation campaign, was a worthy member of the international working class. Its struggle for better economic conditions was fully justified by the tenets of international Marxism, for the organization of Jewish workers into trade unions would ultimately contribute to the struggle to make Russia into a socialist state. The leaders then went one step further. The struggle of the Jewish proletariat, they argued, was also a national struggle for equal rights for Russian Jewry, a struggle which the assimilated and cowardly Jewish bourgeoisie was incapable of waging and which non-Jewish movements were liable to ignore. Thus the connection was made between the social role of the Jewish proletariat, whose mission was to lead the way to socialism, and its national role as defender of Jewish rights in the Russian Empire. This conception was to be developed into a full-blown socialist-nationalist ideology which virtually all Jewish socialist movements came to accept.

**The Bund**

This way of thought became the organizational and ideological basis for the General Jewish Workers’ Union in Russia and Poland (the "Bund"), founded in 1897 as the result of the unification of various local movements in the major cities of Lithuania. The new ideology, as well as the new trade union organization, encountered stiff opposition: Russian Marxists, who organized the Russian Social Democratic Workers’ Party in 1898, refused to admit the need for an autonomous Jewish organization, a position consistently affirmed by *Lenin* in his polemics with the Bund. Certain members of the old circles, who prized the cultural work carried on by the intellectuals, denounced the tactics of agitation as a plot to keep the workers ignorant and therefore incapable of leadership roles in the revolutionary movement. The various opposition movements which emerged in Vilna, Minsk, and other centers advanced an additional argument which was to have con-
siderable weight among Jewish socialists. The Jewish working class, they claimed, could not wage a meaningful class struggle because it consisted almost entirely of artisans, with little if any difference between employers and employees. Those artisans, who for various reasons could gain entrance to the great factories, had nothing in common with the Russian factory proletariat, not to mention the great proletariats of Western Europe. Agitation, therefore, could only lead to the farcical struggle of the “poverty-stricken against the indigent.”

The formulatons of the agitation program rejected this argument. The Jewish artisans, they wrote, was a particularly apt subject for the slogans of economic action, since he was better educated than the factory worker and was the heir to a long tradition of guild organization. The fact that 90% of the Jewish workingmen in Lithuania were craftsmen who labored in tiny shops might therefore be advantageous, and in the end a Jewish factory proletariat would doubtless develop. Indeed, the outbreak of strikes in the Pale, from 1892 on, and the remarkable organizational achievements of the Jewish proletariat under the leadership of the Bund (achievements which placed the Jewish movement, in Plekhanov’s words, in the vanguard of the Russian proletariat army) would appear to bear out the correctness of the agitation tactics. Certainly the opposition movements were swept away by the Jewish workers’ massive response to the agitation program. On the other hand, there is considerable evidence that the strike movement was unable to cure the economic troubles of the Jewish artisan class, which were caused to a certain extent by its inability to enter the factories. The Bund’s assumption that the Jewish proletariat was essentially no different from any other was to come under heavy attack in the early years of the 20th century.

As already noted, as early as the 1890s the socialists had attributed both a social and a national role to the Jewish proletariat. The success of the agitation tactics gave impetus to the formulation by the leaders of the Bund of a Jewish national program. The development from Liebermann’s disavowal of all interest in the Jews as a national entity to the Bund’s adoption of the demand for national-cultural autonomy, presented in 1903, is of great importance. It is explicable in terms of the fact that the Jewish proletariat, bearer of the Marxist mission, was also seen as the bearer of the Jewish national tradition as against the assimilated, russified or polonized Jewish middle class. This became clear to the socialists only with the inauguration of the agitation tactics, when they came face to face with the masses for the first time. In order better to serve the cause of the Yiddish-speaking Jewish workers the movement forged a natural alliance with the Yiddish literary renaissance – Jewish workers were now offered “Peretz instead of Turgenev. The interest in all things Yiddish, glorified as the language of the laboring class (in contrast to Hebrew, the language of the reactionary yeshivot), remained a hallmark of the Bund throughout its existence. Moreover, the tactics of agitation brought to the fore a new leadership, a “popular” one often drawn from the so-called “semi-intelligentsia” (meaning the Jewish youth without diplomas), which was less russified and closer to the Jewish masses than the Kremer and Martovs. Both these factors caused Bundists to advance from the attitude that a Jewish organization was justified basically on technical grounds to the attitude that the Jewish people, represented by its proletariat, presented national characteristics of a positive nature which should be fostered. This new assumption was strengthened by the growth of Jewish nationalism in Russia as a competing ideology to Bundism. It was also strengthened by the development, within the Austrian Social Democratic Party, of the theory of national self-determination on a personal rather than a territorial basis. By demanding national rights for the Jews, which meant mainly the right to foster Yiddish cultural activities, the Bund embarked on a course taken by many other socialist parties representing the oppressed nationalities of the Russian and Austrian empires. It was also following trends within the European socialist movement, which during the period of the Second International increasingly came to recognize and encourage the liberation movements of subject peoples. The Bund’s combination of socialism and nationalism was therefore in line with tendencies in East European Marxism, though the Jewish case was more difficult to defend since it was by no means clear that the Jews were, in fact, a nationality. Thus Otto Bauer, chief theoretician of the Austrian Marxists and the author of a famous book on Marxism and nationalism, specifically excluded the Jews from the community of nations. This was the background to the long polemics between the Bund and Lenin, who never doubted that the solution to the Jewish question lay in assimilation. Neither Lenin nor Bauer, however, could convince the Bundists that the defense of the Jewish workers’ national needs was any less vital than the defense of their economic and political needs.

In the early years of its existence the Bund ruled, virtually unchallenged, as the party of the politically active Jewish working class. Even its greatest enemies within the Jewish socialist camp have never failed to grant the Bund credit for its role in awakening this class, in which it inspired new hopes for a society based on social justice and democracy. The Bund, in short, put the East European Jewish working class on the map of modern Jewish history. However, a fundamental weakness of the party was its assumption that the condition of the Jews in Russia was not greatly different from the condition of the other nationalities of the empire, except that the Jews lacked a territory and therefore required national cultural autonomy on a personal basis. The task of the Jewish proletariat was to struggle, side by side with the proletariats of the other nationalities, for a socialist Russia. Antisemitism was regarded as a manifestation of capitalism alone; socialism would abolish it, along with all other iniquities, and would solve the Jewish question once and for all. Zionism was therefore regarded as a bourgeois ideology, a brand of utopianism dangerous because it might lure workers away from their proper mission. Zionists were seen as working hand-in-hand with antisemites, the classic example being Herzl’s meeting with Von *Plehve.
Zionist Socialism

These views were rejected by a new type of Jewish socialism, Zionist Socialism, which challenged the hegemony of the Bund in the years immediately preceding the first Russian revolution. The ideologists of this new movement were from various backgrounds: there were former “bourgeois” Zionists, such as Nachman Syrkin, who were unable to withstand the great influence of Russian radicalism and moved to the left but without abandoning their Zionist principles; and former Russian socialists, such as Ber Borochov, whose encounters with Russian antisemitism, including the proletarian variety, helped to push them into the Zionist camp. The “Zionist Socialists agreed with the Bund in recognizing the predominant role of the Jewish proletariat in modern Jewish history, and in recognizing the dual nature of this role – both social and national. However, they were also in fundamental agreement with the Zionist analysis of the Jewish predicament, namely that antisemitism was endemic to the Diaspora and that the reversal of class relationships through revolution, however desirable, did not constitute a solution. Their problem was to create an ideology which, rejecting both the Bund’s russo-centrism and the all-class character of bourgeois Zionism, would combine the revolutionary determinism of the former with the doctrine of territorialism articulated by the latter.

The early Po‘alei Zion circles found it easier to attack the Bund than to formulate a clear alternative. Their attack was based on the theory that the Jewish working class did not constitute a proletariat, a theory somewhat reminiscent of the views of those who opposed the agitation tactics of the early 1890s. The Jewish working class, it was argued, was incapable of transforming itself into a proletariat because of the very nature of the Diaspora, which precluded the possibility of a normal Jewish existence. It was, and would remain, incapable of a meaningful class struggle, and therefore the entire Bundist program was based on a class with no future. Thus the failure of Jewish workers to enter the great factories was not a temporary phenomenon but a symptom of the Jewish people’s abnormal situation, which no social revolution could alter. The Jewish strike movement, while perhaps of psychological value, was a palliative rather than a cure. The peculiar nature of the Jewish proletariat, cited by the circle’s participants in their polemics with Kremer and Gozhanky, and by the Bundists as proof that the Jewish artisans would be particularly amenable to the class struggle, was presented as proof of the bankruptcy of the Bund’s position. Thus the emotional argument against the Bund, the rising tide of antisemitism symbolized by the Kishinev pogrom (1903), was given “scientific” backing by studies proving the absurdity of Jewish strikes and the absence of Jewish workers from the great factories.

As socialists, however, the Bund’s critics were also obliged to base their hopes on the Jewish proletariat (or at least on the “laboring masses”). Therefore they evolved the concept that the Jewish question could be solved only through the territorial concentration of the Jewish working class, where a meaningful class struggle would be feasible and would lead to a Jewish socialist society. This territorial concentration, however, would not come about as the result of the will of the Jewish people – Herzl’s famous slogan, “If you will it, it is no dream” was unacceptable to the Marxist and semi-Marxist intelligentsia – but as the inevitable result of the Jewish proletariat’s search for a base from which to conduct the class struggle. Thus both the Bund’s error and Zionism’s ultimate victory were proven in “scientific” terms, as was the pioneering role of the Jewish proletariat in the Zionist movement. Marxist determinism was introduced to lend certainty to the Zionist ideal, a fact of great psychological significance to those who had previously suspected Zionism of being Utopian. Herzl’s slogan was turned on its head; since it was proved that “it is no dream,” therefore “we shall will it.”

While Zionist Socialists (see below) agreed that the abnormal situation of the Jewish working class, itself symptomatic of the incurable disease of the Diaspora, ruled out a Diaspora solution to the Jewish question, there was no agreement on a number of extremely difficult problems inherent in the basic ideology. There was, for example, the problem of the “two levels.” Should the Zionist Socialists participate in the political and economic struggle in Russia, or should they concentrate solely on efforts to obtain a territory? The latter alternative was not particularly attractive, since it was not clear exactly how a political party, with its base in Russia, might work to hasten the territorial solution. On the other hand, if the Jewish question could not be solved in Russia, and if the Jewish proletariat was incapable of waging the class struggle, what was the point of organizing a party in the Diaspora at all? It was logical that, despite the “negation of the exile” implied in the theses of the Zionist Socialists, their involvement in the Diaspora should nonetheless increase as their popularity among Jewish workers and intellectuals grew. From a practical point of view it was clear that the territorial solution, especially after the episode of the Uganda scheme, was far off, and that the Jewish masses would remain in Russia for the foreseeable future. Along with this was the fact that the rising revolutionary storm in Russia, which reached its peak in 1905–06, could not be ignored by the Jewish socialists, whether Zionists or not. Thus Zionist Socialists, revealing an apparent contradiction between their theory and their practice, often became as involved in the Russian struggle as their antagonists, the Bundists. This was particularly true during great upheavals in Russia, when the temptation to participate and therefore to prove one’s revolutionary worth was too great to withstand. The problem of the “two levels” remained crucial for all Zionist Socialists, just as the peculiar composition of the Jewish proletariat and the participation of workers in pogroms remained a problem for the Bund. This problem helped split the socialist Zionist camp in 1917 and during the civil war, the greatest Russian upheaval of them all.

Another basic problem was the question in which territory the Jews were to be concentrated. For many Zionist Socialists, who believed along with Herzl in the imminent collapse of Diaspora Jewry (a belief naturally strengthened
by the Kishinev pogrom), any territory would do, and therefore they supported the Uganda scheme, an issue which divided the Zionist movement from 1903 on. Moreover, it was difficult for socialists to accept the Palestinian orientation of bourgeois Zionism, since it seemed to be based on mysticism and was unsupported by any scientific, socialist analysis. The eternal bond between the Jewish people and Erez Israel appeared to be a fitting slogan for the *Mizrachi movement but not for Marxists. It is therefore paradoxical that the most consistent Marxist of all, Ber Borochov, nonetheless insisted on Palestine, though he too justified his choice on utilitarianism rather than on appeals to Jewish tradition. The problem of “why Palestine,” like the problem of Hebrew versus Yiddish, remained a difficult one for Zionist Socialists, especially for Marxists torn between their loyalty to the national movement and their adherence to scientific socialism.

Other issues also separated the various socialist Zionist groups, which included strict Marxists, semi-Marxists, and Populists. To cite one example, some rejected the “catastrophe” approach to the Jewish Diaspora and insisted that the territorial solution, though necessary, could be achieved only after a long process of development in the Diaspora. During the first Russian Revolution three distinct parties formed out of the ideological confusion: the Marxist, Palestinian Po'alei Zion, the *Zionist Socialist Workers' Party (known as S.S.), which despite its name was territorialist, and the *Jewish Socialists Workers’ Party, also known as the “Sejmist” party, which called for the nurturing of Jewish national life in the Diaspora (under the aegis of a Jewish parliament, or Sejm) until the time was ripe for a territorial solution. Together, these parties spelled a serious challenge to the hegemony of the Bund. Unlike the Bund, all suffered from the tension between the ultimate goal, a territorial solution, and the inescapable need to participate in the struggle for socialism, Jewish national rights in the Diaspora, and the improvement of the economic lot of the Jewish masses. The three parties, all claiming to represent the Yiddish-speaking, economically and culturally deprived Jewish laboring masses, found that their activities overlapped. It is significant that the objective situation led all of them to champion national cultural autonomy for Russian Jewry, a stand also taken by the Bund. In fact, though kept alive by polemics between party leaders, ideological distinctions tended to be blurred in the daily struggle. Thus Bundists, socialist Zionists, and socialist territorialists all cooperated in the establishment of Yiddish schools, seen as the mainspring in the creation of Jewish national autonomy. While the gulf between the Bundist and Zionist Socialist analysis of the Jewish question remained as wide as ever, so long as the Jewish masses remained concentrated in the Pale and elsewhere in Eastern Europe, the practical platforms of the various Jewish socialist parties were bound to grow more and more similar.

**Europe Outside Russia**

In Eastern Europe, beyond Russia’s borders, Galicia offered the most fertile ground for Jewish socialism. Both the Bund and the Zionist Socialists made inroads in this Austrian province, which combined economic conditions even worse than those in the Pale with a much more moderate political system. Vienna, a magnet for Galician Jewish intellectuals, became an important Po'alei Zion center, though the absence of a substantial Jewish proletariat made Bundist incursions impossible. The great emigration from Eastern Europe did produce a Jewish proletariat in England, chiefly in London’s East End, which became an important Jewish socialist and trade union center in the 1880s. In London, as in the cities of the Pale, there was a profusion of both radical Jewish intellectuals and Jewish artisans, but different conditions made for a very different development in Jewish socialism. One issue, the path to Yiddish, which was complicated in Russia, was much easier in London. Having left Russia behind and not having yet become anglicized, the intellectuals turned to Yiddish to fill the vacuum. Thus Morris *Vinechesky, Liebermann’s contemporary, abandoned his mentor’s Hebrew and published in London the first socialist paper in Yiddish, the Poylische Yidl. The English capital became a training ground for Yiddish socialist journalists, whose writings were read in both Russia and America. Trade union activities were central to the Jewish movement from the very beginning, natural in a country which, unlike Russia, boasted an advanced and legal trade union movement. The Jewish unions were often founded by socialists (or anarchists), and for as long as Jewish workers were clearly differentiated from non-Jews it is possible to speak of a Jewish movement. However, on the eve of World War I specifically Jewish unions were on the wane, a result of growing assimilation and the absorption of Jewish workers by English unions. The Yiddish socialist press and Jewish socialist and anarchist groups, deprived of leadership and subjects for organization, were also in decline. The careers of such Jewish socialists as Vinechesky, Philip Krantz, and Benjamin Feigenbaum, who were active in London and then left for the new world, illustrate both the importance of London as a center of early Jewish socialist activity and its rather swift eclipse by New York.

**The United States**

The history of U.S. Jewish socialism is not unlike that of English Jewish socialism, though incomparably richer and more important. In the United States Russian-Jewish radicals, arriving from the early 1880s onward, found themselves estranged from the mainstream of American political life: even American Marxism, whose main practitioners were German immigrants in New York, was too reformist for them. Leaving Russia behind, but not the Russian radical tradition, they plunged hopefully into the Yiddish-speaking milieu of New York, editing socialist newspapers, writing Yiddish pamphlets and poetry, and above all organizing Jewish workers into trade unions. These unions, unlike most American labor organizations, were socialist in ideology; there were no greater enemies of S. Gompers’ nonpolitical unionism, embodied in the American Federation of Labor, than the Jewish unions led by former Russian radicals. The various waves of immigration...
brought to the U.S. numerous East European Jewish socialists, including illustrious Bundists and Zionist Socialists, who formed groups of their own. Such organizations, aside from their local activities, were of great importance for their sister organizations in Eastern Europe and Palestine, since they were in a position to offer both political and financial support. Thus just as the significance of American Zionism within the world Zionist movement increased, so did that of the American Po’alei Zion within world labor Zionism, all the more so since most of the prominent Po’alei Zion leaders were at one time or another active in America. Equally important was the cultural work accomplished by Jewish socialists among the Yiddish-speaking immigrants. If the Russian movement had its circles, and later its Yiddish secular schools, American Jewish socialism created the Arbeter Ring (“Workmens’ Circle”), a fraternal organization which combined economic and cultural activities. In the United States, as in Eastern Europe, socialism was the means whereby great numbers of the Jewish poor received an education.

In the United States, as in Russia, the organization of Jewish unions and the use of Yiddish were justified on technical grounds. Thus A. *Cahan, perhaps the dominant figure in American Jewish radicalism, a former student at the same Vilna rabbinical seminary which Aaron Lieberman attended, used Yiddish in his speeches to the Jewish workers in America simply because they understood no other language. Unlike Russia, however, where the tendency was from Russian to Yiddish, in the United States the tendency was from Yiddish to English. The mainstream of the U.S. Jewish socialist movement, represented by Cahan and his newspaper *Jewish Daily Forward, favored the Americanization of the Jewish masses. National cultural autonomy was regarded as a justified demand for East European Jewry but was clearly absurd in the United States, the land of democracy, where the all-pervasive influence of English soon made itself felt among the immigrant masses. Moreover, if Russian conditions favored the creation of mass socialist parties, like the Bund, which were of a pronounced Marxist, revolutionary character, in the United States the mass Jewish organization was the union, whose socialist character was clear at the outset but which tended to leave socialism behind with the passage of time. It is interesting to note that in Russia, where Jewish workers were not particularly successful in improving their economic situation, the Jewish labor movement and Jewish socialism remained more or less identical. In the United States, where major breakthroughs were made in the Needle Trade Union relations with management in the years immediately preceding World War I, this identity was not maintained. The career of David *Dubinsky, a former Bundist who became the leader of the International Ladies Garment Workers’ Union and left Bundism behind, illustrates this process. Thus American soil nourished neither the national nor the radical sides of East European Jewish socialism, though both Yiddishists and Jewish Marxists remained active on the American scene.

**Relations with the Communist Party**

The Bolshevik October (1917) Revolution and the establishment of the Communist International inaugurated a period of schisms within the Jewish socialist movement, as within virtually all socialist parties. It became necessary to choose between affiliation to the victorious Communist movement and continued adherence to democratic socialism. For the Jewish parties this choice was particularly difficult; the Russian Communist Party, while clearly opposed to antisemitism, inherited an assimilationist attitude toward the Jewish question and was hostile to both Zionism and Bundism. Hence to join the Communist movement meant, essentially, to abandon a specifically Jewish program (though not the use of Yiddish to reach the Jewish workers). In the Soviet Union, of course, there was no freedom to choose. The Bund, which was anti-Bolshevik during the revolution, was not tolerated by the new regime. After the failure of efforts to maintain organizational autonomy as the so-called “Kombund” (“Communist Bund”), the Bund was forced out of existence by 1921. The various Zionist socialist movements, though they lasted longer than the Bund, were finally crushed in the Soviet Union during the later 1920s. It should not be imagined that the collapse of autonomous Jewish socialist parties in the U.S.S.R. was solely the result of repression. In 1918 many Bundists began to opt for Communism, reflecting, among other things, the Jewish reaction to pogroms in the Ukraine. Many members of Po’alei Zion, favorably inclined toward the Bolshevik coup from the beginning, also declared their adherence to the Communist movement, as did the United Jewish Socialist Workers’ Party, the left faction of the so-called Fareynikte (“United,” e.g., the unified S.S.-Sejmist Party, which had amalgamated in 1917). Such erosion indicates that, at least among certain Jewish socialists, the Jewish content was less important than the hopes for a new society in which all national problems would be automatically solved. If many Jewish radicals had been led to Jewish territorialism by the atmosphere of antisemitism so prevalent in czarist Russia, the victory of Communism, transforming Russia from the most backward to the most enlightened country in Europe, led them back to the ideas of pure internationalism. Moscow for them appeared to be a surer Zion than Jerusalem. As for the Bundists, the attraction of participating in building the new socialist state in Russia, along with the hope that their national program might, after all, be implemented by the Communists, led large numbers to break with the anti-Bolshevik tradition of their party. All Jewish socialists in Russia, moreover, were influenced by their fear of the counter-revolution, which had revealed its antisemitic character in the terrible pogroms in the Ukraine. Clearly it was necessary to fight these forces of reaction, and in the polarized atmosphere of the civil war in Russia the Bolsheviks appeared to many Jewish socialists to be the lesser of the two evils.

Defectors from the various Jewish socialist parties constituted the backbone of the so-called “Jewish Sections” (Yevsektsiya) which existed until 1930 as Jewish Communist organizations designed to propagate Communism among the
Soviet Jewish masses. Their creation was in fact a concession to reality on the part of the Communist leadership, whose antipathy to autonomous Jewish organizations was tempered by the fact, “discovered” so many times in the history of Jewish socialism, that the Jewish masses were not yet assimilated and that propaganda would have to be carried on in their language. There was no question of going further, since the Soviet regime saw to it that “national deviations” did not appear. Nonetheless the leaders of the Yevsektsiya, though doubtless they were made use of by the regime in its war with Zionism and other “reactionary” Jewish ideologies, saw themselves as defenders of the interests of the Jewish masses. Inevitably, as the regime consolidated itself, and as its policy toward the national minorities became more inflexible, the Yevsektsiya came increasingly under attack. Their demise in 1930 meant the end of the history of Jewish proletarian organizations in Russia.

During the interwar period the newly constituted Polish Republic, which included both Galicia and large areas of the former Pale of Settlement, became the center of Jewish socialism. Here the Bund withstood the blandishments of Communism, and despite a sharp move to the left which included the readiness to accept much of the Communist platform, remained intact, though factionalized. In the end its inner solidarity, the fruit of decades of conflict with the Russian and Polish socialist movements, its firm organizational base among Jewish workers, and the failure of the Bolsheviks to conquer Poland, allowed the Bund to flourish until 1939. The Bund retained its hold over the majority of Jewish trade unions, played a dominant role in the Yiddish secular school movement, and succeeded in winning general acclaim as a champion of Jewish rights against the omnipresent Polish antisemitism. The party benefited from the general trend to the left within Polish Jewry, itself the result of the worsening economic and political situation, and became far more than merely the strongest Jewish working class party. Despite the Bund’s failure to improve the conditions of the Jewish masses, which deteriorated during the interwar period, it became, by the later 1930s, the strongest Jewish party in Poland. It was the Bund’s tragedy that evidence of this strength, its victories in local elections in such cities as Warsaw and Lodz, occurred only a few years before the German conquest, which destroyed East European Jewry and with it the great socialist party which thought only in terms of a Diaspora solution to the Jewish question.

The world Po’alei Zion movement, which had come to overshadow the socialist territorialist parties after the failure of the Uganda project and which naturally benefited from the *Balfour Declaration, split in 1920 over the issues of whether or not to adhere to the Communist International and of their relations with the Zionist movement. The left faction, drawing its strength chiefly from Russia and Poland, actually accepted *Zinoviev’s celebrated 21 points for admission to the Comintern, while the right, based mainly on delegations from the United States and Palestine, refused to go that far (though it too took a positive attitude toward the Bolshevik revolution).

However, the Left Po’alei Zion did not join the Comintern, not because it decided against this step but because the world Communist movement could not accept its program for Palestine. It thus existed, mainly in Poland, as a Zionist party too far left to have anything to do with the official Zionist movement and as a revolutionary Marxist party unacceptable to the Comintern. This unenviable position, complicated still further by the party’s ambivalent attitude toward Hebrew and toward *aliyah (emigration to Palestine), reduced its appeal and its ability to compete both with the Bund and with the more moderate Zionist socialist movements. No other organization illustrated more clearly the inherent contradictions of a Diaspora-based Marxist Zionist party. On the other hand the Right Po’alei Zion, identifying with *Aḥдут ha-Avodah in Palestine, with the pioneering movement, and generally with progressive Zionism, became ever stronger within the world Zionist movement. In Poland, for example, by the 1930s the moderate socialist Zionist faction had become the strongest force within the Zionist movement. Generally speaking Right Po’alei Zion became less socialist and more nationalist, following the lead of party developments in Palestine, where Syrkin’s non–Marxist ideology was more influential than Borochov’s strictures. If to Left Po’alei Zion Palestine appeared less important than world revolution and Yiddish more important than Hebrew, Right Po’alei Zion broadened its national base. It thereby followed the course taken by so many other socialist parties which, once they had gained a certain degree of power (in this case in Palestine), spoke less and less of the proletariat and the class struggle.

Pioneering Youth Movements

A striking feature of Jewish socialism in the interwar period was the rise of pioneering youth movements. To a certain extent these movements followed in the footsteps of the *Ẓe‘irei Zion (“Youth of Zion”) circles, whose history began in Russia in the early 20th century. A fervent supporter of settlement in Palestine, nationalistic, at the outset non-socialist, and even nonpolitical, the Ẓe‘irei Zion rejected the Marxist determinism and intense involvement in the Diaspora of the various Jewish socialist parties. Their voluntarism and emphasis on personal salvation through *aliyah, which established an alternative for Jewish youth to the existing parties, whether Bundist or Zionist, was also the hallmark of the pioneering youth movements established during and after World War I. Thus *Ha-Shomer ha-Za‘ir, founded in Galicia during the war by middle-class youths seeking their way between the Polish world which rejected them and the Jewish bourgeois existence they found so distasteful, turned not to Marxism and not to party organization but to self-fulfillment through pioneering, through an act of will which would make them productive proletarians building a just society in Palestine. Both Ẓe‘irei Zion and Ha-Shomer ha-Za‘ir shared a natural sympathy for socialism, and neither was able to withstand the pressure to organize into political groups. In 1920 the left faction of Ẓe‘irei Zion created the Zionist Socialist Party (*żs),
which later merged with Right Po'alei Zion, while the right faction merged with the Palestinian nonsocialist party, *Ha-Poél ha-Za'ir, to form the *Hitahadut. Both these parties offered a moderate labor Zionist alternative to the radical Left Po'alei Zion. As for Ha-Shomer ha-Za'ir, it developed from a self-styled vanguard of romantic idealists into a Marxist movement based on the organizational structure of the Ha-Kibbutz ha-Arzi, founded in Palestine in 1927. The attraction of Marxism for the Zionist Socialists of the early 20th century had been that it could make Zionism appear determined rather than a mere dream. For the voluntarist members of Ha-Shomer ha-Za’ir, on the other hand, it functioned as a cement which held the movement together in Palestine, guarding against internal collapse and amalgamation with other elements. The history of both Ze’rei Zion and Ha-Shomer ha-Za’ir demonstrates that organizational and ideological consolidation could not be avoided by groups whose initial mission was personal redemption through proletarianization. The acceptance by the Ze’rei Zion, for example, of the principle of Jewish national autonomy in Russia, and their active struggle for Jewish rights in the Diaspora, is reminiscent of the history of Po’alei Zion. But the political offshoots of Ze’rei Zion, active in an era when aliyaḥ was a clear possibility, were firmly centered on Palestine and less subject to the dilemma of the “two levels.” The problem of “which territory,” of course, had completely disappeared. This also held for the various pioneering youth movements, Ha-Shomer ha-Za’ir, He-Halutz ha-Za’ir, etc., whose major problem in the Diaspora concerned the likelihood of aliyaḥ and the impact of aliyaḥ on the local organization. What tied the youth movements of the 1920s and 1930s, whether Marxist or not, to the Jewish socialist tradition, was their preoccupation with the necessity to create a just Jewish society based on productive labor. If Liebermann and later the Bundists and Zionist Socialists discovered the Jewish proletariat, members of the pioneering movements proposed to turn themselves into proletarians in Palestine, an extreme solution which reflected the crisis of East European Jewry in the period between the two world wars.

Later Developments

In the United States in the interwar period, as elsewhere, the Jewish socialist and trade union movement was rent by disunion between communists and socialists, the former mounting a serious and at least partly successful challenge within the Jewish union membership. Here, as in Eastern Europe, former Bundists and socialist Zionists lent their talents to the formation of a Jewish federation within the Communist Workers’ Party. More important, however, was the steady decline of the American Jewish proletariat and of Yiddish. To a certain extent this was a function of America’s immigration laws, for the children of the Jewish needle trades’ workers did not, as a rule, follow the professions of their parents, but entered areas which would have been closed to them in the old world. The striking feature of the Jewish proletariat in the United States was that it was a one-generation phenomenon. If the Jewish unions remained Jewish, they remained so only in terms of their leadership. Similarly, the decline of Yiddish dealt a blow to the socialist press and to the cultural activities of Jewish labor institutions. Thus the ideology of A. Cahan, who believed that the Jewish labor movement’s goal was to make good Americans of its members, was achieved, but the movement itself naturally declined once americanization was completed. While certain white collar unions in America, such as the Teachers’ Union in New York, were still predominantly Jewish in membership in 1971, they were neither socialist in content nor Jewish in any meaningful form.

The Jewish socialist tradition was eliminated in Eastern Europe by the Holocaust, and in America by the unparalleled opportunities offered by American society. Its chief impact was in Israel, where ideas formed in Eastern Europe were molded to fit the task of building the yishuv. The Jewish socialist movement, in the old world and the new, was of enormous significance to countless numbers of Jews, to whom it offered new vistas of education, the ideals of democratic socialism, and the chance to obtain a decent standard of living. The vision of men as different as Liebermann, Kremer, Borochov, and Cahan — that the Yiddish-speaking Jewish masses needed special organizations in order to better their economic and cultural conditions, whether in the Diaspora or in Palestine, and that the task of the radical Jewish intelligentsia was to devote itself to these masses — produced one of the most fruitful of modern Jewish political movements.

[ Ezra Mendelsohn]
of Judaism. From its inception, the Société des Études Juives published one of the leading learned periodicals of modern Jewish scholarship, in which reports on the society's meetings and activities appeared; they were also published in its *Annuaire* (1881–85). In addition, the society sponsored the publication of works such as H. Gross's *Gallia Judaica* (1897), Th. Reinach's (ed.) *Josephus* (7 vols., 1900–32), and Loeb's *Les Tables du Calendrier Juif* (1886). Its activities were suspended during the two world wars; after World War II the society, on the initiative of its president G. *Vajda*, renewed its cycle of lectures and the publication of its journal. Among its presidents were J. *Derenbourg*, A. *Darmstetter*, and members of the *Rothschild family*. Th. *Reinach* was its secretary for many years and E. *Renan* was a member and lecturer. In the early 21st century, the SEJ maintained its tradition of monthly conferences, despite the challenge of a much larger range of Jewish cultural offerings in which the scholarly, historico-philological approach is but one option. Apart from the *ReJ*, the SEJ publishes the "Collection de la Revue des études juives," a very prolific series of monographs (17 titles published between 1980 and 1997; 20 between 1998 and 2004).

[Colette Sirat / Jean-Pierre Rothschild (2nd ed.)]

**SOCIETIES, LEARNED.** Learned societies among Jews, whose prototypes existed in the talmudic period, flourished in the late Middle Ages and were particularly widespread in Eastern Europe even into the 20th century. They were conceived on a broad basis. Unlike societies formed during the 17th and 18th centuries such as the Académie Française and the Royal Society of London, which operated under royal or government sponsorship and support and consisted of a small, aristocratic element of the general population, Jewish learned societies were democratic and open to all. Workers, merchants, and businessmen joined together in their own localities and formed semiprivate organizations, often with their own dues, structure, and book of statutes, for the study of some aspect of traditional Jewish literature. Among the most common of these groups was the *hevra shas* (Talmud; see *Study*).

**EARLY 19TH-CENTURY SOCIETIES.** With the advent of the 19th century and the achievement of civil equality, Western European Jewry began a process of self-examination. Although there had been individuals earlier who applied critical methods to traditional study, such as *Elijah*, the Gaon of Vilna, and Nahman *Krochmal*, it was Moses *Mendelssohn* who initiated new types of learned societies within the Jewish community. Beginning with Mendelssohn there was an increased interest in Hebrew and Bible study. In 1783 Isaac *Euchel* established *Hevrat Doreshet Leshon Eshon* (Society for the Propaganda of the Hebrew Language) in *Koenigsberg*, where, later that year, the first secular periodical in Hebrew, *Ha-Measasef*, began its appearance. In 1819, reacting to riots, a group of young university students led by Leopold *Zunz*, Edward *Gans*, and Moses *Moser* formed the Verein fuer Kultur und Wissenschaft der Juden. Zunz, coining the term *Wissenschaft des Judentums* ("Science of Judaism"), continued to research facets of Jewish literature after the society disbanded in 1824, and nearly all subsequent learned societies were indebted to him for initiating a systematic study of Judaism.

**LATTER 19TH-CENTURY SOCIETIES.** The greatest period of growth of the learned societies was during the second half of the 19th century, due to an increase in academic specialization along with an expanding teaching profession and a growing awareness of the social sciences. Within the Jewish community the cultural scholarly functions of the learned society were sometimes part of a larger organization. Thus, the Alliance Israélite Universelle, founded in 1860 with the goal of defending civil and religious liberties and alleviating disabilities of Jews, collected valuable demographic and ethnographic materials and sponsored scholarly publications in addition to its own house organs.

The Society for the Promotion of Culture among the Jews of *Russia*, founded in 1863, subsidized Jewish scholarly publications despite its russianization aims. Among its more notable journals was *Yeveytskaya Biblioteka* ("Jewish Library"), an annual begun in 1871 containing articles on the nature of the Jewish past and present. Another example of a society sponsored by a larger organization was the Historische Kommission, established by the *Deutsch-Israelitischer Gemeindebund* in 1885. The commission collected historical data on German Jewry and published the *Zeitschrift füer Geschichte der Juden in Deutschland* (1887–92; reestablished by I. *Elbogen* and A. *Freimann* 1929–37).

**PUBLISHING SCHOLARLY WORKS.** Some societies were formed in response to a particular aspect of the learned society, such as the publishing of scholarly works. In 1864 the *Mekize Nirdamim* Society was established in Germany with the express purpose of publishing Hebrew works of Jewish classical literature, especially unpublished manuscripts. The society, which was transferred to Erez Israel in 1934, had published about 100 books in all by 1970.

Attempts to organize a publishing society in the United States included the American Jewish Publication Society in Philadelphia (1845) and another bearing the same name in 1873, both short-lived. In 1888 the *Jewish Publication Society of America* was founded and by 1970 had published over 600 volumes. Among these works were an English translation of the Bible (1917, and a translation beginning in 1962) and the annual American Jewish Year Book starting in 1899. *Monatsschrift füer Geschichte und Wissenschaft des Judentums* was a scholarly periodical founded by Zacharias *Frankel*, published under different editors (including H. Graetz and I. Heinemann) and in different places, but primarily in Breslau. It was published consistently from 1851 until 1939, except for a short interlude in 1887–92. In 1904 the newly founded *Gesellschaft zur Foerderung der Wissenschaft des Judentums* financed the publication of the journal. This same organization
had undertaken to print a historical encyclopedia of German Jewry, *Germania Judaica* (vol. 1, 1934; vol. 2, 1968).

Germany was the scene of frequent attempts to establish learned societies. In 1841 M. Joel, S. Stern, and L. Zunz founded the Kulturverein, which tried to encourage investigation of contemporary problems by conducting essay contests. Many of its leaders were active in the Reform movement. In 1855 Ludwig Phillipson, along with Jost and A. *Jellinek, founded the Institut zur Foerderung der Israelitischen Literatur, which published over 80 works during its 18-year existence. The *Juedisch-Literarische Gesellschaft, established in 1902 in Frankfurt on the Main, was primarily interested in investigations into aspects of traditional Judaism.

The most important learned society in France, the *Société des Etudes Juives, was founded in 1880 by Zadoc Kahn, Isidore Loeb, and Theodore Reinach. The Société has concentrated on French Jewry, and over 100 volumes of its scholarly journal *Revue des Etudes Juives* have appeared, extending over 75 years, with a brief interruption during World War II. It has also published such basic works as H. *Gross’s *Gallia Judaica* (1897) and Reinach’s *Textes.*

**20th-Century Societies.** In response to the need for proper research tools for the investigation of the Holocaust, the Centre de Documentation Juive Contemporaine was established by Isaac *Schneersohn in France in 1943. The organization has encouraged scholars in individual research and has published numerous volumes, including the periodical *Le Monde Juif* (1946). Also devoted to Holocaust research is the Central Jewish Historical Society, founded in 1944 in Lublin by Philip Friedman, which moved to Warsaw in 1948 and became the *Jewish Historical Institute. Among the most notable books it published was Emanuel Ringelblum’s *Notit s fun Varsher Geto* (1952, fuller edition 1961–63). It also published the quarterly *Bleter far Geshikhte.* With the death of its director, Berl Mark, in 1967, and faced with increasing Polish Jewish emigration and government restrictions, the institute, despite its Marxist orientation, found it increasingly difficult to continue its work.

The end of the 19th century witnessed the birth of a learned society in England, the *Jewish Historical Society of England, founded in 1893 by Lucien Wolf, Albert Hyamson, Israel Abrahams, and Claude Montefiore. It has concentrated its efforts upon the history of the Jews in England and Anglo-Jewry throughout the world. Its scholarly periodicals are *Transactions* (from 1893) and *Miscellanea* (irregularly from 1925). Though not strictly a learned society, the *Wiener Library and Institute for Contemporary History, established by Alfred *Wiener in 1934 in Amsterdam and moved to London in 1939, specializes in material relating to Nazism, antisemitism, and minority problems, as well as contemporary European history and the State of Israel. It publishes the *Wiener Library Bulletin* and is one of the sponsors of the journal *Journal of Contemporary History.*

In 1908 Maxim *Vinaver organized the Russian Jewish Historical Ethnographic Society in St. Petersburg and became its first president. Simon *Dubnow, the historian who had issued a call for such a society in 1891, became vice chairman of the society and served as editor of its scholarly journal *Yevreyskaya Starina.* Among the contributors were Meir *Balaban, Isaac (Ignacy) *Schiper, Moses *Schorr, and Mark *Wischnitzer.*

**Related Institutions in the United States**

The 20th century witnessed two major demographic shifts within the Jewish community as the United States and Israel increasingly became the major centers of Jewish scholarly activity. The relative profusion of groups interested in various aspects of Jewish life denied the learned societies any exclusive claim to *Wissenschaft des Judentums,* especially on the contemporary scene. Educational institutions (e.g., Hebrew Union College) and professional societies, such as rabbinical organizations (e.g., *Central Conference of American Rabbis*), the Association of Jewish Libraries (founded 1966), and the National Council for Jewish Education (founded 1926) have engaged, in part, in activities similar to those of learned societies. They publish journals (Hebrew Union College Annual, *Jewish Education,* etc.) and share the camaraderie associated with such groups (e.g., Society of Jewish Bibliophiles, founded 1961). The sophistication of professional studies in the area of communal needs led to the early formation of the *National Conference of Jewish Communal Services* (1898), which publishes the *Journal of Jewish Communal Services.*

Several research institutes are almost exclusively dedicated to the work of learned societies. Among these are the *YIVO Institute for Jewish Research, founded in Vilna in 1925 and moved to New York in 1940, which is a major source of research and information on modern Jewry. It has published most of its work in Yiddish. The *Leo Baeck Institute* (founded 1959) serves as a research center for the history of the Jews in German-speaking countries from the enlightenment to the rise of Nazism and publishes a yearbook (from 1956). There are also libraries and archives which engage in scholarly research and publish journals (e.g., *Studies in Bibliography and Booklore* and *American Jewish Archives,* both of Hebrew Union College) although they do not constitute learned societies even in its broadest definition.

However, learned societies in the more classical form do exist. Among those in the United States are the *American Academy for Jewish Research and the *American Jewish Historical Society* (founded 1892). The latter collects and publishes material relating to U.S. Jewry, issues the *American Jewish Historical Society Quarterly,* and has published individual monographs relating to the Jews in the United States. The *Conference on Jewish Social Studies* (founded 1933) aims to promote a better understanding of the position of the Jews in the modern world through scientific research. Its scholarly journal is *Jewish Social Studies.*
SOCIETIES AND INSTITUTES IN ISRAEL. Especially since its creation the State of Israel has become home to numerous learned societies, research institutes, and academies. The traditional patterns (e.g. *hevrə shəhər*) have been infused with new life. Bible study groups flourish; the largest is the Israel Society for Biblical Research, which also publishes the *Beth Mikra*. There is hardly an area of research from archaeology to poetry to Zionism which is not under investigation by some institution, be it under governmental, university, or private auspices. Among those that were established prior to 1948 is the *Israel Exploration Society* (founded 1913), which engages in excavations and related research into the history and geography of Israel. It publishes a quarterly in English, a Hebrew quarterly, *Qadmoniot*, and an annual, *Eretz-Israel*. The Historical Society of Israel (founded 1925) promotes the study of Jewish history. The Palestine Historical and Ethnographical Society, as it was originally called, issued a journal, *Méassef* (6 vols.), and a quarterly, *Zion*, which began to appear regularly in 1935. In 1942 the Israel Folklore Society was founded with the aim of preserving Jewish folklore by recording customs, traditions, folk songs, tales, and proverbs of the various Jewish communities in the Diaspora. It publishes a Hebrew biennial journal, *Yeda Am* (*Folklore*).

Several societies have received official government recognition since the establishment of the state. The *Academy of the Hebrew Language*, founded at the turn of the century by Eliezer *Ben-Yehuda*, was reestablished in 1953 by Knesset law. It studies the vocabulary, structure, and history of the Hebrew language and is the official authority for its development. Among the academy’s publications is *Lesḥonenu*, a journal for the study of the Hebrew language and cognate subjects. Yad Vashem, formally established by the Knesset in 1953, publishes numerous studies relating to the Holocaust. Another academy established by the Knesset is the Israel Academy of Sciences and Humanities (1961), which promotes work in these areas and brings together the most eminent Israeli scholars.

Among the many institutes in Israel are the Harry Fischel Institute for Research in Talmud and Jewish Law (founded 1932) and the Institute for Research in Jewish Law (founded 1963), which are both concerned with responsa literature and the codification of Jewish law. The *Ben-Zvi Institute* (founded 1948) sponsors research in the history of Jewish communities from the tenth century to the present, with primary interest in Oriental communities. *Sefunot* (starting 1956) is one of its most important publications. The Asher Barash Bio-Bibliographical Institute (founded 1951) gathers documentary material on Hebrew writers and aims at bibliographical registration of all Hebrew literature published since the Mendelssohn era. It publishes an annual anthology, *Genazim* (1961).

There are also many archives in Israel interested in preserving various aspects of Jewish life (see *Archives*). The Israel Archives Association (founded 1956) was established to promote cooperation among them and to coordinate their activities. The Association for Jewish Demography and Statistics was established (1958) in cooperation with the Institute of Contemporary Jewry at the Hebrew University to promote the collection, arrangement, and analysis of pertinent data relating to the demography of the Jewish people. The professionalization of Jewish scholarship, the sophistication of research tools, the tragedy of the Holocaust, and the birth of Israel have all given impetus to *Juedische Wissenschaft* in its broadest definition.

[Simcha Berkowitz]

---

**SOCIETY FOR THE ATTAINMENT OF FULL CIVIL RIGHTS FOR THE JEWISH PEOPLE IN RUSSIA** (Rus. “Soyuz dlya dostizheniya polnopraviya yevreyskogo naroda v Rossii”), a non-party organization which existed from 1905 to 1907, whose aim was declared in its name. The society organized the participation of Jews in the elections of the First and Second *Duma*, also obtaining legal aid for Jews after the pogroms of October 1905. At the founding convention in Vilna in April 1905, where representatives of the Jewish intelligentsia of all parties took part (with the exception of those on the left), Simon *Dubnow* defined the aims of the society. A central committee was elected, whose headquarters were to be in St. Petersburg. Maxim *Vinaver* was chosen as chairman of this committee, which he led until the dissolution of the society. The historian Julius *Hessen* became its secretary. Three further conventions were held in St. Petersburg, the second in December 1905, following the October *pogroms*, when the 1905 Russian revolution had been at its height. It was decided: (1) to appoint a committee in which a delegate of the non-Jewish public would participate to investigate the pogroms and to demand that the guilty officials be dismissed and brought to justice; (2) to claim economic reparation from the government; and (3) to demand the release of Pinhas *Dasherovskii* who was in prison for attacking the organizer of the *Khishinev pogroms*.

The third convention, held in February 1906 on the eve of the elections to the First Duma, was devoted to the elections. Jewish delegates standing for election to the Duma were instructed on how to fight for equal rights for Russian Jewry. The fourth and last conference took place in May 1906, ten days after the opening of the First Duma. Largely by virtue of the society’s activities, 12 Jewish delegates had been elected to the Duma. On the question of whether a Jewish national group should be established in the Duma, Vladimir *Jabotinsky* (speaking for the Zionists) and Dubnow were in favor of the proposal, but Vinaver and his followers opposed it violently. Political polarization of Jewish life broke up the society; Dubnow and M. *Kreinin* founded their party in 1906, and the Russian Zionist conference at *Helsingfors* decided that Zionists should contest elections under their own party
SOCIETY FOR THE PROMOTION OF CULTURE AMONG THE JEWS OF RUSSIA

SOCIETY FOR JEWISH FOLK MUSIC, society founded in St. Petersburg in November 1908 by a group of Jewish students at the conservatory there and their friends, among them Solomon *Rosowsky, Lazar *Saminsky, A. Zhitomirsky, and A. Nieswizki (Abileah). It was originally intended to be a “Society for Jewish Music,” but the commanding general of the district refused to license it under this title because he doubted whether true Jewish music existed, although he conceded that there must be Jewish folk music. The word folk was therefore inserted in the name and constitution. An important circle of Jewish musicians with similar interests had already formed in Moscow c. 1894 around Joel *Engel, and the first concert of the material they had collected and arranged was held there in 1900. This and similar groups now coalesced with the society in St. Petersburg. Joseph *Achron, Moses *Milner, Mikhail *Gnesin, Joseph *Yasser, Alexander *Veprik, and Alexander *Krein soon joined its ranks. In 1912 the Society already had 389 members with chapters in Moscow, Kiev, Kharkov, and Odessa. In 1918 it was disbanded by the Soviet government as “not conforming to the spirit of the time,” but the influence of its ideology and actions persisted both among the members who remained in Russia and among those who left to settle in Western Europe, the United States, and Palestine. The Society’s constitution did not fully reflect its unwritten ideology, and its provisions were never carried out in full. These are quoted here because all subsequent organizations for the promotion of Jewish music followed the same basic pattern. The aim of the society was “to promote the research and development of Jewish folk music — religious and secular — by the collection of folk songs and their harmonization, and to aid Jewish composers…” For this purpose the Society was to issue publications of music and musical research; to organize meetings, concerts, operatic performances, and lectures; to form a choir and orchestra of its own; to found a library; to publish a periodical; and to organize competitions and award prizes for “musical works of Jewish character.” An ensemble of singers and instrumentalists was founded which undertook many concert tours. Expeditions went to the Vitebsk and Kherson regions, and the melodies they collected were given to various composers for harmonization. Dozens of these works were published. Kisselgoff, Zhitomirsky, and Lvov also published the Lider Zamlbukh with arrangements of folk and art material “for school and home use.” In 1913 the society was stirred up by the controversy between Saminsky and Engel, in which Saminsky questioned whether the indiscriminate gathering and propagation of any and every tune taken from the “folk” really represented Jewish music, and pressed for a more discerning search as well as for the recognition of the greater authenticity of the liturgical traditions. Saminsky’s visits to the Jewish communities in the Caucasus and Turkey confronted him with the reality of a Jewish musical tradition outside the Ashkenazi culture which he had already surmised was neither less and perhaps even more authentic than that of Eastern Europe. Another controversy arose between Engel and *Shalom Aleichem — Engel denying and Shalom Aleichem advocating the recognition of the songs of Mark *Warshawski as true folk songs. Discussions of what constituted Jewish music were also frequent and there was an intense nationalistic spirit (although most of the society’s leading members, with the exception of Engel, did not identify directly with the Zionist movement). Engel’s foundation of the Juwal-Verlag in Berlin was the last (actually posthumous) direct result of the society’s endeavors. Its ideals were carried to the United States, where they were propagated by Saminsky, Yasser, Rosowsky, and Achron, and to Palestine where this was done by Engel himself. After his death in 1927, they continued to exert a strong influence on musical developments in the yishuv through Menashe Ravina and Joachim *Stutschewsky.

SOCIETY FOR THE PROMOTION OF CULTURE AMONG THE JEWS OF RUSSIA, a society aimed at uniting advanced groups among Russian Jewry for the purpose of practical, organized, and planned activities to promote popular education; founded in St. Petersburg in 1863 on the initiative and with the financial support of wealthy Jews active in the community the majority of whom were residents of the city.

Foundation
Leon *Rosenthal, one of the founders of the society and its treasurer for a long time, stated that the motive for setting it up was the accusation, constantly leveled by government representatives and members of the Russian public in general, that the religious, social, and cultural separatism of the Jews was the chief obstacle to their being granted civic equality. These circles exerted pressure on the leaders of the Jewish community in St. Petersburg to employ their standing to influence the internal regeneration of their people in accordance with the spirit of the times. The Jewish leaders decided to respond to this demand, which seemed to them justified. To set up a countrywide association of supporters of education, they proceeded immediately to work out a set of regulations for the organization. The project encountered numerous difficulties on several sides: the Orthodox sector dissociated themselves from it for fear of adverse consequences to the Jewish religion, while the free-thinking maskilim in the capital were of...
the opinion that it was necessary to introduce more extreme and quicker measures. High government officials, who feared that the society might develop into a broad-based popular association, opposed the establishment of branches throughout the country.

Only after exhausting negotiations with the interested parties for almost a year was a definition of the aims agreed upon, namely, to spread and promote culture among the Jews of Russia, to support Jewish literature and authors, and to assist young students. The means to achieve this would be by teaching Russian to the Jewish masses, and by the publication of original books, translations, and periodicals in Russian and Hebrew. It was laid down that the society should operate under the auspices of the ministry of education and should accept members without distinction of sex, status, or religion.

The first members who agreed to set up the initial fund of the society were mainly representatives of the Jewish financial aristocracy in various cities, particularly St. Petersburg; only a small minority belonged to the intelligentsia. At the first general meeting (December 1863) J.Y. *Guenzburg was elected chairman of the society's committee. The committee energetically recruited new members among wealthy businessmen, well-known scholars, and authors. Special efforts were made to bring into the ranks of the society liberal Christian scholars, writers, and personalities active in public affairs. In the first year of its existence the Jewish members of the society included – in addition to a group of philanthropists – writers and scholars such as Abraham Dov *Lebensohn, A. *Mapu, S.J. *Fuen, Joshua *Steinberg, H.S. *Slonimski, A. *Zederbaum, Y.L. *Gordon, S.J. Abramowitsch (*Mendele Mokher Seferim), J.L. *Pinser, L. *Levanda, A.A. *Harkavy, and D. *Chwolson. The various projects of the society were financed by individual contributors headed by J.Y. Guenzburg and his son H. *Guenzburg, and L. Rosenthal. This left its mark on the character of the society and its orientation, which were determined by the personal endeavors of its chief supporters. Another serious setback to its democratic organization was the refusal of the government to permit the society to establish branches in the centers of the *Pale of Settlement; this would have enabled it to influence the masses more closely. After the establishment of a branch in Odessa in 1867, about 31 years passed before a second branch in Riga was authorized.

**Ideological Differences**

From the beginning differences arose within the committee as to the methods for spreading useful knowledge among the masses, especially the language to be used. The moderate wing, as represented by Rosenthal, regarded it as an association of intellectuals who aimed at building something new and not destroying the traditional, being convinced that religion and knowledge were closely linked. It was, therefore, the duty of the society to provide a “neutral” education for the masses so as not to arouse feelings of distrust, to refrain from offending accepted beliefs and opinions, and by publishing popular articles on science, geography, and general history to expand the Jewish reader’s horizon and spur him to constant mental improvement. Rosenthal advocated the Hebrew language for propagating culture among Jewish youth, and proposed giving priority to the society’s publication of Hebrew books and periodicals. On the society’s committee there was also a group that included Chwolson and Harkavy, which emphasized promoting among the Jewish public a knowledge of the Russian language and the creation of a Russian-Jewish literature, to assist in removing the barriers between Jews and the rest of the population, and to rebut the false accusations leveled at the Jews and Judaism. A small group within the society, represented by S.A. *Schwabacher, rabbi of the Odessa community, and A. Neuman, rabbi of St. Petersburg, demanded that a special department for the education of the younger generation should be devoted to the study of German as a means of understanding fundamental works of Judaism, which had been written mainly in that language, and to becoming acquainted with general European culture. Finally the society’s committee approved in February 1864 the view that spreading Russian among Jews was to be the basis for all its activities, since that alone was likely to prepare them gradually to take a direct part in the life of Russian society. The extreme “Russification” group in the society was concentrated in the Odessa branch. Among them were O. *Rabinovich, J.L. Pinser, and E. Soloveichik.

In 1872, when J.L. Gordon became secretary of the society, he reformulated its operative principles which he had published as a manifesto in the Hebrew press. The innovations in this document were an appeal to those devoted to education in the Pale of Settlement to assist the development of vocational training institutions for young people, which would assure them an honorable and suitable livelihood; a declaration of the society’s readiness to help Jewish artisans to settle throughout the Russian Empire; a firm demand to introduce changes in the existing administration of the Jewish communities; and, above all, the credo of Jewish maskilim which identified them with the government stand – that the Jews would be deserving of emancipation after their spiritual and moral “improvement” had been achieved. The rights already given to certain classes of Jews in Russia were, in the society’s opinion, a forerunner and pledge of general civic equality in the not too distant future if the Jews carried out their duty to themselves and their country by acquiring an education.

**Publishing Activities**

To help Jews acquire a knowledge of Russian it was resolved to publish primers with suitable exercises and Jewish history in Russian. To encourage Jewish authors in this language they were allotted grants, and it was planned to issue scholarly and literary annuals in which their works would be published. These projects also had the apologetic aim of presenting the Russian reader with authentic information on the history and culture of the Jewish people. The project for publishing the annuals ran into numerous difficulties through lack of sufficient literary talent, censorship restrictions, and internal in-
hibitions, i.e., apprehension about publishing criticism of the Jewish religion or way of life. After the appearance of the first collection, which had taken about four years to prepare, the society decided to abandon its plans in this area. The heads of the society were interested in issuing a periodical in Russian on Jewish affairs, but did not dare to carry out this aim themselves, contenting themselves with support of the weeklies Den (1869–71); Vestnik Russkikh Yevreiev (1871–73), issued by A. Zederbaum, and a Russian supplement to the weekly Ha-Karmel, edited by S.J. Fuenn (1865, 1866, and 1868).

The most successful literary undertaking of the society in this period was a collection on the views of the Talmud sages, initiated by D. Chwolson. The Hebrew text by Zevi Hirsch *Katzenellenbogen and S.J. Fuenn was completed in 1871. The Russian translation, edited by L. Levanda with the comments by J.L. Gordon, was published in three volumes in 1874 and 1876. The publication of the book was aimed both to serve as a textbook for rabbis to prepare their sermons in the language of the country, and to explain to the non-Jewish public the foundations of the Talmud which had determined the national character of the Jews. The latter, apologetic intention, apparently predominated in the 1870s when antisemitism increased in Russia under the influence of J. *Brafman's *Kniga Kagala “Book of the Kahal”.

The society devoted much effort to a new undertaking to which it ascribed a decisive importance in bringing the Jews of Russia closer to Haskalah – the translation of the Bible into Russian. This approach was naturally based on the revolutionary results achieved in Jewish life of a similar project in German on the initiative and with the participation of Moses *Mendelssohn. In 1873 the society brought out a new translation of the Torah by J. Gerstein (“The Learned Jew”), adviser on Jewish matters to the governor-general of Vilna, and J.L. Gordon, which achieved a wide circulation. The society also allocated large sums as a subvention for translation into Russian of the sidur and the mahzorim for the festivals, and for composition of a series of textbooks in Russian to publishers of periodicals, such as the Yevreyskaya Biblioteka edited by A. *Landau, and to Jewish scholars undertaking research into Jewish history, such as I. *Orshanski and others. The society allotted grants to the authors of Hebrew books on mathematics, physics, astronomy, biology, chemistry, geology, etc., including the writers H.S. Slonimski, Z.H. *Rabinowitz, S.J. Abramowitsch, and J. *Syarkin. It supported the periodicals Ha-Zefirah and Ha-Meliz, which devoted special sections to the natural sciences, and distributed popular Hebrew books on general and Jewish history and biography; in 1866–70 the society published four parts of the history by Georg Weber translated by K. *Schulman, who added chapters on Jewish history in different periods. At the invitation of the society Schulman also wrote a book on Russian geography which appeared in 1870 to serve as a reader for adults to further their acquaintance with their native country. A similar patriotic need was to be met by S. *Mandelkern's Russian history printed in 1895, which incorporated chapters on Jewish history.

Both wings of the society's committee – the protagonists of Hebrew and of Russian – were united in their negative attitude toward Yiddish, which they regarded as an anachronism, symbolizing an obsolete order. Despite this, it expressed readiness to support the Yiddish weekly Kol Mevasser for disseminating basic facts among the mass of Jews. The committee allocated modest sums for publishing Yiddish books on Jewish and Russian history. However, in view of severe criticism in the general Russian press and Russian-Jewish press, it later desisted from taking such steps.

Educational Activities
The largest item of expenditure in the society's budget was assistance to Jewish students in Russian institutions of higher education, especially in St. Petersburg, whom the maskilim regarded as ideal candidates for leading the nation. At the end of the 1870s the society decided to send several graduates of rabbinical institutes to Breslau for further education in the Juedisch-Theologisches Seminar and the local university, on the assumption that on their return they would serve as examples of rabbis on the German pattern. However, in eight years not more than three candidates were found suitable. In December 1879 the government banned the grant of scholarships to Jewish students from Russia who were studying at foreign universities, since this was opposed to the regulations of the society.

After the reform in the government educational network for Jews which led to the closure of many schools, and under pressure of appeals for the establishment of improved schools, the society decided to form a special fund to meet the most urgent needs in regard to secondary and elementary schools. Its policy in this field of activity was to refrain from setting up schools, and to support private initiative, without intervening in the internal affairs of these institutions. It also proposed to introduce reading and writing in Russian as a compulsory subject, to set up a special department of Hebrew subjects, to extend aid to the organizers of handicrafts classes attached to the schools, to help establish general teaching institutes in the Pale of Settlement, and to admit several pupils without charge with an allocation from the society. The rabbis of the communities and the authorized representatives of the society would frequently engage in establishing libraries for the use of the public at large.

Membership
The membership of the society numbered 175 in 1864; 287 in 1873, and 740 in 1888. In the first decade of the society's existence, its total income, mainly derived from contributions by the barons Guenzburg and L. Rosenthal, was 120,000 rubles. In its first 25 years it distributed 268,000 rubles to Jewish students in general schools, particularly of higher education; 31,000 rubles in cash, and 25,000 in form of grants of books to private schools; 32,000 rubles for supporting literature; and 24,000 rubles in aid to the needy.

From the 1890s
A new spirit invaded the society from the early 1890s. Edu-
icated youths who sought ways to serve their people joined the society and were influential in introducing new methods. In 1891 the society founded a "historical committee" for research in the history of the Jews of Russia. The committee published collections of documents dealing with Jewish history in Russia, and in 1908 became the Jewish Historical and Ethnographic Society. In 1894 a committee for Popular Education was established and in its framework the younger intelligentsia was active (L. *Bramson, J. *Brutzkus, A. *Kahnstam, etc.). The committee made a survey of Jewish schools, and advocated the support of old and new institutions, especially schools including Hebrew studies, in their curricula. The society sent delegates to visit educational institutions. Hebrew teachers were organized, a teachers' convention being held in Orsha (Belorussia) in 1903, and young teachers trained. The "Grodno courses" opened in 1907, and under A. Kahnstam's guidance a new generation of teachers with pedagogical training came into being. The new trends found expression in the society's revised statutes of 1901, which fixed the membership fee at 5 rubles (outside St. Petersburg). Branches were opened in Moscow (1894), Riga (1898), and Kiev (1908), each of which developed independent local activity. From 1902 the society organized councils where delegates of the branches met, as well as Jewish educationalists and cultural workers. In 1900 membership reached 3,010. In 1908 the society's statutes were changed again. It was entitled to open schools, libraries, courses for training teachers, and to give lectures. The membership fee was fixed at 3 rubles annually. Branches were to be opened wherever the number of members reached 25. In 1912 there were 30 branches throughout Russia with 7,000 members. The Moscow branch was particularly active, also being responsible for activity in the districts of Mogilev and Vitebsk. The Kiev branch became a center of activities in the southwestern area of the Pale of Settlement. In 1910 the society maintained ten schools, and partially supported 98 schools, as well as libraries in various Jewish communities. Its yearly budget in 1911 was 378,000 rubles. In 1910 the society began to publish its organ Vestnik ope (later named Vestnik yevreyskogo Prosveshcheniya) dealing with education, culture, and libraries. In 1912 a committee was established to find ways to reform and improve the existing traditional heder. This problem was debated by the society's council in 1912.

Since the society was the only legal body for educational and cultural activities in Russia, it was joined in the early 20th century by national and Zionist leaders, such as Ahad *ha-Am, H.N. *Bialik, S. *Dubnow, etc., and after the failure of the 1905 revolution also by members of the Jewish socialist parties. A struggle evolved in the society's councils between three trends: the initial trend of the assimilationists who advocated closer ties with Russian culture, the Hebrew-Zionist trend, and the Yiddishist *Bund trend. During World War I the society opened 215 schools with 30,000 pupils for Jewish refugee children from the battle zones. The struggle between the trends became even more accentuated. After the Russian February Revolution the Zionists established their own federation for education and culture, *Tarbut, and the Yiddishists established their society, Kultur-Lige (in Kiev). The Bolshevik Revolution of October 1917 put an end to this development. The society's branches in the provincial towns were liquidated, the schools were closed, and all educational activities were prohibited. The center in Petrograd remained in existence, maintained its library, and published three literary-scientific collections. The society was finally disbanded by the authorities in 1930. The library, which contained 50,000 books and about 1,000 manuscripts, was given to the Institute for Proletarian Jewish Culture in Kiev.

**SOCIOLoGY.** Sociology as a field of intellectual endeavor is much older than sociology as an academic discipline. Modern sociology can be traced to the Scottish moralists such as Adam Ferguson, David Hume, Adam Smith, and possibly to Thomas Hobbes. The word "sociology" was coined by Auguste Comte, and the study of sociology powerfully promoted by Herbert Spencer; but the first chairs of sociology were those of Albion Small in Chicago (1892) and Emile *Durkheim in Bordeaux (1896). Thus, one may say that sustained interest in the structure and processes of society arose when the ancien régime toppled and a new social order was painfully ushered in. At the same time, the emancipation set free Jewish intellectual energies on a vast scale. It is a moot question whether the interest of Jewish authors was directed toward the social sciences, including sociology among them, chiefly (as Martin *Buber surmised) because of a long and deep-rooted proclivity of the Jewish mind to think in relations rather than in substance, or because of the opportunity that was offered by the social sciences of a frankly critical stance toward the existing social order, coupled with a perceived chance of improving it. But it is certain that the Jewish condition, placing as it did the Jewish community, and especially the Jewish intellectual, at the margin of society, was ideally designed to make both incentives historically effective. Consequently, Jews were prominent both among the founding fathers of academic sociology and among the spokesmen of that particular brand of social science which sprang from the Socialist movement.

Not all Marxist writers qualify as sociologists, but Karl *Marx does. Armed with a thorough knowledge of Hegelian dialectics and Ricardian economics and buttressed by data of experience from the industrial revolution in England and the political revolution in France, he based his sociology in the first place on the analysis of social stratification. However, his was not a static rank order, as in an Aristotelian world view, but, rather, incessantly exposed to internal contradiction and ensuing transformation until, after a final and decisive class struggle, the moment was reached where a classless...
society would come into view. The second contribution of Marx to modern sociology was what Max "Scheler and Karl "Mannheim, neither of them Marxian partisans, later called the sociology of knowledge. If the catchword for what was wrong with the working class was "alienation," meaning estrangement from the means of production, so the catchword for what was wrong with intellectuals was "ideology," meaning the erection of a false "superstructure" which was hiding, rather than laying bare, the roots of thought as well as of institutions in the material realm of life.

The comprehensiveness as well as the simplicity of the Marxian sociology, coupled with its polemic emphasis and its action orientation, have made Marxism the prevailing social philosophy not only in the communist countries but also in the "third world," and have gained adherents among intellectuals everywhere, but its universal aim has militated against its development as a specific sociology. Scientifically, the influence of Marxism was much more pronounced within the mainstream of academic sociology than among orthodox Marxists. By way of argument and counterargument, adaptation and refutation, Marx is present in the main body of sociological writing. This is true about Ferdinand Toennies, Werner "Sombart, Max Weber, Ludwig "Gumplowicz, and Karl Mannheim among the classic authors in Europe; and about such U.S. Jewish sociologists as Louis "Wirth and Alvin Gouldner (1920–1980). The same applies for representatives of conflict theory like Lewis "Coser; of the sociology of knowledge, like Kurt Wolff; for race relations specialists like Max Wolf; and a development specialist like Irving Louis Horovitz (the editor of Trans-Action, a magazine aimed at popularizing the findings of activist social scientists); for political sociologists and stratification specialists like Reinhard "Bendix and S.M. "Lipset; and urban sociologists and community theorists like Herbert Gans (1927–); Joseph Bensman (1922–), and Maurice Stein (1926–). All those in this latter group are more or less influenced by Marx-derived concepts, but hardly any one of them would consider himself a strict Marxist or even a profound student of Marx. Exceptions might include Bernhard "Stern and Daniel Bell (1919–), both of Columbia University. The latter is best known for his contributions to the understanding of "post-industrial" society.

A sharply profiled group are the founders of the Institut fuer Sozialforschung and leaders of the influential Frankfurt school of sociology, Max "Horkheimer and Theodor W. "Adorno, as well as Herbert "Marcuse; they combined Marxian and, even more so, Hegelian dialectics with Freudian depth psychology, but opposed a party-bound Russian Marxism as much as the U.S. form of ideology-blind positivism. In the case of Herbert Marcuse, once the idol of "New Left" students in two continents, a new kind of "hastening the end" attitude appeared, which cast away the classical Marxian idea of the proletariat as the bearer of the revolution and the redeemer of mankind, in favor of a dynamic interplay of the free intellect and the free eros. This is a species of anarchism, the very contradiction to the dogmatic Marxian approach related to it.

In comparison to these profound ramifications of Marxian influence in sociology, which are traced here only insofar as its major Jewish proponents are concerned, Marxian sociology proper does not seem to have been overly fruitful. Even here, some scholars, such as the Italian Achille "Loria and the Viennese Paul Wiesengrueen can only be placed on the periphery of Marxian thought. On the other hand, the sociological significance of those authors who were active participants in socialist and communist partisan movements is blunted by the fact that they were primarily social philosophers, idealists, polemists, interpreters rather than researchers or sociological theorists, supplying a comprehensive philosophy of historical development for the faithful. Among those that should be mentioned here because of their advancement of Marxian sociology are Eduard "Bernstein, the leader of the revisionist trend in European socialism, the Austro-Marxists Max "Adler, who strove to combine Marxism and Kantianism, and Otto "Bauer, who created a Marxian theory of nationality and nationality struggles. This approach was a forerunner of those protagonists of the "third world" who, like Frantz Fanon, cast the colored peoples in the role originally designed for the industrial proletariat. Even more in this direction were Rosa "Luxemburg's and Rudolf "Hilferding's assertion that the internal contradictions of capitalism made its expansion into colonialism and imperialism an inescapable necessity. However, Rosa Luxemburg thought that nationalities would disappear in this gigantic expansion of exploitation, a belief which was not shared by the "third world" protagonists. The Hungarian György "Lukacs, more a social philosopher than a sociologist, shared with Rosa Luxemburg the opposition to positivistic and deterministic versions of Marxism and an emphasis on personal spontaneity and historical dialectics. Leo Kofler (1907–1995), Fritz Sternberg (1895–1963), Siegfried "Landschut, and George Lichtheim (1912–1973) were related to that position. The outstanding name among the Russians was Lev "Trotsky, whose concept of "combined development" serves to justify a proletarian revolution in an industrially underdeveloped country.

Jews figure prominently among the founding fathers of academic sociology. The great names here are Ludwig Gumplowicz, Emile Durkheim, and Georg "Simmel. Their backgrounds were in law, economics, history, and philosophy, but their fame rests with their achievements in sociology. Of these, Gumplowicz is the least known today because he spent his adult life, bitter with the frustrations of the Austro-Hungarian nationality struggles, in an academic backwater at the University of Graz. His embracement of a pessimistic brand of social determinism, derived from Darwinian notions, seemed justified by the circumstances. According to Gumplowicz, the individual was nothing except as a member of a group, and groups, in turn, were engaged in a fierce struggle for survival in which the bigger dog usually emerges victorious and imposes his law on the vanquished. This gloomy view of race and ethnic relations contrasted sharply with the only other serious theory of race relations, which was later developed in the
U.S. by Robert E. Park and his disciples. Émile Durkheim is
an entirely different figure. Agreeing with Gumbel, that
social phenomena are sui generis and more than an aggregate
of individual wills, his emphasis was not so much on conflict
but on solidarity. Solidarity can be of a "mechanical" nature,
as in homogeneous societies, or of an "organic" character, as
in societies based on the division of labor, or it can, when indi-
vidualism is carried too far, be endangered by normlessness, or
"anomie." But, although reflected in individual minds, society
always remains supreme. As a Jew, Durkheim would provide a
fascinating case study, even more than Gumbel. The
Austrian–Polish Gumplowicz considered the Jews an anachro-
nistic irritant because, having lost language and territory, they
had ceased to be a nationality and were doomed to disappear
as a separate entity. Durkheim, scion of a rabbinical family
turned libre penseur, was fond of quoting the biblical sources
of Hebraic law as one of the most primitive manifestations of
"mechanical solidarity," but he went further than that when
he demonstrated in his often quoted book, Les formes élémen-
taires de la vie religieuse, that religion was a social phenom-
emon of the first order, a delification, as it were, of the solidar-
ity of past, present, and future generations; the totem animal
was the powerful ancestor of the tribe, the personification of
its strength and endurance. Religion was thus brought down
to earth and placed in a historical, and yet generally valid,
context. Surely, Durkheim would not have needed to travel
around the globe to the Australian Arunta to prove that the
Jewish people was the corpus mysticum of the Jewish religion
and the God of Abraham, Isaac, and Jacob the guarantor of its
existence. Durkheim was prevented from stating the matter
clearly in this fashion by his desire to strengthen, through his
equation of religion and society, the embattled forces of la ré-
publique laïque. However, as Gumplowicz would have had to
revise his negative evaluation of a Jewish nationality if he had
lived to see the establishment of a Jewish state, so Durkheim's
theory of the social nature of religion may well serve to sanc-
tify Israel nationalism as known today.

Georg Simmel, like Durkheim often quoted, especially
among U.S. sociologists, asked the Kantian question: "How is
sociology at all possible?" He arrived at the conclusion
that sociology is a distinctive science because it is not so much
concerned with the varying contents of social phenomena
but with the forms that they have in common wherever they
occur. But these forms are not forms of substance or patterns
of behavior; they manifest themselves in interpersonal rela-
tions and as such are located in the minds of men. This rela-
tional emphasis has struck many readers of Simmel as lack-
ing in concreteness, even in commitment, but it agrees with
the Buberian formula about the relational inclination of Jew-
ish thinking, the I-Thou formula "between man and man," which
for Buber must be understood as construed in the image
of the encounter between man and the Creator. Indeed,
Buber and Simmel were personal friends. More specifically
speaking, Simmel made a significant contribution to the so-
ciology of the Jews in his concept of the "stranger," one of his
numerous formal concepts that serve to elucidate a variety of
actually occurring phenomena. The "stranger," according to
Simmel, is not so much the man who comes today and goes
tomorrow, but the man who comes today and stays tomorrow;
and the Jew throughout the ages, but especially the medieval
Jew, is the prototype of the species.

From then on the role that Jews as persons and Jews as a
topic have played in sociology becomes ramified and diffuse.
Perhaps the most convenient way of coming to grips with it is
to differentiate between the European and the U.S. scene,
with Israel a possible third partner. In Europe, partly because
of the Holocaust, partly for other reasons, only a few outstand-
ing names come to mind. Franz *Oppenheimer, a follower
of Gumplowicz and a student of Marx and, like Durkheim, the
son of a rabbi, turned the pessimistic and cataclysmic views of
his masters into evolutionary optimism by attempting to prove
that exploitation and domination will cease once the monop-
olic grip on landed estate is loosened. From this point of
departure, Oppenheimer became interested in Zionism and
was one of the initial promoters of rural cooperatives in Pal-
estine. The Hungarian-born Karl Mannheim combined influ-
ences stemming both from Karl Marx and Max Weber in his
elaboration of a "sociology of knowledge" which comprehends
knowledge as embedded in the situational experience of the
man of knowledge, that is, a relational, although not neces-
sarily a relativistic, phenomenon.

Émile Durkheim, more than any other European sociolo-
gist, formed a "school"; his disciples were almost all Jews, but
few of them were sociologists. One might mention here Maurice *
Halkwachs, primarily a demographer, Marcel *Mauss,
Durkheim's son-in-law and his successor as editor of L'Année
Sociologique, Lucien *Lévy-Bruhl and his son Henry *Lévy-
Bruhl; all these, going beyond Durkheim, tried to combine
sociology and psychology, but their published works fall more
in the fields of ethnology, social anthropology, and the history
of law and institutions than in the field of sociology proper.
Perhaps the most renowned disciple of Durkheim was Marc
*Bloch, an economic historian and one of the initiators of a
sociological school of historiography. René *Worms, on the
other hand, more important as organizer than as scholar, was
an adversary of Durkheim. Later French-Jewish sociologists,
such as Georges *Gurvitch, Raymond *Aron, and Georges
*Friedmann, were less influenced by Durkheim than by ideal-
istic and phenomenological philosophy and by the sociologi-
cal approach of Max Weber. Georges Friedmann, a specialist
in industrial sociology, contributed a brilliant analysis of
contemporary Israel and the impact which it might have on
the future of the Jewish people. Among the U.S. interpreters
of Durkheim (as well as of Simmel, Mannheim, Weber, and
toenies) are such Jewish sociologists as Louis Wirth, Kurt
Wolff, Harry Alpert (1912–1977), Reinhard Bendix, Lewis Co-
sor, and Werner J. *Cahnman. Jeffrey Alexander (1947– ), a
leader in the neo-functionalist tradition, revitalized the under-
standing of the classic theorists, including Durkheim, Weber,
and Marx. His work has been associated with what he calls
the “late-Durkheimian” approach, or the “strong program” in cultural sociology (as compared to the “weak” program of the sociology of culture).

In England, Morris *Ginsberg developed a comparative sociological approach, based on evolutionary and social-psychological components; he was the editor of the *Jewish Journal of Sociology*. In pre-Hitlerian Germany and Austria, one encounters, apart from Oppenheimer and Mannheim, a number of interesting Jewish sociologists whose impact, however, was not far-reaching, partly because they were more social philosophers than sociologists, such as Rudolph *Eiser, Wilhelm *Jerusalem, Hermann *Kantorowicz, David *Koigen, Eugen *Rosenstock-Huessy, and the somewhat diffuse Ludwig *Stein (1859–1930), and partly because they were specialized, such as Friedrich Hertz and Walter *Sulzbach, who were students of nationalism, or Siegfried *Kracauer, whose careful analysis of white-collar employees and the social impact of the movies was not sufficiently appreciated. Rudolf *Goldscheid, one of the initiators of the Deutsche Gesellschaft fuer Soziologie, is remarkable because of his ethically motivated opposition to Max Weber’s impassioned emphasis on a “value-free” social science. It should be added in this context that Germany, along with the countries of Eastern Europe, gave birth to the sociology of the Jews. In Eastern Europe, the writings of Leon *Pinsker, Aḥad Ha-Am, and Ber (Dov) *Borochov, although sociological in content, are essayistic in form, while the publications emanating from the Yiddish Scientific Institute (YIVO), first in Vilna, later in New York, are more in the area of social history than sociology. The German effort, on the other hand, in connection with the Verein fuer die Statis-
tik der Juden, was demographic and therefore at least pre-sociological in nature. The foremost name is Arthur *Ruppin; others are Felix Theilhaber, Arthur *Cohen, and Jacob *Lest-
chinsky; the latter lived in Germany, and later in the U.S., but was at first with the YIVO circle.

The story of the participation of the Jews in U.S. sociology is entirely different from the one in Europe. Among the founding fathers of sociology in the U.S., that is, the first post-
Spencerian generation, were no Jews. The same is true about the second generation. As late as the 1930s only two Jewish sociologists of some importance were on the scene, Samuel *Joseph at the predominantly Jewish New York City College, and Louis Wirth, who was soon to rise to prominence at the oldest and most prestigious department of sociology in the country, the University of Chicago. There may be a variety of reasons for this tardy development, but one of them becomes clear if one compares what happened in sociology with the corresponding data in the related field of anthropology. The founding father of cultural *anthropology, as it is known today in the U.S., undoubtedly is Franz *Boas and beside him Edward *Sapir, both German-Jewish immigrants. In the second generation, Jews are prominently represented by such students of Boas as A.A. *Goldenweiser, Robert *Lowie, Paul *Radin, L. *Spier, all of them Austrian, Polish, and Russian immigrants, as well as by the U.S.-born Ruth Benedict and Melville J. *Herskovitz. What is involved is an apparently negative reaction in academic circles to entrusting “foreigners” with the teaching of such sensitive topics as U.S. history, U.S. literature, and especially sociology, while they were “allowed” to safely concern themselves with the analysis of remote cultures such as, for instance, the ones of the Crow, Klamath, and Winnebago Indians. Nor was this negative reaction politically of a predominantly conservative flavor, as one might assume if one were to conclude from European antecedents. Rather, it was radical “progressives” among older U.S. sociologists, like Henry Pratt *Fairchild, Edward A. *Ross, and Robert *Faris who, in Fairchild’s terminology, reminded immigrants that as “guests” they must adapt themselves to their “hosts,” if they wished to be “accepted” as equals. This attitude amounted to a formidable psychological barrier, especially for aspiring Jewish intellectuals.

This state of affairs totally changed after 1948 when, apart from a limited number of European refugee scholars, a great many native-born Jews entered the ranks of U.S. sociologists. By 2005, of the 50 preeminent sociologists listed at the website http://www.kfunigraz.ac.at/sozwww/agsoe/lexikon/ klassiker, approximately one-third were, or are, Jews (www. jinfo.org/Sociologists.html). About the same percentage have served as presidents of the American Sociological Association, including the president as of 2005 (Cynthia Fuchs Ep-
stein, 1933– )

Several scholars of Jewish descent who have been aloof to Jewish life, or even baptized, played a prominent role in U.S. sociology, especially Robert K. *Merton, the foremost structural-functional theoretician in U.S. sociology, whose striking formulations have been widely accepted, Paul F. *Lazarsfeld, the recognized leader in quantitative sociology, Neil J. *Smelser, the most prolific writer among the students of Talcott Parsons, and David *Riesman, a Unitarian, who gained fame with a sociological best seller, The Lonely Crowd. Of these, Merton and Lazarsfeld were presidents of the American Sociological Association, as were Philip M. *Hauser, a former director of the U.S. Bureau of the Census and an internationally known demographer, and Reinhard Bendix, a German-born theorist and a specialist in stratification theory. Arnold *Rose, a race-relations specialist, the assistant to Gunnar Myrdal’s trailblazing study of the U.S. black, An American Dilemma (1944), passed away before he could occupy the office to which he was elected. The three latter scholars were graduates of the University of Chicago and students of Louis Wirth, while Merton represented a school of thought more prominent on the Eastern seaboard. Lazarsfeld was, by training, a mathematical psychologist. Louis Wirth himself, the first Jew to be elected to the presidency of the a.s.a., never fully reconciled his intense interest in Jewish affairs with his conviction that total assimilation was both inevitable and desirable, but his importance rests chiefly with his interest in urbanism, his interpretation of major figures in European sociology, and his passionate espousal of the cause of racial equality and social reform.
Up to the mid-20th century, one can say that a historical and phenomenological trend in U.S. sociology became more pronounced, along with a continuing and major trend of quantitative and positivistic emphasis. To the former trend belonged the Jewish sociologists Cahnman, Coser, and Kurt Wolff, as well as the scholars Albert *Salomon, Bernard Rosenberg (1923–1996), Norman Birnbaum (1926– ), Sigmund *Diamond, Benjamin *Nelson (1911–1977), the urbanist Herbert Gans (1927– ), and the political sociologist, Amiat Ezioni, an Israeli-American famous for his work on socioeconomic and as founder of the Communitarian movement in the early 1990s; to the latter chiefly some of the students of Paul F. Lazarsfeld, such as Bernard R. Berelson (1912–1979), David Caplovitz (1928–1992), and Herbert Hyman (1918–1985). Mathematical and statistical sociology was furthered by Leo Goodman (1928– ) and Mark Granovetter (1943– ). The strucrutional-functional school in sociological theory, whose major representatives among Jewish scholars are Marion J. Levy, Jr. (1918–2002) and Neil J. Smelser, represented a third trend. Other scholars occupied a variety of intermediary positions in this regard, such as the criminologists Herbert *Bloch and Albert K. Cohen (1918– ), the political sociologists Seymour M. Lipset and Walter B. Simon (1918– ), the urban sociologist Alvin *Boskoff, and the industrial sociologists Peter Blau (1918–2002), Robert Dubin (1916– ), Philip Selznick (1919– ), and Rosabeth Moss Kanter (1943– ).

In the second half of the 20th century, sociology developed in several directions in which Jewish sociologists played significant roles. These included challenges to the hegemony of both functionalist (Parsons) and conflict (Marxist) theory in the development of phenomenology, symbolic interactionism and postmodernism; the development of global macrosociology, the concept of “multiple modernities” and the impact of world systems; population studies on both the macro (demography) and micro (networking) levels; the rejection of the notion of “value-free” sociology and the awareness of the influence of social position on the development and impact of sociology, and its extension to the sociology of race, gender, and class relations, their intersections and especially the development of feminist and queer theory; and the developing field of the sociology of Jewry.

Symbolic interactionism, a term coined by Herbert Blumer, grew out of the “Chicago school” and was developed by a number of prominent Jewish sociologists, including the ethnomethodologist Harold Garfinkel (1917– ); Erving Goffman (1922–1982), whose dramaturgical approach to impression management and contributions to role theory became a classic of sociology, most famously through his *The Presentation of Self in Everyday Life. It incorporated Simmelian micro-perspective on interaction with a macro-level analysis of Durkheimian ritual behavior (Adams, 2003). Alfred Schutz contributed the idea of “multiple realities” in a phenomenological perspective contributing to the sociology of knowledge and knowing. Stanley Milgram (1933–1984) had a major impact on social science with what came to be known as the “Milgram experiments,” which demonstrated that authority figures could command obedience to extraordinary measures even in the United States by virtue of their position; he also developed the concept of the six degrees of separation, an early development of networking theory.

Bridging macro- and micro-perspectives, and theory and empiricism, Norbert Elias (1890–1990) developed “process” or “figurational” sociology, his most prominent contribution being *The Civilizing Process. Synthesizing German, American, French, and British social scientific advances through the 1930s, he explored the historical development of “civilized” identity and habitus, the history of emotions, the part played by state formation in that development, and the dynamics of national identity-formation. National identity-formation has also been explored by Erik Erikson (1902–1999) and Alex *Inkeles (1920– ), who has focused on the manifestation of “modern” identity as well as convergence and divergence in “modern” societies. Other Jews contributing to such global sociology include Immanuel Wallerstein (1930– ), who furthered the concept of the world system and global economic and political stratification; Lewis *Feuer (1912–2002), who began his career as a radical Trotskyist, a scholar of Marx and Hegel, with a major focus on the study of imperialism (http://frm.nationalreview.com/archives/week_2002_11_24.asp); and Shmuel Noah Eisenstadt (1923–), whose concept of “multiple modernities” challenged the linear and unified concept of modernity. Edward Shils (1910–1995), distinguished service professor in the Committee on Social Thought and in Sociology, was internationally renowned for his research on the role of intellectuals and their relations to power and public policy, following in a Weberian tradition. This cultural sociology was echoed in other Jewish sociologists, including Neil Postman (1931–2003), a media theorist, who studied how culture was affected by technology (or “Technopoly” as he called one of his books). One could also say that Thomas Kuhn (1922–1996) was a cultural sociologist in that he studied the impact of shifts in scientific culture or paradigms on society and science.

Jews figured among some of the most prominent demographers in the last half of the 20th century, including Ronald Freedman (1917– ), who established and directed the Population Studies Center at the University of Michigan, and with Howard Schuman helped establish the on-going Detroit Area Study (DAS) to analyze social trends in the area; Sidney Goldstein (1927– ), generally recognized as the “dean of demographers of American Jewry” and who like Freedman was president of the Population Association of America; Calvin Goldscheid (1941– ); Nathan Keyfitz (1913– ), who has made significant contributions to fertility, aging, and environmental impacts of population growth and who founded the International Institute for Applied Systems Analysis in Austria; Robert Hauser (1942– ), director of the Center for Demography of Health and Aging at the University of Wisconsin–Madison and collaborator on the Wisconsin Longitudinal Study of life course and aging; and Harriet Presser (1936– ), founding director of the Center on Population, Gender and
Social Inequality at the University of Maryland. Both Freedman and Presser were presidents of the Population Association of America. Jewish sociologists have also been among the leaders in the field of applied sociology, including Daniel Yankelevich (1924– ), founder of the first private firm to measure and analyze shifting trends in American social and cultural values, Ross Koppel (1948– ), president of the Social Research Corporation; and Judith Auerbach (1956– ), vice president of the American Foundation for AIDS Research, who also served as director of the Behavioral and Social Science Program of National Institutes of Health (U.S.).

Several U.S. Jewish sociologists have made their mark in race and intercultural relations studies, or more generally, studies of inequality, partly because the field explicitly or implicitly includes Jewish topics, but chiefly because, for a variety of reasons, the problems of all minorities appeal to them. Early names to be mentioned here are Leo Srole (1908–1993), a collaborator with W. Lloyd Warner in the ethnic aspects of the much-discussed “Yankee City” studies; Melvin Tu-min (1919–1994), whose monographs deal with situations in North Carolina, Puerto Rico, and Guatemala; Milton Gordon (1918–) and Nathan Glazer, profound students of the processes of assimilation and ethnic identification in U.S. life; Milton Barron (1918–) and Stanley Bigman (1915–), authors of pioneering studies on intermarriage; Seymour Lemovitman (1930– ), coauthor of Children of the Gilded Ghetto (1961); Arnold Rose; Peter Rose (1933–); Raymond Mack (1927–); and Immanuel Wallerstein in his Africanist studies. Oscar Lewis (1914–1970) focused his attention on the culture of poverty, through ethnographic portrayals of peasant communities in Mexico, Latin America, and Northern India, as well as poor Hispanics in the United States. Stanley Lieberson (1933–) received the Distinguished Contribution to Scholarship Award for his A Piece of the Pie: Blacks and White Immigrants since 1880. His work has focused on language usage and conflict, fashion, naming customs, and other nuances of cultural diversity. One of his latest books, A Matter of Taste: How Names, Fashions, and Culture Change, included a section on Jewish naming customs.

Other sociologists, like Sophia Robison, Morris Janowitz, and Werner J. Cahnman, made contributions in the field of race and intercultural relations, but their main interests are in other fields: Sophia Robison’s in criminology, Janowitz’ in military sociology, Cahnman’s in the development of typological theory, especially in connection with historical studies.

One would be remiss to discuss the field of inequality without its more recent developments in terms of the intersections of race, class, and gender, feminism, and queer theory. Gender studies and feminism began with Betty Friedan (1921–2006), and continued through Jessie Bernard (1903–1996), who helped established the scholastic foundations of modern feminism, Nancy Chodorow (1944–) on the reproduction of mothering, and Judith Butler (1956–), among others. The latter, who credits her first realized interest in social philosophy to her early synagogue experiences, is chief representative of a body of intellectuals who have contributed to the reformulation of social theory in relationship to the “new” social movements such as the 1960s’ student movements, the women’s movements rekindled in the 1970s and beyond, race and ethnic pride movements stemming from the Civil Rights era of the late 1960s, and the gay and lesbian liberation movements of the 1980s and beyond. Uncovering the sexual politics of the private sphere, and protesting the exclusion of women from the public sphere, state, and economy, her work (most famously Gender Trouble), as well as that of others, has initiated debate over the relationships of culture, identity and representation.

Out of reluctance by many sociologists to publicize their own Jewish identity for fear of reprisal in the academy, studies of the Jewish minority were not commonly undertaken until the 1960s legitimized ethnic roots and attention. In the focus on multiculturalism, however, Jews were often obscured as part of the white majority (aptly captured in a study by Karen Brodkin (1941–)), How Jews Became White Folks and What That Says about Race in America). Therefore, the study of American Jews became essentially a parochial pursuit rather than part of the more mainstream study of ethnic, racial, and religious minorities.

As far as the image of the Jew and the treatment of Jewish topics in sociological literature are concerned, there are differences to be observed as one moves from Europe to the U.S., but also continuities. In Europe the scholarly interest in Jewish matters was predominantly socioeconomic in nature, and it was cultivated primarily by Christian authors. Albert Schaeffle (1831–1903), writing about the Viennese stock exchange crash in 1873, considered the Jews as “naturally belonging to the financial faction.” Werner Sombart’s related but historically buttressed thesis that the calculating spirit of the Jews was one of the prime factors in the rise of modern capitalism was contested by Max Weber, who characterized the Jewry of the dispersion as a “Paravigolk” whose economic activities were peripheral, not central, to significant occidental developments. Jewish traders, Weber maintained, were not instrumental in bringing about the modern factory as a rationally conceived and continuing enterprise. However, Weber analyzed the “ethical,” or “missionary,” Hebrew prophecy as the first step on the way to the rational “disenchantment of the world” which later culminated in the Puritan ethic and its secular aftermath. Ferdinand Toennies (1855–1918) occupies the middle ground between Sombart and Weber inasmuch as he sees the Jews internally as the remnant of a former “Gemeinschaft,” but in their external relations as one of the forces promoting the expanding modern Gesellschaft. This discussion has not been continued in the U.S., but Georg Simmel’s concept of the “stranger” has led to an interesting elaboration in Robert E. Park’s and Everett Stonequist’s concept of the “marginal man” as “one who is poised in psychological uncertainty between two or more social worlds; reflecting in his soul the discords and harmonies, repulsions and attractions of these worlds.” Park had in mind cultural as well as physical hybrids,
emancipated Jews as well as light-skinned blacks. One of Park's disciples, Howard Becker (1899–1960) applied the “marginal man” concept to structural situations in talking about “marginal trading peoples” while Park's Jewish student Louis Wirth analyzed the ghetto as a state of mind marked by marginality; an extended controversy has followed in which a number of Jewish authors, among them Amitai Etzioni and Aaron Antonovsky (1923–1994), participated.

Last, but certainly not least in the present context, ought to be mentioned scholars whose major if not exclusive interest is in the Jewish field. Jewish topics have occupied a place in U.S. sociological literature; however, research on Jews tends to be isolated in Jewish publications rather than well-integrated in appropriate mainstream journals. However, some trends are ascertainable. While an analysis of papers published in three leading sociological journals (American Sociological Review, American Journal of Sociology, Social Forces) in the years 1929–64 showed that 74 of the published papers dealt with topics referring to intergroup relations (acculturation, assimilation, intermarriage, prejudice, discrimination, antisemitism, etc.), 51 papers dealt predominantly, although not exclusively, with internal topics of Jewish life (23 with family and youth, 15 with socioeconomic and demographic topics, 13 with Jewish religion and institutions). A comparable analysis of dissertations on Jewish topics (cf. Isaacque Graeber, Jewish Themes in American Doctoral Dissertations, 1933–64) yielded 53 intergroup relations studies against 47 internal and, in part, structural studies, but the total figures include, along with those in sociology, historical, anthropological and psychological studies, thus impairing comparability. A review of sociological work on American Jewry that was published 1970–80 (Heilman, 1982) lamented the parochialism of the sociology of American Jewry. A later analysis of social science papers appearing in the electronic database JSTOR and dealing with topics related to American Jews (Burstein, 2004) revealed 129 articles, 19 dealing with politics, 29 with family (including fertility and intermarriage), and 26 with educational and economic attainment. Only nine articles dealt with (internal) Jewish religious practices or organizational life. However, the articles tended to cite research written by and for other Jews more than mainstream theories or problematics, indicating a persistent parochialism.

The review was incomplete, since it did not include some of the primary sources for publishing social science research on Jewry (which are not indexed in JSTOR): Jewish Social Studies, a publication of the Conference on Jewish Relations which began in 1938; Commentary, established in 1946, which aims to present intelligent and accessible analysis of the social character of American Jews; Judaism, begun in 1951 and including many sociological articles; Midstream, started in 1954; The Jewish Journal of Sociology, published bi-annually since 1958 out of the United Kingdom; Contemporary Jewry, the official journal of the Association for the Social Scientific Study of Jewry, which began publishing in 1974 as Jewish Sociology and Social Research, taking its present name in 1976; or the major journals of sociology of religion (such as Sociology of Religion, Review of Religious Research, Journal of the Social Scientific Study of Religion, Journal of Contemporary Religion) and ethnicity (such as Ethnic and Racial Studies, Ethnicities, Social Identities). While analyses of Jewish institutional life and identification are rarer in the latter journals than comparisons of Jews to other religious and U.S. denominations, sociological topics focusing on Jews are often included.

The analysis of Jewish institutional life and of the changing factors in Jewish identification has developed considerably in the last several decades. Three surveys of American Jews (the 1971, 1990, and 2000–01 National Jewish Population Studies) have resulted in serious analysis of American Jews, often in comparison to the wider American population and Israeli Jews. The 1990 National Jewish Population Studies resulted in 11 monographs, seven of which were published as a special series by SUNY Press. Topics included denominationalism, gender roles, Jewish and American culture, Jewish Baby Boomers and children, internal migration. Further, an impressive body of community studies has been collected (over 90), summaries of 45 of which have been collected by Ira Sheskin and published under the auspices of the North American Jewish Data Bank, currently housed at the University of Connecticut under the directorship of Arnold Dashefsky.

Early scholars of Jewish sociology included Nathan Goldberg (1903–1979), Erich *Rosenthal, Oscar Janowsky (1900–1993), Bernard Lazertwit, C. Bezalel Sherman (1896–1971), Benjamin F. Ringer (1920– ), Victor Sanua (1920– ), Benjamin *Halpern, Will Herberg (1907–1977), Albert Vorspan (1924– ), Mannheim Shapiro (1913–1981), Charles S. Liebman (1934–2003), and Albert Gordon (1901–1968); the last was a rabbi turned sociologist. Building on these early foundations, and incorporating new data and approaches, American Jewish sociology has developed along several lines, including general analyses or theories of American Jewish life (Marshall *Sklare, Charles Silberman (1925– ), Calvin Goldscheider (1941– ), Seymour Martin Lipset, Charles Liebman (1934–2003); aculturation and assimilation (Steven Cohen, Calvin Goldscheider); ethnicity (Steven Steinberg (1944– ); Herbert Gans, especially with his development of the concept "symbolic ethnicity” and, later, “symbolic religiosity”); social history and especially portraits of particular communities and groups of Jews (Samuel Heilman (1946– ); Jack Wertheimer (1948– ); Lynn Davidman (1955– ); Debra Kaufman (1941– )); denominational studies and Jewish pluralism (Bernard Lazertwit, Arnold Dashefsky (1941– )); American Zionism (Chaim Waxman (1941– ); Jonathan Woocher (1946– ), who suggested that Israel-oriented sentiment and activity formed the basis of American Jewish “civil religion”); Jewish politics and social movements (Daniel *Elazar (1934–1999); Jewish feminism (see more detail in Women in Sociology below); Jews and economics (Eva Etzioni-Halevy (1934– ); Barry Chiswick (1942– )); family, gender roles, intermarriage (Moshe (1936– ) and Harriet Hartman (1948– ), Rela Mintz Geffen (1943– )); intermarriage (Rodney Stark (1934– ) and Charles
Stember (1916–1982), participants in studies on antisemitism that were sponsored by the ADL (Anti-Defamation League) and the AJC (American Jewish Committee), respectively; Egon Mayer (1944–2004), Bruce Phillips, E. Rosenthal, Sylvia Barack Fishman; education (Walter Ackerman 1918–); Steven Steinberg; Harold Himmelshar (1944–); demography (Calvin Goldscheider 1941–); Sidney and Alice Goldstein (1936–); language and Jewish culture (Max Weinrich, Eliehu Katz 1926–), and Sylvia Barack Fishman.

The sociology of Jewish religion began, perhaps, with Mordecai M. Kaplan’s Judaism as a Civilization, continued with myriad publications of Jacob Neusner, Stephen Sharot’s (1943–) focus on Jewish religious movements in comparative perspective, and S.N. Eisenstadt’s Jewish Civilization: The Jewish Historical Experience in a Comparative Perspective (1992). The contribution of the Diaspora to the development of Jewish life has been explored by Daniel Boyarin (1946–) and Jonathan Boyarin, and the comparative perspective within Judaism, surveying the various Diasporas as well as Israel, has been greatly developed by Eliezer Ben-Rafael (1938–) and colleagues (e.g., Contemporary Jewries: Convergence and Divergence, 2003).

The beginnings of sociology in Israel were European. One trend was clearly demographic, starting with Arthur Ruppin and competently continued by the scientific director of the Israel Central Statistical Bureau, Roberto Bachi, but, another, more descriptive than analytic, and represented by Zvi Rudy (1900–1972) and Aryeh Tartakower, had East European antecedents. Structural-functionalism dominated Israeli sociology as it was established at Hebrew University’s department of sociology, founded in 1948 by Martin Buber, followed as chair by Shmuel N. Eisenstadt (1923–), Jacob Katz (1904–1998), Joseph Ben-David (1920–1986), and Yomina Talmon (1923–66), later joined by Judith Shuval (1926–), Simon Herman (1912–), and Henry Rosenfeld (1911–1986). The first student to complete her studies in the department, Rivka Bar-Yosef, later became a faculty member and chair. Chaim Adler (focusing on education), Dov Weintraub (1926–85), Erik Cohen (1932–), Moshe Lissak (1928–), and Eliehu Katz joined in the next few years, rounding out a major cross-institutional research plan on the emerging Israeli society, including the absorption of immigrants (Eisenstadt), youth movements (Ben-David), kibbutz (Talmon), education (Reuven Kahane), and the moshav (Weintraub). A macrosociological and theoretical emphasis allowed the work to transcend the small-scale case study, and continues to characterize some of its most renowned members, such as Victor Azarya (1946–), Baruch Kimmerling (1939–), Nachum Ben-Yehuda (1948–), and Erik Cohen. Katz went on to found Hebrew University’s Communications Institute, as well as to head the task force charged with the introduction of television broadcasting in the late 1960s. Along with this institutional emphasis, Uriel Foà (1916–1990), Judith Shuval, and Louis Gutman, the latter of which founded the Israel Institute of Applied Social Research, were early representatives of a positivistic and quantitative sociology, some of which continues at the Institute of Contemporary Jewry at Hebrew University, where Sergio DellaPergola is a chief demographer of Jewry worldwide. Tel Aviv University’s Faculty of Social Sciences was founded in the late 1950s with a challenge to the dominant functionalist approach of studying Israeli society, starting with its first chair, Yonaton Shapiro. Applying sociology to some of the country’s greatest dilemmas, it developed such foci as the Institute of Labor Relations and a Public Policy Program. Its faculty have studied democracy in Israeli society (Ephraim Yuchtman-Yaar 1935) and Yochanan Peres) and other aspects of political sociology (Hanna Herzog), work and labor markets (Rina Shapira 1932–), Moshe Semyonov (1946–), Noah Lewin-Epstein, and Haya Stier), education and stratification (Hanna Ayalon, Yossi Shavit) as well as ethnicity and Jewish identity in Israel and globally (Eliezer Ben-Rafael). The challenge to the functionalist perspective was further developed at Haifa University, with one of its major proponents Sammy Smooha (1941–), whose research focus on the disadvantaged Asian-African immigrants and Israeli Arabs showed the lack of unity and consensus in the society. A Marxist perspective was further developed at Haifa University with such researchers as Shlomo and Barbara Swirska, Deborah Bernstein (1956–, focusing on gender), and Shulamit and Henry Rosenfeld (focusing on the kibbutz). Israeli feminism developed in the mid-1980s with such scholars as Dafna Izraeli (1937–2003), Deborah Bernstein, and Barbara Swirska. More recently, a post-Zionist perspective incorporating the effects of “colonization” after the 1967 war on Israeli society and the Palestinians has developed in Israel. The establishment of the Israel Sociological Society in 1967 marked a turning point in the development of the sociological occupation in Israel, moving it beyond the confines of academic institutions and setting up its own nationwide community for professional development as well as academic purposes. In addition to five major universities in Israel and their faculty and research staff, numerous non-Israeli social scientists have done studies in Israel, especially in and about the kibbutzim. A number of Israeli faculty have joint appointments abroad and/or spend sabbaticals abroad, which further connects Israeli sociology to global conferences and developments.

[ Werner J. Cahnman / Harriet Hartman (2nd ed.)]

Women in Sociology

Few women, Jewish or otherwise, were among the founders of sociology. Perhaps the earliest Jewish American woman sociologist was Fay Karpf (1893–1981); a preeminent social psychologist, she was the first chair of the Division of Social Psychology of the American Sociological Association, later chairing a department in the Graduate School for Jewish Social Work. Marie Jahoda (1907–2001), a British social psychologist and researcher at the American Jewish Committee, Columbia University, and the University of Sussex, was also influential in the development of the field. Like many of the first sociologists, some of the Jewish women who made early inroads in the field were intellectual Marxists; these include
Rosa *Luxemburg, who studied the role of women in revolution, and Alexandra Kollontai (1872–1952). Hannah *Arendt (1906–1975) had a deep sense of Jewish identity that shaped her writings and world view, including critical examination of alienation, political power and authority. Rose Laub *Coser (1916–1994) became an international expert on women, work and leadership, focusing on the bureaucratic settings of medical institutions as well as the family.

Jewish women have played major roles in sociological research and leadership. Seven of 18 scholars who contributed to a volume of autobiographical essays by female leaders in the field (ed. A. Goetting and S. Fenstermaker) clearly indicate their Jewishness, including Beth Hess, Suzanne Keller, Helen Mayer Hacker, Janet Lever, Shulamit Reinharz, Gaye Tuchman, and Hannah Scheller Wartenberg. For some, like Hannah Arendt, Shulamit Reinharz, Gaye Tuchman, and Deborah Lipstadt, Jewish identity was always integral to their scholarship; for others, its role has been mixed. Lenore Weitzman became well known for her work on the “divorce revolution” and later focused on the Holocaust. Jewish women who have been active as applied sociologists include Judith Auerbach (1956– ), vice president of Public Policy and Program Development at the American Foundation for AIDS Research, and Felice Levine, former executive director of the American Sociological Association.

The contributions of Jewish women have perhaps been most notable in the field of gender studies both generally and as applied to the study of Jews. Among the first feminist scholars was Jessie “Bernard (1903–1996), whose work on “his and her” marriages became a staple of both family and feminist studies. Mirra Komarovsky (1905–1999), the second woman to be president of the American Sociological Association (1972–73), brought out the cultural parameters and contradictions in gender roles. Viola Klein (1908–1973), an Austrian social theorist who fled the Nazis to Great Britain, focused on the social construction of women’s nature and attributes, as well as on Women’s Two Roles: Home and Work (with Alva Myrdal). Cynthia Fuchs Epstein (1933– ), current president of the American Sociological Association as of 2005, applied the study of gender to professions; Rosabeth Moss Kanter (1943– ) focused on Men and Women of the Corporation, in addition to many other contributions to organizational theory and behavior. In what Hester Eisenstein has termed the first phase of women’s studies scholarship, the contributions of Carolyn *Heilbrun (1926–2003), Florence Howe (1929– ), and Barbara Haber (1934– ) stand out, as does Janet Saltzman Chafetz’s (1942– ) work on gender role socialization, Debra Renée Kaufman’s (1941– ) application of gender analysis to achievement, and Shulamit Reinharz’s (1946– ) feminist perspective on social research methods.

In the second phase of feminist scholarship, which concentrated on the strength and power of women, such social scientists as Phyllis Chesler (1940– ), Gerda *Lerner (1920– ), and Adrienne Rich (1929– ) are prominent. Nancy Chodorow’s (1944– ) The Reproduction of Mothering (1978) infused a neo-Freudian understanding into persisting gender difference. Carol *Gilligan’s (1936– ) In a Different Voice (1982) focused on the moral development of women. In such books as Gender Trouble, Judith Butler (1956– ) contributed to the reformulation of social theory by uncovering the sexual politics of the private realm, and protesting the exclusion of women from the public sphere, state, and economy.

Jewish women were among the founders of Sociologists for Women in Society and continue to be active in it and the National Women’s Studies Association, Judith Lorber (1931– ), as an example, was a founding editor of Gender and Society and president of sws and the Eastern Sociological Society. Women have also been active in the professional societies devoted to social science research in Jewish studies, including the Association for the Social Scientific Study of Jewry (ASSJ), of which four of the 12 presidents have been women; the Women’s Caucus of the Association for Jewish Studies (AJS); and the Jewish Women’s Caucus of the National Women’s Studies Association.

In their 1994 critique of the application of feminist sociology to American Jews, Lynn Davidman and Shelly Tenenbaum note that the first full-length sociological studies of Jewish women did not appear until 1991; they also point out that few articles in the primary journals for Jewish studies (American Jewish Year Book, Contemporary Jewry, Jewish Journal of Sociology and Jewish Social Studies) included a focus on women or gender prior to the 1990s. Women’s family and economic roles received attention in Goldscheider’s Jewish Continuity and Change (1984), and were enlarged upon by Moshe and Harriet Hartman’s analysis of the 1990 National Jewish Population Study (Gender Equality and American Jews, 1996). Women’s participation in voluntary Jewish organizations has been the subject of some study (B’nai B’rith (1985), and others reviewed in a report by the National Commission on American Jewish Women (1995), which also reviews other scholarship on Jewish women). Sylvia Barack Fishman has provided in-depth analysis of women’s roles and feminism among American Jews. Barbara Schreier shows how the immigrant experience affected Jewish women’s fashion, while Riv-Ellen Prell’s (1947– ) work studies how cultural images of Jews have permeated the interaction between American Jewish men and women. Women’s religious identity received attention from Marion Kaplan’s work on Jews in imperial Germany; more contemporary work on Jewish identity by Bethamie Horowitz has identified different “journeys” taken by both men and women. Several works have provided ethnographic insights into women’s role in Orthodox Judaism, beginning with M. Danziger’s general study of the revival of Orthodox Judaism (1989), and including Davidman’s and Kaufman’s respective studies of newly Orthodox women.

Israeli women have also been the focus of sociological study, Susan Starr Sered and Tamar El-Or have provided especially interesting studies of Israeli religious women; Harriet Hartman’s (1948– ) dissertation discussed ethnic differences among Israeli women; and Deborah Bernstein’s
(1956– ) research focuses on Jewish women’s roles in pre-state Israel.

While women have been active in Israeli sociology practically since the founding of the first Sociology Department at Hebrew University in 1948, they are underrepresented in leadership and professional positions. Rivka Bar-Yosef, the first student to complete Ph.D. Sociology studies at the Hebrew University, became the third department head. After Bar-Yosef, it took 30 years for another woman to chair department (Amalya Oliver), and only one woman, Judith Shuval (1926– ), has been president of the Israel Sociological Society.

The work of Israeli women sociologists has been diverse, including work on immigration and healthcare (Judith Shuval), Israeli bureaucracy and sociolinguistics (Brenda Danet (1937– ), work and occupations (Dafna Izraeli (1937–2003), education (Rina Shapira (1932– ), and the kibbutz (Yonina Talmon (1923–1966), Michal Galgi (1944– )).

【Harriet Hartman (2nd ed.)】

**SOCOH OR SOCO (Sokkho).** 

ישולו, שאלת

1. Town in the Shephelah of Judah, situated between Adullam and Azekah (Josh. 15:35). The Philistines camped between Socoh and Azekah prior to the encounter of David and Goliath (1 Sam. 17:1). Rehoboam fortified the place (11 Chron. 11:7). It was one of the cities occupied temporarily by the Philistines in the time of Ahaz (11 Chron. 28:18). In that period it served as an administrative or storage center, being one of the four cities named on the la-melekh stamps of the Judean monarchy. In Byzantine times, the name applied to a double village (Eusebius, Onom. 156:18 ff.), which was still a center for pottery manufacture. The scholar “Antigonos of Sokho (Avot 1:3) was probably from this village or from the Judean town listed. It is identified with the twin mounds of Khirbat Shuwayka (occupied in the Iron Age), overlooking Wadi-al-Samt (the valley of Elah), E. of Azekah.

2. Judean town, situated in the southernmost mountain district (Josh. 15:48). It is the present-day Khirbat Shuwayka, W. of Eshtemoa.

3. Canaanite town in the Sharon near Yaham, mentioned in the inscriptions of Thutmose III (no. 67), Amenhotep II (15th century B.C.E.) and Shishak (no. 41; c. 920 B.C.E.). It was included in Solomon’s third district (1 Kings 4:10). In talmudic times it was a Samaritan settlement and under the crusaders it was known as Casal Soque. It is the present-day Khirbat Shuwaykat al-Ra’a, north of Tulkarm.

**SODERBERGH, STEVEN (1963– ),** U.S. film director. Soderbergh was born in Atlanta, Georgia, the second of six children. The family moved to Baton Rouge, Louisiana, where Peter Soderbergh, his father, was a professor and dean of Louisiana State University’s College of Education. As a teenager, Soderbergh enrolled in film classes at Louisiana State. In 1978, at age 15, he made a short film titled Janitor. After graduation from high school in 1980, he skipped college and went directly to Hollywood, where he worked as a freelance film editor. He wrote scripts and made short films, including a documentary about the rock group Yes. Soderbergh was asked to direct a concert film for the band, Yes: 9012 Live (1986), which earned him a Grammy nomination. His next project, the Southern drama sex, lies and videotape (1989), debuted at the Sundance Film Festival and earned Soderbergh the Palm d’Or at the Cannes Film Festival and an Oscar nod for best original screenplay; the film would go on to earn $100 million worldwide. Soderbergh followed his acclaimed debut with Kafka (1991), King of the Hill (1993), and The Underneath (1995). After Soderbergh filmed the Spalding Gray performance piece, Gray’s Anatomy (1996), and the low-budget Schizopolis (1996), he returned to the mainstream with Elmore Leonard’s Out of Sight (1998), starring George Clooney and Jennifer Lopez. Following the Terence Stamp–Peter Fonda thriller The Limey (1999), Soderbergh received Academy Award nominations for his Julia Roberts vehicle Erin Brockovich (2000) and the illegal drug trade thriller Traffic (2000); it was the first time a director had received a double nomination since 1938, and Soderbergh took the Oscar for Traffic. In 2000, Soderbergh and Clooney founded their production company, Section Eight. Soderbergh’s next film was an all-star, big-budget remake of the Rat Pack film Ocean’s Eleven (2001), which he juxtaposed with the remake of the Russian art film Solaris (2002) and the more independent-minded Full Frontal (2002), an unofficial sequel to sex, lies and videotape for which stars like Roberts, Clooney, and Brad Pitt agreed to work union scale. In March 2002, Soderbergh was elected the first vice president of the Directors Guild of America. He married a second time to model and TV host Jules Asner in 2003, and one year later reunited the Ocean’s Eleven cast for the sequel Ocean’s Twelve.

【Adam Wills (2nd ed.)】

**SODOM (modern Sedom) AND GOMORRAH (Heb. שׂוֹם וַעֲמֹרָה).** two cities in the “plain” of the Jordan, usually men-
tioned together and sometimes with Admah, Zeboim, and Bela, which is identified with Zoar. The first biblical reference to them is in the account of the boundaries of Canaan (Gen. 10:19). They were situated in the well-watered Jordan Valley, east of Beth-El (13:10–11). Lot, Abraham’s nephew, chose to dwell in Sodom; he was captured in the campaign of the four kings led by Amraphel of Shinar against the five kings of the plain (ch. 14), in which the forces of Sodom and Gomorrah were defeated and their people and chattels taken as booty, until eventually rescued by Abraham. The story of the fall of Sodom and Gomorrah is related in Genesis 18–19: God decided to destroy them because of the grievous sins of their inhabitants. In spite of Abraham’s pleas not to punish the just with the wicked, the judgment was executed, as not even ten just men could be found there. The visit of the two angels to Lot and the inhospitable behavior of the people of Sodom occurred on the occasion of the destruction. Finally, Lot and his family were led out of Sodom, and the city, together with three of the others in the plain, only Zoar being saved, was destroyed by a rain of brimstones and fire until “the smoke of the country went up as the smoke of a furnace.” In later books of the Bible, the fall of Sodom and Gomorrah is cited as an example of God’s wrath and as a warning of future destruction (Deut. 29:22; Isa. 13:19; Amos 4:11). Jerusalem is compared to them (Jer. 23:14; Ezek. 16:49 ff.) as are Edom (Jer. 49:18), Babylon (Jer. 50:40), and Moab (Zeph. 2:9). In all these cases, their names indicate the extent of the destruction to come as punishment for a people’s sins.

The geographical and historical problems connected with the fate of these two cities are related to the tectonic nature of the Dead Sea. The creation of the Jordan rift certainly antedates Abraham, but local upheavals are by no means excluded. Sodom and Gomorrah are usually assumed to be beneath the southern part of the Dead Sea, south of the lisan, the peninsula jutting into the sea, which is shallow and more recent than the rest of the depression. Local tradition, as represented in the Arabic name of the salt mountain, Jebel al-Sudūm or mountain of Sodom, favors the southern site. Some scholars, however, have looked for the two cities at the northern end of the Dead Sea or near Bāb al-Dhrā, east of the lisan. No clear archaeological evidence has yet been produced in favor of either theory, although the location of Zoar indicates that ancient tradition placed the five cities at the southern end of the Dead Sea.

[Michael Avi-Yonah]

In the Aggadah

Sodom was the incarnation of wickedness, but wickedness of a special type. It was an evil-mindedness and hard-heartedness which consisted of the inhabitants basing their actions on the strict letter of the law. For instance, when a stranger passed through their territory, he was besieged and robbed of whatever he possessed. However, each Sodomite was careful to take only a trifle, so that when the victim remonstrated with the thieves each would claim that he had taken a mere pittance (less than a perutah) which was not worth discussion. After a while, they decided entirely to discourage wayfarers whom they felt were only coming to deplete their wealth, which God had lavished upon them to the extent that even their wheat contained gold dust (Job 28:6; Sanh. 109a). If a lost soul did occasionally wander into Sodom, they fulfilled the dictates of hospitality by giving lodging to the stranger. They had standard-sized beds on which travelers slept. If the stranger was too long for the bed, they shortened him by lopping off his feet – if too short, they stretched him out (a parallel to the Procrustean bed of Greek mythology). If a poor man happened to come there, every resident gave him charity, bricks of gold and silver, upon which he had written his name, but no bread was given to him. When he died of starvation, each came and took his gold and silver back.

There were four judges in Sodom who meted out justice in a unique fashion. Their names were Shakrai ("liar"), Shakrai ("awful liar"), Zayyafi ("forger"), and Mazle Dina ("perverter of justice"). If a man assaulted his neighbor, the judges required the victim to pay the assailant a medical fee for the "bleeding" he received. The judges also ruled that a man had to pay eight zuzim for crossing through the waters of a river although the fee was only four zuzim when he crossed by ferry. On another occasion they ruled in favor of a Sodomite who stole a carpet from a traveler, and insisted that the stranger had only dreamed that he possessed it. In addition, the outsider was charged three pieces of silver for having his dream interpreted. If a man assaulted his neighbor’s wife and caused her to miscarry, the judges ruled that the woman had to be given to the assailant so she would become pregnant from him to compensate for the lost child (Sanh. 109a–b; Sefer ha-Yashar, Va-Yera). Charity was forbidden on penalty of death, since it was felt that its practice encouraged the proliferation of beggars. Paltit, the daughter of Lot, secretly sustained a wandering beggar. The Sodomites could not understand why the beggar did not perish and they suspected that he was being given food in secret. Three men concealed themselves near the beggar and Paltit was caught in the act of giving him sustenance. She was put to death by being burned upon a pyre. The doom of Sodom was sealed when a young maiden was caught giving bread, which she had hidden in her pitcher, to a poor man. Once her crime became known, they daubed her with honey and placed her on the parapet of the wall and the bees came and consumed her. The cries of the unfortunate girl finally made God resolve to destroy these sinners (Sanh. 109b; Sefer ha-Yashar, Va-Yera; Gen. R. 49:6). God destroyed the city at dawn of the 16th day of Nisan when both the moon and sun were in the heavens, since there were both moon and sun worshipers in Sodom (Gen. R. 50:12).

This attitude of firmly sticking to the letter of the law is reflected in the halakhah of Middat Sedom, “acting in the manner of Sodom,” (Ket. 103a; BB 12b) about a man who refuses to confer a benefit which costs him nothing (BB 12b). The meaning of the sin of Sodom perpetuated in the English language by applying the word sodomy to homosexuality,
though based on the Bible (Gen. 19:5–8), is not overstressed in the Midrash.

[Aaron Rothkoff]

**Modern Times**

In the 20th century the name Sedom was given to the site at the northwestern corner of the Dead Sea and at the foot of the huge salt plug of Mount Sodom (see *Land of Israel, Physiography*), where the auxiliary installations of the Palestine Potash Company were set up in 1937. Lying 1,295 ft. (395 m.) below sea level, Sedom has the world’s lowest-situated industrial plant. The Palestine Potash Co. was established in 1929, and its Kallia plant, at the northern end of the Dead Sea, began production of potash and bromides in 1932. The opening of the Sedom branch works was necessitated by the lack of room for evaporation pans at Kallia. The carnallite extracted at Sedom was ferried over the Dead Sea north to Kallia, where, during World War II, potash production reached an approximate 100,000 tons annually, thus supplying about half of Great Britain’s requirements at the time. The relatively small quantities of bromide also constituted an important contribution to the Allied war effort. The 1947 UN partition plan provided for the inclusion of Sedom and the Dead Sea shore from there north to En-Gedi in the proposed Jewish state. During the Israel War of Independence, the Sedom Works, accessible only by boat, were completely cut off for many months. Reinforced by the workers and settlers from Kallia and *Bet ha-Aravah, who had to evacuate those two places in May 1948 and could only be transferred to Sedom, the core of laborers held out under severe hunger and thirst until contact with the rest of Israel was renewed in “Operation Lot” (December, 1948). The Kallia works remained in Jordanian hands and were completelyrazed by the Arab Legion; thus the renewal of production at Sedom had to be deferred until 1954, after the Beersheba-Sedom road was built. In the intervening years, existing machinery had become useless through corrosion, and a new plant had to be built. In 1955, the Bromide Company was founded, and it set up its factory near the Sedom Potash Works. Soon after, both enterprises were integrated into the Dead Sea Works. In the initial years, however, output at both plants did not progress satisfactorily, because only part of the evaporation pans had remained accessible (the rest were included in Jordanian territory) and the labor force was unstable. It was therefore decided to replace the system of having laborers live at the spot in temporary quarters and then take home leave for seven to ten days by having a labor force composed only of inhabitants of *Dimonah (and later also *Arad), who could go home every evening. Only in 1957/58 was the previous potash output of 100,000 tons again attained, 151,000 tons were produced in 1962/63 and 188,000 tons in 1963/64. Two steps led to a considerable expansion: the turning of most of the Israel half of the southern Dead Sea basin, an area of 50 sq. mi. (130 sq. km.), into evaporation pans through the construction of a huge containing dike and 25 mi. (40 km.) of other dikes; and the construction in 1964 of a second potash plant which used the hot leaching instead of the cold flotation method (for technical details see *Israel, State of: Economic Affairs, Mineral Resources). In 1964/65, potash output reached 320,000 tons and in 1970 approached 1,000,000 tons after a third plant with a 400,000 tons annual capacity was begun in 1969. From 1970, potash production and exports regained their profitability after a price slump on the world market was overcome. In 2001, potash production stood at 1.77 million tons. Bromine output rose from 5,120 tons in 1964/65 to 206,000 tons in 2001. Another plant at Sedom produces table salt of high purity and industrial salts. The simultaneous progressive mechanization and introduction of electronic devices made feasible the reduction of the labor force.

[Shlomo Hasson]

**In the Arts**

The interconnected biblical accounts of Lot, the nephew of Abraham, and the wicked “Cities of the Plain” have inspired a number of writers and artists, but relatively few composers. One of the rare medieval treatments in literature is the English mystery play, *Histories of Lot and Abraham* (in Ms). Thereafter interest waned until the late 16th century with the publication of an anonymous English ballad, *Of the Horrible and Woeful Destruction of Sodome and Gomorrha* (London, 1576). This was followed by *Conflagratio Sodomae* (1607), a five-act neo-Latin tragedy by Andreas Saurius, who also published a German version of the drama (Strasbourg, 1607); and G. Lesley’s English verse play, *Fire and Brimstone; or the Destruction of Sodom* (London, 1675). Some of the most significant treatments of the theme have been written by 20th-century authors. Perhaps the most brilliant – and certainly the most disturbing – dramatic interpretation of the subject was Jean Giraudoux’s *Sodome et Gomorrhe* (1943), first staged in 1946. Here the French playwright broadened the sweep of the original account and reduced the biblical quorum of ten righteous persons needed to preserve the cities from their overthrow to a single couple, whose inability to maintain normal sexual harmony results in the final catastrophe. Other 20th-century treatments include Robert Brendel’s German tale, *Die grosse Hure* (1920); Maria Ley-Piscator’s novel, *Lot’s Wife* (1954); and Nikos Kazantzakis’ Greek drama, *Sodhoma kye Ghomorra* (1956), which attempts to establish a parallel between the biblical past and the menacing present.

In art, the chief episodes treated are Lot’s flight from Sodom and his incestuous relationship with his daughters. The flight from Sodom (Gen. 19:16ff., 29) is a favorite choice of artists, the burning city (Gen. 19:24ff.) often being shown in the background, although (unlike the Flood) it seldom formed a subject in itself. The transformation of Lot’s wife into a pillar of salt (Gen. 19:26) was sometimes also incorporated in the flight. The pillar occasionally appears as a column with the head of Lot’s wife as a capital and “the man who returns to sin is hardened like a rock and is licked by infernal wild beasts” (*Speculum Humanae Salvationis*). The subject is found in the
sixth-century Vienna Genesis and in the 12th-century mosaics at Monreale. It figures in medieval carvings, stained glass, and manuscripts, including the 13th-century St. Louis Psalter (Bibliothèque Nationale) and Sarajevo *Haggadah, where the burning of Sodom and the transformation of Lot’s wife appear as separate episodes. In the Renaissance, the subject appears in a fresco by Benozzo Gozzoli in the Campo Santo, Pisa; in the Raphael Loggia in the Vatican; and in a painting by Paolo Veronese in the Louvre. There is also a painting of the subject (Kress Collection, National Gallery of Art, Washington) attributed to Duerer. The subject was later treated in paintings by Rubens (Louvre) and Guido Reni (National Gallery, London). “Rembrandt made a pen-and-ink drawing of Lot’s departure. The salacious theme of the elderly, drunken Lot making love to his daughters (Gen. 19:30–38) appealed especially to German, Dutch, and Flemish artists of the Renaissance, and to Italian artists of the 17th century. In many pictures, the elder daughter is shown sitting on his knees, while the younger plies him with wine. The subject appears in the Vienna Genesis and in a few other medieval sources; and in paintings by Lucas Cranach (Pinakothek, Munich), Albrecht Altdorfer and Quentin Massys in the Vienna Museum, and Lucas van Leyden (Louvre). The last artist also made a copper engraving of the subject. Other treatments include that by Rubens in the Louvre, a pen-and-ink sketch by Rembrandt, paintings by David Teniers (Pinakothek, Munich), Simon Vouet (Strasbourg Museum) and by Italian artists of the period, including Guercino-Goya and Gustave Courbet who also painted the subject.

In Music

Only slight interest in the subject has been displayed in this field. Beethoven’s teacher, Simon Sechter, wrote a two-part oratorio, Sodom’s Untergang (1840), which was apparently never performed. Other settings are few and forgotten. For Giraudoux’ drama, Sodome et Gomorrhe (1943), the incidental music was written by Arthur Honegger.

[Bathaia Bayer]

SOEST, town in Germany. The Jewish settlement in Soest is continuous from its beginning in the 13th century until the Holocaust. Jews must have been present in the city during the first half of the 13th century, since a mid-13th century source attests that Jews from Soest were house owners in Cologne. At the beginning of the 14th century, Soest Jews paid a sum of eight protection money” to the archbishop of Cologne as Schutzgeld (“protection money”). From 1330 onward jurisdiction over the Jews passed to the city, which did not allow more than two Jewish families to reside there. Among the Jews of Soest in the Middle Ages were a number of municipal physicians, a very unusual phenomenon for Westphalian Jews at the time. Among these were Master Solomon (1510) and Benedictus (1540). Another remarkable event was the conversion to Judaism of a scholar and canon named Robert, who died in Frankfurt in 1298.

From the beginning of Prussian rule, in the mid-17th century, the Jews of Soest belonged to the duchy of Mark. A family named Stern moved from Frankfurt and around 1700 settled in Soest, where their descendants lived until the Holocaust. Even in the 18th century the number of Jewish families was restricted to two. Only after Soest was included in the grand duchy of Berg (1807–14) did the number increase (70 people in 1822). At that time a synagogue was built, which was expanded in 1882. In addition to the medieval cemetery, a new one was purchased in 1832. Under the influence of the Obervorsteher (“senior warden”), L. Hellwitz, changes inspired by the concepts of “radical Reform” were introduced into the liturgy during the first half of the 19th century. The private Jewish primary school, founded in 1828, was converted into a municipal school in 1859. Due to the inclusion of nearby communities, the membership of the Soest community rose to 323 Jews by 1880. After that there was a steady decline: in 1933 there were 162 Jews in Soest, while in 1939 only 64 Jews remained. Deportations to concentration camps brought the community to an end. The four Jews residing there in 1971 belonged to the community of *Paderborn. In 2005, eight Jews from Soest were affiliated with the Paderborn Jewish community. There are commemorative plaques at the Jewish cemetery and the site of the former synagogue.

[Bernhard Brilling]

SOFAEER, ABRAHAM (1896–1988), British actor. Born in Rangoon, Burma, Sofaeer was a schoolmaster before going on the London stage in 1921. He toured in Shakespeare for four years and subsequently appeared in Jewish roles such as Cohen in G.B. Stern’s *The Matriarch* (London and New York, 1930), the title role in Schnitzler’s *Professor Bernhardi* (1936), Disraeli in Laurence Housman’s *Victoria Regina* (which he performed 750 times in the U.S. starting in 1936), and Samson in Milton’s *Samson Agonistes* (1951). In the 1930s and 1940s Sofaeer appeared in many British films and, from about 1950 until 1970, in more than 20 Hollywood films, always in supporting roles.

740 ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 18

From 1969 to 1976 Sofaer was professor of law at Columbia University School of Law. In 1975 and 1976 he served as a New York State administrative judge, and was hearing officer for the first major environmental action involving PCBs, the *New York Department of Environmental Conservation v. General Electric Company*, concerning the discharge of PCBs into the Hudson River. Sofaer was appointed U.S. district judge for the Southern District of New York in 1979. He presided over several high-profile cases, including the libel action against *Time* magazine by Israeli general Ariel Sharon, in which Sharon prevailed.

In 1985 Sofaer became legal adviser to the U.S. Department of State. He was the principal negotiator in international matters, including the dispute between Egypt and Israel over Taba; the U.S. claim against Iraq for its attack on the USS *Stark*; claims against Chile for the assassination of diplomat Orlando Letelier; sovereign immunity in Soviet-U.S. relations; the Iran-U.S. Claims Tribunal; and extradition and mutual legal assistance treaties. In 1989 he received the Distinguished Service Award, the highest State Department award for a non-civil servant.

After leaving the Department of State in 1990, Sofaer entered private practice as a partner in the firm of Hughes, Hubbard, and Reed in Washington, D.C. Two years later he was retained to represent Libya in matters pertaining to the 1988 bombing of Pan Am Flight 103 over Lockerbie, Scotland. Though Sofaer maintained that his role was to seek "consensual resolutions" and that during his tenure at the State Department the investigation of the bombing was focused on Iran, not Libya, he was nevertheless charged with violating Rule 1.11 of the Rules of Professional Conduct by the District of Columbia Bar. Rule 1.11 prohibits a lawyer formerly employed by the federal government from working on a matter in which the lawyer participated while in government employ. Sofaer and his firm subsequently dropped the case. In an appeal of the charges, a three-judge panel of the D.C. Court of Appeals ruled in the bar's favor.

In 1994 Sofaer was named the first George P. Shultz Distinguished Scholar and Senior Fellow at the Hoover Institution of Stanford University. The focus of his work as a legal scholar has included the separation of powers in the American system of government, international law, terrorism, national security, and conflicts in the Middle East. He was a member of the American Bar Association, the American Law Insti-

---

**SOFER** (Schreiber), rabbinical family, descendants of Moses *Sofer, Abraham Samuel Benjamin Wolf* (1815–1871), eldest son of Moses Sofer, succeeded his father on his death in 1839 as rabbi and *rosh yeshivah* of Pressburg. During the 32 years he occupied this post, he continued his father's policies in all matters. He was one of the active organizers of Hungarian Orthodoxy for the Jewish Congress which took place in 1869, and subsequently carried on his activity in this sphere (see *Hungary*). Though not at first an extremist, he later joined their ranks and finally gave the religious approval of the Sofer dynasty to the schism in Hungarian Jewry. He published responsa and expositions of the Torah under the title *Ketav Sofer* (1873–1938).

His brother *Simhah Bunem Sofer* (1842–1906), son and successor of Abraham Wolf, continued to maintain the large yeshivah, to organize Orthodoxy, and to accentuate the differences between it and other sectors of Hungarian Jewry. For this purpose, he strengthened relations with hasidic rabbis in Hungary. He expressed his opposition to the *Mizrachi* conference which took

---

[Dorothy Bauhoff (2nd ed.)]
place in Pressburg in 1904. His publications are: Shevet Sofer, responsa (1909) and novellae on talmudic tractates (1938–56); and Shaarei Simhah, on the Pentateuch (1923).

Simeon (1850–1944), son of Abraham Wolf, founded in 1881 the well-known yeshivah in Erlau (Hung., Eger), where he was rabbi, and taught there until the day he was taken to Auschwitz extermination camp where he perished. He had been in favor of agricultural settlement in Erez Israel. He published the responsa, Hitorerut Teshuvah (4 vols., 1912–34).

Solomon Sofer (1833–1930), son of Abraham Wolf, was a distinguished preacher and writer. He is the author of Hut ha-Meshullash (1887), biographies of famous members of the family; and edited the Iggerot Soferim (1928), containing letters of his family, the Sofers and the Egers. He served as rabbi of Beregszasz until his death.

Akiva Sofer (1878–1959), son of Simhah Sofer, succeeded his father as rabbi and rosh yeshivah of Pressburg. In 1940 he settled in Israel where he reestablished the yeshivah of Pressburg (Jerusalem), acting as its head until his death. His publications are Da’at Sofer (1963) on Torah, and responsa (2 vols., 1965).

Abraham Sofer (Schreiber; 1897–), son of Simeon Sofer, served as rabbi in many communities in Greece and in Italy. He immigrated to Erez Israel in 1939, settling in Jerusalem. From 1948 to 1966 he was a teacher at the Jewish Theological Seminary of New York. As a fruitful rabbinic author, his main activity was preparing the works of Menahem *Meiri, as well as of other rishonim for publication.

BIBLIOGRAPHY: Solomon Sofer, Ha-Hut ha-Meshullash (1887); idem, Iggerot Soferim (1928); Simeon Sofer, Mikhtav Sofer, ed. by J.N. Stern (1952), 3–86; A.S.B. Sofer, Ketov Zut Zikkaron (1957); Kressel, Leksikon, 2 (1967), 481.

[Moshe Shraga Samet]

SOFER, HAYYIM BEN MORDECAI EPHRAIM FISCHEL

(1821–1886), Hungarian rabbi. An outstanding pupil of Hatam Sofer in Pressburg and of Meir Eisenstaedter in Ungvar, Hayyim was appointed head of the yeshivah at Mattersdorf in 1844. He served as rabbi of Győmrő in 1852, of Sajoszentpéter in 1859, and of Munkacs in 1867. Persecuted by the Hasidim despite his religious extremism, he left Munkacs in 1880 and was appointed the chief rabbi of the Orthodox community in Pest. He was one of the leading extreme Orthodox rabbis in Hungary, a signatory of “the infamous excommunication” of the maskilim in Michalovce, and a central figure of the Shomerei ha-Dat organization. He demanded that adherents of the Reform movement be excommunicated and that their sons be refused circumcision.

He was the author of the following works: Peles Hayyim (1854), novellae on the first chapter of Gittin; Ma’aneh Hayyim (1879–85), responsa arranged according to the order of the Shulḥan Arukh; Sha’arei Hayyim (1869), admonitions against the Reformers; Kol Sofer (2 pts., 1881–82), on the Mishnah; and Sha’arei Hayyim (1892), a commentary on Psalms.

[Itzhak Alfassi]

SOFER, MOSES (known as Hatam Sofer; 1762–1839), rabbi, halakhic authority, and leader of Orthodox Jewry. Sofer was born in Frankfurt and his two most important teachers there were Phinehas *Horowitz and Nathan *Adler. When, as a result of the opposition to his innovations and departure from accepted custom, Adler was forced to leave Frankfurt, Sofer, his loyal disciple, then 19 years of age, accompanied him on his wanderings. Although Sofer never returned to his native town, he was always proud of it, and used to sign himself “Moses ha-Katan [the insignificant] of Frankfurt on the Main.” He served first as rabbi of Dresnitz (Moravia) and of Mattersdorf, and in 1806 was appointed rabbi of Pressburg, at that time the most important community in Hungary, where he remained for the rest of his life. His appointment to this high office came as a result of the reputation he had acquired by virtue of his outstanding scholarship, moral character, talent and leadership, and a mystical religious fervor which he had acquired under the influence of Adler. There already existed in Pressburg an appreciable minority of maskilim who unsuccessfully opposed his appointment. However, the opposition was not completely silenced, and Moses Sofer did not have a tranquil time.

During his 33 years there Sofer founded his famous yeshivah, the largest since the Babylonian yeshivot, and made it the center from which to organize Orthodox Jewry in its struggle against the Reform movement. Despite the expansion of his yeshivah and his great influence, which spread far and wide, he was continuously conscious of the growing tension between the traditionalists and the groups which sought a more liberal interpretation of Judaism in order to come to terms with the “spirit of the times.” His qualities enabled Sofer to become the undisputed religious authority in his own town. As a result, unlike the case in other large European cities, the innovators were not triumphant. He declared total war with no concessions in the battle against modernity. Though it gave him no pleasure to engage in conflict (“There are no quarrels without wounds.” Response, pt. 6, no. 35), he waged the battle of Orthodoxy vigorously, resourcefully, and with diplomatic skill. He adopted the long-range plan of strengthening educational and communal institutions and disseminating Torah study (“It is a time to act for the Lord, increase your Torah,” ethical testament, see below); the appointment of his best disciples to rabbinic posts and the strengthening in general of the status of the rabbinate; the formation of a joint front with the hasidic movement; and the winning of the confidence of the government in the loyalty of Orthodox Jewry. Nevertheless, when the need arose he did not abstain from also utilizing the methods of propaganda and even demagoguery, by witty epigrams and slogans with which he mercilessly belabored his opponents. These methods were decisive for the Jews of Central Europe, sharpening the division and creating an irreparable
breach between the Orthodox and the non-Orthodox sectors. Although he was one of the few rabbis who foresaw this consequence, he nevertheless deliberately adopted this policy. Among the many pungent and pointed epigrams which Sofer coined, and which became the slogans of the Orthodox, the best known is his application of the talmudic dictum "Hadash asur min ha-Torah" to mean that any innovation, even though from the point of view of halakhah it is unimportant, is strictly forbidden simply because it is an innovation.

This extreme view had its source in his profound and unstinted admiration for the classic rabbinic literature to its most minute detail, including every hallowed custom, as it existed in the German-Polish way of life at the end of the 18th century. He was convinced of the inner perfection of that way of life, and of its essential superiority to the prevalent culture, despite the tremendous resurgence of this culture and its massive achievements. Since modernism by its very nature nurtured within itself a distinct threat to every type of traditional institution, he instinctively shrank from it a priori. As a result he obstinately opposed the new type of school founded by the maskilim in particular and the doctrine of Moses *Mendelssohn in general, although in principle he was not opposed to secular studies where they were undertaken purely for the needs of the traditional way of life or for the sake of livelihood. Similarly he dissociated himself from the battle for emancipation, not merely because he feared the heavy price that would be exacted for it at the cost of tradition, but because he viewed the very aspiration for equality as a sign of dissatisfaction with the traditional way of life of the community and a desire for partial assimilation with gentile culture. He finally brought to an end the debate which was being hotly waged as to whether the Shulhan Arukh was still to be regarded as the final authoritative code. The principle of complete submission to the Shulhan Arukh became one of the fundamental doctrines of Orthodoxy. In addition he ruled that from then onward no distinction existed from the point of view of their religious importance between an insignificant custom and an explicit biblical prohibition. Sofer's attitude made him the undisputed leader of the rabbis of Europe who organized themselves between 1817 and 1821 to frustrate the first efforts of the Reform movement in Berlin, Hamburg, and Vienna. From this struggle which, as a result of his direction, ended in partial success, Sofer emerged as the recognized leader of Orthodoxy, a status which he maintained until the end of his life.

Sofer's first wife died childless in 1812. Some months later he married the daughter of Akiva *Eger, later rabbi of Posen, who was considered the greatest talmudist of his time. Their children formed one of the best-known rabbinic families (see *Sofer family). In his will, Sofer appointed his eldest son, Abraham Samuel Benjamin Wolf, to succeed him as rosh yeshivah. Shortly before his death he indicated to the community his desire that Abraham be appointed his successor in the rabbinate during his own lifetime. Although his son was only 24 at the time, Moses Sofer's request was granted. Thenceforth the Pressburg community became the heritage of the Sofer family dynasty. Simeon, his second son, was appointed rabbi of Cracow where he founded the Orthodox organization, Mahzike Hadas. Solomon Zalman Spitzer, his son-in-law, was rabbi of the Orthodox congregation in Vienna.

Another manner in which he wielded great influence was through his voluminous writing. During his lifetime hardly anything was published. Immediately after his death, however, the family began to publish his writings. They comprise seven volumes of responsa (1855–1912; *Hatam Sofer), sermons (2 vols. 1829), novellae on the Talmud, commentaries on the Torah, letters, poems, and a diary. They all bear the imprint of his Orthodox trend. His ethical testament, of which many editions have been published, is especially worthy of mention. It is wholly devoted to the battle for religion. *Ha-Lev ha-Ivri (1864) of Akiva Joseph Schlesinger, a book popular among the ultra-Orthodox, of which many editions have appeared (first ed. Vienna, n.d., 2nd 1863), is written in the form of a commentary on this will. Moses Sofer and his sons and disciples played an important part in the growth of the Jewish settlement in Ereẓ Israel in the 19th century until the Zionist immigration. He also made great use of nationalist sentiment in his campaign against the Haskalah and Reform. He fought for the Hebrew language and for the idea of the return to Zion.

[Moše Shraga Samet]

SOFERIM (Heb. סופרים; “scribes”). Although the word soferim is identical with the biblical word translated scribes and dealt with under that heading, during the Second Temple period the word came to denote a specific class of scholars. The exact meaning and delineation of the group involved is a matter of controversy. According to Nachman Krochmal (Morēh Nevuḵeit ha-Zeman, section 11), Frankel (Mishnah pp. 3ff.), Weiss (Dor, 1 (19044), ch. 6ff.), and others, the era of the soferim of the Talmud commenced in the time of Ezra and continued until the time of Simeon the Just, who was the last of the men of the Great Synagogue. These scribes, whose names are not known and who were active during the time of the Persian rule, laid the foundations of the "Oral Law: they instituted regulations in the social and religious spheres, explained to the people the Torah and its precepts distinctly and gave the sense (Neh. 8:8). They taught the halakhot and the traditions in close connection with the study of the Bible and deduced new halakhot through the interpretation of the written text. They read the Written Law, interpreted its content, and integrated it into the traditional halakhot as well as the laws that had been derived from it. As a result of the activities of the soferim the Torah ceased to be the heritage of the priests and levites alone. From among the many pupils they educated, scholars arose from all classes.
Several of these scholars considered the soferim also to be the founders and members of the Great Synagogue, and attribute to the period between Ezra the Scribe and Simeon the Just all those traditions and halakhah designated as mikra soferim ("scribal reading"), ittur soferim ("scribal embellishment," Ned. 37b), tikunik soferim ("scribal emendation," Gen. R. 49:7; Theodor-Albeck p. 505), dikdukei soferim ("details of the scribes," Suk. 28a), and divrei soferim ("the words of the scribes," Sanh. 88b). They find support for their views in the talmudic statement, "The early scholars were called soferim because they used to count [sofer also means 'to count'] all the letters of the Torah. Thus they said that the vav in gaḥon (Lev. 11:42) marks the middle letter of the Torah" (Kid. 30a); i.e., the scribes scrutinized and were meticulous with the text of the Bible and its transmission. Similarly: "Why are they called soferim? Because they enumerated the laws according to numbers [sfurot], e.g., five may not separate terumah; five are obliged to take "hallah," etc. (T, Shek. 512). The passage which follows combines two meanings: that the scribes counted the letters of the Bible and taught the halakhah or mishnayot in numerical form (cf. also Hag. 15b, Sanh. 106b). Kaufmann in his Toledot ha-Emunah ha-Yisre'elit (vol. 4 pt. 1, 276ff. and 481ff.), however, has proved beyond question that there is no evidence in the Talmuds for an era of the soferim, and talmudic tradition does not attribute a single law to this era. The first Mishnah of Avot has no reference whatsoever to soferim or to generations of soferim. Though the Talmud does mention regulations by Ezra and by the men of the Great Synagogue, it does not attribute any decrees or halakhah to scribes between Ezra and the tannaitic era. The word sofer in both talmudic and later literature is used as a general designation for Torah scholars and copyists from various eras and of different categories. In Ben Sira (39:1–11) the honorable status of the scribe is described. In the Apocrypha and in the New Testament, scribes appear side by side with other notables (see 1 Macc. 7:12–13; Test. Patr. Levi 8:17; Jos. Ant. 12:142; Luke 11:42–52; etc.). The designation scribes is equivalent to sages and elders, but in several places it alludes to holders of offices in the Temple and in the courts. The meaning of the term varies similarly in talmudic literature. Thus, from the passage in Sotah (15a) where Rabbah Gamaliel said to the scholars, "Scribes! permit me and I shall expound it allegorically like a jewel," scribes are identical with the scholars. In another passage, however, R. Eliezer the Great says: "Since the day the Temple was destroyed, the scholars began to be like scribes, and the scribes like "hazzanim," etc. (Sot. 9:15), and from this it seems that the status of the scribes was regarded as being lower than that of scholars. In Leviticus Rabbah 9:2 (and parallels) the soferim are referred to as teachers of Bible in contrast to mashninim, teachers of the Mishnah. The phrase "the words of the scribes" in the talmudic sources always refers to the statements of earlier scholars of the Oral Law, and can refer to statements from those attributed to Moses to those of the generation immediately preceding the compilation of the Mishnah (cf. e.g., Yev. 2:4 with Yev. 21a; Or. 3:9 with Kid. 38a; Tosef. Ta'an. 2:6; and Maim. Comm. Kel. 17:12). The sages emphasized the need to heed the words of the soferim: "My son! Be more heedful of the words of the soferim than of those of the Written Law[Torah]. For the words of the Torah contain positive and negative injunctions (for the transgression of which there is no death penalty) but whoever transgresses the words of the scribes incurs the penalty of death" (Er. 21b; cf. Tj, Ber. 1:5, 3b). The purpose of stringency was to prevent their doctrines being regarded as of secondary importance (cf. Tosef. Ta'an. 2:6, and parallels); "These are the words of the Torah, and the words of Torah do not need strengthening, but those are the words of the soferim and the words of the soferim require strengthening." They even went so far as to state that God showed Moses the dikdukei Torah and the dikdukei soferim and the innovations which the soferim would introduce in the future (Meg. 19b).

SOFERIM (Heb. סופרים, eng. soferim), one of the "minor tractates printed in the Talmud editions at the end of the order of Nezikin. Its first main division (chs. 1–5) treats the writing of Sifrei Torah. The tosafists call it one of the "outside books" (Pes. 40b s.v. avei). Another of these tractates is Sefer Torah, to which Soferim bears a close relationship. Soferim contains 21 chapters divided into 255 paragraphs, which, like the mishnayot in the Jerusalem Talmud, are called halakhah.

Chapters 1–9 cover writing materials; qualifications required in the writer; language and translation of the Bible and laws governing the mode of writing, particularly in reference to the names of God; sewing and repairing the parchment; preservation of scrolls that have become ritually unfit for use; textual variants; and readings of particular words and passages. Chapters 10–17 include regulations for reading on general and particular occasions; reading of particular passages; requirements of a quorum; some further regulations in writing, particularly the Hagiographa, with special attention to the Book of Esther; benedictions for reading these; qualifications for reading; sanctity of religious writings and appurtenances; tefillin and mezuzot; Torah study; the Haggadah; and readings for festivals and New Moon. Chapters 18–21 address daily and festival psalms and other liturgical matters; observances for the Day of Atonement; prayers for Tishah be-Av; blessings and readings on Hanukkah, and laws in connection therewith; rejoicing in Nisan; Purim observances; and various aggadot.

This division is one of convenience but does not follow the dates of compilation, in which scholars see very much disorder. It is also not regarded as a unity but as a compilation of three distinct works belonging to different dates, with various interpolations. Most scholars regard the work as of Palestinian origin, though it is generally dated about the middle of the eighth century. In various matters the regulations of Soferim are accepted in practice as against the Talmud, e.g., reading
Exodus 32:11–14, 34:1–10 on fasts (17:7), whereas the Mishnah prescribes “the Curses and Blessings” (Lev. 26:3–end). Soferim appeared in English translation in the Soncino minor tracts (1965).

SOFIA, capital of Bulgaria. Jews lived in Sofia from the first centuries of the Christian era under Roman rule. Later they were known as *Romaniots. Their synagogue (“Kahal de los Griegos”; the Greek Synagogue) stood until 1898. When Jews were expelled from Hungary in 1376, some of them came to Sofia. A second wave of Hungarian Jews was brought by Sultan Suleiman the Magnificent, after the short-lived conquest of Buda in 1526. After the expulsion from Bavaria in 1470, Ashkenazi Jews arrived in Sofia, where they established their own community. The refugees from Spain also established a new community. During the 16th century, there were three separate communities – the Romaniot, the Ashkenazi, and the Sephardi. Eventually they amalgamated into a single Sephardi community. Even though the Ashkenazi Jews integrated with the Sephardi Jews, their synagogue was, until in recent times, known as the Kehillat Ashkenazim in order to distinguish it from that of the newer Ashkenazim, who came from Russia, Romania, Hungary, Germany, and Galicia.

During the 16th and 17th centuries, the Jews of Sofia worked as craftsmen and businessmen. The town was a transit center for goods which were sent from Salonika to Bucharest, Belgrade, and other cities. After an abortive rebellion against the Turkish rule, the merchants of *Dubrovnik (Ragusa), who held an important place in the economic life of Sofia, were compelled to cede their position to their Jewish rivals, in whose hands the whole of the commerce became concentrated during the 17th century. At the time the community of Sofia numbered 2,000. When Bulgaria became independent in 1878, the Jews saved the city from pillage and fire. The largest Jewish population of the country was then located in Sofia (according to the official census of 1880, numbering 4,146). Two Jews were appointed to the municipal council. The Jews lived in a quarter which was known as Hagada, situated in the center of the present city. In 1884–85 there were 6,000 Jews in Sofia and in 1920, 16,196. During the Serbo-Bulgarian war in 1885, the community set up a hospital which treated the war casualties. The Jews of the town engaged in commerce, crafts, and brokerage. Three-quarters of them barely earned enough to sustain themselves.

During World War II, in May 1943, an expulsion decree was issued against the Jews of Sofia. At that time they numbered some 25,000. The project to exterminate them, however, was not carried out. After the mass immigration of Bulgarian Jewry to Israel (until 1949), 5,000 Jews remained in Sofia. In 1951 there were 5,259 Jews, in 1964 4,000, and in 2004 around 3,000. (For the postwar period, see also *Bulgaria.)

[Simon Marcus]

**SOISSONS,** town in the Aisne department, N. France. There was a large Jewish community in Soissons by the beginning of the 12th century at the latest. At this time Guibert de Nogent produced his treatise, De incarnatione contra Judaeos, with the aim of severing the good relations between the Jews and Count John I of Soissons. At a later date Count Raoul granted the convent of Notre Dame an annual income of six gold bezants for as long as the Jews remained in the town; they were thus untouched by the expulsion of 1182. The community possessed a synagogue, probably in the center of the Juiverie, which was situated under the castle walls, a first cemetery close to the early enclosure of the town (where an early 13th-century gravestone of one Hannah was found), and a second cemetery near St. Christopher's Gate. Jews lived in many of the villages around Soissons. The medieval community came to an end with the expulsion in 1306. Jewish scholars in the town included the commentator Shemaiah, probably a relative and pupil of Rashi. At the beginning of World War II about 80 Jews lived in Soissons but no community was re-established after the war.

[Bernhard Blumenkranz]

**SOKAL,** town in Lvi district, Ukraine; within Poland until 1772 and between the two world wars. Jews first settled there in the middle of the 16th century. In 1578 the municipality restricted the number of Jews in the town to two families, who were authorized to occupy two houses. In 1609 the Jews reached an agreement with the townsman authorizing them to erect 18 houses and a synagogue, and to acquire land for a cemetery. In 1613 the houses of the Jews were destroyed by a fire which broke out in the town; Sokal was devastated by the Cossacks under *Chmielnicki in 1648. In the 17th and 18th centuries Sokal was among the important communities in the province (galil) of Chelm-Belz within the framework of the Councils of *Lands. A printing press was established there around 1755. During the period of Austrian rule, from 1772 to 1918, the Jews were mainly occupied in small-scale commerce, crafts, and transportation. *Hasidism had considerable influence within the community. The Jewish population numbered 2,408 (36% of the total) in 1880; 3,727 in 1890; 3,778 (41%) in 1900; 4,516 (39%) in 1910; 4,360 (43%) in 1921; and 5,520 in 1931. Between the two world wars, Sokal was within Poland and Zionism played an important role in community life.

[Shimon Leib Kishenboim]
Holocaust Period
After the outbreak of World War II Jewish refugees from Belzec, Krzyżynopol, and from cities in western Poland arrived in Sokolka, and during the period of Soviet rule (1939–41) the Jewish population increased to more than 6,000. The refugees were lodged in synagogues as well as private homes and a special committee was established to aid them. Because of Sokolka’s proximity to the German border, the Jews of the town witnessed the tragedy of the Jews of Chelm and Hrubieszów in November 1939 when they were brought by the Germans to the Bug River, but the Soviet border patrol prevented the survivors of the “death march” from crossing the river to the Soviet side. In the summer of 1940, refugees in Sokolka from western Poland were deported to the Soviet interior. On June 23, 1941, a day after the outbreak of the German-Soviet war, the Germans captured Sokolka. Eight persons were shot the same day. On June 30, 1941, the Ukrainian police killed 200 Jews near a brick factory in the neighborhood of Sokolka. In the winter of 1941 and early in 1942, the Jews were subjected to forced labor, economic restrictions, and physical attacks. On Sept. 17, 1942, an Aktion took place in which 2,000 Jews were deported to the death camp at *Belzec. On Oct. 15, 1942, a ghetto was set up in Sokolka into which more than 5,000 Jews, including Jews from Steniatyn, Radziechow, Lopatyń, Witkow, Tartakow, and Mosty Wielkie were concentrated. The ghetto had only four wells and its inhabitants suffered from a severe water shortage. On Oct. 24–28, 1942, 2,500 Jews from Sokolka were deported to Belzec. On May 27, 1943, a final Aktion took place. The ghetto was liquidated and the town was declared judenrein. Some 30 persons survived in forests and hideouts.

SOKOLKA, town in Białystok province, N.E. Poland; until 1795 within Poland; until 1807 under Prussia; subsequently until 1915 the town belonged to Russia, reverting to Poland after World War I. Jews settled in Sokolka in the latter half of the 17th century. In 1698 they were granted a royal privilege giving them rights to engage in commerce and own property. There were 522 Jewish poll-tax payers in Sokolka and its surroundings in 1765. The Jewish population of the town numbered 1,454 in 1847; 2,651 (52% of the total) in 1897; and 2,821 (46.4%) in 1921. Jews there earned their livelihood from trade in agricultural produce, hides, and crafts. Jewish contractors developed the tanning industry in Sokolka from 1868, which before the outbreak of World War I employed 700 workers. The Jewish workers’ movement began to organize locally in the late 19th century; Zionists began activity in the early 20th century. All Jewish parties were active there between the two world wars. Jews from Sokolka joined the Third Aliyah and helped to found *Kefar Malal in Ereẓ Israel. Jews were occupied in over 80% of the businesses and crafts in the town. The American Jewish Joint Distribution Committee helped to set up a tanning cooperative. Community institutions included schools of the Yavneh, *Tarbut, and CYSHO, a Maccabi sports club, and two libraries.

Dov Rabin

SOKOLOF, PHIL (1921–2004), U.S. health crusader. Sokolof, who was born in Omaha, Nebraska, went into home building after four years with a band as a song-and-dance man. He found a way to produce certain construction components less expensively and started producing them himself. He founded the Phillips Manufacturing Company in 1955 and became a millionaire several times over. But in 1966, after a heart attack, he educated himself to the dangers of high cholesterol and began bombarding food manufacturers and others. His campaign gained ammunition from evidence linking cholesterol with clogged arteries and heart disease. He founded the nonprofit National Heart Savers Association in 1985 and supported free cholesterol screenings around the country. His organization’s tests of cholesterol levels helped to persuade Congress to proclaim a National Know Your Cholesterol Month and to persuade food processors to cut down on the use of highly saturated coconut and palm oils. The foundation was also credited with helping to pass legislation strengthening requirements for listing cholesterol content on food labels. He wrote Add Years to Your Life (2002).

746 ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 18
SOKOLOW, ANNA (1915–2000), U.S. choreographer, teacher, and one of the outstanding figures in American modern dance. She grew up on New York’s Lower East Side and began experimenting while a soloist with the Martha Graham Company (1930–38). Her first group work, Anti-War Cycle, was presented in 1933 by the Workers’ Dance League. As a soloist, she toured Russia in 1934, and her first company, the Dance Unit, gave concerts in the U.S. and Mexico during the 1930s. Under Mexican government auspices, she formed the first Mexican modern dance company, La Paloma Azul. Her work reached an artistic turning point in 1953, when she choreographed Lyric Suite (to music by Alban Berg) in Mexico. It was performed in New York by nine dancers from the New Dance Group, which became her new company. Other works included Rooms (1955), a study of urban loneliness, Dreams (1961), an “indictment of the Nazi concentration camps,” and Déserts (1967). Anna Sokolow made frequent visits to Israel, where she acted as teacher. In 1953 she was invited to Israel to work with the Inbal dance group. Following this, she was invited yearly until the 1990s and choreographed for the major companies in Israel, including “Bat-Sheva and the Kibbutz Dance Company. Her most important contribution was the creation of the Lyric Theater in Tel Aviv (1962) with the best available dancers of the time, thus creating the first professional dance company in Israel. With them she created 11 original works in four programs. Sokolow introduced new performing standards and educated a new generation of dancers who became active in all major Israeli dance companies.

[Marcia B. Siegel / Bina Shiloah (2nd ed.)]

SOKOLOW, NAHUM (1859–1936), Hebrew writer, pioneer in modern Hebrew journalism, and president of the World Zionist Organization. Sokolow was born in Wyszogród, near Plock, Poland, into a family with deep roots in Poland that had produced many rabbis and public figures. He received a fundamental Jewish education and he also acquired a general education. This mixture of Jewish and world culture marked him later in life as one of the few Hebrew authors with a command (both written and oral) of a number of other languages. He also had a command of the treasures of non-Jewish literature and culture, and this contributed to the charm he had for leading personalities of the Western world. After his marriage at the age of 17 he lived in his father-in-law’s house in Makow, and pursued his studies. He began to write in a variety of fields – commentaries on Jewish topics, poetry, stories, plays, scientific articles, etc. His first literary effort was a report from Plock to the Hebrew weekly Ivri Anokhi (1874).

Sokolow continued sending reports to the newspaper Ha-Zefirah (1876) and soon became its regular columnist on scientific affairs, a subject that was close to the heart of the editor, H.Z. *Slonimski. In a short while, Sokolow became one of the paper’s most famous writers. His first book also dealt with the natural sciences, geography and geology (Mazzuket Aref, 1878). At the same time, he developed his writings in other languages (Yiddish, German, and Polish). Finally, Sokolow moved to Warsaw (1880), where his writing took a decisive turn with the publication of the first of a series of articles in Ha-Zefirah entitled “Zofeh le-Veit Yisrael,” which became most popular. The column treated current affairs in a feature-writing (“feuilleton”) style in a rich and sparkling Hebrew. From that time he was the regular columnist for Ha-Zefirah and gradually transformed the paper into a lively publication, finally becoming its acting editor (his name appeared among the list of editors only from 1886).

Sokolow was the first in the history of the Hebrew press and literature to create a vast reading public, which was an unusual mixture encompassing maskilim (Western-oriented secularists), extreme Orthodox rabbis, and religious Jews. He knew how to direct the style of his writing at a variety of different circles because he was close to all of them. Sokolow expressed reservations about the Hibbat Zion movement when it first appeared, although he was simultaneously drawn toward it emotionally. He wished to restrain the enthusiasm of the early 1880s and even attacked J.L.*Pinke's Autoemancipation, continuing in this line until the First Zionist Congress (1897). In the meantime, he published books in the fields of history and belles lettres. His textbook on the English language for Yiddish-speakers was widely distributed at the beginning of the great wave of migration to the United States, after the pogroms in southern Russia (1881). He also published an adaptation of Laurence *Oliphant’s book on Ereẓ Israel entitled Ereẓ Hemdah (1885). When he began to feel confined by his position with Ha-Zefirah, Sokolow started to publish the voluminous yearbooks Ha-Asif (6 published, 1885–94), in which all types of literature were presented. These collections had a success unprecedented in the annals of Hebrew literature in the scope of their distribution. These collections marked the beginning of Hebrew literature as a public medium and not only as a vehicle for personal entertainment.

In the spring of 1886 Ha-Zefirah became a daily, and Sokolow himself filled practically every issue, in addition to his many writings in other periodicals and other languages. With the aid of Y.H. Zagorodski, he also published the first lexicon of Hebrew authors (including some scholars on Judaism who wrote in other languages) entitled Sefer ha-Zikkaron (1889). A decisive turn took place in his life with the appearance of Theodor *Herzl. At first he received Herzl’s Jewish State with reservations. But after his participation in the First Zionist Congress as the correspondent for Ha-Zefirah and his meeting with the Zionist leader, he became one of Herzl’s greatest admirers, and turned Ha-Zefirah into his most loyal and dedicated Hebrew organ. Through this transformation, Sokolow’s writing became even more ramified, and there was almost no literary genre that he did not attempt, especially in his efforts to bring Orthodox circles closer to Zionism through a series of articles that grew into entire volumes (Le-Maranan u-le-Rabbanan, 1901).

Sokolow translated Herzl’s Zionist novel Altneuland into Hebrew under the title Tel Aviv (a site mentioned in Ezek.
3:15), by which he meant to symbolize the original name of the book (old-new land; tel meaning a hill of ruins, aviv meaning spring), and thereby inspired the name for the first Jewish city in Erez Israel. During the controversy over the "Uganda Scheme, his newspaper was the most devoted to Herzl and the plan, although it also published articles against the Scheme. Above all, Sokolow wanted to preserve the unity of the Zionist Organization. As part of his program to combine public activities with literary endeavor, he became involved in the plan to publish a general encyclopedia in Hebrew, which never materialized because of the upheaval surrounding the 1905 revolution in Russia.

At the beginning of 1906, Ha-Zefirah ceased publication, and in the same year Sokolow was invited by David *Wolffsohn to serve as the general secretary of the World Zionist Organization. His first act in this position was to establish the official Hebrew weekly of the Zionist Organization, *Haolam (1907), which continued to be published up to and after the establishment of the State of Israel. From that point on, Sokolow's life was intimately connected with the history of the Zionist movement (see *Zionism). From his position as general secretary he rose to become a member of the Zionist Executive in 1911 and was reelected in 1913. He continued to write throughout this period, especially after Ha-Zefirah was renewed in 1910. He won the esteem of his readers and the Hebrew literary world with the publication of a selection of his articles (1902) and a jubilee book in his honor (1904), as well as by his editing of a literary collection to commemorate the 50th anniversary of the publication of Ha-Zefirah (1912).

During his period of service as general secretary of the Zionist Organization, Sokolow began meeting with European personalities, an activity which continued until the end of his life. During his first visit to the United States and Canada (1913) he won the support of many Jews and non-Jews for the Zionist cause. Close to the outbreak of World War I, Sokolow visited Erez Israel as head of an investigating committee of the Zionist Organization, and after the trip he published for the first time his impressions of the country and continued to do so after his succeeding visits. With the outbreak of World War I, he moved to London and, together with Weizmann, was involved in Zionist political activity in England and in other countries (France, Italy, etc.). After Herzl, Sokolow was the first Zionist to have an audience with the pope (and the first Jew to have an audience with Pope Benedict XV) whom he informed on the affairs of the Zionist movement (1917). He played an important role in the efforts which eventually achieved the *Balfour Declaration, and was the head of the committee which prepared the wording of the declaration, in addition to procuring the approval of statesmen from other countries for it. His name thus became linked to that of Weizmann, and he became one of the most outstanding figures in the Zionist movement both through his connections with diplomats of many nations and his deep roots in the Jewish world.

During the period of political work for the Balfour Declaration, Sokolow was also involved in preparing his monumental work entitled History of Zionism, 1600–1918, which came out in two volumes in 1919 (a shorter German edition came out in 1921). The work not only provides a comprehensive description of the Jewish people's attachment to Erez Israel but also describes the relationship of non-Jews to the idea of the return of the Jews to Erez Israel, and this made it a pioneering endeavor. He revealed a mass of new material, all but unknown until his time, especially on the personalities in England who had preached the return of the Jews to their homeland for hundreds of years. Sokolow wished to prove indirectly that the Balfour Declaration grew out of a rich tradition in England. In his introduction to the book, Lord Balfour expressed his own credo through a defense of the Zionist idea against opposition from a number of viewpoints. In his comprehensive introduction, Sokolow defined the foundations of Zionism in the following points:

A home for Jews who are materially or morally suffering; a home for Jewish education, learning, and literature; a source of idealism for Jews all over the world; a place in which Jews can live a healthy Jewish life; a revival of the language of the Bible; the resurrection by civilization and industry of the old home of our fathers, long neglected and ruined; the creation of a sound, strong Jewish agricultural class.

Thus Sokolow combined all three aspects of the practical, political, and cultural Zionism. Although he himself was involved in political activity throughout the years, he always emphasized the other two aspects as well.

After World War I, when the solution of all problems, including the Jewish problem, was the prevailing mood toward peace, Sokolow headed the Jewish delegation to the Paris Peace Conference. His appearance before the conference on Feb. 27, 1919, was most impressive. Weizmann described Sokolow's speech in Trial and Error (1949, p. 243): "... without being sentimental, it was as if two thousand years of Jewish suffering rested on his shoulders. His quiet, dignified utterance made a very deep impression on the assembly.” From that time on, Sokolow appeared at every general Jewish and Zionist assembly, and was chairman of most of them. When the Zionist Executive was consolidated after the war, he was elected as its head. He was also the head of the Comité des Délégations Juives, the representative of world Jewry at the League of Nations, succeeding Julian *Mack and Louis *Marshall. In this position he formulated the Jewish claims, especially that of European Jewry, most notably in the field of securing Jewish rights in the new countries created after the conflict. At the Zionist London Conference (1920), which adjusted Zionist policy and organization to the post-war reality, Sokolow was not only one of the principal speakers, but also the one who named the new Zionist fund *Keren Hayesod. From that time until the end of his life he traveled throughout the Jewish world on behalf of the fund. He again visited Palestine in the spring of 1921, at the same time that Winston *Churchill was there, as head of the Zionist Commission (in-
stead of M. *Ussishkin, who was then in the United States). He succeeded in undoing the effect of the Arab memoranda sent to Churchill, and took the opportunity to participate in the founding of the Hebrew Writers’ Union in Erez Israel. He also did much to encourage the yishuv after the anti-Jewish riots that had taken place at the time. Sokolow was chosen chairman of the 12th Zionist Congress (the first congress to convene after the war; Carlsbad, 1921) and was chairman of every succeeding congress until his death, continuing the tradition of Max *Nordau by speaking on the situation of the Jews of the Diaspora. Although he could not match Nordau’s eloquence, he was far more knowledgeable than Nordau about what was happening throughout the Diaspora, in the East as well as the West. At the congresses he proved his skill in cajoling the conflicting factions, and his concluding motto, “It was a difficult Congress but a good one,” became famous. He was in great demand as a public speaker. During his trips he would constantly meet with public leaders and heads of government and would obtain pro-Zionist statements from them.

When the enlarged *Jewish Agency was established in 1929, Sokolow became chairman of its Executive. At that time, Arab riots again broke out in Palestine, and opposition, headed by Weizmann, grew in the Zionist movement against the policy of the Zionist Executive toward the Mandatory government. This subject created a storm at the 17th Zionist Congress (1931) and resulted in Weizmann’s failure to be reelected president of the Zionist Organization. Sokolow was chosen in his place. He was reelected at the 18th Congress (1933), and continued in the presidency until Weizmann was again elected president at the 19th Congress (1935). During Sokolow’s term as president, the Nazis rose to power in Germany, and the United States, which was the main source of Zionist funds, underwent a financial crisis. Sokolow again set out on a series of trips and mobilized a substantial amount of capital to meet the pressing needs of the Zionist endeavor. In 1935, when his last term as president of the organization ended, he was chosen honorary president of the Zionist Organization and the Jewish Agency and chairman of its Department of Education and Culture and of Mosad Bialik. He died in London. In 1956 his remains were interred on Mount Herzl in Jerusalem.

With all his dedicated and ramified activity in the Zionist movement for two generations, Sokolow was above all a Hebrew author and journalist (in his case it is sometimes difficult to draw an exact dividing line between these two areas of literary activity). He was also a skilled writer in a number of other languages (notably Yiddish, Polish, German, English, and French). Sokolow was the idol of the Hebrew reading public for almost three generations, and his writings are a unique example of the development of Hebrew literature from the 1870s until the end of his life in the 20th century. The reading public that Sokolow created was not attracted to the Hebrew language by romanticism and nostalgia, but by the response provided by the new Hebrew literature to their actual cultural and social needs. Sokolow created a specific personal genre of writing in each generation, at first as a writer on current affairs and afterward in other roles, especially as a journalist writing what is called in Europe the “feuilleton.” He knew the secret of how to be innovative in every new generation and was thus constantly surprising and refreshing, as, for example, in his last years with his endeavors in the field of belles lettres and in his famous series of articles Ishim (“Personalities”), which were begun many years before, and only reached their climax late in his life. His works covering his impressions of his travels are also outstanding. His mosaic style added much to the magic of his writings, which no other Hebrew author could match. At the end of his life he worked on the preparation of a lexicon on the history of the Hebrew language (chapters of which were printed in his lifetime).

Sokolow was Hebrew literature’s most prolific author for many years, and Bialik said: “If someone were to be found to collect all of Sokolow’s writings – his articles, essays, feuilletons, impressions of travels, studies, stories, etc. – and bring them together in one spot, he would need 300 camels.” Over the years he published many books in installments in Ha-Zefirah and Haolam, only a small portion of which was later published in book form: Barukh Spinoza u-Zemanno (1929), Ha-Ani ha-Kibbuzi (1930), and Ishim (3 vols., 1935). A large portion of these works, however, is still buried in periodicals in Hebrew and in other languages. Shortly before his death he published in English the book Hibbath Zion (1935) dealing with the Zionist idea in the modern period. After his death Sefer Sokolow, edited by S. *Rawidowitz, was published, containing a selection of his early writings with an evaluation and bibliography of his works (1943). A selection of all types of his works was published in three volumes with a comprehensive monograph on him by G. Kressel (1958–61), who also put out a similar selection in Yiddish (1966).

Sedeh Nahum, a kibbutz in the Jezreel Valley, is named after Sokolow, as is Bet Sokolow, the journalists’ house in Tel Aviv. The Tel Aviv municipal council offers an annual prize in journalism in his honor.

[Getzel Kressel]

SOKOLOW PODLASKI, town in Warszawa province, Poland. A Jewish community was first organized there at the end of the 16th century. In 1665 the owner of the town, Jan Kazimierz Krasinski (1607–1669), granted the Jews judicial powers among other rights, and accorded Jewish craftsmen the same status as that of the Christians. In the 18th century many Jews engaged in such crafts as weaving, tailoring, furrier, and tanning; they also engaged in wholesale commerce of agricultural produce and cloth. There were 165 Jews who
paid the poll tax living in Sokolow in 1765. The Jewish population numbered 1,186 (37% of the total population) in 1827; 2,275 (62%) in 1857; 4,248 (59%) in 1897; 4,430 (55%) in 1921; and 5,027 in 1931.

Sokolow became noted as a center of Hasidism. During the middle of the 19th century R. Elimelech was rabbi of Sokolow, and during the 20th century, the zaddik Isaac Zelig Morgenstern (d. 1940), a great-grandson of Menahem Mendel the zaddik of Kotsk, held rabbinical office and acted as leader of the Hasidim.

After World War I, the economy of the town was disrupted as a result of antisemitic activities. In 1937–38 there were attacks on Jews accompanied by bloodshed.

[Shimshon Leib Kirshenboim]

**Holocaust Period**

At the outbreak of World War II there were 4,000 Jews in Sokolow. The German army entered the town on Sept. 20, 1939, and immediately began terrorizing the Jewish population. On Sept. 23, 1939 (the Day of Atonement), the Germans set the local synagogue on fire. In the summer of 1941 a ghetto was established in Sokolow. The Jews there were deported to Treblinka death camp on Sept. 22, 1942. They offered considerable passive resistance, some hiding themselves, but about 500 of those found in hiding were shot on the spot. Another 700 succeeded in fleeing into the surrounding forests, but most of them were shot by German armed units who searched the forests. Groups of young Jews joined small partisan units operating in the vicinity. One group entered the Bialystok region and joined the guerrillas there.

The Jewish community was not reconstituted in Sokolow Podlaski after the war. Organizations of former residents were established in Israel, the United States, France, and Argentina.

[Stefan Krakowski]

**SOLA, ABRAHAM DE** (1825–1882), rabbi and hazzan.

Born in London, de Sola was the sixth child of the renowned Dutch hazzan David Aaron de *Sola, leader of the English Sephardim. Abraham graduated from London Jews’ College, where he was a student of the Oriental scholar, Louis *Loewe. He immigrated to Canada via New York in 1847 to begin his ministry at Sheerith Israel in Montreal (a position he obtained through correspondence). Until his death in New York, where he was visiting with his sister, he served his congregation with honor and distinction for 35 years. In many of his sermons and scholarly writings, he expressed his views on the reconciliation between the natural sciences and religion. His long association with McGill University, beginning as a Hebrew lecturer in 1848 and later as professor of Hebrew and Oriental Literature from 1853, earned him, in 1858, an honorary doctor of laws degree (the first to be awarded to a Jewish minister in both America and England). He was also elected as an honorary member of the Natural History Society, before which he gave many lectures. In 1878, he completed his revision of the Sephardic liturgy (based on the respective multivolume editions of his father and Isaac Lesser). His prayer books became the basis for the liturgy of Sephardic synagogues throughout North America, until superseded by David de Sola *Pool’s more recent revision in the late 1910s. Like his father and hazzanic forebears, whose musical tradition he preserved, he combined “modernism” with “uncompromising Orthodoxy,” and mindful of his Sephardi heritage, his life and works served as an “unsurpassed model” well into the 20th century. His writings include *Sermons in Manuscript* (Canadian Jewish Congress Archives, Montreal); *A Jewish Calendar for Fifty Years: Montreal* (1854, with Jacques J. Lyons); *The Sanatory Institutions of the Hebrews as Exhibited in the Scriptures and Rabbinical Writings and as Bearing upon Modern Sanatory Regulations* (1861).

[Israel J. Katz (2nd ed.)]

**SOLA, DE,** Sephardi family in Holland, Britain, and North and South America. After 1492 the family dispersed from Spain to Portugal (where some survived as Marranos, were martyred under the Inquisition, or fled overseas), and Holland. From *Aaron de Sola* (18th century), who fled to London and settled in Amsterdam, the various branches in England, Canada, the West Indies, and Holland are directly descended.

The descendants of Aaron’s second son, *Isaac de Sola* (b. 1728), who settled in Curaçao, include General Juan (Isaac) de Sola (c. 1795–1860), a hero of the South American war of liberation against Spain; Benjamin de Sola (1818–1882), a leader of the Jewish community in Curaçao; an earlier Benjamin de Sola (1735–1816) who was physician to the Dutch king William V and published medical works; Abraham de Sola (d. 1753), rabbi, preacher, and hazzan of the Spanish and Portuguese congregation in London (1722–49); and Raphael Samuel Mendes de Sola (d. 1761), hazzan of Curaçao from 1749.

Staunch adherence to Orthodoxy particularly distinguishes the descendants of Aaron’s eldest son, David de Sola (1727–1797). Outstanding among these was David’s grandson, David Aaron de Sola (1796–1860). Born in Amsterdam, he was appointed hazzan of the London Sephardi community in 1818. He was an able assistant to Haham Raphael *Meldola, whose daughter he married in 1819. After Meldola’s death in 1828 *De Sola virtually assumed the rabbinical leadership of the English Sephardim and in 1831 delivered the first English sermons authorized by the *Ma’amad, which later published several of his addresses. His Seder Berakhot (1829), a manual on the blessings, received the support of Moses *Montefiore, who also encouraged De Sola’s work on a new prayer book.*
Published as *Forms of Prayer According to the Custom of the Spanish and Portuguese Jews* (5 vols., 1836–38; 1852), and with a new English translation, this is generally regarded as his finest work and is still used by the English Sephardim. In collaboration with Morris J. *Raphall, De Sola then prepared Eighteen Treatises of the Mishnah with the aim of arming his fellow-opponents of the budding Reform movement (1842; 1845), a pirated edition was repudiated by the coauthors). De Sola’s other works include an English-Hebrew edition of Genesis, published in collaboration with Raphall and I.L. Lindenthal (1844) and intended to form part of a complete Bible (“The Sacred Scriptures”) which, however, never appeared; and a new edition, with English translation, of Wolf *Heidenheim’s Ashkenazi mahzor, The Festival Prayers, according to the custom of the German and Polish Jews* (5 vols., 1860). This mahzor was often reprinted.

David Aaron de Sola also entered into an ill-fated partnership with M.J. Raphall as coeditor of an Orthodox periodical, *The Voice of Jacob* (1841), later taken over by *The Jewish Chronicle* which it slightly preceded. One of his best-known works, *The Ancient Melodies of the Liturgy of the Spanish and Portuguese Jews* (1857), written in collaboration with the composer Emanuel *Aguilar, was a pioneering attempt to establish the dates of the Sephardi liturgical compositions. De Sola himself composed tunes for the Sephardi synagogue, and an appendix to *The Ancient Melodies* contains his well-known setting of the *Adon Olam* hymn, which has become popular in Ashkenazi as well as Sephardi congregations of Great Britain. He was influential in organizing the Association for the Promotion of Jewish Literature and other similar bodies. Of his 15 children, Abraham *de Sola became a rabbi in Montreal and a leader of Canadian Orthodoxy.***

*Godfrey Edmond Silverman*

**SOAL. (Kohen-Solal, Shulal, Sholal)**, family of North African origin which settled in Majorca toward the close of the 13th century and returned to *Algeria as a result of the Spanish persecutions of 1391. MAIMON SOLAL (Xullel), the son-in-law of the famous physician Leon Masconi, was one of the most influential members of the community of Majorca. Due to his intervention the ancient privileges of the Jews on the island were confirmed in 1385. DAVID KOHEN-SOLAL, a correspondent and colleague of Isaac b. Sheshet Perfelt (Ribash), assumed the leadership of the community of Mostaganem as soon as he arrived in Algeria. His son, ABRAHAM (I) Kohen-Solal, a disciple of Simeon b. Zemah Duran, was regarded as an important rabbinical authority and a scholar of logic and other religious and secular sciences. He had settled in *Honéin, where his son HAYYIM KOHEN-SOLAL AND his descendant NATHAN (II) became wealthy merchants. SAADIYAH SOLAL was a rabbi in Tlemcen in the first half of the 15th century. NATHAN (II) (also called also Yehonatan) ben Saadiyah was born in 1437 and immigrated to Jerusalem before 1471. He left Jerusalem because he suffered from the Musta’arab leaders of the Jerusalem community and settled in Egypt in 1481. In Egypt he served as spiritual leader and between 1484 and 1502 was the Jewish *nagid* of the *Mamluk Sultanate. He established himself in *Cairo, where he headed the Jewish community and renewed its importance. He died in 1602. He had a special court of law for which the dayyanim were appointed by him. Spanish scholars had a high opinion of him. He sometimes returned to Jerusalem but still did not get along with the local Musta’arab leaders. He had seven children: Saadiyah, Ephraim, Abraham, Dolca, Masoda, Simah, and Isaac. His son Abraham died in 1482. His nephew Isaac ben Abraham ha-Kohen *Sholal (Solal)* was the last *nagid* of Egyptian Jewry, from 1502 until 1517. He was a rich grain merchant and held an important position in the mint of the Mamluk sultan. He was also a scholar. Between 1502 and 1508 or between 1509 and 1513 he resigned from his position, but returned after a time. He was a great philanthropist and founded three yeshivas, one in *Egypt and two in Ereẓ Israel. He had a court of law in Cairo and had an important library with many manuscripts. After the Ottoman conquest of Egypt he lost his rank and settled in Jerusalem, and was active there in *Kabbalah in order to bring about the ge’ulah* (redemption). He issued new regulations in Jerusalem to develop the community, one of which was the exemption of scholars from taxes. He died on Rosh Hodesh Kislev 5285 (1524) in *Jerusalem. His wife, Kamar, was the daughter of R. Abraham ben Hayyim (d. 1545). When Isaac died his only son, Abraham, was a little boy. He lived many years in Jerusalem, but because of the difficult economic situation he immigrated to Egypt after 1560. The documents of the Muslim court of law in Jerusalem mention several persons of the Sulal family in the 16th century, including Musa Sulal and Salmon ben Musa Sulal. There are many important *Genizah and other sources for the Sulal family.*

The members of the family who had remained in Algeria continued to rank among its Jewish leaders. MOSES BEN ISAAC KOHEN-SOLAL (d. 1788) was one of the principal merchants of Algiers and an esteemed philanthropist. He established an important commercial branch of his business in *Mogador, Morocco, where his sons had settled. From 1808 Marseilles became the center of the family’s activities. In 1835, after having taken into account his economic and political influence, the sultan requested that the French government accept NISSIM KOHEN-SOLAL as Moroccan consul.

*David Corcos / Leah Bornstein-Makovetsky (2nd ed.)*}
SOLARZ, STEPHEN (1940– ), U.S. congressman 1974–94, leading Democratic foreign policy expert. Born and educated in Brooklyn, Solarz is the son of an attorney and Tammany Hall captain. He is a product of the New York public schools and a graduate of Midwood High School. He attended Brandeis University (B.A. 1962), where he edited the student newspaper.

He then went on to Columbia Law School but found law school uninteresting and switched to the graduate school in international affairs. Among others, he studied with Zbigniew Brzezinski, who was to become Jimmy Carter’s national security advisor while Solarz was a congressman. He also worked with famed columnist Max *Lerner at the New York Post and as national news editor of Newsfront. He taught political science at Brooklyn College before running for the State Assembly in 1968 and defeating a 15-term incumbent. He served in the Assembly for five years and ran for Congress in 1974 in the most heavily Jewish district in the nation, serving such areas as Brighton Beach, Sheepshead Bay, and Coney Island. His successor in the State Assembly was Charles *Schumer, destined to be his colleague, ally, and sometimes rival in the years ahead.

Solarz asked for a seat on the House Foreign Affairs Committee. His opening salvo in Congress marked him as an ambitious and aggressive comer with a keen interest in foreign policy. In his first six months he gave 12 speeches and co-sponsored 370 bills. Even his most ardent critics could never call him lazy. He conferred with world leaders and set out to make a name for himself in international relations. As one staff member put it: “Steve is only interested in two things: Brooklyn and the rest of the world.”

In the 1980s, he chaired the Asian and Pacific Affairs Subcommittee of the House Foreign Affairs Committee, an area of growing interest to the American people in that decade. He is remembered for his leadership on the Philippines. He left Manila just as Benigno S. Aquino was coming home to challenge President Ferdinand Marcos. Following Aquino’s assassination, Solarz returned to Manila for the funeral and proceeded to push the Reagan administration to distance itself from the Marcos government. Shortly after Marcos left for exile in Hawaii, Solarz was at one of the opulent palaces and publicized Imelda’s massive shoe collection. He worked closely with Aquino’s widow, Corazon, who became president.

In his years of service, Solarz became known as one of the most important and informed members of the House. A world traveler, he conducted himself as a future secretary of state. An ardent defender of Israel, he introduced legislation barring U.S. firms from complying with the boycott of Israel. He freed Jewish women from Syria, enabling them to join the Syrian community in Brooklyn. His performance was, to say the least, impressive. Kurt Stone reports that he was one of the first to back the Afghan rebels, created a plan adopted by the UN to resolve the civil war in Cambodia, was the first American government figure to visit North Korea in 30 years, co-sponsored the resolution to allow President George H.W. Bush to use force in the Persian Gulf and help plan a nuclear freeze strategy.

He introduced the Religious Freedom Restoration Act, designed to permit Orthodox Jews to keep their head covered while on public service, which only passed the House after Solarz was no longer a member.

With the redistricting of New York and its diminished congressional representation, Solarz was forced to run as a white man in a mixed hispanic and black district and was defeated in a 1992 primary. His political influence was weakened by the loss of a key ally in Albany – responsible for redistricting – and because he was caught up in the House Banking scandal when it became known that he and his wife had written 743 overdrafts, which hurt his reelection bid as well. Schumer remained in a safe district and soon became a U.S. senator. Solarz was nominated to serve as ambassador to India, where his expertise would have been of service to the Clinton Administration, but the nomination was withdrawn without explanation. Shortly thereafter his wife, Nina, was found guilty of stealing funds from a charity. She was given probation.

Solarz maintained his interest in foreign policy and has extensive ties to both the Middle East and the Pacific rim. His intelligence and diligence served to make him a diminished but important voice in U.S. foreign policy.

SOLDI (Soldi-Colbert), EMILE-ARTHUR (1846–1906), French medalist of Danish descent whose real name was Soldyck. At the age of 23 Soldi received the Grand Prix de Rome in medal engraving. An amazingly versatile man, he was an archaeologist and sculptor as well, being also noted in his time as a writer and translator from Danish. The best-known medal by Soldi is his “Homage to the Victims of the Invasion,” which refers to the Franco-Prussian War of 1870–71. This medal is still being issued by the French mint. He executed many commemorative andportrait medals. [Daniel M. Friedenberg]

SOLEL BONEH, *Histadrut* concern for building, public works, and industry. Solel Boneh developed out of organized groups of Third Aliyah pioneers that contracted to do road building and quarrying. In 1920 the first agreement was signed between the Agricultural Workers’ Union and the Public Works Department of the Mandatory government for the building of a road between Tiberias and Zemah. The two existing labor parties ran separate contracting offices, which were merged in 1921 into the Histadrut’s Public Works and Building Office, renamed Solel Boneh in 1924. The concern carried out a variety of works throughout the country; it worked for British army camps and helped to lay railroad lines and to build Tel Aviv and Jewish quarters in Jerusalem and Haifa. Its resources
were scanty, however, and it went bankrupt during the economic crisis of 1927, renewing its activities only in 1935.

During the Arab riots (1936–39) Solel Boneh was responsible for a number of large-scale pioneering operations: the building of *stockade and watchtower settlements, fortifications in Jewish areas, and police stations in outlying spots. It organized Jewish laborers for work in the ports of Tel Aviv and Haifa and was responsible for the erection of the security fence along the northern frontier (the “Tegart Wall”) by hundreds of Jewish workers accommodated in a camp that stretched for miles. During World War II Solel Boneh made an important contribution to the war effort, erecting army camps in many parts of the country. It also built airfields, bridges, roads, and factories abroad in Egypt, Syria, Iraq, Cyprus, Iran, and Bahrain.

On the establishment of the State of Israel (1948), Solel Boneh played a large part in the building of thousands of homes, as well as hospitals, schools, factories, roads, and airfields. In 1958, on the initiative of Pinhas *Lavon, Solel Boneh was reorganized into three companies: Building and Public Works, Overseas and Harbors Works, and Industry, with subsidiary companies for building materials (Even va-Sid – “Stone and Lime”), sanitary installations (Herouth), and tiles and cement products (Hemar). Among Solel Boneh’s outstanding projects were the construction of the atomic research center at Nahal Sorek; the Hadassah-Hebrew University Medical Center at Ein Kerem, Jerusalem; and the 268-foot chimney of the Haifa power station. As part of the reorganization, workers’ representatives were co-opted onto the managements: three out of ten in the Building and Public Works Company, the same proportion in Even va-Sid, and two out of 11 in Herouth. The Overseas and Harbors Works Company has carried out extensive projects in Asia, Africa, and non-Arab countries of the Middle East. At the end of 1970 Solel Boneh employed about 25,000 workers and had a turnover of some $230 million.

With the Histadrut selling off its assets in the 1980s and 1990s, Solel Boneh became part of the Housing and Construction Holding Company Ltd., Israel’s largest construction group. In the early 2000s Solel Boneh’s turnover exceeded $400 million, and it was involved in building the $1.3 billion Trans-Israel Highway.

[Soloveichik, Nahum *Goldmann

**SOLIELI (Soloveichik), MORDECAI** (Max; 1883–1957), public figure and biblical scholar. Born in Kovno, Lithuania, Soliel was one of the founders of the Russian-language Zionist newspaper, Yevreyeskaya Zhizn (later *Razvet*), in 1904. During the Russian Revolution he left Russia for Lithuania. Soliel was elected to the Lithuanian Sejm (parliament) and served as minister for Jewish affairs (1919–21). In 1921 he was elected to the Zionist executive, but as a result of differences of opinion with Weizmann on the question of establishing a Jewish Agency and because of other problems, he resigned in 1922/23. Soliel (along with Yizhak *Gruenbaum, Nahum “Goldmann, and others) was a leader of the “radical faction.” From 1923 to 1933 he contributed to the (German) Encyclopaedia Judaica in Berlin and edited its Bible and Ancient Near-East section. In 1933 he emigrated to Palestine, where he settled in Haifa and was active in public life there. From 1944 to 1948 he served as the head of the department of education for the yishuv. When the State of Israel was established he was made director of its broadcasting service Kol Israel and later became chairman of the public council attached to the broadcasting service. His works include Toledot Bikkoret ha-Mikra (with Zalman Rubashov-Shazar, 1925); Sekhiyyot ha-Mikra (illustrations and documents in biblical research, 1925); and Lexicon Biblicum (Hebrew; posthumous, edited by M. Borochov, 1965).

**BIBLIOGRAPHY:** Y. Gruenbaum, Penei ha-Dor (1957), 306–11. [Yehuda Slutsky]

**“SOLINUS, CAIUS JULIUS** (third century c.e.), Latin grammarian who wrote a work containing geographical and historical tidbits culled from earlier authors. He paraphrased *Pliny the Elder on Judea (Natural History, 5:71ff.; 7:65), sometimes borrowing the exact words of his source. Solinus does not seem to have a clear picture of the material he deals with: he mentions a Lake Sara, probably an error for Pliny’s Genasara (Kinneret). Though Pliny comments on the Tiberias hot springs, Solinus overlooks this natural phenomenon and refers only to Lake Tiberias. Besides, in repeating Pliny’s views on the *Essenes, he used the present tense, although that sect had long been extinct.

[Jacob Petroff]

**SOLIS, family name of 17th-century Portuguese Marranos. A young Lisbonite SIMÃO PIRES SOLIS was accused in 1630 of stealing the sacramental elements from the church of Santa Engrácia and he was condemned to the stake. His hands were chopped off and he was dragged through an incensed mob and burned. For weeks thereafter bands of Old Christians rioted against the New *Christians. Solis’s brother, the Franciscan HENRIQUE SOLIS, left Portugal, where he was burned in effigy on March 11, 1640. He made his way to Amsterdam and took the name Eleazar, remaining a leading member of Dutch Jewry until 1656. Other bearers of the Solis name are descendants of the Portuguese court financier DUARTE DA SILVA (1596–1688), whose son ISAAC (DIOGO) DA SILVA SOLIS of Hamburg and grandson ISAAC (FERNANDO) DA SILVA SOLIS of the Low Countries adopted their new names upon re-embracing Judaism. Fernando’s father FRANCISCO, reconciled at an auto-da-fé in 1652, became treasurer general to Queen Catherine. He was credited with planning the Spanish victory over the Duke of Crequi in 1673, and in 1682 he was named Marquis de Montfort. The Marrano economist DUARTE GOMES DE SOLIS was a financial authority for the Portuguese crown during

the early 1600s. His often reprinted and translated *Discourse on the Commerce of the Two Indies* (Lisbon, 1622) projected a scheme for the development of the territorial lands. The volume *Mémoires Inédits* (ed. by Léon Bourdon, 1955) contains GOMES DE SOLIS’s economic reports to the crown for 1621. The proceedings of Madrid’s inquisitorial court for 1654 record that an otherwise unknown DIEGO DA SOLIS of Lisbon appeared in the defense of Bartolomé Feros.

The Solis name was carried to the New World as well. One JOSEPH DE SOLIS resided at Pernambuco, Brazil, in 1645–50. During the same time BENJAMIN DE SOLIS was a member of the first synagogue in Dutch Brazil. The U.S. family of *Solis-Cohen* traces its ancestry back to SOLOMON DA SILVA SOLIS, who fled to Amsterdam from Spain in about 1665 and married Isabel da Fonseca, daughter of the marquis of Turin, count of Villa Real and Monterey.

**BIBLIOGRAPHY:** Roth, Marranos, index; A. Wiznitzer, *Jews in Colonial Brazil* (1960), 50 (on Duarte Gomes de); 110 (on Joseph de); 138 (on Benjamin de); R.J.H. Gottheil, in: *JQR*, 15 (1902/03), 231 (on Diego R.S.).

**SOLIS-COHEN,** U.S. family founded by JACOB DA SILVA SOLIS who emigrated to the U.S. in 1803. Jacob’s grandfather is reported to have refused succession to the marquisate of Turin, since it would have required his defection from Judaism. Most of Jacob’s descendants were born and lived in Philadelphia.

JACOB DA SILVA SOLIS-COHEN (1838–1927), grandson of Jacob da Silva Solis, was a surgeon. During the Civil War he served as surgeon to the Union army, and later did pioneering research work in laryngology which led to an honorary professorship at the Jefferson Medical College, Philadelphia. He founded and edited the *Archives of Laryngology*. His brother LEON DA SILVA SOLIS-COHEN (1840–1884) was a writer of stories and verse often based on old Jewish legends. Another brother, DAVID DA SILVA SOLIS-COHEN (1850–1928) was a physician and poet. Born in Philadelphia, he settled in Portland, Oregon, where he was active in Jewish organizations, including the Zionist society. He served as Portland police commissioner (1892–94 and 1898–1902) and mayor (1896–98), and also wrote several books for children.

SOLOMON DA SILVA SOLIS-COHEN (1857–1948), another brother, was a physician and poet. A professor of clinical medicine at Jefferson Medical College (1904–27), he was a fellow of the American Association for the Advancement of Science and a trustee of the U.S. Pharmacopoeia Convention. His basic research in medicine was widely noted. He was active in Jewish affairs, attending the Third Zionist Congress in Basel (1899) and later serving as a (non-Zionist) member of the Jewish Agency. He published a volume of original verse, *When Love Passed By* (1929), and translated many Hebrew poems into English, including Ibn Ezra’s *Selected Poems* (trans. 1934). A full bibliography is included in his *Judaism and Science* (1940).

JUDITH DA SILVA (1876–1927), daughter of the second Jacob da Silva Solis-Cohen, was a fashion editor. She wrote numerous articles and stories on dressmaking and fashion as well as on nature subjects. Her brother MYER DA SILVA (1877–1960), became a physician and later he served on the staff of the graduate school of the University of Pennsylvania and wrote numerous articles on medical subjects. Another brother, JACOB DA SILVA SOLIS-COHEN JR. (1890–1968), was a realtor and genealogist. He served as president of the Jewish Publication Society of America and honorary president of Congregation Mikveh Israel, Philadelphia. He wrote a paper on the founder of the family, “Jacob S. Solis: Traveling Advocate of American Judaism” (AJHQ, 52 (1962–63), 310–9). EMILY DA SILVA SOLIS COHEN JR. (1890–1966), daughter of Solomon, was an author and welfare worker. She wrote and translated several popular books for children on Jewish themes, and numerous articles.

[Alan D. Corre]

SOLODAR, ABRAHAM (1890–1936), U.S. Hebrew poet and teacher. Born in Russia, Solodar went to Erez Israel in 1911, and emigrated to the United States in 1926. At an early age he was encouraged in his literary efforts by Bialik in Odessa, and by *Brenner* in Tel Aviv.

SOLOMON (Heb. שאול; tenth century B.C.E.), son of *David, king of *Israel. Born of Bath-Sheba, Solomon was so named by *David (I Sam. 12:24; according to the keri, Targ. *Jon., and according to the Pesh., by his mother), while Nathan called him Jedidiah (Heb. ידידיה; I Sam. 12:25). Apparently his principal name was Solomon, analogous to the similar Phoenician names שלום and שלום האל (cf. the interpretation of the name in 1 Chron. 22:9). Jedidiah being an affectionate or honorable appellation “because of the Lord” or, according to the Septuagint, “by word of the Lord” (I Sam. 12:25; cf. Deut. 33:12; I Kings 22:1). Following the intervention of Nathan and Bath-Sheba, *David decided to have Solomon anointed king in his own lifetime, and not his son *Adonijah the son of Haggith who, supported by some army commanders and a section of “the king’s servants” led by *Joab son of Zeruiah and *Abiathar the priest, was proclaimed king by them beside *En-Rogel without *David’s knowledge (I Kings 1:7, 9, 18, 19, 24, 25, 41, 44). *David’s mighty men and the *Cherethites and the *Pelethites, later joined by “the king’s servants,” sided with Solomon (I:8, 10, 33, 38, 47), who was inducted at the *Gihon spring. He was brought down there riding on a mule, and, in the presence of Nathan the prophet and *Beniah son of Jehoiada, was anointed king by *Zadok the priest, to the sound of the blowing of the ram’s horn and of the people’s shout of “Long live King Solomon” (1:32–40). The account does not mention Solomon’s qualities by virtue of which he was found worthy of the kingship despite his being one of the king’s younger sons (1 Chron. 3:1–10). This is ascribed to *David’s vow to Bath-Sheba, not mentioned in 11 Samuel, that Solomon would succeed to the throne (1 Kings 1:13, 17, 30). Solomon’s succession was accompanied by the destruction or banishment of rivals: *Joab and *Adonijah were killed; *Abiathar the priest was banished to *Anathoth; the killing of *Shimei son of *Gera, however, may be explained as a measure taken against potential rebels among the survivors of the former royal house.

The Kingdom of Solomon

Already at the outset of his reign Solomon was distinguished as a king who took vigorous action against opponents and did not shrink from a blood vengeance. *David’s last testament to Solomon should not necessarily be regarded as a tendentious projection by the author of the narrative in order to attribute the bloodshed by the newly crowned king to the instructions of the founder of the royal house. First, *David’s hostility to *Joab was well known. Second, it was certainly unnecessary to ascribe the matter of the sons of *Barzillai the *Gileadite to *David’s last testament (2:5–9). Third and primarily, the account of Solomon’s elevation contains no exaggerated praise of him. In any event, the bloodshed, associated as it was with a blood vengeance, reflects the upheavals that afflicted the royal court of *David, in consequence of which Solomon became king even during his father’s lifetime, as emphasized again by the Chronicler in his idealistic, apologetic explanation of Solomon’s second, public induction (“And they made Solomon the son of David king the second time,” 1 Chron. 29:20–25; cf. 23:1; 28:1–11, 20–21). Solomon reigned jointly with his father apparently from 967 to 956 B.C.E. and on his own from 956 to 928 B.C.E. According to the biblical account, it was from *David that Solomon inherited a kingdom which extended from “beyond the (Euphrates) river to the border of Egypt” (1 Kings 5:1). The verse is a late gloss, defining Solomon’s territory anachronistically, and attempting to raise Solomon to the status of the great imperialists of the Neo-Assyrian, Neo-Babylonian, and perhaps Persian periods. “Beyond the river” (Heb. ever ha-nahar is the equivalent of Akkadian eber nārī, first used two centuries after *Solomon in Neo-Assyrian sources for the territory west of the Euphrates (Cogan, 213)). Indeed, in the time that has transpired since the appearance of the first edition of the *Encyclopaedia Judaica, both archaeological evidence and critical study of the biblical texts have undermined the confidence of scholars about the greatness of Solomon. Some scholars despair of recovering the historical Solomon, while others call his very existence into question. J.M. Miller (apud Handy 1–24) has framed the basic issues involved in separating the historical *Solomon from the Solomon of legend: (1) *The Davidic–Solomonic empire of the magnitude described in the Bible does not seem to fit the circumstances following the collapse of the international system of the Bronze age ca. 1200. (2) Some have argued that the collapse of the Hittite Empire and the withdrawal of Egypt from Asia would have enabled the rise of an empire centered in Palestine. But if that is the case such an empire should have left some epigraphical sources. (3) The biblical descriptions of Solomon’s territorial holdings are not of a piece. Close examination reveals that some of the passages point to a relatively modest, and therefore more credible, realm. (4) Archaeological evidence available at present has not revealed anything like an empire centered in the Palestinian hill country in the 10th century. The land of the Philistines was certainly not included in his kingdom, it being clearly stated that Solomon had dominion “to *Gaza” (1 Kings 5:4 [4:24]), and hence the translation “to the land of the Philistines” (5;1 [4:21]) is correct. It is unlikely that Solomon’s dominion extended north over the neo-Hittite kingdom of *Hamath, where, according to *Chronicles, he built (or reconstructed) store-cities, and reached as far as *Tadmor (Palmyra) in the wilderness, where he also fortified himself (11 Chron. 8:3–5). More likely is the account in 1 Kings 9:18 where the ketiv reads *Tamar, which fits the geographic horizon of the chapter as an important point of the southern border (Cogan, 302). In addition, if *Rezon held *Damascus, Solomon could not have held much Aramean territory. Similarly, if he handed 20 cities over to *Hiram, he did not have dominion in “Phoenicia.

Solomon may have had some share in the exchange of merchandise between the northern and southern countries, as indicated by the obscure passage (1 Kings 10:28, 29) which tells of “the king’s traders” and that “Solomon’s import of
horses was from... Que” – according to the Septuagint and the Vulgate in Cilicia (cf. II Chron. 1:16 which has קְוֵא instead of קְוֵה as in I Kings 10:28; see *Que). From Anatolia Solomon imported horses which he sold in Egypt; he sold chariots from Egypt to the Aramean and neo-Hittite kingdoms in Syria, “to all the kings of the Hittites and the kings of Aram.”

However, Na‘aman (apud Handy, 71) points out that it was in the eighth–seventh century that Egypt and Que were export centers of horses and chariots, and that the role of Solomon’s traders is anachronistically borrowed from that of the tamkāru traders of the Neo-Assyrian empire. More likely is some control by Solomon of the commercial route that passed through...
Jordan on the way from Arabia to Damascus. Associated with this economic activity of Solomon is the story of the "Queen of Sheba, who came to Jerusalem "with a very great retinue, with camels bearing spices, and very much gold, and precious stones" (1 Kings 10:2). "Never again came such an abundance of spices" (10:10; 11 Chron. 9:1–9) as those which she gave to Solomon. That the queen came to test Solomon's wisdom smacks of legend. The use of the term hitdot, "riddles" (1 Kings 10:1), an Aramaic loan whose shape points to a sound shift no earlier than the sixth century, indicates a late origin for the present text. Nonetheless, early South Arabian trade with Mesopotamia involving wood and spices transported by camels is attested in the early ninth century and may have begun as early as the tenth (Nā'amān apud Handy, 73–3). In addition, queens are well attested in Arabia, though according to Kitchen (apud Handy, 141), not after 690 B.C.E. In sum, the story is not to be dismissed as utter anachronistic fantasy.

The Bible speaks of close relations between Solomon and *Hiram (son of Abibaal according to Josephus, king of Tyre), who, according to quotations cited by Josephus (Ant. 1:113–5; Ant. 8:1:44–7), was also renowned for buildings he erected and royal projects he undertook. There is probably some basis to the biblical account that Israel cooperated with Tyre in sailing in the Red Sea. The servants of Hiram, "seamen who were familiar with the sea," sailed with Solomon's servants to Ophir, from which, as also from southern countries as a whole and perhaps from Africa, too, they brought gold and silver, sandalwood and ivory, apes and peacocks (1 Kings 9:26–28; 10:11, 22). The port from which the ships put to Sea was *Ezion-Geber (Jazirat Faraun in the gulf south of Elat?). Alongside Solomon's ships (9:26) the Bible mentions "the fleet of Hiram," (10:11, 22). The reference to "a fleet of ships of Tarshish" is to a type of large ship adapted for transporting metal and for sailing great distances (Isa. 2:16; Ezek. 27:25; Ps. 48:8). In the barter trade between Hiram and Solomon, Israel provided Tyre with wheat and oil, while Tyre supplied Israel with cedar and cypress wood and with gold (1 Kings 5:22–25 [8–11]; 9:11). The builders of Hiram and of Solomon cooperated in constructing the Temple (5:32 [18]). Apparently the execution by Hiram, the metal craftsman (not the king of the same name) of the bronzework in the Temple (7:13–15) was not an isolated or exceptional circumstance. The cooperation with Hiram in shipping, in work, and in barter provided Solomon with the opportunity of importing metal – copper and iron – from Anatolia and Cyprus and of establishing bronze foundries for the needs of the Temple in the plain of the Jordan (7:46). Another source of copper was Edom, where there is evidence of major copper smelting from Feinan in Jordan from the tenth–ninth century (Cogan, 273; Muhly, 1501, Levy). Based on mutual advantage and on the resulting economic prosperity, special relations apparently developed between Israel and Tyre, which, commencing already in the days of David and perhaps in those of Abibaal, culminated in a treaty between the two kingdoms. These relations explain the biblical account which tells of the personal friendship between Solomon and Hiram ("for Hiram always loved of David") and which refers in particular to Solomon's wisdom (1 Kings 5:15–26 [1–12]; cf. the exaggerated phraseology in 11 Chron. 2:2–15).

Solomon's relations with the other kingdoms, too, were peaceful, while his marriage to foreign women – Moabites, Ammonites, Edomites, Sidonians, and neo-Hittites – led to the establishment of close ties between Israel and the neighboring peoples. The marriage of the daughter of Pharaoh king of Egypt to the king of Israel is a special case, treated at length by the Bible, which states that Solomon brought her to the city of David (1 Kings 3:1), built a house for her (7:8; 9:24; 11 Chron. 8:11), and received Gezer from Pharaoh "as dowry to his daughter" (1 Kings 9:16). The father-in-law was undoubtedly a pharaoh of the 21st Dynasty (Siamon or Psusennes II, both of whom reigned in the days of Solomon). There is indeed some basis for conjecturing that the marriage of the daughter of Pharaoh to the king of Israel – an exceptional event in the annals of the pharaohs – reflects a period of Egyptian weakness. Note that Hadad the Edomite was married to the sister of a pharaoh (1 Kings 11:15–22). Though Solomon's marriage into the Egyptian royal family is condemned in 1 Kings 11:1, it was probably a matter of pride for the Hebrew writer of 1 Kings 3:1 and 9:16, who wished to preserve the tradition that a parvenu dynasty had managed to acquire a bride from a kingdom both ancient and renowned for its wisdom (1 Kings 5:10).

Economy and Society

The ancient figurative description of every man dwelling safely under his vine and under his fig tree within Israel's borders "from Dan even to Beer-Sheba" (1 Kings 5:5 [4:25]) depicts a flourishing agricultural situation. The passages which tell of the huge quantity of bronze (7:47), the gold and the silver, the luxuries and other precious articles (9:28; 10:10, 11, 12, 14, 22, 25), as well as the statements that silver was regarded as stones (or "it was not considered as anything in the days of Solomon," 10:21) and that cedars were as common as sycamore trees (10:27), exaggerated though they may be, yet reflect a prosperous situation. The wealth and of the initiative of the kingdom expressed itself primarily in building, as is evident from the Bible and from archaeological finds: the magnificent buildings of the Temple and the king's house together with their appurtenances and ornamentations, the plans of which were apparently based on those of northern Syrian temples (a very close parallel to Solomon's Temple, and contemporary with it, was found in Ain Dara in Syria; see Monson); the extension of Jerusalem to the north; the erection of cities for chariots and horsemen and of store-cities within the kingdom; the special construction of the Israelite house (four-roomed house, in archaeological terminology); the construction in hewn stone and the ornamentation of buildings with proto-Eolithic capitals; public buildings like those brought to light at Beth-Shemesh and at Tell Belt Mirsim, and regarded by some as storehouses; a casemate wall characteristic of, though not exclusive to, this period in the fortification of cities, such as that uncovered at...
Hazor, Megiddo, Beth-Shemesh, and Tell Belt Mirsim; the impressive and similar, almost identical, four-pillared gateways at Hazor, Megiddo, and Gezer, built apparently according to a uniform, well-devised, royal plan (these three cities are mentioned in the Bible alongside Jerusalem as an example of the building executed by Solomon, 1 Kings 9:15). Archaeologists differ over the question of whether this building activity is to be assigned to Solomon in the tenth century or whether it is of a later date (see survey in Dever apud Handy, 217–51; Finkelstein, Rainey, 2001). The peace which reigned in Palestine in the days of Solomon was based not only on political relations but also on chariot cities and principally on fortified cities at the approaches to the mountains of Judah and Jerusalem, at the entrance to the valley of Jezreel, and in Galilee, some of which – Hazor, Megiddo, Gezer, Beth-Horon, Baaloth – are mentioned in the Bible. The defense of Jerusalem was apparently of the greatest importance to Solomon.

The organization of the internal administration, begun in the days of David, was further advanced under Solomon, as can be seen from the list of his officials, among whom are included scribes, the recorder, the commander of the army, priests, the officer in charge of the district officers, the minister over the household, the king’s friend, and “Adoniram in charge of the forced labor” (1 Kings 4:1–7). The division into districts (see Rainey, 174–79), the inception of which may date from David’s reign, was consolidated and stabilized in the days of Solomon, when each of the officers had to make provision for the king’s household “for one month in the year” and supply not only “Solomon’s provision” (4:7; 5:2–8 [4:22–28]) but also the needs of the court in general, such as horses and swift steeds (equal rekhash, רְכֶשׁ, but perhaps rekhev רְכֶב, “chariots,” 5:8 [4:28]). This division, deviating partially from the boundaries of the tribes, reflects the administration that, alongside the ancient tribal division (4:15–18), was based on new territorial units, which differed from the earlier tribal grouping and some of which may have been inherited also by the surviving Canaanite population (4:8–14, 19; cf. 9:20, 21). Even though Judah had its own special officer (4:19), it was not included among the 12 districts on an equal footing with the rest, for not only did it constitute a special political unit alongside Israel (4:20; 5:5 [4:25]), but it was apparently exempted from the economic obligations to the royal household laid on the other parts of the country.

The construction of buildings, the splendor of the royal court, and the economic expansion involved the duty not only of providing supplies for the court but also “a levy of forced labor,” i.e., compulsory service (corvée), the mas, well known from the Amarna letters of the 14th century, imposed both on the surviving Amorites and on the Israelites (5:27–30 [13–16]; 9:20–23). Solomon, it is stated with much exaggeration, had 70,000 “burden-bearers,” 80,000 “hewers of stone in the hill country,” and a levy of 30,000 men of whom 10,000 a month were sent “by courses” to Lebanon (5:27–29 [13–15]). Alongside them are mentioned 3,300 chief officers “who had charge of the people who carried on the work” (5:30 [16]; cf. the figure of 550 “who had charge of the people,” 9:23; these may have been in charge of the non-Israelite workers, or of the king’s work in a limited sense, or may represent a different tradition). The men of the levy worked in Lebanon, at building in Israel, and at the copper foundry, such as that in the plain of the Jordan between Succoth and Zarethan (5:31 [17], 32 [18], 7:46 and see above). The revolt against the House of David which broke out at the outset of Rehoboam’s reign specifically because of the onerous burden of service (1 Kings 12) had its roots in various features that marked Solomon’s reign. The people were embittered not only by the heavy taxation, which was an innovation in the kingdom that had come into being against the background of a lengthy tribal regime, but also by the contrast between the heavy burdens on the one hand and the splendor and luxury of the royal court on the other. Likewise the barrier between Israel and Judah, which enjoyed special privileges, alienated the northern tribes from the Davidic kingdom. “Jeroboam son of Nebat, who was “in charge over all the forced labor of the house of Joseph” (11:28), probably revolted against the king not only in his capacity as the officer in charge of the compulsory service but as the standard bearer of the antagonism between the House of Joseph and the northern tribes in general on the one hand and Judah on the other. The divorce from the tribal tradition expressed, for example, in the geographical division of the districts and perhaps also in the fostering of a sacred center in Jerusalem, lacking though it did an ancient tradition, incited the tribes, in an attachment to time-honored centers such as Beth-El, Penuel, Shechem, and Dan, to rebel against the House of David. Thus the kingdom of Solomon, although characterized by economic development and by internal political security, provoked both a social revolt and tribal opposition or a general conservative tribal antagonism, the spokesman of which was the Yahweh prophet Ahijah the Shilonite. But in the days of Solomon the kingdom was still at the height of its power and Jeroboam was compelled to flee to Egypt. The author of the Book of Kings, in keeping with his religious conceptions, ascribes the revolt and the division to the idolatry of the king, in which he was influenced by his foreign wives.

The Wise King and Judge
The Bible attributes the peace and prosperity reigning in the country to the wisdom of Solomon, a literary topos already present in the prologue to the Code of *Hammurapi* (cos 11, 336–37. King Asshurbanipal of Assyria (669–627) boasts of his own wisdom (Streck Asb. 256 I. 17). Solomon’s wisdom is mentioned already in that part of David’s last testament which is not formulated in the style of the Book of Deuteronomy (1 Kings 2:6, 9). The Bible describes the king as wiser than all men, as uttering proverbs and songs, solving riddles, and speaking of trees and beasts, of fowl, creeping things, and fishes, this being the type of wisdom renowned in eastern lands. His wisdom was essentially part of the totality of the wisdom of the East and the wisdom of Egypt, although it was higher in degree (5:9–14 [4:29–34]; 10:1, 3). Outside the
book of 1 Kings, Prov. 25:1 speaks of “proverbs of Solomon collected by King Hezekiah and his circle.” According to the Bible, Solomon was held in high esteem and extolled among other peoples too. Primarily, however, Solomon was considered a wise judge, as is evident from the dream at Gibeon and from the case of the two harlots. Solomon’s wisdom was manifested mainly in connection with his royal authority as conceived both in modern times and in the Ancient East. It expressed itself in the function of dispensing justice to individuals and principally of establishing a just and righteous regime for the people as a whole. More precisely, it expressed itself in a capacity for leadership that distinguishes between good and evil (“Give Your servant therefore an understanding mind to govern Your people, that I may discern between good and evil; for who is able to govern this Your great people?” 3:9). The account of the dream at Gibeon likewise associates the king’s riches and honor with his understanding (“a wise and discerning mind,” 3:12, 13). The other passages, too, which mention the king’s wisdom in connection with his political acts apparently refer to a quality of leadership (3:17 [7], 26 [12]; 10:5, 7, 9: “He has made you king, that you may execute justice and righteousness,” ibid. 23, 24). One of the most important halls in the king’s house which was near the Temple was called “the Hall of the Throne” or “the Hall of Judgment” (7:7), symbolizing the decisive quality of leadership as conceived already in the days of the Judges (on David’s judicial function, cf. 11 Sam. 8:15; 12:1–6; 14:5–21).

In addition to this “wisdom,” Solomon’s royal authority was enhanced by his status as a sacrificial king, who supervised the religious rites, himself offered sacrifices, blessed the people after the manner of the priests, and took a decisive part in the dedication of the Temple, the sanctification of the court, and the celebration of the Feast of Tabernacles (1 Kings 3:15; 8:3–5, 14, 22, 54–56, 62–66). The proximity of the king’s house to the Temple, to which no explicit parallel has been found in the Ancient East, also set the seal of divine election and perhaps even of divine favor on the royal authority which produced a decisive change in the regime in Israel. The transition from the Tabernacle to the Temple apparently also symbolized the transition from a tribal to a monarchical regime. Henceforth associated with the Temple, which was conceived in the ancient part of Solomon’s prayer as the house of God’s habitation (8:33), the kingdom of the House of David was bound up with the city, which as early as in the days of Solomon may have begun to assume a holy character. Yet on the basis of the experience of generations, this close proximity of the royal palace to the Temple provoked the anger of Ezekiel (43:7–10), while the Chronicler saw fit to omit a description of the king’s house, the building of which took 13 years, from the account of the Temple.

It is this variegated conception of the quality of leadership informed with a divine inspiration which brought such renown to the wise king that succeeding generations ascribed to him the composition of such widely different poetry and wisdom works as the Song of Songs, Proverbs, and Ecclesiastes, which contain numerous motifs characterizing the attribute of kingship. In assessing the reign of Solomon, it is important to distinguish the main narrative, in which Solomon rules a peaceful and prosperous kingdom, from the details which tell us of the burdensome yoke he laid on the people (1 Kings 12:4), of the internal opposition by one of his most talented officials, Jeroboam, who was able to build on northern resentment, and of the opposition of the prophet Ahijah. Most telling of all is the fact that the kingdom did not survive his death.

See also “History: Kingdoms of Israel and Judah.”

[Samuel Abramsky / S. David Sperling (2nd ed.)]

In the Aggadah

Solomon succeeded to the throne at the age of 12 (SOR 14). His original name, Jedidiah, the “beloved of God,” was superseded by that of Solomon (Shelomoh) because of the peace (shalom) that prevailed throughout his reign. He was also known as Koheleth (Eccles. 1:1), Lemuel (Prov. 31:1), Agur, Jakeh, and Ithiel (Prov. 30:1; Eccr. R. 1:2). Solomon chose wisdom, knowing that once he possessed it all else would come of itself (PR 14:59; Song R. 1:1, no. 9). This God-granted wisdom made him the wisest of mankind. His 800 proverbs are equal to 3,000 since each verse in his book may be interpreted in two or three different ways (Song R. 1:3, nos. 10, 11). He was an expert horticulturist, and he succeeded in growing all types of foreign plants in Ereẓ Israel (Targ. Eccles. 2:4–6; Eccr. R. 2:5). He understood the language of the beasts and birds and they submitted to his judgment (Song R. 1:3, nos. 10, 11). He was also known as Koheleth (Eccles. 1:1). He consulted him was the Queen of Sheba (Targ. Sheni 1:3, ibid. 23, 24). One of the most important halls in the king’s house which was near the Temple was called “the Hall of the Throne” or “the Hall of Judgment” (7:7), symbolizing the decisive quality of leadership as conceived already in the days of the Judges (on David’s judicial function, cf. 11 Sam. 8:15; 12:1–6; 14:5–21).

In addition to this “wisdom,” Solomon’s royal authority was enhanced by his status as a sacrificial king, who supervised the religious rites, himself offered sacrifices, blessed the people after the manner of the priests, and took a decisive part in the dedication of the Temple, the sanctification of the court, and the celebration of the Feast of Tabernacles (1 Kings 3:15; 8:3–5, 14, 22, 54–56, 62–66). The proximity of the king’s house to the Temple, to which no explicit parallel has been found in the Ancient East, also set the seal of divine election and perhaps even of divine favor on the royal authority which produced a decisive change in the regime in Israel. The transition from the Tabernacle to the Temple apparently also symbolized the transition from a tribal to a monarchical regime. Henceforth associated with the Temple, which was conceived in the ancient part of Solomon’s prayer as the house of God’s habitation (8:33), the kingdom of the House of David was bound up with the city, which as early as in the days of Solomon may have begun to assume a holy character. Yet on the basis of the experience of generations, this close proximity of the royal palace to the Temple provoked the anger of Ezekiel (43:7–10), while the Chronicler saw fit to omit a description of the king’s house, the building of which took 13 years, from the account of the Temple.

It is this variegated conception of the quality of leadership informed with a divine inspiration which brought such renown to the wise king that succeeding generations ascribed to him the composition of such widely different poetry and wisdom works as the Song of Songs, Proverbs, and Ecclesiastes, which contain numerous motifs characterizing the attribute of kingship. In assessing the reign of Solomon, it is important to distinguish the main narrative, in which Solomon rules a peaceful and prosperous kingdom, from the details which tell us of the burdensome yoke he laid on the people (1 Kings 12:4), of the internal opposition by one of his most talented officials, Jeroboam, who was able to build on northern resentment, and of the opposition of the prophet Ahijah. Most telling of all is the fact that the kingdom did not survive his death.

See also “History: Kingdoms of Israel and Judah.”

[Samuel Abramsky / S. David Sperling (2nd ed.)]
permitted to a monarch (Deut. 17:16–7; Sanh. 21a), because he thought that with his wisdom he would not be affected by his transgression. At this God declared, “As thou livest, Solomon and a hundred of his like shall be annihilated before a single letter of the Torah will be obliterated” (TJ, Sanh. 2b, 20c), and in fact Scripture records that his many wives finally “turned away his heart after other gods” (1 Kings 11:4). The rabbis declare that “It would have been better for Solomon to have cleaned sewers than to have this verse written of him” (Ex. R. 6:1). When he married the daughter of Pharaoh, the archangel Gabriel descended from heaven and inserted a reed in the sea around which accumulated silt and on which the city of Rome was ultimately built (Sanh. 21b). On the nuptial night she brought him a thousand musical instruments. Although each one was dedicated to a different idol, Solomon neglected to stop her (Shab. 56b). She spread over his bed a tapestry studded with diamonds and pearls which gleamed like constellations in the sky and created an illusion of stars. Solomon slept on until the fourth hour of the morning, causing deep sorrow among the people since the daily sacrifice could not be offered because the Temple keys lay under Solomon’s pillow (Lev. R. 12:5).

The most important of Solomon’s acts was his building of the Temple, in which he was assisted by angels and demons. Indeed, the edifice was throughout miraculously constructed, the large, heavy stones rising and settling in their proper places by themselves (Ex. R. 52:4). Solomon split the stone by means of the shamir, a worm whose mere touch cleft rocks. He was informed of the worm’s location by the chief of the demons, Ashmedai, who was captured by Benaiah, Solomon’s chief minister (Git. 68a). Solomon was so assiduous in this task that the Temple’s erection took only seven years, about half the time for the erection of the king’s palace, despite the greater magnificence of the sanctuary. In this respect, he was the superior of his father, King David, who first built a house for himself, and then thought about a tabernacle for God. Indeed, it was Solomon’s meritorious work in connection with the Temple that saved him from being reckoned by the sages as one of the impious kings, among whom his sins might rightfully have placed him (Sanh. 104b; Song R. 1:1, no. 5). Second only to the Temple in beauty was Solomon’s throne. None before or after him could construct a similar work of art, and when his vassal-kings saw its beauty they prostrated themselves and praised God. Jewels and gold adorned the throne and animals guarded its approach. These animals also lifted Solomon from step to step when he ascended the throne (Targ. Sheni 1:2, 5–7). The throne did not long remain in the possession of the Israelites. During the life of Rehoboam, the son of Solomon, it was taken to Egypt. Shishak, the father-in-law of Solomon, appropriated it as indemnity for his widowed daughter. Ultimately, the throne was taken to Babylonia, Greece, and finally to Rome (Esth. R. 1:12).

Because of his sins, Solomon gradually lost his throne, his wealth, and even his wisdom. At first he ruled over the inhabitants of the upper world as well as over those of the lower; then only over the inhabitants of the earth; later over Israel alone; then he retained only his bed and his staff; and finally only his staff was left to him (Sanh. 20b). There is a difference of opinion on whether Solomon returned to his throne. He “saw three worlds” which, according to one opinion, means that he was successively a private person, a king, and again a private person. According to another, however, he was king, private person, and again king (Sanh. 20b; Git. 68b). For three long years, he journeyed about as a mendicant from city to city and from country to country, atoning for his sins. While a beggar, during his old age, he wrote Ecclesiastes, saying wherever he went, “I Koheleth was king over Israel in Jerusalem” (Eccles. 1:12). Previously, in his youth, he had written the Song of Songs, and in his middle age Proverbs (Song R. 1:1, no. 10).

In Islam

From various allusions, which are found in the works of Arab poets, it is evident that tales concerning King Solomon (Sulaymān) were circulated in the Arabian Peninsula even before the appearance of *Muhammad. In the *Koran Solomon is not only the successor of King David (Sura 27:1b) but also the faithful servant of Allah (38:29). He did not even momentarily abandon the service of Allah; it was rather the devils who negated it and taught the people sorcery, thus estranging them from the worship of the Creator (2:96). Once, however, when gazing at his horses, Solomon overlooked the recital of the evening prayer at its proper time; but as a sign of repentance, he killed his beloved horses (38:31–33). In the most positive description of the character of Solomon, one recognizes Christian influence. As a faithful servant, Solomon requests that eternal kingship be granted to him (38:34). He is awarded wisdom and intelligence, understands the speech of the birds, and rules over the wind which blows with strength (27:15, 16, 81; 31:11), as well as over the spirits (21:82; 34:11, 12; 38:35–38). It is no wonder that Solomon’s fame reached distant lands and that the Queen of Saba (Sheba) came to visit him (27:20–45). No one was aware of his death until a worm ate away the staff which supported his body, the staff broke, and his body collapsed (34:14).

There are certain characteristics common both to David and Solomon (see *David, in *Islam). Some have been transferred from David to Solomon (the invention of armor), while others have been transferred from Solomon to David, such as the domination of animals and birds (38:17, 18). Solomon participated in the judgment decided by his father concerning the pastureland on which sheep grazed (21:78). David was as wise as Solomon (21:79–82).

Following Jewish aggadah and ancient legends, some of which originated in Persia, the Muslim commentators on the Koran and legend writers devote an important place to Solomon’s character, birth, wisdom, intelligence as a judge and investigator of complicated affairs, his rule over the jinn (spirits) who obeyed his commands and built palaces, fortresses, bath houses, and dams for him, and his mastery of sorcery.
and mysticism. Solomon's chief counselor, Asaf b. Barakhya, also made use of the king's magic ring (khatam Salaymain). Solomon lost his kingdom because he listened to the voice of his wife Tarea, the daughter of the king of Sidon; he was punished by being exiled from his kingdom. Solomon died at the age of 48, after having ruled Israel for 40 years (as did his father David).

In the Arts

In Literature. As the king of Israel appointed to build the Temple and as the legendary embodiment of wisdom, Solomon became a prototype of Jesus in the medieval Christian world. Treatment of the subject in literature, art, and music involves not only Solomon himself but also the sub-themes of the Queen of Sheba and the Shulammite of the Song of Songs. In literature, one of the earliest surviving works on the theme is an Anglo-Saxon legend, the poetical Dialogue of Solomon and Saturn (manuscript at Cambridge; ed. R.J. Menner, 1941). There is also a 15th-century Dyalogus Salomonis et Marcolfi (Cologne, 1473); but from this period, beginning with the anonymous German mystery, Das Spiel von Koenig Salomon mit den zweyen Frawen (1461), most writing on the theme was in dramatic form. One unusual medieval work was the 15th-century Russian "Tale of the Centaur," based on the midrashic account of Solomon's construction of the Temple. During the Renaissance era plays included a Spanish Farsa de Salomon (c. 1530) by Diego Sanchez; a Fastnachtspiel by the Meistersinger Hans Sachs (1550); an anonymous Italian Rappresentazione del Re Salomone (Florence, 1562), apparently preceded by an earlier work on the subject (c. 1512); and a drama celebrating the Danish heir to the throne, written by H.J. Ranch of Viborg (1584). However, the outstanding treatment was probably the German neo-Latin playwright Sixtus Birck's Sapientia Salomonis (1547), a performance of which by the boys of Westminster School was given before Elizabeth 1 of England in 1565. Although the 17th century produced further dramas – notably Joost van den Vondel's Shlomo Hamelekh (Amsterdam, 1612) by Balthasar Dias in Portugal, and Pedro Calderón de la Barca's La Sibila del Oriente y Gran Reina de Sabá (Madrid, 1682) in Spain – a more philological and pessimistic note was struck by writers emphasizing Solomon's outlook as the traditional author of Ecclesiastes. Two examples are the anonymous German Schau-Platz der Eitelkeit... (1668), a five-act prose drama, and the English poet Matthew Prior's verse soliloquy, Solomon on the Vanity of the World, written in the 1690s but published only in 1718; works of this type were common throughout the following century. Apart from the texts of various oratorios, such as Thomas Morell's Solomon (1749) which was set to music by Handel, the two outstanding 18th-century treatments were both in German: Friedrich Gottlieb Klopstock's tragedy, Salomo (1764), and Johann Jacob Bodmer's religious drama, Die Thorheiten des weisen Koenigs (Zurich, 1776).

The subject proved even more attractive to some of the major writers of the 19th century, who often displayed greater ingenuity in their use of the legendary material made accessible by modern scholarship; and Jews were prominent for the first time among these authors. Lippman Moses Bueschenthal's five-act German tragedy, Der Sieglering des Salomo (Berlin, 1820), was followed by Kornel Ujejski's Polish biblical poem, Pieśni Salomona (1846) and Heinrich *Heine's romantic poem, "Salomo" (in Romanzen, 1851). Among works on the theme published in the second half of the century were "Azael," the Spanish Jew's first tale in the third part of Henry Wadsworth Longfellow's Tales of a Wayside Inn (1872), on the Angel of Death's encounter with Solomon; Victor Hugo's grandiose poem "Salomon" (in La légende des siècles, 1877); the U.S. poet John Greenleaf Whittier's "King Solomon and the Arts" (1877); Robert *Browning's poem, "Solomon and Baldis" (1883); Paul "Heyse's five-act drama, Die Weisheit Salomos (1887); and Károly Szász's Hungarian biblical play, Bölcs Salomon (1889). Others who turned to the subject included the Portuguese dramatist Eugénio de Castro e Almeida (Bélkiss, Rainha de Sabá, d'Axum e do Hymiar, 1894), the English poet Arthur Symons (The Lover of the Queen of Sheba, 1899), and the Czech poet Julius *Zeyer. Among 20th-century authors the theme has, if anything, enjoyed even greater popularity. Works which it has inspired include the U.S. poet Vachel Lindsay's "King Solomon and the Queen of Sheba" (in The Chinese Nightingale and Other Poems, 1917); Alfons Paquet's German drama, Markolph; oder Koenig Salomo und der Bauer (1924); the Irish poet W.B. Yeats' "Solomon and the Witch" (1924); and "Solomon's Parents" (in Poems of Thirty Years, 1925) by the English writer Gordon Bottomley.

Some of the outstanding modern interpretations of the story have been written by Jews. The Danish poet Oscar Ivar *Levertin's works on Jewish themes include Kung Salomo och Morolf (1905). Three other important works were Edmond *Fleg's biography, Salomon (1929); Hayyim Nahman *Bialik's Va-Yehi ha-Yom— (English version by Herbert Danby, And It Came to Pass... 1938), a collection of legends; and Sammy *Gronemann's biblical comedy, Der Weise und der Narr; Koenig Salomo und der Schuster ("The King and the Cobbler," 1942), Nathan *Alterman's Hebrew version of which (1942) was staged in Israel both as a play and as a successful and pioneering Hebrew musical comedy. Gronemann also wrote a comedy entitled Die Koenigin von Saba (1951). Three treatments in Yiddish are Abba Isaac Buch's Ashmedai... (1911), a drama about Solomon and Jerooboam; Saul Saphir's historical novel, Shlomo Hamelekh (1931); and Jerakhmèl Steigman's Mayseleh vegin Shlomo Hamelekh (1931), tales for children.

In Art. In art, too, Solomon is a major biblical theme. Scenes from his life are often found in Byzantine manuscripts, and his figure is sculpted on medieval cathedrals and appears in stained glass; several scenes are also portrayed in the Raphael Loggie in the Vatican. Solomon is also an important figure in art of the Islamic world. The main scenes treated are the anointing and coronation of Solomon, the judgment of Solomon, the construction of the Temple, the visit of the Queen...
of Sheba, and Solomon worshipping idols. The anointing and crowning of Solomon (1 Kings 1:39 and Song of Songs 3:11) appear in medieval sculpture, stained glass, and in manuscripts – notably the ninth-century Bibles of Charles the Fat and St. Paul-Without-the-Walls and the 15th-century Hours of Turin by Hubert and Jan Van Eyck (now destroyed). Bath-Sheba sitting at the right hand of Solomon (1 Kings 2:19) was regarded as a type of the coronation of the virgin. This interpretation is explicit in the sumptuous Tapestry of the Three Crowns in Sens Cathedral, France. The judgment of Solomon (1 Kings 3:16–28) has generally been popular with artists. It appears in several French and German Hebrew manuscripts, such as the 13th-century British Museum Miscellany and Bibliothèque Nationale Pentateuch, the Second Nuremberg Haggadah, and the Tripartite Mahzor from the Kauffman Collection, Budapest. In the Middle Ages the judgment of Solomon was regarded as an example of justice and was often depicted in lawcourts. There is a 15th-century sculpture of the subject at the Palace of the Dukes, Venice. Among Renaissance treatments are a drawing of the school of Mantegna (Louvre) and a painting by Giorgione (private collection, England). The subject was also popular in the 17th century, particularly with the French school. There are paintings by Rubens (Copenhagen State Museum), Jacob Jordens (Prado, Madrid), and Nicolas Poussin (Louvre). In the 18th century it was included by Tiepolo in his ceiling for the Archbishop’s palace, Udine. Solomon constructing the Temple (1 Kings 6:1 ff. and 2 Chron. 3:1 ff.) is a subject found in 15th-century French manuscripts, notably the Jewish Antiquities of Josephus in the Bibliothèque Nationale illustrated by Jean Fouquet. As the real appearance of the Temple was unknown, Fouquet visualized it as a French Gothic cathedral of his own time, and other artists such as Giotto and Taddeo Gaddi imagined it in the form of the Dome of the Rock, i.e., as a circular or octagonal building surmounted by a cupola.

King Solomon and the Queen of Sheba was not a common subject until the 12th century. From that time onward, however, they often appeared as a pair. The two episodes treated in medieval art are the meeting of Solomon and Sheba (1 Kings 10:1 ff. and 2 Chron. 9:1 ff.) and Sheba enthroned beside the king. In Christian iconography Solomon was the type of Jesus and Sheba represented the gentle Church; hence Sheba’s meeting with Solomon bearing rich gifts foreshadowed the adoration of the Magi. On the other hand, Sheba enthroned represented the coronation of the virgin. Sculptures of the Queen of Sheba are found on great Gothic cathedrals such as Chartres, Rheims, Amiens, and Wells, and the reception of the queen was a popular subject during the Italian Renaissance, as it appealed to the contemporary taste for pageantry and display. It appears in the famous bronze doors to the Florence Baptistry by Lorenzo Ghiberti, in frescoes by Benozzo Gozzoli (Campo Santo, Pisa) and in the Raphael Loggie (Vatican). The Venetians predictably exploited the decorative possibilities of the subject. There are examples by Tintoretto (Prado) and Veronese (Pinacotheca, Turin). In the 17th century, Claude Lorrain (1600–1682) painted one of his peaceful landscapes of harbors at sunset, representing the queen embarking on her journey to Solomon (National Gallery, London). Depictions of the idolatry of Solomon (1 Kings 11:4 ff.) are found in medieval art, where the elderly monarch is shown kneeling before an idol to which a woman is pointing. This was also quite a common subject in the 16th and 17th centuries.

IN MUSIC. Two early musical works are Josquin de Prés’s motet, Stetit autem Salomon (1538), and a curiosity – a canon for 96 voices by Pietro Valentini called Nodus Salomonis (“Solomon’s Knot”), first published in 1631 and republished and analyzed in 1650 by Athanasius Kircher in his Musurgia Universalis; the entire canon is nothing but a kind of “change ringing” on the G major chord. Early oratorios on the theme include Carissimi’s Judicium Salomonis (1669) and F.T. Richter’s L’incoronazione di Salomone (Vienna, 1696). The subject is taken up by northern composers: G.C. Schuermann’s “spiritual opera,” Salomon (Brunswick, 1701), J.G. Keiser’s opera, Solomon (Hemburg, 1703), and M.A. Charpentier’s oratorio, Judicium Salomonis (Paris, 1702). Porsile’s Lesalettione di Salomone (Barcelona, 1711) is held to be the first oratorio performed in Spain (in honor of the emperor Charles 11). Zadok the Priest (the description of Solomon’s coronation) is the first of a set of four coronation anthems composed by Handel for George 111 (1727) and is still sung at every British coronation. Handel’s oratorio, Solomon, was first performed at Covent Garden on March 17, 1749; the “Entry of the Queen of Sheba” from this work is often performed as a concert piece, and the oratorio was reedited by Mendelssohn with cuts and the addition of an organ part. Solomon’s judgment again appears as an oratorio subject in I. Holzbauer’s Il Giudizio di Salomone (Mannheim, 1766), and in a Polish work, Sąd Salomona, by Chopin’s teacher Elsner (tragedy with dances and incidental music; Warsaw, 1806). The 19th century gave new prominence to the Queen of Sheba. Gounod’s four-act opera, La Reine de Saba (text by M. Carré and J. Barbier, after Gérard de Nerval), had its premiere at the Paris Opera in 1862; but a more lasting success was gained by Karl *Goldmark’s Die Koenigin von Saba (text by S.H. *Moshenthal, première in Vienna, 1875). Some of the melodic material is supposed to have been based on synagogue motifs. Ernest *Blok’s Schelomo, Rhapsodie Hébraïque, for cello and orchestra, was inspired by a figurine of Solomon sculpted by the wife of the cellist Alexander Barjanski. Blokh’s work was composed in 1915 and first performed in 1917 with Barjanski as soloist and the composer conducting. Later works on the subject are Reynaldo *Hahn’s La Reine de Scheba (1926; text by Edmond *Fleg); Belkis, Regina di Saba, a ballet by O. Respighi (1932); and Randall Thompson’s Solomon and Balkis, an opera in one act, based on Kipling’s The Butterfly that Stamped (1942). The music for Sammy Grone- mann’s Shelomo ha-Melekh ve-Shalmai ha-Sandelar was written by Alexander Argov.

Ashmedai, an opera based on the talmudic legend of Satan assuming the appearance of the king by Yosef *Tal
SOLOMON, family of English origin which won distinction in St. Helena and South Africa. The founder was NATHANIEL SOLOMON (1735–1800), a merchant with interests in the East India trade, who married Phoebe Mitz (or De Mitz) of Leiden in 1774, when she was 14 years old. She was widowed at 40, had 21 children, and lived to a great age. The eldest son, SAUL SOLOMON (i; 1775–1850), left for India at the age of 20, but, on becoming dangerously ill, was put ashore at St. Helena. On his recovery he started trading with passing ships and in time acquired almost a monopoly in the provisioning of ships and the wholesale trade. His brothers JOSEPH and BENJAMIN joined him and by 1815 he had become a wealthy man, noted for his hospitality. He became sheriff of St. Helena and was appointed consul for the Netherlands and France. He kept in touch with the earliest Cape Town congregation. His brother Benjamin (1786–1877) settled in Cape Town where for many years he was usher of the court. SAUL SOLOMON (ii; d. 1892), their nephew, was educated in Cape Town. Apprenticed to a bookseller and printer, he eventually became a partner and finally took over the business with his brothers. They printed the Government Gazette and in 1863 became proprietors of the newspaper, The Cape Argus, which remained a leading daily and was the start of the largest chain of newspapers in South Africa. On the grant of parliamentary government to the Cape in 1854, Saul Solomon was elected a member of the Assembly. He played a leading part in securing responsible government for the Colony in 1872, but because of a physi-

SOLOMON, family of Australian pioneers and statesmen. EMMANUEL SOLOMON (1800–1873) was born in London and transported to Sydney as a convict in 1818 for housebreaking. After being pardoned, he went into business as a merchant in Sydney with his brother and settled in Adelaide, the capital of South Australia, in 1838, two years after it was founded. He was a general merchant and auctioneer and in 1840 opened the city’s first theater. Well known for his philanthropic gifts, Solomon helped finance the building of large apartment blocks for the colonists to replace the primitive homes of the early settlers. He served in the South Australian parliament in 1862–65 and 1867–71.

His nephew, JUDAH MOSS SOLOMON (1818–1880), who was born in London and arrived in Sydney in 1831, became Emmanuel Solomon’s partner in business in Adelaide. Judah Moss Solomon played an active part in municipal affairs. He was elected to the town council in 1852 and in 1869–71 served as mayor. From 1858 to 1874 he represented Adelaide in the South Australian Parliament and played an important part in introducing a public health act. When a small Jewish community was established in 1848, Judah Moss Solomon was elected first president of the congregation.

Judah Moss Solomon had two sons. The elder, BENJAMIN SOLOMON (1844–1922), was appointed chief censor of Australia on the outbreak of World War I. His brother, VABIAN LOUIS SOLOMON (1853–1908), born in Adelaide, settled in Darwin in the Northern Territory in 1874 and worked as a merchant and shipping agent. He founded the Northern Territory Times, the first newspaper in the region, and became mayor of Darwin. Vabian Solomon was prominent in the development of the mining and pearl-fishing industries and on his return to Adelaide became the representative of the Northern Territory in the South Australian Parliament, serving from 1890 to 1901.

Expert on financial matters, he was an important political figure in South Australian politics and was premier for a short time in 1899, the first Jew to become premier of an Australian colony or state. Vabian Solomon represented South Australia at the convention which framed the federal Australian constitution. In deference to his religious beliefs, the convention did not meet on Saturdays. He was elected to the first federal Parliament in 1901 and served for two years. In 1905 he was again elected and remained in Parliament until his death. His daughter Esther was the first woman elected to the Adelaide City Council.

[Isidor Solomon]
SOLOMON

cal infirmity declined office. He was a powerful debater, brilliant in repartee, liberal in outlook, and a spokesman for the African population. Like other of the Solomons who settled at the Cape, he became a Christian and married a Christian, but retained an interest in Jews and Jewry. Of his sons SAUL SOLOMON (III; 1875–1960) became a judge of the Transvaal Supreme Court, and WILLIAM EWART GLADSTONE SOLOMON (1880–1966), a painter, was principal of the Government Art School in Bombay. EDWARD SOLOMON, son of Joseph Solomon and nephew of the first Saul, became a Congregational minister. His three sons were all knighted: SIR EDWARD PHILIP SOLOMON (1845–1914), minister of public works in the Transvaal under General Botha; SIR RICHARD SOLOMON (1850–1913), first high commissioner of the Union of South Africa in London (1910–13); and SIR WILLIAM HENRY SOLOMON (1852–1930), chief justice of the Union (1927–29).

SOLOMON (né Solomon Cutner; 1902–1988), British pianist. Solomon was born in London and made his first public appearance at the Queen's Hall at the age of eight. Up to the age of 16 he continued to give concerts, after which he studied in London and Paris. His London reappearance in 1921 marked the beginning of a great career, which included world tours and important American appearances in 1926 and 1939. He was made a Commander of the British Empire in 1946. Solomon, as he always called himself, was considered one of the finest pianists Britain ever produced. After suffering a stroke in 1956, he was forced to retire prematurely from the concert platform. [Max Loppert]

SOLOMON, BERTHA (1892–1969), South African lawyer and politician. Born in Minsk, Russia, she was taken to South Africa at the age of four to join her father Idel Schwarz, a Zionist pioneer. She was the second South African woman to be admitted to the bar, practicing in Johannesburg. She was elected to the Transvaal provincial council in 1933 and from 1938 to 1958 sat in the Union Parliament as a member of the United Party. A vigorous champion of women's rights, she was prominent in the campaign for votes for women in 1930. Through her persistent efforts she was responsible for the Matrimonial Affairs Act of 1953 which removed some of the disabilities of women resulting from the marriage laws. She was also a leading figure in the National Council of Women and was a founder of the South African Women's Auxiliary Air Force in World War II. Her autobiography, Time Remembered, appeared in 1968. [Louis Hotz]

SOLOMON, ELIAS LOUIS (1879–1956), U.S. Conservative rabbi. Solomon was born in Vilna, Lithuania, and after childhood sojourns in England, Cyprus, and Palestine, he immigrated with his family to the United States in 1888. He earned a B.A. from the City College of New York in 1900 and was ordained in 1904 at the *Jewish Theological Seminary, where he earned a D.H.L. in 1910. After heading the Barnett Memorial Hebrew School in Paterson, New Jersey, he served as rabbi of Congregation Beth Mordechai in Perth Amboy, New Jersey (1905–07; Kehillath Israel in the Bronx, New York (1907–18); and associate rabbi of Kehillath Jeshurun in Manhattan, New York (1918–21), before becoming rabbi of Congregation Shaarei Zedek on New York City's West Side, where he remained until his death.

Solomon was an early leader of Conservative Judaism. His first role was as president of the Alumni Association of the Jewish Theological Seminary of America (1914–16), the forerunner to the *Rabbinical Assembly. In 1913, together with Solomon *Schechter, he helped found the United Synagogue of America, serving as one of the organization's first presidents (1918–24). During his tenure in office, the United Synagogue's Women's League and Young People's League were established, the United Synagogue Recorder was launched, and plans were made to build the Yeshurun Synagogue in Jerusalem. Solomon remained the organization's honorary lifetime president, stepping in to serve briefly as its acting executive vice president following Samuel *Cohen's retirement. In 1926, he helped form another umbrella organization for congregations, the Synagogue Council of America, for which he also served as president from 1930 to 1932.

Solomon brought his leadership skills to a wide variety of regional and national Jewish organizations, serving as president of the New York Board of Rabbis (1929–30), chairman of the America Pro-Falasha Committee, honorary president of the American Biblical Encyclopedia, and treasurer of the Jewish Braille Society of America. He was also active in the Hebrew Free Loan Society and the National Council of Christians and Jews. During World War II, he was appointed by President Harry S. Truman to serve on the Selective Service Panel and received a presidential citation. [Bezalel Gordon, (2nd ed.)]

SOLOMON, EZEKIEL (d. 1806), Michigan's first-known Jewish settler. Born in Berlin, Germany, Solomon was among the first Jewish merchants to go to Montreal, Canada, at the time of the British occupation. Solomon was a partner with Chapman Abraham, Gershon Levy, Benjamin Lyon, and Levi Solomons, who were originally army purveyors and who later figured prominently as pioneer fur traders in Michigan. In 1761 Solomon went to Fort Michilimackinac, today's Mackinaw City in Michigan. He was captured by the Indians during their 1763 massacre, but gained his freedom by being ransomed. He was a partner of the Mackinaw Company enterprise, which was organized in 1779 by some 30 traders and companies and which is believed to be the first example of a department store operation in the United States. He was also one of the organizers, in 1784, of Michigan's first Board of Trade. Although married to a Christian, Solomon remained a
Jew and was an officer and active member of Montreal’s Congregation Shearith Israel.

[Irving I. Katz]

**SOLOMON, HANNAH GREENEBAUM** (1858–1942), founder and first president of the National Council of Jewish Women (NCJW). The fourth of ten children born to Sarah Spiegel and Michael Greenebaum, a successful Chicago merchant, she married Henry Solomon in 1879 and the couple had three children. Solomon brought leadership and ideological vision to the NCJW, helping it become the premier Jewish women’s organization in late 19th and early 20th century America. Representative of a generation of middle-class Jewish women who paved the way for giving women a voice in the public affairs of the Jewish community, Solomon made a career out of voluntarism and social reform. A member of Chicago’s most prominent Reform synagogue, Temple Sinai, Solomon had a strong commitment to Jewish life and the larger community; she and her sister, Henrietta Frank, became the first Jewish members of the prestigious Chicago Women’s Club in 1876. Already well known, Solomon emerged as an obvious choice to chair the Jewish Women’s Congress that convened when Chicago hosted the 1893 World’s Fair. At the conclusion of the four-day Congress, delegates founded the National Council of Jewish Women and unanimously elected Hannah Solomon as president.

In the NCJW’s early years, Solomon and other leaders often confounded expectations about proper gendered behavior. As Council president, Solomon was the first woman to speak from several synagogue pulpits throughout the country. Through her presidency of the NCJW and directorship of the Bureau of Personal Service, an agency that served Jewish immigrants in Chicago’s seventh ward, Solomon established herself as one of the premier community leaders of Chicago. She served for years as the only woman on the Executive Board of the Associated Jewish Charities. Under her leadership, the Chicago NCJW chapter created a Sabbath School for girls in order to inculcate Jewish values and provide young women with educational opportunities. Solomon’s support for an initiative within Reform Jewry to move the Saturday Sabbath to Sunday as a means of conforming with American standards and encouraging greater Sabbath observance within the Jewish community created dissension within the NCJW and motivated an attempt to remove her as president. During the contentious debate, Solomon issued her often quoted statement, “I do consecrate the Sabbath. I consecrate every day in the week.” Solomon and her allies managed to keep the opposition from ousting her as president and steered the NCJW toward a pluralistic position that supported Sabbath observance without taking an official position on the Sunday Sabbath issue. However, Solomon’s stance on Sabbath observance remained a source of divisiveness through her years as president, which concluded in 1905. She wrote the autobiographical *Fabric of My Life* (published posthumously in 1946) and *A Sheaf of Leaves* (1911), a privately printed collection of essays, speeches, and other writings.

[Beth S. Wenger (2nd ed.)]

**SOLOMON, HAROLD** (“Solly”; 1952– ) U.S. tennis player. Growing up in Silver Spring, Maryland, Solomon proved his tennis abilities early, being ranked the No. 2 youth player in America at 14 before winning the US National Clay Court Championship for 18-year-olds. Solomon attended Rice University and was twice an All-American, establishing himself as a patient and accurate volleyer. Solomon’s patented shot, the “moonball”—a deep, high, top-spin lob—kept his opponents from attacking the net, and forced them to maintain their concentration during long rallies, Solomon’s forte. As a member of the Association of Tennis Professionals (ATP), Solomon enjoyed a successful 16-year career, won 64 percent of his 879 singles matches, and was selected to four American Davis Cup teams, including two championship teams in 1972 and 1978. From 1975 to 1980, Solomon was one of the top professional tennis players in the world, winning 20 of his 22 singles titles, and being ranked as high as fifth in the 1980 ATP standings before finishing in seventh place. Solomon also finished in the top ten of the ATP in 1976 (8th), 1978 (9th), and 1979 (8th), and maintained a top-20 ranking from 1974 to 1980. Solomon paired with another Jewish player, Eddie Dibbs, to form a doubles team which was referred to affectionately in the press as “The Bagel Twins”; the duo was ranked in the top ten from 1974 to 1976. After retiring in 1986, Solomon went on to become an equally effective coach, helping Mary Joe Fernandez maintain a top-ten ranking from 1994 to 1998, and then managing Jennifer Capriati’s celebrated 1999 comeback, when she climbed from 101st to 23rd in the world, while winning her first titles in over six years. Seeking to devote more time to his family, Solomon ended his stretch as a traveling full-time coach in November 2000, serving instead as an adviser to players on the women’s circuit. In January 2006 Solomon opened the Harold Solomon International Tennis Academy in Ft. Lauderdale, Florida, to develop young, promising tennis players, with special emphasis on sportsmanship and character building. Apart from his tennis work, Solomon and his wife, Jan, have been active in organizations addressing the problem of world hunger.

[Robert B. Klein (2nd ed.)]

**SOLOMON, ODES OF**, a collection of early Christian poems of the first century C.E. which might have some bearing on Jewish sectarian literature. The poems were discovered by
J. Rendel Harris, who published them (1909) and gave them the name Odes of Solomon to distinguish them from the better-known *Psalms of Solomon contained in the same manuscript. The Odes were known to some of the Church Fathers: the combination of Odes and Psalms of Solomon was probably quite common in the early Church, but there is no claim to authorship by Solomon in the text. The extant version is a Syriac translation from the Greek. A Hebrew or Aramaic original is possible, but difficult to prove. Of the 41 Odes, 15 are unmistakably, even sharply, Christian, 11 probably Christian, and 14 not necessarily so; none contains positively Jewish material. They can, however, be classed with the *Hodayot (Qumran *Thanksgiving Psalms) in a loose literary genre, by the common features of a highly poetic record of deeply personal religious experience, centered on the themes of election and salvation, a poetic structure of loose *parallelismus membroum, and some figures of style and some unusual metaphors (the firm foundation, the trees planted by God, the lifting to the heights). On the strength of these common metaphors, it has been suggested that some Odes are of Jewish sectarian origin, but this is not likely. However, the doctrinal type of the Christianity expressed by the Odes is not easy to classify (there are some affinities to gnosticism); it is certainly early and, therefore, the possibility that the Odes represent some group of Christians which was influenced by the Dead Sea sect (or some similar Jewish sect) cannot be denied. Even so, the influence of the Dead Sea sect is less pronounced than in other Christian writings. Fragments of the Greek version were published in M. Testuz, *Papyrus Bodmer X–XII (1959).

**SOLOMON, PSALMS OF**, a collection of 18 pseudopigraphical psalms, extant in Greek and Syriac, but seemingly written in Hebrew. The ascription to Solomon, which stems from the Greek version, has no historical basis, and indeed the psalms themselves make no reference to Solomon. The psalms deal with a number of diverse subjects which include a personal poem, a lament on the nation’s troubles, and a hymn of messianic hope, while others deal with social, religious, and political themes.

Psalm 1 speaks of an unexpected war that came to a prosperous nation because of its sins. Psalm 2 relates an attack by gentiles on Jerusalem and the Temple. Although this evil befell the Jews because of their shameful practices, the wicked one who attacked them would receive his deserts. In Psalm 3 the poet discusses the fate of the wicked, who, unlike the righteous, will forfeit the world to come. Psalm 4 attacks the godless who associate with the righteous, censures their transgressions, and looks forward to their destruction by God. (Attempts have been made to equate this with historical situations, but suggestions made so far are without any firm basis.) Psalms 5, 6, and 7 describe God’s greatness and His help for the righteous, and entreat Him to help His people. Psalm 8 again describes the tumult of war in sinful Jerusalem and the treatment the city receives at the hands of the conqueror. Psalm 9 again asks God to defend His people. Psalm 10 praises God who rebukes and chastises but who has pity upon the righteous. Psalms 11 contains a vision of the redemption and of the return of the Jewish exiles to Jerusalem. Psalms 12, 13, and 14 praise the righteous and their deliverance, while condemning the wicked and describing their punishment. Psalm 15 presents a description of the crimes of the wicked and of their punishment on the Day of Judgment. In Psalm 16, the poet begs God to keep him from sin, and to show him kindness and deliver him. In Psalm 17 the poet awaits God’s judgment and the restoration of the promised kingdom of David, which had been usurped by sinners. However, these are punished by a foreigner (apparently Pompey, see below) who inflicts evils upon Jerusalem, after which, at the end of days, God’s salvation will be shown. Psalm 18, the last one, is also filled with messianic hope.

The historical meaning and value of the psalms depends upon the determination of the date of composition. The generally accepted view is that they were compiled about the middle of the first century B.C.E., the political allusions in them reflecting the conquest of Judea by Pompey (63 B.C.E.) and the events connected with it. These can be explained in the light of certain contemporary events, like the verses in Psalm 17 that speak of the promise of the kingdom of David, of its plunder by sinners (the *Hasmoneans), and their punishment by a foreigner (Pompey) who exiled them to the West (Italy). The first verses of the second psalm, which depict a wicked man who broke into Jerusalem and defiled the Temple, refer to a similar situation. Most commentators think that verses 25–29 allude to the fate of Pompey who was murdered in 48 B.C.E. when he went to Egypt after being defeated by Julius Caesar. This interpretation attaches great significance to the criticism of the sins of the Hasmoneans which stigmatizes them as having stolen the kingdom from the dynasty of David. This leads many scholars to believe that the author of the psalms was a *Pharisee, although one must remember that hostility to the Hasmoneans was not restricted to the Pharisees.

There is also considerable historical importance in the eschatological spirit prevalent in the psalms, and in the description of the pious, the righteous, and the God-fearing, who are possibly a collective group that included the author himself. The chief eschatological teaching of the book is found in Psalms 17–18, which give an extensive description of the hoped-for Messiah of the House of David. This section was greatly influenced by Isaiah, chapter 11. The author also preached the doctrine of resurrection (15:12; 15:13). J. Ephron attempted to reject this interpretation completely and postulated that the psalms are Christian. The psalms became known only at the beginning of the 17th century, when the Greek text was published by J.L. de la Cerda from a manuscript. Since
then, additional Greek manuscripts have been discovered and further editions have appeared. A Syriac translation has also been discovered but it is of limited value since it was made from the Greek text, not from the Hebrew original.

[Uriel Rappaport]

**SOLOMON, SERVANTS OF** (Heb. משלי שלמה). The “Servants of Solomon” are mentioned in 1 Kings 9:27 (cf. 11 Chron. 8:18) in an annalistic section (1 Kings 9:15–28) that records the grandiose projects undertaken by King Solomon. These included construction within the country and commercial enterprises on an international scale, undertaken in conjunction with Solomon’s Phoenician ally, Hiram of Tyre. Solomon’s work force, organized to implement his projects, consisted of two major components: corvée labor – large numbers of workers conscripted mainly from the non-Israelite population; and an official, managerial class of army commanders, and some skilled technicians, mostly Israelites. Many scholars assign the “Servants of Solomon” to the non-Israelite corvée, and classify them as royal slaves, hence their name. Support- ers of this view cite a later source, the list of returning exiles in the days of Zerubbabel (Ezra 2:2ff.), where “the Sons of the Servants of Solomon” are listed together with the “Nethinim, usually assumed to be Temple slaves (ibid. 2:43–58). The slave status of both the Nethinim and the “Servants of Solomon” is to be questioned, however. It is probable that the “Servants of Solomon” were the official class (1 Kings 9:27), and not part of the corvée (ibid. 9:20–21). They are, after all, mentioned in connection with the trade in gold, brought from *Ophir* (location uncertain). Together with Phoenician sea captains provided by Hiram, they set forth on large sailing ships from the port of Elath (Ezion-Geber). The Hebrew term for “slave, servant,” *eved*, can also mean “courtier, royal official” (Ex. 8:20; Esth. 3:2).

[Baruch A. Levine]

**SOLOMON, SIMEON** (1840–1905), British artist. Born in London, he was the son of Michael Solomon, a prosperous hat importer and the second Jew to be made a freeman of the city of London. The young Simeon was encouraged by his brother, Abraham Solomon (1823–1862), a highly gifted but conventional genius, who died the very day he was elected an associate of the Royal Academy, and by his sister, Rebecca Solomon (1832–1886), also a Pre-Raphaelite artist whose work was widely exhibited in her lifetime; she had a stabilizing effect on Simeon during the latter’s childhood. Simeon, a child prod- igy, entered the Royal Academy before he was 15 and exhibited at 18, the youngest artist ever to have been shown there. He created a stir with a picture of the infant Moses set adrift on the Nile and another entitled “Habet,” inspired by a contemporary novel, *The Gladiators*. At one Royal Academy exhibition, works by all three Solomons were on show. Simeon Solomon was influenced by the aesthetics of the pre-Raphæ- elites, Millais and Burne-Jones, with both of whom he was friendly (Burne-Jones said Solomon was the greatest artist in the pre-Raphaelite Brotherhood) and who had a profound ef- fect on his work, which some critics felt to be unmanly and sentimental. In 1871 Simeon also published a prose poem *A Vision of Love Revealed in Sleep* which expresses the ideals of his later paintings and drawings. His public career ended in 1873 when he was arrested in a public lavatory and jailed for a short term for a homosexual offense. At the age of 44, he was admitted to a workhouse. To pay for liquor and drugs, he went on making drawings which he sold to dealers very cheaply. These drawings betray nothing of the degraded circum- stances under which he was living. Forgotten for several decades, Solomon’s work was rediscovered in the 1960s. His painting, with its soft and subtle gradations, evokes haunting visions. The half-naked angels, somber rabbis, Greek Orthodox priests, and delicately outlined heads of dreamers fail to give any clue to the artist’s strange personality. In recent years his reputation has risen, in part because of his status as an eth- nic and sexual outsider in Victorian society.

[Alfred Werner]

**SOLOMON, SOLOMON JOSEPH** (1860–1927), English painter. Solomon was born in London where he settled and at- tained considerable social and professional popularity. When in 1918 he was appointed president of the Royal Society of Brit- ish Artists, he wrote to a Jewish friend: “I feel I ought to ac- cept the presidency of the RBA, because I am a Jew.” During World War I, Solomon developed an interest in camouflage and as a result was made lieutenant colonel (1916) and was sent to France on a special mission. On his return he established a camouflage training school. He wrote *Strategic Camouflage* (1920). He was active in Jewish social life, was a founder and the first president of the Maccabean Society (1891), and was an active supporter of the Ben Uri Art Society.

Solomon painted portraits of many eminent people, in- cluding Queen Victoria, Israel *Zangwill* (1894), Heinrich *Graetz* (1887), and Solomon *Schechter* (1902). In his fash- ionable paintings of Edwardian society, he revived the grand manner of the great English portrait painters, employing in addition certain Impressionist devices. He established his reputation with a series of Old Testament subjects with back- grounds inspired by his visit to the Middle East. He painted decorative panels for the Royal Exchange and the House of Lords and mythological and allegorical scenes in the taste of
the period. Allegory (1904) has been interpreted as representing the ultimate triumph of Judaism as the world religion. He wrote one theoretical work, The Practice of Oil Painting (1910).

Solomon's sister, Lily Delissa Joseph (1863–1940), pioneer cyclist, motorist, and airplane pilot, was also a painter.

**BIBLIOGRAPHY:** O.S. Phillips, Solomon J. Solomon (Eng., 1933); DNB, 795–6 (incl. bibl.); Nameny, in: Roth Art, 586–7; M. Buber (ed.), Juedische Kuenstler (1903). 141–53.

**SOLOMON, TESTAMENT OF** of pseudepigraphic work written in Greek, of uncertain date. King Solomon, the narrator, states that during the construction of the Temple his overseer was plagued by the demon Ornias. In answer to the king's prayers, the angel Michael appeared and gave Solomon a ring with which he exorcized the demon. He then summoned up one spirit after another, both male and female, subdued each, and compelled them to assist in the building of the Temple. The queen of the south visited him and marveled at the wisdom of Solomon. In his encounters with the demons Solomon asks each his name, his powers, the angel to whom he is subject, and the means by which he is subdued. The stress on a knowledge of the name and particulars of a demon is common in the demonology of many cultures and is especially pertinent to exorcism. Some of the demons, such as Abezethibod (מֵאֵבֵזְתָּהוֹד, Av Ezot Oved?), the demon of the Red Sea, Asmodeus, and Beelzebul (Beelzebul; a Greek variant of Beelzebub) are of Oriental origin. Most bear Greek names. Of these, some are concretized evil traits such as are found in classical myths (e.g., Pthonos, jealousy; Eris, strife). Others show affinities to figures of Greco-Roman myth and cult: Obizouth with her dragon-like hair is a Medusa type; Cynosparton, a sea demon, is reminiscent of Poseidon; Onoscelis seems to be the empousa; the dog-shaped Rhabdos and the three-headed serpent are similar to creatures such as Cerberus, the dog of Hades, and the multi-headed Hydra.

Parallel material on Solomon's encounters with demons in Josephus (Ant., 8:45ff.) and midrashic sources (e.g., Git. 68) shows that the Testament contains elements which are considered Jewish; mention of the crucifixion and like references point to Christian elements. Such a syncretistic blend of Jewish, Christian, Oriental, and Hellenic motifs is typical of the demonological and magical literature and papyri emanating from Egypt in the first centuries of the common era. Scholars suggest between c. 100 C.E. and c. 300 C.E. as possible dates of composition. Editions of the Testament of Solomon were published in Patrologia Graeca (122 (1899), 1315–58), and by C.C. McCown (ed.), The Testament of Solomon (1922).

**BIBLIOGRAPHY:** F.C. Conybeare, in: JQR, 11 (1898/99), 1–45; 18, 11 (1907), 448f.; Ginzberg, Legends, 4 (1913), 150–4; 6 (1928), 292f. [Jacob Petroff]

**SOLOMON, WISDOM OF** (Gr. Σοφία Σαλωμώνος (or Σ. Σαλωμώντος) or, Σοφία; η πανδόρος Σοφία, “the wisdom of all the good precepts” — a title sometimes given also to Proverbs and Ben Sira), an apocryphal work. The ascription of the book to Solomon is mentioned explicitly in chapters 7–9 (particularly in 9:7), but such early writers as Jerome (Præfatio in libros Solomonis), and Augustine (De Civitate Dei, 17:20), already were skeptical about this ascription, and attributed the work to Philo despite the fact that its viewpoint differs from his.

The book can be divided into three parts. Chapters 1–5 deal with eschatology, 6–11 deal with wisdom, and 11–19 are a Midrash on the Exodus from Egypt with a Hellenistic presentation. The first part discusses the fate of the righteous and the wicked. The wicked man regards all acts as accidents, and is thus not deterred from doing whatever he wishes; he is unaware that in the end man's life will be judged by his good deeds. Although the wicked man appears to prosper, eternal life and happiness is reserved for the righteous. Thus the righteous man, though he appears not to prosper, is the truly wise man. By its very nature wisdom is unlikely to enter the soul of the wicked (1:4).

The second part describes wisdom as a metaphysical reality, as “a breath of the power of God” (7:25). It exists forever and through its power all knowledge and every virtue is created. It determines the history of Israel. Without expressly mentioning their names, the author exemplifies wisdom's role in the life of biblical “heroes” (Cain, Noah, the men of Sodom, Jacob, and Joseph) and in important events (the Exodus from Egypt and the crossing of the Red Sea).

In the third part the author deals at length with the plagues in Egypt and the redemption. The miracle is regarded not as a change in nature but as a change in the principles that constitute nature, and whether as reward or as punishment always takes the form of measure for measure (e.g., the waters of the Nile were changed to blood because the Egyptians first sinned with water when they cast the Hebrew children into the Nile; on the other hand, the Israelites were rewarded by receiving water from the rock). Punishment itself comes after all possibilities have been exhausted, since it is God's nature to wait for the repentance of the wicked. While discussing Pharaoh's rebelliousness the author incidentally discusses the origin of idolatry in general. It lies in man's bad habit of not seeking for the first cause, and in the fashioning of images which were indeed first created for a specific occasion (e.g., a father mourning for his only son erected an image of him), but then spread through the desire to flatter tyrants and their ambition to exalt themselves. Through idolatry man also found a way of realizing his desires by assigning a different god to each of his vices.

The purpose of the book is to strengthen the Jewish believer against the seduction of idolatry. The problem of the
sufferings of the righteous, already discussed in the Bible, is dealt with here against the background of Hellenistic thought. The punishment of the righteous serves the purpose of “testing” or “educating,” but his reward is granted in the world to come. God is the God of the living and He intended man to be immortal. However, Satan’s jealousy brought death into the world (2:23 f.) but only the men of vanity experience it (2:24).

The punishment of the righteous is fleeting but his hope everlasting (4:3), while “the memory of the wicked shall perish on the day of reckoning” of their iniquities, i.e., on the eschatological Day of Judgment. Like Proverbs and Ben Sira this work compares wisdom to a creative principal through which God acts in the world (18:15). Idolatry, which is the opposite of wisdom, is regarded as fetishism. The author scorns in particular the worship of “contemptible” beasts (cats, snakes, monkeys), a cult common in Egypt.

Many influences have entered into the book. Besides that of the Bible, the book’s view is similar to the view of the sages that evil does not come from the Lord (1:13 – Sifra Be-Ḥukkotai, ch. 4:1); that the soul preexisted (8:20 – Hagg, 12b): that there is a heavenly temple (9:18 – Gen. R. 1:4); that everything is judged measure for measure (Sot. 1:7); and that the soul is a trust (Yalk. Pt. 935). Like the rabbinic aggadot it mentions the singing of Ḥalal at the time of the Exodus from Egypt (Pes. 117a). Other views, however, are Platonic and Stoic, e.g., the idea that the world was created from primeval matter (9:9); that the body serves as a hindrance to the influence of God in man (9:15); that there are four virtues (8:7); and that spirit is preexistent. As in Platonism, the wise are the beloved of God, and as in Stoicism the spirit is compared with fire (2:2). The author mentions several other views (that right is might; that man dies but once) only in order to refute them.

As far as the language is concerned, a conscious effort is made to imitate biblical style, including parallelism, but construction of the sentences is Greek and is polished. There is a tendency toward alliteration, paronomasia, and complex words rare even in Greek. Opinions differ as to the composition of the book. Some are of the opinion that the first part was written in Hebrew, others consider the whole book to have been written in Hebrew, while yet others divide it among various authors all of whom wrote in Greek. However, the composition of the Greek words, the use of assonance, the rhythmic construction and the imagery (crowning the head with flowers, the victory processions of athletes, etc.) in all parts of the work alike support the view that it was written in Greek by one person, apparently in Alexandria. The date of composition is uncertain. Since the author opposes the deification of kings, some ascribe it to the era of Caligula. However, the Ptolemaic kings also compared themselves to gods. A 16th-century manuscript was found (now in Hechal Shlomo in Jerusalem) which is a translation of the whole apocryphon, seemingly from the Latin, into a corrupt Hebrew.

[Golda Akhiezer (2nd ed.)]

SOLOMON BEN AARON (Solomon Yedida; 1670 (?)–1745), prominent Karaite scholar, author, and spiritual leader from Lithuania. Born in Posewol, he moved after 1707 to Troki. He was a teacher of Torah and had many disciples. In 1710 as a result of a plague, which annihilated more than half of the Karaite population of Lithuania, he lost his wife and children and moved to Vilna, which had become the temporary residence of Karaites during the plague and where he served as the head of the Karaite bet din. In Vilna he was friendly with Rabbanite Jews, such as Joshua Heschel and Aryeh Leib Shapira, with whom he corresponded. In 1719 he returned to Troki and became head of the community until the end of his life. He knew Latin, Polish, and Rabbanite literature. Solomon corresponded with Karaite worthies and community leaders from Jerusalem, Constantinople, Damascus, and Lithuania-Poland on learned and community subjects. In 1666/7 Solomon was invited by Prof. Puffendorf, rector of Riga University (then under Swedish control), to come there to expound the Karaite doctrines. He was also asked to write a work about the schism between Karaites and Rabbanites. He wrote a book Apiyrion Asah Lo, which explains in its first part the commandments according to the doctrines of the Karaites and their differences from those of Rabbanites. The second part contains an anti-Rabbanite polemic. Without any critical approach Solomon introduces the traditional apologetic Karaite claim that the split between Rabbanism and Karaism had begun in the period of the Second Temple. The shortened version of this book was first published by A. Neubauer, Aus der Petersburger Bibliothek, Leipzig, (1866), 4–29 (later edition: J. Algamil (ed.), 2000). He wrote several works: Hanokh la-Na’ar and Rakh va-Tov (preserved in mss in various libraries) – grammatical treatises; Lehem Shearim (10s A 3, JNUL mic. 52475) – polemics between Karaites and Rabbanites by way of questions and answers; Migdal Oz (10s A 162; JNUL mic. 52389) – anti-Christian polemics, a kind of guide for those, who are forced to dispute with Christians. He wrote also liturgical poems in Hebrew and the Karaite language, of which some were incorporated in the Karaite siddur.

[Golda Akhiezer (2nd ed.)]
SOLOMON BEN ABRAHAM OF MONTPELLIER (13th century), talmudic scholar, initiator of the Maimonidean controversy that took place in the third decade of the 13th century (see *Maimonidean Controversy and Criticism). While he admired Maimonides as a talmudist and always spoke of him with respect, Solomon opposed his philosophic views, and in his fear that they would lead to heresy, began to campaign against the study of the Guide of the Perplexed and Sefer ha-Madda, the first book of the Mishneh Torah, in which Maimonides set down some of his philosophic views. Together with his two disciples, *David ben Saul and Jonah b. Abraham *Gerondi, Solomon enlisted the support of the rabbis of northern France, who in 1232 pronounced a ban against the study of the philosophical works of Maimonides and the secular sciences. The supporters of Maimonidean philosophy in Provence retaliated by excommunicating Solomon and his two disciples. With the deepening of the controversy Solomon was accused by David *Kimhi, a supporter of the Maimonists, of informing to the Franciscans and the Dominicans concerning the heretical nature of the Guide, thus initiating the burning of the work, which is thought to have taken place in Marseilles around 1232. Modern scholars, however, maintain that it is extremely unlikely that either Solomon himself or his two disciples actually did inform to the non-Jewish authorities, for they continued to be respected within the Jewish community as individuals and scholars, and it is difficult to believe that they would have been had they actually informed on the Maimonists.

Cited by Menahem b. Solomon *Meiri in one of his responsa, Solomon was spoken of favorably by *Nahmanides, Judah *Alfakar, Meshullam b. Solomon, and Joseph b. Todros ha-Levi *Abulafia. From extant sources such as Abraham b. Moses b. *Maimon's Milhamot Adonai, Solomon emerges not as a simple man nor as an extreme fanatic but as a learned talmudist who was uneducated in the realm of philosophy and did not understand the complexities of Maimonidean philosophy. While it is not clear exactly what he opposed in Maimonides' philosophy, it appears that he objected to Maimonides' allegorical interpretation of talmudic passages that described the afterlife in a material fashion and to his interpretation of many biblical laws. He opposed the view that the activation of the intellect was the prerequisite for attaining immortality, maintaining that the observance of the divine law was more important. He criticized Samuel ibn *Tibbon, the translator of the Guide, rather than Maimonides himself, for interpreting all biblical narratives allegorically.

SOLOMON BEN ELIJAH HA-KOHEN (late 11th and early 12th century), founder of an academy in *Damascus in the early 12th century. His father, the gaon *Elijah b. Solomon (d. 1083), was head of the Palestinian academy in Tyre. Elijah appointed his elder son, Abiathar, as his successor and his second son, Solomon, as av ("father") of the academy. However, after the dispute which broke out between the members of the academy and *David b. Daniel b. Azariah, who demanded that the Jews of Palestine and *Syria also recognize him, Abiathar was forced to escape to Tripoli in Syria. Solomon also left Tyre. It seems that he remained for some time in one of the villages of Galilee and later settled in *Hadrak. There he founded an academy which was considered as a continuation of the Palestinian one. He also assumed the title of gaon. A letter that he wrote in 1116, while gaon in Hadrak, was found in the *Genizah.

**BIBLIOGRAPHY:** Mann, Egypt, index; Mann, Texts, 1 (1931), 249ff.; S. Assaf (ed.), Sefer ha-Yishuv, 2 (1944), 93–94; Braslavi, in: *Eretz Israel*, 5 (1958), 220ff.

[Abraham Ashtor]

SOLOMON BEN HASDAI, exilarch in Babylonia, 733–c. 759, grandson of the *exilarch *Bustanai. Solomon was a scholar and leader. During his period of office he appointed three geonim to the academies of *Sura and *Pumbedita; one of these was his brother-in-law, Natronai Kahana of Pumbedita, who was also a member of the Bustanai family. When the academy of Sura lost its leader and a suitable rosh yeshivah could not be found, he appointed R. Yehudai b. *Nahman of Pumbedita as Gaon of Sura. His brother David was the father of *Anan, the founder of the *Karaite sect. His son Isaac Iskoi succeeded him as exilarch.

[Abraham David]

SOLOMON BEN JUDAH (d. 1051), Palestinian gaon and academy head in Jerusalem and in Ramleh from 1025 to 1051. It appears that R. Solomon was the son of a family of scholars from Fez. He married into the family of Solomon b. Joseph ha-Kohen, who preceded him in the gaonate. He was the father of three sons and a daughter, including Abraham who held the position of "fourth" in the yeshivah, and Yahya who studied under R. Hai Gaon.

At first R. Solomon was haiyazan in Jerusalem, then a member of the academy, then av bet din, and finally head of the academy. The members of his bet din were Nathan b. Abraham as av bet din, Tobiah b. Daniel, and Joseph ha-Kohen and Elijah ha-Kohen of the family which held positions in the Ereẓ Israel gaonate. More of his letters have been preserved than of any other Palestinian Gaon, and many were published. His Hebrew had a figurative style, and his particular concluding blessing was "great salvation." He also wrote in Arabic. Most of the letters were sent to Egypt. A document of his bet din from 1044/45 – evidence of the receipt of a pledge in Jerusalem and signed by the gaon and Elijah ha-Kohen – has been preserved. A letter of recommendation written by him for a Jew of Khurasan, who traveled to Egypt to collect funds, is also extant. He also wrote piyyutim, some of which were published. These include a kerovah for Hanukkah, a section of a piyyut for Shavuot, and a poem expressing yearning for the redemption
of Jerusalem. A *piyyut* in his honor was written by the *hazzan* Eli ha-Kohen b. Ezekiel of Fostat, and Ephraim he-Haver b. Shemariah wrote a *kinah* in his memory.

A peaceful man, his judgments were lenient and inclined toward making concessions. His approach to the Karaites was also tolerant; he attempted to abolish the ban which was issued against them every year on Hoshana Rabba on the Mount of Olives. In spite of the authorities' prohibition, the ban was once issued against the Karaites without his consent. As a result, several scholars were arrested and imprisoned in Damascus. The sufferings he endured at the hands of his adversaries are echoed in his letters. He was accused of having taken for himself a contribution which was sent from Mahdiyya to the yeshivah. His relations with Elhanan b. Shemariah were strained and he was compelled to leave Jerusalem after he was declared guilty of not helping certain prisoners. It is also possible that pressure from the local Karaites brought about his departure from Jerusalem to Ramleh. His principal adversary was Nathan b. Abraham, the disciple of Samuel ("the Third") b. Hoshana, and R. Hushiel of Kairouan. After the death of his uncle Bar Yoḥai, the *av* of the academy, Nathan was appointed, with the support of influential circles in Egypt, as *av* in Ereẓ Israel. While R. Solomon was in Jerusalem and Nathan in Ramleh, Nathan proclaimed himself academy head (*rosh yeshivah*). The *Gaon* then went to Ramleh and issued a ban against him for overstepping his bounds. Both factions engaged in polemics and sent letters of accusation to Egypt. The representatives of the Fatimid government in Jerusalem and Ramleh supported R. Solomon, according to instructions received from Egypt. The dispute continued for three years and in 1043 an agreement was reached between the adversaries. According to this, Nathan was to remain *av* and after the death of the *gaon*, he would assume the position of *rosh yeshivah*. During R. Solomon's time the economic situation in Ereẓ Israel, especially in Jerusalem, was poor; heavy taxes were imposed. In 1024 bedouin of the Jarāt tribe attacked the country and plundered Ramleh and the rest of the centers. A plague raged through Jerusalem, and in 1033 the country was struck by an earthquake. The pilgrimage from the Diaspora, on which the incomes of the academy and the Jewish population were to a great extent dependent, declined. In his letters to Egypt, R. Solomon described the distressing situation and appealed for support for maintenance of the Jews. He maintained relations with the communities of Damascus, Aleppo, and Tyre; they requested that he pray for them and give them his blessing, and they contributed to his academy. A letter from distant Spain was brought to him "from the merchants in Seville." The *nagid* Jacob b. Amram of Mahdiyya (near Kairouan) sent a contribution to his academy. The *gaon* also exchanged letters with R. Hai Gaon. Relations with Babylonia deteriorated as a result of the rivalry for the support of Egypt, the wealthiest contributor to the academies in Babylonia and Ereẓ Israel. Egypt was the political and financial pillar of Ereẓ Israel and the majority of the academy's income came from there. In 1026–27 R. Solomon sent a *hazzan* named Solomon and his own son Abra-

ham in order to raise funds in Egypt. He also maintained a correspondence with personalities in the inner circles of the royal court and the heads of the Egyptian communities, such as the communal leader Samuel b. Talyon and the "chief of the congregation" Abraham b. Isaac ha-Kohen. Most of his letters were addressed to three personalities: Abraham b. Sahlan and his son Sahlan, leaders of the Babylonian community in Fostat who also supported the Ereẓ Israel academy, and Ephraim b. Shemariah of Gaza, a member of the "Great Sanhedrin" and leader of the Ereẓ Israel community in Fostat. The Jerusalemite community in Egypt was subject to the authority of R. Solomon, who also intervened in its internal affairs.

[Eliezer Bashan (Sternberg)]

**SOLOMON BEN JUDAH HA-BAVLI** (mid-tenth century), Hebrew poet. One of the first Hebrew hymnologists in Europe. He appears to have lived in northern Italy though his family was of Oriental origin. Little is known of him apart from some semilegendary allusions to him as an esteemed *paytan*, and as one of those who conveyed the Oriental "Secrets of Prayer" from Italy to Germany. The limited literary remains now extant consist of a few hymns for the Sabbath and festivals, as well as about 25 *selihot*. His best-known production is a *yosef* for Passover, *Or Yeshu Maʾesharim*, the pattern of which is taken from one of Eleazar Kallir’s works, and later served as a model for many other Italian and German hymnologists, such as his pupil *Meshullam b. Kalonymus*. His *Avodah for the Day of Atonement*, *Adderet Tilhoshet*, is one of the most puzzling of its kind. The *selihot* of Solomon are often referred to as *shalmoniyot*, a term possibly derived from his name. His poetry is remarkable for its rich rhyme; only his *Avodah* is unrhymed. His style is heavy and murky and his works often raise difficult problems of commentary which the early sages, including Rashi, tried to solve. His *piyyutim* had a great influence on the works of the first Italian and Ashkenazi *paytanim* who took him as a model. In 1865 L. Zunz prepared a list of Solomon ha-Bavli’s poems. E. Fleischer published the first critical edition of his poems, with introduction and commentary, in 1973.

[Ezra Fleischer]
SOLOMON BEN JUDAH “OF DREUX” (or Rouen; 12th–13th centuries), French scholar and tosafist. Solomon was one of the eminent pupils of *Isaac b. Samuel of Dampierre. He was regarded as one of the leaders of French Jewry in his time, and was one of the seven French scholars to whom Meir Abulafia addressed his letter of complaint against the Provençal scholars because of their attitude to Maimonides’ view of the resurrection. He is called Solomon ha-Kadosh (“the saintly”), and sometimes simply “Ha-Kadosh,” apparently because of his piety and asceticism. Both contemporary and later scholars relied on his customs. Solomon is mentioned in the standard *tosafot to a number of tractates, in those of a pupil of Rabbenu Perez to *Bava Kama and *Bava Mezija, and to a considerable extent in the works of the tosafists of England, which have been discovered during recent years. There is also mention of *tosafot by Solomon himself which are no longer extant. He also apparently engaged in biblical exegesis since, in addition to quotations from him occurring in the collections of the tosafists to the Pentateuch, he is known to have been the teacher of Meir of Etoile, who engaged exclusively in biblical exegesis. Another of his pupils was *Samuel b. Solomon of Falaise.

Findings of the 1970s on indicate that R. Solomon was associated with Rouen and not Dreux.

BIBLIOGRAPHY: Gross, Gal Jud, 171–3, 626; Urbach, Tosafot, index. [Israel Moses Ta-Shma]

SOLOMON BEN JUDAH OF LUNEL (Solomon Vivas; 1411–?), Provençal philosopher. At the age of 13, under the direction of his teacher, Solomon ben Menahem (Frat Maimon), Solomon composed a commentary on Judah *Halevi’s Kuzari, entitled Heshek Shelomo, which is extant in manuscript (Bodleian Library, Opp. Add. 114). At times, Solomon quotes his teacher word for word – for example, in the section on the 53rd chapter of Isaiah. While the author claims to have based his commentary on Judah b. Isaac Cardinal’s Hebrew translation of the Kuzari, it appears that the translation he used was, apart from a few variations, that made by Judah ibn *Tibbon.

The work reflects a considerable knowledge of the philosophical literature of the period. Solomon quotes Shem Tov *Falaquera, *Levi b. Gershom’s commentary on Ecclesiastes, a section on physics from Levi’s Milhamot Adonai, and portions of Levi’s commentary on the Pentateuch. He also refers to *Moses of Narbonne’s commentary on al-*Ghazali’s “Intentions of the Philosophers,” Solomon b. Menahem’s commentary on *Levi b. Abraham’s Battei ha-Nefesh, and Ruah Hen, a philosophical work of disputed authorship which was meant to serve as a kind of introduction to the philosophical ideas of Maimonides’ Guide. In one portion of his commentary, Solomon attributes Ruah Hen to Moses ibn *Tibbon, while in another portion, he holds that the work was written by Samuel ibn *Tibbon. He implies that he himself wrote a commentary to the work. Toward the end of Heshek Shelomo he refers to Sefer ha-Sod by Joseph ibn *Kaspi.

SOLOMON BEN MEIR (12th century), northern French scholar, grandson of *Rashi and younger brother of Jacob *Tam and *Samuel b. Meir. Very little is known about him. He was born after Rashi’s death and was apparently named after him. He occupied himself mainly with exegesis, grammar, and punctuation, and was called “the father of the grammarians.” Only fragments of his work have survived in the Arugat ha-Bosem of *Abraham b. Azriel, who is the only scholar to cite him. Solomon may possibly have compiled a book of halakhic rulings (Ḥul. 116b, Rashi end of commentary to Mishnah 8:5).

BIBLIOGRAPHY: Gross, Gal Jud, 162, 234; Urbach, Tosafot, 54, 56; S. Poznański, Perush al Yehzekel … le-Rabbi Elizeer mi-Belganz (1913), xxxixff.

[Israel Moses Ta-Shma]

SOLOMON BEN SAMSON (11th century), scholar of Worms, a contemporary of Rashi’s teachers. He used to sign himself יִנְשַׁמּוּ and as a result is referred to as “Sason.” His teachers were *Jacob b. Yakar and, apparently, *Eleazar of Worms, and he was a colleague of *Isaac b. Judah ha-Levi, the teacher of Rashi. Many of Solomon’s rulings are quoted in the Maaseh ha-Geonim (1910) in reply to questions raised by the sons of *Machir b. Judah. It is stated there that he and *Kalonymus of Rome disagreed with Isaac b. Moses of Mainz as to whether a minor male could exercise the equivalent of meʿun (see “child marriage”) with regard to his wife. Some of his responsa were collected in the Teshuvot Hakhamei Zarefat ve-Loter, (ed. by J. Mueller (1881), nos. 43–56).

His responsa are written in the style of Rashi, in a spirit of humility, and are based on the traditions of his teachers. Statements of his are found among various works of the school of Rashi, such as Shibbolei ha-Leket, Sefer ha-Pardes, and Sefer ha-Rokeah. He was also one of the first of the commentators on *piyyut in Germany. Additional fragments of his work were discovered recently in the manuscript of a prayer book. A paytan called Solomon b. Samson b. Eliakim is mentioned by L. *Zunz in his Literaturgeschichte der synagogalen Poesie.

SOLOMON BEN SAMUEL (14th century), scholar living in Urgench, Transoxania (Uzbekistan). In 1339 he compiled a Hebrew-Persian dictionary, Sefer ha-Melizah, comprising over 1,000 alphabetical entries on the vocabulary of the Bible, Targum, Talmud, and Midrash. The author knew Turkish, Persian, Arabic, and Aramaic and was well acquainted with the works of Jewish scholarship of the West, including *Rashi, whom he called “Solomon the Frenchman.” There are manu-
scripts of Sefer ha-Melizah in the *Firkovitch and E.N. *Adler Collections.  
[Walter Joseph Fischel]

SOLOMON SULIMAN BEN AMAR (ninth or tenth century), liturgical poet. Solomon was also called Solomon Alsingari, from which it follows that he came from Sindjar, west of *Mosul in Kurdistan. He may possibly have lived in Babylon, but it is not impossible that he lived in Ereẓ Israel or in *Egypt. Many hundreds of his piyyutim were discovered in the Cairo *Genizah. Since many of them do not bear his signature, some of them were attributed in error to other pizzutim, whose names were also Solomon, as for example Solomon ibn Gabirol.

His important piyyutim are kerovot for all the Jewish festivals; yezorot, for all the portions of the Torah; and a malmad for the order of the Temple service on the Day of Atonement. Only a few of his piyyutim have been published, about seven by I. Davidson in *Genzei Schechter, 3 (1928), others by various scholars. Fragments of the malmad were published, without his name being given, by I. Elbogen in his *Studien zur Geschichte des juedischen Gottesdienstes (1907), 176–82.

[Abraham David]

SOLOMONS, ADOLPHUS SIMEON (1826–1910), U.S. leader in social welfare programs. Solomon, who was born in New York, as a young man helped found Mount Sinai Hospital. Moving to Washington in 1859, he did government printing, ran a bookstore, and maintained a photograph gallery. In 1871 he was elected to Washington D.C.'s House of Delegates. His greatest achievement was in the service of the American Red Cross, which he helped Clara Barton establish in 1881. While she was absent from Washington in 1883, he conducted the young organization's affairs from its Washington headquarters as second vice president and was described by her as “my good vice president and kind counselor.” Solomon held this office for 12 years and represented the U.S. at the Red Cross conference in Geneva in 1884. Sent by President Chester A. Arthur as the U.S. representative to the International Red Cross convention in 1887, he was elected vice president of the convention. For 20 years Solomon was director of Columbia Hospital and Living In Asylum, also serving as an executive of many other health institutions. Of a religious bent, he was concerned with Jewish survival and served as acting president of the Jewish Theological Seminary Association (1902) and as a member of the central committee of the Alliance Israélite Universelle. Solomon became the champion of the new immigrants from Eastern Europe, and was appointed by Baron de Hirsch as general agent for the Baron de Hirsch Fund in the U.S.

[Abram Vossen Goodman]

SOLOMONS, JACK (1900–1979), British boxing promoter. Born in London’s East End, Solomon’s became a professional fighter at the age of 17, but after three bouts he left the ring and entered the fish business. In 1931 he returned to boxing as a promoter, and following World War II promoted the sport in Great Britain with the 1945 British heavyweight championship match between Jack London and Bruce Woodcock. The event was a huge success and made Solomon the premier boxing promoter in Britain. He staged boxing shows all over the world, and in 1962 put on the first professional bout in Israel. Solomon’s promoted numerous world title fights including the 1951 middleweight match between Ray Robinson and Randy Turpin and the heavyweight meeting of Cassius Clay and Brian London in 1966. He is the author of the book *Jack Solomon’s Tells All* (1956).

[Jesse Harold Silver]

SOLOVEICHIK, Lithuanian rabbinical family. (See Chart: Soloveichik Family.) It is first heard of in Slobodka. (1) JOSEPH HA-LEVI SOLOVEICHIK was the *parnas* of the community and strove to have the 1758 prohibition forbidding Jews to live in Kovno rescinded. His son, (2) ISAAC, had two sons, (3) Moses and Abraham, who built the great synagogue of Williamsopol-Slobodka in 1772. Moses was appointed rabbi of Williampol-Slobodka. Moses’ son, (4) JOSEPH, became the son-in-law of Hayyim of Volozhin and was rabbi of Kovno. Joseph’s son, (5) ISAAC ZEEV, was appointed the official rabbi of Kovno. (6) Joseph Baer *Soloveichik was the son of Isaac Zeev, as was (7) HAYYIM SIMHAI, whose only daughter married Feivel Holzberg, the father of Isaac Raphael Holzberg. (8) SIMHAI HA-LEVI SOLOVEICHIK, son of Elijah Zevi, a son of (4), immigrated to Jerusalem, where he was known as Simhah of London. (9) Hayyim *Soloveichik was the son of (6). (10) SIMHAI, also a son of (6), was appointed rabbi of Mogilev in 1911. (11) ZALMAN, son of (8), was a well-known Jerusalem communal worker. (12) MOSES, son of (9), was rabbi in a number of Lithuanian towns and then rosh yeshivah at the Rabbi Isaac Elchanan Theological Seminary (see *Yeshiva University*) in New York. (13) JOSEPH DOV, son of (8), was appointed rabbi of Spring Valley in 1933. (14) MOSES, son of (8), was a rosh yeshivah and rabbi in Switzerland. (15) Isaac Zeev ha-
Levi *Soloveichik (1886–1959), son of (9), was a rosh yeshivah in Warsaw, succeeded his father at Brisk, and on immigrating to Jerusalem in 1941, founded a yeshivah for exceptional students. He was known as Velvele Brisker. He was regarded as the supreme halakhic authority by the extreme Orthodox section of the community. (16) Joseph Dov *Soloveitchik, (17) Samuel Soleveichik, a prominent chemist, and (18) Aaron *Soloveichik were sons of (12). The literary output of this distinguished family has been remarkably meager under special circumstances.

[Mordechai Hacohen]

**SOLOVEICHIK, AARON** (1917–2001), U.S. rosh yeshivah and noted Orthodox rabbinical personality. Born in Khaslavich, Belarus, he was taken to Warsaw in 1920 where his father Rabbi Moshe *Soloveichik became head of the Talmud department of the Taḥkemoni rabbinical seminary. In 1930, right after his bar mitzvah, Soloveichik and his family immigrated to the United States, where his father had become the senior rosh yeshivah at the Rabbi Isaac Elchanan Theological Seminary. Soloveichik graduated from the high school (Talmudical Academy), and the college (Yeshiva College) affiliated with the Rabbi Isaac Elchanan Theological Seminary. He received his rabbinical ordination from the latter institution and also attained a legal degree from the New York University Law School. Soloveichik first taught Talmud at Mesivtha Tifereth Jerusalem and then at the Rabbi Chaim Berlin Yeshiva. In 1960 he joined the Talmudic faculty of the Rabbi Isaac Elchanan Theological Seminary, where his older brother, Rabbi Joseph Baer *Soloveichik, was the dominant spiritual and intellectual figure. Rabbi Aaron Soloveichik moved to Chicago in 1966, where he became rosh yeshivah and dean of the faculty at the Hebrew Theological College in Skokie, Illinois.

In 1974 he left this school and founded Yeshivas Brisk in Chicago. In 1986 he began commuting weekly to New York to also teach at the Rabbi Isaac Elchanan Theological Seminary, where he became the successor to his ailing brother, Joseph. In addition to Talmud and cognate texts, Soloveichik also taught the philosophy of Judaism, lectured on contemporary issues, and devoted much time to student guidance. He became a beloved and focal rabbinic figure on the American Torah scene. Despite suffering a debilitating stroke in 1983, he courageously continued his teaching responsibilities. Soloveichik was quoted in the New York Times (January 4, 1987), “I try to elevate myself through my suffering. I’m in constant pain. But when I give a shi’ur, I don’t feel it as much.”

Soloveichik was forthright in expressing his opinions and took strong positions on contemporary issues. He opposed the war in Vietnam, which was unusual at the time for an American rosh yeshivah. Soloveichik strongly supported the settlement of all of the Land of Israel. He was opposed to the Oslo Accords and lobbied Israeli political and spiritual leaders on both political and theological grounds. Soloveichik declared that the Land of Israel belonged solely to the Jewish people and that compromise would not bring peace.
A portion of his teachings was published by Soloveichik, aided by his students. *Logic of the Heart, Logic of the Mind*, consisting of “reflections on topics of our times” appeared in 1991. Three volumes of his rabbinic novellae were published. *Od Yisrael Yosef Beni Hai*, in memory of a grandson, appeared in 1993. Two volumes, entitled *Perah Mattheh Aharon*, consisting of insights on the first two divisions of Maimonides’ Mishneh Torah, were published in 1997 and 1999. In editing these volumes, Soloveichik was assisted by his disciple David Applebaum, who was both a rabbi and medical doctor and resided in Jerusalem. Applebaum was to be murdered in a suicide bombing at the Hillel Café together with his daughter, Naava, on the eve of her wedding (2003).

[Aaron Rothkoff (2nd ed.)]

### SOLOVEICHIK, HAYYIM  
(known as R. Hayyim Brisker; 1853–1918), talmudist and predominant figure in Orthodox Jewry in his time. Soloveichik was born in Volozhin where his father Joseph taught at the yeshivah. At the age of 20, he married a daughter of Raphael Shapiro, one of the heads of the yeshivah at Volozhin, and he remained there pursuing his studies with great diligence. He was accustomed to discuss talmudic problems with a small circle of outstanding students and before long his influence was felt throughout the yeshivah. In 1880 he was appointed to the staff and became renowned as a stimulating teacher.

Soloveichik was the initiator of a new trend in Talmud study. Possessed of remarkable analytic powers, he would carefully analyze the subject under discussion into its categories and component parts. He evolved a suitable terminology with which to describe the different concepts and showed that the differences in the Talmud itself and among its authoritative interpreters derived from them. The method spread and was adopted in yeshivot throughout the world. Thousands of students flocked to hear him; many of them became distinguished teachers. Naphtali Zevi Judah “Berlin, head of the yeshivah, would consult him before making any change in its administration. After the Volozhin yeshivah closed in 1892, Soloveichik went to live with his father, the rabbi of Brisk (Brest-Litovsk). His father died that same year and Soloveichik succeeded him. He at once threw himself into communal activity, using his great talents to improve existing religious and social services and to establish new ones. His reputation grew; rabbis and laymen of the surrounding district consulted him on all matters. His opinion was always asked for and heeded, his leadership never being taken for granted. He participated in every important rabbinical and communal council. Of a friendly disposition, he kept open house for all, whether talmudists or scientists, learned or ignorant, religious or irreligious. He was ready to help every one, sympathizing, comforting, and advising. Scholars would bring him their difficulties; even unmarried mothers came to him for assistance and advice. None left him empty-handed and without renewed courage. Most of his salary was given to the needy, and as a result he was frequently in debt. In the winter he left his wood store unlocked so that the poor might help themselves. The lay leaders complained they could not afford the cost involved, but he replied that he would have to instruct his wife not to light his fire since it was impossible for him to sit in a warm room knowing that the poor were freezing.

In 1895 Brisk was swept by a fire which destroyed many homes. All Soloveichik’s energies were devoted toward the rebuilding. He slept in the synagogue porch among those who had lost everything in the fire, and the stream of scholars and lay leaders who wanted to consult him came to him there. Stringent personally in the observance of religious precepts, he was always lenient when applying them to others. In public religious practice, however, he was firm and uncompromising, and did all he could to stem the erosion of Jewish life. Because of his sincerity, great knowledge, and personal piety, he invariably prevailed against those who wished lightly to introduce changes into communal institutions or places of learning. Many of his novellae on talmudic tractates have been published, (3 vols, 1952–66), as well as his novellae on Maimonides Mishneh Torah (1936).

[Mordechai Hacohen]

### SOLOVEICHIK, ISAAC ZE’EV HA-LEVI  
(1886–1959), rabbi of Brisk (Brest-Litovsk), halakhist, and talmudist. Born in Volozhin, Isaac was the son of Hayyim “Soloveichik, who was his only teacher and regarded him as his spiritual heir, who would continue that tradition of study which originated in Volozhin. Isaac’s erudition and acumen were evident from his early youth, and his father stated that in insight he resembled his grandfather Joseph Baer, the founder of the Brisk dynasty of great talmudists. On the death of his father in 1918, Isaac Ze’ev was appointed by the community to succeed him as rabbi of Brisk. He soon became renowned as a central figure in the world of Torah and was popularly known as “R. Velvel.” He did not establish a yeshivah at Brisk but gave lessons to a group of the best students of yeshivat as well as other select individuals who assembled in his *bet midrash*. Admission to his circle of students was regarded as a great privilege, to which every student who wished to perfect his knowledge aspired. Despite his youth, the great contemporary talmudists, well-known rabbis, and heads of yeshivot, acknowledged his superiority and paid respectful attention to his words, his *hiddushim* (“original deductions”) passing from mouth to mouth.

On the conquest of Poland in World War II, he fled from Brisk to Vilna together with five sons and two daughters (his wife and another four children were murdered in Brisk). Soloveichik was saved from the destruction of Polish Jewry and in 1941 went to Erez Israel, settling in Jerusalem. He established there a “*kolel* of select young men. A yeshivah was founded and administered by his eldest son Joseph Dov.
There was a great difference between Soloveichik’s activities as rabbi of Brisk and his conduct in Jerusalem. During his 20 years as rabbi of Brisk he had been in the center of communal and congregational life, while in Jerusalem he confined himself to his studies, firmly refusing any official appointment and avoiding any public appearance or participation in daily public life. He even refrained from giving halakhic rulings, maintaining that “Jerusalem has a rabbi to whom problems should be addressed.” Only in cases where he saw danger to the foundations of religion and faith did he break silence and give his ruling in the most vigorous of terms. He belonged to no party and did not intervene in political affairs, but as an outstanding halakhist he exercised great influence over extensive circles of Orthodox Jewry, especially after the death of Avraham Karelitz (Hazon Ish). In Jerusalem, as in Brisk, he lectured daily and his novellae were noted down or transmitted by his pupils. “R. Velvel” loved the Holy Land and believed wholeheartedly in the mitzvah of living there.

[Itzhak Goldschlag]

**SOLOVEICHIK, JOSEPH BAER, OF VOLOZHIN** (1820–1892), talmudist and rosh yeshivah. Soloveichik was educated by his father, Isaac Ze’ev *Soloveichik of Kovno, and his great-uncle, Isaac, son of Hayyim of Volozhin. While in Volozhin, he married into a wealthy family, but was shortly thereafter forced by his father-in-law to divorce his wife when he failed to give the correct order of the recitation of some minor prayers on a festival. This so embittered him that he left Volozhin and subsequently studied under S. *Kluger in Brody and J.N. Orenstein in Lemberg. His reputation spread, and he was appointed successor to Gershon Menahem of Minsk at the yeshivah there. He finally returned to Volozhin in 1849 to serve as joint rosh yeshivah with Naphtali Zevi Judah *Berlin (the “Neziv”),* the son-in-law of Isaac of Volozhin. With the passage of time, the two found it increasingly difficult to agree. It was impossible for them to work in harmony, particularly since both exercised considerable spiritual influence on the students. Their differences caused such a complete break between them that they could not act jointly in the administration of the school or in the planning of the curriculum. They were different in their temperaments and in their approach, to talmudic studies. Berlin was patient and temperate, modest and sober in his ways, preferring erudition to subtlety, while Soloveichik was a dynamic personality, sharp-witted, preferring acumen to erudition in talmudic studies and in worldly matters. Soloveichik respected no person in argument and deferred to no one. They presented their dispute before four outstanding scholars, who decided in favor of Berlin. Soloveichik left Volozhin and became rabbi of Slutsk. He later restored harmony in his relations with Berlin when his son, Hayyim, married Berlin’s granddaughter. In Slutsk he found scope for his energies, both in Torah teaching and in communal organization. He deployed his abilities and his industry for the community’s needs, devoting himself wholeheartedly to helping the poor and the needy. During the severe famine of 1866, he founded a society to help the poor, put himself at its head, and collected subscriptions from door to door. He was devoted to the needs of the community and was an outstanding humanitarian. Even when fighting those who wished to change or undermine Jewish religious life and values, he retained the love and respect of all. With his fiery spirit he could not continue in the rabbinate and in 1875 relinquished his position, settling in Warsaw where he lived privately and in great poverty, devoting himself to study and deeds of benevolence. In 1878, when invited to become rabbi of Brest-Litovsk, he agreed on condition that he would be obeyed in all communal matters and that aid for the poor would be under his direction. In 1890 he was associated with a group which bought land in Erez Israel.

The following of his works have been published, all under the title *Beit ha-Levi: Novellae on the Talmud, 102 responsa and sermons* (2 vols., 1863–64), *sermons on Genesis and Exodus* (2 vols., 1884), and halakhic novellae (1891). He contributed to I. Lipkin’s (Salanter) periodical *Tevunah* in 1861.

[Mordechai Hacohen]

**SOLOVEICHIK, MOSHE** (1879–1941), Orthodox rabbi. The son of a distinguished father, Rabbi Hayyim *Soloveichik,* and the father of distinguished sons, Rabbi Joseph Dow *Soloveichik* and Rabbi Aaron *Soloveichik,* learning was an essential component of his family life. Born in Volozhin and raised in Brest-Litovsk (Brisk), young Moshe studied with his father the talmudic methodology that was the mark of the Soloveichik family. He married the daughter of Rabbi Elihu Feinstein and studied with his father-in-law until his 30th birthday, when he became the communal rabbi of Rassin in the Kovno Province. He established a *kolel* there and in 1913 moved to Chaslovitz, where he was a communal rabbi. He was there during World War I and in 1921 was invited to succeed his father as the rabbi of Brisk. He declined and instead became a Talmud teacher at Takhkemoni Geva’ot in Warsaw, a school at which both Jewish and secular studies were taught. According to his daughter, Rabbi Moshe was disturbed by the increasing secularization of the curriculum and of the students. There were significant tensions between Soloveichik and Professor *Balaban,* the distinguished secular history teacher. Thus when in 1929 he was invited to Rabbi Isaac Elchanan Theological Seminary in New York to replace the recently deceased Rabbi Shlomo Polachek, the offer was accepted with great enthusiasm. His recruitment by Rabbi Bernard Dow Revel enhanced the prestige of the seminary and Moshe Soloveichik became a supporter of Revel’s efforts to build an Orthodox Jewish university. His prestige was also enhanced at *Rieth,* where his *shirur* became the gateway to ordination. As Gilbert Klaperman wrote: “To
weather Reb Moses Soloveichik’s exacting standard and then earn his signature on the semicha was the highest accolade that could come to any student.” He had rigorous standards and enforced them, teaching the methodology that had been taught to him by his forebears and the one he had taught to his sons and his students. He died in 1941 and his son Joseph was invited to be his successor as rosh yeshivah. He did not publish much during his lifetime in keeping with family tradition, but his legacy was in his teaching, his sons and his students.

[Michael Berenbaum (2nd ed.)]

**SOLOVEITCHIK, JOSEPH BAER** (1903–1993), U.S. rabbinic scholar and religious philosopher, preeminent spiritual leader of Modern Orthodoxy in the last half of the 20th century. Scion of a distinguished Lithuanian rabbinical family, Soloveitchik was born in Pruzhana, where his maternal grandfather, Elijah Feinstein, was the rabbi. Soloveitchik spent his formative years in Khaslavichy, Belorussia, where his father Moses served as the rabbi from 1913 until after the Communist takeover in 1918. The Khaslavichy community included a large number of Lubavitcher Hasidim. Soloveitchik later integrated their lifestyle and theological stance into his own philosophical lectures and publications. Until his family’s relocation to Warsaw, Poland, in 1920, Soloveitchik devoted himself almost exclusively to the study of the Talmud and the Codes. Under his father’s tutelage, he mastered his paternal grandfather’s (see Hayyim “Soloveitchik” “Brisker Derekh.” This method of rabbinic study stressed incisive analysis, exact classifications, critical independence, and emphasis on Maimonides’ *Mishneh Torah*.

In his late teens, Soloveitchik received the equivalent of a high school education from private tutors. In Warsaw, he entered the Free Polish University in 1924, studying political science. In 1926, he commenced his studies at the University of Berlin. Soloveitchik majored in philosophy and was attracted to the neo-Kantian school. In 1932, he received his doctorate, after the acceptance of his dissertation on the epistemology and metaphysics of Hermann Cohen.

In his dissertation *Das reine Denken und die Seinskonstituierung bei Hermann Cohen* (Berlin, 1933), Soloveitchik analyzes Cohen’s cognitive idealism, according to which objective existence has only cognitive being. The extra-cognitive world, represented by the senses, exists only chaotically and lacks order; its function is to present problems and questions to cognition. Cognition, in turn, creates objects within itself, generating them from the infinitesimal to their objective existence. It should be noted that objective existence in cognition means the existence of scientific objects, subject to Newtonian causality. Soloveitchik expands on these determinations and discusses their development in the thought of his own doctoral advisor, Heinrich Maier, and Paul Natorp, who followed in Cohen’s footsteps.

In 1931 Soloveitchik married Tonya Lewit (1904–1967). Her background was similar to that of her husband, in that she had been raised in eastern Europe (Vilna), and sought higher education in western Europe. She received a doctorate in education from Jena University and was to ably assist her husband in all his endeavors until her death. In 1932 they immigrated to the United States, where Rabbi Moses Soloveitchik had been the head of the talmudic faculty of the Rabbi Isaac Elchanan Theological Seminary in New York City, since 1929. A few months after his arrival, the younger Soloveitchik became the rabbi of a segment of the Orthodox Jewish community of Boston. This city was to remain his home until his death.

In 1937 he founded the Maimonides School, the first Jewish day school in the New England area. With the influx of European yeshivah students during the late 1930s, Soloveitchik organized the Heikhal Rabbenu Haym ha’Levi and Yeshivath Torahot Israel. On May 13, 1941, he succeeded his father as professor of Talmud in New York City at the Rabbi Isaac Elchanan Theological Seminary, which achieved university status in 1945 and became known as Yeshiva University. RIETS, or the Yeshiva, as it was popularly known, was an integral subdivision of the school. Soloveitchik also lectured at the university’s Bernard Revel Graduate School, where he served as professor of Jewish philosophy. He was to continue his weekly Talmud lectures at the school until illness forced his retirement in 1985. Soloveitchik gradually became the dominant spiritual personality on the Yeshiva University scene. He was popularly designated “The Rav” or the rabbi par excellence. In this setting he remained the quintessential rosh yeshivah, and his lectures were in the classic Brisk tradition. Essentially, the Talmud, Maimonides, and the basic early commentaries were the core of his classes in the yeshivah for 44 years. The Rav thus became the spiritual mentor of the majority of the American-trained Orthodox pulpit rabbis. His position at Yeshiva University was paramount in projecting Soloveitchik into prominence upon both the national and international Jewish scenes. From 1953, Soloveitchik also exerted a decisive influence on Orthodoxy, in his capacity as chairman of the Halakhah Commission of the Rabbinical Council of America. Among his rulings was his unequivocal opposition to mixed seating in synagogues. He went so far as to prohibit listening to the shofar on Rosh Hashanah in such synagogues. The Rav advised praying at home without hearing the shofar rather than worshipping in such a synagogue. Nevertheless, he did not advocate a total break with the Reform and Conservative movements. Soloveitchik differentiated between “external affairs” and “internal issues.” On issues involving relations with the non-Jewish world, he held that cooperation with all Jewish organizations was desirable. Regarding internal matters such as halakhah and synagogue ritual, there was less capacity for joint viewpoints.

Soloveitchik questioned aspects of the dialogue initiated by the Catholic Church with Jewish leaders as part of the Church’s ecumenical movement during the 1960s.
He encouraged Jewish-Christian dialogue on social, political and ethical issues – even terming it “essential” (“Statement on Interfaith Relations,” in Record of Rabbinical Council of America (Feb. 1965)). Soloveitchik himself delivered his most famous religious paper, “The Lonely Man of Faith,” to an interfaith audience at a Catholic seminary in Brighton, Massachusetts, and he later stated that all discussions of ethics and social values are necessarily “religious.” In his essay “Confrontation” (Tradition 6:2, Spring–Summer 1964) he espoused a nuanced position regarding interfaith dialogue on religious matters (Eugene Korn, Modern Judaism (October 1965), 290–315).

Soloveitchik was originally a devotee of Agudath Israel and served as the chairman of the national executive committee of its American branch. He also was a member of its initial Council of Torah Sages, which was constituted in 1941. As the tragedy of European Jewry became known, the Rav became an advocate of the Mizrahi movement. Following World War II, he became the honorary president of Mizrahi, which was later renamed the Religious Zionists of America. In 1935, Soloveitchik journeyed to Palestine, in what was his only visit to the Holy Land, where he was a candidate for the post of Ashkenazi chief rabbi of Tel Aviv. He was not selected. In 1939, Soloveitchik declined to be a candidate to succeed Chief Rabbi Isaac Herzog. At the time, the Rav’s election was assured since he enjoyed a wide spectrum of support.

Soloveitchik represented the entire Jewish community as a member of the advisory committee on humane slaughter of the United States Department of Agriculture, established 1958. In 1958–59 he delivered a series of classes on Jewish social philosophy to a group of social workers in New York. Soloveitchik also was the principal Jewish representative in Yeshiva University’s Institute of Mental Health Project, undertaken in 1960, in conjunction with Harvard and Loyola Universities. Its goal was to study religious attitudes toward psychological problems. The lectures delivered to these groups later served as the basis for a portion of his published philosophical writings, particularly “The Lonely Man of Faith.” Soloveitchik conducted weekly classes at Congregation Moriya on the upper west side of Manhattan. He also taught in Boston and every Saturday night gave a public lecture on the Torah portion at the Maimonides School. Sunday mornings he conducted a Talmud class under the auspices of the Hevra Shas of Boston. In addition, there were the Rav’s annual Teshuvah lectures, delivered under the aegis of the Rabbinical Council of America. There were also a large number of discourses delivered before the Rabbinical Council and the Yeshiva University Rabbinical Alumni. The high point of every annual convention and midwinter conference was generally the Rav’s lecture. At these venues, the themes varied and stressed halakhic, philosophical, theological, homiletical, and aggadic insights.

In addition, Soloveitchik’s broad knowledge of general culture – philosophy, mathematics, science, literature – was integrated into these public discourses.

Soloveitchik was regarded by the Jewish world as the unchallenged leader of what has been designated as Modern Orthodoxy. Although never totally at home in the world of American Modern Orthodoxy, it was in this universe that the Rav’s leadership was widely accepted. While Soloveitchik’s brilliant scholarship was acknowledged in all Torah circles, his influence on the masses was through his disciples and the rabbis who followed his teachings. In addition, his public lectures and discourses enabled a wider audience to be inspired by his instruction. As a talmudic and halakhic expositor, the Rav possessed unusual dexterity in exploring difficult technical concepts. He was a remarkable orator in his native Yiddish, and an effective speaker in English and Hebrew. The annual halakhic and aggadic discourse which the Rav delivered at Yeshiva University, on the anniversary of his father’s death, attracted thousands of listeners. These Yahrzeit de-rashot lasted from four to five consecutive hours. They were regarded as the major yearly academic event for American Orthodoxy.

Soloveitchik was reluctant to publish due to his family’s tradition of perfectionism. Albeit, he wrote much, since all his public lectures were delivered from and preserved in manuscripts. For many decades his main publication was a lengthy essay “Ish ha-Halakhah” ((1944), 651–735) which was later translated into English by L. Kaplan and published as Halakhic Man (Jewish Publication Society, 1983).

This essay describes the dynasty of Brisk-method scholars. Written during the Shoah, the essay thus manifested a double purpose. First, to constitute a memorial to the type of yeshivah scholarship which was destroyed, and second, to describe this scholarly archetype in modern philosophical categories, so that it might be reconstituted in America. The term “halakhah” as used in this essay means primarily scholarship in the Brisk method of study, and not halakhah in its practical application. Soloveitchik describes the “Halakhic man” as cognitive man – a mixture of homo religiosus and scientist. A careful reading, however, reveals that halakhic man is essentially cognitive man. His cognition is described in line with Hermann Cohen’s cognitive idealism, and in accordance with the conventionalistic trend in the philosophy of science. It should be noted that the halakhah is not merely a substitute for the laws of science. In the view of the halakhic man (i.e., the rosh yeshivah), yeshiva scholarship includes knowledge of scientific law. Since halakhic man’s cognition is pervaded by Cohen’s neo-Kantianism, and for him the only objective existence is that of the halakhic objects of cognition, it cannot be tolerant of other cognitions. The only experience halakhic man recognizes is the experience of scholarship and the emotions it arouses. Some critics claim, with a large degree of justification, that Soloveitchik himself did not identify with the image of the rosh yeshivah described in “Halakhic Man,” but that he personally identified with the mixture of scholarship and religious experience, as suggested by his two other great works of this period, “The Halakhic Mind” and “U-Vi-kashtem mi-Sham.”
“The Halakhic Mind” (which is understood as depicting Soloveitchik’s own orientation), written in 1944 but published only in 1986, differs completely from “Halakhic Man” (which is understood as depicting the rosh yeshivah of Brisk) and its cognitive-halakhic idealism. In “The Halakhic Mind,” Soloveitchik employs the method which would characterize his writings for the rest of his life: phenomenology of the religious mind. Soloveitchik sought by this approach to point to the need for essentialist research of religious consciousness in general, and of Jewish religious consciousness in particular. His working assumption is cognitive pluralism: just as, for example, there is scientific cognition, so there is also religious cognition. He therefore ignored historic and ontological existence. God’s immanence, for instance, is of interest not from a factual perspective (God is or is not immanent), but from its being a factor of the religious mind. Soloveitchik made use of diverse and contradictory sources (philosophy, Kabbalah), because they all construct the essential religious consciousness mind. From this time on, Soloveitchik focused only on research of the religious mind. He added to the phenomenological method another method: reconstruction, namely, that in order to uncover the depths of the religious mind, one must reconstruct its practical and normative dimension. In his terminology, in order to reveal the subjective, one must reconstruct it out of the objective. Soloveitchik divided the Jewish religious mind into three parts: the subjective part (emotions and intellectual or mystical theories); the practical objective part (actions and behavior, such as performing the Torah’s commandments); the normative objective part (norms underlying actions and behavior). The subjective part should be reconstructed out of the practical and normative objective parts. Soloveitchik especially emphasized the halakhah as a structured component of the religious mind. Accordingly, the halakhic man, namely the rosh yeshivah whose cognition is constructed in accordance with cognitive idealism, does not regard the subjective dimension as significant, nor does he recognize cognitive pluralism.

“The Halakhic Mind” thus calls for research into the Jewish religious mind and establishes guidelines for the phenomenological method, but does not fully apply these guidelines, especially not in the relatively small section dealing with Judaism.

The application would come in another work from the same period, namely “U-Vikashtem mi-Sham,” written in 1944 but only published in 1978. Here Soloveitchik presented, step by step, the construction of the Jewish religious consciousness mind, in three stages. The first two stages are characterized by dialectic, and the third stage by a resolution of the dialectical tension. In the first stage, there is a tension between scientific accomplishments, which empower the person, and divine revelation, which undermines his self-confidence. In the second stage the tension is between love and fear of God. In the third and highest stage, the tension disappears, and is replaced by cleaving to God, in Maimonides’ Aristotelian epistemological terms of the unity of intellect, intellect and intelligized object, which Soloveitchik compares with Hermann Cohen’s cognitive idealism. Soloveitchik reconstructed these three stages out of the halakhah, thus reinforcing his position that the phenomenology of Judaism cannot be separated from Judaism’s practical foundation, the halakhah.

In 1956 Soloveitchik delivered a sermon in honor of Israel’s Independence Day, which was then published as a Hebrew essay, “Kol Dodi Dofek” (“Hark! My beloved is knocking” – cf. Song of Songs 5:2). Originally published in 1961 (in Simon Federbush (ed.), Torah u-Melukhah, 11–44), this essay was republished many times and was translated into several languages. Here, for the first time, Soloveitchik presented an overtly existentialist approach. Thereafter he would write in an existentialist style, such as his “Lonely Man of Faith,” while at the same time continuing to write phenomenological works. The two kinds of works differ regarding the role of distress, metaphysics, the other and the purpose of the work. Regarding suffering, in his phenomenological writings, suffering is one of the dialectical poles, but in his existentialist writings suffering is the central point. Moreover, in the phenomenological writings the dialectical tension is resolved and the suffering disappears, but in the existentialist writings the polarity and suffering remains, but the person learns to live with it and endow it with meaning. Regarding metaphysics, in Soloveitchik’s phenomenological works religious metaphysics is of interest and exists as a component of consciousness cognition, i.e., theoretical approaches are important because they reflect the structure of religious “cognition.” Conversely, in the existentialist works metaphysics is no longer of interest. The problem of the other first arises in Soloveitchik’s existentialist writings. The purpose of his phenomenological works was intellectual curiosity and religious need, but the purpose of his existentialist works is, first and foremost therapeutic: the very act of writing them eased his distress.

Soloveitchik rejected any metaphysical solution to the problem of suffering. The halakhah does not pretend to solve the problem; indeed, any solution would be an illusion. What the halakhah does is to endow suffering with meaning, thus enabling the suffering person to control his fate, rather than to be controlled by it. This is also the significance of Soloveitchik’s dealing with the Shoah and the State of Israel in the same essay: the question of the reason for the Shoah is meaningless, and the only question worthy of discussion is that of meaning. “Kol Dodi Dofek,” one of Soloveitchik’s Zionist homilies, emphasizes the existential foundations of the State of Israel and the exclusive question of meaning. Only the halakhah can simultaneously endow with meaning the national catastrophe of the Shoah and the national revival of sovereign statehood.

Soloveitchik’s existentialist approach is also reflected in several other works published in a pamphlet “Out of the Storm,” but the apex of his existentialist writing is his “Lonely Man of Faith,” which focuses on the problem of the other. In the modern world, faith is unique and subjective. Only divine intervention can make communication between two lonely people possible, and at a later stage, create a community.
suffering of loneliness does not disappear, but community life makes it possible to live with suffering and to endow it with meaning.

During the last decade or so of his active endeavors, Soloveitchik softened, somewhat, his resistance to the publication of his works. Subsequently, many volumes appeared under his name, including some that the Rav authorized and others that were edited from his public discourses. This trend intensified after Soloveitchik’s death, as students and family published many volumes dedicated to both his Talmudic novellas and philosophical discourses. His son established the Morasha Foundation and his daughters inaugurated The Torah HoRav Foundation. Both were devoted to the publication of their father’s manuscripts. Since thousands of recordings and many manuscripts remain unpublished, definitive studies of Soloveitchik and his era will wait for decades.

Soloveitchik was unique among his contemporary rabbinical colleagues. While continuing the intensive Torah scholarship, exemplary piety and dedicated leadership of his forebears, he additionally embraced western civilization. While there was no synthesis between these divergent visions, they co-existed harmoniously in his personality and lifestyle. In a lecture delivered to the Yeshiva University Rabbinic Alumni in 1956, the Rav contrasted his outlook with that of Rabbi Samson Raphael Hirsch. The latter advocated a greater synthesis between Torah and the civilization of a given epoch. Soloveitchik viewed them as separate disciplines and held that each world would lose its uniqueness if integration were attempted. He praised Yeshiva University since the yeshivah division continued the traditions of the classic Lithuanian yeshivot. Alongside the yeshivah, the university operated as a separate academic institution. Soloveitchik felt that both divisions functioned without synthesis and compromise.

Soloveitchik has remained the dominant spiritual leader for the Modern Orthodox world in the years since his death. No single rabbinical figure has emerged to inherit the Rav’s mantle of leadership. Often many divergent and even contradictory viewpoints were ascribed to the Rav by his numerous disciples. Few perceived the totality of the Rav’s spiritual gestalt. His lack of synthesis and the harmonious coexistence of numerous disciplines and quests that characterized his outlook added to the quandary.

The Soloveitchiks had three children. The eldest, Dr. Atarah Twersky, was chairman of the school committee of the Maimonides School, and thus continued the tradition established by her mother. Her husband, Rabbi Dr. Isadore Twersky, was both a professor at Harvard University and The Talner Rebbe of Boston. Dr. Tovah Lichenstein resided in Jerusalem and taught at Bar-Ilan University’s School of Social Work. She was married to Rabbi Dr. Aharon Lichtenstein, rosh yeshivah of Yeshivat Har Etzion in Alon Shvut. The youngest, Rabbi Dr. Haym Soloveitchik, was professor of Jewish history at The Bernard Revel Graduate School of Yeshiva University.

“SOLOVIEV, VLADIMIR” (1853–1900), Russian philosopher and theologian. Born in Moscow, he was the son of S.M. Soloviev, professor of Russian history at Moscow University. Vladimir Soloviev also lectured at this university but suffered the criticism of reactionaries for the liberal character of his Christianity. From 1877 to 1881 he held a post at the Ministry of Education in St. Petersburg, and later devoted himself to writing. His mystical vision, high intelligence, and religious tolerance made him one of the most outstanding men in Russia, and his philosophical and theological writing were influential. He vainly tried to reunite the Russian Orthodox Church and the Roman Catholic Church, and in 1896 he himself was received into the latter.

An interesting component of Soloviev’s thought is his theological and practical philo-Semitism. In this he was almost alone in Russian mystical Christian circles and differed from his friend, Feodor Dostoyevski. Soloviev even wrote a small book about Judaism and another about the Talmud. His positive evaluation of Judaism resulted not only from his appreciation of Judaism’s “religious materialism,” that is, its avoidance of abstract theology. In addition, he opposed Christian missionary activities among the Jews. Soloviev learned Hebrew and on his deathbed he recited a Hebrew psalm for the sake of the Jews.

SOLOW, ROBERT MERTON (1924– ), U.S. economist, Nobel Prize laureate. Born in Brooklyn, Solow was educated at Harvard University from which he received his Ph.D. in 1951. From 1949 he was on the faculty of the Massachusetts Institute of Technology, becoming a professor of economics in 1958 and Institute Professor in 1973.

He was also affiliated with the Council of Economic Advisers, as senior economist (1961–62) and consultant (1962–68), and was a consultant to the RAND corporation (1952–64). He served as a director of the Boston Federal Re-
serve Bank from 1975 to 1980 and was chairman of the bank in 1979–80.

Among Solow’s other activities, he was a member of the President’s Commission on Income Maintenance (1968–70), served on the board of directors and as a member of the executive committee of the National Bureau of Economic Research, served as a trustee of the Institute for Advanced Studies of Princeton University (1972–78), and was president of the American Economic Association (1979). In 1961 he received the AEA’s John Bates Clark Award, given to the best economist under age 40.

A fellow of the American Academy of Arts and Sciences and the recipient of the Seidman award in Political Economics (1983), he was awarded the Nobel Prize in economic sciences in 1987 for his significant contributions to the theory of economic growth.

In 1995 he retired from teaching at MIT. He served as chairman of the board of the nonprofit research group Manpower Demonstration Research Corporation, which he helped establish in the 1970s. He was also Foundation Fellow of the Russell Sage Foundation.

[Solow is a prolific author with many notable works.]

[SOLTI, SIR GEORG (1912–1997), conductor. Born in Budapest, Solti studied at the Liszt Academy with Dohnanyi, Bartok, and Kodaly and became an accomplished pianist. From 1930 to 1939 he was répétiteur at the Budapest Opera; he worked with Toscanini at Salzburg Festivals, making his debut as a conductor at Budapest (1938). As a Jew facing professional restrictions, he left Hungary in 1939. He spent the war years in Switzerland as a concert pianist, gaining the first prize at the 1942 Geneva competition. Solti’s international conducting career began after the war. In 1946 he directed the Munich Opera and then in Frankfurt (1952–61), the Dallas SO (1960–61), and the Covent Garden Opera, London (1961–71). He was appointed director of the Chicago Symphony Orchestra (1969–1990), transforming it to one of the most celebrated orchestras in the world. He subsequently took additional posts as “conseiller musical” at the Paris Opera (1971–73), music director of the Paris Orchestra (1972–75), principal conductor of the LPO and artistic director of the Salzburg Festival. Solti also appeared regularly with the Vienna Staatsoper, and from 1956, he frequently conducted the *Israel Philharmonic Orchestra*, with which he also made several recordings. His dynamic and vibrant conducting style, and his preference for huge sound, demanded the outmost professional performance from the players and reflected his charismatic and powerful personality. Solti became known for his wide-ranging concert and operatic repertoire, and his special competence in conducting for recordings. He gave a large number of first performances, made more than 250 recordings, among them the major works of Strauss, Wagner, Mozart, and Verdi. Solti made the first complete *Ring* recording (1958–1966) and conducted it in Bayreuth in commemoration of the one hundredth anniversary of Wagner’s death (1983). Outstanding among his other recordings is a Mahler cycle (with the Chicago SO). He was honored with 32 Grammy awards – more than any other artist. In 1971 Solti was knighted; in 1972 he took on British nationality and was entitled Sir Georg. In 1974 he was made a Commandeur of the Légion d’Honneur. He has received many other major honors from many countries. He wrote a memoir, *Solti on Solti* (1997).

The production of ceremonial objects was a major venue through which Jews expressed their artistic abilities, despite the partial prohibition against sculpture. The focus centered on items related to the synagogue and prayers, festivals, and home rituals. Materials and styles for the same function varied among the dispersed Jewish communities, lending a rich texture to the overarching Jewish civilization.
